 - 2.1 Create a materials list and collect materials.
 - 2.2 Select appropriate tools and equipment including personal protective equipment (PPE).
- 3 Install, test and commission system.
 - 3.1 Set out and install a home sprinkler system in a single-story Class 1a building, according to job specifications and in compliance with relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements.
 - 3.2 Test and commission home sprinkler system in a single-story Class 1a building, according to job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements.
- 4 Clean up.
 - 4.1 Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPWT3030A Install home fire sprinkler systems.

Assessment Requirements for CPCPWT3030 Install home fire sprinkler systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Typographical error corrected in Element 1.1.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPWT3030A Install home fire sprinkler systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing a home fire sprinkler system in a single-storey Class 1a building using a length of piping a minimum of four metres and including:
 - a water service using a minimum of two materials
 - a control valve
 - an actuating device
 - an alarm
 - two sprinkler heads
 - one sprinkler head using cross-linked polyethylene (PEX) pipe.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- installation, testing and commissioning requirements of home fire sprinkler systems
- operation and function of purging drain valves
- processes, procedures and techniques of:
 - installing a home fire sprinkler system in a Class 1a building
 - testing and commissioning
 - actuating device
 - control valve assembly
 - alarm systems
 - approved piping and fittings
 - sprinkler heads

- pressure and flow requirements
- building classification
- push-fit and crimp-fit PEX pipe and fitting systems
- domestic sprinkler systems as required by the Deemed-to Satisfy NCC provisions
- how to access relevant information, including codes and standards manufacturers' instructions, codes, relevant Australian Standards and jurisdictional requirements
- tools, materials and equipment used to install home fire sprinkler systems, including testing and commissioning
- work health and safety (WHS) requirements for installing, testing and commissioning home fire sprinkler systems.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPWT4011 Design and size heated and cold-water services and systems

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPWT4011B Design and size heated and cold-water services and systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design, size and document the layout of heated, tempered and cold-water services, flushing systems, and hydrant and hose reel systems for residential and commercial multi-floor buildings.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------|--|
| 1 Identify system requirements. | 1.1 Access, read and determine system requirements from job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements. |
| | 1.2 Identify and apply workplace, work health and safety (WHS) and environmental requirements. |
| | 1.3 Determine quantity, location and points of fixture |

connection.

- | | |
|----------------------------------|--|
| 2 Design and size system layout. | 2.1 Design and size system layout in accordance with relevant manufacturers' instructions, Australian Standards and jurisdictional requirements. |
| | 2.2 Use the proposed design to identify and specify optimal material requirements. |
| | 2.3 Produce final system layout plans according to relevant drawing design standards. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPWT4011B Design and size heated and cold-water services and systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPWT4011 Design and size heated and cold-water services and systems

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPWT4011B Design and size heated and cold-water services and systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout and schematic details for a commercial building with the design incorporating:
 - an approved heated/tempered circulating system and cold-water system to a minimum of seven floor levels. Each floor level must include a hydrant and hose reel system
 - at least five levels with the following fixtures on each floor level:
 - a disabled bathroom incorporating a water closet (WC) and basin
 - male toilet facilities including three WCs, three basins and three individual urinals or an equivalent sized urinal slab incorporating a mains pressure flush valve system
 - female toilet facilities including five WCs and three basins
 - a shower
 - a kitchen sink for tea making purposes
 - one floor level containing a commercial kitchen with food preparation area including at least:
 - a commercial dishwasher
 - a commercial pot wash facility
 - a commercial glasswasher
 - a basin
 - one floor level containing a plant room
- designing, sizing and documenting the layout and schematic details for a residential building with the design incorporating:
 - an approved heated/tempered water system and a drinking and non-drinking cold water system to a minimum of seven floor levels, inclusive of basement, to include fixtures on each floor level (excluding the basement).
 - at least the following fixtures on each floor level:
 - three baths

- six showers
- six WCs
- six basins
- three kitchen sinks
- three dishwashers
- three laundry tubs
- three clothes washing machines.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- process of designing, sizing and documenting the layout of heated, tempered and cold-water services and systems
- properties of water, including pressure and flow rates
- heated, tempered and cold-water services and flushing systems, and fire hydrant and hose reel systems, including non-drinking water requirements
- mains pressure flushing devices
- selection requirements for installing:
 - thermostatic mixing valves
 - backflow prevention devices
- drawing instruments and sketching techniques, including the use of conventional symbols
- use of computers for documentation
- computer-aided design software
- how to access relevant information, including codes and standards
- tools, materials and equipment used to design and size heated and cold-water services and systems
- work health and safety (WHS) requirements for designing and sizing heated and cold-water services and systems.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPWT4022 Commission and maintain backflow prevention devices

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPWT4022A Commission and maintain backflow prevention devices. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to test, commission and maintain backflow prevention devices in water services.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

CPCPWT3027 Install backflow prevention devices

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify testing, commissioning and maintenance requirements.

1.1 Access, read and determine backflow prevention device testing, commissioning and maintenance requirements from job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements.

- 1.2 Obtain, interpret and follow workplace, work health and safety (WHS) and environmental requirements.
- 2 Prepare for work.
 - 2.1 Create a materials list and collect materials.
 - 2.2 Select appropriate tools and equipment including personal protective equipment (PPE).
- 3 Commission and maintain devices.
 - 3.1 Commission and maintain devices in compliance with manufacturers' instructions, relevant Australian Standards and jurisdictional requirements.
 - 3.2 Complete documentation according to regulatory requirements.
- 4 Clean up.
 - 4.1 Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPWT4022A Commission and maintain backflow prevention devices.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPWT4022 Commission and maintain backflow prevention devices

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPWT4022A Commission and maintain backflow prevention devices. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- testing and commissioning the following backflow prevention devices:
 - three different double check valves
 - one single (testable) check valve
 - two different registered air gaps (including different orifice sizes and inlet pressures)
 - three different reduced pressure zone devices
- removing and maintaining:
 - one double check valve
 - one reduced pressure zone device.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- basic hydraulics and mechanics relevant to backflow prevention devices in water services
- process of testing, commissioning and maintaining backflow prevention devices
- properties of water, including pressure and flow rates
- types of backflow prevention devices
- electrical safety
- how to access relevant information, including codes and standards
- tools, materials and equipment used to test, commission and maintain backflow prevention devices in water services
- work health and safety (WHS) requirements for testing, commissioning and maintaining backflow prevention devices in water services.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPWT4023 Commission and maintain hot and heated water temperature control devices

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCWPT4023A Commission and maintain hot and heated water temperature control devices. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to test, commission and maintain hot and/or heated water temperature control devices, including thermostatic mixing valves in water services.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

CPCPWT3022 Install and commission water heating systems and adjust controls and devices

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify commissioning and maintenance requirements.

1.1 Access, read and determine device commissioning and maintenance requirements from job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements.

- | | | |
|-----------------------------------|-----|---|
| | 1.2 | Identify and apply workplace, work health and safety (WHS) and environmental requirements. |
| 2 Prepare for work. | 2.1 | Create a materials list and collect materials. |
| | 2.2 | Select appropriate tools and equipment including personal protective equipment (PPE). |
| 3 Commission and maintain device. | 3.1 | Commission and maintain device in compliance with manufacturers' instructions, relevant Australian Standards and jurisdictional requirements. |
| | 3.2 | Complete documentation according to regulatory requirements. |
| 4 Clean up. | 4.1 | Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements. |
| | 4.2 | Clean tools and equipment, check for serviceability and report any damage, and store and secure. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCWPT4023A Commission and maintain hot and heated water temperature control devices.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPWT4023 Commission and maintain hot and heated water temperature control devices

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCWPT4023A Commission and maintain hot and heated water temperature control devices. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- testing and commissioning three different types of thermostatic mixing valves in accordance with manufacturers' instructions and relevant Australian Standards
- maintaining three different types of thermostatic mixing valves in accordance with manufacturers' instructions and relevant Australian Standards.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- bacteria in water and its effect on health
- characteristics and applications of different types of hot and/or heated water temperature control valves and devices
- process of commissioning hot and/or heated water temperature control devices
- properties of water, including pressure and flow rates
- how to access relevant information, including codes and standards
- tools, materials and equipment used to test, commission and maintain hot and/or heated water temperature control devices, including thermostatic mixing valves in water services
- work health and safety (WHS) requirements for testing, commissioning and maintaining hot and/or heated water temperature control devices, including thermostatic mixing valves in water services.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCSFS5001 Define scope and hazard level of fire systems design projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCSFS5001A Define scope and hazard level of fire systems design projects. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to interpret briefs and specifications for fire systems design projects to define the scope and hazard level of projects.

This unit of competency supports the role of fire system designers and design consultants who need to determine the nature and purpose of a fire systems design concept.

The role may involve interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes, including the National Construction Code (NCC).

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Interpret fire systems design concept, brief or specification.

1.1 Gather and interpret design concepts and brief, specifications and recommendations for fire systems design project.

- | | | |
|---|-----|---|
| | 1.2 | Determine and outline the nature, purpose and location of proposed fire systems. |
| 2 Establish building classifications and hazard levels for fire systems design project. | 2.1 | Determine size and type of buildings from initial project documentation. |
| | 2.2 | Determine function and occupancy of buildings from initial project documentation. |
| | 2.3 | Obtain clarification of specific building details from client or other relevant persons within project timelines. |
| | 2.4 | Research and confirm building classifications and hazard levels according to relevant codes and standards. |
| 3 Determine and verify the applicable legislation, codes and standards. | 3.1 | Determine and verify regulatory requirements applicable to the fire systems design project. |
| | 3.2 | Determine and confirm the codes and standards applicable to the location and classification of buildings included in fire systems design project. |
| | 3.3 | Determine and verify insurance requirements impacting on applicable codes and standards for fire systems project. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCSFS5001A Define scope and hazard level of fire systems design projects.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCSF5001 Define scope and hazard level of fire systems design projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCSF5001A Define scope and hazard level of fire systems design projects. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- interpreting design concepts, briefs and specifications
- establishing hazard levels and building classifications
- identifying relevant localised legislation, codes and standards for each of the following project types:
 - low-rise building
 - medium-rise building
 - high-rise building (over 25 metres)
 - building over 50 metres in height
 - building classifications in the National Construction Code (NCC)
- selecting and applying one of the following locations to the each of the above project types ensuring all locations have been used at least once:
 - local
 - involving more than one state or territory
 - international.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- fire engineering principles:
 - innovative fire systems
 - relevant computer-aided design (CAD) programs such as:
 - archi CAD
 - Revit
- relevant current legislation, codes and standards:
 - building acts

- building regulations
- infrastructure supply regulations
- the Building Code of Australia (BCA)
- NCC
- jurisdictional authorities in addition to the BCA and NCC
- Australian standards for fire systems
- international standards for fire systems
- other fire systems standards commonly required by building insurers
- fire systems technology and components:
 - water-based systems
 - wet pipe sprinkler systems
 - deluge and drencher systems
 - dry pipe sprinkler systems
 - pre-action sprinkler systems
 - early suppression fast response (ESFR)
 - hydrants, hose reels and monitors
 - water supply tanks
 - fire pump sets
 - high-pressure water mist systems
 - gas suppression
- detection and warning systems:
 - emergency warning and intercommunications systems (EWIS)
 - fire detection and alarm systems
 - smoke control systems
- purpose and operation of fire systems:
 - layout
 - system operation
 - performance requirements
 - maintenance standards
 - system activation and operation
- passive fire safety elements:
 - identification of passive elements
 - impact of fire systems design on passive elements
 - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- interconnection of fire systems:
 - cause and effect matrix
 - interface with other services

- construction industry terminology
- different types of buildings for fire systems design projects:
 - residential
 - commercial
 - industrial
 - mixed classification
- building classifications:
 - classifications in the BCA such as:
 - occupancy classes
 - multiple classifications
 - parts with more than one classification
 - classifications specified in relevant Australian or international standards
 - classifications relating to standards or codes applied by building insurers
- how to access relevant information, including codes and standards
- relevant work health and safety (WHS) requirements to define scope and hazard level of fire systems design projects.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCSFS5002 Research and interpret detailed fire systems design project requirements

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCSFS5002A Research and interpret detailed fire systems design project requirements. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the outcomes required to obtain and process design drawings and documentation required for the preparation of detailed fire systems designs and to make an initial assessment of how the fire systems are affected by other aspects of the project. The unit also covers researching detailed fire systems compliance requirements and regulatory processes and negotiating solutions to conflicts arising between the design brief and compliance or installation requirements.

This unit of competency supports the role of fire systems designers who need to gather and process fire systems design project drawings and documentation and establish the detailed design and compliance requirements for fire systems. The role also involves assessing the impact of building construction and services installation on the detailed fire systems design and negotiating solutions to any conflicts arising.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Gather and interpret project initiation documentation.
 - 1.1 Gather and check fire systems design briefs, plans and specifications for currency and completeness.
 - 1.2 Interpret the specific requirements of engineered or innovative solutions, designed and specified by fire engineers.
 - 1.3 Request, obtain and file relevant drawings, plans and schedules for the building project according to workplace and project procedures.
 - 1.4 Assess impacts of building construction and the installation of other services on fire systems design to pre-empt possible issues.

- 2 Research the detailed requirements of relevant legislation and regulatory processes.
 - 2.1 Investigate legislation impacting on design compliance in different project locations and interpret and note variations in requirements.
 - 2.2 Interpret regulatory requirements impacting on fire systems designs and project processes and specific requirements in different states, territories and jurisdictional locations.
 - 2.3 Identify different climatic or locational conditions and their impact on the operational performance of the designed fire systems.

- 3 Research the detailed requirements of applicable codes and standards.
 - 3.1 Gather and check applicable codes and standards for currency.
 - 3.2 Research and interpret requirements relating to specific fire systems in different types of buildings and situations.
 - 3.3 Determine and apply the appropriate code requirements for the building and situation.

- 4 Consult and negotiate to clarify and finalise project details.
 - 4.1 Confirm the interpretation of the required fire systems design and intended layout and interconnection with relevant personnel.
 - 4.2 Undertake consultation and negotiations with relevant personnel to resolve conflicts between the design brief, regulatory or insurance requirements, the requirements of

building construction, and the installation of the fire systems and other services.

- 4.3 Clarify aesthetic requirements relating to the location of fire system components and installation methods and negotiate solutions.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCSFS5002A Research and interpret detailed fire systems design project requirements.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCSF5002 Research and interpret detailed fire systems design project requirements

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCSF5002A Research and interpret detailed fire systems design project requirements. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- establishing the detailed design requirements of fire systems design projects, including discretionary client requirements for four different types of buildings, including:
 - commercial building
 - factory
 - residential nursing home
 - high-rise building.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace design tools and processes
- drawings, plans and schedules for the building project:
 - architectural
 - structural
 - mechanical
 - hydraulic
 - electrical
 - layout
 - section
 - detail
 - project schedule or construction program
 - design brief
 - design specifications
- level of accuracy required in detailed design drawings

- compliance requirements for fire systems design projects in different locations
- aesthetic requirements relating to the location of fire system components
- relevant current legislation, codes and standards:
 - building Acts
 - building regulations
 - infrastructure supply regulations
 - the Building Code of Australia (BCA)
 - the Plumbing Code of Australia
 - Australian standards for fire systems
 - National Construction Code (NCC)
 - jurisdictional authorities in addition to the BCA and NCC
 - international standards for fire systems
- regulatory requirements, systems and processes:
 - mandatory requirements
 - design approval
 - fire brigade requirements
 - certification of installation
 - infrastructure supply regulations
- protection requirements for different buildings
- fire systems' technology and components:
 - water-based systems:
 - wet pipe sprinkler systems
 - deluge and drencher systems
 - dry pipe sprinkler systems
 - pre-action sprinkler systems
 - early suppression fast response (ESFR)
 - hydrants, hose reels and monitors
 - water supply tanks
 - fire pump sets
 - high pressure water mist systems
 - gas suppression systems
 - detection and warning systems:
 - occupant warning systems
 - emergency warning and intercommunications systems (EWIS)
 - fire detection and alarm systems
 - smoke control systems
- purpose and operation of fire systems:
 - layout
 - system operation
 - performance requirements

- maintenance standards
- system activation and operation
- passive fire safety elements:
 - identification of passive elements
 - impact of fire systems design on passive elements
 - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- interconnection of fire systems:
 - cause and effect matrix
 - interface with other services
- construction industry terminology
- roles and responsibilities of relevant building project personnel:
 - builders
 - consultants
 - trades
 - commissioning personnel
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems and other services
- installation methods:
 - access requirements
 - work health and safety (WHS) requirements
- fluid mechanics and hydraulics relating to
 - water supply
 - pressure
 - pump selection
 - tank selection
 - pressure vessels
 - pipe range
- sustainability requirements and ratings:
 - energy conservation
 - water conservation
- types of fire systems for projects and classifications, including:
 - low-rise buildings
 - processing building applications
 - warehouse buildings under 13.7 m high
 - warehouse buildings over 13.7 m high
 - medium-rise buildings
 - high-rise buildings (over 25 metres)

- buildings over 50 metres in height
- types of buildings and situations:
 - different types of buildings:
 - residential
 - commercial
 - industrial
 - warehouse
 - mixed classification
 - buildings in different locations:
 - local
 - involving more than one state or territory
 - classifications of buildings in the BCA:
 - occupancy classes
 - multiple classifications
 - parts with more than one classification
 - fire hazard properties of materials and smoke growth rate
 - classifications of buildings specified in relevant Australian or international standards
 - classifications of buildings relating to standards or codes applied by building insurers.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCSFS5003 Develop plans and methodology for fire systems design projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCSFS5003A Develop plans and methodology for fire systems design projects. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the outcomes required to ensure a quality result for the detailed design of fire systems through work organisation, planning and methodology.

This unit of competency supports the role of fire systems designers who manage their own work and take responsibility for ensuring that detailed designs of fire systems are produced within required timeframes and to the standards required for approval of such designs.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify and apply procedures for initiating fire systems design projects.

1.1 Identify various project file-sharing and communication systems, tools and methods to ensure efficient and effective operation.

1.2 Use project and file-naming systems according to workplace and project requirements.

- 1.3 Identify efficient and effective document filing and storage systems according to workplace and project requirements.
 - 1.4 Identify systems for efficient tracking and filing of project communications according to workplace and project requirements.
 - 1.5 Identify a system for ensuring relevant project documentation is requested, received, named and filed according to workplace procedures.
- 2 Develop a plan for setting up fire systems design projects.
 - 2.1 Develop plan for setting up correct computer-aided design (CAD) backgrounds according to workplace and project requirements.
 - 2.2 Develop systematic processes for identifying and importing the correct layer drawings into CAD according to workplace and project requirements.
- 3 Develop a plan and methodology for designing fire systems.
 - 3.1 Develop actions and timeframes in the design process for fire systems according to workplace, project requirements, quality assurance and other regulatory approval, as required.
 - 3.2 Determine stages where regulatory or other approval is required for the design and establish procedures to ensure that these are obtained.
 - 3.3 Identify applicable fire codes, standards and data sheets from relevant authorities and underwriters.
- 4 Develop a plan and methodology for finalising fire systems design projects.
 - 4.1 Establish actions and timeframes in the fabrication and installation support process according to workplace and project requirements.
 - 4.2 Establish final drawing and documentation requirements according to workplace and project requirements.
 - 4.3 Establish timelines for long lead items such as fire tanks, fire pumps and specialist overseas equipment.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCSFS5003A Develop plans and methodology for fire systems design projects.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCSF5003 Develop plans and methodology for fire systems design projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCSF5003A Develop plans and methodology for fire systems design projects. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- developing a project plan and methodology for a minimum of four types of fire systems design projects, including:
 - commercial building
 - factory
 - residential nursing home
 - high-rise building.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace design tools and processes
- project documentation:
 - drawings
 - architectural
 - structural
 - mechanical
 - hydraulic
 - electrical
 - layout
 - section
 - detail
 - final drawings:
 - 'as installed' drawings
 - block plans

- tactical fire plans
- commissioning benchmarks
- operations and maintenance manuals
- project schedule or construction program
- design brief
- design specifications
- compliance and quality requirements for fire systems design projects, including:
 - low-rise buildings
 - processing building applications
 - warehouse buildings under 13.7 m high
 - warehouse buildings over 13.7 m high
 - medium-rise buildings
 - high-rise buildings (over 25 metres)
 - buildings over 50 metres in height
- communication and negotiation processes
- level of accuracy required in detailed design drawings, plans and reports
- fire systems design activities, including installation support and finalisation
- naming conventions for design drawings and drawing register
- computer software functions and operation:
 - word processing
 - spreadsheet
 - email
 - internet
- fire systems technology and components:
 - water-based systems:
 - wet pipe sprinkler systems
 - deluge and drencher systems
 - dry pipe sprinkler systems
 - pre-action sprinkler systems
 - early suppression fast response (ESFR)
 - water spray systems
 - water mist systems
 - wet chemical suppression systems
 - foam suppression systems
 - hydrants, hose reels and monitors
 - water supply tanks
 - fire pump sets
 - detection and warning systems:
 - occupant warning systems
 - emergency warning and intercommunications systems (EWIS)

- fire detection and alarm systems
- smoke control systems
- emergency lighting systems
- purpose and operation of fire systems:
 - special products and hazards
 - system operation
 - performance requirements
 - maintenance standards
 - system activation and operation
- passive fire safety elements
- identification of passive element:
 - impact of fire systems design on passive elements
- construction industry terminology
- roles and responsibilities of relevant building project team and personnel, including:
 - architect
 - lead contractor
 - mechanical engineer or contractor
 - hydraulic engineer or contractor
 - electrical engineer or contractor
 - client
 - consulting engineer
 - civil engineers
 - fire engineers
 - building (private) certifier or surveyor
- project management processes, including scheduling, communications and file sharing
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems and other services
- regulatory or other approval:
 - building certifier or surveyor
 - fire brigade
 - fire engineer.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCSFS5005 Research and evaluate fire system technologies and components

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCSFS5005A Research and evaluate fire system technologies and components. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the outcomes required to research, evaluate and select existing, new and incoming technologies and components for fire system detection and suppression systems. The unit also involves developing a broad understanding of the range of products available and their application, operation, performance and interaction.

This unit of competency supports the work of fire systems' designers and certifiers who need to:

- understand the characteristics, operation and interaction of fire system technologies and components
- select and assess fire system technologies and components.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|--|-----|--|
| 1 | Research and evaluate fire suppression | 1.1 | Research and identify the range of technologies and components for fire suppression systems. |
|---|--|-----|--|

- systems.
- 1.2 Assess the suitability of fire suppression systems to different types of buildings and situations with reference to relevant legislation, codes and standards and client requirements.
 - 1.3 Determine the performance characteristics and limitations of fire suppression systems.
 - 1.4 Analyse fire suppression system failures and propose appropriate design solutions.
 - 1.5 Select suitable and cost-effective fire suppression system technologies and components for buildings, situations and climatic conditions.
- 2 Research and evaluate fire detection and occupant warning systems.
- 2.1 Identify technologies and components available for fire detection and occupant warning systems.
 - 2.2 Assess the suitability of fire detection and occupant warning systems to different types of buildings and situations with reference to relevant legislation, codes and standards.
 - 2.3 Determine the performance characteristics and limitations of fire detection and occupant warning systems.
 - 2.4 Select suitable and cost-effective fire detection and occupant warning system technologies and components for buildings and situations.
- 3 Analyse and specify the interaction of fire systems.
- 3.1 Analyse and specify the required interactions for effective operation of fire systems in different types of buildings and situations.
 - 3.2 Identify and examine the interfaces that affect interactions between fire systems in different types of buildings and situations.
 - 3.3 Select suitable fire detection and suppression systems for buildings and situations and specify the interactions and interfaces required for effective performance.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCSFS5005A Research and evaluate fire system technologies and components.

Assessment Requirements for CPCSF5005 Research and evaluate fire system technologies and components

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCSF5005A Research and evaluate fire system technologies and components. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- researching, evaluating and selecting fire detection and suppression systems for four types of fire systems design applications, including:
 - sprinklers
 - water mist
 - deluge/pre-action
 - gas suppression.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- drawings, plans, reports and specifications
- manufacturer specifications and technical performance data for fire detection and suppression technologies and components
- applications for different fire systems design projects:
 - low-rise buildings
 - processing building applications
 - warehouse buildings under 13.7 m high
 - warehouse buildings over 13.7 m high
 - medium-rise buildings
 - high-rise buildings (over 25 metres)
 - buildings over 50 metres in height
- interactions and interfaces between fire detection and suppression systems
- suitability of fire detection and suppression systems technology and components
- performance and cost-effectiveness of different technologies and components
- workplace design tools and processes

- computer software functions and operation:
 - word processing
 - spreadsheet
 - email
 - internet
- relevant current legislation, codes and standards:
 - building Acts
 - building regulations
 - infrastructure supply regulations
 - the Building Code of Australia (BCA)
 - National Construction Code (NCC)
 - Australian standards for fire systems
 - international standards for fire systems
 - jurisdictional authorities in addition to the BCA and NCC
 - other fire system standards commonly required by building insurers
- fire systems technology and components:
 - water-based systems:
 - wet pipe sprinkler systems and components
 - deluge and drencher systems
 - dry pipe sprinkler systems and components
 - pre-action sprinkler systems and components
 - early suppression fast response (ESFR) sprinklers and components
 - water spray systems
 - water mist systems
 - wet chemical suppression systems
 - foam suppression systems
 - hydrants, hose reels and monitors
 - water supply tanks
 - fire pump sets
 - fire control panels
 - valves
 - gaseous suppression systems
 - detection and warning systems:
 - occupant warning systems
 - emergency warning and intercommunications systems (EWIS)
 - fire detection and alarm systems
 - smoke control systems
 - emergency lighting systems
 - fire control panels
- purpose and operation of fire systems:

- layout
- high hazard products
- system operation
- performance requirements
- maintenance standards
- system activation and operation
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility:
 - system activation and operation
 - effect of fire, heat and smoke of component materials
 - interaction with other systems and services
- interconnection of fire systems:
 - cause and effect matrix
 - interface with other services
- water supplies:
 - common water sources
 - conservation requirements
 - in-ground reticulation
 - booster configurations
- fluid mechanics and hydraulics relating to:
 - water supply
 - pressure
 - pump selection
 - tank selection
 - pressure vessels
 - pipe range
- sustainability requirements and ratings:
 - energy conservation
 - water conservation
- electrical and electronics theory:
 - units used to measure current (alternating current (AC) and direct current (DC)), power, capacitance, inductance and sound attenuation
 - definition of voltage ratings and requirements applicable to fire detection and warning systems as defined in communication and electrical safety regulations, including extra-low voltage (ELV), low voltage (LV) and hazardous voltages
 - basic operation of common electronic and electrical components used in fire detection and warning systems including:
 - basic operation of communication protocols on addressable systems
 - peripheral devices (printers)
 - interfaces to other communication systems to high level or low level
- communication technologies:

- data transfer
- networking
- communication protocols
- radio frequency technologies.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCSFS5006 Create detailed designs for fire sprinkler systems

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCSFS5006A Create detailed designs for fire sprinkler systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the outcomes required to obtain, process and set up drawings for the detailed design of fire sprinkler systems. The unit also involves assessing and selecting component requirements, setting out the locations of components, and creating final notated drawings.

This unit of competency supports the role of fire systems designers with responsibility for creating detailed designs for sprinkler fire suppression systems.

Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|--|
| 1 Set up fire systems design drawings. | 1.1 Request, receive, name and file relevant project drawings and documentation according to workplace procedures. |
| | 1.2 Clean drawings to leave minimal essential information. |
| | 1.3 Import layers showing designs of other services into clean architectural or structural drawings. |

- 1.4 Add details from drawings of the floor of the level above, if these affect the design.
 - 1.5 Name, file and back up the detailed design drawings according to workplace procedures.
 - 2 Calculate preliminary data.
 - 2.1 Develop floor area calculations to determine the number of sprinkler zones.
 - 2.2 Determine the sprinkler occupancy classifications, minimum sprinkler flow and initial fire flow demands based on classifications for the site.
 - 2.3 Determine and analyse the town main water capabilities for the fire services serving the site to identify if fire pumps and fire tanks are required.
 - 2.4 Calculate the proposed fire pump flow and pressure and fire tank sizes.
 - 2.5 Prepare a comparison list of equipment which can be used across the site.
 - 3 Lay out the fire sprinkler system design.
 - 3.1 Determine and notate the exact location of sprinklers on the drawing according to relevant codes and standards.
 - 3.2 Determine and notate the most efficient and workable layout and location of sprinkler system components on the drawing according to regulatory requirements, standards and regulations.
 - 3.3 Design pipework layout and coordinate with building elements and services and identify pipework sizes and elevations across the systems.
 - 3.4 Calculate, check and notate dimensions on the drawing according to regulatory requirements, standards and regulations.
 - 3.5 Undertake hydraulic analysis of the fire systems using both hand calculation procedures and computer modelling programs.
 - 3.6 Validate fire pump and tank sizes with initial estimates.

- 3.7 Develop detailed designs of pipework for complicated interaction of pipework and building elements and services.
 - 3.8 Develop detailed designs of pipework configurations for fire tanks, fire pumps, brigade booster and suction points and alarm valves, including manifold systems and flow switch arrangements.
- 4 Submit drawings for approval and finalise design process.
 - 4.1 Submit fire sprinkler system design drawings to relevant personnel within the scheduled timeframe.
 - 4.2 Make or negotiate required amendments to design drawings as required.
 - 4.3 Process and distribute final approved design drawings according to project and regulatory requirements, standards and regulations.
 - 4.4 Select fittings and components according to project and regulatory requirements, standards and regulations.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCSFS5006A Create detailed designs for fire sprinkler systems.

Links

Assessment Requirements for CPCSF5006 Create detailed designs for fire sprinkler systems

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCSF5006A Create detailed designs for fire sprinkler systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing fire sprinkler systems for four different types of buildings, including:
 - commercial building
 - factory
 - residential nursing home
 - high-rise building.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace design tools and processes:
 - effective and workable layout and location:
 - selection of cost-effective components and materials
 - consideration of:
 - penetrations
 - conflict with other services
 - work health and safety (WHS) risks
 - access constraints
 - installation problems
 - aesthetic requirements
 - efficiencies to facilitate work on site and reduce labour costing
 - negotiations regarding amendments:
 - non-compliance with applicable legislation, codes and standards
 - impact on installation risks and constraints
 - impact on cost-effectiveness

- level of accuracy required in detailed design drawings
- storage and sharing design drawings
- naming conventions for design drawings and drawing register
- computer software functions and operation:
 - word processing
 - spreadsheet
 - email
 - internet
 - proprietary hydraulic calculation software
- relevant current legislation, codes and standards:
 - building Acts
 - building regulations
 - infrastructure supply regulations
 - the Building Code of Australia (BCA)
 - National Construction Code (NCC)
 - Australian standards for fire systems
 - international standards for fire systems
 - jurisdictional authorities in addition to the BCA and NCC
 - other fire system standards commonly required by building insurers
- fire systems technology and components for water-based systems:
 - wet pipe sprinkler systems
 - deluge and drencher systems
 - dry pipe sprinkler systems
 - pre-action sprinkler systems
 - early suppression fast response (ESFR)
 - discharge nozzles
 - pipework
 - pipework supports
 - system valves
 - zone valves
 - sprinkler heads
 - Pipework fittings
 - control valves
- purpose and operation of fire systems:
 - layout
 - system operation
 - performance requirements
 - maintenance standards
 - system activation and operation

- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- regulatory approval and fire systems design certification processes
- compliant designs for fire sprinkler systems for a range of types of sites, including:
 - low-rise buildings
 - medium-rise buildings
 - high-rise buildings (over 25 metres)
 - buildings over 50 metres in height
- construction industry terminology
- roles and responsibilities of relevant building project personnel:
 - architect

- pipe fabrication methods and constraints
- mathematic principles, equations and calculation methods:
 - flow calculations:
 - area of operations
 - discharge rates and quantities
 - discharge times
 - pressure gain and loss
 - K-factors
 - pressure, temperature and volume relationship
 - Hazen-Williams equation
 - Darcy-Weisbach equation
 - computational fluid dynamics
- project drawings and documentation:
 - architectural
 - structural
 - mechanical
 - electrical
 - hydraulic
 - fire engineer's or estimator's specifications.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCSFS5007 Create detailed designs for hydrant and hose reel systems

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCSFS5007A Create detailed designs for hydrant and hose reel systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to obtain, process and set up drawings for the detailed design of hydrant and hose reel systems for low to high-rise buildings over 25 metres and 45 metres in height.

This unit of competency supports the role of fire systems designers and hydraulic design consultants who manage their own work and take responsibility for assessing and selecting component requirements, setting out the locations of components and creating final notated drawings for hydrant and hose reel systems.

The role may involve interaction with fire engineers, architects, contractors, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes, including the National Construction Code (NCC).

This unit does not apply to fire systems for special hazard locations.

Licensing, legislative, regulatory or certification requirements may apply to this unit.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Set up fire systems design drawings.
 - 1.1 Access and review project drawings and documentation.
 - 1.2 Clean drawings to leave minimal essential information.
 - 1.3 Import layers showing designs of other services into clean architectural or structural drawings.
 - 1.4 Add details from drawings of the floor level above, if these affect the design.
 - 1.5 Process the detailed design drawings in accordance with workplace procedures.

- 2 Lay out the hydrant and hose reel design.
 - 2.1 Conduct a site visit if possible, to confirm dimensions and assess installation risks and constraints.
 - 2.2 Determine the exact location of hydrants and hose reels and notate on the drawing according to relevant codes and standards.
 - 2.3 Determine the most efficient and workable layout and location of hydrant and hose reel system components and notate on the drawing.
 - 2.4 Calculate and check dimensions and notate on the drawing.

- 3 Submit drawings for approval and finalise design process.
 - 3.1 Submit fire hydrant and hose reel system design drawings to relevant persons within the scheduled timeframe.
 - 3.2 Make or negotiate amendments to design drawings as required.
 - 3.3 Process and distribute final approved design drawings according to project and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCSFS5007A Create detailed designs for hydrant and hose reel systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCSF5007 Create detailed designs for hydrant and hose reel systems

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCSF5007A Create detailed designs for hydrant and hose reel systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- producing fully compliant designs for hydrant and hose reel systems for the following sites:
 - low-rise building
 - medium-rise building
 - high-rise building (over 25 metres)
 - building over 45 metres in height
 - building classifications in the National Construction Code (NCC).
- processing design drawings using parametric modelling software and workplace procedures.

Designs for all the above include:

- fire engineer's designs for alternative solutions
- technical issues impacting on hydrant and hose reel system designs
- relevant regulatory approval and fire systems design certification processes.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace design tools and processes
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- fire science:
 - fire behaviour and dynamics
 - impact of fire on structures and materials
 - products of combustion

- fire control strategies
- fire retardants
- fire detection technologies
- fire suppression technologies
- fire containment
- computer software functions and operation:
 - word processing
 - spreadsheet
 - email
 - internet
 - proprietary project management software
 - proprietary hydraulic calculation software
 - parametric modelling software
- relevant current legislation, codes and standards:
 - building acts
 - building regulations
 - infrastructure supply regulations
 - National Construction Code (NCC)
 - Australian standards for fire systems
 - international standards for fire systems
 - other fire system standards commonly required by building insurers
- protection requirements for different buildings
- fire systems technology and components for hydrant and hose reel systems
- purpose and operation of fire systems:
 - layout
 - system operation
 - performance requirements
 - maintenance standards
 - system activation and operation
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- passive fire safety elements:
 - identification of passive elements
 - impact of fire systems design on passive elements
 - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- interconnection of fire systems:
 - cause and effect matrix
 - interface with other services
- basic principles of structural engineering

- characteristics of building materials
- construction industry terminology
- roles and responsibilities of relevant building project personnel:
 - architect
 - lead contractor
 - mechanical engineer
 - hydraulic engineer
 - electrical engineer
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems and other services
- installation methods:
 - access requirements
 - work health and safety (WHS) requirements
- sustainability requirements and ratings:
 - energy conservation
 - water conservation
- pipe fabrication methods and constraints
- mathematical principles, equations and calculation methods:
 - financial calculations, for example to assess cost-effectiveness of fire systems
 - trigonometry, for example to amend dimensions of pipe allowing for fittings
- flow calculations:
 - area of operations
 - discharge rates and quantities
 - discharge times
 - pressure gain and loss
 - K-factors
 - pressure, temperature and volume relationship
 - Hazen-Williams equation
 - Darcy-Weisbach equation
 - computational fluid dynamics
- principles of organic and inorganic chemistry
- basic principles of thermodynamics:
 - effects of heat
 - stratification of gases
 - smoke and heat dynamics
- contractual processes
- project drawings:
 - architectural
 - structural
 - mechanical

- electrical
- hydraulic
- fire engineer's or estimator's specifications
- efficient and workable layout and location considerations:
 - selection of cost-effective components and materials
 - penetrations
 - conflict with other services
 - WHS risks
 - access constraints
 - installation problems
 - aesthetic requirements
 - efficiencies to facilitate work on site and reduce labour costing
- negotiations regarding amendments to design drawings which may arise due to:
 - non-compliance with applicable legislation, codes and standards
 - impact on installation risks and constraints
 - impact on cost-effectiveness
- hydrant and hose reel system components:
 - hose reels
 - hydrant valves
 - booster valves.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCSFS5008 Create detailed designs for fire detection and warning systems

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCSFS5008A Create detailed designs for fire detection and warning systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to obtain, process and set up drawings for the detailed design of fire detection and warning systems low to high-rise buildings over 25 metres and 50 metres in height.

The unit involves assessing and selecting component requirements, setting out the locations of components and creating final notated drawings.

This unit of competency supports the role of fire systems' designers with responsibility for creating detailed designs for fire detection and warning systems.

The role may involve interaction with fire engineers, architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes, including the National Construction Code (NCC).

Licensing, legislative, regulatory or certification requirements may apply to this unit, requirements should be confirmed with the relevant government body.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Set up fire systems design drawings.
 - 1.1 Request and obtain project drawings and documentation and name and file according to workplace procedures.
 - 1.2 Clean drawings to leave minimal essential information.
 - 1.3 Import layers showing designs of other services into clean architectural or structural drawings.
 - 1.4 Add details from drawings of the floor level above, if these affect the design.
 - 1.5 Process detailed design drawings according to workplace procedures.
- 2 Lay out the fire systems design.
 - 2.1 Determine the exact location of the fire detection and warning system and notate on the drawing.
 - 2.2 Determine the most efficient and workable layout and location of fire detection and warning systems components and notate on the drawing.
 - 2.3 Calculate and check dimensions and notate on the drawing.
- 3 Specify component capacities and characteristics.
 - 3.1 Complete electrical calculations to assess requirements and confirm cable ranges.
 - 3.2 Specify components which are most suitable to the application.
 - 3.3 Design and specify electronic interfaces with other services.
 - 3.4 Prepare system performance requirements and commissioning procedures and specifications according to relevant codes and standards and component manufacturer's recommendations, workplace and project requirements.
- 4 Submit drawings for approval and finalise design process.
 - 4.1 Submit fire detection and warning system design drawings to relevant personnel within the scheduled timeframe.
 - 4.2 Make or negotiate required amendments to design

drawings as required.

- 4.3 Process and distribute final approved design drawings according to project requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

- Supersedes and is equivalent to CPCSF5008A Create detailed designs for fire detection and warning systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- producing fully compliant designs for fire detection and warning systems for the following sites:
 - low-rise building
 - medium-rise building
 - high-rise building (over 25 metres)
 - building over 50 metres in height
 - building classifications in the National Construction Code (NCC).
- processing design drawings using parametric modelling software which include:
 - relevant standards, codes, workplace procedures, regulatory and manufacturer requirements within agreed project timeframes
 - relevant regulatory approval and fire systems design certification processes
 - technical issues impacting on fire detection and occupant warning system designs
 - fire engineer's designs for alternative solutions.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace design tools and processes
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- computer software functions and operation:
 - word processing
 - spreadsheet
 - email
 - internet

- parametric modelling software
- BASIC computer programming language
- current legislation, codes and standards:
 - building acts
 - building regulations
 - infrastructure supply regulations
 - Building Code of Australia (BCA)
 - National Construction Code (NCC)
 - Australian standards for fire systems
 - international standards for fire systems
 - jurisdictional authorities in addition to the BCA and NCC
 - other fire system standards commonly required by building insurers
- protection requirements for different buildings
- purpose and operation of fire systems:
 - layout
 - special products and hazards
 - system operation
 - performance requirements
 - maintenance standards
 - system activation and operation
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- construction industry terminology
- roles and responsibilities of relevant building project personnel:
 - architect
 - lead contractor
 - mechanical engineer
 - hydraulic engineer
 - electrical engineer
- installation methods:
 - access requirements
 - work health and safety (WHS) requirements
- sustainability requirements and ratings relating to:
 - energy conservation
- electrical and electronics theory:
 - units used to measure current (alternating current (AC) and direct current (DC)), power, capacitance, inductance and sound attenuation
 - definition of voltage ratings and requirements applicable to fire detection and warning systems as defined in communication and electrical safety regulations, including extra-low voltage (ELV), low voltage (LV) and hazardous voltages

- basic operation of common electronic and electrical components used in fire detection and warning systems including:
 - basic operation of communication protocols on addressable systems
 - peripheral devices (printers)
 - interfaces to other communication systems to high level or low level
- communication technologies:
 - data transfer
 - networking
 - communication protocols
 - radio frequency technologies
- acoustics and speech intelligibility for occupant warning systems
- financial management:
 - budgeting
 - cost-effectiveness
- contractual processes
- project drawings and documentation:
 - architectural
 - structural
 - mechanical
 - electrical
 - hydraulic
 - water-based fire suppression systems
 - fire engineer's or estimator's specifications
- efficient and workable layout and location relating to:
 - penetrations
 - conflict with other services
 - interfaces with other services
 - WHS risks
 - access constraints
 - installation problems
 - aesthetic requirements
 - efficiencies to facilitate work on site and reduce labour costing
 - selection of cost-effective components and materials
- detection and warning system components:
 - EWIS
 - fire detection and alarm systems
 - smoke control systems
 - emergency lighting systems
 - manual call buttons
 - amplifiers

- speakers
- emergency lighting
- fire alarm and control panels:
 - conventional
 - addressable
- detectors:
 - heat
 - smoke
 - flame sensing
 - spot
 - projected beam
 - aspiration type
- power source
- batteries
- cabling
- fireproof cable
- electrical calculations:
 - the voltage drop in a wiring path given the required electrical parameters
 - battery capacity requirements given the required performance parameters
 - power supply and battery charge capacity requirements given the required performance parameters
 - Cable Services Australia (CSA) cable size and cabling medium type given the required electrical performance parameters
 - total power supply consumption requirements of field equipment in normal and active (alarm) state given the required electrical performance parameters of equipment installed
 - the number of points, circuits and zones on a system given the required performance parameters of a wiring path
- negotiations regarding amendments to design drawings arising due to:
 - non-compliance with applicable legislation, codes and standards
 - impact on installation risks and constraints
 - impact on cost-effectiveness.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCSFS5009 Create detailed designs for fire systems' water supplies

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCSFS5009A Create detailed designs for fire systems' water supplies. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the outcomes required to obtain, process and set up drawings for the detailed design of water supplies for fire systems. The unit also involves assessing and selecting component requirements, setting out the locations of components and creating final notated drawings.

This unit of competency supports the role of fire systems designers with responsibility for creating detailed designs for water supplies for fire systems.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|--|
| 1 Confirm water-based fire systems designs. | 1.1 Request, receive, name and file relevant project drawings and documentation according to workplace procedures. |
| | 1.2 Confirm details and dimensions and to assess water supply installation risks and constraints. |

- 1.3 Notate the exact location of fire system components on detailed design drawings according to relevant codes and standards.
 - 1.4 Name, file and back up the detailed design drawings according to workplace procedures.
 - 2 Calculate pipe sizes and pump and tank requirements.
 - 2.1 Determine the initial fire flow demands for the site based on the occupancy classifications.
 - 2.2 Analyse water flow and pressure test results to establish the minimum levels of available supply in accordance with local jurisdictional requirements.
 - 2.3 Determine and analyse the town main water capabilities for the fire services serving the site to identify if fire pumps and fire tanks are required.
 - 2.4 Consider options for cost-effective and efficient solutions with reference to manufacturer specifications for the performance of components and according to workplace policies.
 - 3 Lay out the water supply design.
 - 3.1 Identify methodologies used in making town main connections.
 - 3.2 Determine and notate the most efficient and workable layout and location of water supply components on the drawings according to workplace procedures.
 - 3.3 Calculate, check and notate dimensions on the drawings according to relevant codes and standards and component manufacturer's recommendations and workplace procedures.
 - 3.4 Determine the locations of backflow prevention devices and their accessibility.
 - 3.5 Review proposed locations of booster connections with local fire authority.
 - 4 Submit drawings for approval and finalise
 - 4.1 Submit water supply design drawings to relevant personnel within the scheduled timeframe.

- design process.
- 4.2 Make or negotiate required amendments to design drawings as required.
 - 4.3 Process and distribute final approved design drawings according to relevant codes and standards and component manufacturer's recommendations workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCSFS5009A Create detailed designs for fire systems' water supplies.

Assessment Requirements for CPCSF5009 Create detailed designs for fire systems' water supplies

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCSF5009A Create detailed designs for fire systems' water supplies. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- effectively applying principles relating to the design of water supplies for fire systems for four types of buildings including a:
 - commercial building
 - factory
 - residential nursing home
 - high-rise building.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace design tools and processes
- project drawings and documentation:
 - proposed water-based fire system designs
 - mechanical
 - electrical
 - hydraulic
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- computer software functions and operation:
 - word processing
 - spreadsheet
 - email
 - internet
- relevant current legislation, codes and standards:

- building Acts
- building regulations
- infrastructure supply regulations
- the Building Code of Australia (BCA)
- National Construction Code (NCC)
- Australian standards for fire systems
- international standards for fire systems
- jurisdictional authorities in addition to the BCA and NCC
- other fire system standards commonly required by building insurers
- protection requirements for different buildings including:
 - low-rise buildings
 - processing building applications
 - warehouse buildings under 13.7 m high
 - warehouse buildings over 13.7 m high
 - medium-rise buildings
 - high-rise buildings (over 25 metres)
 - buildings over 50 metres in height
- fire systems' technology and components
- fire system water supply technology and components:
 - electric pumps
 - diesel pumps
 - tanks
 - pressure vessels
 - booster configurations
 - components for water recovery systems
- purpose and operation of fire systems:
 - layout:
 - consideration of a range of sustainable options for producing the required water pressure for water-based fire systems
 - selection of cost-effective components and materials
 - consideration of:
 - conflict with other services
 - work health and safety (WHS) risks
 - access constraints
 - installation problems
 - aesthetic requirements
 - efficiencies to facilitate work on site and reduce labour costing
 - performance requirements
 - maintenance standards

- characteristics and limitations of products and materials used in water supplies for fire systems and issues relating to material compatibility
- construction industry terminology
- roles and responsibilities of relevant building project personnel:
 - architect
 - lead contractor
 - structural engineer
 - mechanical engineer
 - hydraulic engineer
 - electrical engineer
 - civil engineer
 - fire engineer
 - building (private) certifier or surveyor
- installation methods:
 - access requirements
 - WHS requirements
- water supplies:
 - common water sources
 - conservation requirements
 - in-ground reticulation
 - booster configurations
- fluid mechanics and hydraulics relating to:
 - water supply
 - pressure
 - tank selection
 - pressure vessels
 - pipe range
- fluid dynamics, hydraulics and the calculations required for the design of water supplies for fire systems
- sustainability requirements and ratings:
 - energy conservation
 - water conservation
- pipe fabrication methods and constraints
- mathematic principles, equations and calculation methods:
 - flow calculations, including:
 - pressure gain and loss
 - K-factors
 - Hazen-Williams equation
 - Darcy-Weisbach equation
 - Colebrook White equations and/or tables

- Manning formula and/or tables
- AS 2200 Design charts for water supply and sewerage
- computational fluid dynamics.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCSFS5010 Provide documentation and support for fabrication of fire sprinkler systems

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCSFS5010A Provide documentation and support for fabrication of fire sprinkler systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the outcomes required to assess issues relating to on-site installation of pipework for sprinkler systems. The unit also involves producing specifications and supporting documentation for the cost-effective fabrication of manageable pipework sections.

This unit of competency supports the role of fire systems designers with responsibility for creating specifications and drawings for the fabrication of pipework sections for fire sprinkler systems.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|--|-----|--|
| 1 Determine the impact on fabrication plans of installation risks and constraints. | 1.1 | Identify on-site work health and safety (WHS) risks relating to the installation of sprinkler systems. |
| | 1.2 | Identify constraints relating to access to on-site installation locations for sprinkler system pipes and |

- components.
- 1.3 Consider impact of installation risks and constraints on fabrication plans for fire sprinkler system pipes and components and determine cost-effective and manageable solutions.
- 2 Plan and specify pipes, fittings and components.
- 2.1 Obtain and analyse current accurate drawings and documentation, and take measurements on-site during construction if possible, to confirm the accuracy of building dimensions.
 - 2.2 Check and confirm the dimensions and design drawing locations of the selected fittings and components.
 - 2.3 Plan and specify fittings and components for ease and safety of installation and to provide cost-effective solutions.
 - 2.4 Calculate, specify and number pipe lengths on relevant drawings.
 - 2.5 Review and apply efficiency and cost effectiveness of relevant pipe materials, pipe fitting methodologies for design.
- 3 Produce fabrication documentation.
- 3.1 Confirm and specify appropriate pipe materials and features.
 - 3.2 Consult supplier as necessary to discuss and negotiate efficient and cost-effective pipe fabrication options.
 - 3.3 Number and detail individual pipe specifications on fabrication lists.
 - 3.4 Supply drawings to support fabrication specifications, as required.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCSFS5010A Provide documentation and support for fabrication of fire sprinkler systems.

 - warehouse buildings under 13.7 m high
 - warehouse buildings over 13.7 m high
 - medium-rise buildings
 - high-rise buildings (over 25 metres)
 - buildings over 50 metres in height
- fire systems' technology and components, including water-based systems:
 - wet pipe sprinkler systems
 - deluge and drencher systems
 - dry pipe sprinkler systems
 - pre-action sprinkler systems
 - early suppression fast response (ESFR)
 - gaseous suppression systems
 - water spray systems
 - water mist systems
 - wet chemical suppression systems
 - foam suppression systems
 - hangers
 - sprinkler heads
 - nozzles
 - elbows
 - tees
 - pumps
 - tanks
- purpose and operation of fire systems:
 - layout
 - location:
 - ceiling space
 - roof space
 - under-floor
 - under-soffit
 - special products and hazards
 - system operation:
 - deluge and drencher systems
 - dry pipe sprinkler systems
 - pre-action sprinkler systems
 - ESFR
 - gaseous suppression systems

- water spray systems
- water mist systems
- foam suppression systems
- performance requirements and technical issues impacting on fire sprinkler systems designs
- maintenance standards
- system activation:
 - deluge and drencher systems
 - dry pipe sprinkler systems
 - pre-action sprinkler systems
 - ESFR
 - gaseous suppression systems
 - water spray systems
 - water mist systems
 - foam suppression systems
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- installation risks and constraints impacting on pipe fabrication specifications for fire sprinkler systems
- construction industry terminology
- roles and responsibilities of relevant building project personnel:
 - architect
 - lead contractor
 - structural engineer
 - mechanical engineer
 - hydraulic engineer
 - electrical engineer
 - civil engineer
 - fire engineer
 - building (private) certifier or surveyor
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems and other services:
 - risks:
 - manual handling
 - confined spaces
 - working at height
 - installation methods:
 - access requirements:
 - height of pipe
 - length of pipe
 - weight of pipe and materials

- distance from beams
- distance from walls
- work health and safety (WHS) requirements
- water supplies:
 - common water sources
 - conservation requirements
 - in-ground reticulation
 - booster configurations
- fluid mechanics and hydraulics relating to pipe range
- sustainability requirements and ratings:
 - energy conservation
 - water conservation
- pipe fabrication methods and constraints
- pipe specifications:
 - length
 - dimension
 - pipe size
 - material:
 - black steel
 - galvanised
 - hot dip galvanised
 - high density polyethylene (HDPE)
 - chlorinated polyvinyl chloride (CPVC)
- pipe connection specifications:
 - flange
 - roll grooved
 - threaded
 - compression
 - fusion welded
 - chemical (glue)
- valve specifications:
 - sluice
 - gate
 - butterfly
 - globe
 - ball
 - solenoid
 - diaphragm
 - pressure reducing
 - flow restricting

- 3-way
- mathematic principles, equations and calculation methods:
 - financial calculations, for example to assess cost-effectiveness of fire systems
- codes, standards, legislation and regulatory requirements
- access to manufacturer's information.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCSFS5011 Provide design documentation and review and support fire system installation processes

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCSFS5011A Provide design documentation and review and support fire system installation processes. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the outcomes required to develop detailed drawings and notes for the fire systems installation team from approved detailed fire systems design drawings. The unit also covers the outcomes required to assist and support the installation team when changes to detailed designs may be required owing to contingencies encountered on-site.

This unit of competency supports the role of fire systems designers whose work involves the preparation of detailed documentation to support the installation of fire systems and the provision of troubleshooting advice and drawings for solutions to on-site issues.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|--|-----|---|
| 1 | Produce installation drawings and documentation. | 1.1 | Check approved detailed design drawings of fire systems to ensure that installation implications of required changes have been addressed. |
|---|--|-----|---|

- | | | |
|---|--|--|
| | 1.2 | Use approved detailed design drawings of fire systems to create installation drawings. |
| | 1.3 | Use detailed design specifications of fire systems to notate the installation drawings with the location of specific components of the fire system. |
| 2 | Review drawings prior to installation. | |
| | 2.1 | Monitor and record ongoing changes to detailed structural or other services' design drawings regularly. |
| | 2.2 | Consider the impact of structural and other services design changes on fire systems design and installation and propose and negotiate appropriate solutions with relevant project team members, as required. |
| | 2.3 | Amend fire systems installation drawings and documentation to incorporate accepted solutions according to workplace and project procedures. |
| 3 | Resolve on-site installation problems. | |
| | 3.1 | Record, prioritise and consider on-site installation issues in line with project timeframes. |
| | 3.2 | Propose and negotiate appropriate solutions with relevant project team members, as required. |
| | 3.3 | Amend fire systems installation drawings and documentation to incorporate accepted solutions as required. |
| | 3.4 | Communicate solutions to on-site fire system installation team members and supply amended documentation according to workplace and project procedures. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCSFS5011A Provide design documentation and review and support fire system installation processes.

Assessment Requirements for CPCSF5011 Provide design documentation and review and support fire system installation processes

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCSF5011A Provide design documentation and review and support fire system installation processes. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- preparing accurate documentation and provision of ongoing support for the installation of fire systems in four projects and buildings, including for a:
 - commercial building
 - factory
 - residential nursing home
 - high-rise building.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- reading and interpreting drawings, plans, reports and specifications
- file sharing and storage processes
- communication processes
- workplace design tools and processes
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- computer software functions and operation:
 - word processing
 - spreadsheet
 - email
 - internet
 - proprietary project management software
- relevant current legislation, codes and standards:
 - building Acts

- building regulations
- infrastructure supply regulations
- the Building Code of Australia (BCA)
- National Construction Code (NCC)
- Australian standards for fire systems
- international standards for fire systems
- jurisdictional authorities in addition to the BCA and NCC
- other fire system standards commonly required by building insurers
- protection requirements for different buildings, including:
 - low-rise buildings
 - processing building applications
 - warehouse buildings under 13.7 m high
 - warehouse buildings over 13.7 m high
 - medium-rise buildings
 - high-rise buildings (over 25 metres)
 - buildings over 50 metres in height
- fire systems' technology and components:
 - water-based systems:
 - wet pipe sprinkler systems
 - deluge and drencher systems
 - dry pipe sprinkler systems
 - pre-action sprinkler systems
 - early suppression fast response (ESFR)
 - gaseous suppression systems
 - water spray systems
 - water mist systems
 - wet chemical suppression systems
 - foam suppression systems
 - hydrants, hose reels and monitors
 - water supply tanks
 - fire pump sets
 - detection and warning systems:
 - occupant warning systems
 - emergency warning and intercommunications systems (EWIS)
 - fire detection and alarm systems
 - smoke control systems
 - emergency lighting systems
- purpose and operation of fire systems:
 - layout
 - special products and hazards

- system operation
- performance requirements
- maintenance standards
- system activation and operation
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- passive fire safety elements:
 - identification of passive elements
 - impact of fire systems design on passive elements
 - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology
- roles and responsibilities of relevant building project personnel:
 - architect
 - lead contractor
 - mechanical engineer
 - hydraulic engineer
 - electrical engineer
- on-site issues, including technical, that can arise during the construction phase and impose changes to the designs of fire systems and other services:
 - installation issues:
 - discrepancies between designed and actual structure
 - discrepancies between designed and actual systems for other services:
 - mechanical
 - hydraulic
 - electrical
 - errors in supplied materials and components
 - scheduling and sequencing changes
 - problems with access to installation locations of fire system components
 - installation implications:
 - on-site work health and safety (WHS) risks
 - manual handling
 - confined spaces
 - working at height
- installation methods:
 - access requirements:
 - height of pipe
 - length of pipe

- weight of materials
- distance from beams
- distance from walls
- WHS requirements
- sustainability requirements and ratings:
 - energy conservation
 - water conservation
- mathematic principles, equations and calculation methods relevant to the system type.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCSFS5013 Support commissioning processes and finalise fire systems design projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCSFS5013A Support commissioning processes and finalise fire systems design projects. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the outcomes required to confirm the post-installation details of fire systems and produce amended drawings and documentation, and to prepare detailed commissioning procedures and specifications. The unit also covers reviewing issues and solutions arising during fire systems design projects and making subsequent improvements to fire systems design project processes.

This unit of competency supports the role of fire systems designers with responsibility for producing 'as built' drawings, block plans, tactical fire plans, and operations and maintenance manuals for fire systems.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|---|-----|--|
| 1 | Produce accurate final drawings for fire systems. | 1.1 | Document progressive changes to fire systems design drawings resulting from construction phase issues according to workplace and project procedures. |
|---|---|-----|--|

- 1.2 Confirm and record final component sizes, locations and building dimensions.
 - 1.3 Prepare, name, notate, file and submit accurate 'as built' drawings according to workplace procedures and project requirements.
 - 1.4 Produce appropriate block plans and tactical fire plans as required.
- 2 Prepare commissioning details, and operation and maintenance manuals for fire systems.
 - 2.1 Prepare system performance requirements and commissioning procedures and specifications according to relevant codes and standards and component manufacturer's recommendations and workplace and project requirements.
 - 2.2 Prepare standard operating procedures (SOPs) for the fire system based on relevant codes and standards and component manufacturer's recommendations.
 - 2.3 Produce regular maintenance procedures for the fire system based on codes and standards component manufacturer's recommendations and relevant regulatory requirements.
 - 2.4 Install operation and maintenance signage as required, according to relevant workplace, project and regulatory requirements codes and standards.
- 3 Review and evaluate the fire systems design process.
 - 3.1 Review and process project documentation including issues and their solutions.
 - 3.2 Discuss project issues and solutions with relevant workplace personnel and explore process improvement strategies.
 - 3.3 Amend project planning, methodologies and quality assurance systems to incorporate agreed process improvement strategies.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCSFS5013A Support commissioning processes and finalise fire systems design projects.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCSF5013 Support commissioning processes and finalise fire systems design projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCSF5013A Support commissioning processes and finalise fire systems design projects. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- preparing four final fire systems design project documentation, including drawings, specifications and commissioning support documentation, including for a:
 - commercial building
 - factory
 - residential nursing home
 - high-rise building.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace design tools and processes
- drawings, plans, reports and specifications
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- relevant regulatory approval and fire systems design certification processes
- relevant current legislation, codes and standards:
 - building Acts
 - building regulations
 - infrastructure supply regulations
 - the Building Code of Australia (BCA)
 - National Construction Code (NCC)
 - Australian standards for fire systems
 - international standards for fire systems
 - jurisdictional authorities in addition to the BCA and NCC
 - other fire system standards commonly required by building insurers

- protection requirements for different buildings including low-rise, medium-rise, high-rise (over 25 metres) and buildings over 45 metres in height
- fire systems' technology and components:
 - water-based systems:
 - wet pipe sprinkler systems
 - deluge and drencher systems

CPCSFS5014 Conduct annual fire systems inspections

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCSFS5014A Conduct annual fire systems certification inspections. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the outcomes required to assess all types of fire systems in all types of buildings to ensure that the systems comply with applicable legislation and will perform in the event of a fire.

This unit of competency supports the role of annual inspectors of fire systems with responsibility for inspecting existing fire systems; assessing compliance with the relevant applicable legislation, codes and standards; and advising whether they continue to perform to current fire safety standards.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|--|-----|--|
| 1 | Prepare for annual fire systems inspections. | 1.1 | Schedule annual fire systems inspections in a timely manner and in consultation with relevant stakeholders, as required. |
| | | 1.2 | Obtain and review current building plans and identify and note modifications made to the building since the |

- last inspection.
- 1.3 Review and use information regarding the current and historical legislation, codes and standards and fire engineered solutions applicable to fire systems to inform inspection planning.
 - 1.4 Review and use information regarding the validity of fire systems' compliance documentation to inform inspection planning.
 - 1.5 Plan fire systems certification inspections to ensure efficient and comprehensive implementation.
- 2 Conduct annual fire systems inspections.
 - 2.1 Inspect and assess each aspect of each fire system for compliance with the applicable current and historical legislation, codes, standards, regulatory requirements and document findings.
 - 2.2 Assess and record the current performance level of each fire system.
- 3 Produce annual fire systems inspection reports and communicate findings.
 - 3.1 Analyse the findings of inspections and identify and record works required to address shortfalls in fire systems' compliance or performance according to regulatory requirements.
 - 3.2 Produce and process reports according to regulatory requirements.
 - 3.3 Communicate the findings of the report to relevant stakeholders according to regulatory requirements, and carefully explain works required to rectify fire systems.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCSFS5014A Conduct annual fire systems certification inspections.

Assessment Requirements for CPCSF5014 Conduct annual fire systems inspections

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCSF5014A Conduct annual fire systems certification inspections. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- preparing for, conducting and reporting on annual fire systems inspections for four types of fire systems in buildings with different construction and modification histories, including:
 - commercial building
 - factory
 - residential nursing home
 - high-rise building.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- auditing processes and protocols:
 - compliance documentation:
 - fire safety schedules
 - inspection and testing logbooks
 - maintenance, repair and replacement documentation
 - roles and responsibilities of relevant professional personnel:
 - fire engineer
 - fire brigade personnel
 - building surveyor or certifier
 - persons with regulatory authority
 - architect
 - structural engineer
 - fire systems' designer

- computer software functions and operation:
 - word processing
 - spreadsheet
 - email
 - internet
- drawings, plans, reports and specifications
- types of buildings, including:
 - low-rise buildings
 - processing building applications
 - warehouse buildings under 13.7 m high
 - warehouse buildings over 13.7 m high
 - medium-rise buildings
 - high-rise buildings (over 25 metres)
 - buildings over 50 metres in height
- relevant current and historical legislation, codes and standards:
 - building Acts
 - building regulations
 - infrastructure supply regulations
 - the Building Code of Australia (BCA)
 - National Construction Code (NCC)
 - Australian standards for fire systems
 - international standards for fire systems
 - other fire system standards commonly required by building insurers
 - jurisdictional authorities in addition to the BCA and NCC
- protection requirements for different buildings
- fire systems' technology and components:
 - water-based systems, including:
 - wet pipe sprinkler systems
 - deluge and drencher systems
 - dry pipe sprinkler systems
 - pre-action sprinkler systems
 - early suppression fast response (ESFR)
 - hydrants, hose reels and monitors
 - water supply tanks
 - fire pump sets
 - hydrants, hose reels and monitors
 - water supply tanks

CPCSFS5015 Prepare documentation for annual fire systems inspections

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCSFS5015A Assess documentation for annual fire systems certification inspections. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency supports annual inspections of fire systems. The unit of competency specifies the outcomes required to research the applicable regulatory requirements for existing fire systems in all types of buildings and to assess compliance documentation to determine whether requirements are met.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCSFS5014 Conduct annual fire systems inspections

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Determine the installation dates for fire systems.

1.1 Access, interpret and document the construction dates and modification histories of buildings to be inspected.

1.2 Identify the types of fire systems installed in buildings to be inspected from compliance documentation.

1.3 Identify the installation dates for individual fire systems in buildings to be inspected.

- 2 Research and interpret the applicable codes and standards.
 - 2.1 Research and identify the current and historical legislation, codes and standards applicable to individual fire systems at the time of installation, or modification of the building.
 - 2.2 Research and interpret the detailed requirements of applicable historical legislation, codes and standards and fire engineered solutions.
 - 2.3 Document and report any disparity between historical legislation, codes and standards applicable and fire engineered solutions applicable at the installation or modification date and current fire safety requirements to relevant stakeholders.
 - 2.4 Prepare checklists and notes on applicable current and historical codes and standards to assist the annual inspection process.
- 3 Assess and report on fire system compliance documentation.
 - 3.1 Review and check schedules for the inspection, testing and maintenance of fire safety systems for compliance with current regulatory requirements.
 - 3.2 Review and check documentation for regular fire systems inspection and testing activities for currency and completeness.
 - 3.3 Identify and note information regarding non-compliance issues and defects.
 - 3.4 Request and review documentary evidence of resolution of non-compliance issues and defects if available.
 - 3.5 Prepare checklists and notes on non-compliance issues and defects identified from compliance documentation to assist the annual inspection process.
 - 3.6 Prepare and process reports detailing anomalies and omissions in fire systems' compliance documentation according to workplace and regulatory requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCSFS5015A Assess documentation for annual fire systems certification inspections.

Assessment Requirements for CPCSF5015 Prepare documentation for annual fire systems inspections

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCSF5015A Assess documentation for annual fire systems certification inspections. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- preparing relevant documentation of annual fire systems inspections that apply to existing fire systems in a range of buildings, including:
 - commercial building
 - factory
 - residential nursing home
 - high-rise building.

The activity should include preparation of fire safety schedules and inspection, testing and maintenance documentation.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance documentation:
 - fire safety schedules
 - inspection and testing logbooks
 - maintenance, repair and replacement documentation
- computer software functions and operation, including relevant proprietary software
- reading and interpreting drawings and reports
- relevant current and historical legislation, codes and standards:
 - building Acts
 - building regulations
 - infrastructure supply regulations
 - the Building Code of Australia (BCA)
 - National Construction Code (NCC)

- Australian standards for fire systems
- international standards for fire systems
- jurisdictional authorities in addition to the BCA and NCC
- other fire system standards commonly required by building insurers
- protection requirements for different buildings, including:
 - low-rise buildings
 - processing building applications
 - warehouse buildings under 13.7 m high
 - warehouse buildings over 13.7 m high

CPCSFS5017 Create detailed designs for foam suppression systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Application reformatted and typographical error in Knowledge Evidence corrected.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Application

This unit of competency specifies the skills and knowledge required to obtain, process and set up drawings for the detailed design of foam suppression systems. The unit also involves assessing and selecting component requirements, setting out the locations of components, and creating final notated drawings.

This unit of competency supports the role of fire systems designers with responsibility for creating detailed designs for sprinkler fire suppression systems.

Fire systems designs are limited to those within the deemed-to-satisfy provisions of the Building Code of Australia (BCA) or detailed fire systems designs for alternative solutions designed by fire engineers. This unit does not apply to fire systems for special hazard locations.

Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

essential outcomes.	demonstrate achievement of the element.
1 Set up fire systems design drawings.	<ul style="list-style-type: none">1.1 Request, receive, name and file relevant project drawings and documentation according to workplace procedures.1.2 Clean drawings to leave minimal essential information.1.3 Import layers showing designs of other services into clean architectural or structural drawings.1.4 Add details from drawings of the floor of the level above, if these affect the design.1.5 Name, file and back up the detailed design drawings according to workplace procedures.
2 Perform preliminary data and calculations.	<ul style="list-style-type: none">2.1 Develop floor area calculations to determine the number of sprinklers zones and required fire hydrant to be considered flowing.2.2 Determine the town main capabilities for the fire services serving the site.2.3 Determine the types of foams applicable for the site.2.4 Determine the minimum hydrant flow for the site.2.5 Determine the initial fire flow demands for the site based on the occupancy classifications.2.6 Analyse the town main water supply capabilities to determine if fire pumps and fire tanks are required.2.7 Calculate the proposed fire pump flows and pressure and fire tanks sizes.2.8 Prepare dimensional drawings for equipment spatial allocations.2.9 Sight fire brigade response point, boosters and tank suction points with stakeholders.2.10 Prepare a comparison list of equipment which can be used across the site.
3 Lay out the foam	<ul style="list-style-type: none">3.1 Confirm dimensions and assess installation risks and

- suppression system design.
- 3.2 Determine and notate the exact location of foam nozzles on the drawing according to relevant codes and standards.
 - 3.3 Determine and notate the most efficient and workable layout and location of sprinkler system components on the drawing according to workplace procedures.
 - 3.4 Design pipework layout and coordinate with building elements and services and identify pipework sizes and elevations across the system(s).
 - 3.5 Calculate, check and notate dimensions on the drawing according to workplace procedures.
 - 3.6 Undertake hydraulic analysis of the fire systems using both hand calculation procedures and computer modelling programs.
 - 3.7 Validate fire pump and tanks sizes versus initial estimates.
 - 3.8 Develop detail designs of pipework for complicated interaction of pipework and building elements and services.
 - 3.9 Develop detail designs of pipework configurations for fire tanks, fire pumps, brigade booster and suction points, alarm valves including manifold systems, and flow switch arrangements.
 - 3.10 Develop detail designs of pipework configurations for the foam tanks, foam pumps, injections devices and alarm valves.
- 4 Submit drawings for approval and finalise design process.
- 4.1 Submit foam suppression system design drawings to relevant personnel within the scheduled timeframe.
 - 4.2 Make or negotiate required amendments to design drawings as required.
 - 4.3 Process and distribute final approved design drawings according to project and workplace requirements.
 - 4.4 Select and order fittings and components according to project and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

New unit.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- effectively designing three different foam suppression systems for three different building types.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace design tools and processes:
 - effective and workable layout and location:
 - selection of cost-effective components and materials
 - consideration of:
 - penetrations
 - conflict with other services
 - work health and safety risks
 - access constraints
 - installation problems
 - aesthetic requirements
 - efficiencies to facilitate work on site and reduce labour costing
 - negotiations regarding amendments:
 - non-compliance with applicable legislation, codes and standards
 - impact on installation risks and constraints
 - impact on cost-effectiveness
- relevant regulatory approval and fire systems design certification processes

- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- foam suppression systems using a range of water supplies, including:
 - town main
 - town main and elevated tank
 - town main with a 100% capacity tank
 - town main with a partial capacity tank
 - tank supply with multiple tank
 - water supply using dams, rivers and sea water
- fire science:

 - civil engineer
 - fire engineer
 - building (private) certifier
- onsite issues that can arise during the construction phase and impose changes to the designs of fire systems and other services
- installation methods:
 - access requirements
 - work health and safety (WHS) requirements
- hydraulic calculations and fluid mechanics and hydraulics relating to pipe range
- water and oil capture and onsite storage systems for environmental purposes
- sustainability requirements and ratings:

- energy conservation
- water conservation
- pipe fabrication methods and constraints
- foam suppression systems for a range of types of sites, including:
 - transformers
 - aircraft hangers
 - petroleum industry storage facilities
 - diesel, steam and gas turbine rooms
- commissioning of foam suppression systems:
 - pressure testing methodologies during the installation phases and their advantages and disadvantages:
 - use of water
 - use of compressed air
 - nitrogen cylinders
 - validating water supplies
 - validating tank in-fill flows
 - validating pump performance:
 - setting pressures for pump starts
 - setting pressures for jacking pump start/stop
 - setting pressure for pressure maintenance pump start/stop
 - reaction times to pumps starting:
 - high set pressures
 - low set pressures
 - validating sprinkler system performance:
 - Annubar at sprinkler valves or pumps
 - discharge rates and quantities
 - discharge times for various types of sprinkler systems:
 - at alarm valve
 - remote test valve
 - the role of the local fire authorities in commissioning fire systems
 - documentation to be completed and distributed
- technical issues impacting on foam suppression system designs
- mathematic principles, equations and calculation methods:
 - financial calculations, for example to assess cost-effectiveness of fire systems

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCSH3001 Fabricate shopfitting components using CNC machines

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCSH3001 Fabricate shopfitting components using CNC machines. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to program and use computer numerically-controlled (CNC) machines to fabricate components for shopfitting units. It includes inputting correct data into selected software programs and sequencing the fabrication process.

It applies to those who fabricate components for a range of shopfitting units in an off-site manufacturing premises ready for installation on commercial sites.

Individuals at this level take responsibility for organising and completing these tasks with a high degree of self-direction.

No licensing, legislative or certification requirements apply to this unit of competency at the time of publication.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

Nil.

Unit Sector

Shopfitting

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Plan and prepare to use CNC machines.
 - 1.1 Identify, read and interpret details of shopfitting components from job requirements, plans and specifications.
 - 1.2 Produce a full size set out of all shopfitting components and detail fabrication method, joint type, grain direction, and drawer and door clearance.
 - 1.3 Calculate material quantities for fabrication of shopfitting components from dimensions on plans.
 - 1.4 Develop an efficient cutting list to minimise waste.
 - 1.5 Determine job priorities and sequence job tasks in consultation with others in the workplace.
 - 1.6 Identify workplace hazards and conditions, assess risks and implement risk controls following work health and safety requirements and environmental practices.
 - 1.7 Select, fit and used personal protective equipment (PPE) required for the task.
 - 1.8 Obtain, safely handle and prepare materials appropriate to the work application and locate ready for use.
 - 1.9 Check serviceability of CNC machinery, and identify, report and rectify faults.
 - 2 Prepare CNC program.
 - 2.1 Select appropriate CNC machine and software program for the task.
 - 2.2 Define the machine functions and select the appropriate program commands for the machine control system in preparation to perform and save programming operations for the fabrication process.
 - 2.3 Determine and check that programming terms, methods and data storage capacity are consistent with job requirements and machine specifications.
 - 2.4 Identify and select method of transferring programs into machine memory.
 - 2.5 Edit machine specification program, compensating for tool profiles, to produce the required straight and circular

tool movements.

- 3 Transfer and test machine controls.
 - 3.1 Load appropriate program into machine memory using selected method.
 - 3.2 Enter program following machine specifications to fabricate shopfitting components.
 - 3.3 Conduct a dry run simulation to test program operations.
 - 3.4 Recognise minor faults and problems with CNC machine operation, and select and apply appropriate action to overcome issues and meet project schedules.
 - 3.5 Edit program and alarm settings as required using the control station.

- 4 Fabricate components.
 - 4.1 Follow manufacturer specifications to fabricate components using automatic mode.
 - 4.2 Identity and legibly mark face and edge of each component following design specifications to assist with efficient and accurate assembly.
 - 4.3 Locate and arrange components ready for assembly to align with relevant plans and specifications.
 - 4.4 Store plans, specifications and set-outs for future reference.

- 5 Clean up.
 - 5.1 Clean CNC machinery, tools and equipment, check for serviceability and report damage or faults.
 - 5.2 Clear work area and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 5.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Supersedes and is equivalent to CPCSH3001 Fabricate shopfitting components using CNC machines. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by selecting, programming and using a computer numerically-controlled (CNC) machine to fabricate components as outlined below:

- select, edit, produce and trial a CNC machine program
- use a CNC machine to fabricate components for:
 - one point of sale counter with a minimum size of 2.4 metres in length
 - one showcase with a minimum size of 2.0 metres high and 1.8 metres wide, with doors and glass
 - and one of the following, which must include a stone or acrylic surface:
 - cabinet with a minimum size of 750 mm high and 2.4 metres wide
 - wall unit with shelves and a minimum size of 1.8 metres high and 1.2 metres wide
 - workstation with a 90-degree return
- utilise milling, boring and pocketing operations during the fabrication process of the above shopfitting components.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- shopfitting regulations, codes and standards relevant to fabricating components on a CNC machine
- organisation's quality assurance requirements relating to fabricating components on a CNC machine
- sustainable shopfitting practices
- CNC machine manufacturer specification
- key features of working drawings and specifications
- workplace processes and procedures, and environmental requirements
- fabrication methods, types and uses of shopfitting components for:

- cabinets
- counters
- showcases
- wall units
- workstations
- characteristics, applications and limitations of materials used for shopfitting components:
 - acrylic
 - glass
 - laminates
 - manufactured board
 - solid timber
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - safe work method statements (SWMSs)
 - safety data sheets (SDSs)
 - hazardous manual tasks
 - exposure to excessive noise
 - exposure to dust
 - electrical safety
 - emergency procedures (evacuation, location and use of firefighting equipment, first aid)
 - safety of public, visitors and others in the workplace
- processes and techniques for fabricating shopfitting unit components:
 - measuring relevant to dimensions and shapes
 - materials take-off
 - production scheduling
 - quality requirements and completion timeframes
- functional and operational features of tools and equipment, including battery operated tools
- CNC machine programming:
 - common conventions used in CNC
 - purpose of the zero point
 - axes of movement
 - data input to achieve job requirements
 - range of software applications
 - sequence of machine operations
 - correction of tool data to match selected tool
 - reasons for selecting tool paths:
 - tool cutter rotational direction and speed
 - lead in and lead out types

- testing and proving the CNC program
- procedures for editing and effects on finished products
- induction and safe operation of CNC equipment:
 - guarding and safe use of woodworking machinery
 - start-up and shutdown procedures
 - reduced speed dry run to check functions and alarms
 - faults and problems and actions to rectify
- types, functions and uses of CNC machinery.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- relevant shopfitting regulations, codes and Australian Standards
- current workplace procedures, workplace safety and environmental documentation
- shopfitting drawings and specifications, organisational policies, procedures and equipment to undertake the performance criteria and assessment requirements
- digital technology, devices and software to program equipment and to develop and save documents electronically.

CPCSH3002 Fabricate and assemble shopfront structures

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Rectified numbering of Performance Criteria.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCSH3002 Fabricate and assemble shopfront structures.

Application

This unit of competency specifies the skills and knowledge required to set out, fabricate and assemble internal and external entries for shopping centres, commercial and industrial buildings. It includes off-site assembly of the structure to ensure correct fit and to allow for preparation for transport.

It applies to shopfitters who fabricate street fronts, bulk heads and entries that form a total shopfront structure for all applications.

Individuals at this level take responsibility for organising and completing these tasks with a high degree of self-direction.

Licensing, legislative or certification requirements may apply to this unit of competency in some states and territories. Relevant state and territory regulatory authorities should be consulted to confirm those requirements.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

Nil.

Unit Sector

Shopfitting

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|-------------------------------------|---|
| 1 Undertake on-site measurements | 1.1 Identify, read and interpret work plans and specification to confirm job requirements. |
| | 1.2 Implement on-site work health and safety requirements. |
| | 1.3 Locate on-site datum, gridlines and reference points from site plan. |
| | 1.4 Use levelling techniques to check surrounding structures and surfaces for plumb, level, line and square. |
| | 1.5 Measure and record internal width and height dimensions. |
| | 1.6 Mark position of proposed frames and fittings on surrounding structure using non-permanent marker. |
| | 1.7 Note, rectify and report inconsistencies to appropriate person in dimensions, layout or location of structure outside the specified tolerances. |
| | 1.8 Notify glazier of site measurements for glass. |
| 2 Plan and prepare for the project. | 2.1 Inspect and identify offsite work area hazards and conditions and implement risk control measures. |
| | 2.2 Prepare detailed working drawings from design drawings to comply with job requirements. |
| | 2.3 Prepare an efficiency cutting plan and list and calculate materials for the project. |
| | 2.4 Determine job priorities and sequence job tasks in consultation with others in the workplace. |
| | 2.5 Select, fit and use personal protective equipment (PPE) required for the task. |
| | 2.6 Identify, obtain, safely handle, prepare and locate materials ready for use. |
| | 2.7 Set out components following workplace procedures. |

- 2.8 Select tools and equipment and check for serviceability.
- 2.9 Conduct a pre-start check and rectify and report faults.
- 3 Fabricate project components.
 - 3.1 Produce specified components using static machines in accordance with job and organisational quality requirements.
 - 3.2 Program CNC machine to manufacturer and produce specified components.
 - 3.3 Test CNC machine program operations in dry run simulation mode, and edit program and alarm settings as required, using the control station.
 - 3.4 Recognise minor faults and problems with CNC machine operation, and select and apply appropriate action to overcome issues and meet project schedules.
 - 3.5 Produce specified work pieces using CNC machine automatic mode.
 - 3.6 Cut straight and curved lines in small sections of glass.
 - 3.7 Check components for correct measurements and compliance with quality and job requirements.
- 4 Assemble components of shopfront structure.
 - 4.1 Select appropriate area to lay out and assemble material components.
 - 4.2 Use appropriate fixings and fasteners to assemble frame and check overall dimension for conformity with location and design.
 - 4.3 Check frame for parallel and square and adjust as required.
 - 4.4 Laminate required areas and fix fittings to components.
 - 4.5 Assemble shopfront free of scratches, dents, blemishes and damage.
- 5 Prepare for transport to
 - 5.1 Disassemble shopfront components that are too large for transport to worksite or too heavy for safe lifting, into

- worksite.
- smaller sections.
- 5.2 Identify and arrange packaging requirements for separate components and sections.
 - 5.3 Label and place components and sections in an appropriate workplace area in preparation for collection and transport to site.
 - 5.4 Number assembly diagram and locate for inclusion in delivery instructions.
- 6 Clean up.
- 6.1 Clean CNC and static machinery, tools and equipment, check for serviceability and report damage or faults.
 - 6.2 Clear work area and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 6.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCSH3002 Fabricate and assemble shopfront structures.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCSH3002 Fabricate and assemble shopfront structures

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Rectified numbering of Performance Criteria.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCSH3002 Fabricate and assemble shopfront structures.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit of competency by fabricating and assembling a shopfront for one of the following as a minimum:

- shopping centre with a minimum size of 2.4 metres high and 3.0 metres wide
- commercial building with a minimum size of 2.4 metres high and 3.0 metres wide
- industrial building with a minimum size of 2.4 metres high and 3.0 metres wide.

The shopfronts must:

- include the entry, bulkheads and component fittings
- be constructed using aluminium, glass and timber
- comprise of one special finish.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- shopfront regulations, codes and standards, in particular:
 - Australian Standard (AS) 1288 Glass in buildings
- organisation's quality assurance requirements relating to fabricating and assembling shopfront structures
- sustainable shopfitting practices
- key features of shopfront working drawings and specifications
- workplace processes and procedures and environmental requirements
- characteristics, applications and limitations of materials and components used in shopfront structures:

- aluminium
- glass
- timber
- special finishes
- glues/silicones/adhesives/tapes
- nuts/bolts/screws
- brackets
- closers/handles and stops
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - safe work method statements (SWMSs)
 - safety data sheets (SDSs)
 - hierarchy of control
 - hazardous manual tasks
 - hazardous materials
 - exposure to excessive noise
 - exposure to dust
 - electrical safety
 - emergency procedures (evacuation, location and use of firefighting equipment, first aid)
 - safety of public, visitors and others in the workplace
- induction and safe operation of CNC equipment:
 - start-up and shutdown procedures
 - data input to achieve job requirements
 - reduced speed dry run to check functions and alarms
 - faults and problems and actions to rectify
 - types and uses of CNC machinery
 - range of software applications appropriate to CNC machinery
- processes and techniques for fabricating and assembling shopfront structures:
 - levelling techniques using laser and spirit levels
 - using measurements and formulas to calculate overall and internal sizes of components
 - measuring and squaring frames
- functional and operational features of power tools and equipment:
 - static machinery
 - air compressor and hoses
 - grinders
 - laser levels
 - drills
 - planers/routers/joiners
 - sanders

- battery operated tools.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- relevant shopfront legislation, codes and Australian Standards
- current workplace procedures, workplace safety and environmental documentation
- shopfront drawings and specifications, organisational policies, procedures and equipment to undertake the performance criteria and assessment requirements
- digital technology, devices and software to program equipment and to develop and save documents electronically.

CPCSH3003 Assemble and install shopfront structures

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0
- Supersedes and is equivalent to CPCCSH3003 Assemble and install shopfront structures.

Application

This unit of competency specifies the skills and knowledge required to assemble and install internal and external prefabricated components, sections and fittings, which form the bulkheads and shopfront structure opening on to a street or shopping centre walkway. It includes assembling and installing shopfronts to new or existing premises.

It applies to shopfitters responsible for receiving, assembling and installing shopfronts.

Individuals at this level take responsibility for organising and completing these tasks with a high degree of self-direction.

Licensing, legislative or certification requirements may apply to this unit of competency in some states and territories. Relevant state and territory regulatory authorities should be consulted to confirm those requirements.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

Nil.

Unit Sector

Shopfitting

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|----------------------|---|
| 1 Plan for the work. | 1.1 Read and interpret job requirements in conjunction with |
|----------------------|---|

- shopfitting plans and specifications.
- 1.2 Identify and apply organisational quality procedures and processes.
 - 1.3 Inspect onsite conditions and identify and report hazards and implement risk control measures.
 - 1.4 Determine job priorities and sequence job tasks in consultation with others in the workplace.
 - 1.5 Select, fit and use personal protective equipment (PPE).
 - 1.6 Select tools, equipment and plant required for the job, check for serviceability, rectify and report faults.
 - 1.7 Receive delivered shopfront components, sections and fittings, check for completeness and report any shortages or damaged materials to appropriate person.
- 2 Prepare for installation.
- 2.1 Check datum, shopfront opening dimensions and levels against construction plan.
 - 2.2 Check and compare overall shopfront structure dimensions with installation specifications.
 - 2.3 Identify lease line and boundary from certified construction plans and confirm with building contractor or relevant person.
 - 2.4 Remove protrusions, and identify and rectify shopfront opening irregularities and dimensions, and check for plumb and level.
 - 2.5 Prepare suitable packing for level and plumb.
 - 2.6 Check location of services, prepared supports and bracing for shopfront structure installation.
- 3 Assemble and install shopfront structure.
- 3.1 Assemble components, fittings and pre-assembled frames and place into position in preparation for installation.
 - 3.2 Raise bulkhead into position using mechanical lifting equipment and support, and brace shopfront structure.
 - 3.3 Check and adjust shopfront structure for position, level,

- plumb and winding.
- 3.4 Anchor and secure shopfront structure using specified fixing methods.
 - 3.5 Fit doors, door furniture and closures and ensure that they operate freely.
 - 3.6 Scribe fillers and seal remaining gaps with approved sealant.
 - 3.7 Measure, compile and send glazing order to appropriate person.
- 4 Clean up.
- 4.1 Remove excess sealant and clean shopfront of marks, masking tape and protective layers.
 - 4.2 Clear work area and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 4.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCSH3003 Assemble and install shopfront structures

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCSH3003 Assemble and install shopfront structures

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0
- Supersedes and is equivalent to CPCSH3003 Assemble and install shopfront structures.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by assembling and installing one shopfront structure, incorporating a bulkhead and an opening for a roller, pivot or concertina doors, with a minimum overall height of 3.0 metres and a minimum width of 3.6 metres.

In doing this, the candidate must:

- schedule shopfront work to accommodate client requirements and minimise disruption to the business operations
- maintain public safety during the use of mobile scaffold, elevated work platform, power tools and equipment.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- shopfront regulations, codes and standards, in particular:
 - Australian Standard (AS) 2047 Windows and external glazed doors in buildings
 - AS 1288 Glass in buildings
- organisation's quality assurance requirements relating to the assembling and installing of shopfront structures
- sustainable shopfitting practices
- key features of working drawings and specifications
- workplace processes and procedures and environmental requirements
- characteristics, applications and limitations of materials used in shopfront structures:
 - acrylic
 - glass
 - aluminium
 - laminates
 - manufactured board

- solid timber
- workplace safety:
 - hierarchy of control
 - job safety and environmental analysis (JSEA)
 - safe work method statements (SWMSs)
 - safety data sheets (SDSs)
 - hazardous manual tasks
 - exposure to excessive noise
 - exposure to dust
 - electrical safety
 - emergency procedures (evacuation, location and use of firefighting equipment, first aid)
 - safety of public, visitors and others in the workplace
- processes and techniques for assembling and installing shopfront structures and fixings
- functional and operational features of hand and power tools and equipment:
 - air compressor and hoses
 - grinders
 - levelling equipment, including spirit levels
 - lifting plant
 - nail guns
 - planers
 - circular saws
 - jig saws
 - power drills
 - power leads
 - battery operated tools
 - hand saws, block plane.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- relevant shopfront regulations, codes and Australian Standards
- current workplace safety and environmental documentation
- shopfront drawings and specifications, organisational policies, procedures and equipment to undertake the performance criteria and assessment requirements.

CPCSHP3004 Assemble internal shopfitting units and prepare for transport

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0
- Supersedes and is equivalent to CPCCSH3004 Assemble internal shopfitting units and prepare for transport.

Application

This unit of competency specifies the skills and knowledge required to assemble internal pre-cut components in an off-site manufacturing premises. It includes attaching fittings to the shopfitting units and preparing them for safe transport to the installation worksite.

It applies to shopfitters involved in the final production stages of assembling shopfitting units prior to installation on a commercial site.

Individuals at this level take responsibility for organising and completing these tasks with a high degree of self-direction.

No licensing, legislative or certification requirements apply to this unit of competency at the time of publication.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

Nil.

Unit Sector

Shopfitting

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare to assemble internal shopfitting units.
 - 1.1 Identify, read and interpret job requirements from plans and specifications.
 - 1.2 Apply organisational quality procedures and processes for assembling shopfitting units.
 - 1.3 Determine job priorities and sequence job tasks in consultation with others in the workplace.
 - 1.4 Identify workplace hazards and conditions and implement risk control measures following work health and safety requirements.
 - 1.5 Select, fit and use personal protective equipment (PPE) required for the task.
 - 1.6 Select tools and equipment for the task, check for serviceability, rectify and report faults.
 - 1.7 Identify components for shopfitting units, safely handle and locate ready for assembling.

- 2 Assemble carcass.
 - 2.1 Assemble carcass with faces and edges flush, and secure joints with specified fixings.
 - 2.2 Square carcass, temporary brace and fix back, position and install shelves and mullions/divisions.
 - 2.3 Square and wind adjoining surfaces, close fit face panels flush with surfaces.
 - 2.4 Position and fix plinth or kicker to specified location.
 - 2.5 Prepare and secure external fixed panels to carcass using specified method and fixings.

- 3 Fit bench and assemble and fit drawers.
 - 3.1 Assemble bench or countertop components in preparation for installation.
 - 3.2 Position bench or countertop on carcass to specified dimensions and fix using specified fixings and fasteners.
 - 3.3 Edge drawer fronts, assemble drawers with bottoms fitted and fixed, and fit handles.
 - 3.4 Determine drawer runner type from job requirements and

- install to manufacturer specifications.
- 3.5 Apply specified clearances to install drawers parallel to carcass bottom.
- 4 Fit doors.
- 4.1 Edge doors and drill for and fix hinges and handles.
- 4.2 Hang doors to carcass with faces flush and allow specified clearances.
- 4.3 Sand surface edge finishes to job requirements and clean unit in preparation for coated finish.
- 5 Prepare units for transport.
- 5.1 Disassemble internal shopfitting units that are too large for transport or too heavy for safe lifting into smaller components and sections.
- 5.2 Determine and arrange packaging requirements for smaller and separate components.
- 5.3 Label disassembled components and sections, and place in a safe and appropriate area ready for collection.
- 5.4 Number and locate assembly diagram for inclusion in delivery instructions.
- 5.5 Safely store shopfitting units and components to avoid damage to surfaces.
- 6 Clean up.
- 6.1 Clean tools, equipment and machinery, check for serviceability and report damage or faults.
- 6.2 Clear work area and dispose of, reuse or recycle materials following workplace and environmental requirements.
- 6.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCSH3004 Assemble internal shopfitting units and prepare for transport.

Assessment Requirements for CPCSH3004 Assemble internal shopfitting units and prepare for transport

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0
- Supersedes and is equivalent to CPCCSH3004 Assemble internal shopfitting units and prepare for transport.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by assembling and preparing for transport as outlined below:

- one point of sale counter with a minimum size of 2.4 metres in length
- one showcase with a minimum size of 2.0 metres height and 1.8 metres wide, including doors and glass
- one of the following, which must include a stone or acrylic surface:
 - cabinet with a minimum size of 750 mm high and 2.4 metres wide
 - wall unit with shelves and a minimum size of 1.8 metres high and 1.2 metres wide
 - workstation with a 90-degree return.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- shopfitting regulations, codes and standards
- organisation's quality assurance requirements relating to the assembling of internal shopfitting units and preparation of units for transport
- sustainable shopfitting practices
- key features of working drawings and specifications
- workplace processes and procedures and environmental requirements
- shopfitting units:
 - cabinet
 - counter
 - showcase
 - wall unit
 - workstation
- characteristics, applications and limitations of materials used in shopfitting components:
 - acrylic

- glass
- laminates
- manufactured board
- solid timber
- adhesives, fixings and fasteners
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - safe work method statements (SWMSs)
 - safety data sheets (SDSs)
 - hazardous manual tasks
 - exposure to excessive noise
 - exposure to dust
 - electrical safety
 - emergency procedures (evacuation, location and use of firefighting equipment, first aid)
 - safety of public, visitors and others in the workplace
- processes and techniques for assembling components for shopfitting units
- functional and operational features of tools and equipment:
 - battery operated tools
 - compressor
 - hand and power tools for assembly of units
 - measuring and marking tools
- fixings and fasteners used in assembling fitment:
 - benchtop connectors
 - brads
 - drawer runners
 - hinges
 - knockdown fittings
 - nails
 - screws
 - timber biscuits.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- relevant shopfitting legislation, codes and Australian Standards
- current workplace procedures, workplace safety and environmental documentation
- shopfitting drawings and specifications, organisational policies, procedures and equipment to undertake the performance criteria and assessment requirements
- digital technology, devices and software to program equipment and to develop and save documents electronically.

CPCSH3005 Apply and trim decorative additions to shopfittings and components

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0
- Supersedes and is equivalent to CPCCSH3005 Apply and trim decorative additions to shopfittings and components.

Application

This unit of competency specifies the skills and knowledge required to apply and trim specifically designed decorative panelling, frames, borders and mirrors to shopfittings and components to ensure a quality finish. It includes offsite work on units being fabricated for installation and on-site installation of units and internal walls.

It applies to shopfitters who also work concurrently with clients and associated contractors to accommodate client requirements where the shop is operational.

Individuals at this level take responsibility for organising and completing these tasks with a high degree of self-direction.

No licensing, legislative or certification requirements apply to this unit of competency at the time of publication.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

Nil.

Unit Sector

Shopfitting

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare to apply decorative additions.
 - 1.1 Identify, read and interpret decorative additions from job requirements, plans and specifications.
 - 1.2 Determine type of decorative addition to be applied and calculate material quantities using measurements and formulas.
 - 1.3 Identify worksite hazards and conditions and implement risk control measures following work health and safety and environmental requirements.
 - 1.4 Determine job priorities and sequence job tasks in consultation with others in the workplace.
 - 1.5 Obtain materials, check for conformity and safely handle and locate materials ready for use.
 - 1.6 Establish appropriate method for fixing decorative additions to the substrate.
 - 1.7 Select, fit and use personal protective equipment (PPE) required for the task.
 - 1.8 Select tools and equipment for the task, check for serviceability, and rectify and report faults.
- 2 Fix and finish decorative additions.
 - 2.1 Set out position of decorative additions in accordance with plan and job description and confirm with client.
 - 2.2 Draw a plan to develop a true mitre for a compound angle and a mitre of different material widths and calculate angles by dissection.
 - 2.3 Set out, mark and cut to length decorative additions.
 - 2.4 Follow specifications to cut curved decorative additions work.
 - 2.5 Fit decorative additions and use established method to fix to substrate.
 - 2.6 Trim and finish decorative additions to meet organisational quality requirements.
- 3 Clean up.
 - 3.1 Clean tools and equipment, check for serviceability and report damage or faults.

- 3.2 Clear work area and dispose of, reuse or recycle materials following workplace and environmental requirements.
- 3.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCSH3005 Apply and trim decorative additions to shopfittings and components.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCSH3005 Apply and trim decorative additions to shopfittings and components

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0
- Supersedes and is equivalent to CPCCSH3005 Apply and trim decorative additions to shopfittings and components.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by applying and trimming:

- decorative timber panelling with a minimum of two square metres to a section of wall
- a minimum of two square metre extruded section border to a wall
- a timber or aluminium frame for a mirror that is at least 1200 mm x 600 mm.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- shopfitting regulations, codes and standards
- organisation's quality assurance requirements relating to the application and trimming of decorative additions to shopfittings and components
- sustainable shopfitting practices
- content of and terms, symbols and conventions used in working drawings and specifications
- workplace processes and procedures and environmental requirements
- characteristics, applications and limitations of materials commonly used for decorative and ornamental additions to shop components:
 - decorative panelling
 - extruded sections and mouldings
 - mirrors
 - adhesives and double-sided tapes
 - fixings and fastenings
 - acrylic
 - glass
 - laminates
 - manufactured board

- workplace safety:
 - job safety and environmental analysis (JSEA)
 - safe work method statements (SWMSs)
 - safety data sheets (SDSs)
 - hazardous manual tasks
 - exposure to excessive noise
 - exposure to dust
 - electrical safety
 - emergency procedures (evacuation, location and use of firefighting equipment, first aid)
 - safety of public, visitors and others in the workplace
- processes and techniques for applying and trimming decorative additions:
 - efficient cutting strategies to minimise waste
 - geometry to develop a true raking mould shape or mitre
- functional and operational features of tools and equipment:
 - air compressor and hoses
 - nail guns
 - power drills
 - levelling equipment
 - battery operated tools
- solving problems, overcoming issues and meeting project schedules.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- relevant shopfitting legislation, codes and Australian Standards
- current workplace procedures, workplace safety and environmental documentation
- shopfitting drawings and specifications, organisational policies, procedures and equipment to undertake the performance criteria and assessment requirements
- digital technology, devices and software to program equipment and to develop and save documents electronically.

CPCSHP3006 Prepare shopfittings and surfaces and apply liquid finishes

Modification History

Release 1	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0 Supersedes and is not equivalent to CPCCSH3006 Prepare shopfittings and surfaces and apply liquid finishes.
-----------	--

Application

This unit of competency specifies the skills and knowledge required to prepare new and previously coated shopfittings and surfaces, and to apply stains, lacquers, paint or sealer to create a specified finish. It includes scheduling work, which may be carried out off-site on units being fabricated for installation and other work completed on-site concurrently with other shopfitting work.

It applies to shopfitters who prepare metal, timber, timber product or concrete surfaces of shop doors, windows, walls, ceilings, partitions and other shopfittings, and apply a range of liquid finishes to these surfaces.

Individuals at this level take responsibility for organising and completing these tasks with a high degree of self-direction.

No licensing, legislative or certification requirements apply to this unit of competency at the time of publication.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

Nil.

Unit Sector

Shopfitting

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

essential outcomes.	demonstrate achievement of the element.
1 Plan and prepare to apply finishes.	<p>1.1 Read and interpret job description for preparing surfaces and applying finishes and confirm with relevant person.</p> <p>1.2 Identify surfaces to be covered, method of surface preparation, liquid finishes and application methods from job requirements.</p> <p>1.3 Select liquid finish, sealants and other surface preparation products and calculate material quantities.</p> <p>1.4 Obtain and follow manufacturer specifications and safety data sheet (SDS) for applying liquid finishes.</p> <p>1.5 Determine job priorities and sequence job tasks in consultation with others in the workplace.</p> <p>1.6 Inspect workplace conditions, identify and report hazards, and implement risk control measures.</p> <p>1.7 Select, fit and use personal protective equipment (PPE) required for the task.</p> <p>1.8 Select, tools and equipment for the job, check for serviceability and rectify and report faults.</p> <p>1.9 Obtain liquid finishes and preparation products, safely handle and locate ready for use.</p>
2 Prepare surfaces.	<p>2.1 Identify and determine condition of new and existing surfaces.</p> <p>2.2 Prepare new or uncoated surfaces and substrates following manufacturer specifications to meet job requirements.</p> <p>2.3 Remove unwanted coatings and loose debris from previously coated surfaces and prepare for specified finish.</p> <p>2.4 Repair surface defects and imperfections by stopping, filling and sanding smooth, ready for required finish.</p>
3 Apply stains and lacquers to surfaces.	<p>3.1 Apply stain evenly and consistently using specified application method and equipment.</p>

- 3.2 Check stained surfaces for consistent colour and dryness, and wipe to provide a clean surface for the application of lacquer.
 - 3.3 Apply consistent coverage of lacquer to surfaces using specified application method following manufacturer instructions.
- 4 Apply sealers and paint to surfaces.
 - 4.1 Apply sealer using specified application method and equipment to obtain an even coverage.
 - 4.2 Allow drying time for painted sealed surface and check for consistent coverage.
 - 4.3 Lightly sand and wipe surfaces to provide a clean surface for repeat paint applications.
- 5 Clean up.
 - 5.1 Clear work area and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 5.2 Seal and store unused liquid finishes, sealers and paints following workplace procedures and manufacturer instructions.
 - 5.3 Clean application tools and equipment following environmental requirements.
 - 5.4 Maintain, store and secure tools and equipment, and rectify and report faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is not equivalent to CPCSH3006 Prepare shopfittings and surfaces and apply liquid finishes.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCSH3006 Prepare shopfittings and surfaces and apply liquid finishes

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0
- Supersedes and is not equivalent to CPCCSH3006 Prepare shopfittings and surfaces and apply liquid finishes.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by preparing new and previously coated surfaces for staining and painting to meet product specifications by:

- staining and spraying a lacquer finish to a new timber surface with a minimum of two square metres
- priming and painting a metal or concrete surface
- preparing and painting a previously painted surface
- painting a surface using a roller and brush.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- shopfitting regulations, codes and standards relevant to preparing and finishing surfaces
- relevant organisation's quality assurance requirements relating to the preparation and application of liquid finishes to shopfittings and surfaces
- sustainable shopfitting practices
- workplace processes and procedures and environmental requirements
- construction and shopfitting terminology relating to preparing and applying finishes to surfaces, including technical data for various surface finishes
- characteristics, applications and limitations of materials used for preparing and applying finishes to surfaces:
 - volatile organic compounds (VOC)
 - sealers
 - lacquers
 - paints
 - stains
- workplace safety:
 - job safety and environmental analysis (JSEA)

- safe work method statements (SWMSs)
- hierarchy of control
- safety data sheets (SDSs)
- hazardous manual tasks
- hazardous chemicals
- exposure to excessive noise
- exposure to dust
- electrical safety
- emergency procedures (evacuation, location and use of firefighting equipment, first aid)
- safety of public, visitors and others in the workplace
- processes and techniques for preparing and finishing surfaces:
 - surface preparation using grinding, manual and mechanical scraping and sanding, heat guns, washing down
 - cleaning previously coated surfaces of dust, grease, chalking, mould, smoke damage and blistering, flaking, peeling, cracking
 - horizontal and vertical application methods using brush, pad, roller, spray gun
- functional and operational features of tools and equipment:
 - spray equipment
 - heat removal equipment
 - mechanical sanders
 - spill kits
 - ventilation and extraction equipment
 - applicators and equipment
- solving problems, overcoming issues and meeting project schedules.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- relevant shopfitting regulations, codes and Australian Standards
- current workplace procedures, workplace safety and environmental documentation
- job requirements, organisational policies, procedures and equipment to undertake the performance criteria and assessment requirements
- digital technology, devices and software to source information and to develop and save documents electronically.

CPCSHP3007 Install prefabricated internal shopfitting units

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0
- Supersedes and is equivalent to CPCCSH3007 Install prefabricated internal shopfitting units.

Application

This unit of competency specifies the skills and knowledge required to receive, position and install prefabricated shopfitting units. It includes assembling large units delivered to the worksite in sections.

It applies to shopfitters responsible for installing internal shopfitting units onsite concurrently with other shopfitting work that must be scheduled to accommodate client requirements, the shop when it is operational, and the requirements of other shopfitters and associated contractors.

Individuals at this level take responsibility for organising and completing these tasks with a high degree of self-direction.

Licensing, legislative or certification requirements may apply to this unit of competency in some states and territories. Relevant state and territory regulatory authorities should be consulted to confirm those requirements.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

Nil.

Unit Sector

Shopfitting

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare to install prefabricated internal shopfitting units.
 - 1.1 Read and interpret plans and specifications to confirm job requirements.
 - 1.2 Interpret and apply organisational quality assurance requirements appropriate for the project.
 - 1.3 Receive and check delivered materials for completeness and conformity with job requirements and identify and report any damage.
 - 1.4 Unload delivered internal shopfitting units, place in safe area onsite ready for installation, and protect unit finishes from damage.
 - 1.5 Determine job priorities and sequence job tasks in consultation with others in the workplace.
 - 1.6 Inspect workplace conditions, identify and report hazards, and implement risk control measures.
 - 1.7 Select, fit and use personal protective equipment (PPE) required for the task.
 - 1.8 Select tools and equipment and check for serviceability.
 - 1.9 Conduct a pre-start check and rectify and report faults.

- 2 Check location of units and prepare for installation.
 - 2.1 Set out and mark position for installation, strike datum to check level, and plumb and confirm with original site measurements.
 - 2.2 Remove protrusions, install structural elements required to support the shopfitting unit and prepare position for unit installation.
 - 2.3 Level and plumb irregularities to meet job requirements and record any discrepancies.

- 3 Assemble and fix shopfitting unit.
 - 3.1 Assemble large unit components in a position for ease of installation.
 - 3.2 Check overall measurements of assembled unit against specification and address any anomalies.
 - 3.3 Prepare shopfitting units with drilled holes and check fixings are appropriate to connect to brickwork, timber,

- metal and stone surfaces.
- 3.4 Install assembled unit and pack level, plumb and square using appropriate levelling equipment and process.
 - 3.5 Anchor assembly at drilled connecting points, fit and align doors with specified parallel gaps.
 - 3.6 Scribe and fix beading and apply sealants to meet job requirements and specifications.
 - 3.7 Remove excessive sealant, protective covering and masking tape, and clean marks and markings from unit.
- 4 Clean up.
- 4.1 Clear work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 4.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 4.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCSSH3007 Install prefabricated internal shopfitting units.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCSH3007 Install prefabricated internal shopfitting units

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0
- Supersedes and is equivalent to CPCCSH3007 Install prefabricated internal shopfitting units.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by installing four internal shopfitting units. One of these units must be assembled with smaller disassembled components to create a larger unit.

In doing this, the candidate must install:

- one point of sale counter with a minimum size of 2.4 metres in length
- one showcase fitted between walls, floor and ceiling, with a minimum size of 2.0 metres high and 1.8 metres wide, including doors and glass
- one of the following:
 - cabinet with a minimum size of 750 mm high and 2.4 metres wide
 - wall unit with shelves and a minimum size of 1.8 metres high and 1.2 metres wide
 - workstation with a 90-degree return.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- shopfitting regulations, codes and standards
- organisation's quality assurance requirements relating to installation of units
- sustainable shopfitting practices
- content of and terms, symbols and conventions used in working drawings and specifications
- workplace processes and procedures and environmental requirements
- shopfitting units:
 - cabinet
 - counter
 - showcase
 - wall unit
 - workstation

- characteristics, applications and limitations of materials used in shopfitting components:
 - acrylic
 - glass
 - laminates
 - manufactured board
 - solid timber
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - safe work method statements (SWMSs)
 - hierarchy of control
 - safety data sheets (SDSs)
 - hazardous manual tasks
 - hazardous substances
 - exposure to excessive noise
 - exposure to dust
 - electrical safety
 - emergency procedures (evacuation, location and use of firefighting equipment, first aid)
 - safety of public, visitors and others in the workplace
- processes and techniques for installing shopfitting units:
 - measuring, levelling and plumbing openings
 - selecting and using various fixings and fastenings
- functional and operational features of tools and equipment:
 - levelling equipment
 - air compressor
 - power grinders
 - nail guns
 - power drills
 - battery operated tools
- solving problems, overcoming issues and meeting project schedules.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- relevant shopfitting regulations, codes and Australian Standards

- current workplace procedures, workplace safety and environmental documentation
- shopfitting drawings and specifications, organisational policies, procedures and equipment to undertake the performance criteria and assessment requirements
- digital technology, devices and software to communicate with others and to develop and save documents electronically.

CPCSH3008 Install internal shop walls and fixtures

Modification History

Release 1	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0
	Supersedes and is equivalent to CPCCSH3008 Install internal shop walls and fixtures.

Application

This unit of competency specifies the skills and knowledge required to prepare, set out and install wall frames, partitions and wall linings to areas such as fitting or treatment rooms in internal shop areas. It includes fitting doors and windows, fixing mouldings and installing fixtures.

It applies to shopfitters engaged in creating new shops or renovating existing shops. The work is completed onsite concurrently with other shopfitting work that must be scheduled to accommodate client requirements, the shop when it is operational, and the requirements of other shopfitters and associated contractors.

Individuals at this level take responsibility for organising and completing these tasks with a high degree of self-direction.

No licensing, legislative or certification requirements apply to this unit of competency at the time of publication.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
---	--

- 1 Plan and prepare to install internal shop walls and fixtures.
 - 1.1 Read and interpret plans and specifications to confirm job requirements.
 - 1.2 Interpret and apply organisational quality assurance requirements appropriate for the project.
 - 1.3 Determine material type and calculate quantities to complete the task.
 - 1.4 Determine job priorities and sequence job tasks in consultation with others in the workplace to ensure timeframes are met.
 - 1.5 Inspect worksite conditions, identify hazards and implement risk control measures following work health and safety requirements and environmental practices.
 - 1.6 Select, fit and use personal protective equipment (PPE) for the task.
 - 1.7 Select tools and equipment for the task.
 - 1.8 Check for serviceability and rectify and report faults.
 - 1.9 Receive and check delivered materials for completeness and conformity with job requirements and identify and report any discrepancies or damage.
 - 1.10 Place materials in a safe and secure position ready for use.

- 2 Install internal wall framing and lining.
 - 2.1 Set out Internal wall framing parallel and square to existing structure.
 - 2.2 Set out frame with door and window openings, cut frame members and assemble ready to erect.
 - 2.3 Stand frame into position, level, square and plumb and use appropriate fixing method and fastenings appropriate for the existing structure.
 - 2.4 Mark and cut lining material to length, and shape and fix to frame to meet job requirements.

- 3 Install partitions.
 - 3.1 Set out and mark position of pre-assembled or onsite assembled partitions to plan dimensions.

- 3.2 Cut partition components accurately to size and locate connection points.
 - 3.3 Install and secure each component junction tight together and flush with face using specified fixings and fastenings.
 - 3.4 Secure, square and plumb assembled partitions within accepted industry tolerances.
- 4 Cut and fix decorative mouldings.
 - 4.1 Mark, cut to length, fit and fix specified mouldings.
 - 4.2 Fit and fix mitre joints flush to face and true.
 - 4.3 Mark and cut to length scribed joints.
 - 4.4 Set out, mark and fix specified fixtures.
- 5 Clean up.
 - 5.1 Clear work area and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 5.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 5.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCSH3008 Install internal shop walls and fixtures.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCSH3008 Install internal shop walls and fixtures

Modification History

Release 1	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0 Supersedes and is equivalent to CPCCSH3008 Install internal shop walls and fixtures.
-----------	---

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- setting out, erecting and fixing a full height internal wall frame, which includes an internal and external corner and a door
- setting out, assembling and fixing partitions, which include one external and one internal corner and a T intersection.

In doing this, the candidate must:

- use timber or metal to construct the full height wall frame
- line wall with both decorative timber panelling and plasterboard
- set out, fit and fix the door jamb, fit and fix profiled architraves, hinge door and fit door furniture
- fit and fix profiled skirting with one external mitred and one internal scribed joint
- set out, assemble and fit a removable pelmet with two return ends.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- shopfitting regulations, codes and standards relevant to internal shop walls and fixtures
- organisation's quality assurance requirements
- sustainable shopfitting practices
- content of and terms, symbols and conventions used in working drawings and specifications
- workplace processes and procedures and environmental requirements
- manufacturer specification for setting out, assembling and fixing selected partitions
- characteristics, applications and limitations of materials used in internal shop walls and fixtures:
 - fibre cement board
 - hardboard

- timber lining boards
- medium density fibreboard (MDF)
- particle board
- plasterboard
- plywood
- glass
- solid timber
- metal
- adhesives and gap fillers
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - safe work method statements (SWMSs)
 - hierarchy of control
 - safety data sheets (SDSs)
 - hazardous manual tasks
 - hazardous chemicals
 - exposure to excessive noise
 - exposure to dust
 - electrical safety
 - working safely at heights
 - emergency procedures (evacuation, location and use of firefighting equipment, first aid)
 - safety of public, visitors and others in the workplace
- processes and techniques for installing internal shop walls and fixtures:
 - cutting, assembling and fixing walls and partitions
 - lining walls using various products
 - using geometry to calculate irregular angles for cutting materials
 - mitring, scribing and fitting decorative mouldings and profiled timber
- construction terminology used in shopfitting
- types of fixings and fasteners used when installing internal shop walls and fixtures, and their application
- operational and functional features of tools and equipment:
 - air compressor
 - battery and gas-powered nail guns
 - drop saws
 - hand tools
 - laser, spirit and water levels
 - power drills
 - power planers
 - power saws

- routers and trimmers
- screw guns
- battery operated tools.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- relevant shopfitting regulations, codes and Australian Standards
- current workplace procedures, workplace safety and environmental documentation
- shopfitting drawings and specifications, job requirements, organisational policies, procedures and equipment to undertake the performance criteria and assessment requirements
- digital technology, devices and software to communicate with others and to develop and save documents electronically.

CPCSH3009 Demolish shopfronts and bulkheads

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Performance Criteria numbering rectified and Modification History rectified.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0
Supersedes and is equivalent to CPCCSH3009 Demolish shopfronts and bulkheads.

Application

This unit of competency specifies the skills and knowledge required to demolish sections of existing shop buildings and to dispose of demolished materials and waste. It includes completing the required demolition work to schedule and following specific plans and specifications.

It applies to shopfitters who demolish old shop building components to make alterations, extensions and additions to the shop. Work may be completed onsite concurrently with other shopfitting work that must be scheduled to accommodate client requirements, the shop when it is operational, and the requirements of other shopfitters and associated contractors.

This demolition work is limited to non-load-bearing shop building structures, including:

- external walls and cladding
- suspended ceiling structures
- shopfronts and glazed sections
- joinery and fixtures
- high level bulkheads.

Individuals at this level take responsibility for organising and completing these tasks with a high degree of self-direction.

Licensing, legislative or certification requirements may apply to this unit of competency in some states and territories. Relevant state and territory regulatory authorities should be consulted to confirm those requirements.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

Unit Sector

Shopfitting

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|------------------------------|---|
| 1 Plan shop demolition work. | 1.1 Identify, read and interpret shopfront demolition details from plans and specifications, and confirm against job requirements. |
| | 1.2 Interpret and apply organisational quality assurance requirements appropriate for scope of work. |
| | 1.3 Determine designated demolition area of shopfront and bulkhead, identify hazards and assess risks. |
| | 1.4 Establish, and confirm with team members, risk management and hazard control measures and manage the status of existing services. |
| | 1.5 Apply and document health, safety and environmental requirements for the worksite and for individual demolition tasks. |
| | 1.6 Sequence and schedule demolition tasks in consultation with team members, others onsite and client, to ensure work is completed within given timeframe. |
| | 1.7 Select, fit and use personal protective equipment (PPE) required for the task. |
| | 1.8 Select plant, tools and equipment suited to the demolition work, check for serviceability, and rectify and report faults. |
| | 1.9 Arrange and organise scaffolding and lifting equipment to meet job requirements. |
| | 1.10 Plan the handling, removal and disposal of identified demolition materials to meet work health and safety (WHS) and environmental requirements. |

- 2 Prepare demolition worksite.
 - 2.1 Erect hoardings, barricades and signage as specified in work instructions.
 - 2.2 Erect and check scaffolding, fall protection and props to ensure they are installed against demolition plan.
 - 2.3 Set out and mark building components to be demolished and removed.
 - 2.4 Check site preparation and safety meet workplace safety and environmental requirements before starting work.
 - 2.5 Cover and protect existing structure, furniture and equipment from dust and damage.
 - 2.6 Identify, isolate or disconnect services for safety and to avoid damage.

- 3 Apply demolition procedures.
 - 3.1 Assess individual tasks immediately before demolition work to identify potential hazards, and review and amend safety procedures in consultation with relevant personnel.
 - 3.2 Install propping required to prevent collapse of overhead non-load-bearing elements.
 - 3.3 Follow demolition procedures for safely dismantling and demolishing building structure.
 - 3.4 Handle and remove demolished materials using appropriate handling techniques from location to designated storage area or skip bin.
 - 3.5 Handle, store and stack demolished materials and components identified for salvage ready for reuse or transport.
 - 3.6 Maintain effective verbal and non-verbal communication, including the use of mobile technology, with team members and others onsite to monitor and manage demolition procedures.

- 4 Clean up.
 - 4.1 Clear work area and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 4.2 Clean and maintain tools and equipment and rectify and report faults.
 - 4.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCSH3009 Demolish shopfronts and bulkheads.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCSH3009 Demolish shopfronts and bulkheads

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Performance Criteria numbering rectified and Modification History rectified.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0
Supersedes and is equivalent to CPCSH3009 Demolish shopfronts and bulkheads.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by dismantling and demolishing a shopfront and internal cabinet.

In doing this, the candidate must:

- dismantle and demolish a shopfront of a minimum of 3.6 metres high and 3.6 metres wide, including a bulkhead, glazing, door closure and joinery
- dismantle one internal cabinet or fixture of a minimum of 3.6 metres high and 2.4 metres wide, which is attached to the building structure
- protect surrounding structure, floor covering, existing furniture and fixtures from damage
- plan and schedule the demolition work to maintain continuity of business operations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- shopfitting regulations, codes and standards relating to shopfront and bulkhead demolition
- organisation's quality assurance requirements relating to demolition of shopfronts and bulkheads
- sustainable shopfitting practices
- construction and demolition terminology used in shopfitting
- content of and terms, symbols and conventions used in working drawings and specifications
- characteristics, applications and limitations of materials used in shopfitting components:
 - acrylic
 - glass
 - laminates

- manufactured board
- solid timber
- procedures and techniques relevant to demolishing shopfronts:
 - calculating volumes of material for removal
 - non-load-bearing external walls
 - suspended ceilings
 - shopfronts and glazed sections
 - joinery and fixtures
 - high-level bulkheads
 - maintaining operation of existing services
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - safe work method statements (SWMSs)
 - hierarchy of control
 - how to identify potential hazards
 - safety data sheets (SDSs)
 - hazardous manual tasks
 - exposure to excessive noise
 - removal of asbestos
 - exposure to dust
 - hazardous substances:
 - lead
 - fibreglass
 - working at heights
 - falling objects
 - vibration
 - electrical safety
 - emergency procedures (evacuation, location and use of firefighting equipment, first aid)
 - safety of public, visitors and others in the workplace
- functional and operational features of tools and equipment:
 - air compressors and pneumatic tools
 - angle grinders
 - elevated work platforms (EWPs)
 - scaffolding
 - power saws
 - power drills.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- relevant shopfitting regulations, codes and Australian Standards
- current workplace procedures, workplace safety and environmental documentation relating to demolition
- shopfitting drawings and specifications, organisational policies, procedures and equipment to undertake the performance criteria and assessment requirements
- digital technology, devices and software to communicate with others and to develop and save documents electronically.

CPCSH3010 Prepare shop floors for new coverings

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Minor edits to formatting.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0

Supersedes and is equivalent to CPCCSH3010 Prepare shop floors for new coverings.

Application

This unit of competency specifies the skills and knowledge required to remove existing shop floor coverings and prepare and apply primer and cementitious products to patch and smooth shop floors ready for the installation of new selected floor coverings.

It applies to those who work in new or existing retail environments where shopfitters need to prepare concrete or timber floors using smoothing and skim coating techniques.

The unit supports shop floor preparation work which is completed onsite and may be undertaken concurrently with other shopfitting work. Where the shop is operational, work is scheduled to accommodate client requirements and coordinate with other shopfitters and associated contractors.

Individuals at this level take responsibility for organising and completing these tasks with a high degree of self-direction.

No licensing, legislative or certification requirements apply to this unit of competency at the time of publication.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

Nil.

Unit Sector

Shopfitting

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|---|
| 1 Plan and prepare shop floors. | 1.1 Identify, read and interpret shop floor preparation and coverings from plans and specifications and confirm against job requirements. |
| | 1.2 Interpret and apply organisational quality assurance requirements appropriate for scope of work. |
| | 1.3 Calculate materials required to prepare shop floors for new coverings. |
| | 1.4 Determine job priorities and sequence job tasks in consultation with others in the workplace to ensure work is completed within given timeframes. |
| | 1.5 Inspect workplace conditions, identify hazards and apply risk control measures to meet work health and safety and environmental requirements. |
| | 1.6 Select, fit and use personal protective equipment (PPE) for the task. |
| | 1.7 Select plant, tools and equipment suited to shop floor preparation work. |
| | 1.8 Check for serviceability and rectify and report faults. |
| 2 Remove existing shop floor coverings. | 2.1 Select starting point to ensure entry and exit access is available during removal process. |
| | 2.2 Lift sections of floor coverings following job specifications and stack existing removed and rolled floor coverings in preparation for removal. |
| | 2.3 Remove and dispose of existing floor coverings using safe manual handling techniques. |
| | 2.4 Clear remnants of floor coverings or fixings from exposed sub-floor surface. |
| 3 Apply floor surface covering. | 3.1 Clean sub-floor surfaces following manufacturer recommendations. |

- 3.2 Apply trial applications of primer and smoothing compound to the sub-floor.
 - 3.3 Confirm suitability and compatibility of primer, smoothing and levelling compounds, and review and retrial until job requirements are met.
 - 3.4 Apply surface covering to required floor area ensuring specified depth and coverage is achieved.
 - 3.5 Check surfaces for contamination, moisture content and suitability of finish, and complete rectification to meet job requirements.
 - 3.6 Seal and store unused products following workplace and environmental requirements.
- 4 Clean up.
- 4.1 Clear work area and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 4.2 Clean and maintain tools and equipment, and rectify and report faults.
 - 4.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCSH3010 Prepare shop floors for new coverings.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCSH3010 Prepare shop floors for new coverings

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Minor edits to formatting.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0

Supersedes and is equivalent to CPCSH3010 Prepare shop floors for new coverings.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by removing four different types of shop floor coverings and preparing the existing surface for a new covering. Each area must be a minimum of 10 square metres.

In doing this, the candidate must:

- remove three of the following surfaces once:
 - carpet tiles
 - vinyl tiles
 - resilient tiles
 - adhesive bonded carpet
 - parquetry with hard underlay
 - floating engineered floor
- clear and clean the exposed surface
- mix and test compounds for suitability and compatibility
- apply primers, and cementitious and levelling compounds to patch and smooth the existing surface.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- shopfitting regulations, codes and standards, in particular:
 - Australian Standard (AS) 2455.1 Textile floor coverings – Installation practice General
 - AS 1884 Floor coverings – Resilient sheet and tiles – Installation practices

- organisation's quality assurance requirements relating to shop floor preparation
- sustainable shopfitting practices
- procedures and techniques for removing existing floor coverings and preparing shop floors for new covering:
 - types and methods of fixing various floor coverings
 - identifying and resolving relevant problems relating to floor preparation
- environmental protection requirements relevant to preparing shop floors for new coverings
- functional and operational features of tools and equipment:
 - vacuum cleaners
 - vinyl tile lifter
 - mixing drills
 - hand and power tools
 - battery operated tools
- characteristics, applications and limitations of materials and products used for floor preparation:
 - smoothing compounds
 - levelling compounds
 - bulk fillers
 - repair/patching compounds
 - binding agents
 - mineral compounds
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - safe work method statements (SWMSs)
 - hierarchy of control
 - safety data sheets (SDSs)
 - hazardous manual tasks
 - exposure to excessive noise
 - removal of asbestos
 - exposure to dust
 - hazardous chemicals and substances
 - electrical safety
 - emergency procedures (evacuation, location and use of firefighting equipment, first aid)
 - safety of public, visitors and others in the workplace.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- relevant shopfitting regulations, codes and Australian Standards
- current workplace procedures, workplace safety and environmental documentation relating to shop floor preparation
- shopfitting drawings and specifications, organisational policies, procedures and equipment to undertake the performance criteria and assessment requirements
- digital technology, devices and software to communicate with others and to develop and save documents electronically.

CPCSPS4001 Investigate and prepare swimming pool site

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit. It includes some content from CPCCBC4049A Apply structural principles to construction of swimming pools and spas, which has been deleted.

Application

This unit specifies the skills and knowledge required to prepare a site for swimming pool construction. It includes investigating the site to confirm site levels and pool height and supervising the excavation.

This unit applies to a range of contexts and reflects the role of those who are responsible for preparing sites for the installation or construction of:

- private swimming pools
- public swimming pools, including:
 - hydrotherapy and therapeutic exercise pools
 - wading and receiving pools associated with water slides
 - wave pools.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks, and their own judgement to deal with predictable and sometimes unpredictable problems.

No licensing or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Swimming Pool and Spa Building

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Evaluate site conditions.
 - 1.1 Read and interpret relevant site and swimming pool construction information from plans, specifications, codes and standards.
 - 1.2 Interpret and apply work health and safety and environmental requirements.
 - 1.3 Evaluate site access, delivery service requirements and space for storage of materials.
 - 1.4 Apply relevant WHS regulations and codes when locating and preparing for work near existing underground and overhead services.
 - 1.5 Assess and resolve site issues that may impact pool construction.
 - 1.6 Calculate amount of excavation spoil and plan the removal.

- 2 Prepare site for pool excavation.
 - 2.1 Prepare procedures for onsite and public safety during project work.
 - 2.2 Design site access and egress and arrange temporary site fencing.
 - 2.3 Set out pool position, finish height of pool and depth of excavation from Australian Height Datum (AHD).
 - 2.4 Organise plant, machinery and equipment for the excavation process.

- 3 Coordinate and manage excavation.
 - 3.1 Check local government and certifier approval and detail drawings to confirm structural requirements.
 - 3.2 Oversee the excavation process ensuring adherence to plan specifications and safety requirements.
 - 3.3 Examine soil stability and take necessary steps to avoid soil collapse.
 - 3.4 Verify soil compaction complies with soil test report, standards and codes.

- | | | |
|---------------------------------------|-----|---|
| 4 Prepare site for pool construction. | 4.1 | Oversee the removal of excess soil and cleaning of public areas. |
| | 4.2 | Prepare site for delivery of swimming pool construction materials. |
| | 4.3 | Complete necessary documentation and notify relevant person of next stage of pool construction. |

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria:

- reading skills to interpret soil test reports
- oral communication skills to interact with clients from diverse backgrounds
- numeracy skills to use measurements and apply formulas to calculate levels
- technology skills to use digital measuring devices.

Unit Mapping Information

No equivalent unit.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCSPS4001 Investigate and prepare swimming pool site

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit. It includes some content from CPCCBC4049A Apply structural principles to construction of swimming pools and spas, which has been deleted.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by preparing two sites for pool construction, one level site and one with sloping/uneven ground.

In doing this, the candidate must:

- determine site contours, datum mark and finished height of pool from project plans
- control risks relating to excavation work.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- regulations, standards and codes relevant to excavation for of swimming pools
- relevant sections of the National Construction Code (NCC)
- excavation work code of practice
- Guide for working in the vicinity of overhead and underground electric lines
- features of project plans and specifications
- processes, procedures and techniques for:
 - levelling using a water level and laser level
 - pool excavation
 - installing ancillary pipework
- operational and functional features of plant, tools and equipment
- workplace procedures and workplace safety:
 - hierarchy of control
 - hazardous manual tasks
 - competency requirements for operating pumping equipment
 - temporary safety barriers and fences around swimming pool construction sites
- workplace and environmental requirements relating to waste disposal and clean up.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or in a simulated workplace environment.

Candidates must have access to:

- regulations, standards and codes relevant to preparation and excavation of sites for swimming pools
- relevant sections of the NCC
- project plans, specifications and manufacturer instructions
- workplace safety and environmental requirements.

CPCSPS4002 Select, procure and store construction materials for swimming pool and spa projects

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Minor edits to formatting.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCBC4050A Select, procure and store construction materials for swimming pools and spa projects. Recoded and updated to meet the Standards for Training Packages.

Application

This unit specifies the skills and knowledge required to supervise the systems by which construction materials are selected, acquired and stored on site for swimming pool and spa projects. It includes identifying non-compliant materials to ensure the delivered construction materials meet the requirements of the National Construction Code (NCC) and contract and service specifications.

This reflects the role of builders, managers and related construction industry professionals responsible for applying quality standards to the procurement and onsite storage of materials for the construction of swimming pools in a range of contexts:

- private swimming pools
- public swimming pools, including:
 - hydrotherapy and therapeutic exercise pools
 - wading and receiving pools associated with water slides
 - wave pools.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks, and their own judgement to deal with predictable and sometimes unpredictable problems.

No licensing or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Swimming Pool and Spa Building

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Evaluate suitability of swimming pool and spa building materials.	1.1 Obtain and ensure currency of relevant project plans, specifications, codes and construction requirements.
	1.2 Identify materials specified in project plans and specifications and assess their compliance and suitability for the project and the region.
	1.3 Establish environmental impacts of different materials.
	1.4 Confirm material installation and assembly tolerances to meet requirements of relevant construction industry standards and codes.
2 Select and procure materials.	2.1 Choose materials for their compliance with structural requirements, durability, sustainability, safety and cost effectiveness.
	2.2 Consider short- and long-term degradation of materials in relation to the project's proposed life cycle.
	2.3 Evaluate and select alternative materials if specified materials are unavailable.
	2.4 Finalise selection of materials for use in accordance with contractual requirements and in consultation with relevant professionals and the client.
	2.5 Procure and order materials following workplace purchasing procedures.
3 Supervise onsite delivery and storage of materials.	3.1 Determine limitations and effects of transportation on materials and components and investigate potentially damaging circumstances.
	3.2 Instruct relevant persons of workplace safety requirements when handling and storing delivered

materials.

- 3.3 Implement procedures for inspecting all materials delivered onsite for quantity, quality, defects and damage.
- 3.4 Inform relevant persons of actions required to deal with quality inconsistencies of delivered building materials.
- 3.5 Supervise and allocate safe storage space, security and protection of materials to meet manufacturer specifications and site safety requirements.
- 3.6 Maintain records of delivery, variations, damage and inferior materials.

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria:

- reading skills to interpret information on materials and to evaluate their suitability for the job
- oral communication skills to use questioning and active listening when clarifying procurement requirements
- numeracy skills to calculate material quantities
- technology skills to use devices to record and track orders and deliveries.

Unit Mapping Information

Supersedes and is equivalent to CPCBC4050A Select, procure and store construction materials for swimming pools and spa projects.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCSPS4002 Select, procure and store construction materials for swimming pool and spa projects

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Minor edits to formatting.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCBC4050A Select, procure and store construction materials for swimming pools and spa projects. Recoded and updated to meet the Standards for Training Packages.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by selecting, procuring and organising the delivery and safe onsite storage for projects covering two of the following:

- one swimming pool
- one spa
- one swimming pool and spa.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- regulations, standards and codes relevant to concrete swimming pools and spas
- relevant sections of the National Construction Code (NCC)
- features of swimming pool and spa project plans and specifications
- pool fencing requirements
- properties, applications and limitations of swimming pool and spa materials, products and components
- workplace quality assurance systems
- processes, procedures and techniques for:
 - building swimming pools and spas
 - calculating concrete quantities
 - using digital devices to track, monitor and control concrete delivery
 - applying ‘shotcrete’
 - applying internal finishes to concrete swimming pools and spas

- type, nature and performance of concrete:
 - properties and uses of cement
 - principles of reinforced concrete using steel, wire, fibres
 - effects of impurities in concrete
 - causes of surface defects during concrete placement
 - compaction of concrete
 - detrimental effects on concrete of poor or no curing
- types of curing methods:
 - accelerated curing
 - continuously wetting concrete
 - impermeable membrane curing
- finishing processes and surface treatments for swimming pool and spa shell
- operational and functional features of tools and equipment
- relevant sections of work health and safety regulations
- workplace procedures and workplace safety:
 - hierarchy of control
 - hazardous manual tasks
 - hazardous chemicals
 - falls from heights
 - temporary safety barriers and fences around pools
 - competency requirements for operating pumping equipment
- workplace and environmental requirements relating to waste disposal and clean-up.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or in a simulated workplace environment.

Candidates must have access to:

- regulations, standards and codes relevant to swimming pools and spas
- relevant sections of the NCC
- project plans, specifications and manufacturer instructions
- workplace policies and procedures for procuring and storing construction materials
- workplace safety and environmental requirements.

CPCSPS4003 Install swimming pool and spa subsoil drainage

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Application

This unit specifies the skills and knowledge required to install subsoil drainage to variously shaped in-ground swimming pools and spas. It includes preparing and installing the drainage during excavation.

This reflects the role of those who are responsible for diverting subsoil water away from the swimming pool and spa construction site. It applies to a range of contexts:

- private swimming pools
- public swimming pools, including:
 - hydrotherapy and therapeutic exercise pools
 - wading and receiving pools associated with water slides
 - wave pools.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks, and their own judgement to deal with predictable and sometimes unpredictable problems.

No licensing or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Swimming Pool and Spa Building

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan the sub-soil	1.1 Access, read and interpret relevant information from
---------------------	--

- drainage. plans, specifications, codes and standards.
- 1.2 Interpret and apply work health and safety and environmental requirements.
 - 1.3 Locate existing underground services and avoid during excavation and construction works.
 - 1.4 Identify type, dimensions and area of subsoil drainage.
 - 1.5 Calculate and order materials.
 - 1.6 Determine commencement date and schedule delivery of material, components and required plant and equipment.
 - 1.7 Determine job priorities and sequence job tasks in consultation with others on site.
- 2 Prepare for and install subsoil drainage.
- 2.1 Set out position and depth of drainage.
 - 2.2 Select, fit and use personal protective equipment appropriate for the activity.
 - 2.3 Conduct a pre-operation check of plant and equipment.
 - 2.4 Excavate trench depth and width to set out position.
 - 2.5 Install and compact specified drainage material to determined levels.
 - 2.6 Install drainage pipework and backfill trenches.
- 3 Clean up site.
- 3.1 Clear the work area and reuse, recycle or dispose of materials in accordance with workplace and environmental requirements.
 - 3.2 Clean tools and equipment, check for serviceability, report any damage or faults and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Assessment Requirements for CPCSPS4003 Install swimming pool and spa subsoil drainage

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by installing subsoil drainage for two different swimming pool construction projects.

In doing this, the candidate must lay drainage and components to set heights, levels and falls.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- regulations, standards and codes relevant to drainage and construction of swimming pools and spas
- relevant sections of the National Construction Code (NCC)
- features of swimming pool and spa project plans and specifications
- properties, applications and limitations of subsoil drainage materials, products and components:
 - perforated pipes and jointing materials
 - geo-textile fabric
 - granular materials
- processes, procedures and techniques for:
 - subsoil drainage excavation
 - installing various types of drainage materials and products
- effects of excessive water on soil and swimming pools
- operational and functional features of tools and equipment
- workplace procedures and workplace safety:
 - hierarchy of control
 - hazardous manual tasks
 - competency requirements for operating excavation equipment
 - temporary safety barriers and fences around pools
- workplace and environmental requirements relating to waste disposal and clean up.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or in a simulated workplace environment.

Candidates must have access to:

- regulations, standards and codes relevant to swimming pool subsoil drainage
- relevant sections of the NCC
- project plans, specifications and manufacturer instructions
- workplace safety and environmental requirements.

CPCSPS4004 Install swimming pool and spa circulation systems and components

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Application

This unit specifies the skills and knowledge required to install pipework to swimming pool and spa circulation systems and components. It includes installing and connecting pool pipework to pumps, filtration and heating systems.

This unit applies to a range of contexts and reflects the role of those who are responsible for the installation process of pipework to above-ground and in-ground:

- private swimming pools
- public swimming pools, including:
 - hydrotherapy and therapeutic exercise pools
 - wading and receiving pools associated with water slides
 - wave pools.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks, and their own judgement to deal with predictable and sometimes unpredictable problems.

No licensing or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Swimming Pool and Spa Building

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare for the installation of circulation systems and components.
 - 1.1 Access, read and interpret relevant information from plans, specifications, codes and standards.
 - 1.2 Interpret and apply work health and safety and environmental requirements.
 - 1.3 Obtain information to identify, locate and protect existing underground services prior to excavation.
 - 1.4 Calculate and order pipework, components and materials.
 - 1.5 Determine commencement date and schedule delivery of pipework, components and materials.
 - 1.6 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.7 Select and check tools and equipment for serviceability.
 - 1.8 Select, fit and use personal protective equipment appropriate for the activity.

- 2 Install pipework for swimming pools and spas.
 - 2.1 Confirm position of circulation equipment with relevant person.
 - 2.2 Excavate trenches for pipework to specified depth and level.
 - 2.3 Install pipework and components to specified fall.
 - 2.4 Test pipework for leaks and repair as necessary.
 - 2.5 Backfill and compact trenches to comply with relevant Australian Standards.

- 3 Clean up site.
 - 3.1 Clear the work area and reuse, recycle or dispose of materials in accordance with workplace and environmental requirements.
 - 3.2 Clean tools and equipment, check for serviceability, report any damage or faults and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

CPCSPS4005 Install prefabricated fibreglass swimming pools

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Application

This unit specifies the skills and knowledge required to install variously shaped in-ground prefabricated fibreglass swimming pools. It includes preparing for filtration and circulation systems and luminary bonding for equipment and lighting.

This unit applies to a range of contexts and reflects the role of those who are responsible for the installation process and the management of excavation and heavy lifting equipment to complete the installation of prefabricated fibreglass:

- private swimming pools
- public swimming pools, including:
 - hydrotherapy and therapeutic exercise pools
 - wading and receiving pools associated with water slides
 - wave pools.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks, and their own judgement to deal with predictable and sometimes unpredictable problems.

No licensing or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Swimming Pool and Spa Building

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan installation of prefabricated fibreglass swimming pool.
 - 1.1 Access, read and interpret relevant information from plans, specifications, codes and standards.
 - 1.2 Interpret and apply work health and safety and environmental requirements.
 - 1.3 Identify and confirm with client type and location of filtration and circulation system and lighting requirements.
 - 1.4 Calculate and order materials and components.
 - 1.5 Determine commencement date and schedule delivery of material and components and required plant and equipment.
 - 1.6 Apply relevant WHS regulations and codes when locating and preparing for
 - 1.7 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.8 Select, fit and use personal protective equipment appropriate to activity.
- 2 Install prefabricated fibreglass swimming pool.
 - 2.1 Set out and mark pool position, finish height and excavation depth.
 - 2.2 Excavate to set out depth and side clearance, allowing for backfill.
 - 2.3 Select and prepare base in accordance with soil classifications of site.
 - 2.4 Confirm installation of circulation pipework to shell of swimming.
 - 2.5 Confirm and implement requirements for managing traffic during pool installation.
 - 2.6 Communicate with crane service provider to lift, position and set shell to the specified level.
- 3 Clean up site.
 - 3.1 Clear the work area and reuse, recycle or dispose of materials in accordance with workplace and environmental requirements.

- 3.2 Clean tools and equipment, check for serviceability, report any damage or faults and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for CPCSPS4005 Install prefabricated fibreglass swimming pools

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by installing one in-ground prefabricated fibreglass swimming pool.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- regulations, standards, codes and permits relevant to installation of prefabricated fibreglass swimming pools
- relevant sections of the National Construction Code (NCC)
- features of swimming pool project plans and specifications
- properties, applications and limitations of swimming pool materials, products and components
- processes and procedures for:
 - pool excavation
 - types of base preparations – screed and compact base, concrete slab
 - lifting, setting and levelling prefabricated fibreglass pools
 - connecting filtration and circulation systems
- licensing and competency requirements for installing swimming pool ancillary equipment
- operational and functional features of tools and equipment
- workplace safety:
 - hierarchy of control
 - temporary safety barriers and fences around pools
 - hazardous manual tasks
 - competency requirements for operating pumping equipment
- types, advantages and environmental efficiencies of swimming pool covers
- workplace and environmental requirements relating to waste disposal and clean up.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or in a simulated workplace environment.

Candidates must have access to:

- regulations, standards and codes relevant to prefabricated fibreglass swimming pools
- relevant sections of the NCC
- project plans, specifications and manufacturer instructions
- workplace safety and environmental requirements.

CPCSPS4006 Apply sprayed concrete to shape and finish swimming pools and spas

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Correction to Knowledge Evidence.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Application

This unit specifies the skills and knowledge required to apply the process of spraying concrete to variously shaped in-ground swimming pool and spa shells using high pressure equipment. It includes knowledge of structural principles and properties and the performance of concrete.

This unit reflects the role of those who are responsible for the process of applying, shaping and finishing pool and spa shells. It applies in a range of contexts:

- private swimming pools
- public swimming pools, including:
 - hydrotherapy and therapeutic exercise pools
 - wading and receiving pools associated with water slides
 - wave pools.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks, and their own judgement to deal with predictable and sometimes unpredictable problems.

No licensing or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Swimming Pool and Spa Building

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Plan to spray concrete for swimming pool and spa shells. | 1.1 Access, read and interpret relevant concrete swimming pools and spas information from plans, specifications, codes and standards. |
| | 1.2 Interpret and apply work health and safety and environmental requirements relating to concrete spraying of swimming pool and spa shells. |
| | 1.3 Identify shape and finish of sprayed concrete and confirm with relevant person. |
| | 1.4 Determine concrete properties from specifications and calculate quantity. |
| | 1.5 Determine job priorities and sequence job tasks in consultation with others on site. |
| | 1.6 Schedule delivery of concrete and required plant and equipment in consultation with equipment operators. |
| 2 Determine compliance with structural principles. | 2.1 Establish swimming pool and spa reinforcing design meets the structural principle requirements for the shape, size and capacity of the swimming pool and spa. |
| | 2.2 Inspect reinforcement and components and check they are fixed as specified in structural plans and comply with standards and codes. |
| 3 Prepare for concreting work. | 3.1 Test delivered concrete for swimming pool and spa shell meets the stated specifications, standards and codes. |
| | 3.2 Conduct a pre-operation check on plant and equipment. |
| | 3.3 Check luminaires bonding, other cabling services, filtration and recirculation plumbing are correctly installed. |
| | 3.4 Confirm accuracy, stability and strength of formwork as required. |
| | 3.5 Mask and protect ancillary installations from concrete |

overspray.

- | | | |
|---|-----|--|
| 4 Supervise spray and finish process to concrete shell. | 4.1 | Select, fit and use personal protective equipment appropriate for activity. |
| | 4.2 | Establish starting point for application of concrete. |
| | 4.3 | Direct the application of concrete to specified thickness and reinforcement coverage. |
| | 4.4 | Control the spraying and shaping of pool shell contours, stairs and landing. |
| | 4.5 | Observe and direct the even finish of walls, base, coving and stairs to specified dimensions and falls. |
| | 4.6 | Check cleanliness and operation of recirculation system. |
| 5 Clean up site. | 5.1 | Clear the work area and reuse, recycle or dispose of materials following workplace and environmental requirements. |
| | 5.2 | Clean tools and equipment, check for serviceability, report any damage or faults and store and secure. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCSPS4006 Apply sprayed concrete to shape and finish swimming pools and spas

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Correction to Knowledge Evidence.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by applying the operations of spraying and finishing for one of the following:

- one swimming pool
- one spa.

In doing this, the candidate must:

- evaluate the properties and performance of concrete and impacts on concrete integrity, and analyse the ability of concrete shell to withstand imposed forces and pressures
- ensure consistent concrete thickness and coverage on steel reinforcing as specified
- direct the shaping of concrete pool shell and finishing to obtain an even and defect-free surface in preparation for interior finish
- apply specified concrete curing methods.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- regulations, standards and codes relevant to concrete swimming pools and spas
- relevant sections of the National Construction Code (NCC)
- features of swimming pool and spa project plans and specifications
- pool fencing requirements
- properties, applications and limitations of swimming pool and spa materials, products and components
- workplace quality assurance systems
- processes, procedures and techniques for:
 - building swimming pools and spas

- calculating concrete quantities
- using digital devices to track, monitor and control concrete delivery
- applying 'shotcrete'
- applying internal finishes to concrete swimming pools and spas
- type, nature and performance of concrete:
 - properties and uses of cement
 - principles of reinforced concrete using steel, wire, fibres
 - effects of impurities in concrete
 - detrimental effects on concrete of poor or no curing
 - types of curing methods:
 - accelerated curing
 - continuously wetting concrete
 - impermeable membrane curing
- records include details of:
 - causes of surface defects during concrete placement
 - compaction of concrete
 - finishing processes and surface treatments for swimming pool and spa shell
- operational and functional features of tools and equipment
- relevant sections of work health and safety regulations
- workplace procedures and workplace safety:
 - hierarchy of control
 - hazardous manual tasks
 - hazardous chemicals
 - falls from heights
 - temporary safety barriers and fences around pools
 - competency requirements for operating pumping equipment
- workplace and environmental requirements relating to waste disposal and clean-up.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or in a simulated workplace environment.

Candidates must have access to:

- regulations, standards and codes relevant to concrete swimming pools and spas
- relevant sections of the NCC
- project plans, specifications and manufacturer instructions
- workplace safety and environmental requirements
- a swimming pool and spa construction site.

CPCSPS4007 Commission ancillary swimming pool and spa systems and hand over to client

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Application

This unit specifies the skills and knowledge required to commission ancillary swimming pool and spa systems. It includes the testing of filtration, heating and lighting systems.

This unit reflects the role of those who are responsible for commissioning ancillary pool systems and finalising hand over to clients. It applies to a range of contexts:

- private swimming pools
- public swimming pools, including:
 - hydrotherapy and therapeutic exercise pools
 - wading and receiving pools associated with water slides
 - wave pools.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks, and their own judgement to deal with predictable and sometimes unpredictable problems.

No licensing or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Swimming Pool and Spa Building

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Collate project and 1.1 Review client information to ensure client requirements

client information.		have been met.
	1.2	Review contractual conditions to determine final payment.
	1.3	Compile client information and instructions for operation of swimming pool and spa equipment and systems.
	1.4	Contact client and arrange suitable time to meet for handover.
2 Connect and test ancillary equipment.	2.1	Test operation of filtration, heating, lighting and cleaning control systems.
	2.2	Conduct adjustment in line with pool environment, conditions and operating specifications.
	2.3	Set equipment timers to accommodate pool environment and conditions.
	2.4	Inspect workmanship and ensure all inclusions are supplied and fitted.
	2.5	Record outcomes and complete necessary documentation.
3 Conduct client handover.	3.1	Confirm project completion and supply of inclusions with client.
	3.2	Demonstrate operation and inform client of settings, adjustments and routine maintenance requirements.
	3.3	Supply owner with swimming pool and spa equipment guarantees, warranties and manufacturer operating instructions.

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria:

- oral communication skills to instruct client on operation of ancillary pool systems
- technology skills to set digital control systems.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for CPCSPS4007 Commission ancillary swimming pool and spa systems and hand over to client

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- commissioning ancillary and control systems for one of the following:
 - one swimming pool
 - one spa
 - one swimming pool and spa
- carrying out handover to client.

The commissioning must include a:

- circulation system
- dosing system
- filtration system
- cleaning system.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- regulations, codes and standards relevant to swimming pools and spas
- pool fencing requirements
- pool cover requirements
- operational and functional features of ancillary pool systems
 - heating
 - filtration
 - lighting
 - cleaning
- features of contracts
- contractual requirements for pool builder and client.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or in a simulated workplace environment.

Candidates must have access to:

- regulations, standards and codes relevant to swimming pools and spas
- relevant sections of the NCC
- project plans, specifications and manufacturer instructions
- workplace policies and procedures relevant to project handover
- workplace safety and environmental requirements.

CPCSPS4008 Install above-ground swimming pool

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Application

This unit specifies the skills and knowledge required to install variously shaped above-ground swimming pools. It includes preparing level and sloping sites and ancillary equipment for connection.

This unit applies to a range of contexts and reflects the role of those who are responsible for installation processes involving excavation and base preparation for above-ground:

- private swimming pools
- public swimming pools, including:
 - hydrotherapy and therapeutic exercise pools
 - wading and receiving pools associated with water slides
 - wave pools.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks, and their own judgement to deal with predictable and sometimes unpredictable problems.

No licensing or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Swimming Pool and Spa Building

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan to install	1.1 Access, read and interpret relevant information from
-------------------	--

- above-ground swimming pool.
- 1.2 Interpret and apply work health and safety and environmental requirements.
 - 1.3 Confirm type and location of pool with client.
 - 1.4 Calculate and order base materials and filtration components.
 - 1.5 Determine commencement date and schedule delivery of material and components and required plant and equipment.
 - 1.6 Apply relevant WHS regulations and codes when locating and preparing for work near existing underground and overhead services.
 - 1.7 Determine job priorities and sequence job tasks in consultation with others on site.
- 2 Prepare for pool installation.
- 2.1 Select, fit and use personal protective equipment appropriate for the activity.
 - 2.2 Select and check tools and equipment for serviceability.
 - 2.3 Set out and mark pool position and finish height.
 - 2.4 Remove grass and topsoil and excavate to the determined depth and level.
 - 2.5 Fill, spread, screed and compact base to specified level.
- 3 Assemble pool.
- 3.1 Determine starting point and prepare pool base and wall components.
 - 3.2 Assemble wall material following manufacturer instructions.
 - 3.3 Complete all fixtures and mask to protect internal lining.
 - 3.4 Install, without damage, internal pool liner in accordance with manufacturer instructions.
 - 3.5 Secure lining and finish pool capping.

- | | | | |
|---|-------------------------------|-----|---|
| 4 | Install recirculation system. | 4.1 | Measure, locate and fit skimmer and return. |
| | | 4.2 | Locate and install pump, plumbing pipes and filtration system accordance with specifications. |
| | | 4.3 | Fill pool and check pool and ancillary equipment for leaks. |
| | | | |
| 5 | Clean up site. | 5.1 | Clear the work area and reuse, recycle or dispose of materials in accordance with workplace and environmental requirements. |
| | | 5.2 | Clean tools and equipment, check for serviceability, report any damage or faults and store and secure. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCSPS4008 Install above-ground swimming pool

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by installing two above-ground swimming pools. The installations must involve:

- differently sized and shaped above-ground swimming pools
- the use of different prefabricated materials on each pool.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- regulations, standards and codes relevant to above-ground swimming pools and spas
- pool fencing requirements
- types and materials of pool covers
- relevant sections of the National Construction Code (NCC)
- manufacturer instructions for installing above-ground swimming pools
- properties, applications and limitations of swimming pool and spa fabrication materials, products and components
- processes, procedures and techniques for:
 - levelling pool and spa base
 - installing and assembling pools and spas
 - connecting filtration, recirculation, heating and lighting systems
- licensing and competency requirements for installing swimming pool and spa ancillary equipment
- operational and functional features of tools and equipment
- relevant sections of work health and safety (WHS) Acts and regulations
- workplace procedures and workplace safety:
 - hierarchy of control
 - hazardous manual tasks
 - temporary safety barriers and fences around pools
- workplace and environmental requirements relating to waste disposal and clean-up.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or in a simulated workplace environment.

Candidates must have access to:

- regulations, standards and codes relevant to above-ground swimming pools and spas
- relevant sections of the NCC
- project plans, specifications and manufacturer instructions
- workplace safety and environmental requirements.

CPCSPS4009 Undertake interior finishing of swimming pools and spas

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Application

This unit specifies the skills and knowledge required to undertake interior finishes to variously shaped swimming pools and spas. It includes applying interior finishes to concrete and fibreglass swimming pools and spas.

This unit reflects the role of those who are responsible for the application of interior finish to swimming pools and spas. It applies in a range of contexts:

- private swimming pools
- public swimming pools, including:
 - hydrotherapy and therapeutic exercise pools
 - wading and receiving pools associated with water slides
 - wave pools.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks, and their own judgement to deal with predictable and sometimes unpredictable problems.

No licensing or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Swimming Pool and Spa Building

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan interior finishing of swimming pool and spa.
 - 1.1 Access, read and interpret relevant swimming pool and spa information from plans, specifications, codes and standards.
 - 1.2 Interpret and apply work health and safety and environmental requirements.
 - 1.3 Identify properties of materials and requirements for application and installation for internal finish of the project.
 - 1.4 Calculate material quantities required as specified.
 - 1.5 Determine project timeframes, job priorities and sequence of job tasks in consultation with others on site.
 - 1.6 Schedule delivery of material and components and required plant and equipment.

- 2 Prepare for the finishing work.
 - 2.1 Confirm materials match the delivery docket and comply with job specifications.
 - 2.2 Select, fit and use personal protective equipment appropriate for activity.
 - 2.3 Check plant and equipment for serviceability.
 - 2.4 Drain excess water from swimming pool and spa.
 - 2.5 Protect lighting and recirculation system components against damage from subsequent works.

- 3 Finish pool and spa interior.
 - 3.1 Repair damage to or imperfections in swimming pool and spa surface.
 - 3.2 Use appropriate techniques to wash, seal and bond surface.
 - 3.3 Protect and maintain pool shell to avoid premature drying of pool finish.
 - 3.4 Establish a starting point for application of interior finish and ensure correct process and sequence are followed.
 - 3.5 Check application techniques for consistent thickness, colour, shape and smoothness.

- 3.6 Confirm interior finish is completed to specifications and to manufacturer guidelines.
- 4 Clean up site.
 - 4.1 materials in accordance with workplace and environmental requirements.
 - 4.2 Clean tools and equipment, check for serviceability, report any damage or faults and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Links

Assessment Requirements for CPCSPS4009 Undertake interior finishing of swimming pools and spas

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by applying an interior finish to two different swimming pool or spa projects.

One project must use concrete and one project must use fibreglass.

As a minimum, the finish must be applied to a corner of a pool or spa, extending one metre deep and one metre wide in all directions, including the radius on the floor of the pool.

In doing this, the candidate must:

- prepare the work area to meet safety requirements
- clean and prepare surface to key and bond interior finish
- apply material maintaining a uniform interior surface finish
- protect finished surface to maintain quality until dry.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- regulations, standards and codes relevant to interior finishing of swimming pools and spas
- swimming pool and spa project plans, specifications, standards and codes
- National Construction Code (NCC)
- properties, applications and limitations of swimming pool and spa materials, products and components used for interior finishing
- processes, procedures and techniques for:
 - measuring and installing vinyl liner to variously shaped swimming pools and spas
 - applying interior finishes to pools and spas:
 - marblesheen
 - pebblecrete
 - paint
 - fibreglass
- operational and functional features of tools and equipment

- workplace procedures and workplace safety:
 - hierarchy of control
 - temporary safety barriers and fences around pools
 - hazardous manual tasks
 - hazardous chemicals
 - falls from heights
- workplace and environmental requirements relating to waste disposal and clean-up.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or in a simulated workplace environment.

Candidates must have access to:

- regulations, standards and codes relevant to above-ground swimming pools and spas
- relevant sections of the NCC
- project plans, specifications and manufacturer instructions
- workplace safety and environmental requirements.

CPCSPS4010 Lay swimming pool and spa coping

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Performance Evidence corrected for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Application

This unit specifies the skills and knowledge required to lay different types of coping finishes to swimming pools and spas.

This unit reflects the role of those who are responsible for the laying and finishing of coping to variously shaped swimming pools and spas. It applies in a range of contexts:

- private swimming pools
- public swimming pools, including:
 - hydrotherapy and therapeutic exercise pools
 - wading and receiving pools associated with water slides
 - wave pools.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks, and their own judgement to deal with predictable and sometimes unpredictable problems.

No licensing or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCSPS4011 Install precast concrete swimming pools

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Application

This unit specifies the skills and knowledge required to install precast concrete swimming pools (precast pools). A precast pool must have a total mass not greater than 12,000 kg (delivered weight). Products of a greater mass are not considered a precast pool.

It includes preparing for and installation of filtration, circulation, heating and lighting systems.

This unit reflects the role of those who are responsible for the installation process and the management of excavation and heavy lifting equipment to complete the installation. It applies in a range of contexts:

- private swimming pools
- public swimming pools, including:
 - hotels, motels and apartments.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks, and their own judgement to deal with predictable and sometimes unpredictable problems.

No licensing or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for CPCSPS4011 Install precast concrete swimming pools

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by installing one precast concrete swimming pool.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- regulations, standards, codes and permits relevant to installation of precast concrete swimming pools:
 - National Code of Practice for Precast Tilt-Up and Concrete Elements in Building Construction
 - Australian Standards
- relevant sections of the National Construction Code (NCC)
- precast pool project plans and specifications
- properties, applications and limitations of precast concrete swimming pool materials and swimming pool products and components
- processes and procedures for:
 - pool excavation
 - types of base preparations – screed and compact base, concrete slab
 - lifting, setting and levelling precast concrete swimming pools
 - connecting filtration and circulation systems
- licensing and competency requirements for installing swimming pool and spa ancillary equipment
- operational and functional features of tools and equipment
- workplace safety:
 - hierarchy of control
 - temporary safety barriers and fences around pools
 - hazardous manual tasks
 - competency requirements for operating pumping equipment

- types, advantages and environmental efficiencies of swimming pool and spa covers
- workplace and environmental requirements relating to waste disposal and clean-up.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or in a simulated workplace environment.

Candidates must have access to:

- regulations, standards and codes relevant to swimming pools and spas
- relevant sections of the NCC
- project plans, specifications and manufacturer instruction
- workplace safety and environmental requirements.

CPCSUS4001 Implement and monitor environmentally sustainable work practices

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCSUS4001A Implement and monitor environmentally sustainable work practices. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to effectively analyse, implement and monitor environmentally sustainable work practices and their effectiveness in the workplace. It includes contributing to consumer environmental efficiency.

This unit of competency applies to those with responsibility for a specific work group, area or worksite, who develop processes and tools and lead a work group or team to improve environmental sustainability.

This unit of competency is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Sustainability

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

essential outcomes.	demonstrate achievement of the element.
1 Investigate current practices in relation to resource usage.	<ul style="list-style-type: none">1.1 Identify current and relevant environmental regulations applying to the organisation.1.2 Assess procedures and practices for ensuring compliance with environmental regulations.1.3 Collect data and information on environmental and resource efficiency systems and procedures.1.4 Analyse and document current purchasing strategies.1.5 Access and analyse information and data for current work processes and products.1.6 Measure and document current resource usage of the work area, site or group and provide findings to stakeholders, key personnel and specialists.
2 Set targets for improvement.	<ul style="list-style-type: none">2.1 Seek input and feedback regarding process inefficiencies, environmental hazards and risks and opportunities for improvements from stakeholders, key personnel and specialists.2.2 Source external information and data from supplier and contractor invoices, tenders and quotes.2.3 Evaluate alternative solutions to worksite environmental issues.2.4 Set efficiency targets.
3 Implement performance improvement strategies.	<ul style="list-style-type: none">3.1 Source and implement techniques, tools, technology and strategies to assist in achieving targets.3.2 Apply workplace continuous improvement strategies and communicate solutions to stakeholders, key personnel and specialists.3.3 Integrate and implement workplace environmental and resource efficiency improvement plans in conjunction with other operational activities.3.4 Cost full value of environmental strategies against current assets and expenditure.

- 3.5 Seek feedback, ideas and suggested actions regarding implemented environmental and resource efficiency plans from management, stakeholders, key personnel and specialists.
- 4 Monitor performance.
- 4.1 Document outcomes and communicate reports on targets to key personnel and stakeholders.
- 4.2 Re-evaluate environmental strategies.
- 4.3 Review and readjust targets and modify new tools and strategies.
- 4.4 Promote successful strategies and, where possible, reward participants.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- numeracy skills to:
 - collect, interpret and measure data to identify and improve sustainable practices
- technology skills to:
 - use communication tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access, extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCSUS4001A Implement and monitor environmentally sustainable work practices.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCSUS4001 Implement and monitor environmentally sustainable work practices

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCSUS4001A Implement and monitor environmentally sustainable work practices. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by analysing and monitoring effective sustainable workplace practices on at least one worksite, area or construction work group.

In doing this, the candidate must:

- access, collect, analyse and organise data from a variety of sources to inform and advise opportunities for improvement
- devise strategies and practices to improve environmental and resource efficiency
- develop and implement improvement plan and introduce tools and technology.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- government legislation, regulations, codes and standards:
 - environmental protection
 - Biodiversity Conservation Act
 - National Construction Code (NCC)
- environmental and sustainability practices:
 - efficient use of resources and materials
 - maximising opportunities to use renewable, recyclable, reusable and recoverable resources
 - management and treatment of waste and waste products
 - implementing and using alternative practices, procedures or materials to reduce or eliminate resource consumption on worksite
 - eliminating the use of hazardous and toxic materials
 - addressing environmental and resource sustainability initiatives
 - referring to federal government five-star rating for all new homes

- workplace environmental and sustainability issues:
 - how tradespersons can contribute to environmental sustainability
 - hazards and risks associated with worksite supervision
 - job specifications and strategies and procedures to maximise opportunities and minimise impacts
- environment industry associations
- methods, techniques and tools to measure environmental impact:
 - accessing the skills of others as appropriate to the specific industry context
 - environmental site management plans
 - examination of invoices from suppliers
 - examination of relevant information and data
 - integration of environmental and sustainability specifications in quotes and tenders
 - measurements made under different conditions
 - recommendation of sustainable products and practices to stakeholders
- workplace safety requirements:
 - hierarchy of control
 - risk management.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- government legislation
- current industry and Australian codes and standards
- current project plans, specifications and manufacturer's product information
- organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- equipment, technology, applications and software to collect, interpret and measure data and develop costings and reports.

CPCSUS4002 Use building science principles to construct energy efficient buildings

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCSUS4002A Use building science principles to construct energy efficient buildings. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to incorporate building science principles into the construction of energy efficient buildings. It includes the ability to research, use constructive thinking and problem-solving processes to identify appropriate sustainable solutions.

This unit of competency applies to those who apply building science principles to construction of energy efficient residential and commercial buildings.

This unit of competency is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable energy efficient building problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Sustainability

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

essential outcomes.	demonstrate achievement of the element.
1 Determine the building envelope expectations.	<p>1.1 Identify type of use and energy efficiency expectations of the building.</p> <p>1.2 Identify risks associated with occupants' indoor activities and health and safety considerations.</p> <p>1.3 Determine environmental and climatic conditions that impact the resilience of building materials.</p> <p>1.4 Identify construction methods that factor in durability of materials.</p> <p>1.5 Consult relevant legislation, standards, regulations and codes to identify minimum energy efficient standards to be met.</p> <p>1.6 Consult relevant domestic and international codes, standards and examples of best practice that meet or exceed current energy efficient standards.</p>
2 Assess energy efficiency construction.	<p>2.1 Research building science principles supporting energy efficiency.</p> <p>2.2 Review embodied energy of the specified products or materials to evaluate the energy efficiency.</p> <p>2.3 Research heating, ventilation and air conditioning (HVAC) systems to identify levels of energy efficiency, ventilation and indoor air quality.</p> <p>2.4 Review mechanical ventilation systems and equipment to aid air flows for appropriateness and operational costs.</p> <p>2.5 Research and identify durability and appropriateness of moisture and vapour barriers to gain high levels of energy efficiency.</p>
3 Decide on method of construction.	<p>3.1 Identify site location and building position to maximise energy efficiency relating to environmental factors, climatic conditions and use of building.</p> <p>3.2 Identify and assess energy efficiency of thermal energy, heating and cooling, air and moisture flows throughout the building.</p>

- 3.3 Develop strategies to minimising unwanted air leakages.
- 3.4 Evaluate and select mechanical ventilation systems and equipment for appropriateness to the site and operational costs.
- 3.5 Evaluate and select materials for interior and exterior barriers for energy efficiency, durability and appropriateness for building site climate.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use technology and programs to access and extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCSUS4002A Use building science principles to construct energy efficient buildings.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCSUS4002 Use building science principles to construct energy efficient buildings

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCSUS4002A Use building science principles to construct energy efficient buildings. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by using building science principles in the development of recommendations for the use of energy efficient materials, products and construction methods for one residential construction project and one commercial construction project.

In doing this, the candidate must:

- incorporate building science principles for energy efficient materials and products used in the building envelope
- research and report on a range of energy efficient design and construction methods with a specific focus on:
 - energy efficient heating, cooling and ventilation
 - energy efficient construction methods and systems
 - effects of condensation, dampness, weatherproofing and waterproofing when preventative measures are incorrectly installed or ignored during construction.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the National Construction Code (NCC)
- processes for the evaluation of energy efficiencies in buildings:
 - local and international research into building science methods
 - systems theory and analysis
 - manufacturer websites and technical data for energy efficient construction materials and systems
- theories and principles of efficient energy use of building and construction processes
- the impact on occupant's health and the adverse effect on material integrity and structural components by failing to meet design principles

- types, application and limitations of different construction materials when selecting construction materials and products for energy efficient buildings
- the role of embodied energy when selecting construction materials and products for energy efficient buildings
- general and environmental construction terminology
- effective energy efficient treatment of the building envelope:
 - gaps around ceiling downlights
 - gaps around insulating material
 - gaps under and around doors
 - openings for floor or ceiling ducts used to transmit heating or cooling
 - wall, floor or ceiling cracks
 - window seals
 - thermal mass
- extreme weather conditions impacting on a building:
 - cyclonic activity
 - extreme heat
 - risk of fire
 - heavy rain and flooding
 - storm weather
- work place safety requirements:
 - working with insulation
- digital tools and devices to communicate and collaborate effectively with others
- a range of digitally-based technology and applications for researching information.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant government building and construction legislation
- current building and construction codes and Australian Standards
- the NCC
- construction drawings and specifications, organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- digital technology to research information and devices, applications and software to develop and save documents electronically.

CPCSUS4003 Maximise energy efficiency through applied trade skills

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCSUS4003A Maximise energy efficiency through applied trade skills. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to undertake trade work using techniques and practices aimed at achieving high levels of energy efficiency in the finished work. It includes identifying and applying principles or techniques designed to maximise the energy efficiency characteristics of a building or project.

This unit of competency applies to builders and tradespeople who identify opportunities for energy efficiency gains during construction of the building envelope or finishing work within the residential or commercial construction work.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Sustainability

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Identify energy efficiency aims of the project.
 - 1.1 Use building science principles to identify efficiency expectations from plans, drawings and specifications.
 - 1.2 Confirm building envelope, energy efficiency requirements and specific instructions on priority areas in consultation with relevant personnel and stakeholders.
 - 1.3 Identify limitations and determine appropriate solutions to achieving energy efficiency requirements with relevant personnel.

- 2 Prepare for task.
 - 2.1 Identify comparable products and materials based on building science knowledge and project energy efficiency specifications.
 - 2.2 Check substituted materials and products for comparable energy efficiency characteristics for approval with relevant person.
 - 2.3 Identify and factor into work plan differences in standard practice to achieving energy efficient outcome, gain approval and adjust task timeframe.
 - 2.4 Calculate material quantity from plans and specifications.
 - 2.5 Locate materials ready for use in proximity to the work area.
 - 2.6 Select energy efficient plant, tools and equipment appropriate to carry out specified tasks.

- 3 Perform tasks using energy efficient techniques.
 - 3.1 Eliminate greenhouse gas emissions and avoid unnecessary waste of products and materials during the use of energy efficient techniques.
 - 3.2 Handle and use products and materials according to manufacturer specifications to ensure energy efficiency ratings are maintained when installed.
 - 3.3 Treat cavities and openings created in the building envelope during the project to avoid unnecessary air leakages.
 - 3.4 Maximise opportunities for achieving energy efficiency

outcomes by minimising energy leakages.

- | | | | |
|---|-----------------------------|-----|--|
| 4 | Finalise and evaluate work. | 4.1 | Arrange assessment of work undertaken with qualified energy assessor to confirm extent of energy efficiency outcomes achieved. |
| | | 4.2 | Identify and note improvements in own work practices to ensure energy efficiency outcomes for future development. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- technology skills to:
 - use mobile and communication tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access and extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCSUS4003A Maximise energy efficiency through applied trade skills.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCSUS4003 Maximise energy efficiency through applied trade skills

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCSUS4003A Maximise energy efficiency through applied trade skills. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by undertaking and completing three different activities to maximise energy efficiency of the process or finished product. The three activities may be related to or on the same construction project.

In doing this, the candidate must:

- use principles or techniques that are designed to maximise the energy efficiency characteristics of the building or project
- apply their trade skills to energy efficient practices during the project.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- general construction terminology
- building science principles:
 - building envelope
 - effective ventilation
 - heat, air and moisture flows:
 - conduction
 - convection
 - radiation
 - interaction between occupants, building components and systems, and the environment both indoors and out
 - moisture management and condensation
- energy efficient techniques:
 - advanced framing or optimal value engineering for energy efficient framing
 - appropriate selection and installation of insulation without compressing it

- conserving energy by effectively sealing the building envelope to minimise air leakage (exfiltration and infiltration) in the building envelope, shell or enclosure
- effectively installing windows and flashing without breaking the building envelope
- effectively selecting and installing thermal insulation
- minimising embodied energy
- sealing, insulating and minimising duct leakage
- sealing leaky joints
- selecting recycled materials to minimise production energy
- sourcing materials or products locally to minimise transport energy
- energy efficiency expectations:
 - acoustic and thermal insulation between zones and rooms
 - achieving relevant energy efficient requirements in the National Construction Code (NCC), and other relevant codes and regulations
 - achieving or maintaining a home energy rating, commercial building rating, or equivalent energy rating
 - effectively selecting and using thermal mass
 - energy conservation
 - minimising infiltration
 - minimising the heat loss and maximising the heat gain based on the requirements of the building reflective of the climatic zones
 - minimising thermal bridging
 - passive solar design approach
 - reducing or minimising energy costs and consumption to heat and cool the building
 - thermal resistance
 - ventilation, heat and energy recovery
 - zero energy homes
- workplace safety:
 - hierarchy of control
 - hazardous manual tasks
- processes, procedures and techniques for:
 - calculating material for the task
- organisation's project quality requirements
- environmental requirements and sustainability principles
- properties, characteristics and limitations of approved materials, products and components:
 - structural insulated panels
 - mud bricks
 - solar panels and battery storage
 - glazing
 - straw bale building products
- functional and operational features of tools and equipment.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- government building and environmental legislation
- relevant industry codes and standards
- current project plans, specifications and manufacturer's product information
- organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- business equipment, technology, applications and software to research product and material information and calculate energy gains.

Links

CPCSUS5001 Develop workplace policies and procedures for sustainability

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Knowledge Evidence updated for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and equivalent to CPCSUS5001A Develop workplace policies and procedures for sustainability. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to develop and implement organisational policies and procedures to continuously support resource efficiency and environmentally sustainable work practices. It includes sourcing and gathering information, including from regulatory sources and relevant stakeholders, to plan, develop and implement policies.

This unit of competency applies to those with managerial responsibilities for identifying approaches to create strategies and develop, implement and review workplace policies and procedures for sustainability.

The context of this unit applies to all industry sectors and sections within an organisation, including a worksite, designated work area, in transit and/or an office.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Sustainability

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|--|-----|--|
| 1 | Develop a workplace sustainability policy. | 1.1 | Define the scope of sustainability policy. |
| | | 1.2 | Identify and consult with key stakeholders to gather input and feedback as part of the policy development process. |
| | | 1.3 | Compile information and strategies relating to essential sustainability objectives to structure policies and procedures. |
| | | 1.4 | Make recommendations for policy options based on likely effectiveness, timeframes and cost. |
| | | 1.5 | Develop policy that reflects an organisation's commitment to sustainability as an integral part of business planning and business opportunity. |
| | | 1.6 | Agree on appropriate methods of implementation. |
| 2 | Communicate the policy. | 2.1 | Promote the policy, including its expected outcome, to key stakeholders. |
| | | 2.2 | Inform those involved in implementing the policy of responsibilities, activities to be undertaken and expected outcomes. |
| 3 | Implement and monitor the policy. | 3.1 | Develop and communicate procedures to assist in the implementation of the policy. |
| | | 3.2 | Implement continuous improvement strategies for resource efficiency. |
| | | 3.3 | Establish record systems for tracking approaches to sustainability continuous improvements. |

- | | | | |
|---|-------------------------------|-----|--|
| 4 | Review policy implementation. | 4.1 | Document outcomes and provide feedback to key personnel and stakeholders. |
| | | 4.2 | Investigate the success or otherwise of the policy. |
| | | 4.3 | Monitor records to identify trends requiring remedial action and use information to promote continuous improvement of performance. |
| | | 4.4 | Modify policies and procedures as required to ensure improvements are made and compliance is maintained. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- writing skills to:
 - prepare written reports, policies and procedures requiring precision of expression and language and structure suited to intended audience
- communication skills to:
 - manage different points of view and dissenting stakeholders
 - present information
- technology skills to:
 - use communication tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access and extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCSUS5001A Develop workplace policies and procedures for sustainability.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCSUS5001 Develop workplace policies and procedures for sustainability

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Knowledge Evidence updated for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCSUS5001A Develop workplace policies and procedures for sustainability. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by developing and implementing policies and procedures for sustainable work practices for one of the following:

- a construction project worksite
- a designated work area
- an office

In doing this, the candidate must:

- gather and compile information from various sources
- engage with stakeholders and key personnel to plan the policy development process and identify requirements and issues that may cause disputes
- integrate into the sustainability policy:
 - minimising resource use
 - applying waste recovery strategies
 - reducing or eliminating use of hazardous chemicals and toxic materials
 - employing lifecycle management approaches at all stages of work
- review policies using performance indicators against measurable benchmarks to identify improvements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- environmental and sustainability legislation, requirements, policies, standards and guidelines including:
 - Environmental Protection and Biodiversity Conservation Act
 - *ISO 14001 Environmental Management Systems*
- government building legislation, codes and standards
- the National Construction Code (NCC)
- organisational policies and procedures, quality systems and best practice approaches
- addressing sustainability initiatives:
 - lifecycle management and thinking
 - elimination or reduction of greenhouse gases
 - star rating for all new homes
 - green purchasing programs to purchase sustainable products
 - green plumbing
 - product stewardship
 - supply chain management to influence suppliers to take up sustainability approaches
 - sustainability action plans or frameworks
 - sustainability covenants and compacts
 - triple bottom line reporting
 - purchasing of carbon credits or green power
 - raising awareness among stakeholders through product advice and user recommendations
 - reduce the consumption of non-renewable resources
 - reducing or eliminating the use of hazardous and toxic materials
 - resource, water and energy audits included in quote or tender
 - training of staff in principles and techniques of sustainability
 - use of solar or renewable energies and water
 - waste treatment initiatives (materials, resources and water)
 - maximising the use of recycled, renewable, reusable and reclaimed resource opportunities
 - efficient use of resources, energy and water
 - environmental site management to minimise stormwater pollution
 - installation of efficient appliances, techniques and recommendations for consumer use and opportunities
- properties, characteristics and limitations of approved building materials and components
- sustainability principles and concepts
- workplace safety requirements:
 - hierarchy of control
 - hazardous substances
 - risk management
- industry associations, such as:
 - Housing Industry Association (HIA)

- Master Builders Association
- Green Building Council of Australia (GBCA)
- sustainability schemes and rating systems:
 - HIA – GreenSmart
 - Master Builders Association of Victoria – Green Living
 - GBCA – Green Star
 - National Australian Building Environmental Rating Scheme (NABERS)
 - Australian Building Greenhouse Rating
 - Leadership in Energy and Environmental Design (LEED)
 - Passive House.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- current and relevant environmental and sustainability legislation, requirements, policies, standards and guidelines
- national, state and territory and local government building codes and standards
- technology, applications and software systems for recording and filing documentation, researching, extracting, analysing and presenting information, interpreting data and developing documents and reports.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCSUS5002 Develop action plans to retrofit existing buildings for energy efficiency

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCSUS5002A Develop action plans to retrofit existing buildings for energy efficiency. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to develop plans to improve the energy efficiency of an existing building. It includes researching appropriate products, materials and systems and engaging with clients and stakeholders when retrofitting a building.

The unit of competency applies to building designers, tradespeople and building project managers involved in the design or development of retrofits for energy efficiency.

This unit of competency applies to those who apply skills and knowledge to identify, analyse and evaluate approaches to sometimes unpredictable problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Sustainability

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Plan retrofit processes.
 - 1.1 Discuss client's use of the building and specific expectations of energy efficient retrofit priorities and incorporate into planning.
 - 1.2 Initiate energy assessment or review report from a prior assessment and discuss with key stakeholders to determine energy conservation measures.
 - 1.3 Provide a client with an overview of recommended processes and information relevant to generating an energy efficient retrofit.

 - 2 Evaluate opportunities to improve energy conservation and efficiency of an existing building.
 - 2.1 Review and evaluate recommendations from energy efficiency assessor for input into the retrofit action plan.
 - 2.2 Identify limitations and obstacles involved in the energy efficiency upgrade of a building and develop appropriate solutions.
 - 2.3 Identify and manage risks of retrofitting an existing building for improved energy efficiency, including possible installation of mechanical ventilation systems.
 - 2.4 Develop and cost strategies that provide a measurable increase in the operational energy efficiency of an existing building.
 - 2.5 Assess structural adequacy of the existing building to determine appropriateness of retrofit solutions for energy efficiency.

 - 3 Research and select energy efficient materials, products and systems.
 - 3.1 Research materials, products and systems specifications for appropriateness to the energy efficiency for the existing building.
 - 3.2 Source literature and consult with manufacturer representatives to identify installation and operational specifications.
 - 3.3 Check compliance requirements for selecting and installing materials, products and systems.
 - 3.4 Assess thermal and acoustic insulation of the building to determine energy efficiency rating.

- 3.5 Determine quality of insulation and installation to improve insulating properties of the building.
- 4 Finalise a retrofit action plan.
 - 4.1 Develop final a retrofit action plan to comply with organisational procedures.
 - 4.2 Explain projected benefits of undertaking each of the proposed retrofit measures to a client.
 - 4.3 Obtain client sign-off and finalise documentation of the agreed plan.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- numeracy skills to:
 - calculate areas, volume and mass to determine dimensions and plan design
 - convert data into measurable and comparable information
- problem-solving skills to:
 - recognise and overcome design and structural construction problems
- technology skills to:
 - use communication tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access and extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCSUS5002A Develop action plans to retrofit existing buildings for energy efficiency.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCSUS5002 Develop action plans to retrofit existing buildings for energy efficiency

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCSUS5002A Develop action plans to retrofit existing buildings for energy efficiency. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by developing an action plan to retrofit and improve the energy efficiency of an existing residential or commercial building up to a maximum of three storeys.

In doing this, the candidate must:

- determine class, type, condition and use of a building
- produce energy efficiency comparison of an existing building and retrofitted building
- produce costing, timelines and products and materials for the retrofit project
- source applications for permits and service connections
- identify limitations and obstacles to retrofit and determine solutions
- develop a process for project risk management.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- building science principles and their application to the retrofitting of existing buildings for improved energy efficiency
- environmental and sustainability legislation, requirements, policies, standards and guidelines:
 - environmental protection
 - biodiversity conservation
- national, state and territory and local government building codes and standards
- the National Construction Code (NCC)
- organisational policies and procedures, quality systems and best practice approaches
- addressing retrofitting expectations and benefits:
 - improved levels of comfort for the occupants
 - increased air changes per hour to improve indoor air quality

- increased durability of the building
- potential for improved return on investment
- reduction in and prevention of mould
- reduction in heating and cooling costs
- fire resistance and resistance from bushfire attack
- risks of retrofitting:
 - budget constraints
 - condition of existing building
 - local council planning provisions
 - land overlays and requirements relating to neighbourhood character
 - orientation of the existing building
 - original design and construction of existing building
 - position of existing services to the building
 - presence of protected vegetation adjacent to existing building
 - protection of existing building under heritage listing
 - proximity of other buildings or structures
 - sealing the building envelope:
 - air pressure differentials
 - combustion
 - moisture and mould
 - poor indoor air quality
- properties, characteristics and limitations of selected building materials and components
- processes, procedure and techniques of:
 - energy assessment to develop energy efficient strategies
 - calculating using measurements and formulas
- retrofitting strategies:
 - light fittings
 - smart technology or motion sensors
 - insulation
 - sealing building envelope
 - solar photovoltaic systems
 - energy sources
- sustainability principles and concepts
- workplace safety:
 - hierarchy of control
 - hazardous manual tasks
 - working at heights
- project plans, specifications and working drawings
- general construction terminology.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- current and appropriate environmental and sustainability legislation, requirements, policies, standards and guidelines
- government building and environmental requirements, codes and standards
- project plans, specifications and material manufacturer's specifications
- technology, applications and software systems for researching, extracting, analysing and presenting information, interpreting data and developing documents and reports to facilitate the development of an action plan to retrofit an existing building for energy efficiency.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCSUS5003 Manage energy efficient building methods and strategies

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCSUS5003A Manage energy efficient building methods and strategies. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to ensure that energy efficient building methods and strategies on new or existing building projects, designed to satisfy energy efficient ratings and requirements, are supported by employees and contractors. It includes conducting appropriate performance testing of the construction to determine adherence to energy efficiency methodologies and techniques.

The unit of competency includes ensuring that work undertaken to construct an energy efficient building, or to retrofit an existing building for improved energy efficiency, is performed as designed and reflects energy efficient specifications.

This unit of competency applies to builders and site managers overseeing the construction of buildings designed to meet energy efficient ratings or improve the energy efficiency characteristics of a residential or commercial building.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Sustainability

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|---|
| 1 Plan and prepare to construct an energy efficient building. | 1.1 Review plans, drawings and specifications to identify energy efficient requirements of finished building or works. |
| | 1.2 Determine the building class and type. |
| | 1.3 Consult relevant stakeholders to identify the purpose and use of the building and the energy efficiency expectations of its owners or occupiers. |
| | 1.4 Source, select and cost construction materials and products to conform to energy efficiency expectations of the building or works. |
| | 1.5 Schedule works to be undertaken to support the energy efficient building strategy. |
| | 1.6 Resource the project with appropriately skilled tradespeople with energy efficiency competency. |
| | 1.7 Develop strategies for the disposal, recovery or reuse of waste materials for the project. |
| | 1.8 Communicate budget, timelines and impact of energy efficiency of the project to the owner, occupier and other stakeholders. |
| 2 Monitor project energy efficiency. | 2.1 Evaluate and quantify the impact on energy efficiency against the expectations to assist in decision-making processes of construction methods, materials selection and alteration of works. |
| | 2.2 Assess the capacity to maximise energy efficiency by improving building envelope sealing prior to other work commencing. |
| | 2.3 Brief trades and other workers on the building project regarding expected energy efficiencies, quality of work, methods and techniques to be used. |
| | 2.4 Monitor the project and maintain communication with subsequent trades to ensure benefits of energy efficient requirements and techniques are not lost or diminished. |

- | | |
|--|---|
| 3 Evaluate and communicate energy efficiency outcomes. | 3.1 Assess works undertaken for adherence to energy efficiency processes. |
| | 3.2 Conduct and record handheld thermal imaging assessment of building or works to determine presence of unwanted heat and air leakages and address findings where necessary. |
| | 3.3 Conduct duct testing to identify the location of leakages and implement remedial work to address findings. |
| | 3.4 Seek external expert verification of star ratings for building energy efficiency. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- numeracy skills to:
 - use statistical data to measure and compare energy efficiency
- oral communication skills to:
 - use appropriate technical language to convey a design and construction brief to a work group, client and stakeholders
- technology skills to:
 - use communication tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access and extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCSUS5003A Manage energy efficient building methods and strategies.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCSUS5003 Manage energy efficient building methods and strategies

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCSUS5003A Manage energy efficient building methods and strategies. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by managing energy efficient building methods and strategies for two building and construction projects:

- one residential - Class 1 or 10 to a maximum of two storeys
- one commercial - Class 2 to 9, Type B or C.

In doing this, the candidate must:

- prepare costing of energy efficient materials, products and labour
- prepare a project schedule with techniques and strategies, products and time lines to communicate to stakeholders and on-site tradespeople
- determine processes for minimising, reusing or reclaiming waste.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- building science principles and their application for improved energy efficiency
- environmental and sustainability legislation, requirements, policies, standards and guidelines
- Environment Protection and Biodiversity Conservation Act
- government building and environmental requirements, codes and standards
- the National Construction Code (NCC)
- organisational policies and procedures, quality systems and best practice approaches
- properties, characteristics and limitations of approved building materials and component:
 - structural insulated panels
 - glazing
 - thermal mass

- impacts on materials and products used in different climate zones and environmental conditions
- processes, procedure and techniques of:
 - building methods and installation of products
 - evaluating energy efficiencies in buildings
 - sealing the building envelope
- sustainability principles and concepts
- approaches to waste management consistent with principles of energy efficiency:
 - processes for minimising, reusing, recycling and recovering waste materials
- workplace safety:
 - hierarchy of control
- project plans, specifications and working drawings
- general construction terminology
- benchmarks to meet standards and rating systems for energy efficiency, such as:
 - Green Star requirements
 - WELL buildings
 - Passive House
- techniques which support energy efficiency:
 - protecting the air barrier by minimising and sealing gaps using advanced framing techniques to increase construction productivity, reduce thermal bridging and increase operational energy efficiency
 - installing insulation on the outside of the frame and in the roof, walls and floor
 - reducing the effect of thermal bridging
 - selecting appropriately sized heating, ventilation and air conditioning (HVAC) system, which considers the tightness of the structure and incorporates heat or energy recovery systems as appropriate for ventilation
 - using air or vapour barriers to ensure the entire building envelope is sealed, separating the inside environment from the outside
 - using thicker insulation to improve the building's thermal performance.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- current and appropriate building, environmental and sustainability legislation, requirements, policies, standards, guidelines and accreditation/certification requirements

- Australian Standards and building industry codes of practice
- project plans, specifications and manufacturer's product and installation specifications
- business equipment, technology, applications and software systems for recording and filing documentation, researching, extracting, analysing and presenting information, interpreting performance data and developing documents and reports.

CPCWHS3001 Identify construction work hazards and select risk control strategies

Modification History

- Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Minor typographical error corrected in Elements and Performance Criteria 3.5. Knowledge Evidence is formatted for clarity.
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCWHS3001 Identify construction work hazards and select risk control strategies. Performance evidence updated to clarify volume and frequency.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 2.0.
New unit.

Application

This unit of competency specifies the skills and knowledge required to participate in preparing a job safety analysis (JSA) for general hazards, and a safe work method statement (SWMS) for high risk work hazards on construction sites as specified in work health and safety (WHS) legislation. It includes meeting all relevant requirements of the National Construction Code (NCC), Australian Standards and Commonwealth and state or territory legislation.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of CPCCWHS1001 Prepare to work safely in the construction industry meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Work health and safety

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|--|
| 1 Plan and prepare. | 1.1 Review job task, work site and compliance requirements. |
| | 1.2 Select and use personal protective equipment (PPE) for each part of the task. |
| | 1.3 Inspect work site and identify hazards relevant to job task. |
| | 1.4 Determine and record level of risk for each identified hazard. |
| 2 Prepare and implement job safety analysis (JSA). | 2.1 Review requirements of work health and safety legislation for preparation of job safety analysis (JSA) using template. |
| | 2.2 Break job task into logical steps, determine tools, equipment, plant and materials to be used for each step, and record on JSA. |
| | 2.3 Identify work site and task-related hazards and levels of risk relating to each step, and record on JSA. |
| | 2.4 Apply hierarchy of controls to determine risk control strategies for each hazard in each step of the job task, discuss and confirm with relevant personnel, and record on JSA. |
| | 2.5 Review work site and job task immediately before starting work and discuss JSA with relevant personnel to confirm as still applicable, or to amend as required. |
| | 2.6 Store JSA securely on site in accordance with compliance requirements. |
| 3 Prepare and implement safe work method | 3.1 Review requirements of work health and safety legislation for preparation of safe work method |

statement (SWMS) for high risk work.

statements (SWMS).

- 3.2 Determine work site conditions and job task requirements.
- 3.3 Determine and record high-risk work site and task hazards relevant to job task.
- 3.4 Break job task into logical steps, determine tools, equipment and materials to be used for each step, and record on SWMS.
- 3.5 Identify high-risk work site and task-related hazards and levels of risk relating to each step, and record on SWMS.
- 3.6 Apply hierarchy of controls to determine risk control strategies for each high-risk hazard in each step of the job task, discuss and confirm with relevant personnel, and record on SWMS.
- 3.7 Review work site and job task immediately before starting work and discuss SWMS with relevant personnel to confirm as still applicable, or to amend as required.
- 3.8 Store SWMS securely on site in accordance with compliance requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCWHS3001 Identify construction work hazards and select risk control strategies.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCWHS3001 Identify construction work hazards and select risk control strategies

Modification History

- Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
- Minor typographical error corrected in Elements and Performance Criteria 3.5. Knowledge Evidence is formatted for clarity.
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCCWHS3001 Identify construction work hazards and select risk control strategies. Performance evidence updated to clarify volume and frequency.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 2.0.
- New unit.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- developing, in consultation with relevant personnel, two Job Safety Analysis (JSA) for general hazards. Each JSA should be for a different job task and on a different work site
- revising a JSA prior to starting work, identifying changed conditions and where appropriate, amending the JSA to reflect changed hazards and risk control strategies
- developing, in consultation with relevant personnel, two Safe Work Method Statements (SWMS) for high-risk work. Each SWMS should be for a different job task and on a different work site.
- revising a SWMS prior to starting work, identifying changed conditions and where appropriate, amending the SWMS to reflect changed hazards and risk control strategies.

All work must be performed to the standard required in the workplace and must meet the requirements of work health and safety (WHS), the National Construction Code (NCC), Australian Standards, Commonwealth and state or territory legislation, manufacturers' specifications, and environmental plans and obligations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- Australian standards, industry guidelines, National Construction Code requirements, and codes of practice, including the Model Code of Practice for Construction Work when identifying construction site hazards and selecting risk control strategies
- format and content requirements for JSAs and SWMSs:
 - environmental requirements
 - public health and safety requirements
 - WHS requirements, including safe operating procedures
 - safety data sheets (SDS)
 - taking into account other work going on near the work area
 - common hazards and causes of incidents and near misses on construction sites
 - compliance requirements in relation to identified job tasks and work sites
 - construction hand and power tools, and equipment relevant to the identified job tasks, and requirements for their safe handling and operation
- processes for preparing SWMSs for high risk work in the construction industry:
 - principles and application of the hierarchy of controls
 - purpose and application of SDS when working with different materials
 - risk management strategies relevant to identified job tasks specified in the performance evidence
 - types of construction methods and materials used in both general hazards and high-risk construction work and risk factors inherent in their use and application
 - use and meaning of construction terminology used on construction work sites relevant to identifying site hazards and selecting suitable risk control strategies.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

AHCLSC307 Implement a retaining wall project

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to install and construct a retaining wall.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Landscape (LSC)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare for retaining wall project	1.1 Interpret plans and specifications 1.2 Identify equipment and material resource requirements according to the scope of the construction work 1.3 Identify workplace health and safety hazards, assess risks and implement controls

Element	Performance criteria
	1.4 Identify and ameliorate environmental impacts of the proposed works 1.5 Select, use and maintain personal protective equipment (PPE) 1.6 Select tools and equipment and check for serviceability 1.7 Organise delivery of materials to site according to workplace priorities
2. Mark out site for retaining wall	2.1 Erect site bunting and place safety signage 2.2 Locate services 2.3 Mark out the position of the retaining wall 2.4 Determine the location and depth of excavations from construction plans 2.5 Establish profiles to conform to the designated tolerances 2.6 Establish survey benchmarks
3. Construct retaining wall	3.1 Assemble or install retaining wall components in accordance to plans and specifications 3.2 Install appropriate drainage in accordance with plans and specifications 3.3 Use tools and equipment safely and in accordance with enterprise safe operating procedures and work health and safety requirements
4. Check quality of work and clean-up site	4.1 Inspect the quality of finished works to ensure the required standard has been achieved 4.2 Clean paved surfaces and dispose of all debris in an environmentally safe and sensitive manner 4.3 Clean, maintain and store tools and equipment

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCLSC307A Implement a retaining wall project.

Companion Volume implementation guides are found in VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=c6399549-9c62-4a5e-bf1a-524b2322cf72>

Assessment Requirements for AHCLSC307 Implement a retaining wall project

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- read and interpret documentation associated with retaining wall projects
- calculate material and resource requirements
- establish survey benchmarks
- excavate and profile soil levels
- use tools and equipment to construct retaining wall projects

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the principles and practices of retaining walls
- environmental impacts of landscape works
- landscape retaining wall materials and construction techniques
- legislative requirements and codes of practice affected by landscape works
- local council permit requirements for landscape works
- materials, equipment and machinery that may be required for the project
- methods and practices for maintaining and repairing retaining walls
- set out techniques
- work health and safety issues

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AURVTP109 Apply vehicle body film wrapping

Modification History

Release	Comments
Release 1	This version first released with AUR Automotive Retail, Service and Repair Training Package Version 6.0

Application

This unit describes the skills and knowledge required to prepare vehicle body surfaces and apply vinyl film wrapping materials. This unit involves preparing for the task, selecting and using specialist tools, selecting vinyl film materials, checking vinyl film quality, and completing workplace processes and documentation.

The unit applies to those working in the automotive paint refinishing repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Vehicle Body Technical - Paint

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to apply vehicle body film wrapping	1.1 Determine job requirements from workplace instructions 1.2 Access and interpret workplace procedures and vinyl film supplier recommended application methods 1.3 Select and inspect vinyl film wrapping materials for quality 1.4 Identify hazards associated with the work and manage risks 1.5 Select and check tools and equipment for serviceability 1.6 Assess vehicle panel surface for quality 1.7 Plan work to apply body film wrapping, minimise waste, and prevent damage to vehicle
2. Measure, cut and apply	2.1 Measure surface area and produce patterns

ELEMENTS	PERFORMANCE CRITERIA
vinyl film	2.2 Cut vinyl film material according to vinyl pattern specifications and safety and environmental requirements 2.3 Prepare body surface using vinyl film supplier approved methods, materials and equipment 2.4 Apply vinyl film wrapping materials according to vinyl film supplier specifications and workplace procedures, and without causing damage to body surface
3. Complete work processes	3.1 Conduct final inspection according to workplace procedures and confirm vehicle is ready for use 3.2 Clear work area and dispose of or recycle materials according to workplace procedures 3.3 Complete documentation according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Locates required sources of information efficiently.
Numeracy	<ul style="list-style-type: none"> Uses basic mathematical operations, including addition, subtraction, multiplication and division to: <ul style="list-style-type: none"> measure surface areas and vinyl film patterns Calculates vinyl film wrapping material requirements.
Oral communication	<ul style="list-style-type: none"> Clarifies instructions and procedures Reports quality issues and job outcomes clearly.
Technology	<ul style="list-style-type: none"> Uses specialist tools.

Unit Mapping Information

Supersedes and is equivalent to AURVTP009 Apply vehicle body film wrapping.

Links

Companion Volume Implementation Guide is found on VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b4278d82-d487-4070-a8c4-78045ec695b1>

Assessment Requirements for AURVTP109 Apply vehicle body film wrapping

Modification History

Release	Comments
Release 1	This version first released with AUR Automotive Retail, Service and Repair Training Package Version 6.0

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- apply vinyl film wrapping on at least three different vehicles.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- methods to locate and interpret information required to apply vehicle body film wrapping, including:
 - information provided by customer and supervisors
 - manufacturer specifications and procedures or equivalent documentation
- workplace procedures required to apply vehicle body film wrapping, including:
 - establishing serviceability of tools and equipment
 - documentation procedures
 - housekeeping procedures, including:
 - examination of tools and equipment
 - storage of equipment
 - identification, tagging and isolation of faulty equipment
 - disposal of excess materials
 - recycling procedures
- work health and safety (WHS) requirements relating to applying vehicle body film wrapping, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using specialist tools
- environmental requirements, including procedures for trapping, storing and disposing of waste material

- types and uses of vinyl film wrapping materials and tools, including:
 - vinyl film wrapping requirements
 - patterns
 - application tools
 - cleaning agents
- vinyl film supplier recommended methods and techniques for applying vinyl film wrapping, including:
 - surface preparation
 - surface measurements and pattern development
 - quality requirements relating to vinyl film wrapping
- procedures for protecting vehicle and components when applying film wrapping
- procedures for final inspection of vehicle vinyl film wrapping.

Assessment Conditions

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the body film wrapping they have applied to vehicles, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace instructions
- PPE to apply vinyl film wrapping
- vinyl film supplier specifications and application methods
- three different vehicles requiring the application of vinyl film materials
- vinyl film wrapping material
- tools, equipment and materials appropriate for applying vehicle body film wrapping.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBAUD513 Report on quality audits

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to report on the outcomes of quality audits and take appropriate follow up actions. It covers compiling audit results, preparing reports for relevant stakeholders, and negotiating follow up actions with relevant stakeholders.

The unit applies to individuals who have an established knowledge of quality auditing and are proficient in using a range of quality auditing techniques. It addresses the function performed by either an auditor having sole responsibility for the audit or an auditor required to report on quality audits as part of a quality audit team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Technical Skills – Audit and Compliance

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to report audit results	1.1 Compile audit results 1.2 Analyse compiled audit results against agreed audit plan and identify non-compliances 1.3 Consult with team members, if required
2. Prepare final audit report	2.1 Produce draft audit report according to audit plan 2.2 Provide draft report to relevant stakeholders and seek feedback 2.3 Finalise audit report, integrating stakeholder feedback, as required 2.4 Present final audit report to auditee and other relevant

ELEMENT	PERFORMANCE CRITERIA
	stakeholders
3. Agree on follow up process with auditee	<p>3.1 Determine timeframes for any corrective action required to deal with non-conformance, in consultation relevant stakeholders, including the auditee</p> <p>3.2 Confirm corrective action follow-up procedures are agreed with relevant stakeholders</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interprets and analyses information from a complex range of organisational documentation
Writing	<ul style="list-style-type: none"> Develops a variety of complex documents using relevant structure, tone and vocabulary appropriate to audience, context and purpose
Oral Communication	<ul style="list-style-type: none"> Participates in spoken exchanges using clear language, tone and pace Uses questioning and listening techniques to clarify understanding
Numeracy	<ul style="list-style-type: none"> Collects, represents, summarises and interprets a range of statistical data
Self-management	<ul style="list-style-type: none"> Monitors adherence to organisational policy/ies and procedure/s Organises, plans and sequences own workload according to timelines and organisational requirements Analyses outcomes of decisions to identify opportunities for improvement
Teamwork	<ul style="list-style-type: none"> Collaborates with others to negotiate joint outcomes, playing an active role in facilitating team understanding
Problem solving	<ul style="list-style-type: none"> Recognises a range of familiar problems, their symptoms and causes, actively looking for suitable corrective actions
Initiative and enterprise	<ul style="list-style-type: none"> Makes a range of decisions in complex situations, taking a range of factors into account
Technology	<ul style="list-style-type: none"> Uses digital tools and systems to develop reports in an effective way

Unit Mapping Information

Supersedes and is equivalent to BSBAUD504 Report on a quality audit.

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- interpret audit results and produce a detailed audit report containing detailed analysis according to specified organisational requirements on at least two different occasions.

In the course of the above, the candidate must:

- negotiate follow-up actions with relevant stakeholders
- use terminology relating to quality auditing.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- quality auditing principles, methods and techniques
- requirements of auditing regulations
- key features of technology required for producing quality auditing results and reports according to organisational requirements
- presentation of corrective action requirements.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- workplace documentation including quality audit reports, checklists, and audit plans
- technology required for quality auditing reporting.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBESB301 Investigate business opportunities

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to identify a business opportunity and its key components. This requires undertaking research to determine the viability of the opportunity, with reference to the legislative frameworks affecting the business.

The unit applies to those establishing or operating a business providing self-employment, as well as those establishing a new venture as part of a larger organisation. The business opportunities may relate to products and/or services offered by the business.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Business Competence – Entrepreneurship and Small Business

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify potential opportunities for business	1.1 Source and analyse market information for potential opportunities 1.2 Analyse information and list details of business ideas and opportunities 1.3 Identify and describe products and/or services that match business ideas 1.4 Identify and analyse available business, financial, digital technology and technical factors related to the potential opportunities 1.5 Identify customers for the products and/or services

ELEMENT	PERFORMANCE CRITERIA
2. Investigate market needs and factors affecting market	<p>2.1 Collect, investigate and analyse business and market information, trends and developments from primary and secondary sources to identify market needs related to business opportunities</p> <p>2.2 Identify ethical and cultural requirements of the market</p> <p>2.3 Identify projected changes in population, economic activity and other macro external factors that may impact business opportunities</p> <p>2.4 Review identified needs and factors and identify their potential impact on business opportunities</p> <p>2.5 Investigate marketing and promotion activities and strategies for identified products and/or services</p>
3. Finalise investigation into business opportunities	<p>3.1 Review personal factors against business opportunities and identify their impact on opportunities</p> <p>3.2 Examine options to address and minimise negative impact and strengthen positive impact of personal factors</p> <p>3.3 Document outcomes of investigation into business opportunity</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Analyses and evaluates information and integrates facts and ideas
Writing	<ul style="list-style-type: none"> Uses information and industry-related terminology to develop required documentation
Numeracy	<ul style="list-style-type: none"> Extracts, evaluates and compares numerical information to determine resources and identify trends
Technology	<ul style="list-style-type: none"> Uses a range of digitally based technology and applications to access and filter data, and then extract, organise and integrate relevant information

Unit Mapping Information

No equivalent unit. Supersedes but is not equivalent to:

- BSBSMB201 Identify suitability for micro business

- BSBSMB301 Investigate micro business opportunities
- BSBSMB306 Plan a home based business.

Assessment Requirements for BSBESB301 Investigate business opportunities

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify and investigate at least one business opportunity and assess the probability of success.

In the course of the above, the candidate must:

- research and analyse information from a range of sources for its potential impact on the market, products and/or services, and customers
- match personal factors to business opportunities.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- sources of business and market information on business ideas and potential business opportunities, including:
 - potential clients and past leads
 - competitor activities, products and services
 - industry trends and insights
 - legislative and regulatory requirements relevant to opportunities being investigated
- market information, trends and developments, including:
 - new and emerging markets and their features
 - expected market growth or decline and associated risk factors
 - economic activity, including projected or potential movements in prices
 - projected changes in availability of resources
- personal factors involved in choosing preferred opportunity include:
 - own skills and aspirations
 - own commitments, expectations and capabilities

- criteria for determining the viability of a business opportunity, including:
 - market size, potential, needs and trends
 - financial considerations
 - benefits and challenges of digital technologies relevant to opportunities
 - resource availability
- business research methods and data collection tools and software
- impact of ethical and cultural requirements of market on opportunities and products.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- internet access for research
- source of information on potential business opportunities, including customer or supplier information
- data collection tools and software
- legislative and regulatory information relating to business opportunities
- workplace documentation and resources relevant to performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBESB406 Establish operational strategies and procedures for new business ventures

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to develop and implement operational strategies and procedures for new businesses.

The unit applies to those establishing a business providing self-employment, as well as those establishing a new venture as part of a larger organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Business Competence – Entrepreneurship and Small Business

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Review operational strategies and procedures for business or new business venture	1.1 Develop a detailed operational plan that sets out clear action points to fulfil on business goals and objectives 1.2 Identify work health and safety (WHS) and environmental issues and implement strategies to minimise risk factors 1.3 Review and evaluate, where appropriate, a quality assurance process for the business in line with industry standards, compliance requirements and cultural criteria 1.4 Develop operational key performance indicators (KPIs) that align to business plan 1.5 Align KPIs to business strategies, including utilisation of existing or new technologies, where practicable, to optimise

ELEMENT	PERFORMANCE CRITERIA
	business performance
2. Implement developed operational strategies and procedures	2.1 Implement systems to evaluate business performance and customer satisfaction, including by setting KPIs or targets 2.2 Implement systems to control stock, expenditure or cost, wastage or shrinkage and risks to health and safety according to business plan, incorporating new digital technologies where applicable 2.3 Identify and manage staffing requirements, considering a range of permanent and flexible arrangements, and adhering to budgetary constraints 2.4 Provide products and/or services according to established legal, ethical cultural and technical standards 2.5 Provide products and/or services according to time, cost and quality specifications, and customer requirements, incorporating new digital technologies where applicable 2.6 Apply quality procedures to address product and/or service and customer requirements
3. Evaluate business performance	3.1 Use digital technologies to regularly evaluate and review achievement of operational targets to ensure optimum business performance, according to business goals and objectives 3.2 Review and document systems and structures to support business performance 3.3 Investigate and analyse operating problems to establish causes and implement changes as required, as part of business quality system 3.4 Update operational policies and procedures to incorporate corrective action
4. Review business operations	4.1 Review and adjust business operations to increase business success, according to business goals and objectives 4.2 Research and implement new and emerging digital technologies into business operations according to business goals and objectives and workplace procedures 4.3 Research new business opportunities and adjust business goals and objectives as new opportunities arise

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Evaluates complex text to determine legislative, regulatory and workplace documentation
Writing	<ul style="list-style-type: none"> Prepares written reports and workplace documentation that communicate information clearly and effectively
Numeracy	<ul style="list-style-type: none"> Interprets numerical information to manage performance information and regulate cash flow
Self-management	<ul style="list-style-type: none"> Evaluates adherence to workplace policies and procedures and considers own role for its contribution to broader goals of work environment Identifies implications of legal and regulatory responsibilities for own work, with specific reference to safety Identifies concepts, principles and features of approaches in use in other contexts and applies them to own situation
Planning and organising	<ul style="list-style-type: none"> Develops plans to manage relatively complex, non-routine tasks that may contribute to longer-term operational and strategic goals

Unit Mapping Information

Supersedes and is equivalent to BSBSMB420 Evaluate and develop small business operations.

Supersedes but is not equivalent to:

- BSBFRA401 Manage compliance with franchisee obligations and legislative requirements
- BSBFRA402 Establish a franchise

Assessment Requirements for BSBESB406 Establish operational strategies and procedures for new business ventures

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop strategies and procedures to manage operations for at least one new business or new business venture, including:
 - an operational plan
 - risk management procedures
 - a quality assurance process
 - performance measures.

In the course of the above, the candidate must:

- use existing, new and emerging digital technologies to optimise business performance
- research and record business improvements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislation, regulations, industry codes of practice and standards specific to small business described in performance evidence
- key features of methods for implementing operation and revenue control systems, including for controlling stock and expenditure
- methods for evaluating performance and implementing improvements, including:
 - identifying and meeting staffing requirements
 - analysing and correcting business problems
 - reviewing and adjusting the business plan
- work health and safety (WHS) responsibilities and procedures for managing hazards and assessing risks associated with business described in performance evidence
- principles of risk management, including risk assessment

- quality assurance system principles and methods
- role of digital technologies and innovation in modern business
- key features of systems to manage staff, stock, expenditure, services and customer service
- key features of required technical or specialist skills relevant to business operations
- workplace procedures for implementing new and emerging digital technologies into business operations.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- business equipment and resources, including business technology
- legislation, regulations, codes of practice and standards relating to business described in performance evidence
- workplace documentation and resources relevant to performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to lead a business operation that covers the steps required to develop and implement business plans.

The unit applies to individuals who are running an organisation or who take a senior role in determining the effective functioning and success of the organisation. These individuals may oversee the work of a number of teams and other managers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Business Competence – Business Operations

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish business plan	1.1 Identify organisational and legislative frameworks relevant to development of a business plan 1.2 Review market requirements for the organisation's products and service 1.3 Identify and assess business requirements, objectives, competitors and established plans 1.4 Develop performance objectives and measures for business plan, in consultation with relevant stakeholders 1.5 Identify financial, human and physical resource requirements for the business 1.6 Develop business plan

ELEMENT	PERFORMANCE CRITERIA
2. Implement business plan	2.1 Communicate business plan to all relevant stakeholders 2.2 Confirm skilled labour is available to implement plan 2.3 Test performance measurement systems and refine, where required 2.4 Prepare reports on key aspects of the business 2.5 Report system failures, product and service failures and variances to the business plan as they occur
3. Respond to performance data	3.1 Analyse performance reports against planned objectives 3.2 Review performance indicators and refine, where required 3.3 Identify and coach under-performing staff 3.4 Establish ongoing review processes

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Description
Reading	<ul style="list-style-type: none"> Gathers, interprets and analyses textual information when developing the business plan and monitoring operational performance
Writing	<ul style="list-style-type: none"> Communicates relationships between ideas and information, matching style of writing to purpose and audience Researches, plans and prepares business plan for relevant stakeholders
Oral communication	<ul style="list-style-type: none"> Presents information and seeks advice using language and features appropriate to audience Participates in discussions using listening and questioning to elicit the views of others and to clarify or confirm understanding
Numeracy	<ul style="list-style-type: none"> Extracts and evaluates mathematical information to review the market, research competitors and review pricing structures
Enterprise and initiative	<ul style="list-style-type: none"> Takes full responsibility for identifying and complying with legislative requirements applicable to self and the organisation
Teamwork	<ul style="list-style-type: none"> Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction, influencing direction and taking a leadership role Provides support in field of expertise to colleagues, as required
Planning and organising	<ul style="list-style-type: none"> Sequences and schedules complex activities, monitors implementation and manages relevant communication

Skill	Description
	<ul style="list-style-type: none">• Systematically gathers and analyses all relevant information and evaluates options in order to monitor performance and identify opportunities for improvement

Unit Mapping Information

Supersedes and is equivalent to BSBMGT617 Develop and implement a business plan.

Supersedes but is not equivalent to:

- BSBCUE604 Develop and maintain a service level strategy
- BSBCUE606 Forecast and plan using customer engagement traffic information analysis
- BSBMGT618 Develop an engagement centre business plan.

Assessment Requirements for BSBOPS601 Develop and implement business plans

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop and implement at least one business plan.

In the course of the above, the candidate must:

- analyse and research business vision, mission, values, objectives, goals, competitors, financial targets, management arrangements and marketing approaches
- write a business plan, including:
 - description of the business
 - products and services
 - financial, physical and human resource requirements
 - regulatory requirements
 - marketing strategy
 - financial indicators
 - productivity and performance targets for key result areas
- monitor and respond to business performance including evaluation of performance against key results indicators
- consult, communicate with and report to relevant stakeholders
- provide analysis of the strengths and weaknesses of a business plan.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational and legislative frameworks required for the development of business plans, including:
 - pre-existing strategic, business and operational plans
 - business vision, mission, values and objectives

- permits or licences that may be required for new activity
- processes for developing and monitoring business plans
- customer needs and budgeting information
- performance objectives and measures, including key results indicators
- stakeholders involved in the development of business plans.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- business information and data relevant to performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for BSBPEF501 Manage personal and professional development

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop and implement a plan for own personal and professional development
- manage personal and professional development of at least two other individuals.

In the course of the above, the candidate must:

- identify roles and responsibilities of team members
- support two different individuals to develop work goals that align with their role and responsibilities
- facilitate team member access to relevant personal and professional development activities
- use technology to organise and prioritise tasks and commitments of a team or work area
- research and implement techniques for maintaining health and wellbeing of self and others
- develop personal work goals, plans and activities to meet work goals
- measure personal work performance, including assessing competency against competency standards
- participate in personal and professional development activities to develop professional competence.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- roles and responsibilities of team members
- principles and techniques involved in the management or organisation of:
 - performance measurement
 - personal behaviour, self-awareness and personality traits identification
 - personal development plans
 - personal goal setting

- task prioritisation
- common personal and professional development activities relevant to the industry
- technology to plan and prioritise work tasks
- techniques to manage health and wellbeing in the workplace
- organisation's human resources policies and procedures relevant to professional development.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to challenges and situations to demonstrate the application of performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for BSBPMG430 Undertake project work

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- undertake project work on a minor project or a section of a larger project.

In the course of the above, the candidate must:

- confirm the quality of project outcomes according to expectations of the organisation
- consult and communicate with relevant stakeholders to generate input and engagement in planning, implementing and reviewing the project
- provide support to team members to enable them to achieve deliverables and to transition them as appropriate at completion of the project.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- project management tools
- types of documents and other sources of information commonly used in defining the parameters of a project
- mission, goals, objectives and operations of the organisation
- relevant legislation and regulations, including work health and safety (WHS) requirements, for project planning
- project management processes according to policies and procedures of the organisation and including:
 - lines of authority and approvals
 - quality assurance
 - human resources
 - budgets and finance
 - risk management
 - recordkeeping

- reporting.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- relevant legislation, regulations, standards and codes
- workplace documentation and resources relevant to performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBPMG532 Manage project quality

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to manage quality within projects. It involves determining quality requirements, implementing quality control and assurance processes, and using review and evaluation to make quality improvements in current and future projects.

The unit applies to individuals responsible for managing and leading a project in an organisation, business, or as a consultant.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Business Competence – Project Management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine quality requirements	1.1 Identify quality objectives and standards with input from relevant stakeholders 1.2 Develop quality metrics for the project and any product output in a quality management plan 1.3 Select quality management methods and tools for resolving quality issues 1.4 Consult with project team and stakeholders on quality requirements
2. Implement quality processes	2.1 Perform quality assurance audit of project processes for compliance with agreed plans

ELEMENT	PERFORMANCE CRITERIA
	2.2 Assess quality control of project and product output according to agreed quality specifications 2.3 Identify causes of variance to quality metrics and undertake remedial action 2.4 Maintain a quality management system for timely recording of quality audit data
3. Implement project quality improvements	3.1 Review processes and implement agreed changes continually throughout the project life cycle 3.2 Review project outcomes against performance requirements 3.3 Identify and document lessons learned and recommended improvements

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Identifies, analyses and assesses textual information obtained from a range of sources and determines how content may be applied to requirements
Writing	<ul style="list-style-type: none"> Develops and documents quality requirements for project plan Records results of quality audits according to organisational requirements
Oral Communication	<ul style="list-style-type: none"> Participates in verbal exchanges using clear language and appropriate non-verbal features to provide and seek relevant information Uses active listening and questioning techniques to elicit views and opinions of others
Numeracy	<ul style="list-style-type: none"> Interprets information to determine measurable objectives Interprets numerical information to measure outcomes against objectives Uses analytical skills to review and evaluate process and decide on future improvements
Self-management	<ul style="list-style-type: none"> Takes responsibility for identifying and following policies, procedures and standards
Teamwork	<ul style="list-style-type: none"> Selects and uses appropriate communication practices in a range of work contexts Collaborates with others to foster shared understanding of quality requirements

SKILL	DESCRIPTION
Planning and organising	<ul style="list-style-type: none">Sequences and schedules complex activities, monitors actions against goals, adjusting plans and resources where necessary
Technology	<ul style="list-style-type: none">Uses digital applications to access, organise, integrate and share relevant information in effective ways

Unit Mapping Information

Supersedes and is equivalent to BSBPMG513 Manage project quality.

Supersedes but is not equivalent to BSBPMG605 Direct quality management of a project program.

Assessment Requirements for BSBPMG532 Manage project quality

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage project quality on at least two occasions.

In the course of the above, the candidate must:

- document a quality-management plan
- implement quality control and assurance processes for a defined project using a range of tools and methodologies.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- quality management theory
- relevant project quality standards that apply in the organisation
- quality assurance and control techniques, key tools and methodologies
- roles and responsibilities of quality management personnel
- methods for managing continuous improvement.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- project documentation including quality criteria, evidence of quality monitoring and improvement practices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBPMG535 Manage project information and communication

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to link people, ideas and information at all stages in the project life cycle. Project communication management ensures timely and appropriate generation, collection, dissemination, storage and disposal of project information through formal structures and processes.

The unit applies to individuals responsible for managing and leading a project in an organisation, business, or as a consultant.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Business Competence – Project Management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan information and communication processes	1.1 Identify and analyse information requirements of the project 1.2 Develop a communication management plan according to project objectives 1.3 Establish a designated project-management information system
2. Implement project information and communication processes	2.1 Manage generation, gathering, storage, retrieval, analysis and dissemination of information by project staff and stakeholders 2.2 Implement, modify, monitor and control designated information-validation processes 2.3 Implement and maintain communication networks 2.4 Identify and resolve communication and

ELEMENT	PERFORMANCE CRITERIA
	information-management system issues
3. Assess information and communication outcomes	3.1 Finalise and archive records according to agreed project information ownership and control requirements 3.2 Review project outcomes for effectiveness of management information and communication processes and procedures 3.3 Develop and document recommended improvements for application in future projects

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Identifies and analyses complex texts from a range of sources
Writing	<ul style="list-style-type: none"> Develops project documents using vocabulary, structure and conventions appropriate to text
Oral Communication	<ul style="list-style-type: none"> Participates in verbal exchanges using clear language and appropriate non-verbal features Uses active listening and questioning to confirm understanding and agreement
Initiative and enterprise	<ul style="list-style-type: none"> Identifies responsibilities and boundaries of own role
Teamwork	<ul style="list-style-type: none"> Identifies requirements of important communication exchanges, selecting appropriate channels, format and content to suit purpose and audience
Planning and organising	<ul style="list-style-type: none"> Sequences and schedules complex activities, monitors implementation and manages relevant communication Uses problem-solving techniques to analyse and resolve issues Evaluates outcomes of decisions to identify opportunities for improvement Uses digital tools to access, organise and analyse complex data

Unit Mapping Information

Supersedes and is equivalent to BSBPMG516 Manage project information and communication.

Supersedes but is not equivalent to BSBPMG607 Direct communications management of a project program.

Assessment Requirements for BSBPMG535 Manage project information and communication

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage project information and communication on at least two occasions.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- alternative communication methods and media and their application on various projects
- effective project-management information systems and their various applications
- methods used to evaluate information systems and communication processes.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- project communication and information management documentation
- examples of how communication was managed on projects.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBPMG536 Manage project risk

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to manage risks that may impact achievement of project objectives. It involves identifying, analysing, treating and monitoring project risks, and assessing risk management outcomes.

The unit applies to individuals responsible for managing and leading a project in an organisation, business, or as a consultant.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Business Competence – Project Management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify project risks	1.1 Identify risk objectives and standards, with input from stakeholders 1.2 Identify project risk context to inform risk management processes 1.3 Identify project risks using valid and reliable risk identification methods
2. Analyse project risks	2.1 Identify risk analysis classification criteria and apply to agreed risk ranking system 2.2 Use risk analysis processes, within delegated authority, to analyse and qualify any risks, threats and opportunities 2.3 Identify risk priorities in agreement with project client and other

ELEMENT	PERFORMANCE CRITERIA
	stakeholders 2.4 Document risk analysis outcomes for inclusion in risk register and risk management plan
3. Establish risk treatments and controls	3.1 Identify and document existing risk controls 3.2 Analyse risk treatment options using agreed consultative methods 3.3 Record and implement agreed risk treatments 3.4 Update risk plans and allocate risk responsibilities to project team members
4. Monitor and control project risks	4.1 Establish risk review processes 4.2 Monitor risk environment and identify changed circumstances impacting project risks 4.3 Evaluate risk responses to changed environment 4.4 Implement agreed risk responses and modify plans
5. Assess risk management outcomes	5.1 Review project outcomes for effectiveness of risk-management processes and procedures 5.2 Develop recommended improvements for application in future projects 5.3 Identify and document risk management issues and recommended improvements for application to future projects

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets and critically analyses complex texts from a range of sources and determines how content may be applied according to organisational requirements
Writing	<ul style="list-style-type: none"> Documents risk analysis and risk controls using required formats and structure Modifies and updates workplace documentation according to requirements
Oral Communication	<ul style="list-style-type: none"> Participates in verbal exchanges using clear language to provide and seek information Uses active listening and questioning techniques to confirm understanding

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Analyses numerical data to identify project risk levels and rank risks according to agreed system of classification
Self-management	<ul style="list-style-type: none"> Identifies and adheres to organisational policies and standards Considers own role in terms of its contribution to broader goals of work environment
Teamwork	<ul style="list-style-type: none"> Selects and uses appropriate conventions and protocols when communicating with internal and external stakeholders to seek or share information Identifies requirements of important communication exchanges, selecting appropriate channels, format and content to suit purpose and audience
Planning and organising	<ul style="list-style-type: none"> Identifies and develops approaches to risk management and implements complex tasks to achieve outcomes Analyses information to make decisions, involving others when appropriate Uses formal and informal processes to monitor implementation of decisions and reflect on outcomes

Unit Mapping Information

Supersedes and is equivalent to BSBPMG517 Manage project risk.

Assessment Requirements for BSBPMG536 Manage project risk

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage project risk on at least two occasions.

In the course of the above, the candidate must:

- conduct effective risk management processes for a project of sufficient complexity
- apply risk management techniques, strategies and tools.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- project risks in a range of risk categories
- key components of a risk management plan
- relevant project risk controls
- industry sector risk classifications and different risk contexts
- organisational and industry standard risk frameworks
- project risk-management processes and procedures
- characteristics, techniques and applications of quantitative and qualitative risk management techniques and approaches.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- workplace documentation and resources
- feedback from project stakeholders about how risks were managed.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBPMG538 Manage project stakeholder engagement

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to manage stakeholder relationships.

The unit applies to individuals responsible for managing and leading a project in an organisation, business or as a consultant.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Business Competence – Project Management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assess stakeholder interests	1.1 Identify project objectives and relevant stakeholders 1.2 Establish stakeholder interests and expectations and determine forms of engagement 1.3 Determine and agree with relevant stakeholders on forms of engagement, communication methods, project content, budget and timelines 1.4 Identify and apply actions to address differing interests 1.5 Consider and advise stakeholders on project management issues
2. Monitor stakeholder engagement	2.1 Assign roles and responsibilities to team members according to interests and expectations and confirm defined project roles are followed 2.2 Develop knowledge management systems to capture team

ELEMENT	PERFORMANCE CRITERIA
	<p>progress, insights and experiences</p> <p>2.3 Conduct and lead stakeholder performance reviews</p> <p>2.4 Identify and address team member development needs and opportunities</p> <p>2.5 Support development of interpersonal skills of the team for stakeholder engagement</p>
3.Review and manage stakeholder engagement	<p>3.1 Communicate information as planned and according to authority levels, identifying and addressing variances</p> <p>3.2 Seek and respond to feedback from relevant stakeholders on management of stakeholder engagement</p> <p>3.3 Document identified improvements and feedback received for future management of stakeholder engagements</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Identifies and interprets workplace documentation to determine relevant information
Writing	<ul style="list-style-type: none"> Documents information about stakeholder interests and communication needs using appropriate vocabulary and formats
Oral Communication	<ul style="list-style-type: none"> Participates in verbal exchanges using clear and detailed language to provide and seek information Uses active listening and questioning to confirm understanding
Self-management	<ul style="list-style-type: none"> Identifies and works according to role parameters
Teamwork	<ul style="list-style-type: none"> Identifies requirements of important communication exchanges, selecting appropriate channels, format and content to suit purpose and audience Collaborates with others to achieve joint outcomes, playing an active role in facilitating and leading activities
Planning and organising	<ul style="list-style-type: none"> Takes responsibility for decisions in complex situations involving multiple variables and constraints Uses analytical skills to identify and address problems

Unit Mapping Information

Supersedes and is equivalent to BSBPMG519 Manage project stakeholder engagement.

Assessment Requirements for BSBPMG538 Manage project stakeholder engagement

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage project stakeholder engagements on at least two occasions.

In the course of above, the candidate must:

- develop and implement stakeholder engagement for a project
- implement a range of appropriate stakeholder communication mechanisms
- demonstrate team leadership for project team and stakeholders.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- stakeholder engagement approaches
- stakeholder interests and expectations
- stakeholder engagement methods
- stakeholder engagement theory
- types of project stakeholders
- conducting performance reviews.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- examples of project management documentation for stakeholder engagement
- records of project team leadership in stakeholder engagement activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

CPCCCA3001 Carry out general demolition of minor building structures

Modification History

Release 1.

Supersedes and equivalent to CPCCCA3001A Carry out general demolition of minor building structures.

The unit of competency was updated to the Standards for Training Packages 2012.

This version first released with CPC Construction, Plumbing and Services Training Package Version 4.0.

Application

This unit of competency specifies the skills and knowledge required to carry out general demolition work of minor building structures to facilitate alterations, extensions and additions to a building in residential and commercial sites.

It includes work being completed to schedules, plans and specifications.

This unit is designed for those working as a member of a team safely demolishing existing building structures and disposing of the waste materials.

It applies to concreters, carpenters and other construction workers working as members of a team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
---	--

<p>1. Plan and prepare the demolition of minor building structures.</p>	<p>1.1 Review and clarify task for demolition of minor building structures.</p> <p>1.2 Assess minor building structures to determine scope of demolition work.</p> <p>1.3 Review jurisdictional requirements for demolition of minor building structures.</p> <p>1.4 Review work health and safety (WHS) requirements for the task in accordance with safety plans and policies.</p> <p>1.5 Identify and manage risks including determining the status of existing services.</p> <p>1.6 Identify safety signage and barricade requirements.</p> <p>1.7 Review environmental requirements for the task in accordance with environmental plans and legislative requirements.</p> <p>1.8 Select plant, tools and equipment, check for serviceability and rectify or report any faults.</p>
<p>2. Demolish minor building structures.</p>	<p>2.1 Erect identified safety signage and barricades, and fit personal protective equipment (PPE).</p> <p>2.2 Complete preparatory work for demolition of minor building structures.</p> <p>2.3 Carry out demolition procedures in accordance with safe and effective processes of deconstructing or demolishing a minor building structure.</p> <p>2.4 Safely and effectively handle materials and building component parts to designated storage area using appropriate material-handling techniques.</p> <p>2.5 Safely and effectively handle, store and stack materials and components identified for salvaging, ready for transport.</p>
<p>3. Clean up after carrying out general demolition of minor building structures.</p>	<p>3.1 Clear work area and dispose of non-salvageable materials in accordance with legislation, regulations, codes of practice and task requirements.</p> <p>3.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications and workplace requirements.</p>

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

- writing skills to complete workplace documentation
- numerical skills to manage storage or removal of materials
- oral communication skills to:
 - use questioning to identify and confirm requirements
 - discuss cause of problems
 - report work site hazards, including faults in tools, equipment and materials.

Unit Mapping Information

Supersedes and is equivalent to CPCCCA3001A Carry out general demolition of minor building structures.

Links

Companion Volume implementation guides are found in VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCCA3001 Carry out general demolition of minor building structures

Modification History

Release 1.

Supersedes and equivalent to CPCCCA3001A Carry out general demolition of minor building structures.

The unit of competency was updated to the Standards for Training Packages 2012.

This version first released with CPC Construction, Plumbing and Services Training Package Version 4.0.

Performance Evidence

To demonstrate competency in this unit, a person must carry out general demolition of one minor building structure, including removal of an external load-bearing wall to form an opening of no less than three metres wide.

In doing this, the person must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- jurisdictional work health and safety (WHS) and environmental legislation and regulations relating to carrying out general demolition of minor building structures, including:
 - job safety analyses (JSAs)
 - safe work method statements (SWMSs)
 - safety data sheets (SDSs)
 - safety manuals and instructions for plant, tools and equipment
 - signage and barricades
 - personal protective equipment (PPE)
 - environmental and work site safety plans
- requirements of Australian Standards and the National Construction Code (NCC) relating to carrying out general demolition of minor building structures
- workplace requirements for all aspects of carrying out general demolition of minor building structures including interpreting work orders and other task documentation and reporting problems
- common industry hazard identification and risk controls for carrying out general demolition of minor building structures, including safe handling of materials and machinery, and the use of signage and barriers
- environmental requirements for carrying out general demolition of minor building structures, including those relating to:

- clean-up protection
- noise and dust
- vibration
- waste management
- processes for selection of appropriate tools, equipment and materials for carrying out general demolition of minor building structures
- techniques and processes for safely and effectively planning and carrying out dismantling or demolition work in accordance with legislation and codes of practice
- recognition and safe handling of materials and building component parts, and methods for salvage or disposal, including:
 - bonded asbestos
 - brickwork
 - concrete
 - glass
 - metal
 - reconstituted timber products
 - tiles
 - timber
- recognition and safe handling of materials and building component parts, and methods for salvage or disposal
- processes for demolition of minor building structures, including:
 - detached carports
 - external sections of buildings (walls, cladding, attached carports, decks and roofs)
 - internal sections of buildings (walling, lining, built-in components and wet area)
 - pergolas and patios
 - retaining walls and fences
 - small concrete structures
 - small ground level buildings
- processes for demolition of types of construction, including:
 - blockwork
 - brickwork
 - concrete
 - metal framing
 - timber framing
- processes for managing risks, including:
 - in areas below floors
 - identification, relocation or disconnection of services
 - loads supported by walls
 - security, and public health and safety
 - weatherproofing of the structure
 - existing services, including:

- electricity
- gas
- telephone and other communications
- water
- requirements for cleaning up work area and tools, materials storage and environmentally friendly waste management.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment. Tasks are to be performed to the level of proficiency and within the time limits expected in a workplace.

Assessors are responsible for ensuring that the person demonstrating competency has access to:

- a minor building structure for demolition
- specifications of the demolition task
- appropriate documents, materials, tools, equipment and PPE currently used in industry
- requirements of appropriate sections of legislation and regulations
- relevant workplace policies and procedures.

CPCCCM2006 Apply basic levelling procedures

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded equivalent unit CPCCCM2006B Apply basic levelling procedures.

Application

This unit of competency specifies the outcomes required to carry out levelling in a single plane for the purpose of establishing correct and accurate set-out of building components. It includes the set-up, testing and use of levelling devices, and establishing and transferring heights using a range of levelling equipment.

The unit supports workers in the construction industry who use a variety of common methods and equipment when working with others and as a member of a team. It applies to levelling work on residential and commercial work sites.

No licensing, legislative, regulatory, or certification requirements apply to this unit of competency at the time of endorsement.

Pre-requisite Unit

Nil

Competency Field

Common

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.

1. Plan and prepare.
 - 1.1. Job requirements are obtained, confirmed with relevant personnel, and applied to planning.
 - 1.2. Work site is inspected, and conditions and hazards are identified within scope of own role and reported according to workplace procedures.
 - 1.3. ***Health and safety requirements*** for levelling procedures are confirmed and applied to planning.
 - 1.4. ***Levelling tools and equipment*** are selected according to job requirements, checked for serviceability, and faults are rectified or reported before starting work.
 - 1.5. Team roles and verbal and non-verbal communication signals are confirmed, as required.
2. Set up and use levelling device.
 - 2.1. Required heights or levels are identified from work instructions.
 - 2.2. Levelling device is set up, and ***levelling device tolerance is checked*** according to manufacturer specifications.
 - 2.3. Levels are shot and heights are transferred to required location and ***marked*** according to job requirements.
 - 2.4. Results of ***levelling activities*** are documented according to organisational requirements.
3. Clean up.
 - 3.1. Work area is cleared and materials sorted and removed or recycled according to statutory and regulatory authority requirements.
 - 3.2. Tools and equipment are cleaned, checked, maintained and stored according to manufacturer specifications.

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

Skill	Performance feature
Numeracy skills to:	<ul style="list-style-type: none">interpret and calculate levelling readings and measurements.
Reading skills to:	<ul style="list-style-type: none">read and interpret documentation from a variety of sources, including drawings and specifications.
Writing skills to:	<ul style="list-style-type: none">enter routine data associated with levelling procedures legibly into workplace documentation.
Planning and organising skills to:	<ul style="list-style-type: none">plan and schedule work in a logical sequence.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Health and safety requirements</i> must include:	<ul style="list-style-type: none">emergency procedures, including:<ul style="list-style-type: none">evacuationfirst aidhazard identification and risk control proceduressafe operating procedures for levelling, including:<ul style="list-style-type: none">manufacturer specificationssafe work method statements (SWMS)safety data sheets (SDS)selection, correct fitting, and use of personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practicesselection and use of tools and equipment.
<i>Levelling tools and</i>	<ul style="list-style-type: none">each of the following:

equipment must include:

- laser levels and targets
- marking equipment
- measuring tapes and rules
- spirit levels and straight edges
- two of the following:
 - automatic/optical levels
 - plumb bobs
 - water levels.

Levelling device tolerance checks must include one or more of the following:

- reverse readings for spirit level
- two peg test for automatic level.

Marks for heights or levels must include:

- chalk or nail mark
- mark on vertical surface
- datum or survey peg
- drawing or sketch.

Levelling activities must include three or more of the following:

- measuring and recording heights for the installation of signage
- positioning offsets and recovery pegs for construction projects
- recording ground levels at respective critical set-out points
- recording heights or level and the transfer of data points
- recording or checking levels in drainage
- recording slab or pad levels for placement of steel columns or masonry piers
- setting up levelling devices
- shooting levels for concrete slabs
- transferring levels and heights for formwork.

Assessment Requirements for CPCCCM2006 Apply basic levelling procedures

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded equivalent unit CPCCCM2006B Apply basic levelling procedures.

Performance Evidence

A person who demonstrates competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. The person must also transfer levels and record differences in height for three different projects as required by job specifications, using at least three of the following levelling devices:

- a spirit level and straight edge
- automatic/optical levelling device
- levelling with water technique
- laser levelling device.

In doing the above work, the person must:

- conduct a two peg test with an automatic/optical level to confirm that the instrument meets manufacturer tolerances
- locate, interpret and apply relevant information in job specifications to the levelling task
- comply with site safety plan, and health and safety regulations applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others, including using agreed communication signals
- confirm accuracy of the readings taken, including set-up and movement of device in two locations
- accurately record results of each levelling procedure according to organisational requirements.

Knowledge Evidence

A person demonstrating competency in this unit must demonstrate knowledge of:

- characteristics, technical capabilities and limitations of different types of levelling devices
- methods of performing calculations associated with levelling
- processes for setting out levelling tasks
- requirements for line, level and plumb in construction projects
- site and equipment safety requirements relevant to basic levelling procedures
- symbols and construction terminology used when interpreting construction plans
- techniques used when applying basic levelling procedures
- contents of and terms used in job safety analyses (JSA) and safe work method statements (SWMS) and the use of this documentation when levelling.

Assessment Conditions

Suitable assessment of performance requires:

- equipment and tools:
 - as listed in the range of conditions and assessment requirements
- specifications:
 - job requirements
 - health and safety requirements
 - manufacturer specifications
 - safety data sheets (SDS)
 - SWMS
 - workplace and relevant work site procedures
- relationships with team members and supervisor:
 - work must be completed as part of a team and under direct supervision and observation
- timeframe:
 - according to job requirements.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

CPCCCM2007 Use explosive power tools

Modification History

Release 1.

Supersedes and equivalent to CPCCCM2007B Use explosive power tools.

The unit of competency was updated to the Standards for Training Packages 2012.

This version first released with CPC Construction, Plumbing and Services Training Package Version 4.0.

Application

This unit of competency specifies the skills and knowledge required to safely and effectively operate explosive power tools (EPTs) using explosive charges in a magazine to fasten materials or fix fasteners to bases.

The unit supports the application of knowledge to safely and effectively use a range of indirect action explosive powered fastening tools used in the construction industry.

It applies to workers who work with EPTs in the construction industry. It involves working under supervision in a team environment.

No licensing, legislative, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1. Plan and prepare to set up, operate and maintain indirect action EPTs.	<p>1.1 Review and clarify task to set up, operate and maintain indirect action EPTs.</p> <p>1.2 Review work health and safety (WHS) requirements for the</p>

	<p>task in accordance with safety plans and policies.</p> <p>1.3 Identify safety signage and barricade requirements.</p> <p>1.4 Review environmental requirements for the task in accordance with environmental plans and legislative requirements.</p> <p>1.5 Calculate material quantity requirements.</p> <p>1.6 Check EPTs for operation in accordance with manufacturers' specifications and safety requirements for use of EPT.</p>
2. Set out fasteners.	<p>2.1 Erect identified safety signage and barricades, and fit personal protective equipment (PPE).</p> <p>2.2 Select fastener in accordance with requirements of the job.</p> <p>2.3 Set-out fasteners adhering to minimum distances for set out from edge of substrate material in accordance with requirements.</p> <p>2.4 Position material, check it is level, and temporarily fix or clamp into designed position in accordance with detailed drawings.</p>
3. Operate EPTs.	<p>3.1 Select charge in accordance with the requirements for material, base and penetration.</p> <p>3.2 Install any attachments and accessories to EPT in accordance with manufacturers' specifications and WHS requirements.</p> <p>3.3 Load fastener and charge into EPT in accordance with manufacturers' specification.</p> <p>3.4 Carry out EPT operation and fix fastener into place in accordance with manufacturers' specifications and legislative requirements.</p> <p>3.5 Check depth of fastening penetration and adjust power regulating device in accordance with conditions.</p> <p>3.6 Carry out misfire procedures in accordance with manufacturers' specifications and legislative requirements.</p> <p>3.7 Remove temporary holdings and fixings without damage to material.</p>
4. Maintain EPTs and kit.	<p>4.1 Check safety features of tools for serviceability in accordance with manufacturers' specifications.</p> <p>4.2 Clean and lubricate tools in accordance with manufacturers' specifications.</p> <p>4.3 Carry out periodic maintenance service in accordance with manufacturers' specifications.</p> <p>4.4 Replenish diminished stocks of charges and fasteners to designed effectiveness of EPT kit.</p> <p>4.5 Check and complete logbook and record maintenance in</p>

	accordance with manufacturers' specifications.
5. Secure and store EPT equipment and charges.	<p>5.1 Store used charges in designated container in accordance with requirements.</p> <p>5.2 Store unused fasteners, the EPT and attachments in a carry case in line with manufacturers' specifications.</p>
6. Clean up after operating EPTs.	<p>6.1 Clear work area and dispose of, re-use or recycle materials in accordance with legislation, regulations, codes of practice and task requirements.</p> <p>6.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications and workplace requirements.</p>

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

- reading skills to:
 - interpret legislative requirements including those of Australian Standards and the National Construction Code (NCC)
- numeracy skills to:
 - apply measurements and calculations to fastener set-out
- oral communication skills to:
 - use questioning to identify and confirm requirements
 - discuss cause of problems
 - report work site hazards, including faults in tools, equipment and materials.

Unit Mapping Information

Supersedes and is equivalent to CPCCCM2007B Use explosive power tools.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCCM2007 Use explosive power tools

Modification History

Release 1.

Supersedes and equivalent to CPCCCM2007B Use explosive power tools.

The unit of competency was updated to the Standards for Training Packages 2012.

This version first released with CPC Construction, Plumbing and Services Training Package Version 4.0.

Performance Evidence

To demonstrate competency in this unit, a person must use explosive power tools (EPTs) to fix metal and timber to one steel base, one concrete base, and one masonry base.

In doing this, the person must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- jurisdictional legislation and regulations relating to setting up, operating and maintaining indirect action EPTs including those for work health and safety (WHS), and protection of the environment, including:
 - job safety analyses (JSAs)
 - safe work method statements (SWMSs)
 - safety data sheets (SDSs)
 - safety manuals and instructions for plant, tools and equipment
 - signage and barricades
 - personal protective equipment (PPE)
 - environmental and work site safety plans
- requirements of Australian Standards and the National Construction Code (NCC) relating to setting up, operating and maintaining indirect action EPTs
- functions, operations and limitations of EPTs
- EPT materials
- EPT charges and fasteners
- EPT attachments, including channel, rebate and other manufacturer attachments
- EPT, fastener and charge manufacturers' specifications
- processes for interpreting drawings and using information for:
 - setting-out fasteners, including:
 - regulated minimum distances

- bases, including concrete, masonry or steel
- positioning material
- processes for:
 - using EPTs, including:
 - stripping and assembling tools
 - completing log of serviceability
 - maintaining and cleaning tools
 - selecting charges and fasteners applicable to the base material and material being fixed
 - misfire procedures
 - using attachments
 - complying with storage and security regulations and work health and safety (WHS) requirements for the working environment
 - selecting signage
 - test fire
- maintaining EPTs and kits
- securing and storing EPT equipment and charges
- materials storage and environmentally friendly waste management
- processes for the calculation of material requirements
- security and storage procedures for equipment and charges
- workplace and equipment safety requirements.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment. Tasks are to be performed to the level of proficiency and within the time limits expected in a workplace.

Assessors are responsible for ensuring that the person demonstrating competency has access to:

- industry-standard indirect action EPTs, attachments, fasteners and charges
- specifications for tasks requiring use of EPTs
- appropriate documents, materials, tools equipment and PPE currently used in industry
- requirements of appropriate sections of legislation and regulations
- relevant workplace policies and procedures.

CPCCCM2008 Erect and dismantle restricted height scaffolding

Modification History

Release 1.

Supersedes and equivalent to CPCCCM2008B Erect and dismantle restricted height scaffolding.

The unit of competency was updated to the Standards for Training Packages 2012.

This version first released with CPC Construction, Plumbing and Services Training Package Version 4.0.

Application

This unit specifies the skills and knowledge required to erect and dismantle restricted height scaffolding to provide work platforms for various occupational applications.

This unit is restricted to modular scaffolding to a height of 4 metres and includes:

- placement of safety barriers
- the application of knowledge to handle, erect and dismantle a range of restricted height scaffolding systems.

It applies to workers who work in a range of industries. It involves working in a team environment.

No licensing, legislative, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1. Plan to erect	1.1 Review scaffolding task and workplace-specific information

scaffolding up to 4 metres.	<p>relating to the task and confirm with associated personnel.</p> <p>1.2 Identify environmental protection and legislative requirements for scaffolding task and incorporate into planning and preparation.</p> <p>1.3 Identify hazards, control measures and equipment associated with the workplace and scaffolding task from job safety analysis (JSA) and safe work method statement (SWMS).</p> <p>1.4 Calculate scaffolding and material requirements and incorporate into planning and preparation.</p> <p>1.5 Determine expected loading on scaffold and supporting structure using load tables, and incorporate into planning and preparation.</p> <p>1.6 Identify site access and egress routes and incorporate into planning and preparation.</p> <p>1.7 Plan scaffolding task in accordance with workplace requirements.</p>
2. Prepare to erect scaffolding up to 4 metres.	<p>2.1 Apply risk control measures and equipment including installing safety signs and barriers and using personal protective equipment (PPE).</p> <p>2.2 Select plant, tools and equipment, check for serviceability and rectify or report any faults.</p> <p>2.3 Select, prepare and locate materials using safe handling techniques.</p> <p>2.4 Inspect scaffolding and components and label, reject or repair damaged items.</p>
3. Erect scaffolding up to 4 metres.	<p>3.1 Establish footing in accordance with the Australian Standard for scaffolding.</p> <p>3.2 Erect scaffolding in accordance with regulations, planned risk prevention and control measures, acceptable safe work practices and manufacturers' specifications.</p>
4. Inspect, repair and alter scaffolding up to 4 metres.	<p>4.1 Inspect critical structural and safety areas of scaffolding for damage, corrosion and wear.</p> <p>4.2 Check current use of scaffolding for compliance with type of scaffolding equipment.</p> <p>4.3 Review scaffolding to determine if changes or modifications were scheduled as per original planning.</p> <p>4.4 Carry out alterations or repairs.</p> <p>4.5 Complete inspection log and handover.</p>

<p>5. Dismantle scaffolding up to 4 metres and clean up.</p>	<p>5.1 Dismantle scaffolding using reverse of procedure for erection.</p> <p>5.2 Clear work area and dispose of, re-use or recycle materials in accordance with legislation, regulations, codes of practice and task specifications.</p> <p>5.3 Clean, check, maintain and store plant, tools and equipment in accordance with manufacturers' specifications and workplace requirements.</p>
--	--

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

- reading skills to:
 - understand written instructions, procedures and signage
- oral communication skills to:
 - use questioning to identify and confirm requirements
 - discuss cause of problems
 - report work site hazards, including faults in tools, equipment and materials
 - provide feedback.

Unit Mapping Information

Supersedes and is equivalent to CPCCCM2008B Erect and dismantle restricted height scaffolding.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCCM2008 Erect and dismantle restricted height scaffolding

Modification History

Release 1.

Supersedes and equivalent to CPCCCM2008B Erect and dismantle restricted height scaffolding.

The unit of competency was updated to the Standards for Training Packages 2012.

This version first released with CPC Construction, Plumbing and Services Training Package Version 4.0.

Performance Evidence

A person who demonstrates competency in this unit must erect and dismantle one modular scaffolding system up to four metres, including three bays (one with a return), one lift with ladder, and fall and edge protection.

In doing this, the person must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- processes for identifying and incorporating into planning for erecting and dismantling scaffolding up to 4 metres
- task and workplace-specific information, including:
 - diagrams and sketches
 - engineering design specifications and manufacturers' specifications
 - safety data sheets (SDSs)
 - regulatory and legislative requirements pertaining to erecting and dismantling restricted height scaffolding
 - relevant Australian Standards.
- safe work procedures related to erecting and dismantling restricted height scaffolding including job safety analysis (JSA) and safe work method statement (SWMS), risk control measures and equipment, including:
 - signage and barricades
 - verbal, written and graphical instructions
 - work schedules, plans and specifications
 - scaffolding and material requirements
 - expected loadings on scaffolding and supporting structures
 - site access and egress routes.

- processes for:
 - selecting and checking plant, tools and equipment and rectifying or reporting faults
 - establishing footings for scaffolding up to 4 metres
 - erecting and dismantling scaffolding up to 4 metres in accordance with regulations, planned risk prevention and control measures, acceptable safe work practices and manufacturers' specifications
 - inspecting critical structural and safety areas of scaffolding for damage, corrosion and wear
 - checking current use of scaffolding for compliance with type of scaffolding equipment
 - cleaning, checking, maintaining and storing plant, tools and equipment.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment. Tasks are to be performed to the level of proficiency and within the time limits expected in a workplace.

Assessors are responsible for ensuring that the person demonstrating competency has access to:

- work sites and specifications to erect and dismantle a modular scaffolding system
- JSAs, SWMSs and jurisdictional requirements relating to erecting and dismantling a modular scaffolding system up to 4 metres
- scaffolding site
- scaffolding components and materials, safety equipment including signs, barricades and personal protective equipment (PPE)
- plant, equipment and tools
- load tables.

CPCCCM2010 Work safely on scaffolding higher than two metres

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Application

This unit of competency specifies the outcomes required to work safely on construction sites where the work activity involves working above two metres from ground level and where fall protection measures are required. It covers safe methods for accessing the work site; and safe methods of moving or passing tools, equipment and materials to heights above two metres, including handling methods that avoid excessive bending or twisting.

The unit supports construction workers operating from scaffolding over two metres in height that has already been constructed with signage and exclusion barriers in place, in order to reach upper storeys or roofs of buildings. It applies to workers who need to control the risk of falling and of falling objects when working on site or removing scaffold components.

It applies to construction work on residential and commercial work sites in new construction, renovation or refurbishment, and maintenance projects.

No licensing, legislative, regulatory, or certification requirements apply to this unit of competency at the time of endorsement.

Pre-requisite Unit

Nil

Competency Field

Common

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.

- | | |
|--------------------------------|--|
| 1. Identify work requirements. | 1.1. Site of proposed work at heights is identified from relevant information. |
| | 1.2. Tasks to be completed are identified from work orders and supervisor instructions. |
| | 1.3. Personal protective equipment (PPE) suitable to the job is selected and checked for serviceability. |
| | 1.4. Method of accessing work area is identified according to <i>safe work method statement</i> (SWMS). |
| | 1.5. Safe work methods for moving tools, equipment and materials to work area are identified to minimise risks. |
| | 1.6. Verbal and non-verbal communication signals are confirmed with team members, supervisor and other personnel working on site, as required. |
| 2. Access work area. | 2.1. Work site is inspected and conditions and <i>hazards</i> are assessed and reported, as required, and risk controls selected according to SWMS. |
| | 2.2. <i>Safety of scaffolding</i> is checked and faults are reported to relevant personnel. |
| | 2.3. Arrangements are made to install required access equipment according to SWMS. |
| | 2.4. Access equipment is inspected for defects and issues are reported and rectified according to health and safety requirements. |
| | 2.5. Safe work methods are used to access work area and to move tools, equipment and materials to required locations on the work site. |
| | 2.6. Tools and materials are placed to eliminate or reduce the risk of items falling. |

- | | | |
|----|--------------------------|--|
| 3. | Conduct work tasks. | 3.1. Work is conducted following workplace-approved procedures and SWMS. |
| | | 3.2. Communication with team members and other site personnel is maintained as required to progress work tasks according to required timelines. |
| | | 3.3. Fall protection equipment is kept in place and adjusted to cater for movement during work. |
| | | 3.4. Scaffold components and fall barriers are kept in place during work. |
| 4. | Finalise work processes. | 4.1. Egress from work area is completed following SWMS and work site supervisor approved methods for moving self, tools and materials to ground level. |
| | | 4.2. Tools, equipment and materials returned to ground level are cleaned, checked, maintained and stored according to manufacturer specifications. |

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

Skill	Performance feature
Numeracy skills to:	<ul style="list-style-type: none"> • perform measurements relating to checking safety of scaffolding.
Oral communication skills to:	<ul style="list-style-type: none"> • report faults in scaffolding construction or materials • report non-routine hazards to a supervisor.
Reading skills to:	<ul style="list-style-type: none"> • interpret safe work methods and risk control strategies in the SWMS relating to job tasks.
Planning and organising skills to:	<ul style="list-style-type: none"> • plan and schedule work in a logical sequence.
Initiative and enterprise	<ul style="list-style-type: none"> • identify standard controls for routine hazards.

skills to:

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

- Safe work method statement*** must include:
- establishing exclusion areas using signage and barricades
 - identifying hazards and assessing risks associated with work site and job tasks
 - health and safety and environmental requirements mandated by regulatory authorities, work site safety plan, and workplace procedures
 - identifying risk control measures to be implemented for job tasks
 - safe operating procedures for:
 - accessing, moving within, and leaving work site
 - moving and placing tools, equipment and materials
 - using tools and equipment, including PPE, prescribed by legislation, regulations, and work site and workplace requirements
 - using tools and equipment at heights.

- Hazards*** to be considered must involve:
- air temperature
 - construction activity involving other workers and contractors
 - dust and vapours
 - electrical equipment
 - energy sources
 - equipment and materials
 - hazardous materials
 - light
 - manual handling
 - moisture
 - noise
 - stationary and moving plant
 - working at heights.

- Safety of scaffolding***
- access gate

- must include checking for:
- bracing
 - condition of scaffold frame and planks
 - guard rails
 - locking pins for castors, if present
 - mid-rails
 - sheeting, if required
 - toe boards.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for CPCCCM2010 Work safely on scaffolding higher than two metres

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. The person must also identify, assess and manage risks while completing three different work tasks on scaffolding higher than two metres at different locations and in different conditions.

The work tasks conducted must involve transporting tools, equipment and materials to the work site; completing the task using the tools, equipment and materials; and then returning them to ground level.

In doing the above work, the person must:

- locate, interpret and apply relevant job task information, standards and specifications
- comply with site safety plan and safe work method statements (SWMS) for access to the work site and completion of the job tasks at heights
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- select and use height access work methods, including inspecting scaffold for faults
- apply knowledge of construction materials to identify:
 - manual handling risks
 - types of lifting and support structures approved for use
- modify work activities to cater for variations in work site procedures, contexts and environment to work safely at heights
- use safe handling requirements, based on information provided for equipment, products and materials.

Knowledge Evidence

A person demonstrating competency in this unit must demonstrate knowledge of:

- construction terminology relevant to working at heights

- contents of and terms used in job safety analyses (JSA) and SWMS for accessing work sites at heights and for completing job tasks while working at heights
- contents of and terms used in safety data sheets (SDS) relevant to the use of tools, equipment and materials
- emergency procedures relevant to working on scaffolding higher than two metres
- quality requirements relating to the set-up of equipment for accessing heights, and for job tasks completed while working at heights
- requirements of Australian standards and codes of practice governing work at heights, including:
 - AS 6001 Working platforms for housing construction
 - AS/NZS 1576 Scaffolding – General requirements
 - AS/NZS 4576 Guidelines for scaffolding
 - Safe Work Australia Model Code of Practice – Preventing Falls in Housing Construction
- types, characteristics, uses and limitations of plant, tools and equipment, including personal protective equipment (PPE), used for accessing work sites over two metres, and for applying safe work methods to complete job tasks while working at heights
- common faults in scaffolding and access equipment
- workplace and work site health and safety requirements relevant to working at heights.

Assessment Conditions

Suitable assessment of performance requires:

- equipment:
 - scaffolding erected for access to a construction work site higher than two metres
 - access equipment to move self, tools, equipment and materials to working platforms, including ladders and hoists
 - tools, equipment and materials to conduct the work tasks specified in the performance evidence
 - PPE relevant to task
- materials:
 - materials required to perform three work tasks at height
- contingencies:
 - faults in scaffolding construction and access equipment
- specifications:
 - AS 6001 Working platforms for housing construction
 - AS/NZS 1576 Scaffolding – General requirements
 - AS/NZS 4576 Guidelines for scaffolding
 - diagrams or sketches relating to work at heights
 - instructions issued by authorised organisational or external personnel
 - JSA, SWMS and SDS relating to the work to be conducted at heights

- Safe Work Australia Model Code of Practice – Preventing Falls in Housing Construction
- schedules, plans and specifications for working at heights
- signage at the work site
- verbal, written and graphical instructions relating to work to be conducted at heights
- physical conditions:
 - different weather conditions, such as wet or windy weather
- relationships with team members and supervisor:
 - work must be completed as part of a team and under direct supervision and observation
- timeframe:
 - according to job specification.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCCM3001 Operate elevated work platforms up to 11 metres

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded equivalent CPCCCM3001C Operate elevated work platforms.

Application

This unit of competency specifies the outcomes required to operate specific types of elevated work platforms (EWPs) safely and effectively in different locations, including on uneven terrain. The unit includes locating, setting up, operating and shutting down scissor lifts and self-propelled boom lifts with a boom length under 11 metres.

The unit supports construction workers in the safe and effective operation of electrical, hydraulic and mechanical EWPs.

The unit does not cover truck-mounted EWPs, powered telescoping devices, hinged devices or articulated devices, or any combination of these used to support a platform on which personnel, equipment and materials may be elevated to perform work and which has a boom length of 11 metres or more.

It applies to construction work on residential and commercial work sites in new construction, renovation or refurbishment, and maintenance projects.

Licensing, legislative, regulatory or certification requirements apply to this unit in some States. Relevant state and territory regulatory authorities should be consulted to confirm those requirements.

Pre-requisite Unit

Nil

Competency Field

Common

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.

1. Plan and prepare.
 - 1.1. Job requirements are obtained, confirmed and applied to planning.
 - 1.2. Work site is inspected and terrain level checked to determine stabilising and safe working area requirements.
 - 1.3. Work site conditions and hazards are assessed and site health and safety requirements confirmed and applied to planning.
 - 1.4. ***Safe work method statement*** (SWMS) for the type of EWP and job and work site requirements is reviewed with relevant personnel and confirmed.
 - 1.5. Plant, tools and equipment, including personal protective equipment (PPE), are selected according to job requirements, checked for serviceability, and faults are rectified or reported before starting work.
 - 1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.
 - 1.7. Verbal and non-verbal communication signals are confirmed with team members, supervisor, and other personnel working on site, as required.
 - 1.8. Rescue plan, including use of fall arrest system, is established and practised before using EWP.

2. Conduct routine checks of EWP.
 - 2.1. Power source is connected to platform equipment according to manufacturer specifications.
 - 2.2. Routine pre-operational equipment checks are carried out according to operator manual or manufacturer specifications, and logbooks for defect checks and EWP maintenance schedules.
 - 2.3. Equipment is switched on in line with start-up procedures, and controls are checked for correct operation and ease of movement.
 - 2.4. EWP is checked to ensure that *emergency safety devices* specified in operator manual are present and operating correctly.

3. Locate EWP in place.
 - 3.1. Platform is positioned for work application and stabilisers, if fitted, are engaged to set equipment base level into place according to safe operating procedures.
 - 3.2. Tools, equipment and materials are placed into bucket or on platform according to job application requirements.

4. Elevate platform to work location.
 - 4.1. Fall arrest harness is fitted securely and lanyard is connected to attachment point.
 - 4.2. EWP controls are operated according to manufacturer recommendations and platform is elevated to work position.
 - 4.3. Power is switched off where specified and locking devices are engaged according to operator manual.
 - 4.4. Work is carried out according to job specification, operator manual, and health and safety requirements.

5. Lower platform and shut down.
 - 5.1. Controls are operated according to manufacturer recommendations and platform is lowered to down position.
 - 5.2. Shut-down procedures are carried out according to operator manual instructions and equipment is switched

off.

- | | |
|--------------|--|
| 6. Clean up. | <p>6.1. Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice, and job specifications.</p> <p>6.2. EWP, tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices.</p> <p>6.3. <i>Work completion procedures</i> are applied and relevant personnel notified that work is finished.</p> |
|--------------|--|

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

Skill	Performance feature
Numeracy skills to:	<ul style="list-style-type: none"> • interpret safe working load of EWP from manufacturer specifications • calculate the load to be put on EWP.
Oral communication skills to:	<ul style="list-style-type: none"> • provide work site personnel with key safety information when elevating and lowering an EWP • use listening and questioning to clarify job and health and safety requirements.
Reading skills to:	<ul style="list-style-type: none"> • interpret operator manual instructions for using different controls of EWPs and operating on different types of terrain.
Writing skills to:	<ul style="list-style-type: none"> • legibly complete required documentation, including: <ul style="list-style-type: none"> • equipment inspection and handover documents that form part of work completion procedures • faulty equipment or workplace incident reports.

skills to:

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safe work method statement must include:

- assessing terrain at work site
- identifying location of overhead power lines directly above or within specified clearance distances as set out in documentation, such as WorkSafe Victoria's 'No Go Zones For Overhead Electrical Power Lines'
- reference to permission to operate EWP from the power authority, if required
- identifying hazards and assessing risks for type of EWP, work site and job tasks, including existence of underground pits
- health and safety and environmental requirements mandated by regulatory authorities, work site safety plan, and workplace procedures
- establishing exclusion areas using signage and barricades
- identifying risk control measures to be implemented for job tasks
- safe operating procedures for type of EWP
- safe working load of the EWP
- using tools and equipment, including PPE, prescribed by legislation, regulations, and work site and workplace requirements.

Emergency safety devices must be applicable to the EWP and include three or more of the following:

- bleed valves
- electronic override
- emergency electric hydraulic pump
- emergency or controlled descent device
- ground controls
- manual hydraulic pump.

Work completion procedures must include:

- completing logbook
- completing post-operational checks
- safely and securely storing safety equipment.

Unit Mapping Information

CPCCCM3001C Operate elevated work platforms

Assessment Requirements for CPCCCM3001 Operate elevated work platforms up to 11 metres

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded equivalent CPCCCM3001C Operate elevated work platforms.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. The person must also set up and operate each of the following types of elevated work platforms (EWPs) at two different locations on the site, including moving the plant around the work site safely:

- self-propelled boom lift (BL)
- scissor lift (SL).

The following functions and controls must be performed while operating both BL and SL:

- boom up and down
- operate attachments
- operate outriggers, where fitted.

The following functions and controls must be performed while operating the BL:

- slew left and right
- telescope in and out.

At least one EWP must be set up and operated on uneven terrain, using outriggers as required.

In doing the above, when working above six metres, the person must fit harnesses and attach lanyards as follows:

- energy or shock absorbers, which must be used with all fall arrest equipment

- lanyards, which must be attached to the harness installed so that the maximum distance a person equipped with a harness would free fall before the fall arrest system takes effect is two metres.

In doing the above, the person must also:

- establish and apply a rescue plan
- apply safe operating procedures, including conducting operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights up to 11 metres
 - working in proximity to others
 - working with dangerous materials
- locate, interpret and apply information relating to job requirements, including:
 - diagrams and sketches
 - environmental requirements, including:
 - clean-up protection
 - noise and dust management
 - vibration management
 - waste management
 - quality requirements relevant to EWP work
 - instructions issued by authorised organisational and external personnel
 - manufacturer specifications, operator manual, and instructions where specified
 - signage
 - industry standards and job specifications
 - verbal, written and graphical instructions
 - work schedules, plans and specifications
- comply with site safety plan and health and safety legislation, regulations and codes of practice applicable to workplace operations
- safely and effectively use tools, plant and equipment relevant to EWP work
- ensure safe working load of EWP is not exceeded
- communicate with others on the work site using verbal and non-verbal communication and communication technology
- work effectively and safely with others on the work site.

Knowledge Evidence

A person demonstrating competency in this unit must demonstrate knowledge of:

- functions and operational limitations of EWP equipment
- types of EWP equipment and health and safety authority certification of competency requirements
- controls and techniques for using EWP
- health and safety requirements for construction work sites, including:
 - procedures relating to equipment operation, including emergency shutdown and stopping, extinguishing equipment fires, organisational first aid requirements, and evacuation procedures
 - hazard identification and risk control procedures, including for handling hazardous materials and dangerous goods
 - selection and use of personal protective equipment (PPE)
 - location and use of firefighting equipment
 - selection and use of tools and equipment
- processes for identifying equipment faults
- general construction terminology relevant to operating EWPs
- safe operating procedures for operating EWPs, including contents of and terms used in:
 - job safety analyses (JSA)
 - safe work method statements (SWMS)
 - safety data sheets (SDS)
- processes for calculating load mass requirements
- quality requirements relevant to operating EWPs
- regulatory and legislative requirements relevant to operating EWPs
- AS 2550 Set: Cranes, hoists and winches - Safe use
- relevant Acts, regulations and codes of practice relevant to working safely at heights on construction sites
- procedures for working safely at heights
- signalling methods and communications relevant to operating EWPs
- types, characteristics, use and limitations of plant, tools and equipment relevant to operating EWPs
- use and limitations of fall rescue systems.

Assessment Conditions

Suitable assessment of performance requires:

- equipment:
 - EWPs
 - extension leads
 - safety harnesses and lanyards
 - special attachments for the EWP when shifting equipment

- PPE prescribed under legislation, regulations, codes of practice and workplace policies and practices
- materials:
 - logbooks
 - service manuals
 - operator manuals
- contingencies:
 - uneven terrain
- specifications:
 - AS 2550 Set: Cranes, hoists and winches - Safe use
 - job specifications
 - manufacturer specifications
 - SWMS
- physical conditions:
 - different weather conditions
- relationship with team members and supervisor:
 - work is conducted as part of a team
- timeframe:
 - according to job requirements.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

CPCCCM3003 Work safely around electrical sources, services and assets

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded equivalent CPCCCM3003A Work safely around power sources, services and assets.

Application

This unit of competency specifies the outcomes required to ensure the safety of personnel and equipment when working with or operating plant while in close proximity to electrical sources, underground and overhead services, and assets.

The unit supports construction workers working on powered construction sites who must check and confirm the location of electrical sources, underground and overhead services, and assets before commencing work. It applies to residential and commercial work sites.

No licensing, legislative, regulatory, or certification requirements apply to this unit of competency at the time of endorsement.

Pre-requisite Unit

Nil

Competency Field

Common

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.

1. Plan and prepare.
 - 1.1. Work instructions, including plans, specifications, environmental and quality requirements, and operational details, are obtained, confirmed with relevant personnel, and applied to planning.
 - 1.2. ***Health and safety requirements*** are identified and applied to planning.
 - 1.3. Plant, tools and equipment are selected to carry out tasks according to job requirements, checked for serviceability, and any faults are rectified or reported prior to starting work.

2. Apply safe work practices.
 - 2.1. Relevant authorities are contacted to identify type and location of ***electrical sources, underground or overhead services, and assets***.
 - 2.2. Plant is positioned according to safe work method statement (SWMS).
 - 2.3. Plant operation procedures are followed to comply with SWMS.
 - 2.4. Work is conducted in or around the electrical source, service or asset according to SWMS.
 - 2.5. On completion of work, personnel, plant and equipment are retracted from powered area following SWMS.

3. Clean up.
 - 3.1. Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specifications.
 - 3.2. Plant, tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices.
 - 3.3. Work completion procedures are followed and relevant

personnel are notified that work is finished.

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

Skill	Performance feature
Learning skills to:	<ul style="list-style-type: none">• evaluate the relevance of information relating to the location of electrical sources, underground or overhead services, and assets to the work to be undertaken.
Oral communication skills to:	<ul style="list-style-type: none">• share information with team members and other personnel on site• participate in straightforward conversations with colleagues and external authorities, and ask questions to identify and confirm requirements.
Reading skills to:	<ul style="list-style-type: none">• interpret a range of documentation, including SWMS, site plans and job specifications.
Writing skills to:	<ul style="list-style-type: none">• report faults in plant or equipment to relevant personnel.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Health and safety requirements</i> must include:	<ul style="list-style-type: none">• emergency procedures, including:<ul style="list-style-type: none">• first aid• evacuation• location and use of firefighting equipment• hazard identification and risk control procedures, including for handling hazardous materials and substances• safe operating procedures, including the conduct of operational
--	--

risk assessment and treatments associated with:

- earth leakage boxes
- job specifications
- lighting
- manual handling techniques
- electric lines, including overhead service trays, cables and conduits
- restricted access barriers
- safety data sheets (SDS)
- surrounding structures
- traffic control
- trip hazards
- use of signage and barricades
- requirements for:
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- selection, correct fitting, and use of personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- selection and use of tools and equipment
- workplace environmental requirements.

Electrical sources, underground or overhead services, and assets must include:

- distribution towers
- generators
- poles
- substations
- temporary services
- train and tram assets
- transmission towers
- underground and overhead lines
- underground conductors.

Unit Mapping Information

Assessment Requirements for CPCCCM3003 Work safely around electrical sources, services and assets

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded equivalent CPCCCM3003A Work safely around power sources, services and assets.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. On two different sites the person must also:

- locate electrical sources, underground and overhead services, and assets
- undertake work according to the safe work method statement (SWMS)
- retract from powered area on completion of work.

The above work must involve:

- locating, interpreting and applying information, standards and specifications relating to working safely around electrical sources, services and assets
- complying with site safety plan and work health and safety (WHS) legislation, regulations and codes of practice applicable to workplace operations
- locating on-site electrical sources, underground and overhead services, and assets and identifying associated required safe work practices
- installing safety signage and barricades before commencing work
- safely positioning plant and equipment on site, giving consideration to location of electrical sources, underground and overhead services, and assets.

Knowledge Evidence

A person demonstrating competency in this unit must demonstrate knowledge of:

- environmental requirements relevant to the work site and job task, including:
 - clean-up protection
 - noise and dust management
 - vibration management
 - waste management

- equipment safety requirements, including procedures for accessing and interpreting:
 - SWMS
 - safety data sheets (SDS)
- procedures for materials storage and environmentally friendly waste management
- techniques to read and interpret plans, specifications and drawings
- safe work practices required on construction sites, including:
 - required signage and barricades
 - required personal protective equipment (PPE)
 - site-specific emergency procedures, including:
 - evacuation
 - first aid, including cardiopulmonary resuscitation (CPR)
 - location and use of firefighting equipment
 - techniques for working with electrical sources, services and assets
 - procedures for working safely at heights
- types, characteristics, uses and limitations of plant, tools and equipment used in the work specified in performance evidence.

Assessment Conditions

Suitable assessment of performance requires:

- equipment:
 - PPE, as appropriate to the task
- materials:
 - signage and barricades appropriate to the task and work site
- specifications:
 - verbal or written instructions and task-specific information issued by authorised personnel
 - plans and specifications appropriate to the task
 - SDS appropriate to the tools and equipment used to perform tasks
 - SWMS
- relationships with team members and supervisor:
 - work may be conducted alone or as part of a team
- timeframe:
 - according to job requirements.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

CPCCCM3004 Identify and apply information in construction plans, drawings and specifications

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

New unit of competency.

Application

This unit of competency specifies the outcomes required to identify work site details and scope of work requirements from construction plans, drawings and specifications, and to apply that information to the initial scheduling and preparation for the work. Work tasks may relate to different areas of work and can include shopfitting, carpentry, construction and painting.

The unit supports construction workers at the early stages of work when the first site visits are made and work requirements are clarified with the client or project manager. It applies to residential and commercial construction projects.

No licensing, legislative, regulatory, or certification requirements apply to this unit of competency at the time of endorsement.

Pre-requisite Unit

Nil

Competency Field

Common

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.
1. Prepare for site visit.	<p>1.1. <i>Plans, drawings and specifications</i> for construction work are obtained, checked for currency, including latest amendments as required, and work site location is noted.</p> <p>1.2. Construction plans, drawings and specifications are checked for inclusion of key information required for the work, and items requiring clarification are noted for discussion with relevant personnel.</p> <p>1.3. Work site visit is scheduled with relevant personnel to confirm and clarify scope of works and job-specific details not included on plans, drawings and specifications.</p>
2. Check work site and confirm work requirements.	<p>2.1. Work site is accessed according to client and organisational requirements.</p> <p>2.2. <i>Layout and features</i> of existing site are checked against plans, drawings and specifications, and items requiring clarification and observed differences in features or dimensions are noted and resolved with relevant personnel.</p> <p>2.3. Plans, drawings, specifications and technical details for the work to be completed are confirmed, and items requiring clarification are resolved with relevant personnel.</p> <p>2.4. Amended plans, drawings or specifications and building approval documentation are obtained, as required, and checked for accuracy.</p>
3. Prepare information and resources for individual job	<p>3.1. Work stages and individual job tasks are determined from construction plans, drawings and specifications.</p> <p>3.2. Simple sketch or sketches are prepared for individual tasks.</p>

tasks.

- 3.3. Job tasks are sequenced and scheduled in consultation with client, project manager and other contractors, as required.

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

Skill	Performance feature
Learning skills to:	<ul style="list-style-type: none">• draw on past experience of interpreting plans, drawings and specifications when interpreting new construction work documentation.
Numeracy skills to:	<ul style="list-style-type: none">• estimate timeframes for different tasks and apply to scheduling• interpret different scales and ratios on plans and drawings and apply when producing simple sketches with accurate dimensions.
Oral communication skills to:	<ul style="list-style-type: none">• use construction terminology in discussions with site personnel to clarify issues relating to plans, drawings and specifications• use listening and questioning skills and appropriate terminology to elicit information from clients regarding work requirements.
Reading skills to:	<ul style="list-style-type: none">• interpret symbols, shading and notations used on construction plans and architectural drawings.
Problem-solving skills to:	<ul style="list-style-type: none">• assess the nature and scope of task requirements and factor in contingency estimates when scheduling.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Plans, drawings and specifications must include five or more of the following:

- cross sections
- detail plans
- elevations
- finishing schedules
- floor plans
- footings and slab set-outs
- roof framing layout
- site plans
- sectional views
- sub-floor and floor plans
- wall framing plans
- window and door schedules.

Layout and features must include at least four of the following:

- adjacent buildings
- contours and contour lines
- datums
- existing structures
- on-site storage
- power, gas, water and telecommunications services
- reduced levels
- site access and egress points.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for CPCCCM3004 Identify and apply information in construction plans, drawings and specifications

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

New unit of competency.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. The person must also:

- interpret at least five construction plans, drawings and specifications for three different work tasks or three different construction sites
- apply the above information to prepare for work, including preparing information and a simple sketch or sketches for each task.

In doing the above, the person must also confirm the actual dimensions of at least three different elements of buildings by interpreting at least two different scales. Where there are differences in measurements, the person must refer to relevant personnel before starting work.

Knowledge Evidence

A person demonstrating competency in this unit must demonstrate knowledge of:

- essential information to be included in simple sketches for tasks specified in the performance evidence
- processes for arranging work site access
- processes for reporting inaccuracies identified in plans, drawings and specifications
- processes for seeking amendments to inaccurate plans, drawings and specifications
- methods of sequencing and scheduling job tasks
- types and key features of construction plans, drawings and specifications used in construction projects
- methods for representing details of construction requirements on plans, drawings and specifications
- construction terminology and symbols used on plans and drawings and in job specifications.

Assessment Conditions

Suitable assessment of performance requires:

- specifications:
 - plans, drawings and specifications for the three different tasks or three different construction sites specified in the performance evidence
- contingencies:
 - differences in measurements
- physical conditions:
 - access to site or sites represented on the plans and drawings for the work tasks
- relationship with client:
 - consultation with client or client's representative is required.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

CPCCCM3005 Calculate costs of construction work

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded equivalent unit CPCCCM2003B Calculate and cost construction work.

Application

This unit of competency specifies the outcomes required to estimate materials, overheads, labour and time requirements and establish costs for the provision of products and services for construction work.

The unit supports tradespersons and those in independent construction job roles to cost a construction project or part of a construction project. It applies to construction work on residential and commercial sites.

No licensing, legislative, regulatory, or certification requirements apply to this unit of competency at the time of endorsement.

Pre-requisite Unit

Nil

Competency Field

Common

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to

- essential outcomes. demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.
1. Gather information.
 - 1.1. Job requirements are determined through discussion with customer or from information supplied.
 - 1.2. ***Plans and specifications*** are accessed and site is inspected to confirm requirements.
 - 1.3. Details of products and services to be provided are developed and checked for availability and fitness for purpose.
 - 1.4. Delivery point and methods of transportation are determined where necessary.
 - 1.5. Details of job tasks are accurately recorded and checked according to workplace procedures.
 - 1.6. Information about material, labour and overhead costs is obtained and checked to be current and accurate.
 2. Estimate materials, labour and time.
 - 2.1. Work, including preparatory tasks, is planned and sequenced to cover all necessary activity.
 - 2.2. ***Types and quantities of materials*** required for work are estimated based on availability, fitness for purpose, and current costs.
 - 2.3. Labour requirements to perform work tasks and complete the job are estimated.
 - 2.4. Time requirements to perform work tasks are accurately estimated and checked with appropriate personnel.
 3. Calculate costs.
 - 3.1. Totals of individual materials, ***labour and overhead costs*** are calculated according to workplace procedures and statutory requirements.
 - 3.2. ***Other project-specific costs*** are identified and calculated according to workplace procedures.
 - 3.3. Total work cost is calculated, including mark-up percentages set by appropriate personnel.

- 3.4. Final cost for work is calculated by applying profit margin according to workplace procedures, and is checked for accuracy.
4. Document and verify details.
- 4.1. Details of costs and charges are clearly and accurately documented according to workplace procedures.
- 4.2. Costs, calculations or other details are verified according to workplace procedures and current costing data.
- 4.3. Costing estimate and materials take-off are prepared for quote.
- 4.4. *Costing documents* are accurately completed for future reference according to workplace procedures.

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

Skill	Performance feature
Learning skills to:	<ul style="list-style-type: none"> • draw on experience of estimating labour time requirements and material costs, and apply knowledge to new jobs to be costed.
Oral communication skills to:	<ul style="list-style-type: none"> • confirm requirements with customer • use listening and questioning to clarify any issues.
Reading skills to:	<ul style="list-style-type: none"> • read and interpret material specifications, job safety analyses (JSA) and Australian standards relevant to work to be undertaken.
Writing skills to:	<ul style="list-style-type: none"> • produce accurate and legible written costing information.

- Technology skills to:
- find and interpret information relevant to current costings for materials and labour using simple internet searches
 - use estimating and costing templates and software.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

- Plans and specifications*** must include three or more of the following:
- building codes
 - conceptual and preliminary sketches or drawings
 - environmental requirements relating to the acquisition, use and disposal of materials
 - project brief and scope of works, including relevant project plans and detailed project requirements
 - quotation conditions and terms of contract
 - relevant Australian standards and industry standards.

- Types and quantities of materials*** must include five or more of the following:
- aluminium
 - brick and blockwork
 - cement, sand, aggregates and bonding agents
 - claddings
 - decorative finishes
 - doors, windows and trims
 - fillers
 - fixings and fastenings
 - glazing
 - hardware
 - medium density fibreboard (MDF) or alternative substrate panelling
 - paint
 - prefinished boards and laminates
 - solid surfaces
 - steel
 - tiles
 - timber.

- Labour costs** must include:
- estimation of time for manufacture, delivery, installation or application
 - personal protective equipment (PPE)
 - wages and on-costs for different types of construction workers.
- Overhead costs** must include:
- administration
 - insurance
 - transport
 - use of communication technology.
- Other project-specific costs** must include at least two of the following:
- plant and equipment hire
 - project-related signs
 - site facilities
 - statutory fees and charges
 - transport and delivery charges
 - waste removal fees.
- Costing documents** must include three of the following:
- costing spreadsheets
 - job sheets
 - labour time allocation
 - materials lists and estimates
 - quotation templates
 - take-off sheets.

Assessment Requirements for CPCCCM3005 Calculate costs of construction work

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded equivalent unit CPCCCM2003B Calculate and cost construction work

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. The person must also cost three different construction jobs, where the costing includes:

- estimating quantities of material required
- determining the types and amount of labour required to complete the work
- estimating time required to complete the work
- estimating overheads associated with the work
- totalling all costs and applying profit margin to establish a client quote.

In doing the above work, the person must:

- locate, interpret and apply information, standards and specifications relevant to estimating and costing work
- calculate final cost for the work and prepare a written quotation for each of the work requirements.

Knowledge Evidence

A person demonstrating competency in this unit must demonstrate knowledge of:

- accuracy and detail required in costing estimates for construction work
- construction terminology used in plans and specifications for construction work
- contents and impact of job safety analyses (JSA) and safe work method statements (SWMS) on costing construction work
- environmental and sustainability requirements relevant to the costing being determined
- procedures for applying the Goods and Services Tax (GST) to costings

- procedures for determining wages and overhead costs relevant to a quotation for construction work
- international system of units (SI) of measurements relevant to the construction industry
- process of estimating and costing construction work
- quality requirements of construction projects and their impact on time required for completion
- relevant statutory and authority requirements related to estimating and costing construction work
- sources of information on material requirements and processes for calculating them
- standards applicable to the work being costed, such as Australian standards and those in the National Construction Code
- terms and content of relevant contract documentation to inform estimate.

Assessment Conditions

Suitable assessment of performance requires:

- equipment:
 - calculator
 - computer with internet access
- specifications:
 - plans and specifications for the work to be undertaken
 - costing information
- relationship with client:
 - consultation with client is required.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

CPCCLBM3001 Licence to operate a concrete placing boom

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 1.

Revised unit of competency replacing superseded non-equivalent CPCCLBM3001A Licence to operate a concrete placing boom.

Application

This unit of competency specifies the outcomes required to operate concrete placing booms safely. It supports the work of concrete placement workers who are responsible for locating concrete placing booms at the workplace and for setting up and operating the boom to deliver concrete safely and accurately as required.

The concrete placing boom includes a knuckle boom capable of power-operated slewing and luffing to place concrete by way of pumping through a pipeline attached to, or forming part of, the boom of the plant.

The unit includes planning the work, conducting routine plant and equipment checks, setting up and preparing for operation, receiving concrete from the manufacturer, placing concrete, and shutting down and securing the concrete placing boom.

This unit is based on the licensing requirements of Part 4.5 of the *Model Work Health and Safety (WHS) Regulations, High Risk Work*, and meets commonwealth, state and territory high risk work licensing requirements. Any alteration to unit content or outcomes would result in a unit that is not acceptable to WHS/OHS regulators for the purpose of licensing.

|---|---|
| 1. Plan concrete placement work. | 1.1. Concrete placement workplace is confirmed, <i>potential hazards and emergencies are identified</i> , and risk controls are selected according to applicable regulations, the hierarchy of controls, and site and <i>workplace procedures</i> . |
| | 1.2. Type of required concrete placing boom and types, volumes and schedule of concrete delivery to the workplace are confirmed with relevant contractors and suppliers. |
| | 1.3. Tools and equipment, including personal protective equipment, are selected to meet work requirements and checked according to workplace procedures. |
| | 1.4. Workplace <i>methods for communicating</i> between concrete placing boom operator and <i>other workplace personnel</i> are identified and confirmed. |
| | 1.5. Proposed location for setting up concrete placing boom is identified, and access to location and <i>ground suitability are confirmed</i> with <i>relevant personnel</i> . |
| 2. Set up boom and prepare for operation. | 2.1. Location and ground are inspected and checked against advice received from <i>reports and drawings</i> and confirmed as suitable according to workplace procedures. |
| | 2.2. Concrete placing boom is located at workplace, positioned for work application, and outriggers are extended and adjusted to ensure stability according to manufacturer specifications and workplace procedures. |

- 2.3. Pre-start operator checks are conducted according to manufacturer specifications and workplace procedures.
 - 2.4. Concrete placing boom is partially extended to test operation and check function according to manufacturer specifications and workplace procedures.
 - 2.5. Plant safety devices are tested according to manufacturer specifications and workplace procedures.
 - 2.6. Post-start operational checks are carried out according to manufacturer specifications and workplace procedures.
 - 2.7. Concrete delivery system components are positioned securely and safely according to workplace procedures.
 - 2.8. Appropriate *risk control measures* are applied to the concrete placing boom location according to manufacturer specifications and workplace procedures.
 - 2.9. Pumping system is tested and prepared for use according to manufacturer specifications and workplace procedures.
3. Deliver concrete.
- 3.1. Supply of bulk concrete to the hopper is coordinated with supply vehicle operators to ensure safe hopper levels, and hose hand and concreters are advised of pauses and changes in supply as required.
 - 3.2. Concrete placing boom is safely and efficiently operated through the *full range of movements* using remote control or control panel to deliver the concrete as required.
 - 3.3. Risk of collision with other fixed structures and moving plant is monitored and suitable risk control measures are implemented.
 - 3.4. Pump is operated using remote control or control panel to ensure a safe optimum output according to requirements of concreters and to minimise damage to the engine and gears.
 - 3.5. Hand signals are correctly made and interpreted, or instructions over the radio are correctly given and received, according to any workplace procedures.

- 3.6. ***Boom operation is constantly monitored*** to ensure stability of boom and safety of personnel, delivery hose and workplace equipment and structures.
 - 3.7. ***Strategies for managing emergencies*** arising during concrete placement are implemented as required and according to manufacturer specifications, and emergencies are reported in line with workplace procedures.
 - 3.8. Concrete placing boom is safely withdrawn from the work area at completion of delivery task.
4. Shut down and secure concrete placing boom and components.
 - 4.1. Delivery lines and hopper are cleaned out according to manufacturer specifications and workplace procedures.
 - 4.2. Concrete placing boom is stowed according to manufacturer specifications and secured for travel according to plant operation and workplace procedures.
 - 4.3. Outriggers are retracted, stowed and secured for travel according to manufacturer specifications and workplace procedures.
 - 4.4. Plates or packing are stowed and secured for travel according to manufacturer specifications and workplace procedures.
 - 4.5. Concrete placing boom is relocated as required and shut down according to manufacturer specifications and workplace procedures.
 - 4.6. Routine post-operational equipment checks are carried out and recorded according to manufacturer specifications and workplace procedures.
 - 4.7. Defects and damage are reported and recorded and appropriate action is taken according to manufacturer specifications and workplace procedures.

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to

performance in this unit but not explicit in the performance criteria.

Skill	Performance feature
Learning skills to:	<ul style="list-style-type: none">• operate concrete placing booms in different types of workplaces transferring key principles of safe operation to different contexts• improve own performance in the safe and efficient operation of concrete placing booms by incorporating learning from experiences in different workplaces and different conditions.
Numeracy skills to:	<ul style="list-style-type: none">• interpret numerical information, including:<ul style="list-style-type: none">• information regarding concrete supply:<ul style="list-style-type: none">• schedule of delivery• strength and volume of concrete• readings on control and monitoring instruments.
Oral communication skills to:	<ul style="list-style-type: none">• use and interpret vocabulary specific to the construction industry at a level sufficient to communicate with other workplace personnel• use non-verbal feedback to support effective communication• use relevant conventions for the use of mobile communication devices, such as two-way radios.
Reading skills to:	<ul style="list-style-type: none">• interpret documentation that includes technical specificity, including:<ul style="list-style-type: none">• engineering drawings• geotechnical reports• plant operation manuals and manufacturer specifications• workplace procedures.
Writing skills to:	<ul style="list-style-type: none">• accurately record and maintain information relating to the operation of concrete placing booms, including:<ul style="list-style-type: none">• incident reports• vehicle and equipment checking and maintenance records.
Self-management skills to:	<ul style="list-style-type: none">• implement risk control measures• initiate emergency management strategies.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. ***Bold italicised*** wording, if used in the performance criteria, is detailed below.

Identification of potential hazards and emergencies must include consideration of:

- environmental conditions, including:
 - lightning
 - storms
 - wind
- ground stability, including:
 - compaction, especially recently filled trenches
 - condition and structure, including presence of underground spaces
 - slopes
- hazardous materials
- inadequate extension of outriggers
- insufficient lighting
- overhead or underground electrical assets and service pipes, including:
 - identification of overhead electric line hazards and risks
 - relevant limits of approach
 - safety observer zone
 - whether the work requires a permit from the electricity supply authority
- pressurised pipes, hoses and equipment
- risk of collision with other fixed structures and moving plant, including cranes, tower cranes and other concrete placing booms
- workplace visit if insufficient information available from building contractor or other workplace personnel
- traffic, including:
 - pedestrians
 - vehicles
 - plant.

Workplace procedures must include:

- compliance with applicable:
 - commonwealth, state and territory health and safety legislation
 - approved codes of practice
 - manufacturer specifications and recommendations for the operation of the concrete placing boom

- safe work method statements (SWMS)
- workplace-specific instructions
- consideration of relevant standards:
 - Australian standards
 - international technical standards (ISO)
 - industry standards.

Methods for communicating must comply with **appropriate** workplace protocols **and** must include:

- making and interpreting hand signals, including:
 - boom up
 - boom down
 - slew left
 - slew right
 - open or extend boom
 - close or retract boom
 - stop boom
 - start pump speed up
 - slow pump down
 - little bit
 - add water
 - all finished
- using fixed channel mobile communication devices, including selecting transmitting frequencies
- verbal:
 - speaking, including questioning to confirm understanding
 - listening
- written, including signage and symbols.

Other workplace personnel must include:

- concrete placing and supply personnel:
 - concreter
 - form worker
 - hose hand
- operator of other construction plant and equipment
- other personnel working on or visiting the workplace
- workplace supervisor.

Confirmation of ground suitability must include:

- checking that there is no evidence of:
 - backfilled ground
 - soft soils

- underground cavities
- uneven ground
- evidence that the ground is stable and can withstand the weight of the fully loaded concrete placing boom and concrete delivery vehicles
- evidence that the ground is relatively level and there is ample space for extension of outriggers to ensure the security of the boom when fully extended and operational
- identifying the type of ground, including:
 - bitumen
 - concrete
 - hard compacted soil
 - rock.

Relevant personnel must include one or more of the following:

- geotechnical engineer
- principal contractor
- structural engineer
- workplace manager.

Reports and drawings must include one or more the following:

- engineering drawings
- geotechnical reports.

Risk control measures must include:

- adequate lighting
- complying with requirements of permit conditions from electrical supply authority, including:
 - observing the limits of approach
 - maintaining the safety observer zone
- disconnecting electricity or compliance with electrical supply authority requirements
- locking pins, including R clips and lynch pins
- minimising the risk of collision with other operational plant
- moving obstructions
- properly securing load-rated chain to secure the hose to the boom
- setting up concrete placing boom an adequate distance from excavations
- using pedestrian barricades
- using personal protective equipment
- using safety tags on electrical switches or isolators
- using traffic barricades and controlling traffic.

Full range of movements must include:

- folding and unfolding
- raising and lowering
- slewing left and slewing right
- stopping boom.

Monitoring boom operation must include:

- checking:
 - operation of safety devices
 - readings on control panels
 - boom location and movement
 - concrete flow
 - hopper level
- checking stability of concrete placing boom
- listening for abnormal noises.

Strategies for managing emergencies must involve:

- complying with workplace evacuation procedures
- contacting emergency services
- notifying other workplace personnel
- shutting down equipment.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for CPCCLBM3001 Licence to operate a concrete placing boom

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 1

Revised unit of competency replacing superseded non-equivalent CPCCLBM3001A Licence to operate a concrete placing boom.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. The person must also be able to provide evidence of the ability to locate, set up, operate and shut down a concrete placing boom for two different concrete placements:

- one of which must involve delivery of concrete where the placement area is not visible to the boom operator and radio communication with the hose hand is essential
- using two types of concrete with different slumps.

For each concrete placement, the person must provide evidence of the ability to:

- comply with commonwealth, state and territory health and safety legislation and regulations
- plan and prepare for concrete placement work, including:
 - conducting a risk assessment of the workplace
 - selecting risk controls according to the hierarchy of control for positioning and safely operating the concrete placing boom
- check location suitability and then position and stabilise the concrete placing boom using outriggers and packing according to plant operation and workplace procedures
- conduct pre-operational checks of plant, boom, pump, safety devices, and control panels according to plant operation and workplace procedures
- operate and control the concrete placing boom, including all functions to the maximum extension, in communication with workplace personnel to deliver concrete as required and according to plant operation and workplace procedures
- monitor concrete supply and pump and boom operation to ensure safe concrete delivery according to workplace procedures

- identify faults and problems with concrete placing boom, including emergencies, and apply appropriate strategies in response according to manufacturer recommendations and workplace procedures
- demonstrate strategies in place for managing the following emergencies that may arise during concrete placement:
 - contact with electric lines
 - failure or loss of control of the boom
 - instability of concrete placing unit
 - pipe or hose blockage or blow-out
 - failure of equipment, including hydraulic system
 - severe environmental conditions, including wind, lightning and storms
- shut down concrete placing boom in line with established safety procedures:
 - idle engine to stabilise temperature
 - disengage pump
 - turn off engine
 - remove key from ignition
 - secure plant according to manufacturer specifications
 - secure boom according to relevant manufacturer specifications and workplace procedures.

Knowledge Evidence

A person demonstrating competency in this unit must be able to demonstrate knowledge of:

- commonwealth, state and territory health and safety legislation and approved codes of practice relevant to operating a concrete placing boom
- Australian and industry standards relevant to operating a concrete placing boom
- characteristics and properties of concrete required for different elements of buildings
- concreting placing procedures, which must include requirements for priming material, volume of concrete required, and consistency and amount of concrete in the delivery line
- features and functions of concrete delivery system components:
 - adaptors
 - boom
 - couplings
 - hose
 - lines
 - locking pins, including R clips and lynch pins
- hand signals used in concrete placement operations
- manufacturer specifications, site and workplace procedures relevant to operating concrete placing booms
- essential safety procedures for ensuring stability of concrete placing boom:
 - deploying outriggers according to manufacturer specifications
 - establishing correct size plates or packing

- correctly positioning plates or packing
- checking plant is level and well-supported
- procedures for maintaining workplace records and information
- protocols for using mobile communication devices on construction workplaces
- routine problems, hazards and emergencies that could arise during concrete placing boom operations and strategies for managing them, including application of the hierarchy of controls
- types of ground and ground conditions at workplace that are:
 - suitable for set-up and operation of concrete placing boom
 - unsuitable for set-up and operation of concrete placing boom.

Assessment Conditions

Assessment must be conducted in the English language.

Assessment of performance must be undertaken in the workplace and/or under realistic workplace conditions that typically reflect:

- the use of full-scale equipment,
- performing tasks/activities within the same timelines expected in the workplace, and
- standard and authorised work practices, safety requirements and environmental constraints.

All practical assessment must be undertaken on a mobile concrete placing boom.

The use of simulators in the assessment of this unit of competency is not acceptable.

Accredited assessors are responsible for ensuring that candidates have access to operational workplaces with personnel to undertake hose hand and concreting responsibilities, and access to:

- equipment in safe operating condition:
 - mobile communication devices, including two-way radios
 - concrete placing boom and associated controls and equipment, including outriggers and packing
 - personal protective equipment
 - plant safety devices with the following features:
 - audible and visual reversing devices
 - horns and sirens
 - lights
 - safety interlocks

- tools and equipment required for pre-start and post-operational equipment checking, cleaning and maintenance
- materials:
 - concrete
 - workplace documentation to be completed
- contingencies:
 - other plant, including cranes, working at the workplace
- specifications:
 - manufacturer specifications
 - work instructions
 - workplace procedures
 - specifications for concrete delivery
 - relevant workplace technical reports and drawings
- physical conditions:
 - suitable terrain and weather for concrete placement operations.

Assessor requirements

As a minimum assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

In addition, assessment must be conducted by an assessor accredited for this high risk work (HRW) licence class in the commonwealth, state or territory jurisdiction where the licence application will be made (i.e. an accredited assessor authorised by a commonwealth, state or territory WHS/OHS regulator).

CPCCPB3014 Install bulk insulation and pliable membrane products

Modification History

Release 1. This version first released with CPC Construction, Plumbing and Services Training Package Version 3.0

Application

This unit specifies the outcomes required to safely undertake floor, wall and ceiling insulation installation work using bulk insulation and pliable membrane products. The unit includes identifying legislative, regulatory, and job requirements; planning and preparing to install insulation; installing insulation; and, completing installation, including preparation of a Statement of Insulation Installation.

The unit requires a person undertaking this work to comply with legislative, regulatory, safety and technical, organisational and site requirements while planning and carrying out the work.

The unit applies to insulation installers working primarily in residential buildings, although there may be application in some instances in commercial buildings.

The work context involves working at heights, working in enclosed areas, dust control and mitigation of risk from asbestos.

At the time of endorsement there was no requirement by any state or territory regulator for insulation installers to complete this unit for licensing or registration purposes.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1. Define job Requirements

- 1.1. Identify scope of required installation activities through review of job requirements and inspection of work site.
- 1.2. Assess and control site risks and *hazards* and communicate and clarify any issues with supervisor.
- 1.3. Identify requirements of workplace procedures for responding to the presence of vermin, asbestos, and dust within the workspace.
- 1.4. Identify required safety equipment and processes by review of work order, risk assessment, safety data sheets (SDS), safe use instruction sheet (SUIS) and *safety legislation*.
- 1.5. Identify and review requirements of *Australian Standards* (AS) AS 4200.2 for pliable membrane wall insulation and AS 3999 relating to electrical inspections, safety and installation activities.
- 1.6. Identify and review workplace *environmental requirements* that relate to the installation activities.
- 1.7. Identify and review workplace *emergency response and evacuation procedures* as they apply to the site of the installation activities.
- 1.8. Identify and review *work instructions and specifications* that relate to the installation activities.

2. Plan and prepare for installing insulation.

- 2.1. Undertake an electrical risk assessment and prepare an electrical risk assessment report.
- 2.2. Document and submit for approval a *Safe Work Method Statement* (SWMS) for the worksite, incorporating identified risks and hazards, the outcomes of the electrical risk assessment, electrical isolation procedure and the hazard hierarchy of control.
- 2.3. Plan job incorporating identified requirements of work order, work site, safety legislation, AS 3999, environmental requirements, work instructions and specifications and SWMS.

- 2.4. Confirm that *insulating material* and *insulation requirements* meet work instructions and thermal and acoustic performance specifications.
 - 2.5. Put in place all requirements of the SWMS.
 - 2.6. Select *personal protective equipment* (PPE), *tools, equipment and associated materials*, check for serviceability and report for repair or replacement where unserviceable.
3. Install floor, wall and ceiling insulation.
 - 3.1. Isolate worksite electrical circuits and install safety signage and lock-out tag in accordance with the SWMS.
 - 3.2. Undertake installation work in accordance with the SWMS.
 - 3.3. Undertake installation work using approved methods of measurement and cutting of insulating material.
 - 3.4. Undertake installation work in accordance with requirements of AS 3999 for recessed luminaries and electrical cable and AS 4200.2 for wall applications where pliable building membranes are required.
 - 3.5. Undertake installation work in accordance with manufacturers' specifications and minimise waste.
 - 3.6. Install insulation without damage or distortion of the surrounding environment, electrical and other services and in a manner that maximises safety of self and others.
 - 3.7. Conduct final inspection to ensure installed floor, wall and ceiling insulation conforms to work instructions, AS 3999 and manufacturers' specifications.
4. Complete installation.
 - 4.1. Clean work area and dispose of, re-use or re-cycle *materials* following workplace and environmental procedures.
 - 4.2. Clean, check, maintain, and store tools and equipment in accordance with manufacturer specifications.
 - 4.3. Document details of malfunctions, faults, wear or damage to tools and equipment and report for repair or replacement.
 - 4.4. Document, distribute, and store Statement of Insulation Installation.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Not Applicable

Unit Mapping Information

Supersedes and is not equivalent to CPCCPB3014A - Install batt insulation products

Links

An Implementation Guide to this Training Package is available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCPB3014 Install bulk insulation and pliable membrane products

Modification History

Release 1. This Version first released with CPC Construction, Plumbing and Services Training Package Version 3.0

Performance Evidence

A person who demonstrates competency in this unit must;

1. Conduct an electrical risk assessment and prepare an electrical risk assessment report.
2. Plan and install:
 - a) bulk insulation in:
 - a floor space with a minimum area of 9 square metres;
 - wall frames a minimum of 2400mm high by 3 lineal metres; and
 - a ceiling space with a minimum area of 9 square metres.
 - b) pliable membrane to:
 - wall frames a minimum of 2400mm high by 3 lineal metres.

The person must provide evidence from each of the above activities that:

- satisfies the elements and associated performance criteria and foundation skills of this unit; and
- confirms the activities to be in accordance with legislative and workplace requirements specified in Knowledge Evidence.

Knowledge Evidence

A person demonstrating competency in this unit must provide evidence to demonstrate knowledge and understanding of the following knowledge evidence items.

Each item defines the type and depth of the knowledge required to meet the demands of one or more performance criteria:

- Jurisdictional Workplace Health and Safety and environmental legislation and regulations
- Workplace requirements for undertaking all aspects of insulation and pliable membrane installation, including interpreting work orders and reporting problems
- Procedures to safely use equipment, shift and handle products and materials, and work at heights and in enclosed areas to install floor, wall and ceiling insulation in common situations
- Organisational procedures for responding to the presence of pests/vermin, asbestos and dust within an installation workspace
- Risks of asbestos containing materials (ACM), and their use in common building

materials used in floor, wall and ceiling spaces

- Key requirements of legislation, regulation and building codes related to floor, wall and ceiling insulation
- Tools and equipment prohibited for use near identified asbestos-containing materials (ACM)
- Appropriate PPE and its use in floor, wall and ceiling insulation installation
- Safety data sheets (SDS) and Safe Work Method Statements (SWMS) commonly used in floor, wall and ceiling insulation installation
- Common health and safety risks associated with handling floor, wall and ceiling insulation products
- Emergency response and evacuation procedures relating to floor, wall and ceiling insulation installation
- Work instructions and specifications relating to floor, wall and ceiling insulation installation
- Electrical risk assessment process, hazard identification and reporting as per Australian Standard (AS) AS 3999 for common floor, wall and ceiling insulation installation
- Hierarchy of hazard control as it relates to floor, wall and ceiling insulation installation
- Organisational requirements and procedures relating to floor, wall and ceiling insulation installation, including requirements for a systematic approach to planning own work
- Key requirements of Australian Standards - relating to floor, wall and ceiling information, including:
 - AS/NZS 4859.1 Materials for the thermal insulation of buildings - Testing and labelling of insulation;
 - AS 4200.2 Pliable building membranes – Installation; and
 - AS/NZS 3000 (with Amd 1) Wiring Rules, in particular Clause 4.5.2.3.
- Requirements relating to floor, wall and ceiling insulation installation from AS 3999 for:
 - personal safety;
 - electrical risk assessment;
 - approved processes; and
 - energy efficiency – new products and technologies.
- Specifications of common floor, wall and ceiling installation materials, including R rating and dimensions
- Types, safety, characteristics, uses and limitations of common floor, wall and ceiling insulation installation tools and equipment
- Type and purpose of lock out tags in floor, wall and ceiling insulation installation
- Requirements of AS 3999 for recessed luminaires and electrical cable, in floor, wall and ceiling insulation installation including:
 - operating temperature limit of electrical cables;
 - effect on cables partially surrounded by thermal insulation and fully surrounded by thermal insulation;
 - common wiring systems used in domestic premises indicating the age of the

- installation;
- clearance and restraint methods to retain thermal insulation from recessed down lights and ancillary equipment; and
- electrical hazards in floor, wall and roof spaces, including unenclosed connections, unenclosed conductors, damaged cable sheaths and exposed conductors.
- Product and process knowledge to identify common problems and predict consequences in floor, wall and ceiling insulation installation
- Quality requirements for installation of floor, wall and ceiling insulation material including thermal and acoustic performance
- Energy efficiency of common floor, wall and ceiling insulation material types
- Methods for measuring and cutting floor, wall and ceiling insulation material
- Procedures for conducting a final inspection of a floor, wall and ceiling insulation installation
- Workplace procedures for environmental requirements for waste, including waste management and recycling relating to floor, wall and ceiling insulation installation
- Procedures for cleaning, checking and maintaining tools and equipment used for floor, wall and ceiling insulation installation
- Procedures for dealing with faulty floor, wall and ceiling insulation installation tools and equipment
- Procedures for documenting, distributing and storing Statements of Insulation Installation incorporating the format and required information as defined in AS 3999 – Appendix D

Assessment Conditions

As a minimum, assessors must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment of performance must be undertaken in the workplace and/or under realistic workplace conditions which typically reflect:

- the use of industry standard equipment;
- performing tasks/activities to the level of proficiency and within timelines that would be expected in a workplace; and
- following standard and authorised work practices, safety requirements and environmental constraints.

Assessment must include work in enclosed areas with an access/egress point (e.g. manhole) and ceiling space obstructions including roof framing, electrical cabling and recessed luminaries.

Assessors are responsible for ensuring that candidates have access to specifications for:

- conducting an electrical risk assessment and preparing an electrical risk assessment report;
- a floor installation task in a floor space with a minimum area of 9 square metres;

- a wall installation task with wall frames a minimum of 2400mm high by 3 lineal metres;
- a ceiling installation task in a ceiling space with a minimum area of 9 square metres ; and
- a wall-wrap installation task for pliable membrane to wall frames a minimum of 2400mm high by 3 lineal metres.
- floor spaces;
- wall frames;
- ceiling spaces;
- materials and tools;
- relevant sections of the Australian Standards/National Construction Code;
- relevant sections of WHS/OHS legislation;
- electrical risk assessment report;
- SWMS template;
- Statement of Insulation Installation template;
- PPE; and
- technical documentation.

CPCCPB3027 Install ceiling insulation products

Modification History

Release 1. This Version first released with CPC Construction, Plumbing and Services Training Package Version 3.0.

Application

This unit specifies the outcomes required to safely undertake only ceiling insulation installation work using bulk insulation products. The unit includes identifying legislative, regulatory, and job requirements; planning and preparing to install insulation; installing insulation; and, completing installation, including preparation of a Statement of Insulation Installation.

The unit requires a person undertaking this work to comply with legislative, regulatory, safety and technical, organisational and site requirements while planning and carrying out the work.

The unit applies to insulation installers working primarily in residential buildings, although there may be application in some instances in commercial buildings.

Persons undertaking this unit should be aware that coverage of this unit extends only to ceiling insulation and does not include the broader context of wall and floor insulation installation.

At the time of endorsement there was no requirement by any state or territory regulator for insulation installers to complete this unit for licensing or registration purposes.

Assessment Requirements for CPCCPB3027 Install ceiling insulation products

Modification History

Release 1. This Version first released with CPC Construction, Plumbing and Services Training Package Version 3.0.

Performance Evidence

A person who demonstrates competency in this unit must;

1. Conduct an electrical risk assessment and prepare an electrical risk assessment report.
2. Plan and install:
 - a. bulk insulation in:
 - a ceiling space with a minimum area of 9 square metres.

The person must provide evidence from each of the above activities that:

- satisfies the elements and associated performance criteria and foundation skills of this unit; and
- confirms the activities to be in accordance with legislative and workplace requirements specified in Knowledge Evidence.

Knowledge Evidence

A person demonstrating competency in this unit must provide evidence to demonstrate knowledge and understanding of the following knowledge evidence items. Each item defines the type and depth of the knowledge required to meet the demands of one or more performance criteria.

- Jurisdictional Workplace Health and Safety and environmental legislation and regulations
- Workplace requirements for undertaking all aspects of ceiling insulation installation, including interpreting work orders and reporting problems
- Procedures to safely use equipment, shift and handle products and materials, and work at heights and in enclosed areas to install ceiling insulation in common situations
- Organisational procedures for responding to the presence of pests/vermin, asbestos and dust within an installation workspace
- Risks of asbestos containing materials (ACM), and their use in common building materials used in ceiling spaces
- Key requirements of legislation, regulation and building codes related to ceiling insulation

- Tools and equipment prohibited for use near identified asbestos-containing materials (ACM)
- Appropriate PPE and its use in ceiling insulation installation
- Safety data sheets (SDS) and Safe Work Method Statements (SWMS) commonly used in ceiling insulation installation
- Common health and safety risks associated with handling ceiling insulation products
- Emergency response and evacuation procedures relating to ceiling insulation installation
- Work instructions and specifications relating to ceiling insulation installation
- Electrical risk assessment process, hazard identification and reporting as per Australian Standard (AS) AS 3999 for common ceiling insulation installation
- Hierarchy of hazard control as it relates to ceiling insulation installation
- Organisational requirements and procedures relating to ceiling insulation installation, including requirements for a systematic approach to planning own work
- Key requirements of Australian Standards relating to ceiling insulation, including:
 - AS/NZS 4859.1 Materials for the thermal insulation of buildings - Testing and labelling of insulation; and
 - AS/NZS 3000 (with Amd 1) Wiring Rules, in particular Clause 4.5.2.3.
- Requirements relating to ceiling insulation installation from AS 3999 for:
 - personal safety;
 - electrical risk assessment;
 - approved processes; and
 - energy efficiency – new products and technologies.
- Specifications of common ceiling installation materials, including R rating and dimensions
- Types, safety, characteristics, uses and limitations of common ceiling insulation installation tools and equipment
- Type and purpose of lock out tags in ceiling insulation installation
- Requirements of AS 3999 for recessed luminaires and electrical cable, in ceiling insulation installation including:
 - operating temperature limit of electrical cables;
 - effect on cables partially surrounded by thermal insulation and fully surrounded by thermal insulation;
 - common wiring systems used in domestic premises indicating the age of the installation;
 - clearance and restraint methods to retain thermal insulation from recessed down lights and ancillary equipment; and
 - electrical hazards in roof spaces, including unenclosed connections, unenclosed conductors, damaged cable sheaths and exposed conductors.
- Product and process knowledge to identify common problems and predict consequences in ceiling insulation installation
- Quality requirements for installation of ceiling insulation material including thermal and

acoustic performance

- Energy efficiency of common ceiling insulation material types
- Methods for measuring and cutting ceiling insulation material
- Procedures for conducting a final inspection of a ceiling insulation installation
- Workplace procedures for environmental requirements for waste, including waste management and recycling relating to ceiling insulation installation
- Procedures for cleaning, checking and maintaining tools and equipment used for ceiling insulation installation
- Procedures for dealing with faulty ceiling insulation installation tools and equipment
- Procedures for documenting, distributing and storing Statements of Insulation Installation incorporating the format and required information as defined in AS 3999 – Appendix D

Assessment Conditions

As a minimum, assessors must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment of performance must be undertaken in the workplace and/or under realistic workplace conditions which typically reflect:

- the use of industry standard equipment;
- performing tasks/activities to the level of proficiency and within timelines that would be expected in a workplace; and
- following standard and authorised work practices, safety requirements and environmental constraints.

Assessment must include work in enclosed areas with an access/egress point (e.g. manhole) and ceiling space obstructions including roof framing, electrical cabling and recessed luminaries.

Assessors are responsible for ensuring that candidates have access to specifications for:

- conducting an electrical risk assessment and preparing an electrical risk assessment report; and
- a ceiling installation task in a ceiling space with a minimum area of 9 square metres.
- ceiling spaces;
- materials and tools;
- relevant sections of the Australian Standards/National Construction Code;
- relevant sections of WHS/OHS legislation;
- electrical risk assessment report;
- SWMS template;
- Statement of Insulation Installation template;
- PPE; and
- technical documentation.

An Implementation Guide to this Training Package is available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCSF2003 Cut and bend materials using oxy-LPG equipment

Modification History

Release 1.

Supersedes and equivalent to CPCCSF2003A Cut and bend materials using oxy-LPG equipment.

The unit of competency was updated to the Standards for Training Packages 2012.

This version first released with CPC Construction, Plumbing and Services Training Package Version 4.0.

Application

This unit of competency specifies the skills and knowledge required to heat, cut and bend construction materials using oxy-LPG equipment.

It includes:

- planning and preparing for the work
- setting up and testing equipment
- cutting material
- heating and bending material
- shutting down equipment
- completing clean-up activities.

It also includes the use of oxy-LPG-acetylene equipment to cut and bend materials for steelfixing applications. It does not involve specialist welding techniques.

It applies to workers working alone or as a member of a team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Concreting

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
<p>1. Plan and prepare to cut and bend materials using oxy-LPG equipment.</p>	<p>1.1 Review and clarify task to cut and bend materials using oxy-LPG equipment.</p> <p>1.2 Review task specifications and check to make sure they are in accordance with legislation, regulations and codes of practice.</p> <p>1.3 Review work health and safety (WHS) requirements for the task in accordance with safety plans and policies.</p> <p>1.4 Identify safety signage and barricade requirements.</p> <p>1.5 Review environmental requirements for the task in accordance with environmental plans and legislative requirements.</p> <p>1.6 Select plant, tools and equipment, check for serviceability and rectify or report any faults.</p> <p>1.7 Calculate material quantity requirements.</p> <p>1.8 Acquire materials for the task and locate them safely ready for use.</p>
<p>2. Set up and test oxy-LPG equipment.</p>	<p>2.1 Erect identified safety signage and barricades, and fit personal protective equipment (PPE).</p> <p>2.2 Select appropriate fire extinguisher and locate it to be readily accessible prior to and during operations.</p> <p>2.3 Attach regulators to oxy and acetylene bottles in accordance with manufacturers' specifications and WHS regulations.</p> <p>2.4 Purge lines to manufacturers' specifications prior to lighting up.</p> <p>2.5 Test equipment for leaks and either undertake corrective action or report faults.</p> <p>2.6 Select appropriate pressures and cutting tips in accordance with material to be cut and manufacturers' specifications.</p>
<p>3. Cut material with oxy-LPG equipment.</p>	<p>3.1 Mark material accurately and secure or clamp ready for cutting.</p> <p>3.2 Light torch in accordance with manufacturer's specifications.</p> <p>3.3 Adjust setting of flame for cutting to manufacturers' specifications.</p> <p>3.4 Adopt correct cutting position to set-out mark during cutting.</p>
<p>4. Heat and bend material using oxy-LPG equipment.</p>	<p>4.1 Mark material accurately and secure or clamp ready for bending.</p> <p>4.2 Light torch in accordance with manufacturer's specifications.</p>

	<p>4.3 Apply heat to specified material and minimise weakening effects of the heating process.</p> <p>4.4 Bend material to specification and cool appropriately.</p>
5. Shut-down oxy-LPG equipment.	<p>5.1 Switch off torch in accordance with manufacturers' specifications.</p> <p>5.2 Shut off gas supply in accordance with manufacturers' specifications.</p>
6. Clean up after cutting, heating and bending materials using oxy-LPG equipment.	<p>6.1 Clear work area and dispose of, re-use or recycle materials in accordance with legislation, regulations, codes of practice and task requirements.</p> <p>6.2 Clean, check, maintain and store plant, tools and equipment in accordance with manufacturers' specifications and workplace requirements.</p>

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

- oral communication skills to:
 - use questioning to identify and confirm requirements
 - discuss cause of problems
 - report work site hazards, including faults in tools, equipment and materials
 - provide feedback.

Unit Mapping Information

Supersedes and is equivalent to CPCCSF2003A Cut and bend materials using oxy-LPG equipment.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCSF2003 Cut and bend materials using oxy-LPG equipment

Modification History

Release 1.

Supersedes and equivalent to CPCCSF2003A Cut and bend materials using oxy-LPG equipment.

The unit of competency was updated to the Standards for Training Packages 2012.

This version first released with CPC Construction, Plumbing and Services Training Package Version 4.0.

Performance Evidence

To demonstrate competency in this unit, a person must use both oxy-acetylene and LPG systems to:

- cut to specification five bars with different sizes up to and including 36 mm
- heat and bend a minimum of three bars to specification including at least one 36 mm bar.

In doing this, the person must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- jurisdictional work health and safety (WHS) and environmental legislation and regulations relating to cutting, heating and bending material using oxy-LPG equipment, including:
 - job safety analyses (JSAs)
 - safe work method statements (SWMSs)
 - safety data sheets (SDSs)
 - safety manuals and instructions for plant, tools and equipment
 - signage and barricades
 - personal protective equipment (PPE)
 - environmental and work site safety plans
- requirements of Australian Standards and the National Construction Code (NCC) relating to cutting, heating and bending material using oxy-LPG equipment
- workplace requirements for all aspects of cutting, heating and bending material using oxy-LPG equipment, including interpreting work orders and reporting problems
- interpretation of plans, drawings and specifications
- processes for the calculation of material requirements from specifications
- scope of work for cutting, heating and bending material using oxy-LPG equipment, including:

- cutting up of waste for salvage
- cutting reinforcement steel
- cutting holes in plate
- bending reinforcement steel
- types and properties of materials, including:
 - cutting consumables
 - deformed bars
 - mesh sheets of deformed bars
 - mesh sheets of plain bars
 - plain rods
- oxy acetylene and LPG heating and cutting equipment types, characteristics, uses and limitations and set-up and operating techniques, including for:
 - cylinders
 - regulators
 - gas tubing
 - cutting blowpipes
 - flint lighters
 - measuring tapes and rules
 - clamps and support stands
- types, characteristics, uses and limitations of tools, equipment and materials required for cutting, heating and bending material using oxy-LPG equipment, including:
 - safe operating procedures
 - operational, maintenance and basic diagnostic procedures
 - workplace and equipment safety requirements
- techniques for cutting, heating and bending material using oxy-LPG equipment
- quality requirements relevant to cutting, heating and bending material using oxy-LPG equipment
- processes, materials and equipment for cutting, heating and bending material using oxy-LPG equipment
- requirements for cleaning up work area and tools, materials storage and environmentally friendly waste management.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment. Tasks are to be performed to the level of proficiency and within the time limits expected in a workplace.

Assessors are responsible for ensuring that the person demonstrating competency has access to:

- work sites and specifications for cutting, heating and bending tasks
- appropriate documents, materials, tools, equipment and PPE currently used in industry
- requirements of appropriate sections of legislation and regulations
- relevant workplace policies and procedures.

CPCCSF2004 Place and fix reinforcement materials

Modification History

Release 1.

Supersedes and equivalent to CPCCSF2004A Place and fix reinforcement materials.

The unit of competency was updated to the Standards for Training Packages 2012.

This version first released with CPC Construction, Plumbing and Services Training Package Version 4.0.

Application

This unit of competency specifies the skills and knowledge required to place and fix reinforcement for concrete work as part of construction processes.

It includes:

- planning and preparing for the work
- final preparation for placement
- placing and fixing reinforcement
- checking the reinforcement
- completing clean-up activities.

It applies to concreters working as members of a team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1. Plan and prepare to place and fix reinforcement	1.1 Review and clarify task to place and fix reinforcement materials. 1.2 Review task specifications and check to make sure they are in

materials.	<p>accordance with legislation, regulations and codes of practice.</p> <p>1.3 Review work health and safety (WHS) requirements for the task in accordance with safety plans and policies.</p> <p>1.4 Identify safety signage and barricade requirements.</p> <p>1.5 Review environmental requirements for the task in accordance with environmental plans and legislative requirements.</p> <p>1.6 Select plant, tools and equipment, check for serviceability and rectify or report any faults.</p> <p>1.7 Check stock of reinforcement materials for correct type, quality and quantities against reinforcement schedule and details in plans/specifications.</p> <p>1.8 Acquire materials for the task and locate them safely ready for use.</p>
2. Prepare for reinforcement placement.	<p>2.1 Erect identified safety signage and barricades, and fit personal protective equipment (PPE).</p> <p>2.2 Check formwork for completion and conformity to receive reinforcement.</p> <p>2.3 Cut and bend reinforcement bars to required set out and plans and specifications.</p> <p>2.4 Tie bars to designed configuration from plans and specifications.</p> <p>2.5 Cut reinforcement sheets to required sizes.</p> <p>2.6 Attach stiffening rods to panels as required to facilitate handling processes.</p> <p>2.7 Locate bar chairs and spacers to requirements of reinforcement schedule, plans and specifications.</p>
3. Place and fix reinforcement.	<p>3.1 Place fabric reinforcement sheets into position in accordance with engineering drawings and specifications.</p> <p>3.2 Locate and position reinforcement bars in accordance with engineering drawings and specifications.</p> <p>3.3 Locate and place reinforcement using bar chairs, ligatures and spacers in accordance with engineering drawings and specifications.</p> <p>3.4 Support and secure reinforcement material into position in accordance with engineering drawings and specifications.</p> <p>3.5 Secure cast-in items to reinforcement in accordance with engineering drawings and specifications.</p> <p>3.6 Cover and protect ends of protruding reinforcement material in accordance with plans and specifications.</p>

4. Check reinforcement prior to concrete pour.	<p>4.1 Check location and position of reinforcement, and of fixing ties to reinforcement for accuracy.</p> <p>4.2 Check depth of coverage, clearance, spacing and overlap of reinforcement material in accordance with engineering drawings and job specification.</p>
5. Clean up after placing and fixing reinforcement materials.	<p>5.1 Clear work area and dispose of, re-use or recycle materials in accordance with legislation, regulations, codes of practice and task requirements.</p> <p>5.2 Clean, check, maintain and store plant, tools and equipment in accordance with manufacturers' specifications and workplace requirements.</p>

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

- oral communication skills to:
 - use questioning to identify and confirm requirements
 - discuss cause of problems
 - report work site hazards, including faults in tools, equipment and materials
 - provide feedback.

Unit Mapping Information

Supersedes and is equivalent to CPCCSF2004A Place and fix reinforcement materials.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCSF2004 Place and fix reinforcement materials

Modification History

Release 1.

Supersedes and equivalent to CPCCSF2004A Place and fix reinforcement materials.

The unit of competency was updated to the Standards for Training Packages 2012.

This version first released with CPC Construction, Plumbing and Services Training Package Version 4.0.

Performance Evidence

To demonstrate competency in this unit, a person must place and fix reinforcement materials on a minimum of three different jobs, each including deformed bars, rods and mesh sheets.

In doing this, the person must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- jurisdictional work health and safety (WHS) and environmental legislation and regulations relating to placing and fixing reinforcement materials, including:
 - job safety analyses (JSAs)
 - safe work method statements (SWMSs)
 - safety data sheets (SDSs)
 - safety manuals and instructions for plant, tools and equipment
 - signage and barricades
 - personal protective equipment (PPE)
 - environmental and work site safety plans
- requirements of Australian Standards and the National Construction Code (NCC) relating to placing and fixing reinforcement materials
- workplace requirements for all aspects of placing and fixing reinforcement materials, including interpreting work orders and reporting problems
- reinforcement materials, including:
 - bar chairs
 - deformed bars
 - ligatures
 - mesh sheets of deformed bars
 - mesh sheets of plain bars
 - plain rods

- spacer/spreader assemblies
- wire ties
- uses, care and limitations of tools and equipment for placing and fixing reinforcement materials, including:
 - bolt cutters
 - measuring tapes and rules
 - mesh guillotines
 - reinforcement benders
 - tie wire reels
 - wire nippers
- types, characteristics, uses and limitations of tools, equipment and materials required for placing and fixing reinforcement materials, including:
 - safe operating procedures
 - operational, maintenance and basic diagnostic procedures
 - workplace and equipment safety requirements
- techniques for placing and fixing reinforcement materials
- quality requirements relevant to placing and fixing reinforcement materials
- processes, materials and equipment for placing and fixing reinforcement materials
- types and applications of reinforcement materials
- requirements for cleaning up work area and tools, materials storage and environmentally friendly waste management.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment. Tasks are to be performed to the level of proficiency and within the time limits expected in a workplace.

Assessors are responsible for ensuring that the person demonstrating competency has access to:

- work sites and specifications for placing and fixing reinforcement materials
- appropriate documents, materials, tools, equipment and PPE currently used in industry
- requirements of appropriate sections of legislation and regulations
- relevant workplace policies and procedures.

CPCCSF3001 Apply reinforcement schedule

Modification History

Release 1.

Supersedes and equivalent to CPCCSF3001A Apply reinforcement schedule.

The unit of competency was updated to the Standards for Training Packages 2012.

This version first released with CPC Construction, Plumbing and Services Training Package Version 4.0.

Application

This unit of competency specifies the skills and knowledge required to interpret a reinforcement schedule to confirm and locate materials to support construction activities.

It includes:

- planning and preparing for work
- reading and interpreting the schedule
- using the schedule to confirm and locate materials for construction use, and to provide information to others on site.

It applies to steelfixers, concreters and construction workers working as members of a team with at least a moderate degree of autonomy. They would be expected to complete routine activities without close supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1. Plan and prepare to apply	1.1 Review and clarify task involving application of reinforcement schedule.

reinforcement schedule.	<p>1.2 Identify elements of structure from project construction schedule and task drawings.</p> <p>1.3 Review work health and safety (WHS) requirements for the task in accordance with safety plans and policies.</p> <p>1.4 Review environmental requirements for the task in accordance with environmental plans and legislative requirements.</p>
2. Read and interpret reinforcement schedule.	<p>2.1 Confirm structural element to be constructed from site and structural detail drawings.</p> <p>2.2 Read reinforcement schedule to identify the appropriate reinforcement type for the structural element.</p> <p>2.3 Determine number of reinforcement pieces/sheets from structural detail drawings.</p> <p>2.4 Identify and report discrepancies in coding and numbering.</p>
3. Check contents of reinforcement material bundles.	<p>3.1 Check content of reinforcement material bundles for conformity to schedule and proposed structural element.</p> <p>3.2 Investigate any discrepancies between schedule and actual material quantities, and resolve or report to relevant personnel.</p> <p>3.3 Investigate any discrepancies between schedule and actual material shape, size or length and resolve or report to relevant personnel.</p> <p>3.4 Identify, segregate and report any cranked or bent items of reinforcement material.</p> <p>3.5 Mark schedule where content conforms to schedule and structural element requirements.</p>
4. Locate reinforcement for element construction.	<p>4.1 Mark and place reinforcement ready for transportation to element location.</p> <p>4.2 Arrange transport of reinforcement to structural location for placement and fixing.</p>
5. Communicate reinforcement schedule information.	<p>5.1 Communicate job sequencing schedule detail to steel fixers and team members to ensure efficient work practices.</p> <p>5.2 Record changes to job sequencing schedule in accordance with site requirements.</p> <p>5.3 Identify work completion procedures and notify relevant personnel when finished, in accordance with site requirements.</p>

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

- oral communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
 - follow instructions.

Unit Mapping Information

Supersedes and is equivalent to CPCCSF3001A Apply reinforcement schedule.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCCSF3001 Apply reinforcement schedule

Modification History

Release 1.

Supersedes and equivalent to CPCCSF3001A Apply reinforcement schedule.

The unit of competency was updated to the Standards for Training Packages 2012.

This version first released with CPC Construction, Plumbing and Services Training Package Version 4.0.

Performance Evidence

To demonstrate competency in this unit, a person must apply the reinforcement schedule in a minimum of two different construction sites.

In doing this, the person must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- jurisdictional work health and safety (WHS) and environmental legislation and regulations relating to applying reinforcement schedule, including:
 - job safety analyses (JSAs)
 - safe work method statements (SWMSs)
 - safety data sheets (SDSs)
 - safety manuals and instructions for plant, tools and equipment
 - signage and barricades
 - personal protective equipment (PPE)
 - environmental and work site safety plans
- requirements of Australian Standards and the National Construction Code (NCC) relating to applying reinforcement schedule
- workplace requirements for all aspects of applying reinforcement schedule including interpreting work orders and reporting problems
- interpretation of plans, drawings and specifications, including job specifications, format and contents of reinforcement schedules, and format and general content of typical construction schedules
- information in reinforcement schedules, including:
 - grade of steel reinforcing
 - length of material
 - location for material, size and shape of bars

- number of bars in a bundle
- shape of formed bars
- size of mesh
- surface markings
- type of steel bars, cranks and bends
- structural elements, including:
 - beams
 - columns
 - footings
 - slabs
 - walls
- general construction and steel-fixing terminology
- conventional symbols, markings and numbering systems used in reinforcement schedules
- reinforcement material types, appearance, standards, packaging and labelling arrangements
- quality requirements for reinforcement materials
- techniques for communicating detail to others, and to record details of work undertaken and completed.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment. Tasks are to be performed to the level of proficiency and within the time limits expected in a workplace.

Assessors are responsible for ensuring that the person demonstrating competency has access to:

- work sites and specifications for tasks involving application of reinforcement schedules
- appropriate documents, materials, tools, equipment and PPE currently used in industry
- requirements of appropriate sections of legislation and regulations
- relevant workplace policies and procedures.

CPCCSG3001 Design and lay out digital signs for production

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded equivalent CPCCSI2002A Lay out and design signage and CPCCSI3016A Produce digital signage using advanced software applications.

Application

This unit of competency specifies the outcomes required to design and lay out signs using industry-recognised design software and to prepare files to be print ready.

The unit supports sign manufacturers who design and modify signs according to client requirements and prepare artwork for a range of diverse outputs, which can include vehicles, posters, billboards and panels.

Sign designs can be simple or complex in nature according to the range of software functionality used and the nature and volume of elements used to design the sign.

No licensing, legislative, regulatory or certification requirements apply to this unit of competency at the time of endorsement

Pre-requisite Unit

Nil

Competency Field

Signs and graphics

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.

- | | | | |
|---|-------------------------|-----|---|
| 1 | Plan production job. | 1.1 | <i>Client requirements</i> and <i>visual design elements</i> are discussed, confirmed with client, and applied to planning. |
| | | 1.2 | Use of existing client artwork is identified, and scope and limitations of potential <i>file formats</i> are discussed. |
| | | 1.3 | Style parameters to be applied to sign are discussed and confirmed with client. |
| | | 1.4 | Design timeframe requirements are established, confirmed with client, and applied to planning. |
| 2 | Prepare to design sign. | 2.1 | Industry-recognised software appropriate to sign design is selected and set up according to job requirements. |
| | | 2.2 | New file is created and <i>document parameters</i> are set up appropriate to final sign specifications. |
| | | 2.3 | Existing digital artwork is imported where required, checked for compatibility with software and output devices, and prepared as appropriate to the task. |
| | | 2.4 | Image databases are researched and images that meet design brief and stock images are selected and imported in appropriate file formats. |
| | | 2.5 | Design templates are selected and imported in appropriate file formats. |
| 3 | Design sign. | 3.1 | Digital elements of the sign are created according to client requirements. |
| | | 3.2 | Elements are arranged in layers to allow for effective selection and re-arrangement. |
| | | 3.3 | Text blocks are created as required, and text is entered, |

- formatted and flowed into document using software functionality and in line with client requirements.
- 3.4 Graphic elements of sign are selected, positioned and edited using relevant software functionality in line with client requirements.
- 4 Produce vector objects and shapes.
- 4.1 Vector objects and shapes are produced with required attributes using relevant software functionality, and manipulated until graphic framework is finalised.
- 4.2 Lines and curves are adjusted and edited to fit design specifications.
- 4.3 Objects are painted and transposed and strokes and effects are scaled according to the design brief.
- 4.4 Colour and appearance attributes are selected and copied according to client brief.
- 4.5 Gradients, fills and patterns are used to paint and blend according to client requirements.
- 5 Edit raster images.
- 5.1 Images are retouched and colour and tone corrections are adjusted to meet client requirements.
- 5.2 **Contouring technique** is applied to produce the best result, depending on the image.
- 5.3 Edited image is saved in appropriate format to allow for importing into other applications and to conform to job specifications.
- 6 Obtain client approval for design.
- 6.1 Draft sign layout is produced and working file saved in appropriate file format.
- 6.2 Compressed file is sent to client in appropriate file format for approval.
- 6.3 Client feedback is obtained for sign design and sign is reviewed and modified where required according to client feedback.
- 6.4 Client sign-off is obtained on final version sign design

and sign.

- | | | | |
|---|----------------------------------|-----|---|
| 7 | Finalise sign design and layout. | 7.1 | Approved design layout is produced in appropriate file format and checked to be free of errors. |
| | | 7.2 | File resolution is adjusted to suit relevant print outputs. |
| | | 7.3 | Print ready design layout is produced, saved in appropriate file formats, and stored according to workplace procedures and client requirements. |

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

Skill	Performance feature
Learning skills to:	<ul style="list-style-type: none"> • independently search databases and internet to source images appropriate to sign designs • develop and trial own approaches to designing signs when templates are not available.
Numeracy skills to:	<ul style="list-style-type: none"> • use and apply software tools to set sign dimensions to the layout of designs.
Oral communication skills to:	<ul style="list-style-type: none"> • check and confirm requirements with client and other relevant personnel.
Reading skills to:	<ul style="list-style-type: none"> • interpret written client feedback on draft designs • use a range of strategies to proof text in signs.
Writing skills to:	<ul style="list-style-type: none"> • liaise with client, seeking feedback on design layout.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Client requirements must include:

- dimensions of sign
- intended site for sign installation
- purpose of sign
- type of preferred media in which to produce sign.

Visual design elements must include:

- colour
- graphics requirements
- text requirements.

File formats must include:

- drawing exchange format (DXF)
- encapsulated post script (EPS)
- portable document format (PDF)
- tagged image file format (TIFF).

Document parameters must include:

- colour space
- size of sign design and file.

Contouring techniques must include two or more of the following:

- layer masks
- lasso tool
- paths
- quick mask.

Unit Mapping Information

CPCCSI2002A Lay out and design signage

CPCCSI3016A Produce digital signage using advanced software applications

Assessment Requirements for CPCCSG3001 Design and lay out digital signs for production

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded equivalent CPCCSI2002A Lay out and design signage and CPCCSI3016A Produce digital signage using advanced software applications.

Performance Evidence

A person who demonstrates competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must design and lay out three different signs each consisting of letters and graphics and a minimum of three different colours, according to the following specifications:

- one sign must be for a standard vehicle door, and use a logo, at least three lines of text, and a standard font
- one sign must manipulate the logo and lettering designed for the standard vehicle door, and lay out the design for a light box panel in landscape measuring minimum 1200 x 2400 mm
- one sign must be for a minimum 1200 x 2400 mm panel in portrait, and use three text blocks each containing at least three lines of text and at least two different images sourced from an image database.

In doing the above work, the person must:

- apply design theory to each sign, using colour effectively to create signs with visual impact
- apply design and layout principles suited to the specified output giving consideration to how each sign will be displayed and the conditions under which each sign will be viewed
- use industry-recognised software to produce the sign design and lay out a print ready file.

Knowledge Evidence

A person demonstrating competency in this unit must demonstrate knowledge of:

- principles and application of design and layout theory relevant to sign manufacture, including:

- balance
- colour and colour harmony
- contrast
- principles and application of letter legibility relevant to sign manufacture, including:
 - format of text
 - letter spacing
 - letter styles
 - type of font used
- techniques for conveying image concept and meaning of the design through the choice and features of typography
- use of dimensions, symbols, abbreviations and key features of designs for signs
- uses and functionality of industry-recognised software for designing and laying out signs
- types, characteristics, uses and limitations of vector and raster files when designing signs
- Australian and international standards relevant to the design of signs used in public spaces, including:
 - AS 1319 Safety signs for the occupational environment
- terminology used in the design and layout of signs.

Assessment Conditions

Suitable assessment of performance requires:

- equipment:
 - computer with proprietary design software appropriate to the design and layout of signs
- materials:
 - image database containing a range of stock images
- specifications:
 - client brief detailing specifications for sign
 - AS 1319 Safety signs for the occupational environment
- relationship with client:
 - check and confirm job requirements
- relationships with team members:
 - work may be undertaken alone or in a team
- timeframe:
 - according to job requirements.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

CPCCSG3002 Produce and apply vinyl signs

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded non-equivalent CPCCSI3001A Produce vinyl signage and CPCCSI3004A Apply advanced vinyl applications.

Application

This unit of competency specifies the outcomes required to produce simple and complex vinyl signs using relevant software, vinyl plotters and weeding tools.

The unit supports sign manufacturers who produce vinyl signs according to client requirements, for attachment to a range of surfaces, including vehicles, metals and glass.

Vinyl signs can be used for advertising, promotional, branding or directional purposes.

No licensing, legislative, regulatory or certification requirements apply to this unit of competency at the time of endorsement.

Pre-requisite Unit

Nil

Competency Field

Signs and graphics

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.

- | | | |
|---|---|--|
| 1 | Plan and prepare to produce vinyl sign. | <p>1.1 Job requirements are identified from drawings, specifications and client brief, confirmed, and applied to planning and preparation.</p> <p>1.2 <i>Health and safety requirements</i> are identified and applied to planning.</p> <p>1.3 <i>Tools, equipment and materials</i> are selected and prepared to carry out tasks consistent with job requirements, and faults are identified and reported.</p> <p>1.4 Correct vinyl type is selected according to planned application and durability requirements.</p> <p>1.5 Sign is set out to scale using industry-recognised software and prepared for production using vinyl plotter.</p> |
| 2 | Operate software and vinyl plotter. | <p>2.1 File is checked for correct layout according to job requirements, and modifications are made before sending file to plotter.</p> <p>2.2 Media is accurately loaded on to plotter and tracking is checked for accuracy.</p> <p>2.3 <i>Vinyl</i> plotter cutting pressure and speed settings are adjusted to suit media.</p> <p>2.4 Cut area dimensions are determined and set to suit media.</p> <p>2.5 File is configured and sent to plotter and finished output is carefully removed from plotter.</p> <p>2.6 Vinyl sign elements are carefully removed using weeding tools and sign is checked to be free of defects.</p> <p>2.7 Finished vinyl sign is cut, ensuring minimum waste and no damage to vinyl.</p> |

- | | | | |
|---|------------------------------|-----|---|
| 3 | Apply vinyl sign to surface. | 3.1 | Surface is cleared of previously applied adhesives minimising risk of damage to surface, cleaned and dried ready for vinyl application. |
| | | 3.2 | Application tape is applied to vinyl sign, squeegeed evenly and firmly to sign, and excess tape is trimmed off. |
| | | 3.3 | Required heights and levels are identified from job requirements and applied to surface and vinyl sign using levelling tools. |
| | | 3.4 | Vinyl sign is positioned and applied to prepared surface using tools and techniques and according to job requirements. |
| | | 3.5 | Application tape is removed, sign is checked, and any defects in application are rectified. |
| 4 | Clean up. | 4.1 | Sign and surrounding surface area are cleaned and waste materials removed according to statutory and regulatory authority requirements. |
| | | 4.2 | Tools and equipment, including personal protective equipment (PPE), are cleaned, maintained and stored according to workplace requirements. |

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

Assessment Requirements for CPCCSG3002 Produce and apply vinyl signs

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded non-equivalent CPCCSI3001A Produce vinyl signage and CPCCSI3004A Apply advanced vinyl applications.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must produce three vinyl signs using a vinyl plotter according to the following specifications:

- one sign containing only lettering in a single colour
- one sign containing lettering and a simple graphic, consisting of at least three different colours.

Each sign must be applied to a different surface selected from the following:

- glass
- metal
- plastic
- vehicle body.

In producing each sign, the person must ensure no damage to the vinyl during the weeding or cutting processes. In the event of damage caused, the person must demonstrate correct procedures to rectify or reproduce the vinyl sign.

In applying the sign to each surface, the person must:

- correctly use materials to prepare the surface
- apply the signs at the specified heights and levels
- check for damage to the vinyl or surface that could have occurred during the application process and rectify damage.

Knowledge Evidence

A person demonstrating competency in this unit must demonstrate knowledge of:

- attributes, characteristics and composition of different vinyl types used to produce signs
- functionality and operation of vinyl plotters used to produce vinyl signs, including:
 - blade offset setting
 - blade types
 - cleaning and maintenance requirements
 - cutting pressure and speeds appropriate to the task
 - test cut requirements
 - vinyl tracking characteristics
- functions and limitations of relevant graphic design software used in producing vinyl signs
- impact of different temperatures on vinyl application
- legislation, codes and standards relevant to the specific production work in performance evidence
- principles of vinyl cutting
- terminology used in signs.

Assessment Conditions

Suitable assessment of performance requires:

- equipment:
 - computer with proprietary software appropriate to producing vinyl signs
 - selection, correct fitting, and use of personal protective equipment (PPE) relevant to preparing surface
 - tools and equipment as listed in the range of conditions
- materials:
 - as listed in the range of conditions
- specifications:
 - client briefs, drawings and instructions
- relationship with client:
 - check and confirm requirements
- relationships with team members:
 - work may be conducted alone or with others
- timeframe:
 - according to job requirements.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

CPCCSG3003 Colour manage signs

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded non-equivalent CPCCSI2001A Use colour for signage.

Application

This unit of competency specifies the outcomes required to assess and apply colour consistently across a range of visual media used to produce signs. It requires the application of colour theory and an ability to use industry-recognised software, hardware and colour matching systems for a range of output devices.

The unit supports sign manufacturers working with different media where the accuracy and consistency of colour are critical to the quality of the final product.

No licensing, legislative, regulatory or certification requirements apply to this unit of competency at the time of endorsement.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to

- essential outcomes. demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.
- 1 Plan and prepare to manage colour.
 - 1.1 **Job requirements** are identified from drawings, specifications, instructions and client briefs, confirmed, and applied to planning and preparation.
 - 1.2 Colour matching system appropriate to the task is selected.
 - 1.3 **Digital devices** used in production of signs are identified and calibrated for colour accuracy and consistency using industry-recognised calibration software and techniques, and faults are identified and rectified or reported to relevant personnel before starting work.
 - 1.4 Colour profile appropriate to the task is identified and set up in industry-recognised software.
 - 1.5 Digital image is imported into software and converted to correct colour profile as necessary.
 - 2 Apply and modify colour.
 - 2.1 Colour legibility is assessed against job requirements, and levels of contrast are adjusted and applied to sign design.
 - 2.2 Colour scheme is determined and principles of colour harmony are applied to sign according to client requirements.
 - 2.3 Test prints are produced and checked against job requirements.
 - 2.4 Sign is colour corrected as required using software tools to ensure consistent application of colour.
 - 3 Maintain colour management systems.
 - 3.1 Colour management systems are routinely checked for accuracy and updated when necessary.
 - 3.2 Digital devices used in sign production are routinely checked and recalibrated when necessary.

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

Skill	Performance feature
Learning skills to:	<ul style="list-style-type: none">consider and respond to feedback relating to achievement of client requirements and colour consistency in signs.
Numeracy skills to:	<ul style="list-style-type: none">recognise differences in and apply numerical values of colour to digital images.
Oral communication skills to:	<ul style="list-style-type: none">confirm job requirements and liaise with others on colour matching processes and results.
Writing skills to:	<ul style="list-style-type: none">report faults in software or output devices to relevant personnel using appropriate documentation and industry-recognised terminology.

Range of Conditions

Assessment Requirements for CPCCSG3003 Colour manage signs

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded non-equivalent CPCCSI2001A Use colour for signage.

Performance Evidence

A person who demonstrates competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must accurately colour match three different digital signs using each of the following devices in the process:

- computer monitor
- digital press
- printer
- proofer
- scanner.

A different colour matching system should be used on each of the three signs, selected from:

- cyan, magenta, yellow and black (CMYK)
- pantone matching system (PMS)
- red, green and blue (RGB).

In doing the above work, the person must:

- accurately calibrate devices to be used in sign production workflow
- apply a colour matching system according to job requirements
- adjust colour and contrast to ensure legibility as appropriate to the task
- check and confirm colour consistency is achieved across each output device and rectify any fault in colour matching.

The person must then select three different colours from one of the digital signs and produce a colour match in paint for each colour.

Knowledge Evidence

A person demonstrating competency in this unit must demonstrate knowledge of:

- uses, applications and limitations of a range of colour matching systems used in the manufacture of signs, including:
 - black and white
 - CMYK
 - grey scale
 - PMS
 - RGB
- functionality and limitations of software used to apply and manage colour in the manufacture of signs
- principles of colour legibility and the use of contrast
- principles and application of colour harmony, including:
 - analogous
 - complementary
 - monochromatic
 - split complementary
- uses, principles and applications of colour theory in sign manufacture.

Assessment Conditions

Suitable assessment of performance requires:

- equipment:
 - computer with industry-recognised proprietary software appropriate to sign design, including calibration software
- materials:
 - appropriate to the digital output
- contingencies:
 - inconsistent colour reproduction across different output devices
 - recalibration of digital devices
- specifications:
 - client brief detailing job specifications
- relationship with client:
 - contact sufficient to confirm or clarify job requirements
- relationships with team members:
 - work may be undertaken with others
- timeframe:
 - according to job requirements.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

CPCCSG3004 Print digital signs

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded non-equivalent CPCCSI2004A Produce digital signage and CPCCSI3016A Produce digital signage using advanced software applications.

Application

This unit of competency specifies the outcomes required to produce finished signs from print ready digital files, using printers and their associated software. Signs can be printed on to a range of substrates, including paper, vinyl, glass, fabric and aluminium composite, using a range of printing technology and equipment. They may also be laminated for protection.

The unit supports sign manufacturers using industry-recognised software and printing equipment to produce signs that are displayed for commercial, advertising, informative and promotional purposes.

Digitally printed signs can be used to produce banners, illuminated signs, billboards, panels and vehicle graphics.

No licensing, legislative, regulatory or certification requirements apply to this unit of competency at the time of endorsement.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.

1	Plan and prepare work.	1.1	Job requirements are identified from client briefs, existing file specifications and workplace instructions, confirmed, and applied to planning and preparation.
		1.2	Output devices suited to the task are identified and printing format is selected and confirmed with client.
		1.3	Workflow roles and responsibilities, sequence of tasks and time requirements are confirmed and applied to planning.
		1.4	Printing software appropriate to the task is selected and set up according to job requirements.
		1.5	<i>Health and safety requirements</i> are identified and applied to planning.
2	Set up printer.	2.1	Print heads are checked for serviceability, monitored, and adjusted or serviced when required.
		2.2	Print media is selected appropriate to type of digital printing required and loaded into printer according to manufacturer specifications.
		2.3	Correct profile for the media is selected to meet job requirements.
		2.4	Feed and bi-directional calibration are adjusted to suit given media.
3	Produce printed	3.1	Print ready digital file is checked for correct output profiles and adjustments are made as required to suit

- sign. output device and media.
- 3.2 Correct colour profiles are applied to file to accurately reproduce colours.
 - 3.3 Image resolution is checked and confirmed as appropriate to output specifications.
 - 3.4 Bleeds, printer marks and contour cuts are applied.
 - 3.5 Digital file is sent to be ripped as required.
 - 3.6 Test prints are printed, quality checked against job requirements, and modifications are made to files and output devices as required to improve print quality.
 - 3.7 Printed sign is checked for quality and client requirements and printed in quantities and according to specifications.
- 4 Laminate printed sign.
- 4.1 Laminator and laminate are selected according to type of printed media and job requirements and are prepared for use.
 - 4.2 Laminate is loaded into laminator, machine controls are adjusted, and laminate is applied to printed media to manufacturer specifications.
 - 4.3 Laminated sign is checked for quality and client requirements, defects are identified and rectified or sign is reprinted and laminated until client requirements are met.
 - 4.4 Laminated sign is stored safely.
- 5 Clean up.
- 5.1 Work area is cleaned and waste materials sorted and removed according to regulatory authority requirements.
 - 5.2 Equipment and printer components are checked and routine maintenance is undertaken, or arranged with external provider as required.

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

Skill	Performance feature
Numeracy skills to:	<ul style="list-style-type: none">• set specifications to printing profiles and settings.

Assessment Requirements for CPCCSG3004 Print digital signs

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded non-equivalent CPCCSI2004A Produce digital signage and CPCCSI3016A Produce digital signage using advanced software applications.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must print three different signs from digital files on each of the following media:

- aluminium composite
- paper
- vinyl.

At least one sign must be produced using a flatbed printer and one sign using a roll to roll digital printer.

Laminate one of the finished signs, selecting laminate for the printed substrate according to type of printed media and job requirements and safely and effectively undertaking laminating processes.

In doing the above work, the person must:

- handle and use uncompressed file formats correctly in the digital printing process
- apply digital colour management principles when using software and output media
- correctly handle media used in the digital printing process
- select and set up appropriate printers for the task and conduct routine maintenance appropriate to the printer
- identify printing and laminating defects and rectify faults to ensure job requirements are met
- operate raster image processor (RIP) software in the printing process.

Knowledge Evidence

A person demonstrating competency in this unit must demonstrate knowledge of:

- characteristics of different types of digital printing output devices, including:
 - flatbed printers
 - roll to roll printers
 - ultraviolet (UV) printers
- types and characteristics of various digital printing products
- principles of colour theory and their application in printing digital signs
- range and application of different laminates
- techniques and process for laminating signs
- safety data sheets (SDS) relevant to the use of printing tools and equipment
- procedures for routine maintenance and cleaning of printers
- statutory and regulatory authority requirements, particularly those relating to:
 - removal of waste products
 - storage of chemicals
- terminology and use of abbreviations in the signs and graphics industry
- use and application of uncompressed file formats, including:
 - encapsulated post script (EPS)
 - portable document format (PDF)
 - RAW file
 - tagged image file format (TIFF).

Assessment Conditions

Suitable assessment of performance requires:

- equipment:
 - laminating equipment appropriate to the task
 - printing equipment appropriate to the task
- materials:
 - electronic files prepared for printing
 - laminating film
 - printing media specified in performance evidence
- specifications:
 - job requirements
 - manufacturer specifications
- relationships with team members:
 - work may be conducted alone and in teams
- timeframe:
 - according to job requirements.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

CPCCSG3005 Engrave signs

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded non-equivalent CPCCSI3005A Use engraving systems.

Application

This unit of competency specifies the outcomes required to engrave signs using specialist rotary engravers. It covers setting up and initialising computer software to interact with the engraving system, preparing tools and materials for engraving, and operating high speed equipment to produce detailed sign artwork that meets client requirements.

The unit supports sign manufacturers who produce fine, detailed markings on various materials, including metal and non-metal.

No licensing, legislative, regulatory or certification requirements apply to this unit of competency at the time of endorsement.

Assessment Requirements for CPCCSG3005 Engrave signs

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded non-equivalent CPCCSI3005A Use engraving systems.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must engrave three signs each containing four lines of text, with a border and a centred graphic or logo as follows.

- at least one sign must be engraved on one of the following metal surfaces:
 - aluminium
 - brass
 - stainless steel
- at least one sign must be engraved on one of the following non-metal surfaces:
 - acrylic
 - engraving laminate.

In doing the above work, the person must:

- select and prepare cutter tools and equipment for the task
- set up engraving software with accurate parameters for the task, including speed, depth and number of passes appropriate to the task
- engrave and finish the sign to client requirements using cleaning and polishing materials.

Knowledge Evidence

A person demonstrating competency in this unit must demonstrate knowledge of:

- application of the following typography elements in sign-writing and engraving, including:
 - font types
 - principles of layout
 - size and spacing
- engraving processes and their use of:

- cutter types
- engraving depths
- engraving materials and their uses
- engraving software
- guillotine systems
- types, uses and limitations of engraving systems
- manufacturer specifications for the safe use and maintenance of engravers and cutters
- processes to check and ensure correct grammar, spelling and punctuation and their application in engraving signs
- safe operating procedures for the use of high speed cutting tools and equipment used in engraving
- safety data sheets (SDS) relevant to the use of engraving tools.

Assessment Conditions

Suitable assessment of performance requires:

- equipment:
 - cutting tools
 - engraving system
 - industry-recognised engraving software
 - laser engravers
 - personal protective equipment, including:
 - chemical proof gloves
 - dustcoats
 - glasses
 - hearing protection
 - rotary engravers
- materials:
 - acrylic
 - aluminium
 - brass
 - cleaning chemicals, including thinners and methylated spirits
 - cutting lubricants
 - engraving laminate
 - glass
 - paints to fill engraved letters or graphics
 - stainless steel
- contingencies:
 - faults in hardware and software
 - need to change cutter tools to rectify faults or resharpen

- specifications:
 - client requirements
 - SDS
- physical conditions:
 - workshop with workspace and lighting suitable for using engraving systems and producing engraved signs
- timeframe:
 - according to job requirements.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

CPCCSG3006 Apply gilding to signs

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Elements and Performance Criteria '3.2 Adhesive is mixed with colour according to job requirements and applied to prepared surface.' moved to 4.1 as an additional subpoint.

Element and Performance Criteria 4.2 corrected to read 'Size is applied carefully to surface and gilding size is checked to be within design.'

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 2.0.

Revised unit of competency. Replaces superseded equivalent CPCCSI3006A Apply gilding to signage.

Application

This unit of competency specifies the outcomes required to prepare background surfaces, and mask, draft and apply gilding to lettering, shapes, heraldic and other decorative forms of signs.

The unit supports sign manufacturers who apply traditional sign-writing techniques and materials to apply gilding to signs.

No licensing, legislative, regulatory or certification requirements apply to this unit of competency at the time of endorsement.

Pre-requisite Unit

Nil

Competency Field

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.

- | | | | |
|---|----------------------------------|-----|---|
| 1 | Plan and prepare work. | 1.1 | Job requirements and timeframes are identified from work instructions and client briefs, confirmed, and applied to planning and preparation. |
| | | 1.2 | Health and safety requirements are identified and applied to planning. |
| | | 1.3 | Tools, equipment and materials are selected to carry out tasks consistent with job requirements. |
| | | 1.4 | Sign surface is prepared to receive gilding. |
| 2 | Transfer sign design to surface. | 2.1 | Draft design is set out to scale using setting out techniques applicable to sign design. |
| | | 2.2 | Draft design is drawn to scale and transferred to prepared surface using direct and indirect layout methods. |
| | | 2.3 | Decorative process is applied and defects in application are identified and rectified in line with job requirements. |
| 3 | Apply water gilding to sign. | 3.1 | Gilding material is cut to required size and shape as specified. |
| | | 3.2 | Gilding material is applied to surface, faults in application are identified and rectified, and excess gilding material is trimmed and removed. |
| | | 3.3 | Surface area and sign are cleaned according to job requirements. |
| 4 | Apply surface gilding to sign. | 4.1 | Adhesive is mixed with colour according to job requirements and applied to prepared surface |

- | | | |
|---|-----------|--|
| | 4.2 | Size is applied carefully to surface and gilding size is checked to be within design. |
| | 4.3 | Gilding material is applied to size using rubbing techniques, ensuring no gaps and that design shape is fully covered. |
| | 4.4 | Applied gilding leaf is burnished to ensure loose particles are removed. |
| | 4.5 | Design shape is trimmed carefully where applicable, and cleaning procedure and materials are applied to clean the gilded and surrounding surface. |
| 5 | Clean up. | |
| | 5.1 | Finished gilded sign and surrounding surface area are cleaned and waste materials removed according to workplace, statutory and regulatory authority requirements. |
| | 5.2 | Tools and equipment, including personal protective equipment (PPE), are cleaned, maintained and stored according to workplace requirements. |

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

Skill	Performance feature
Learning skills to:	<ul style="list-style-type: none"> • transfer key principles and techniques of letter spacing and writing to new gilded sign designs.
Numeracy skills to:	<ul style="list-style-type: none"> • perform measurements and calculations in the process of setting out to scale and transferring design to required location.
Oral communication skills to:	<ul style="list-style-type: none"> • use questioning to identify and confirm requirements, share information, listen and understand.
Reading skills to:	<ul style="list-style-type: none"> • interpret a range of familiar workplace documentation received in the course of applying gilding to signs, including design

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

Skill	Performance feature
	specifications, hand drawings, manufacturer specifications and work instructions.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

- Health and safety requirements*** must include:
- selection, correct fitting, and use of PPE prescribed under legislation, regulations and workplace policies and practices
 - emergency procedures, including:
 - evacuation
 - first aid
 - location and use of firefighting equipment
 - hazard identification and risk control procedures
 - safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - lighting
 - use of machines
 - use of tools and equipment
 - workplace environmental requirements.

- Tools and equipment*** must include at least two of the following:
- cotton wool or velvet
 - gelatine
 - gilder's pad
 - gilding knife
 - gilding mop
 - gilding mug
 - gilding tip
 - heating pots
 - stove.

Assessment Requirements for CPCCSG3006 Apply gilding to signs

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Elements and Performance Criteria '3.2 Adhesive is mixed with colour according to job requirements and applied to prepared surface.' moved to 4.1 as an additional subpoint.

Element and Performance Criteria 4.2 corrected to read 'Size is applied carefully to surface and gilding size is checked to be within design.'

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 2.0.

Revised unit of competency. Replaces superseded equivalent CPCCSI3006A Apply gilding to signage.

Performance Evidence

A person who demonstrates competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must produce one word of gilded lettering on two different sign surfaces selected from the following:

- glass
- metal
- stained timber.

In doing the above work, the person must:

- prepare the sign surface using selected materials and processes
- lay out sign design accurately to scale on sign surface and apply a decorative technique to the lettering
- clean finished sign and surface area.

Knowledge Evidence

A person demonstrating competency in this unit must demonstrate knowledge of:

- theory of letter spacing when laying out signs
- methods and application of design transfer
- range and use of gilding materials and their characteristics, including:

- enamel paints or suitable paints for glass
- loose leaf metals, such as:
 - gold
 - silver
 - aluminium
 - Dutch metal
 - copper
 - variegated leaf
 - water-based size
- techniques for gilding and producing gilded surfaces, including:
 - finishing techniques
 - handling materials relevant to gilding operations
- methods for identifying dimensions, symbols, abbreviations and key features of signs from sign designs and drawings
- purpose and application of the following when applying gilding to signs:
 - safety data sheets (SDS)
 - safe work method statements (SWMS)
- techniques for measuring and setting out layout of signs to be gilded
- preparation techniques for surfaces used in gilding signs, including:
 - glass
 - metal
 - stained timber
- workplace, statutory and regulatory authority requirements relevant to handling materials used in gilding signs, including:
 - removal of waste products
 - storage of chemicals and materials
- terminology and use of abbreviations in the signs and graphics industry
- traditional and contemporary font styles
- types and characteristics of tools and equipment used to apply water gilding.

Assessment Conditions

Suitable assessment of performance requires:

- equipment and tools:
 - as listed in the range of conditions
- materials:
 - gilding materials
 - sign surface specified in performance evidence
 - paints suitable for gilding signs
- specifications:
 - work instructions

- SDS
- timeframe:
 - according to job requirements.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

CPCCSG3007 Paint lines and scrolls

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded equivalent CPCCSI3007A Apply lines and scrolls.

Application

This unit of competency specifies the outcomes required to paint various forms of line and scroll work on specified and prepared surfaces.

Painted line and scroll work is a decorative art form applied to a variety of surfaces, including vehicle bodies, horse-drawn coaches, boats and glass gilding. Lines are painted to provide borders and to frame the sign. Application methods can include the use of freehand brushwork or rollers and spray techniques using masks and template guides.

The unit supports sign manufacturers using traditional paint and brush techniques.

No licensing, legislative, regulatory, or certification requirements apply to this unit of competency at the time of endorsement.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.

1	Plan and prepare work.	1.1	Job requirements are identified from drawings, specifications, and client or workplace instructions, confirmed, and applied to planning and preparation.
		1.2	<i>Health and safety requirements</i> are identified and applied to planning.
		1.3	Colour selection is determined consistent with job requirements and recorded for future reference.
		1.4	<i>Tools, equipment</i> and materials are selected to carry out tasks consistent with job requirements.
		1.5	Surfaces are identified and prepared according to planned material application and line work or scroll work application.
2	Set out design layout.	2.1	Shape and form of lines and scrolls are determined from copy.
		2.2	Line and scroll layout is set out using template guide where required.
		2.3	Errors in set out are identified and rectified before applying paint.
3	Apply painted lines and scrolls.	3.1	<i>Paint</i> appropriate to the surface is applied using relevant technique according to layout and job requirements.
		3.2	Line work and scroll work are painted accurately to setout and specified colours, and defects in application or technique are identified and rectified according to job requirements.
4	Clean up.	4.1	Worked surface and surrounding surface area are cleaned

and waste materials removed according to workplace, statutory and regulatory authority requirements.

- 4.2 Tools and equipment, including personal protective equipment, are cleaned, maintained and stored according to workplace requirements.

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

Skill	Performance feature
Learning skills to:	<ul style="list-style-type: none"> • transfer key principles and techniques of painting lines and scrolls on different surfaces.
Numeracy skills to:	<ul style="list-style-type: none"> • transfer measurements from drawings to paint lines or scroll work.
Oral communication skills to:	<ul style="list-style-type: none"> • check and confirm requirements with clients and other relevant personnel.
Reading skills to:	<ul style="list-style-type: none"> • read and interpret a range of workplace documentation, including drawings and specifications.
Writing skills to:	<ul style="list-style-type: none"> • record colours used in painting lines and scrolls on prepared surfaces.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

- Health and safety requirements*** must
- selection, correct fitting, and use of personal protective equipment (PPE) prescribed under legislation, regulations and

- include:
- workplace policies and practices
 - emergency procedures, including:
 - evacuation
 - first aid
 - location and use of firefighting equipment
 - hazard identification and risk control procedures
 - safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - traffic control
 - work site visitors and the public
 - working at heights
 - working in proximity to others
 - use of tools and equipment
 - workplace environmental requirements.

- Tools and equipment*** must include artist brushes and at least three of the following:
- dagger liners
 - drafting equipment
 - guides
 - ladders
 - lining fitches
 - mahl sticks
 - measuring tapes and rules
 - planks
 - pots
 - quill liners
 - scaffolding
 - sign cutters
 - stirrers
 - straight edges
 - templates.

- Paint*** type must include one or more of the following:
- acrylic
 - enamel
 - water-based.

Assessment Requirements for CPCCSG3007 Paint lines and scrolls

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded equivalent CPCCSI3007A Apply lines and scrolls.

Performance Evidence

A person who demonstrates competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must paint three lines on a rendered brick wall, each line at least 1.5 metres in length and of the following thicknesses:

- 12 mm
- 25 mm
- 50 mm.

The person must also paint three different scrolls, each measuring at least 300 x 400 mm using three different colours. Each scroll must be painted onto a different surface selected from the following:

- fibreglass
- glass
- metal
- timber.

At least one scroll must involve the use of a template guide.

In producing the above work, the person must demonstrate each of the following line and scroll techniques:

- arrowed
- bull nosed
- curled
- square end
- tapered.

-

Knowledge Evidence

A person demonstrating competency in this unit must demonstrate knowledge of:

- Australian standards relevant to painting lines and scrolls:
 - AS 1319 Safety signs for the occupational environment
 - AS 2311 General workmanship – painting
 - AS 2700 Colour standards for general purposes
- types, uses and maintenance requirements for brushes used in line and scroll work
- principles and techniques of colour selection in the design of line and scroll work
- purpose and application of the following when painting lines and scrolls:
 - paint, tools and equipment used when creating line and scroll work specified by client
 - safety data sheets (SDS)
 - safe work method statements (SWMS)
- statutory and regulatory authority requirements, particularly those relating to:
 - removal of waste products
 - storage of chemicals and materials
- techniques and methods for:
 - measuring and calculating material quantities required for painting lines and scrolls on prepared surfaces
 - setting out line and scroll work
- use of symbols, dimensions and terminology relating to line and scroll work
- terminology and use of abbreviations in the signs and graphics industry
- types and uses of drawings and layouts used for line and scroll work on surfaces.

Assessment Conditions

Suitable assessment of performance requires:

- equipment and tools:
 - as listed in the range of conditions
- materials:
 - paint
 - surfaces:
 - fibreglass
 - glass
 - metal
 - timber
- relationship with client:
 - sufficient to check and confirm job requirements
- specifications:

- Australian standards specified in knowledge evidence
- drawings
- job specifications
- SDS
- SWMS
- timeframe:
 - according to job requirements.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

CPCCSG3008 Hand draw chalkboards and showcards

Modification History

Release 1.

This version first released with CPC Construction and Property Services Training Package Version 2.

Revised unit of competency. Replaces superseded equivalent CPCCSI3008A Write showcards and chalkboards.

Application

This unit of competency specifies the outcomes required to lay out and manually draw chalkboards and showcards for commercial signs.

The unit supports sign manufacturers who produce customised products for clients using traditional sign-writing techniques, materials and methods. Work is performed using a range of brushes, paints and chalk to produce hand drawn lettering and graphics.

No licensing, legislative, regulatory or certification requirements apply to this unit of competency at the time of endorsement.

Assessment Requirements for CPCCSG3008 Hand draw chalkboards and showcards

Modification History

Release 1.

This version first released with CPC Construction and Property Services Training Package Version 2.

Revised unit of competency. Replaces superseded equivalent CPCCSI3008A Write showcards and chalkboards.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must produce:

- one menu consisting of lettering and graphics on chalkboard
- one showcard using paints and brushes, drawn on cardboard.

In doing the above work, the person must:

- prepare each surface
- apply the principles and theory of laying out signs to ensure their legibility and visual impact
- select and use tools and materials to safely and efficiently meet the job requirements.

Knowledge Evidence

A person demonstrating competency in this unit must demonstrate knowledge of:

- surface compatibility with different paints and mediums and various methods for their application
- design principles and their application in hand drawing chalkboards and showcards, including:
 - construction of alphabets and choice of fonts
 - theory of letter spacing
 - principles and application of theories of laying out signs, including:
 - balance
 - colour
 - contrast
 - harmony

- letter styles
- space
- relevant Australian standards applicable to hand drawn signs, including:
 - AS 1319 Safety signs for the occupational environment
 - AS 2311 General workmanship – painting
 - AS 2700 Colour standards for general purposes
- colour selection techniques and principles relating to hand drawing chalkboards and showcards
- commonly used drawings and layouts for chalkboards and showcards
- purpose and application of the following when working with materials required to produce hand drawn chalkboards:
 - safety data sheets (SDS)
 - safe work method statements (SWMS)
- processes and techniques to measure and calculate material quantities required when hand drawing chalkboards and showcards
- measuring and setting out methods relevant to layout of hand drawn chalkboards and showcards
- statutory and regulatory authority requirements relating to the use and handling of materials used in drawing chalkboards and showcards, including:
 - removal of waste products
 - storage of chemicals and materials
- symbols, dimensions and terminology relating to chalkboards and showcards
- techniques for writing chalkboards and showcards
- types and characteristics of brushes and applicators used when producing hand drawn chalkboard and showcard signs
- types, use and compatibility of materials applied to chalkboards and showcards.

Assessment Conditions

Suitable assessment of performance requires:

- equipment and tools:
 - as listed in the range of conditions
- specifications:
 - Australian standards specified in knowledge evidence
 - drawings
 - SDS
 - SWMS
 - work instructions
- timeframe:
 - according to job requirements.

Assessor requirements

CPCCSG3009 Screen-print signs

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded equivalent CPCCSI3009A Screen-print signage.

Application

This unit of competency specifies the outcomes required to screen-print signs.

The unit supports sign-writers who print directly on to materials, including fabric and paper, using screen-printing tools and techniques.

No licensing, legislative, regulatory or certification requirements apply to this unit of competency at the time of endorsement.

Pre-requisite Unit

Nil

Competency Field

Signs and graphics

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.

- 1 Plan and prepare work.
 - 1.1 Job requirements are identified from drawings, workplace instructions and client briefs, confirmed, and applied to planning and preparation.
 - 1.2 Screen-printing *tools and equipment* are selected, checked for serviceability, and faults are rectified or reported before starting work.
 - 1.3 *Health and safety requirements* are identified according to specified tasks and workplace operations and applied to planning.
 - 1.4 Materials to be screen-printed are selected and prepared for printing.
 - 1.5 Number of screens required is calculated and confirmed, and then applied to planning.
 - 1.6 Ink colours are selected, tested to match specification, and prepared for application.

- 2 Produce screen-printed sign.
 - 2.1 Material for screen face is cut accurately to setout shape and design is reproduced to screen face.
 - 2.2 Stencils are prepared according to job requirements.
 - 2.3 Printing process is set up for operation with material and screen aligned to specification.
 - 2.4 Ink is applied and spread across screen, checked for even and consistent application, and reapplied as required.
 - 2.5 Screens are printed on to substrates to achieve accurate registration according to job specification.
 - 2.6 Screen-printed sign is checked for consistency and accuracy according to job requirements and defects are identified and rectified.

- 3 Clean up.
 - 3.1 Finished sign and surrounding surface area are cleaned and waste materials removed according to statutory and regulatory authority requirements.
 - 3.2 Tools and equipment, including personal protective

equipment (PPE), are cleaned, maintained and stored according to workplace requirements.

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

Skill	Performance feature
Learning skills to:	<ul style="list-style-type: none">• transfer key principles and techniques of colour selection when working with different designs to be screen-printed.
Numeracy skills to:	<ul style="list-style-type: none">• calculate and measure quantities of materials required to produce screen-printed signs.
Oral communication skills to:	<ul style="list-style-type: none">• check and confirm job requirements with client and colleagues.
Reading skills to:	<ul style="list-style-type: none">• read and interpret workplace documentation to clarify job requirements, including client brief and workplace instructions.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Tools and equipment</i> must include at least five of the following:	<ul style="list-style-type: none">• drying rack• inks• kick leg• paints• palette knife• screen• screening table• squeegee• steel rule• stencil knife.
--	--

Health and safety requirements must include:

- selection, correct fitting, and use of PPE prescribed under legislation, regulations and workplace policies and practices
- emergency procedures, including:
 - evacuation
 - first aid
 - location and use of firefighting equipment
- hazard identification and risk control procedures
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - lighting
 - use of machines
 - use of tools and equipment
- workplace environmental requirements.

Unit Mapping Information

CPCCSI3009A Screen-print signage

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCSG3009 Screen-print signs

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded equivalent CPCCSI3009A Screen-print signage.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must screen-print three signs each consisting of letters and at least one graphic as follows:

- one sign must be screen-printed to one of the following metals:
 - aluminium
 - stainless steel
- one sign must be screen-printed to one of the following fabrics:
 - cotton
 - gauze
 - polyester
 - silk
- one sign must be screen-printed to at least one of the following substrates:
 - glass
 - paper
 - plastic
 - wood.

At least two of the above signs must measure at least 1 square metre.

In doing the above work, the person must:

- reproduce a design and transfer design to material for screen-printing
- cut screen design to shape
- construct screen ready for printing as appropriate to the task.
-

Knowledge Evidence

A person demonstrating competency in this unit must demonstrate knowledge of:

- colour selection techniques and principles and their application in screen-printed signs
- methods for identifying dimensions, symbols, abbreviations and key features of signs from sign designs and drawings
- purpose and application of the following when screen-printing signs:
 - safety data sheets (SDS)
 - safe work method statements (SWMS)
- principles and techniques for the layout of signs
- relevant Australian standards:
 - AS 1319 Safety signs for the occupational environment
 - AS 2311 General workmanship – painting
 - AS 2700 Colour standards for general purposes
- statutory and regulatory authority requirements relating to the use of materials used in screen-printing signs, including:
 - removal of waste products
 - storage of chemicals and materials
- techniques for cutting designs for screens and screen-printing
- range of traditional and contemporary font styles for use in screen-printing signs
- terminology and use of abbreviations in screen-printing.

Assessment Conditions

Suitable assessment of performance requires:

- equipment and tools:
 - as listed in the range of conditions
- materials:
 - block out
 - cardboard
 - masking tape
 - metal and fabric as specified in the performance evidence
 - screen frames
 - spray adhesive
 - stencil films
 - substrates as specified in the performance evidence
- specifications:
 - AS 1319 Safety signs for the occupational environment
 - AS 2311 General workmanship – painting
 - AS 2700 Colour standards for general purposes
- timeframe:

- according to job requirements.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

CPCCSG3010 Hand render pictorials

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded equivalent CPCCSI3010A Hand render pictorials.

Application

This unit of competency specifies the outcomes required to produce and lay out hand-rendered pictorial images that form signs on a range of surfaces.

The unit supports sign manufacturers who work on site, painting the required sign directly on to a surface, using a range of paints, brushes and application techniques.

No licensing, legislative, regulatory or certification requirements apply to this unit of competency at the time of endorsement.

Pre-requisite Unit

Nil

Competency Field

Signs and graphics

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of

conditions.

- | | | | |
|---|------------------------|-----|--|
| 1 | Plan and prepare work. | 1.1 | Job requirements are identified from drawings and instructions, confirmed, and applied to planning and preparation. |
| | | 1.2 | Material quantities are estimated according to size of sign and materials to be used. |
| | | 1.3 | Health and safety requirements are identified according to specified tasks and workplace operations, and are applied to planning. |
| | | 1.4 | Substrate is identified and prepared according to planned material application. |
| | | 1.5 | Tools, equipment and materials are selected to carry out tasks according to job requirements and relevant Australian standards. |
| | | 1.6 | Layout is set out to scale. |
| | | 1.7 | Colour selection is determined consistent with job requirements and colours are recorded for future use. |
| 2 | Produce illustration. | 2.1 | Drawing instruments, media and background materials are selected and prepared according to job requirements. |
| | | 2.2 | Illustration is reproduced from design or drawing applying accurate proportion and perspective. |
| | | 2.3 | Light and shade effects are applied to illustration creating visual realism using techniques suitable to the selected medium. |
| 3 | Paint illustration. | 3.1 | Painting techniques are applied to illustration according to job requirements. |
| | | 3.2 | Accurate visual texture, light and shade are applied to the illustration. |
| | | 3.3 | Colours are applied, achieving correct tones and tonal order. |

- 3.4 Lettering and illustration are applied to pictorial sign accurately and cleanly.
- 3.5 Completed illustration is checked for accuracy and completeness and any defects are rectified according to job requirements.
- 4 Clean up and finish sign.
 - 4.1 Sign and surrounding surface environment are cleaned and waste materials removed according to statutory and regulatory authority requirements.
 - 4.2 Tools and equipment, including personal protective equipment (PPE), are cleaned, maintained and stored according to workplace requirements.

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

Skill	Performance feature
Learning skills to:	<ul style="list-style-type: none"> • transfer key principles and techniques of hand rendering pictorials to new sign designs.
Numeracy skills to:	<ul style="list-style-type: none"> • measure and calculate material quantities required to hand render pictorials • calculate and apply scale to enlargements of sign designs.
Oral communication skills to:	<ul style="list-style-type: none"> • communicate clearly with client and others using verbal and non-verbal communication.
Reading skills to:	<ul style="list-style-type: none"> • interpret a range of familiar workplace documentation, including drawings, specifications and written instructions from clients and others.
Writing skills to:	<ul style="list-style-type: none"> • accurately reproduce letters from a design template.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Job requirements must include:

- purpose of sign
- quality requirements
- size and style of sign.

Health and safety requirements must include:

- selection, correct fitting, and use of PPE prescribed under legislation, regulations and workplace policies and practices
- emergency procedures, including:
 - evacuation
 - first aid
 - location and use of firefighting equipment
- hazard identification and risk control procedures
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - lighting
 - use of machines
 - use of tools and equipment
- workplace environmental requirements.

Tools and equipment must include at least two of the following:

- artist brushes
- easel
- sketch pad.

CPCCSI3010A Hand render pictorials

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCSG3010 Hand render pictorials

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded equivalent CPCCSI3010A Hand render pictorials.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must produce two hand-rendered pictorials as follows:

- one must be a portrait of a person, using at least seven different colours, showing facial texture, lines, contouring, light and shade with lettering underneath
- one must be a company logo with lettering, using at least four different colours and showing blended and shaded lettering techniques.

One of the above hand-rendered pictorials must be produced on a masonry wall measuring at least 1.5 square metres.

One of the above hand-rendered pictorials must be produced on one of the following:

- canvas
- glass
- metal
- paper
- timber.

For each hand-rendered pictorial, the person must demonstrate use of at least two different painting techniques selected from:

- posterisation
- scumbling
- stippling
- wet blend.

In doing the above work, the person must:

- interpret design specifications, including dimensions, symbols, abbreviations and key features of signs
- identify and correctly apply designed material to prepared substrate
- identify and record colours used
- apply techniques to produce colour fully to boundary limits
- reproduce pictorial to size requirements
- check the final work for accuracy and completeness, and identify and rectify any defects.

Knowledge Evidence

A person demonstrating competency in this unit must demonstrate knowledge of:

- application of the following typography elements in sign-writing and hand rendering pictorials, including:
 - font types
 - principles of layout
 - size and spacing
- Australian standards relevant to the use of paint:
 - AS 2311 Guide to the painting of buildings
 - AS 2700 Colour standards for general purposes
- paint application techniques relating to hand rendering pictorials
- theory and processes used in colour selection for sign-writing
- methods for identifying dimensions, symbols, abbreviations and key features of signs from pictorial designs and drawings
- compatibility of surfaces with paints, solvents and mediums
- purpose and application of the following when working with paint and other chemicals used to produce hand-rendered pictorials:
 - safety data sheets (SDS)
 - safe work method statements (SWMS)
- processes and techniques to measure and set out relevant to layout of signs
- statutory and regulatory authority requirements, particularly those relating to:
 - removal of waste products
 - storage of chemicals and materials
- terminology and use of abbreviations in the signs and graphics industry.

Assessment Conditions

Suitable assessment of performance requires:

- equipment:
 - artist brushes

- easel
- mediums
- sketch pad
- specifications:
 - AS 2311 Guide to the painting of buildings
 - AS 2700 Colour standards for general purposes
- materials:
 - charcoal
 - oil and acrylic paints
 - pencils
- timeframe:
 - according to job requirements.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

CPCCSG3011 Install LED technology into signs

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded non-equivalent CPCCSI3011A Use LED technology for signage, CPCCSI3012A Apply electrical theory for illuminated signage, and CPCCSI3013A Install LED systems.

Application

This unit of competency specifies the outcomes required to select and install light emitting diode (LED) systems into signs. It covers identifying the appropriate LED system to achieve job requirements, laying out and installing the system into position, and connecting and circuit testing the system to ensure consistent distribution of light.

The unit supports sign manufacturers producing illuminated signs. It applies to signs illuminated using LED technology, including light boxes and fabricated letters which, depending on how the modules are positioned inside the letter, will produce either face-illuminated or halo-lit signs.

Where LED lighting is less than 240 volts, no licensing, legislative, regulatory or certification requirements apply to this unit of competency at the time of endorsement. Should lighting be above 240 volts, relevant state and territory regulatory authorities should be consulted to confirm licensing, legislative, regulatory or certification requirements that apply to this unit of competency.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.

1	Plan and prepare work.	1.1	<i>Job requirements</i> are identified from specifications and client brief, confirmed, and applied to planning and preparation.
		1.2	Sign installation details are identified and applied to planning.
		1.3	<i>Tools, equipment</i> and <i>materials</i> are selected to carry out tasks consistent with job requirements, and faults are identified and rectified before starting work.
		1.4	<i>Health and safety requirements</i> are identified and applied to planning according to job requirements.
		1.5	Statutory and local authority requirements relating to the display of illuminated sign are identified and applied to planning.
2	Select and prepare LED modules.	2.1	LED system is selected according to job specifications and prepared for use.
		2.2	Quantity of transformers required is calculated according to job specifications, and type of LED system is selected.
3	Fix LED system to sign.	3.1	Sign is checked to be free of damage, and is cleaned and allowed to dry.
		3.2	LED modules are laid out and checked for completeness according to manufacturer recommendations.
		3.3	LED modules are safely fixed to sign according to type of illumination required and manufacturer specifications.

		3.4	Unused wires are safely capped or looped to avoid creating shadows on sign face.
4	Connect and test LED wires	4.1	Module wires are connected to transformers and regulated according to manufacturer specifications.
		4.2	Module wires are tested to be fully functioning and any defects are identified and rectified.
5	Position and check sign.	5.1	Sign is mounted to surface or placed into position according to job requirements.
		5.2	Sign is illuminated and checked for consistent distribution of light according to job requirements.
		5.3	Inadequately lit areas of the sign and possible causes are identified and lighting is rectified according to job requirements.
6	Clean up.	6.1	Finished sign and surrounding surface area are cleaned and waste materials removed according to statutory and regulatory authority requirements.
		6.2	Tools and equipment, including personal protective equipment (PPE), are cleaned, maintained and stored according to workplace requirements.

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

Skill

Performance feature

- Learning skills to:
- access a range of manufacturer support material to identify:
 - changing technology in LED systems
 - required approach to installing LED systems into signs.
- Numeracy skills to:
- calculate:

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

Skill	Performance feature
	<ul style="list-style-type: none"> • depth of sign and apply to selection of appropriate LED system • required number of transformers and other elements used when installing LED into signs.
Oral communication skills to:	<ul style="list-style-type: none"> • identify and confirm lighting requirements.
Reading skills to:	<ul style="list-style-type: none"> • interpret manufacturer instructions and recommendations relating to layout and connection of LED systems.
Writing skills to:	<ul style="list-style-type: none"> • report faults in LED systems and components to manufacturers and other relevant personnel using relevant documentation.
Problem-solving skills to:	<ul style="list-style-type: none"> • identify possible causes of faults in signs illuminated with LED technology and trial appropriate solutions.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Job requirements</i> must include:	<ul style="list-style-type: none"> • lighting durability expectations • location of sign • quality of light required: <ul style="list-style-type: none"> • brightness • colour • lighting effect • surface material to which sign is to be fixed • type and dimensions of sign.
--	--

<i>Tools and equipment</i>	<ul style="list-style-type: none"> • caulking gun
-----------------------------------	--

- must include at least three of the following:
- circuit testing equipment
 - electrical connection tools
 - measuring tape
 - PPE suited to working with LED technology
 - soldering tools
 - wire strippers.

Materials must include:

- LED lighting system
- LED modules.
-

Health and safety requirements must include:

- selection, correct fitting, and use of PPE prescribed under legislation, regulations and workplace policies and practices
- emergency procedures, including:
 - evacuation
 - first aid
 - location and use of firefighting equipment
- contents of and terms used in safe work method statements (SWMS) for the safe use of tools and equipment
- hazard identification and risk control procedures
- safe operating procedures, including operational risk assessment and treatments associated with:
 - soldering
 - working with low voltage electrical wires
 - working with power
- workplace environmental requirements.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for CPCCSG3011 Install LED technology into signs

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded non-equivalent CPCCSI3011A Use LED technology for signage, CPCCSI3012A Apply electrical theory for illuminated signage, and CPCCSI3013A Install LED systems.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must select and install light emitting diode (LED) systems into three signs as follows:

- two fabricated lower case 'b' in Helvetica font, measuring at least 600 mm high x 75 mm wide, and 100 mm deep and mounted to a white surface:
 - one must be face illuminated, with the face of the letter formed of opal acrylic and the back of the letter with a PVC foam backing
 - one must be halo lit, with the sides and face of the letter formed of non-illuminating cast acrylic and the back of the letter formed of clear acrylic
- one freestanding back lit light box measuring up to 1800 mm x 300 mm x 100 mm, with an opal acrylic face.

In doing the above work, the person must:

- identify and confirm client requirements for the finished job, including:
 - colour and brightness requirements
 - location for finished sign
 - quality and performance requirements of finished sign
- lay out, install and secure the LED modules to each sign to ensure even and consistent lighting
- test lights and correct any faults in light distribution.

Knowledge Evidence

A person demonstrating competency in this unit must demonstrate knowledge of:

- application and use of:
 - safety data sheets (SDS) when working with LED components
 - safe work method statements (SWMS) when installing LED systems into signs
- capacity of different surface types to absorb or reflect LED light
- electrical theory relevant to selecting and using LED technology for signs, including:
 - processes to calculate maximum driver loading for LED modules
 - regulation of electrical current in LED systems
- principles and application of design and layout theory relevant to sign manufacture, including:
 - balance
 - colour and colour harmony
 - contrast
- use, application and limitations of red, green and blue (RGB) colour system in LED signs
- limitations of sign manufacturer's role when working with electrical components, including licensing and regulatory requirements applicable to working with electricity
- pitch as it relates to positioning LED modules in fabricated letters and light boxes
- requirements for working safely around power sources, services and assets
- techniques for evaluating and using:
 - LED systems and packages
 - LED components
- uses, applications and limitations of LED technology for illuminating signs, including:
 - colour types and limitations
 - components
 - durability
 - semi-conductor chip technology characteristics
 - systems and system packages
- processes to manage heat generated by LED
- terminology used in manufacture of signs.

Assessment Conditions

Suitable assessment of performance requires:

- equipment and tools:
 - as listed in the range of conditions
- materials:
 - as listed in the range of conditions
- specifications:
 - fabricated letters as specified in the performance evidence
 - light box as specified in the performance evidence
 - SDS
 - SWMS

- contingencies:
 - processes to identify and rectify faults in LED systems and uneven distribution of light
- timeframe:
 - according to job requirements.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

CPCCSG3012 Fabricate signs

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces non-equivalent CPCCSI2005A Fabricate signage and CPCCSI3002A Use rotary router.

Application

This unit of competency specifies the outcomes required to fabricate signs using acrylic sheets and metal framing.

Fabricated signs are used for a range of purposes, including light boxes, point of sale product trays, monoliths, pylons and individual letters.

The unit supports sign manufacturers who fabricate custom-made signs in response to client design requirements.

No licensing, legislative, regulatory or certification requirements apply to this unit of competency at the time of endorsement.

Pre-requisite Unit

Assessment Requirements for CPCCSG3012 Fabricate signs

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces non-equivalent CPCCSI2005A Fabricate signage and CPCCSI3002A Use rotary router.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must fabricate three different signs as follows:

- a lower case letter 'b' in Clarendon font, using acrylic sheeting, with a minimum 50 mm return and 300 mm height
- a letter 'D' in Helvetica font, using stainless steel or aluminium, with a minimum 50 mm return and 300 mm height
- an aluminium light box with a minimum 300 mm acrylic front and back panel with a 100 mm edge; with the front and back of the light box being acrylic with a minimum of 4.5 mm thickness.

In doing the above work, the person must use at least three of the following tools and equipment:

- acrylic glues and heating equipment
- battery drill
- CAD/CAM routing equipment
- glass marking pencil
- guillotine
- metal ruler or tape measure
- welding tools and equipment
- scribe
- square
- surface cutting equipment.

For each sign to be fabricated, the person must:

- identify the job requirements for the sign, noting instructions from design specifications or client discussions, including durability and longevity requirements, purpose and location for final sign, size and material requirements
- select and prepare tools, equipment and materials to fabricate the sign according to client requirements
- select, correctly fit, and use personal protective equipment (PPE) relevant to the task
- accurately calculate required material quantities
- safely and accurately measure and cut materials to size, minimising waste
- fabricate and assemble the sign according to client requirements, maintaining safety and quality standards
- trim and clean the sign, check for imperfections, and rectify any faults prior to finalising sign
- store sign safely, ready for client inspection and installation
- clean the work area and dispose of, or identify for recycling and re-use, any waste materials.

Knowledge Evidence

A person demonstrating competency in this unit must demonstrate knowledge of:

- fabrication techniques used when working with acrylic
- folds and tolerances of light weight metals used in fabricating signs
- techniques for using rotary routers and other tools when cutting materials used in fabricating signs
- types, characteristics and applications of high and medium impact acrylic
- statutory and regulatory authority requirements, particularly those relating to:
 - removal of waste products
 - storage of chemicals and materials
 - work health and safety relevant to fabricating signs
- techniques used to weld aluminium and galvanised steel up to 3 mm in thickness
- types, uses and limitations of:
 - different extrusion systems used in sign manufacture
 - modular directory systems used in sign manufacture
- purpose and application of the following when using tools, equipment and materials to fabricate signs:
 - safety data sheets (SDS)
 - safe work method statements (SWMS)
- use of manufacturer specifications when using tools, equipment and materials to fabricate signs.

Assessment Conditions

Suitable assessment of performance requires:

- equipment:

- tools and equipment as specified in the performance evidence
- materials:
 - acrylic sheets
 - stainless steel or aluminium sheeting as specified by the task
 - PPE: gloves and safety glasses
- specifications:
 - client brief or work instructions detailing job specifications of sign to be fabricated, including size, purpose, colour, material selection, durability and quality requirements of final sign
 - work instructions
 - manufacturer instructions and specifications for tools, equipment and materials used in fabricating signs
 - relevant SDS
- physical conditions:
 - workshop with suitable lighting and facilities for the fabrication of signs
- relationship with client:
 - check and confirm job requirements
- relationships with team members:
 - work may be conducted alone or as part of a team
- timeframe:
 - according to job requirements.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

Links

Companion Volume implementation guides are found in VETNet -

CPCCSG3013 Paint letters and decorative effects for signs

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded equivalent CPCCSI2006A Signwrite to simple forms and CPCCSI3003A Signwrite to decorative forms.

Application

This unit of competency specifies the outcomes required to manually paint signs on surfaces, comprised of various letter types and graphics. It covers setting out the sign to scale from a smaller design template using different layout methods; selecting and using tools and equipment to paint letters and graphics; and using brush strokes, techniques and decorative effects to achieve the desired result.

The unit supports sign manufacturers who produce customised signs that are painted directly on to surfaces for a range of purposes, including advertising boards and retail signs.

No licensing, legislative, regulatory or certification requirements apply to this unit of competency at the time of endorsement.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.

1	Plan and prepare work.	<p>1.1 Job requirements are identified from drawings, specifications, instructions and client briefs, confirmed, and applied to planning and preparation.</p> <p>1.2 Work site is assessed and scaffolding requirements are identified and installed according to statutory and licensing requirements.</p> <p>1.3 <i>Health and safety requirements</i> are identified and applied to planning.</p> <p>1.4 Sequence of tasks is determined and confirmed with relevant personnel.</p> <p>1.5 <i>Tools and equipment</i> are selected to carry out tasks according to job requirements, checked for serviceability, and faults are rectified or reported before starting work.</p> <p>1.6 Colour selection is determined, consistent with job requirements.</p>
2	Lay out sign.	<p>2.1 Size and dimensions of sign to be painted are calculated according to sign design and job requirements.</p> <p>2.2 Layout method is selected according to size and scale of the work and is implemented.</p>
3	Produce lettering and graphics.	<p>3.1 Surface is prepared according to job specifications.</p> <p>3.2 Letters are painted on to surface using tools, equipment and sign-writing techniques according to job requirements.</p> <p>3.3 Letter spacing is consistently applied according to job requirements.</p> <p>3.4 Errors in paint application are identified and rectified</p>

through the sign-writing process.

3.5 ***Decorative effects*** are applied to letters according to job requirements.

3.6 Graphics are painted on to surface using tools, equipment and brush techniques according to job requirements.

4 Clean up.

4.1 Finished sign and surrounding surface environment are cleaned and waste materials removed according to statutory and regulatory authority requirements.

4.2 Tools and equipment, including personal protective equipment (PPE), are cleaned, maintained and stored according to workplace requirements.

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

Skill	Performance feature
Learning skills to:	<ul style="list-style-type: none"> • transfer key principles and techniques of painting decorative effects when working with different sign designs.
Numeracy skills to:	<ul style="list-style-type: none"> • measure surface and perform calculations to accurately identify required surface area for design • calculate scale and dimensions of final sign from drawings and apply to layout processes for sign-writing.
Oral communication skills to:	<ul style="list-style-type: none"> • enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand.
Reading skills to:	<ul style="list-style-type: none"> • interpret a range of familiar workplace documentation, including hand drawings, manufacturer specifications and instructions.
Writing skills to:	<ul style="list-style-type: none"> • report faults in tools and equipment to manufacturers and other relevant personnel.

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

Skill	Performance feature
--------------	----------------------------

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Health and safety requirements must include:

- selection, correct fitting, and use of PPE prescribed under legislation, regulations and workplace policies and practices
- emergency procedures, including:
 - evacuation
 - first aid
 - location and use of firefighting equipment
- hazard identification and risk control procedures
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - traffic control
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
 - use of machines
 - use of tools and equipment
- workplace environmental requirements.

Tools and equipment include:

- cutting knives
- mahl sticks
- oils appropriate to the application
- paint pots
- sign-writing pencils, pens and brushes
- stirring sticks
- tape measures and rulers
- tapes.

- Decorative effects* must include:
- three dimensional (3-D)
 - colour effects
 - shading.

Assessment Requirements for CPCCSG3013 Paint letters and decorative effects for signs

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded equivalent CPCCSI2006A Signwrite to simple forms and CPCCSI3003A Signwrite to decorative forms.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must produce four hand-painted signs using both simple and decorative lettering.

The signs must be produced to scale and measure a minimum of 1 square metre for at least two of the following surfaces:

- glass
- masonry
- metals
- plastics
- wood.

One of the above hand-painted signs must include a small graphic logo with at least four different colours.

A different layout method must be used for each of the above signs, ensuring that the following four methods are used in total:

- computer-generated
- direct on to substrate
- overhead projection
- pounce method.

In doing the above work, the person must demonstrate:

- correct use of techniques to measure, and calculate and apply scale and dimension when producing the final sign
- correct selection and use of brushes, paints and brush techniques to produce job requirements
- correct preparation of paints and other tools and equipment
- application of health and safety requirements
- assessment of own work throughout the process, and identification and rectification of faults in painting letters and decorative effects.

Knowledge Evidence

A person demonstrating competency in this unit must demonstrate knowledge of:

- characteristics, style and sign-writing techniques for simple alphabets, including:
 - block letters
 - sans serif alphabets
- characteristics, style and sign-writing techniques for decorative alphabets, including:
 - construction of formal and informal alphabet scripts
 - freestyle alphabets
 - serif alphabets
- methods for calculating and applying dimensions and scale when laying out signs
- contents of and terms used in safe work method statements (SWMS) applicable to sign-writing to decorative forms
- principles of design applicable to lettering, including:
 - theory of letter writing
 - layout of various types of lettering
- relevant Australian standards, including:
 - AS 2311 General workmanship – painting
 - AS 2700 Colour standards for general purposes
 - AS 1530.3 Fire retardant systems
 - AS 1319 Safety signs for the occupational environment
- purpose and application of manufacturer specifications when working with paints and chemicals used to sign write decorative forms
- statutory and regulatory authority requirements relating to painting letters and decorative effects for signs, particularly those relating to:
 - removal of waste products
 - storage of chemicals and materials
- techniques to produce layout accurately to balanced design
- terminology and use of abbreviations in the signs and graphics industry.

Assessment Conditions

Suitable assessment of performance requires:

- equipment:
 - paint pots
 - brushes
- materials:
 - paints
 - pencils
 - sign substrates
- contingencies:
 - errors in paint application or brush techniques to be identified and corrected during the work
- specifications:
 - Australian standards:
 - AS 2311 General workmanship – painting
 - AS 2700 Colour standards for general purposes
 - AS 1530.3 Fire retardant systems
 - AS 1319 Safety signs for the occupational environment
 - design of sign to be produced, supplied on A4 sheet of paper and showing colours, style and quality requirements of sign
 - substrate of suitable type and size, as specified in the performance evidence
- physical conditions:
 - may be indoors or outdoors
- relationship with client:
 - confirm job requirements
- relationships with team members:
 - work may be conducted alone or with others
- timeframe:
 - according to job requirements.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

CPCCSG3014 Manufacture gas-charged glass-formed illuminated signs

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded equivalent CPCCSI3014A Manufacture gas-charged glass-formed illuminated signage.

Application

This unit of competency specifies the outcomes required to form glass tubes into specific shapes, fill them with gas, and provide a source of power to the tubes to produce illuminated signs commonly referred to as neon signs. It covers using tools and equipment to shape the glass tubes, and then attaching electrodes and pumping gas through the tubes before sealing and powering up the signs for display. It also covers installing the sign to a backing for display purposes and maximum visual effect.

The unit supports sign manufacturers who produce illuminated signs using neon gas.

No licensing, legislative, regulatory or certification requirements apply to this unit of competency at the time of endorsement.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.

- | | | | |
|---|--------------------------------------|-----|---|
| 1 | Plan and prepare work. | 1.1 | Job requirements are identified from drawings and specifications. |
| | | 1.2 | Sequence of tasks required is determined and confirmed with relevant personnel. |
| | | 1.3 | Tools and equipment are selected to carry out tasks according to job requirements, checked for serviceability, and faults are rectified or reported before starting work. |
| | | 1.4 | <i>Health and safety requirements</i> are identified and applied to planning. |
| 2 | Mark out design. | 2.1 | Design is set out to scale on fire retardant sheeting using layout methods according to job requirements. |
| | | 2.2 | Sections are calculated and marked out to design specifications. |
| | | 2.3 | Joint locations are determined from layout and marked out on pattern. |
| | | 2.4 | Electrodes are marked out to indicate double backed or right angled position. |
| 3 | Bend glass. | 3.1 | Glass is heated over a gas flame until pliable. |
| | | 3.2 | Glass is bent to form shape consistent with pattern and specifications, and any errors in shaping are rectified. |
| 4 | Attach electrodes and connect glass. | 4.1 | Electrodes are attached to pattern specification and requirements of Australian standards. |
| | | 4.2 | Glass tubing is connected using procedures and techniques according to job requirements. |

- | | | | |
|---|------------------------------------|-----|---|
| 5 | Prepare glass for lighting system. | 5.1 | Pumping station is activated and section is connected to pumping station according to job requirements and safety procedures. |
| | | 5.2 | Glass is vacuumed and pumped with gas using equipment and materials consistent with job requirements. |
| | | 5.3 | Glass is sealed and bombarded using equipment consistent with job requirements and industry standards. |
| | | 5.4 | Glass is cooled safely and aged according to job requirements. |
| | | 5.5 | Neon sections are tested to determine transformer loadings according to Australian standards and safety procedures. |
| | | 5.6 | Doubled sections of glass are blackened to form design shape. |
| 6 | Secure finished sign and clean up. | 6.1 | Neon glass sign is securely attached to panel using attachments and supports according to job requirements. |
| | | 6.2 | Sign and surrounding surface area are cleaned and waste materials removed according to statutory and regulatory authority requirements. |
| | | 6.3 | Tools and equipment, including personal protective equipment (PPE), are cleaned, maintained and stored according to workplace requirements. |

Assessment Requirements for CPCCSG3014 Manufacture gas-charged glass-formed illuminated signs

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded equivalent CPCCSI3014A Manufacture gas-charged glass-formed illuminated signage.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must manufacture two different gas-charged glass-formed illuminated signs as follows:

- one sign must contain a directional symbol, such as an arrow
- one sign must consist of at least three words written in script lettering and sans serif font, using three different colours.

In doing the above work, the person must:

- work, shape and join the glass tubed sections safely and accurately to form the required shapes or letters
- select and use relevant tools and equipment to handle and form the glass
- safely attach required number of electrodes and connect glass tubing
- prepare the glass and pump gas to the glass assembly safely
- bombard, cool and age the glass to specifications
- affix each finished sign to a panel measuring a minimum 400 mm length x 300 mm height.

Knowledge Evidence

A person demonstrating competency in this unit must demonstrate knowledge of:

- statutory and regulatory authority requirements relating to safe handling of materials, including:
 - removal of waste products
 - storage of chemicals and materials

- key features of drawings and specifications of gas-charged glass-formed signs, including dimensions, symbols and abbreviations
- methods and techniques to:
 - shape and form glass
 - pump gas into glass
- processes to measure and set out when preparing to manufacture gas-charged illuminated signs, including applying direct and indirect layout methods
- Australian standards appropriate to manufacturing gas-charged illuminated signs, including:
 - AS 2508.2.012 Safe storage and handling; information cards for hazardous materials
 - AS 3100 Approval and test specification – General requirements for electrical equipment
 - AS 3953 Loading guide for dry-power transformers
 - types and characteristics of fonts and lettering styles used in the manufacture of signs
- safety procedures required when working with live flame and gas
- terminology used in sign manufacture
- types and characteristics of gas-charged glass-formed illuminated signs
- types, characteristics and correct handling procedures for materials used in the manufacture of gas-charged glass-formed illuminated signs
- types and uses of electrodes and transformers when manufacturing gas-charged glass-formed illuminated signs
- purpose and application of the following when working with tools and equipment used in the manufacture of gas-charged glass-formed illuminated signs:
 - safety data sheets (SDS)
 - safe work method statements (SWMS).

Assessment Conditions

Suitable assessment of performance requires:

- equipment:
 - glass heaters
 - tongs
- materials:
 - custom wood panel measuring at least 400 mm in length x 300 mm in height
 - electrodes
 - fastenings and fixings used to attach sign components
 - glass tubes
 - neon gas
 - transformers
- contingencies:
 - identify and rectify faults in illuminated signs
- specifications:

- Australian standards:
 - AS 2508.2.012 Safe storage and handling; information cards for hazardous materials
 - AS 3100 Approval and test specification – General requirements for electrical equipment
 - AS 3953 Loading guide for dry-power transformers
- SDS for materials used when manufacturing gas-charged illuminated signs
- SWMS
- relationship with client:
 - check and confirm design of glass shapes and job specifications
- timeframe:
 - according to job requirements.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

CPCCSG3015 Produce airbrushed signs

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded equivalent CPCCSI3015A Produce airbrushed signage.

Application

This unit of competency specifies the outcomes required to select and apply air brushes, inks, paints and application techniques to produce various forms of airbrushed signs.

The unit supports sign manufacturers who use traditional painting and airbrushing techniques to achieve a visual style of signs.

No licensing, legislative, regulatory or certification requirements apply to this unit of competency at the time of endorsement.

Pre-requisite Unit

CPCCSI3015A Produce airbrushed signage

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCSG3015 Produce airbrushed signs

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded equivalent CPCCSI3015A Produce airbrushed signage.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must produce two airbrushed signs as follows:

- one head and shoulders portrait of a person, measuring at least 600 x 900 mm, using at least six different colours, and demonstrating the use of texture, gradient and line work
- one graphic produced on a motor vehicle bonnet, including the use of at least six different colours, and demonstrating the use of adhesive masks to accurately produce edge definition.

In producing the above work, the person must:

- interpret specifications for preparing and applying various airbrush techniques
- select, set up and check airbrush equipment and accessories prior to use
- identify defects associated with airbrush application and take corrective action
- maintain, clean, dismantle and reassemble airbrush, components and accessories
- prepare and apply a variety of masks to use in conjunction with airbrush techniques
- apply airbrush techniques using a variety of freehand and masked techniques
- comply with relevant safety and environmental legislation, regulations and codes of practice applicable to workplace operations.

Knowledge Evidence

A person demonstrating competency in this unit must demonstrate knowledge of:

- airbrushing terminology and use of abbreviations
- Australian standards applicable to airbrushing sign work, including AS 1319 Safety signs for the occupational environment
- characteristics and applications of different airbrushes used to airbrush signs, including:

- single action
- double action
- internal mix
- external mix
- characteristics and applications of different paint types used to airbrush signs, including:
 - oil-based
 - water-based
- principles and techniques of producing airbrushed signs, including application of:
 - freehand techniques
 - geometric shapes
 - graphics
 - lettering
- purpose and application of safety data sheets (SDS) when producing airbrushed signs
- statutory and regulatory authority requirements relevant to airbrushing sign work, including those relating to removal of waste products
- techniques for producing airbrushed signs through the choice of relevant materials
- types of airbrushes, components and accessories used in airbrushed sign work
- work health and safety (WHS) requirements and safe work methods applicable to airbrushing.

Assessment Conditions

Suitable assessment of performance requires:

- equipment:
 - air hose
 - air brushes, components and accessories
 - buckets
 - compressed air and leads
 - masks
 - measuring tapes and rules
 - paint pots
 - stencil knives
 - straight edges
- materials:
 - inks
 - masking materials
 - motor vehicle bonnet
 - paints
- specifications:
 - AS 1319 Safety signs for the occupational environment
 - SDS

- timeframe:
 - according to job requirements.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

CPCCSG3016 Prepare surfaces for signs

Modification History

Release 1.

This version first released with CPC Construction and Property Services Training Package Version 2.

Revised unit of competency. Replaces superseded equivalent CPCCSI2003A Prepare surfaces for signage.

Application

This unit of competency specifies the outcomes required to ensure surfaces are prepared and ready for fixing signs. The unit covers assessing surfaces, which can include metals, plastics, brick and plasterboard walls; identifying the extent of preparation required; selecting and preparing equipment; and applying materials to the surface safely and effectively, minimising damage to surrounding areas.

The unit supports sign manufacturers who install signs in a range of indoor and outdoor settings.

No licensing, legislative, regulatory or certification requirements apply to this unit of competency at the time of endorsement.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.

1	Plan surface preparation.	<p>1.1 Job requirements, including type of surface, are identified from drawings, specifications and instructions and type, and confirmed.</p> <p>1.2 <i>Health and safety requirements</i> are assessed and applied to planning.</p> <p>1.3 <i>Tools, equipment</i>, paint systems and materials are selected to carry out tasks consistent with job requirements, and faults are rectified or reported before starting work.</p> <p>1.4 Drop sheets are placed if required to protect floor and surrounding areas.</p> <p>1.5 <i>Personal protective equipment</i> (PPE) is sourced according to manufacturer specifications, and health and safety and workplace requirements.</p> <p>1.6 Signs and barricades are selected and installed according to health and safety and workplace requirements.</p>
2	Clean and prime surface.	<p>2.1 Condition of surface is assessed.</p> <p>2.2 Surface is roughly sanded according to job requirements.</p> <p>2.3 Surface is <i>cleaned</i> to remove grease and dirt and allowed to dry.</p> <p>2.4 Undercoat is applied to surface and allowed to dry according to manufacturer specifications.</p> <p>2.5 Primer is applied to surface and allowed to dry according to manufacturer specifications.</p>
3	Apply paint.	<p>3.1 <i>Paint applicator</i> compatible with coating type is selected and prepared according to manufacturer specifications.</p>

- 3.2 Spray gun and air compressor, if required, are set to manufacturer specifications and correct viscosity of paint is determined for specified application.
 - 3.3 Coating is applied evenly over the surface area and defects in application are identified and rectified.
- 4 Clean up.
- 4.1 Paint applicator is cleaned using correct cleaning products and according to workplace procedures and manufacturer specifications.
 - 4.2 Surface and surrounding work area are cleaned using correct solvents and in line with safety and environmental requirements.
 - 4.3 Waste materials are handled and removed according to statutory and regulatory authority requirements.
 - 4.4 Tools and equipment, including personal protective equipment (PPE), are cleaned, maintained and stored according to workplace requirements.

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

Skill	Performance feature
Learning skills to:	<ul style="list-style-type: none"> • assess the nature of preparation required for new and challenging surfaces.
Numeracy skills to:	<ul style="list-style-type: none"> • calculate material quantities required to prepare the specified surface area.
Oral communication skills to:	<ul style="list-style-type: none"> • clarify job requirements and expectations with client and colleagues.
Reading skills to:	<ul style="list-style-type: none"> • identify and interpret manufacturer specifications for tools, equipment and materials used when preparing surfaces for signs.

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

Skill**Performance feature**

- Writing skills to:
- report faults in tools and equipment to manufacturers and other relevant personnel in short, simple reports.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Health and safety requirements must include:

- selection, correct fitting, and use of PPE prescribed under legislation, regulations and workplace policies and practices
- emergency procedures, including:
 - evacuation
 - first aid
 - location and use of fire-fighting equipment
- hazard identification and risk control procedures
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers
 - traffic control
 - working at heights
 - work site visitors and the public
 - working in confined spaces
 - working in proximity to others
 - use of machines
 - use of tools and equipment
- workplace environmental requirements.

Tools and equipment must include at least

- air compressor
- deburring tools

- two of the following:
- roller sleeve
 - ruler and marking tools
 - sanding equipment.

- Personal protective equipment*** must include:
- gloves
 - goggles
 - mask.

- Cleaners*** used must include one or more of the following:
- alcohol
 - garnet paper
 - methylated spirits
 - mineral turpentine
 - thinners
 - wax and grease remover
 - wet and dry sandpaper.

- Paint applicator*** must include:
- brushware
 - roller
 - spray gun.

Assessment Requirements for CPCCSG3016 Prepare surfaces for signs

Modification History

Release 1.

This version first released with CPC Construction and Property Services Training Package Version 2.

Revised unit of competency. Replaces superseded equivalent CPCCSI2003A Prepare surfaces for signage.

Performance Evidence

A person who demonstrates competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must safely prepare the following surfaces each measuring at least one square metre, in readiness for application of signs:

- brick wall
- gyprock wall
- metal
- plastic.

In doing the above work, the person must:

- use appropriate sanding and cleaning techniques for each surface
- select, prepare and apply correct undercoat and primer for a painted surface
- apply paint using each of following application methods:
 - brush paint
 - roll paint
 - spray paint
- identify and rectify defects in paint application.

Knowledge Evidence

A person demonstrating competency in this unit must demonstrate knowledge of:

- range of coating types and their characteristics, including:
 - acrylic lacquers and their thinner or reducer
 - clear finishes and their thinner
 - oil-based paints and their solvents

- spraying enamel and its thinner
- two-pack paints and their thinner
- water-based paints and their thinner
- range of undercoats and primers and their application to different surfaces, including:
 - brick
 - plasterboard
 - metals
 - plastics
- purpose and application of the following when preparing surfaces for signs:
 - manufacturer specifications relating to paint and other products used in surface preparation
 - safety data sheets (SDS)
 - safe work method statements (SWMS)
- safety and environmental legislation, regulations and codes of practice applicable to working with paint and other products used in surface preparation
- statutory and regulatory authority requirements, particularly those relating to:
 - removal of waste products
 - storage of chemicals.

Assessment Conditions

Suitable assessment of performance requires:

- equipment:
 - air compressor
 - brushware
 - ladders or other equipment used to provide safe access to work area
 - roller and roller sleeve
 - spray gun
- materials:
 - cleaners as listed in the range of conditions
 - primers appropriate to the surface
 - undercoats appropriate to the surface
- specifications:
 - range of surfaces to prepare as specified in the performance evidence
 - work instructions or drawings appropriate to the task
- physical conditions:
 - work may be conducted indoors and outdoors
- relationship with client:
 - sufficient to check and confirm job requirements
- relationships with team members:

- work may be conducted alone or with others
- timeframe:
 - according to job requirements.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

CPCCSG3017 Erect and install signs

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded non-equivalent CPCCSI2007A Apply fasteners and fixings.

Application

This unit of competency specifies the outcomes required to erect and install signs to surfaces and structures, safely and according to client requirements.

The unit supports installers of signs working in a range of settings who must ensure appropriate permits are in place prior to erecting a sign, that the surface is suitable for installing the sign, and that appropriate fasteners and fixings have been selected for the task.

Licensing, legislative, regulatory or certification requirements apply to this unit in some States. Relevant state and territory regulatory authorities should be consulted to confirm those requirements.

Pre-requisite Unit

Nil

Competency Field

Signs and graphics

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to

- essential outcomes. demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.
- 1 Plan and prepare for installation processes.
 - 1.1 Job requirements are identified from work instructions and confirmed with relevant personnel.
 - 1.2 Characteristics and dimensions of sign are identified and weight of sign is calculated and applied to planning.
 - 1.3 Research is undertaken to determine the need for local authority permits to install sign, client is informed, and relevant permissions obtained or sighted before starting work.
 - 1.4 Detailed installation drawings are obtained and confirmed.
 - 1.5 ***Tools and equipment*** are selected to carry out tasks according to job requirements, checked for serviceability, and faults are rectified or reported before starting work.
 - 1.6 ***Health and safety requirements*** are identified and applied to planning.
 - 1.7 Sequence of tasks is determined and confirmed with relevant personnel.

 - 2 Assess installation site.
 - 2.1 Work site is assessed and need for engineering risk assessment is identified with relevant personnel and obtained where appropriate to confirm structural integrity of supporting background before starting work.
 - 2.2 Site plans are sourced and location of assets, services and infrastructure beneath and around installation site are identified.
 - 2.3 Condition of surface is assessed and need for remedial work is identified.
 - 2.4 Remedial work if required is undertaken or referred to relevant personnel for action according to job requirements.

- | | | | |
|---|--|-----|--|
| 3 | Prepare to secure sign. | 3.1 | Surface is cleaned and prepared according to planned material application. |
| | | 3.2 | Sign is positioned on site, checked for quality, and identified faults are rectified before installation. |
| 4 | Secure sign to surface, as required. | 4.1 | Location for sign is confirmed against drawings and position is marked out for installation. |
| | | 4.2 | Marked locations are checked to be level and errors in measurements and calculations are rectified before sign is installed. |
| | | 4.3 | Sign is positioned and secured with <i>fasteners and fixings</i> according to manufacturer specifications, specified tolerances, job requirements and safety procedures. |
| 5 | Secure freestanding sign, as required. | 5.1 | Location for support materials is marked out on site according to job requirements. |
| | | 5.2 | Footings for sign are created to specified depth according to job requirements and sign characteristics. |
| | | 5.3 | Anchor bolts are inserted and holes are filled with concrete and finished to job requirements. |
| | | 5.4 | Support poles are inserted, fixed into position, and checked for levelling using levelling tools. |
| | | 5.5 | Sign is secured to poles using specified fastenings and fixings, and checked for stability, and faults are rectified or reported to relevant personnel. |
| 6 | Finalise work and clean up. | 6.1 | Installation is checked to ensure it is level, and faults in installation process are identified and rectified or reported to relevant personnel. |
| | | 6.2 | Appropriate colour and type of paint are applied to visible fastenings and fixings to a professional standard and according to job requirements. |
| | | 6.3 | Sign and surrounding area are cleaned and waste materials are removed according to statutory and |

regulatory authority requirements.

- 6.4 Tools and equipment, including personal protective equipment (PPE), are cleaned, maintained and stored according to workplace requirements.

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

Skill	Performance feature
Learning skills to:	<ul style="list-style-type: none">source and apply information relating to council and other permissions required for some sign installations.
Numeracy skills to:	<ul style="list-style-type: none">take accurate measurements and calculate weights and load tolerances.
Reading skills to:	<ul style="list-style-type: none">interpret manufacturer specifications relating to use of fasteners and fixings used to erect signsinterpret job requirements, installation instructions and diagrams relating to erecting and installing signs.
Writing skills to:	<ul style="list-style-type: none">complete council and other regulatory authority documentation required as part of permit approval processesreport faults in tools and equipment to manufacturer and other relevant personnel using appropriate documentation and terminology.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Tools and equipment

- chamois
- drills

- must include:
- ladder
 - levelling tools
 - measuring tapes and rules
 - post hole digger
 - PPE suited to installing signs
 - touch-up paint.

Health and safety requirements must include:

- selection, correct fitting, and use of PPE prescribed under legislation, regulations and workplace policies and practices
- emergency procedures, including:
 - evacuation
 - first aid
 - location and use of fire-fighting equipment
- hazard identification and risk control procedures
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers
 - traffic control
 - work site visitors and the public
 - working in confined spaces
 - working in proximity to others
 - use of machines
 - use of tools and equipment
- workplace environmental requirements.

Fasteners and fixings must include:

- all of the following chemical products:
 - construction adhesive
 - injection systems
 - spin capsules
 - hammer-in capsules
- and five or more of the following:
 - electrical clips
 - nylon anchors
 - hollow wall anchors
 - plastic toggles
 - metal toggles
 - multi-clips

- lug anchors
- steel ferrule expanding bolts
- metal screws
- chipboard screws
- plasterboard screws.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for CPCCSG3017 Erect and install signs

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised unit of competency. Replaces superseded non-equivalent CPCCSI2007A Apply fasteners and fixings.

Performance Evidence

A person who demonstrates competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must erect and install two signs as follows:

- one sign must measure at least 1200 x 2400 mm, be constructed of aluminium no more than 5 mm thick, and be fixed using appropriate fixings and fastenings to one of the following surfaces:
 - acrylic
 - glass
 - masonry
 - metal
 - plasterboard
 - plastic
 - timber
- one sign must measure at least 1200 x 2400 mm, be constructed of aluminium no more than 5 mm thick, and be positioned as a freestanding sign to two aluminium posts or poles measuring no less than 90 x 90 mm.

In doing the above work, the person must:

- check and confirm the need for planning permissions to install the signs in specified location
- check and confirm the site for services and assets below ground
- assess the sign installation requirements relevant to the work site, identifying potential risks and hazards and demonstrating measures to mitigate potential work site risks and hazards

- ensure the structural integrity of the supporting background, including taking steps to ensure reinforcement is arranged if required
- follow safety procedures when erecting and installing above signs
- identify and select methods for erecting and installing above signs, including selecting tools, fasteners and fixings giving consideration to the characteristics of the signs
- prepare the work site for installation and install the signs according to job requirements.

Knowledge Evidence

A person demonstrating competency in this unit must demonstrate knowledge of:

- purpose and application of the following when erecting and installing signs:
 - safety data sheets (SDS)
 - safe work method statements (SWMS)
- effect of mechanical and chemical fixings and fastenings used to install signs on different surfaces
- load bearing specifications for a range of fastener and fixing measurements and calculations relating to material quantities
- relevant Australian and New Zealand standards in relation to the installation of signs, including:
 - AS/NZS 3832 Electrical installations – Cold-cathode illumination systems
 - AS 1319 Safety signs for the occupational environment
- statutory and regulatory authority requirements, particularly those relating to:
 - removal of waste products
 - storage of chemicals and materials
- types and uses of tools and equipment used for installing signs
- processes and practices for working safely around power sources, services and assets.

Assessment Conditions

Suitable assessment of performance requires:

- equipment:
 - a range of fasteners and fixings used for erecting and installing signs
 - a range of tools and equipment used for erecting and installing various types of signs:
 - chamois
 - drills
 - ladder
 - levelling tools
 - measuring tapes and rules
 - post hole digger
 - personal protective equipment suited to installing signs
 - touch-up paint

- materials:
 - one freestanding sign and one sign fixed to a surface
 - signs to be 1200 x 2400 mm, constructed of aluminium
 - signs to be installed
 - ready-mix concrete
- contingencies:
 - engineering risk assessment may be required to confirm structural integrity of supporting wall or structure
 - local authority planning permission may be required in certain settings and locations
- specifications:
 - Australian and New Zealand standards in relation to the installation of signs, including:
 - AS/NZS 3832 Electrical installations – Cold-cathode illumination systems
 - AS 1319 Safety signs for the occupational environment
 - SDS
 - SWMS
- physical conditions:
 - installation may be required in indoor and outdoor settings
- relationship with client:
 - sufficient contact to check and confirm requirements
- relationships with team members:
 - work may be undertaken alone or with others
- timeframe:
 - according to job requirements.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

CPCCWC3004 Install suspended ceilings

Modification History

Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.

Correction to prerequisite unit code from *CPPWHS2001 Apply WHS requirements, policies and procedures in the construction industry* to *CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry*.

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Updated to reflect current industry terminology, tools and equipment.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 2.0.

Application

This unit of competency specifies the skills and knowledge required to install exposed and concealed suspended ceilings.

It includes setting out and installing ceiling suspension systems and installing lining material.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|------------------------------|--|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions and plan sequence of work. |
| | 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements. |
| | 1.3 Select and use personal protective equipment (PPE) for each stage of the task. |
| | 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades. |
| | 1.5 Select tools and equipment, check for serviceability and report any faults that may affect the safe operation of the equipment, tag equipment and set aside. |
| | 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use. |
| 2 Install suspension system. | 2.1 Set out ceiling grid and alignment levels for ceiling. |
| | 2.2 Fix suspension rods to underside of soffit and structural members with masonry anchors, bolts and screws at prescribed centres. |
| | 2.3 Assemble suspended framework and connect to suspension rods. |
| | 2.4 Fasten suspension system, check for looseness and rattles, and secure as required. |
| | 2.5 Fix bridging framework to both sides of service ducts to support suspension system. |
| 3 Install lining materials. | 3.1 Install lining materials according to design pattern set out in job drawings. |
| | 3.2 Cut edges of lining materials and conceal to match |

- pre-finished edges.
- 3.3 Provide openings and penetrations as shown in job drawings.
 - 3.4 Fix trims and beads at junctions with other building elements and surfaces.
- 4 Clean up.
- 4.1 Clear work area and dispose of, reuse or recycle materials.
 - 4.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCWC3004A Install suspended ceilings

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for CPCCWC3004 Install suspended ceilings

Modification History

Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.

Correction to prerequisite unit code from CPPWHS2001 Apply WHS requirements, policies and procedures in the construction industry to CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Updated to reflect current industry terminology, tools and equipment.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 2.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by installing:

- one exposed suspended ceiling of minimum area of 10 square metres
- one concealed suspended ceiling of minimum area of 15 square metres.

Each of the suspended ceilings must include grid and support wires or rods, and a penetration to accommodate one or more of the following fittings:

- an air duct
- an exhaust system
- a support column or beam.

All work must be performed to the standard required in the workplace and must comply with Commonwealth and state/territory laws and regulations, national construction codes, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards for installing suspended ceilings

- quality policies and standards for installing suspended ceilings
- safety requirements for installing suspended ceilings, including personal protective equipment (PPE), job safety analyses, safe work method statements and safety data sheets
- environmental requirements for installing suspended ceilings
- methods to mitigate risks of seismic movement when installing suspended ceilings
- processes for reading and interpreting plans, drawings and specifications used when installing suspended ceilings
- purpose and application of the following when using tools, equipment and materials to install suspended ceilings
- suspended ceiling installation techniques and processes, including:
 - alignment levelling
 - anchors and bolts
 - droppers and suspension rods
 - furring channels
 - main beams, rails and runners
 - spacer bars
 - tracks and main tracks
 - reinforced concrete ceiling and floor slabs
 - steel ceiling and rod framing
 - timber and steel floor
 - timber ceiling and rod framing
- suspended ceiling materials and their preparation and applications, including:
 - fibre cement sheeting
 - infill panels, including:
 - acoustic
 - decorative timber
 - metal
 - two-pack
 - insulation materials
 - plasterboard
 - suspended ceiling components
- techniques for calculating material requirements for installing suspended ceilings
- types of tools and equipment for installing suspended ceilings.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCWHS1001 Prepare to work safely in the construction industry

Modification History

Release Comment

Version 1 Replaces superseded equivalent CPCCOHS1001A Work safely in the construction industry.

Application

This unit of competency specifies the mandatory work health and safety training required prior to undertaking construction work. The unit requires the person to demonstrate personal awareness and knowledge of health and safety legislative requirements in order to work safely and prevent injury or harm to self and others. It covers identifying and orally reporting common construction hazards, understanding basic risk control measures, and identifying procedures for responding to potential incidents and emergencies. It also covers correctly selecting and fitting common personal protective equipment (PPE) used for construction work.

This unit meets the general construction induction training requirements of:

- Part 1.1 Definitions and Part 6.5 of the Model Work Health and Safety Regulations;
- Division 11 of Part 3 of the Occupational Safety and Health Regulations 1996 for Western Australia; and
- Division 3 of Part 5.1 of the Occupational Health and Safety Regulations 2007 for Victoria.

It is expected that site-specific induction training will be conducted prior to conducting construction work.

Licensing, legislative, regulatory or certification requirements apply to this unit. Relevant work health and safety state and territory regulatory authorities should be consulted to confirm jurisdictional requirements.

Pre-requisite Unit

Assessment Requirements for CPCCWHS1001 Prepare to work safely in the construction industry

Modification History

Release Comment

Version Replaces superseded equivalent CPCCOHS1001A Work safely in the construction
1 industry.

Performance Evidence

A person demonstrating competency in this unit must satisfy the requirements of the elements, performance criteria, foundation skills, and range of conditions of this unit, in addition to the specific performance and knowledge evidence described below.

The person must:

- identify and orally report two construction hazards
- orally explain how risk could be reduced or removed in relation to those two hazards
- select appropriate personal protective equipment (PPE) to control the risk
- orally explain basic procedures for responding to incidents and emergencies, including types and purpose of the following fire safety equipment:
 - fire blankets
 - fire extinguishers, including water, carbon dioxide, powder and foam
 - hose reels and mains
- identify and orally explain the meaning of required safety signs and symbols
- orally explain the purpose of job safety analyses (JSAs), safe work method statements (SWMS) and safety data sheets (SDS)
- orally explain the roles of the following designated health and safety personnel:
 - first aid officers
 - work health and safety representatives
 - work health and safety committee members
 - supervisors.

The person must also demonstrate correctly fitting to themselves the PPE listed below:

- eye protection
- hearing protection
- hard hat

- high visibility retro reflective vest.

Knowledge Evidence

A person must demonstrate knowledge of:

- basic duty of care, and the roles, rights and responsibilities of business owners and workers in relation to working safely while undertaking construction work
- basic meaning of the terms ‘hazard’ and ‘risk’
- basic principles of risk management, including the following five steps in order:
 - identify hazard
 - assess risk
 - consult and report
 - control hazard
 - review
- basic procedures for accessing first aid
- construction hazards, including those relating to:
 - asbestos
 - confined spaces
 - electrical: power lines, cords and equipment
 - excavations and trenches, including underground services
 - dust
 - falling objects
 - hazardous substances and dangerous goods
 - hot and cold work environments
 - manual handling
 - noise
 - plant and equipment operation
 - traffic and mobile plant
 - unplanned collapse
 - ultraviolet radiation
 - working at heights, including scaffolding
- construction work that requires a high risk work licence
- types, purpose and use of PPE used in construction, as specified in the performance evidence, and including safety footwear, harnesses and respiratory protection, and ultraviolet (UV) protective clothing and sunscreen
- construction emergencies, including:
 - chemical spill
 - fire
 - injury to personnel
 - structural collapse
 - toxic or flammable vapour emission

- vehicle or mobile plant accident
- construction incidents, including:
 - incidents resulting in personal injury or damage to property
 - near misses or dangerous occurrences that do not cause injury but may pose an immediate and significant risk to persons or property, and need to be reported so that action can be taken to prevent recurrence
- safe work practices that should be followed in construction work, including:
 - accessing and using site amenities for drinking water, hand washing and toilets
 - following safety procedures when performing work tasks and using equipment
 - identifying and reporting hazards, incidents and injuries in the workplace
 - keeping the work area clean, tidy and free from debris
 - not using or being affected by drugs and/or alcohol while at work
 - preventing bullying and harassment in the workplace
 - selecting and using required PPE
 - smoking only in designated areas
 - storing and removing waste and debris in designated areas
- meanings and symbols associated with construction safety signs, symbols and tags, including:
 - emergency information signs: exits, emergency equipment and first aid
 - fire signs: location of fire alarms and firefighting equipment
 - hazard signs and symbols: danger and warning
 - regulatory signs and symbols: prohibition, mandatory and limitation or restriction
 - safety and lockout tags: danger and out-of-service tags.

Assessment Conditions

The following must be present and available to learners during assessment activities:

- equipment:
 - all of the PPE listed in the performance evidence
- specifications:
 - state or territory Act relevant to the location of the learner, as specified in the range of conditions.

The assessment of performance evidence must be done by direct observation of the learner by an assessor, either by an assessor observing the learner physically and/or by an assessor observing the learner via audio and visual media in real time.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

Assessors must hold the unit *CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry*, or its successor.

Links

Companion Volume implementation guides are found in VETNet -

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Modification History

Release 1.

Supersedes and equivalent to CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry.

The unit of competency was updated to the Standards for Training Packages 2012.

This version first released with CPC Construction, Plumbing and Services Training Package Version 4.0.

Application

This unit specifies the outcomes required to carry out work health and safety (WHS) requirements through safe work practices in all on- or off-site construction workplaces.

It requires the performance of work in a safe manner through awareness of risks and work requirements, and the planning and performance of safe work practices with concern for personal safety and the safety of others.

The unit covers fundamental WHS requirements necessary to undertake work tasks within any sector in the construction industry. It includes the identification of hazardous materials, including asbestos, and compliance with legislated work safety practices. It does not cover removal of asbestos, which is a licensed activity.

It applies to workers in the construction industry.

This unit also relates directly to the general construction induction training requirements of the Model Work Health and Safety Regulations 2011 and relevant occupational health and safety regulations for Victoria and for Western Australia. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* covers these induction training requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
<p>1. Identify and assess risks.</p>	<p>1.1 Identify, assess and report hazards in the work area to designated personnel.</p> <p>1.2 Report safety risks in the work area based on identified hazards, to designated personnel.</p> <p>1.3 Follow safe work practices, duty of care requirements and safe work instructions for controlling risks.</p> <p>1.4 Contribute to WHS, hazard, accident or incident reports in accordance with workplace procedures, Australian government and state or territory WHS legislation, and relevant information.</p>
<p>2. Identify hazardous materials and other hazards on work sites.</p>	<p>2.1 Correctly identify and, if appropriate, handle and use hazardous materials on a work site in accordance with legislative requirements, and workplace policies and procedures.</p> <p>2.2 Apply measures for controlling risks and construction hazards effectively and immediately.</p> <p>2.3 Use appropriate signs and symbols to secure hazardous materials that have safety implications for self and other workers, immediately they are identified.</p> <p>2.4 Identify asbestos-containing materials on a work site and report to designated personnel.</p>
<p>3. Plan and prepare for safe work practices.</p>	<p>3.1 Identify, wear, correctly fit, use and store correct personal protective equipment and clothing for each area of construction work in accordance with workplace procedures</p> <p>3.2 Select tools, equipment and materials, and organise tasks in conjunction with other personnel on site and in accordance with workplace procedures.</p> <p>3.3 Determine required barricades and signage, and erect at the appropriate site location.</p> <p>3.4 Apply material safety data sheets (MSDSs), job safety analyses (JSAs) and safe work method statements (SWMSs) relevant to the work to be performed.</p>
<p>4. Apply safe work practices.</p>	<p>4.1 Carry out tasks in a manner that is safe for operators, other personnel and the general community, in accordance with legislative requirements, and workplace policies and procedures.</p> <p>4.2 Use plant and equipment guards in accordance with manufacturers' specifications, work site regulations and Australian Standards.</p> <p>4.3 Follow procedures and report hazards, incidents and injuries</p>

	<p>to relevant authorities.</p> <p>4.4 Recognise and do not use prohibited tools and equipment in areas containing identified asbestos.</p> <p>4.5 Identify and follow requirements of work site safety signs and symbols.</p> <p>4.6 Clear and maintain work site area to prevent and protect self and others from incidents and accidents, and to meet environmental requirements.</p>
5. Follow emergency procedures.	<p>5.1 Identify designated personnel in the event of an emergency for communication purposes.</p> <p>5.2 Follow safe workplace procedures for dealing with accidents, fire and other emergencies, including identification and use, if appropriate, of fire equipment within scope of own responsibilities.</p> <p>5.3 Describe, practice and effectively carry out emergency response and evacuation procedures when required.</p> <p>5.4 Carry out emergency first aid treatment of minor injuries and, as soon as possible, accurately report treatment details to designated personnel.</p>

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Modification History

Release 1.

Supersedes and equivalent to CPCOHS2001A Apply OHS requirements, policies and procedures in the construction industry.

The unit of competency was updated to the Standards for Training Packages 2012.

This version first released with CPC Construction, Plumbing and Services Training Package Version 4.0.

Performance Evidence

To demonstrate competency in this unit, a person must apply WHS requirements, policies and procedures on three separate and different occasions in the construction industry.

In doing this, the person must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- jurisdictional work health and safety (WHS) and environmental legislation and regulations
- workplace requirements for undertaking all aspects of applying WHS requirements, policies and procedures in the construction industry including interpreting work orders and reporting problems
- procedures and policies for identifying and reporting hazards, safety risks and hazardous materials, including asbestos, in the workplace
- procedures for following safe practices when dealing with hazards and hazardous materials, and controlling risks associated with them
- use of appropriate protective equipment and clothing, choice of tools, use of barricades and signage, and the necessity of following relevant safety procedures as indicated
- methods of safely performing tasks in accordance with legislative requirements and workplace policies and procedures
- procedures for reporting hazards, incidents and injuries
- necessity for keeping work site clear of risks to prevent accidents and to meet environmental requirements
- policies and procedures to be followed in an accident, fire or other type of emergency.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment. Tasks are to be performed to the level of proficiency and within the time limits expected in a workplace.

Assessors are responsible for ensuring that the person demonstrating competency has access to:

- appropriate documents, materials, tools, equipment and personal protective equipment currently used in industry
- requirements of appropriate sections of legislation and regulations
- relevant workplace policies and procedures.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

BSBSUS211 Participate in sustainable work practices

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to measure, support and find opportunities to improve the sustainability of work practices.

The unit applies to individuals, working under supervision or guidance, who are required to follow workplace procedures and instructions. These individuals work in an environmentally sustainable manner within scope of competency, authority and own level of responsibility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Business Competence – Sustainability

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Measure sustainable work practices	1.1 Identify sustainable work practices in own work role 1.2 Measure current usage of resources in own work role 1.3 Record and file resource usage documents 1.4 Identify resource inefficiencies from gathered information
2. Support sustainable work practices	2.1 Identify and comply with workplace sustainability procedures 2.2 Identify workplace environmental hazards according to environmental regulations and standards 2.3 Report any breaches and potential breaches to organisational personnel
3. Seek opportunities to	3.1 Identify areas of improvement to work practices in own work

ELEMENT	PERFORMANCE CRITERIA
improve sustainable work practices	<p>area</p> <p>3.2 Consult with colleagues and management to assess potential to improve sustainability of identified work practices</p> <p>3.3 Make suggestions for improvements to workplace practices in own work area</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Calculates basic metric measurements to determine resource usage
Reading	<ul style="list-style-type: none"> Recognises and interprets textual information to establish job requirements
Writing	<ul style="list-style-type: none"> Completes documents using required formats
Teamwork	<ul style="list-style-type: none"> Selects and uses appropriate conventions and protocols when communicating with co-workers in range of work contexts Collaborates and cooperates with others to achieve joint outcomes
Initiative and enterprise	<ul style="list-style-type: none"> Implements actions according to requirements, taking some responsibility for sequencing and timing of tasks Analyses current practices to identify opportunities for improvement
Self-management	<ul style="list-style-type: none"> Understands and adheres to legal and regulatory responsibilities related to own work
Technology	<ul style="list-style-type: none"> Uses main features and functions of digital tools to complete work tasks and access information

Unit Mapping Information

Supersedes and is equivalent to BSBSUS201 Participate in environmentally sustainable work practices.

Assessment Requirements for BSBSUS211 Participate in sustainable work practices

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- participate in at least three sustainable work practices.

In the course of the above, the candidate must:

- identify benefits of sustainable work practices and areas of improvement for sustainable practices in the workplace
- identify and apply sustainability legislation and organisational sustainability policies and procedures
- participate in and support discussions for improved resource efficiency processes
- identify, measure and document usage of resources
- collaborate with team members to develop suggestions for improving workplace sustainability practices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- environmental and resource hazards and risks
- Australian and international standards for corporate social sustainability
- sustainability regulations and codes of practice applicable to own role
- organisational sustainability policies and procedures
- reporting channels and procedures to report breaches and potential issues
- advantages of sustainable practices in the workplace.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- documentation, information and resources on workplace environmental and resource efficiency
- sustainability legislation, regulations and standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBSUS411 Implement and monitor environmentally sustainable work practices

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to analyse and implement improvements to the environmental sustainability of work practices and monitor their effectiveness.

The unit applies to individuals with responsibility for the practices of a specific work area or who lead a work group or team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Business Competence – Sustainability

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish sustainable work contexts	1.1 Identify and assess organisational compliance against environmental legislation, regulations and standards 1.2 Collect data on environmental efficiency in organisational systems and processes 1.3 Analyse data on environmental efficiency and current purchasing strategies and identify areas for improvement 1.4 Consult stakeholders and external data sources on sustainability best practice 1.5 Develop efficiency targets and methods to monitor outcomes
2. Implement sustainable	2.1 Identify and source tools to set efficiency targets

ELEMENT	PERFORMANCE CRITERIA
work practices	2.2 Implement and integrate efficiency targets with other operational activities 2.3 Support team members to identify possible areas for improved resource efficiency in work areas 2.4 Seek and act on feedback from stakeholders on implementation
3. Monitor performance of sustainable work practices	3.1 Assess outcomes using monitoring method developed 3.2 Document and communicate outcomes to key personnel and stakeholders 3.3 Identify changes required to targets and tools from strategies and improvement plans 3.4 Promote successful strategies in development of new efficiency targets

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Analyses numerical information to measure usage and calculates metric measurements, quantities and ratios and financial data using appropriate tools
Oral communication	<ul style="list-style-type: none"> Presents information and seeks advice using structure and language appropriate to audience Participates in discussions using listening and questioning to elicit the views of others and to clarify or confirm understanding
Reading	<ul style="list-style-type: none"> Identifies and analyses texts to determine legislative and regulatory requirements relevant to work area Reviews reported information to evaluate workplace strategies and improvement practices
Writing	<ul style="list-style-type: none"> Documents findings of investigations from written and oral sources according to organisational requirements Provides updates about progress using formats and language appropriate to the audience and context
Initiative and Enterprise	<ul style="list-style-type: none"> Identifies and follows legislative requirements and organisational policies and procedures associated with own role
Teamwork	<ul style="list-style-type: none"> Selects and uses appropriate conventions and protocols when communicating with internal and external stakeholders to seek or share information

Skill	Description
	<ul style="list-style-type: none"> Collaborates and consults with a range of stakeholders to achieve shared understanding of individual roles in meeting objectives
Planning and organising	<ul style="list-style-type: none"> Develops plans to manage routine and non-routine tasks for own work group with an awareness of how they contribute to the broader organisation Uses systematic, analytical processes to set environmental targets, gather relevant information, identify and evaluate alternative approaches Evaluates outcomes of decisions to identify opportunities for improvement
Technology	<ul style="list-style-type: none"> Uses the main features and functions of digital tools to complete work tasks and access information

Unit Mapping Information

Supersedes and is equivalent to BSBSUS401 Implement and monitor environmentally sustainable work practices.

Supersedes but is not equivalent to:

- BSBSUS402 Implement an environmental management plan
- BSBSUS403 Measure, monitor and reduce carbon emissions
- BSBSUS404 Assess, implement, monitor and report on waste management
- BSBSUS405 Assess, monitor and reduce water use
- BSBSUS406 Identify and apply sustainability rating tools.

Assessment Requirements for BSBSUS411 Implement and monitor environmentally sustainable work practices

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- implement and monitor at least three environmentally sustainable work practices.

In the course of the above, the candidate must:

- identify current procedures, practices and compliance requirements in relation to environmental and resource sustainability in the workplace
- engage and consult with relevant stakeholders to develop and implement sustainability improvements, encourage feedback and to report on outcomes
- plan and organise work group activities to:
 - measure current resource usage
 - evaluate alternative solutions to workplace environmental issues
 - resolve workplace sustainability issues and generate ideas for improvements
 - evaluate and implement strategies to improve resource usage
 - comply with environmental requirements
- apply continuous improvement approaches to enhance organisation's sustainability performance
- apply change management techniques to support sustainability performance.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- compliance requirements for the work area with reference to legislation, regulations, codes of practice and workplace procedures that relate to environmental and sustainability issues
- relevant internal and external sources of information for the development of efficiency targets
- benchmarks for environmental and resource sustainability relevant to organisation

- Australian and international standards for corporate social sustainability
- continuous improvement approaches for workplace practices
- resources for monitoring sustainable work practices including:
 - questionnaires and surveys
 - visual calculations
 - supply records and invoices
 - previous internal and external audit documents
- organisational systems and procedures that relate to environmental and resource sustainability improvements, including:
 - supply chain, procurement and costing strategies
 - quality assurance
 - recommendation development and seeking approvals
 - sales strategies and operations.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- environmental sustainability legislation, regulations, standards and codes
- workplace reference materials for environmental sustainability and practices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBTEC201 Use business software applications

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to select and use software and organise electronic information and data.

The unit applies to those who use a limited range of practical skills with a fundamental knowledge of equipment use and the organisation of data in a defined context, under direct supervision or with limited individual responsibility.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Digital Competence - Technology Use

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Select and prepare to use technology	1.1 Identify task purpose, audience, format and presentation requirements, and clarify with relevant personnel, where required 1.2 Select relevant technology and software applications to achieve requirements of the task 1.3 Adjust workspace, furniture and equipment to suit own ergonomic requirements
2. Input and process information or data	2.1 Identify and open application, according to task and organisational requirements 2.2 Enter information or data into application according to organisational requirements

ELEMENT	PERFORMANCE CRITERIA
	2.3 Ensure information or data is checked and amended according to organisational and task requirements 2.4 Format information or data using appropriate application functions according to organisational and task requirements 2.5 Use relevant help functions to overcome simple issues
3. Finalise and store document	3.1 Review and edit final information or data, and prepare for storage in accordance with organisational and task requirements 3.2 Name and store document and exit application

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Recognises and interprets information from familiar sources to determine job role and task requirements
Writing	<ul style="list-style-type: none"> Produces and amends files to meet task and organisational requirements Completes required documentation using organisational formats

Unit Mapping Information

Supersedes and is equivalent to:

- BSBITU211 Produce digital text documents
- BSBITU212 Create and use spreadsheets
- BSBWOR204 Use business technology.

Supersedes but is not equivalent to BSBCUE301 Use multiple information systems.

Assessment Requirements for BSBTEC201 Use business software applications

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- select and use at least three business software applications on two occasions each.

In the course of the above, the candidate must:

- select and use technology safely and according to organisational requirements
- identify and address faults according to requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key features of:
 - organisation's work health and safety requirements relevant to own role
 - organisation's requirements for file naming and storage
 - applications used for organising electronic information and data.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- workplace equipment and resources
- electronic files, information and data
- workplace documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBWHS513 Lead WHS risk management

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to lead the management of work health and safety (WHS) risks in an organisation. The unit includes facilitating the identification of hazards and potential hazards, leading the assessment of associated risks, selecting and implementing suitable risk controls, and evaluating the overall effectiveness of the organisational WHS risk management process. It involves communicating with stakeholders throughout the process.

The unit applies to those in an organisation who provide specialised knowledge and guidance to a range of personnel when leading the management of WHS risks.

NOTES

1. The terms ‘occupational health and safety’ (OHS) and ‘work health and safety’ (WHS) are equivalent, and generally either can be used in the workplace. In jurisdictions where *model WHS laws* have not been implemented, registered training organisations (RTOs) are advised to contextualise this unit of competency by referring to existing WHS legislative requirements.

2. The *model WHS laws* include the model WHS Act, model WHS Regulations and model WHS Codes of Practice. See Safe Work Australia for further information.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Regulation, Licensing and Risk – Work Health and Safety

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
----------	----------------------

ELEMENTS	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Facilitate identification of WHS risk management requirements	1.1 Identify and review internal and external sources of WHS information and data that apply to risk management processes 1.2 Identify legislative requirements for WHS risk management 1.3 Identify duty holders, individuals and/or parties to consult about and participate in risk management processes, according to organisational and legislative requirements 1.4 Identify and communicate roles and responsibilities of individuals and/or parties that impact on risk management 1.5 Identify organisation-specific factors that will impact on hazard identification, risk assessment and risk controls 1.6 Confirm that risk management scope is clearly defined according to organisational policies and procedures
2. Lead risk assessment	2.1 Lead hazard identification process according to organisational policies and procedures 2.2 Identify and document risk factors as they apply to identified hazards according to organisational policies and procedures 2.3 Apply knowledge of WHS laws, workplace WHS information and data, and identified hazards and risk factors to analyse and assess risk 2.4 Document risk assessment according to organisational policies and procedures, and legislative requirements 2.5 Communicate outcomes of risk assessment to required personnel according to organisational and legislative requirements
3. Lead risk control	3.1 Identify organisational risk control policies and procedures appropriate to identified hazards 3.2 Select suitable risk controls according to assessed level of risk, organisational WHS hazard and risk control policies and procedures, and WHS laws 3.3 Plan to implement selected risk controls according to organisation's WHS management system (WHSMS) and WHS information system (WHSIS) 3.4 Implement selected risk controls according to organisational policies and procedures

ELEMENTS	PERFORMANCE CRITERIA
	3.5 Document and communicate selected risk controls to required personnel, according to organisational and legislative requirements
4. Evaluate effectiveness of WHS risk management process	<p>4.1 Establish nature and scope of evaluation process and key performance indicators</p> <p>4.2 Review effectiveness of implemented risk management process according to organisation's WHSMS and legislative requirements</p> <p>4.3 Modify risk management process as required in response to evaluation</p> <p>4.4 Document risk management process according to WHSIS requirements</p> <p>4.5 Communicate evaluation findings according to organisational requirements</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Organises, analyses and integrates information from a range of sources
Writing	<ul style="list-style-type: none"> Documents results of investigations using clear and comprehensible language and layout
Oral Communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to clarify understanding of others' views Presents information with varying level of technical vocabulary to suit audience
Numeracy	<ul style="list-style-type: none"> Collates, interprets and compares mathematical and statistical information relevant to requirements
Navigate	<ul style="list-style-type: none"> Considers legal and regulatory

Skill	Description
the world of work	<p>responsibilities when implementing, monitoring or reviewing risk-management processes</p> <ul style="list-style-type: none"> Leads effective consultation and participation during all stages of WHS risk-management process
Interact with others	<ul style="list-style-type: none"> Identifies and uses appropriate conventions and protocols when communicating with others Plays a lead role in situations requiring effective collaboration skills, demonstrating the ability to guide discussions and outcomes
Get the work done	<ul style="list-style-type: none"> Develops plans or processes to manage WHS risk management tasks, with an awareness of how they contribute to operational and strategic goals Determines whether, and how, others should be involved, using consultative or collaborative processes as an integral part of the decision-making process Applies problem-solving processes to determine solutions to WHS risk management issues Uses analytical and lateral thinking to review practices and suggest improvements Uses a range of digitally-based technology and applications to access, organise and share relevant information in effective ways

Unit Mapping Information

Supersedes and is equivalent to BSBWHS503 Contribute to the systematic management of WHS risk.

Assessment Requirements for BSBWHS513 Lead WHS risk management

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- plan, implement and evaluate a systematic process for managing work health and safety (WHS) risk in a work area.

During the above, the candidate must:

- identify, interpret and apply information from a range of sources, including organisational and legislative requirements
- review WHS risk-management process according to established scope and key performance indicators
- consult effectively with required stakeholders using appropriate interpersonal communication skills.
-

Knowledge Evidence

The candidate must demonstrate the knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- commonwealth and state/territory WHS laws relating to WHS risk management, including WHS Acts, regulations, codes of practice and standards
- WHS information and data that applies to WHS risk-management process, including:
 - organisational and duty holder legal requirements
 - organisational policies and procedures relating to identifying hazards, assessing risks and implementing risk controls
 - key components of the work health and safety management system (WHSMS)
- internal and external sources of WHS information and data, and procedures for accessing them

- organisational behaviour and culture in relation to WHS risk management activities and their impact on WHS and the work team, including organisation's risk appetite
- key components of effective consultation and participation strategies
- tools and techniques to:
 - identify health and safety hazards
 - assess risks, taking into account nature and impact of risk, and likelihood of risk arising
 - identify and select suitable risk controls
 - facilitate effective communication and consultation processes, and identify key personnel related to communication
- application and limitations of techniques and tools for identifying hazards, and analysing and assessing risks
- hierarchy of control measures:
 - its use in establishing level of risk
 - factors limiting effectiveness of types of controls
 - role and limitations of procedural controls
 - use of personal protective equipment
- other functional areas in the organisation that impact on the management of WHS-related risks
- impact of workforce characteristics and composition on WHS risk and its management, including:
 - cultural background/diversity
 - gender
 - labour market changes
 - levels of language, literacy and numeracy skills in the workforce
 - workforce structure and organisation, including part-time, casual and contract workers, shift rosters and geographical location
 - workers with specific support needs and limitations
 - workplace cultural attitudes towards alcohol and other drug use
- principles of decision-making.
-

Assessment Conditions

Assessment must comply with WHS laws, legal responsibilities and duty of care required for this unit. It must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities undertaken by individuals carrying out WHS duties in the workplace, and must include access to:

- workplace equipment and resources
- WHS laws, and organisational policies and procedures required to demonstrate the performance evidence
- case studies and, where possible, real situations
- opportunities for interaction with others.

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

BSBWHS516 Contribute to developing, implementing and maintaining an organisation's WHS management system

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to contribute to the development, implementation and maintenance of elements of a work health and safety management system (WHSMS). WHSMSs support organisations in systematically managing work health and safety (WHS) in the workplace. WHSMSs consist of a documented set of plans, actions and procedures that target improvements.

The unit applies to those with organisational responsibilities for contributing to tasks in relation to elements of a WHSMS appropriate to the nature and scale of the organisation and its WHS risks. These people will have supervisory responsibilities, work in a range of WHS roles across all industries, and apply a substantial knowledge base and well-developed skills in a wide variety of WHS contexts.

NOTES

1. The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) are equivalent, and generally either can be used in the workplace. In jurisdictions where *model WHS laws* have not been implemented, registered training organisations (RTOs) are advised to contextualise this unit of competency by referring to existing WHS legislative requirements.
2. The *model WHS laws* include the model WHS Act, model WHS Regulations and model WHS Codes of Practice. See Safe Work Australia for further information.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Regulation, Licensing and Risk – Work Health and Safety

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Contribute to developing WHSMS	1.1 Access and analyse sources of information to determine required form, content, purposes and functions of WHSMS 1.2 Identify duty holders and their roles and responsibilities in WHSMS, according to WHS laws 1.3 Document organisational WHSMS that meets legal and organisational requirements 1.4 Consult with individuals and parties about what the WHSMS should include and integrate their feedback as required 1.5 Communicate information about WHSMS to required personnel
2. Contribute to developing WHSMS implementation plan	2.1 Identify key components of plan that meet legal and organisational requirements 2.2 Facilitate and support consultation with, and participation of, required personnel in plan development 2.3 Contribute to developing draft plan according to organisational policies and procedures 2.4 Seek feedback on draft plan 2.5 Finalise and record plan according to organisational policies and procedures
3. Support implementation of WHSMS	3.1 Consult with colleagues on WHSMS implementation and agree on required timeframe and resources 3.2 Communicate benefits of WHSMS and agree on management roles and responsibilities in supporting its implementation 3.3 Identify and address potential barriers to WHSMS implementation according to organisational policies and procedures
4. Contribute to measuring and evaluating WHSMS performance	4.1 Communicate requirements for measuring and evaluating WHSMS performance to required personnel according to organisational requirements 4.2 Facilitate and support consultation with, and participation of, required personnel in measuring and

ELEMENTS	PERFORMANCE CRITERIA
	evaluating WHSMS performance 4.3 Evaluate WHSMS performance outcomes according to established protocols 4.4 Analyse and document outcomes of evaluation process
5. Contribute to review of WHSMS	5.1 Gather and analyse required review documentation according to organisational policies and procedures 5.2 Facilitate and support consultation with, and participation of, required personnel to identify opportunities to improve WHSMS 5.3 Contribute to identifying required changes to WHSMS 5.4 Contribute to adjusting WHSMS as required according to organisational policies and procedures 5.5 Seek approval of updated WHSMS from required personnel 5.6 Distribute information about approved updated WHSMS according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identifies, interprets and critically analyses texts in relation to WHSMS information and WHSMS review documentation
Writing	<ul style="list-style-type: none"> Matches style of writing to purpose and audience in consulting, developing and communicating WHSMS and WHS policy Uses appropriate layout, vocabulary, grammatical structure and conventions in consulting, developing and communicating WHSMS and WHS policy
Oral communication	<ul style="list-style-type: none"> Presents information about WHSMS and WHS policy using structure and language appropriate to the audience Uses questions and active listening to extract main ideas, gather information and feedback, and seek and offer opinions
Numeracy	<ul style="list-style-type: none"> Selects from and applies an expanding range of mathematical and problem-solving strategies in relation to WHSMS measurement and evaluation

Skill	Description
Navigate the world of work	<ul style="list-style-type: none">• Accepts responsibility for developing, implementing or modifying workplace policies and procedures applicable to WHSMS• Keeps up to date on changes to WHS laws and regulations relevant to own role and responsibilities, and considers their implications when negotiating, planning and undertaking work
Interact with others	<ul style="list-style-type: none">• Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction
Get the work done	<ul style="list-style-type: none">• Sequences and schedules activities, monitors implementation and manages relevant communication in relation to WHSMS planning• Uses systematic and analytical processes in non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against agreed criteria in review and evaluation of WHSMS• Uses digital systems and tools in the context of plan implementation and measurement, and evaluation of WHS performance

Unit Mapping Information

Supersedes and is equivalent to BSBWHS506 Contribute to developing, implementing and maintaining WHS management systems.

Assessment Requirements for BSBWHS516 Contribute to developing, implementing and maintaining an organisation's WHS management system

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- contribute to developing, implementing, reviewing and improving a work health and safety management system (WHSMS) for an organisation.

During the above, the candidate must:

- communicate and explain the WHSMS and associated implementation plan to others to facilitate their contribution and ensure their commitment to the system
- apply effective consultation and communications processes and protocols
- use suitable and sufficient tools to measure and evaluate WHSMS performance.
-

Knowledge Evidence

The candidate must demonstrate the knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- commonwealth and state/territory WHS laws, guidance material and publications relating to developing and implementing WHSMS
- organisational requirements for WHSMS:
 - commitment from line management and supervisors to provide leadership in WHS and prioritise WHS as part of operational planning and activity
 - compliance with required policies, procedures, processes, and tools
 - requirements for recordkeeping that address WHS, privacy and other relevant legislation
- elements of effective WHSMS with reference to required commonwealth and state/territory WHS Acts, regulations, codes of practice and standards, including:
 - policies and procedures

- WHSMS certification standards
- duty holders and their responsibilities
- consultation and communication arrangements
- required training and induction
- WHS risk assessment, including risk controls
- sources of information to determine required form, content, purposes and functions of WHSMS to be developed and implemented
- key components of WHSMS plan:
 - required resources to implement plan within set timeframes
 - management roles and responsibilities in supporting WHSMS implementation and operation
 - roles and responsibilities of individuals and parties under WHS laws
 - procedures, protocols and tools for measuring WHS performance, including WHS-related lead and lag key performance indicators (KPIs)
- barriers to implementing WHSMS, and strategies to address them
- benefits to an organisation of having a WHSMS, and an integrated return-to-work and injury management program
- instruments issued by WHS regulators and how they apply to the organisation
- duties, rights and obligations of individuals and parties under WHS laws.
-

Assessment Conditions

Assessment must comply with WHS laws, legal responsibilities and duty of care required for this unit. It must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities undertaken by individuals carrying out WHS duties in the workplace, and must include access to:

- workplace equipment and resources
- WHS laws, and organisational policies and procedures required to demonstrate the performance evidence
- case studies and, where possible, real situations
- opportunities for interaction with others.

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

BSBWRT411 Write complex documents

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to plan, draft and finalise complex documents.

The unit applies to individuals who work in a range of business environments and are skilled in the creation of documents that are more complex than basic correspondence, memos and/or forms and that require review and analysis of a range of information sources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Social Competence – Written Communication

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan complex document	1.1 Determine audience, purpose and requirements of document according to organisation policies and procedures 1.2 Determine required format, style and structure for document 1.3 Establish method of communication 1.4 Develop content overview of document 1.5 Determine categories and logical sequence of information according to proposed structure, content and document requirements
2. Draft complex document	2.1 Confirm information is cohesive and satisfies document purpose and requirements 2.2 Develop draft document to communicate data, information and

ELEMENT	PERFORMANCE CRITERIA
	<p>knowledge according to organisational policies and procedures</p> <p>2.3 Identify gaps in required data, information and knowledge, and collect additional material from relevant sources, if required</p> <p>2.4 Draft text according to document purposes and requirements</p>
3. Finalise complex document	<p>3.1 Review draft text and confirm document purpose and requirements are met</p> <p>3.2 Check grammar, spelling and style for accuracy and punctuation</p> <p>3.3 Confirm draft text is approved by relevant organisation personnel</p> <p>3.4 Review and incorporate any amendments in final copy</p> <p>3.5 Apply basic design elements for document appropriate to audience and purpose</p> <p>3.6 Check document and confirm all requirements are met</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets a variety of text to determine and confirm task requirements Proofreads document checking for grammar, spelling, structure, and suitability of style and format for audience
Oral Communication	<ul style="list-style-type: none"> Uses listening and questioning skills to seek additional information or confirmation of task completion
Self-management	<ul style="list-style-type: none"> Follows accepted communication practices and protocols when seeking information or feedback from others Takes responsibility for planning, sequencing and prioritising tasks to achieve required outcomes
Technology	<ul style="list-style-type: none"> Uses the main features and functions of digital tools to complete work tasks

Unit Mapping Information

Supersedes and is equivalent to BSBWRT401 Write complex documents.

Assessment Requirements for BSBWRT411 Write complex documents

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan, draft and finalise three different complex documents that convey the required information in a format suitable for the intended audience and purpose according to organisational policies and procedures for document production.

In the course of the above, the candidate must:

- review and analyse a range of information sources
- use business technology to apply formatting and incorporate graphics
- apply organisation style guide/house style.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisation style guide/house style
- format and its impact on readability, cohesion and appearance of document
- categories and logical sequences of information
- rules and conventions for written English
- key features of word processing software
- key features of written communication methods, including:
 - general emails
 - procedures
 - business letters
 - meeting agendas
- organisational policies and procedures relating to written communication
- process for checking:
 - suitability of document for audience, purpose, format, and structure

- grammar, spelling and style for accuracy and punctuation
- key text elements including basic design elements.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- office equipment and resources
- organisational policies and procedures
- organisational style guides.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

CHCDIV001 Work with diverse people

Modification History

Release	Comments
Release 1	<p>This version was released in <i>CHC Community Services Training Package release 2.0</i> and meets the requirements of the 2012 Standards for Training Packages.</p> <p>Merged HLTHIR403C/CHCCS405C. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency.</p>

Application

This unit describes the skills and knowledge required to work respectfully with people from diverse social and cultural groups and situations, including Aboriginal and/or Torres Strait Islander people.

This unit applies to all workers.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Elements and Performance Criteria

ELEMENT

Elements define the essential outcomes

1. Reflect on own perspectives

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element

1.1 Identify and reflect on own social and cultural perspectives and biases

1.2 Work with awareness of own limitations in self and social awareness

1.3 Use reflection to support own ability to work inclusively and with understanding of others

ELEMENT**PERFORMANCE CRITERIA**

Elements define the essential outcomes

Performance criteria describe the performance needed to demonstrate achievement of the element

- 1.4 Identify and act on ways to improve own self and social awareness

2. Appreciate diversity and inclusiveness, and their benefits
 - 2.1 Value and respect diversity and inclusiveness across all areas of work
 - 2.2 Contribute to the development of work place and professional relationships based on appreciation of diversity and inclusiveness
 - 2.3 Use work practices that make environments safe for all

3. Communicate with people from diverse backgrounds and situations
 - 3.1 Show respect for diversity in communication with all people
 - 3.2 Use verbal and non-verbal communication constructively to establish, develop and maintain effective relationships, mutual trust and confidence
 - 3.3 Where a language barrier exists, use effective strategies to communicate in the most efficient way possible
 - 3.4 Seek assistance from interpreters or other persons according to communication needs

4. Promote understanding across diverse groups
 - 4.1 Identify issues that may cause communication misunderstandings or other difficulties
 - 4.2 Where difficulties or misunderstandings occur, consider the impact of social and cultural diversity
 - 4.3 Make an effort to sensitively resolve differences, taking account of diversity considerations
 - 4.4 Address any difficulties with appropriate people and seek assistance when required

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for CHCDIV001 Work with diverse people

Modification History

Release	Comments
Release 1	<p>This version was released in <i>CHC Community Services Training Package release 2.0</i> and meets the requirements of the 2012 Standards for Training Packages.</p> <p>Merged HLTHIR403C/CHCCS405C. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency.</p>

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- undertaken a structured process to reflect on own perspectives on diversity
- recognised and respected the needs of people from diverse social and cultural backgrounds in at least 3 different situations:
 - selected and used appropriate verbal and non verbal communication
 - recognised situations where misunderstandings may arise from diversity and formed appropriate responses

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- concepts of cultural awareness, cultural safety and cultural competence and how these impact different work roles
- concepts and definitions of diversity
- own culture and the community attitudes, language, policies and structures of that culture and how they impact on different people and groups
- features of diversity in Australia and how this impacts different areas of work and life:
 - political
 - social
 - economic

- cultural
- legal and ethical considerations (international, national, state/territory, local) for working with diversity, how these impact individual workers, and the consequences of breaches:
 - discrimination:
 - age
 - disability
 - racial
 - sex
 - human rights:
 - *Universal declaration of human rights*
 - relationship between human needs and human rights
 - frameworks, approaches and instruments used in the workplace
 - rights and responsibilities of workers, employers and clients, including appropriate action when rights are being infringed or responsibilities not being carried out
- key areas of diversity and their characteristics, including:
 - culture, race, ethnicity
 - disability
 - religious or spiritual beliefs
 - gender, including transgender
 - intersex
 - generational
 - sexual orientation/sexual identity - lesbian, gay, bisexual, heterosexual
- key aspects, and the diversity, of Australia's Aboriginal and/or Torres Strait Islander cultures, including:
 - social, political and economic issues affecting Aboriginal and/or Torres Strait Islander people
 - own culture, western systems and structures and how these impact on Aboriginal and/or Torres Strait Islander people and their engagement with services
- potential needs of marginalised groups, including:
 - protective factors
 - physical, mental and emotional health issues/care needs
 - consideration of impacts of discrimination, trauma, exclusion and negative attitudes
- resources that support individuals and organisations to embrace and respond to diversity
 - language and cultural interpreters
 - imagery
- influences and changing practices in Australia and their impact on the diverse communities that make up Australian society
- impact of diversity practices and experiences on personal behaviour, interpersonal relationships, perception and social expectations of others

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions. Where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources.

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

CPPACC6002A Apply performance-based codes and risk management principles to assessing buildings for access

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit specifies the competency required to apply performance-based codes, and risk assessment and risk management principles to accessibility features of buildings. It covers the comparison of proposed alternative solutions to the prescriptive Deemed-to Satisfy (DTS) requirements of the building legislation for the accessibility of building developments. It includes the evaluation of existing common law decisions for assessing risks associated with building development.

The assessment results in the preparation of a report describing the suitability of the proposed Alternative Building Solution to the provision of access and its usability by people with disabilities.

The unit requires the ability to communicate with members of the building industry on the interpretation and implementation of the Disability Discrimination Act (DDA), the DDA Premises Standard and the Building Code of Australia (BCA).

The access consultant may either work alone or as a member of a team.

This unit is based on BCGSV6009A Implement performance based codes and risk management principles for buildings up to 3 storeys.

Application of the Unit

Application of the unit

This unit of competency supports the access consulting service of serving on a BCA Access Panel. It involves the application of analysis, planning and evaluation to complex technical issues.

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Not Applicable

Employability Skills Information

Employability skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

1 Evaluate performance-based codes.

2 Apply the performance-based codes.

PERFORMANCE CRITERIA

1.1 The role of the regulation of buildings and the built environment within society is identified and applied.

1.2 Societal goals related to the construction and use of buildings are interpreted.

1.3 The hierarchy of commonwealth, state and territory ***building access legislation*** and the role of BCA Objectives, Functional Statements and Performance Requirements are identified and recorded.

1.4 Differences between public policy and professional judgement are identified and recorded.

2.1 Assessment methods pertaining to access contained in the BCA and their application are identified and applied.

2.2 Methodologies for determining correct performance requirements to be satisfied are applied.

2.3 Processes for involving relevant parties in the decision-making process are determined.

2.4 Impacts of a performance-based solution on building maintenance and alterations are identified and documented.

2.5 Assessment report for the proposed performance-based solution is prepared.

ELEMENT

PERFORMANCE CRITERIA

- 2.6 All documentation and records used in evaluating the proposed performance-based solution are retained for future reference and retrieval.
- 3 Conduct a risk assessment.**
- 3.1 Assessment methods pertaining to access contained in the BCA and their application are identified and applied.
- 3.2 Methodology for determining correct performance requirements to be satisfied is applied.
- 3.3 Methodology for determining and assessing risks is identified and applied.
- 3.4 Research data sources for risk assessment and management are identified and applied.
- 3.5 Consequences of various forms of risk are identified and reported.
- 3.6 Basic probabilistic analysis, including use of event trees, is applied in accordance with risk assessment principles.
- 3.7 Statistics used in risk assessment practices are interpreted.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

Required knowledge and understanding include:

- anthropometric principles of accessible building design and fitout
- commonwealth, state and territory anti-discrimination legislation and regulations
- commonwealth, state and territory Heritage Acts
- Deemed-to-Satisfy provisions
- design, structural and construction principles of buildings
- disability awareness
- environmental issues impacting on material selection
- ergonomic principles
- industry codes of practice and ethics
- international standards on building access
- limitations of work role, responsibility and professional abilities
- nature of building materials and effect of performance

- occupational health and safety (OHS) policies and procedures
- processes for interpreting reports, working drawings and specifications
- processes for recording data, administering records and preparing reports
- relevant commonwealth, state and territory building and other legislation, local government regulations and Australian standards
- research methodology and analytical processes
- risk management methodology appropriate for buildings and the built environment
- risk management principles
- role, responsibilities and powers of building certifiers
- state and territory Planning and Development Acts
- relevant terminology and definitions in hazard identification.

Required skills and attributes include:

- analytical skills to:
 - analyse, evaluate and apply legislative requirements pertaining to disability access
 - analyse and evaluate the impacts of the full range of disabilities and the limitations that each disability places on the individual's ability to access the environment
 - analyse and evaluate how environmental barriers impact on people with disabilities
 - evaluate the proposed Alternative Building Solution
 - assess risks associated with the proposed Alternative Building Solution
- application skills to:
 - apply relevant anti-discrimination and building legislation
 - apply industry building codes of practice and ethics and other legislative requirements to work processes
 - apply disability awareness to work processes
 - apply current Australian and international building codes, standards, regulations and practices
- communication skills to:
 - explain clearly information on issues and legislation relating to the provision of access
 - consult effectively with clients and colleagues
 - impart knowledge and ideas through oral, written and visual means
 - use workplace equipment and communication methods
- literacy skills to:
 - assess and use workplace information
 - read and interpret plans, specifications and structural drawings
 - read and use anatomical and medical terminology
 - read and use building and construction terminology
- organisational skills to:
 - prepare and manage documentation
 - collect, store and retrieve data
- interpersonal skills to:

- relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities
- seek and obtain information in a sensitive and appropriate manner
- facilitate change for greater awareness of disability access
- analyse own work practices and process outcomes critically
- engage colleagues and share disability access knowledge
- adapt to new workplace situations
- research skills to:
 - initiate searches for information relevant to assessing Alternative Building Solutions
 - source, analyse and evaluate building legislative requirements
 - source, analyse and evaluate legislative requirements for the provision of access.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment

- This unit of competency could be assessed on its own or as part of an integrated assessment activity involving other competencies relevant to the job function.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- A person who demonstrates competency in this unit must be able to provide evidence of:
 - recognising the needs and desires of people with disabilities to engage fully in all aspects of society, and their right to do so
 - interpreting accurately the impacts of the full range of disabilities and the limitations that each disability places on the individual's ability to access the environment
 - interpreting accurately how the full range of environmental barriers impact on any of the impairments that people with disabilities might have
 - applying disability awareness to the provision of access for people with disabilities
 - interpreting and applying the BCA hierarchy and the Objectives, Functional Statements and Performance Requirements when evaluating

performance-based designs

- selecting and applying suitable assessment methods for determining correct performance requirements
- selecting and applying suitable risk assessment methods in evaluating performance-based designs
- researching and referring to recognised national and international data sources and publications on access issues
- interpreting the financial and social costs and benefits of Building Upgrade Plans and maintenance activities to provide access
- complying with OHS regulations applicable to workplace operations
- reporting the determination of compliance within the context of relevant legislation, BCA and Australian standards
- applying organisational management policies and procedures, including quality assurance requirements.

Context of and specific resources for assessment

- Resource implications for assessment include:
 - a registered provider of assessment services
 - competency standards
 - assessment materials and tools
 - suitable assessment venue/equipment
 - workplace documentation
 - candidate special requirements
 - cost and time considerations.
- Validity and sufficiency of evidence requires that:
 - competency will need to be demonstrated over a period of time reflecting the scope of the role
 - where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision of competence only taken at the point when the assessor has complete confidence in the person's competence
 - all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence
 - where assessment is for the purpose of recognition (RCC/RPL), the evidence provided will need to be current and show that it represents competency

demonstrated over a period of time

- assessment can be through simulated project-based activity and must include evidence relating to each of the elements in this unit.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Building access legislation may include:

- Australian standards
- DDA
- DDA Premises Standard
- DDA Transport Standard
- BCA
- state and territory building legislation
- commonwealth, state and territory anti-discrimination legislation and regulations

local government regulations.

Unit Sector(s)

Unit sector

Access consulting

CPPACC6003A Apply unjustifiable hardship principles to Alternative Building Solutions for access

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit specifies the competency required to apply the principles of unjustifiable hardship to the legislative requirements for existing buildings undergoing building work. It requires an assessment of any unjustifiable hardship component of a proposed Building Upgrade Plan, Alternative Building Solution or application for an exception from a requirement of the Building Code of Australia (BCA).

The assessment is tested against the principles of unjustifiable hardship as set out in the Process to Administer Access to Buildings (The Protocol) and the Disability Discrimination Act (DDA) Premises Standard. The assessment may result in the preparation of a report describing the processes for reaching approval of the proposed alternative solution or application for exception.

The unit requires the ability to communicate with members of the state or territory Access Panel on the interpretation and implementation of the DDA, the DDA Premises Standard, the BCA and The Protocol.

The access consultant may either work alone or as a member of a team.

Application of the Unit

Application of the unit

This unit of competency supports the access consulting service of serving on a BCA Access Panel. It involves the application of analysis, planning and evaluation to complex technical issues.

ELEMENT

the assessment of the Alternative Building Solution.

4 Apply unjustifiable hardship principles to the assessment of the application for exception from a requirement of the BCA.

PERFORMANCE CRITERIA

to the Deemed-to-Satisfy provisions of the relevant legislative requirements is assessed.

3.2 A technical assessment of the issues identified in the application for Alternative Building Solution is conducted in accordance with the Process to Administer Access to Buildings.

3.3 The ability of the Alternative Building Solution to provide access is assessed in accordance with unjustifiable hardship considerations.

3.4 Unjustifiable hardship considerations are assessed and the findings are documented in accordance with the objectives of the DDA and state and territory anti-discrimination legislation.

4.1 The issues nominated in the proposal as preventing the provision of access are identified.

4.2 A technical assessment of the issues identified in the application for exception is conducted in accordance with the Process to Administer Access to Buildings.

4.3 The validity of the issues presented in the application for exception from a requirement of the BCA is assessed against unjustifiable hardship considerations.

4.4 Unjustifiable hardship decisions are assessed and the findings are documented in accordance with the objectives of the DDA and state and territory anti-discrimination legislation.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

Required knowledge and understanding include:

- anthropometric principles of accessible building design and fitout
- commonwealth, state and territory anti-discrimination legislation and regulations
- commonwealth, state and territory Heritage Acts
- design, structural and construction principles of buildings
- disability awareness
- environmental issues impacting on material selection
- ergonomic principles

- functional systems of the human body
- industry codes of practice and ethics
- international standards on building access
- limitations of work role, responsibility and professional abilities
- nature of building materials and effect of performance
- occupational health and safety (OHS) policies and procedures
- processes for interpreting reports, working drawings and specifications
- processes for recording data, administering records and preparing reports
- relevant commonwealth, state and territory building legislation, local government regulations and Australian standards
- research methodology and analytical processes
- role, responsibilities and powers of building certifiers
- state and territory Planning and Development Acts
- relevant terminology and definitions in hazard identification.

Required skills and attributes include:

- analytical skills to:
 - analyse, evaluate and apply legislative requirements pertaining to disability access
 - analyse and evaluate the impacts of the full range of disabilities and the limitations that each disability places on the individual's ability to access the environment
 - analyse and evaluate how environmental barriers impact on people with disabilities
 - apply unjustifiable hardship principles to arguments presented in applications for an exception to a requirement of the BCA
 - interpret and analyse routine and non-routine situations to establish suitable methods of reporting
- application skills to:
 - apply relevant anti-discrimination and building legislation
 - apply industry building codes of practice and ethics and other legislative requirements to work processes
 - apply disability awareness to work processes
 - apply current Australian and international building codes, standards, regulations and practices
- communication skills to:
 - discuss unjustifiable hardship principles, their interpretation and application
 - seek alternative advice from other experts within own field
 - seek advice from experts in areas outside own expertise
- literacy skills to:
 - assess and use workplace information
 - read and interpret plans, specifications and structural drawings
 - read and use anatomical and medical terminology
 - read and use building and construction terminology

- read and comprehend case documentation associated with claims for unjustifiable hardship
- organisational skills to:
 - confirm that all relevant case documentation is provided
 - research, reference, store and retrieve data for use in decision-making processes
- interpersonal skills to:
 - relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities
 - seek and obtain information in a sensitive and appropriate manner
 - facilitate change for greater awareness of disability access
 - analyse own work practices and process outcomes critically
 - engage colleagues and share disability access knowledge
 - adapt to new workplace situations
- personal attributes relating to:
 - impartiality
 - fairness
 - independence
 - objectivity
 - confidentiality
 - respect
- research skills to:
 - initiate searches for information relevant to claims for unjustifiable hardship
 - source, analyse and evaluate building legislative requirements
 - source, analyse and evaluate legislative requirements for the provision of access
- technical skills to:
 - participate in decision-making processes.
 -

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment

- This unit of competency could be assessed on its own or as part of an integrated assessment activity involving other competencies relevant to the job function.

Critical aspects for assessment and evidence required to demonstrate

- A person who demonstrates competency in this unit must be able to provide evidence of:
 - recognising the needs and desires of people with

competency in this unit

disabilities to engage fully in all aspects of society, and their right to do so

- interpreting accurately the impacts of the full range of disabilities and the limitations that each disability places on the individual's ability to access the environment
- interpreting accurately how the full range of environmental barriers impact on any of the impairments that people with disabilities might have
- applying disability awareness to the provision of access for people with disabilities
- interpreting and applying the unjustifiable hardship provisions of the BCA to Building Upgrade Plans, Alternative Building Solutions and applications for exception from a requirement of the BCA
- conducting a technical assessment of Building Upgrade Plans, Alternative Building Solutions and applications for exception in accordance with the Process to Administer Access to Buildings (The Protocol)
- complying with OHS regulations applicable to workplace operations
- reporting assessment findings within the context of the relevant legislation, BCA and Australian standards
- applying organisational management policies and procedures, including quality assurance requirements.

Context of and specific resources for assessment

- Resource implications for assessment include:
 - a registered provider of assessment services
 - competency standards
 - assessment materials and tools
 - suitable assessment venue/equipment
 - workplace documentation
 - candidate special requirements
 - cost and time considerations.
- Validity and sufficiency of evidence requires that:
 - competency will need to be demonstrated over a period of time reflecting the scope of the role
 - where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at

different points in time and separated by further learning and practice with a decision of competence only taken at the point when the assessor has complete confidence in the person's competence

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence
- where assessment is for the purpose of recognition (RCC/RPL), the evidence provided will need to be current and show that it represents competency demonstrated over a period of time
- assessment can be through simulated project-based activity and must include evidence relating to each of the elements in this unit.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Building Upgrade Plan means:

- a plan for upgrading the accessibility of an existing building over time.

Alternative Building Solution means:

- a building solution that complies with BCA performance requirements, other than by reason of satisfying the Deemed-to-Satisfy provisions.

An ***application for exception from a requirement of the BCA*** refers to:

- a process under the Building Access Regulatory Compliance Process that allows applicants to seek an exception from a requirement of the BCA.

Legislative requirements may include:

- DDA
- commonwealth, state and territory anti-discrimination legislation and regulations
- DDA Premises Standard
- BCA
- Australian standards
- international codes and standards

Unjustifiable hardship considerations may include:

- Process to Administer Access to Buildings (The Protocol).
- the financial viability of a project
- the involvement of public funds in the building work
- the extent of the benefit from providing access
- the significance of any heritage value of features in a building that may be affected by the provision of access
- technical limits
- topographical restrictions or other site constraints
- any relevant safety or health factors
- the requirements of other legislation.

Access consulting

CPPBDN5101 Produce digital 3-D models of building designs

Modification History

Release 1 This version first released with CPP Property Services Training Package Release 11.0.

Supersedes and is equivalent to CPPBDN5012A Produce and present 3-D models of small-scale building designs. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to produce three-dimensional (3-D) models for small-scale building design projects involving residential projects and commercial or industrial projects up to 2,000m² floor area and buildings of Type B and C construction, as defined in the National Construction Code (NCC).

This unit is suitable for drafters and building designers who apply technical and theoretical knowledge and skills to building design work tasks.

This unit forms part of the licensing requirements for people engaged in building design in some states and territories. For further information, check with the relevant regulatory authority.

Pre-requisite Unit

Nil.

Unit Sector

Building Design

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|------------------------------------|-----|--|
| 1 Set up and manage digital files. | 1.1 | Create, name, save and retrieve files for digital 3-D models of small-scale building design project. |
| | 1.2 | Import digital drawing files using appropriate file transfer protocols. |

	1.3	Use appropriate file transfer protocols to export and transfer files in required formats for client and consultant use.
2 Create digital 3-D models of building design.	2.1	Access sources of customised architectural objects for digital 3-D models.
	2.2	Operate 3-D modelling functions of design software to create 3-D model and additional objects.
	2.3	Apply architectural objects to 3-D models to meet project requirements.
3 Produce 3-D model presentation.	3.1	Manipulate 3-D models to create a range of views.
	3.2	Apply dimensions and notations to views as required.
	3.3	Check 3-D models for accuracy, completeness, quality and compliance.
	3.4	Select and apply presentation styles and display controls according to project and workplace requirements.
	3.5	Save and file 3-D models according to workplace requirements.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- reading skills to interpret:
 - complex technical information and instructions in software manuals
 - and apply compliance requirements and drawing standards to 3-D models
- numeracy skills to calculate dimensions and scales for models.

Unit Mapping Information

Supersedes and equivalent to CPPBDN5012A Produce and present 3-D models of small-scale building designs.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=6f3f9672-30e8-4835-b348-205dfcf13d9b>

Assessment Requirements for CPPBDN5101 Produce digital 3-D models of building designs

Modification History

Release 1 This version first released with CPP Property Services Training Package Release 11.0.

Supersedes and is equivalent to CPPBDN5012A Produce and present 3-D models of small-scale building designs. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by producing digital 3-D models of two different building designs. Designs must include:

- one residential project
- one commercial or industrial project of up to 2,000m² floor area.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- relevant legislation, codes and standards
- workplace and building design project requirements
- client requirements for building design
- architectural styles:
 - terminology
 - objects
 - views
 - notation
- building design data
- contextual and site constraints
- design drawing and representation methods
- functions and operation of 3-D modelling software programs including display controls.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations. Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting where these skills and knowledge would be performed. This includes access to:

- technical references and software manuals
- computer with internet access, 3-D modelling and portable document format software.

CPPCMN2002 Participate in workplace safety arrangements

Modification History

Release	Comment
Release 1	This version first released with CPP Property Services Training Package Version 5.0.

Application

This unit of competency specifies outcomes required to participate in predetermined workplace safety arrangements in a range of workplace contexts.

The unit applies to personnel who participate in workplace safety arrangements in a cleaning work context. It includes identifying workplace hazards, basic knowledge, and application of workplace emergency procedures.

It applies to individuals who perform their duties alone or in a team environment, under routine supervision and without supervisory responsibilities.

No licensing, legislative or certification requirements apply to this Unit at the time of publication.

Pre-requisite Unit

Cleaning Operations

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the	Performance criteria describe the performance

essential outcomes.		needed to demonstrate achievement of the element.	
1.	Identify and report workplace hazards.	1.1	Assess work area and identify workplace hazards.
		1.2	Assess workplace hazards and work restrictions affecting completion of work order.
		1.3	Communicate and clarify issues with supervisor, team member or client.
		1.4	Refer to Safety Data Sheets (SDS) and follow safe work methods.
		1.5	Position safety signage and barriers to control hazards.
2.	Follow workplace WHS procedures.	2.1	Follow work health and safety (WHS) legislation requirements in accordance with workplace procedures.
		2.2	Participate in WHS workplace practices within scope of own role and responsibilities.
		2.3	Actively follow emergency procedures as required by workplace standards.
		2.4	Complete workplace safety checklist.

Foundation Skills

This section describes language, literacy, numeracy, and employment skills that are essential to the performance in this unit, but not explicit in the performance criteria.

Skill	Performance Feature
Reading skills to:	<ul style="list-style-type: none"> ▶ Interpret workplace safety procedures ▶ Interpret Safety Data Sheets (SDS) ▶ Interpret workplace signs and safety plans
Oral communication skills	<ul style="list-style-type: none"> ▶ Report workplace hazards

to:	▶ Clarify safety issues and procedures
Learning skills to:	▶ Locate information in workplace documents, manuals, and labels
Writing skills to:	▶ Complete workplace reports

Assessment Requirements for CPPCMN2002 Participate in workplace safety arrangements

Modification History

Release	Comment
Release 1	This version first released with CPP Property Services Training Package Version 5.0.

Performance Evidence

A person who demonstrates competency in this unit must participate in two different workplace safety arrangements.

Performance must include:

- communicating effectively with supervisors;
- understanding workplace safety procedures;
- applying basic safety principles in the workplace; and
- assessing and controlling workplace risks.

Knowledge Evidence

A person demonstrating competency in this unit must identify:

- cleaning workplace safety policies and procedures, WHS standards, supervisory instructions relating to safety measures and PPE.
- workplace hazards and risk control measures in cleaning workplaces, including:
 - equipment and material use, storage, cleaning and disposal procedures
 - range and meaning of workplace safety signs and symbols
 - site safety plan
 - types and purpose of personal protective equipment (PPE)
 - ways to maintain WHS in emergency situations
- workplace requirements for undertaking all aspects of workplace safety arrangements tasks including:
 - key workplace safety policies and procedures,
 - work health and safety standards,
 - supervisory instructions relating to safety measures and PPE.

- workplace procedures for;
 - basic assessment of cleaning work areas for workplace hazards
 - basic health and safety including:
 - emergency response and evacuation procedures
 - injury, dangerous occurrence and incident reporting
 - reporting workplace hazards
- communicating and clarifying work requirements with supervisor, team members or client
-

Assessment Conditions

As a minimum, assessors must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment of performance must be undertaken in the workplace and/or under realistic workplace conditions which reflect:

- cleaning workplace safety policies and procedures, WHS standards, supervisory instructions relating to safety measures and PPE.
- performing tasks/activities to the level of proficiency and within timelines that would be expected in a workplace; and
- following standard and authorised work practices, safety requirements and environmental constraints.

Assessors are responsible for ensuring that candidates have access to:

- appropriate documents, materials, tools equipment and personal protective equipment currently used in industry;
- legislation and regulations; and
- workplace policies and procedures.

CPPDSM5022A Implement asset management plan

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to plan for the management of assets. It requires the ability to implement effective strategies to manage the operational, resource and maintenance needs of assets and to review and evaluate those strategies.

The unit may form part of the licensing requirements for persons working in the property industry, including in the real estate, business broking, stock and station agency and property operations and development sectors, in those States and Territories where these are regulated activities.

Application of the Unit

Application of the unit

This unit of competency supports the work of those involved in planning for the management of assets.

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units

Nil

Employability Skills Information

Employability skills The required outcomes described in this unit of competency contain applicable facets of employability skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged, will assist in identifying employability skills requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Establish performance needs of assets.	1.1 <i>Asset</i> performance needs are established in consultation with <i>relevant people</i> according to <i>organisational requirements</i> .
	1.2 <i>Risk</i> assessment is conducted on asset management outcomes according to organisational and <i>legislative requirements</i> .
	1.3 <i>Industry benchmarks</i> are analysed to determine expected <i>asset performance</i> in varying conditions according to organisational requirements.
	1.4 Applicable legislation is interpreted in order to establish user, contractual and legislative requirements for asset performance.
	1.5 Specifications, conditions and manufacturer requirements for asset maintenance and operation are identified for incorporation into plan.
2 Prepare asset management plan.	2.1 Asset management plan is prepared that facilitates achievement of identified aims and objectives.
	2.2 Operational and maintenance <i>schedule</i> detailing a range of activities and time lines is incorporated into asset management plan.
	2.3 Asset management plan is presented to <i>client</i> for review according to organisational requirements.

ELEMENT	PERFORMANCE CRITERIA
	<p>2.4 Quality assurance goals and strategies related to implementation of the plan are communicated using established <i>communication channels</i>.</p> <p>2.5 Monitoring and reporting arrangements for asset management plan are established and documented in line with client requirements.</p> <p>2.6 Financial, physical and human resource requirements are identified and arranged according to asset management plan and organisational requirements.</p> <p>2.7 Roles and responsibilities for establishing and maintaining <i>asset register</i> are identified and documented according to client and legislative requirements.</p>
3 Review and evaluate asset management plan.	<p>3.1 <i>Maintenance strategies</i> and plans are reviewed and evaluated in consultation with client and relevant people using appropriate <i>communication techniques</i>.</p> <p>3.2 Systematic review processes and established <i>evaluation methods</i> are identified and used to assess planning processes and outcomes.</p> <p>3.3 Evaluation results are prepared in required format, style and structure and presented to relevant people within agreed timeframes.</p> <p>3.4 Recommendations for improvement of plan are presented to relevant people according to organisational procedures.</p> <p>3.5 <i>Business equipment and technology</i> are used to securely maintain documentation according to legislative and organisational procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills:

- analytical skills to interpret documentation, analyse risk, estimate costings and budget needs, and review and evaluate plan
- communication skills to negotiate and consult with relevant people
- computing skills to access the internet and web pages, prepare and complete online forms, lodge electronic documents and search online databases

REQUIRED SKILLS AND KNOWLEDGE

- interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and varying physical and mental abilities
- literacy skills to interpret written and oral information
- organisational skills to schedule and meet time lines and client requirements, organise resource and support processes, and plan and document strategies to manage assets
- technical skills to develop schedules and document plans.

Required knowledge and understanding:

- building codes and relevant Australian standards
- building control legislation
- building practices in relevant property types
- building services and operation methods and practices
- customer needs and preferences for different property types
- industry performance benchmarks
- limitations of work role, responsibility and professional abilities
- maintenance procedures, including vendor specifications
- monitoring and evaluation systems
- OHS issues and requirements
- organisational and professional procedures, ethical practices and business standards
- relevant federal and state or territory legislation and local government regulations related to:
 - anti-discrimination
 - consumer protection
 - environmental issues
 - equal employment opportunity (EEO)
 - financial probity
 - franchise and business structures
 - industrial relations
 - OHS
 - privacy
 - property sales, leasing and management
- standards for building equipment operation.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment

This unit of competency could be assessed through practical demonstration of planning for the management of assets. Targeted written (including alternative formats where necessary) or verbal questioning to assess the candidate's underpinning knowledge would provide additional supporting evidence of competence. The demonstration and questioning would include collecting evidence of the candidate's knowledge and application of ethical standards and relevant federal, and state or territory legislation and regulations. This assessment may be carried out in a simulated or workplace environment.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- determining asset performance needs using industry benchmarks and consideration of risk
- documenting resource and support arrangements, incorporating expected costs, and processes for development and maintenance of an asset register and operational and maintenance schedules
- evaluating the asset management plan through consultation with interested parties
- knowledge of organisation's practices, ethical standards and legislative requirements associated with planning for the management of assets
- preparing a detailed asset management plan which incorporates strategies for risk management, resource needs, monitoring and reporting arrangements and quality assurance.

Context of and specific resources for assessment

Resource implications for assessment include:

- a registered provider of assessment services
- assessment materials and tools
- candidate special requirements
- competency standards
- cost and time considerations
- suitable assessment venue and equipment.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the language and literacy capacity of the candidate and the work being performed.

Validity and sufficiency of evidence require that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision of competence only taken at the point when the assessor has complete confidence in the person's competence
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence
- where assessment is for the purpose of recognition (RCC/RPL), the evidence provided will need to be current and show that it represents competency demonstrated over a period of time
- assessment can be through simulated project-based activity and must include evidence relating to each of the elements in this unit.

In all cases activity and must include evidence relating to each of the where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge. Questioning will be undertaken in such a manner as is appropriate to the language and literacy levels of the candidate and any cultural issues that may affect responses to the questions, and will reflect the requirements of the competency and the work being performed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Assets may be static or dynamic and include:

- buildings
- business and marketing contracts
- equipment
- furniture
- goodwill
- land
- property
- vehicles.

Relevant people may include:

- agents
- clients
- designated OHS representatives
- emergency personnel
- engineers and technicians
- government personnel
- installers
- legal representatives
- management and colleagues
- members of industry associations
- property owners
- site personnel
- subcontractors
- technical experts
- tenants.

Organisational requirements may be outlined and reflected in:

- access and equity principles and practice guidelines
- business and performance plans
- complaint and dispute resolution procedures
- goals, objectives, plans, systems and processes
- legal and ethical requirements and codes of practice
- mission statements and strategic plans
- OHS policies, procedures and programs
- policies and procedures in relation to client service
- quality and continuous improvement processes and standards
- quality assurance and procedure manuals.

Risk may relate to:

- industry special risks
- loss of profits
- machinery malfunction

Legislative requirements may be outlined and reflected in:

- OHS
- public liability
- trade practices issues.
- Australian standards, and quality assurance and certification requirements
- award and enterprise agreements
- codes of practice covering the market sector and industry, financial transactions, taxation, environment, construction, land use, native title, zoning, utilities use (water, gas and electricity), and contract or common law
- environmental and zoning laws affecting access security, access and property use
- general duty of care to clients
- home building requirements
- local regulations and by-laws
- privacy laws applying to owners, contractors and tenants
- relevant federal, and state or territory legislation that affects organisational operation, including:
 - anti-discrimination and diversity
 - environmental issues
 - EEO
 - industrial relations
 - OHS
- strata, community and company titles
- tenancy agreements
- trade practices laws and guidelines.

Industry benchmarks may include:

- discounted cash flow
- employment rates
- industry association performance index
- inflation rate
- internal rate of return
- life cycle costing
- published vacancy factors
- tenancy mix.

Asset performance criteria may include:

- age
- condition assessment
- cost
- depreciation
- down time
- emergency operation and backup
- functionality

- life span
 - maintenance requirements and cost
 - replacement
 - security
 - service levels.
- Schedules*** may be:
- charts
 - computerised
 - paper-based
 - prepared for daily, weekly, monthly or annual timeframes
 - to-do lists
 - wall-mounted planning boards
 - work diary.
- Clients*** may include:
- building supervisors
 - company management
 - fund managers
 - fund providers
 - government and legal instruments or agencies
 - institutions
 - insurers
 - internal and external property groups
 - legal advisers
 - private investors
 - property agents
 - property owners
 - risk assessors.
- Communication channels*** may include:
- direct line supervision paths
 - lateral supervision paths
 - organisational communication protocols and procedures
 - organisational networks.
- Asset register*** may include:
- air conditioning
 - cleaning
 - heating
 - security systems
 - telecommunications systems
 - utilities
 - ventilation
 - vertical services
 - waste management.
- Maintenance strategies*** may relate to:
- cleaning
 - electrical

- emergency lighting
- evacuation
- fire lighting
- garden
- housekeeping
- painting
- pests
- plumbing
- sanitary disposal
- security
- vertical movement
- waste disposal
- weather proofing.
- active listening
- clear presentation of options
- consultation methods
- culturally inclusive and sensitive engagement techniques
- questioning to clarify and confirm understanding
- seeking feedback
- two-way interaction
- using language and concepts appropriate to cultural differences
- verbal or non-verbal language.
- checklists
- cost data analysis
- expert and peer review
- interviews
- observation
- questionnaires
- review of quality assurance data.
- data storage devices
- email
- facsimile machines
- internet, extranet and intranet
- photocopiers
- printers
- scanners
- software applications, such as databases and word applications
- work computers.

Communication techniques may include:

Evaluation methods could be qualitative or quantitative and may include:

Business equipment and technology may include:

Employability Skills Information

Employability skills The required outcomes described in this unit of competency contain applicable facets of employability skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged, will assist in identifying employability skills requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Establish study requirements.	<p>1.1 Aims and objectives of <i>investment</i> feasibility study are clearly established according to <i>client</i> and <i>organisational requirements</i>.</p> <p>1.2 Study objectives and time lines are negotiated and agreed in consultation with <i>relevant people</i>.</p> <p>1.3 <i>Relevant documentation</i> and <i>legislative requirements</i> are gathered and reviewed to identify critical requirements of the study.</p> <p>1.4 Initial comparisons with similar properties are made to allow effective comparison with <i>client expectations</i> according to organisational requirements.</p> <p>1.5 Situations requiring <i>specialist advice</i> are identified and support is sought as required according to organisational requirements.</p>
2 Access relevant information.	<p>2.1 Relevant <i>information</i> is gathered and organised in a format suitable for <i>analysis</i> and interpretation.</p> <p>2.2 Market information is accessed and evaluated in terms of validity, reliability and relevance according to identified analysis requirements.</p> <p>2.3 Relevant people are consulted to gather additional information using appropriate <i>communication techniques</i>.</p>

ELEMENT	PERFORMANCE CRITERIA
	2.4 Environment is scanned to identify and assess factors that may impact on study according to organisational requirements.
	2.5 Reliable methods for gathering information are used according to organisational requirements, making efficient use of time and resources.
3 Analyse information.	3.1 Quantitative and qualitative analysis is undertaken of <i>comparative market data</i> using standard financial analysis techniques.
	3.2 Economic trends and market developments are identified and evaluated in terms of potential implications and impact on study objectives.
	3.3 <i>Factors</i> increasing or diminishing investment <i>risk</i> are identified, analysed and discussed with client.
	3.4 Sound reasoning is applied to ensure consistency of interpretations based on available information.
4 Formulate investment scenarios.	4.1 Alternative investment scenarios are developed to meet study requirements according to organisational requirements.
	4.2 <i>Consultative processes</i> are used to obtain views of industry experts as required.
	4.3 Scenarios are verified against prescribed criteria and analysed to minimise subjective assessment.
	4.4 Sensitivity analysis is performed on data to identify degree of convergence within identified industry and market <i>benchmarks</i> .
	4.5 Property trends and <i>market conditions</i> are identified and evaluated against study requirements.
5 Document feasibility study.	5.1 Feasibility study is presented in appropriate format, style and structure using suitable <i>business equipment and technology</i> .
	5.2 Report is prepared and distributed to relevant people within agreed timeframes according to organisational requirements.
	5.3 Conclusions are documented that are verifiable, current and sufficiently detailed to meet identified client and organisational requirements.
	5.4 Information is securely maintained with due regard to client confidentiality, and legislative and organisational requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills:

- communication skills to negotiate client requirements and consult with industry experts and other relevant people
- computing skills to access the internet and web pages, prepare and complete online forms, lodge electronic documents and search online databases
- interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and varying physical and mental abilities
- literacy skills to interpret written and oral information
- organisational skills to plan and schedule time lines and objectives and to manage project processes
- problem solving skills to determine factors that may affect property markets and evaluate risk
- research skills to source, analyse and interpret property and market information
- technical skills to use software for planning and scheduling tasks, use financial and assessment software and spreadsheets, and access market information.

Required knowledge and understanding:

- alternative property uses
- building control legislation, codes and relevant Australian standards
- business and industry property networks
- current property and investment market
- investment risk factors and relationship to return expectations
- limitations of work role, responsibility and professional abilities
- OHS issues and requirements
- organisational and professional procedures, ethical practices and business standards
- project assessment methods
- relevant federal and state or territory legislation and local government regulations related to:
 - anti-discrimination
 - consumer protection
 - environmental issues
 - equal employment opportunity (EEO)
 - financial probity
 - franchise and business structures
 - industrial relations
 - OHS

REQUIRED SKILLS AND KNOWLEDGE

- privacy
- property sales, leasing and management
- sources of industry and market information
- types of property markets
- value management.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment

This unit of competency could be assessed through practical demonstration of conducting an assessment of investment feasibility. Targeted written (including alternative formats where necessary) or verbal questioning to assess the candidate's underpinning knowledge would provide additional supporting evidence of competence. The demonstration and questioning would include collecting evidence of the candidate's knowledge and application of ethical standards and relevant federal, and state or territory legislation and regulations. This assessment may be carried out in a simulated or workplace environment.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- analysing market information to identify economic trends, market developments and risk factors
- documenting and presenting investment feasibility study using appropriate business equipment and technology
- formulating investment scenarios against industry benchmarks
- knowledge of organisation's practices, ethical standards and legislative requirements associated with conducting an assessment of investment feasibility
- sourcing documentation and information through consultation to establish study aims and objectives,

Context of and specific resources for assessment

- and make initial comparisons of similar properties
- sourcing market and environmental information to identify factors affecting study.

Resource implications for assessment include:

- a registered provider of assessment services
- assessment materials and tools
- candidate special requirements
- competency standards
- cost and time considerations
- suitable assessment venue and equipment
- workplace documentation.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the language and literacy capacity of the candidate and the work being performed.

Validity and sufficiency of evidence require that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision of competence only taken at the point when the assessor has complete confidence in the person's competence
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence
- where assessment is for the purpose of recognition (RCC/RPL), the evidence provided will need to be current and show that it represents competency demonstrated over a period of time
- assessment can be through simulated project-based activity and must include evidence relating to each of the elements in this unit.

In all cases activity and must include evidence relating to each of the where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge. Questioning will be

undertaken in such a manner as is appropriate to the language and literacy levels of the candidate and any cultural issues that may affect responses to the questions, and will reflect the requirements of the competency and the work being performed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Investment may relate to:

- concepts and plans
- strategies and placement of capital in property for investment
- productive use of property and assets
- customer service outcomes.

Clients may include:

- financial institutions
- fund managers
- individuals
- internal and external property groups
- investment organisations.

Organisational requirements may be outlined and reflected in:

- access and equity principles and practice guidelines
- business and performance plans
- complaint and dispute resolution procedures
- goals, objectives, plans, systems and processes
- legal and ethical requirements and codes of practice
- mission statements and strategic plans
- OHS policies, procedures and programs
- policies and procedures in relation to client service
- quality and continuous improvement processes and standards
- quality assurance and procedure manuals.

Relevant people may include:

- accountants
- agents
- clients

Relevant documentation may relate to:

- government personnel
- interested parties
- legal representatives
- management and colleagues
- members of industry associations
- taxation specialists.
- building codes
- current and planned property or site developments
- deposited, survey and other plans and maps
- depreciation schedules
- land title and zoning
- leasing rates
- legal status
- management policy and procedures
- marketing services
- performance of comparable properties
- permits
- rates notices
- sales information
- taxation papers
- tenancy and other contracts or leases.

Legislative requirements may be outlined and reflected in:

- Australian standards
- general duty of care to clients
- home building requirements
- privacy requirements
- relevant federal, and state or territory legislation that affects organisational operation, including:
 - anti-discrimination and diversity
 - environmental issues
 - EEO
 - industrial relations
 - OHS
- relevant industry codes of practice covering the market sector and industry, financial transactions, taxation, environment, construction, land use, native title, zoning, utilities use (water, gas and electricity), and contract or common law
- strata, community and company titles
- tenancy agreements
- trade practices laws and guidelines.

Client expectations may relate

- immediate capital gains
- long-term capital gains.

to:

Specialist advice may be sought from:

- architects
- bankers and financiers
- developers
- investment consultants
- land economists
- members of industry associations
- planners
- real estate agents
- solicitors
- taxation and accounting practitioners
- valuers.

Information sources may include:

- consultants
- industry and organisational databases
- information services
- press clippings
- published industry data, including industry indices
- third parties
- trade journals.

Analysis may include:

- computer modeling
- examination of cash flows and other financial projections
- examination of collected data
- quantitative and qualitative analysis
- probability analysis
- time series recognition.

Communication techniques may include:

- active listening
- clear presentation of options
- consultation methods
- culturally inclusive and sensitive engagement techniques
- questioning to clarify and confirm understanding
- seeking feedback
- two-way interaction
- using language and concepts appropriate to cultural differences
- verbal or non-verbal language.

Comparative market data may include:

- best practice information
- national and international benchmarking
- inter-organisation comparison data.

Factors that may influence

- constraints on use

complexity of feasibility study may include:

- existing land use and ownership
- government zoning and restrictions
- project financing
- staging of investment or development
- structure of leases
- type and number of tenants.

Risk may relate to:

- asset allocation and investment spread
- borrowing risk
- gearing
- economics
- lifestyle choices
- market and property sector risks, including:
 - fluctuations in economic cycle
 - interest rates
 - stock market
- organisational risk
- risk factors and client return expectations
- volatility of income and capital.

Consultative processes may include:

- face-to-face meetings
- telephone, facsimile and written communication.

Benchmarks may include:

- building operational costs
- business strategy parameters
- economic parameters
- financial constraints
- historical operational costs
- industry published building occupation data
- market expectations
- research data
- statutory costs.

Market conditions may relate to:

- availability of alternatives
- business confidence
- economic conditions
- level of competition.

Business equipment and technology may include:

- computers
- data storage devices
- email
- facsimile machines
- internet, extranet and intranet
- photocopiers
- printers
- scanners

- software applications.

CPPDSM6008A Develop strategic facilities management plan

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to develop and implement a strategic facilities management plan that is consistent and appropriate. It requires the ability to measure the effectiveness of the facilities management plan using a variety of review and evaluation methods and to modify and implement corrective action strategies.

The unit may form part of the licensing requirements for persons working in the property industry, including in the real estate, business broking, stock and station agency and property operations and development sectors, in those States and Territories where these are regulated activities.

Application of the Unit

Application of the unit

This unit of competency supports the work of those involved in developing and implementing strategic facilities management plans.

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units

Nil

Employability Skills Information

Employability skills The required outcomes described in this unit of competency contain applicable facets of employability skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged, will assist in identifying employability skills requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Establish facilities management requirements.	<p>1.1 <i>Facilities</i> management performance needs are determined and confirmed as required in consultation with <i>relevant people</i>.</p> <p>1.2 Risk assessment of facilities management outcomes is conducted and assessed according to industry and organisational policies and procedures.</p> <p>1.3 Relevant <i>industry benchmarks</i> are analysed to assess expected performance of <i>assets</i> in varying market conditions.</p> <p>1.4 Applicable industry, <i>organisational and legislative requirements</i> are interpreted to establish user, contractual and legal compliance for facilities performance.</p>
2 Prepare plan.	<p>2.1 <i>Facilities management plan</i> including aims and objectives is prepared in appropriate format for dissemination to relevant people.</p> <p>2.2 <i>Quality assurance goals and strategies</i> are established according to facilities management plan.</p> <p>2.3 Monitoring and reporting arrangements for facilities management plan are determined in line with client requirements.</p> <p>2.4 <i>Life cycle analysis</i> is undertaken and capital investment</p>

ELEMENT	PERFORMANCE CRITERIA
<p>3 Organise resources and support processes.</p>	<p>strategies are planned.</p> <p>3.1 Financial, physical and human resource requirements are organised according to facilities management plan.</p> <p>3.2 <i>Information relating to implementation of facilities management plan</i> is distributed using established <i>communication channels</i>.</p> <p>3.3 Reliable management methods are used, making efficient use of time and resources.</p> <p>3.4 <i>Roles and responsibilities</i> associated with implementation of facilities management plan are clearly defined and documented.</p>
<p>4 Review, evaluate and modify facilities management plan.</p>	<p>4.1 Facilities management plan is reviewed and evaluated in consultation with relevant people using appropriate <i>feedback strategies</i>.</p> <p>4.2 Systematic review processes are established and suitable <i>evaluation methods</i> used to evaluate facilities management plan outcomes.</p> <p>4.3 Evaluation results are reviewed and recommendations for modification of plan and corrective actions are incorporated as required into facilities management plan.</p> <p>4.4 Information is securely maintained with due regard to client confidentiality, and legislative and organisational requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills:

- analytical skills to interpret documentation, evaluate plan, analyse risk and estimate costings and budget needs
- communication skills to include relevant people in the planning process, discuss issues that may impact on others and receive feedback
- computing skills to access the internet and web pages, prepare and complete online forms, lodge electronic documents and search online databases
- interpersonal skills to obtain feedback that enables a review and evaluation of plan and to relate to people from a range of social, cultural and ethnic backgrounds and

REQUIRED SKILLS AND KNOWLEDGE

varying physical and mental abilities

- leadership skills to take a leading role in a variety of situations and pursue new challenges and opportunities
- literacy skills to access and interpret relevant information and prepare required documentation and information for those involved in implementation activities
- problem solving skills to identify potential barriers to implementation of the plan and establish contingencies
- research skills to collect reliable and valid information and match forecasting models and techniques with specific asset or facility requirements
- technical skills to design facilities or asset management plan, schedule tasks and report outcomes.

Required knowledge and understanding:

- building services and operation methods and practices
- financial analysis and forecasting principles
- impact analysis and investment scenario planning
- industry benchmarks for maintenance procedures
- industry performance benchmarks, including use and application of value analysis and benchmarking techniques
- long-range and annual facility planning techniques and practices
- organisational and professional procedures, ethical practices and business standards
- organisational quality systems, such as recording systems and strategic planning processes
- principles and practices of performance measurement, including review and evaluation procedures, processes and techniques
- principles and processes of objective setting
- relevant federal and state or territory legislation and local government regulations related to:
 - anti-discrimination
 - consumer protection
 - environmental issues
 - equal employment opportunity (EEO)
 - financial probity
 - franchise and business structures
 - industrial relations
 - OHS
 - privacy
 - property sales, leasing and management.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment This unit of competency could be assessed through practical demonstration of developing and implementing a facilities management plan. Targeted written (including alternative formats where necessary) or verbal questioning to assess the candidate's underpinning knowledge would provide additional supporting evidence of competence. The demonstration and questioning would include collecting evidence of the candidate's knowledge and application of ethical standards and relevant federal, and state or territory legislation and regulations. This assessment may be carried out in a simulated or workplace environment.

Critical aspects for assessment and evidence required to demonstrate competency in this unit A person who demonstrates competency in this unit must be able to provide evidence of:

- conducting a life cycle assessment and planning appropriate investment and disposal strategies for incorporation into facilities management plan
- determining facilities and asset management requirements using industry benchmarks and risk assessment strategies
- evaluating the facilities management plan and making recommendations for immediate action or modification of the plan
- identifying resource requirements, communicating roles and responsibilities and designing an implementation strategy for the plan
- knowledge of organisation's practices, ethical standards and legislative requirements associated with developing and implementing facilities management plans
- preparing a facilities management plan incorporating quality systems and reporting procedures.

Context of and specific resources for assessment Resource implications for assessment include:

- a registered provider of assessment services
- assessment materials and tools
- candidate special requirements
- competency standards
- cost and time considerations
- suitable assessment venue and equipment
- workplace documentation.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the language and literacy capacity of the candidate and the work being performed.

Validity and sufficiency of evidence require that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision of competence only taken at the point when the assessor has complete confidence in the person's competence
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence
- where assessment is for the purpose of recognition (RCC/RPL), the evidence provided will need to be current and show that it represents competency demonstrated over a period of time
- assessment can be through simulated project-based activity and must include evidence relating to each of the elements in this unit.

In all cases activity and must include evidence relating to each of the where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge. Questioning will be undertaken in such a manner as is appropriate to the language and literacy levels of the candidate and any cultural issues that may affect responses to the questions, and will reflect the requirements of the competency and the work being performed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Facilities may include:

- car parking
- child care centres
- community facilities
- educational facilities
- meeting places
- offices
- security facilities
- sport and recreation venues.

Relevant people may include:

- agents
- clients
- colleagues
- designated OHS representatives
- emergency personnel
- engineers and technicians
- government personnel
- installers
- legal representatives
- members of industry associations
- property owners
- site personnel
- subcontractors
- supervisors
- technical experts
- tenants
- tradespeople.

Industry benchmarks may relate to:

- discounted cash flows
- employment rates
- industry association performance index
- inflation rate
- internal rates of return
- life cycle costings
- published vacancy factors
- tenancy mix.

Assets may be static or dynamic and include:

- buildings
- business and marketing contracts
- equipment
- furniture

Organisational requirements may be outlined and reflected in:

- goodwill
- land
- property
- vehicles.
- access and equity principles and practice guidelines
- business and performance plans
- complaint and dispute resolution procedures
- emergency and evacuation procedures
- employer and employee rights and responsibilities
- goals, objectives, plans, systems and processes
- legal and ethical requirements and codes of practice
- mission statements and strategic plans
- OHS policies, procedures and programs
- policies and procedures in relation to client service
- policies and procedures relating to own role and responsibility
- quality and continuous improvement processes and standards
- quality assurance and procedure manuals
- records and information systems and processes.

Legislative requirements may be outlined and reflected in:

- Australian standards
- codes of practice covering the market sector and industry, financial transactions, taxation, environment, construction, land use, native title, zoning, utilities use (water, gas and electricity), and contract or common law
- consumer protection
- environmental and zoning laws affecting access security, access and property use
- freedom of information relevant federal, and state or territory legislation that affects organisational operation, including:
 - OHS
 - environmental issues
 - EEO
 - industrial relations
 - anti-discrimination and diversity
- home building requirements
- local regulations and by-laws
- privacy laws applying to owners, contractors and tenants
- public health
- quality assurance and certification requirements
- strata, community and company titles

Facilities management plan may include:

- tenancy agreements
- trade practices laws and guidelines.
- asset management process and practice recommendations
- building and engineering maintenance plans
- environment plans and guidelines
- funding strategies
- life cycle management plans
- long-term capital and maintenance financial forecasts
- performance benchmarking recommendations and measurement processes
- planning guidelines
- quality standards
- risk management processes and practices
- utilities plans and infrastructure such as energy, water and sewerage.

Quality assurance goals and strategies may relate to:

- a formal structure against which progress can be evaluated
- budgets and timetables that enable the commitment of resources at appropriate points in the project
- compliance with Australian standards
- contingency plans to cater for a change of corporate focus or significant project difficulties
- continuous improvement strategies
- mechanisms for involving a wide variety of interested parties or stakeholders in the project
- procedures for monitoring and evaluating project outcomes and client satisfaction
- reducing risk by anticipating, evaluating and developing strategies for the management of possible problems
- reporting procedures and protocols.

Life cycle analysis may include:

- computer modelling
- examination of cash flows and other financial projections
- quantitative and qualitative analysis
- probability analysis
- time series recognition.

Information relating to implementation of facilities management plan may include:

- a formal structure against which progress can be evaluated
- acquisition and disposal strategies
- budgets and timetables that enable the commitment of resources at appropriate points
- consultation strategies to involve stakeholders

- contingency plans to cater for changes or significant difficulties
 - objectives, scope and expected benefits
 - quality assurance procedures
 - specifications
 - transition plans.
- Communication channels*** may include:
- direct line supervision paths
 - lateral supervision paths
 - organisational communication protocols and procedures
 - organisational networks.
- Roles and responsibilities*** may be influenced by:
- codes of conduct
 - job description and employment arrangements
 - organisational policies relevant to work role
 - skills, training and competencies
 - supervision and accountability requirements, including OHS
 - team structures.
- Feedback strategies*** may include:
- clients and their legal representatives
 - management and colleagues
 - documentation and reports
 - formal and informal communication
 - regular meetings.
- Evaluation methods*** could be qualitative or quantitative and may relate to:
- checklists
 - cost data analysis
 - expert and peer review
 - interviews
 - observation
 - questionnaires
 - review of quality assurance data.

Competency field

Property operations and development

CPPFES2025A Inspect, test and maintain gaseous fire-suppression systems

Modification History

Revised unit

Unit updated and equivalent to PRMPFES25C Inspect, test and maintain gaseous fire suppression systems

Unit Descriptor

This unit of competency specifies the outcomes required to complete mechanical inspection, testing and maintenance tasks on installed gaseous fire-suppression systems.

Application of the Unit

This unit of competency supports fire protection technicians responsible for inspecting, testing and maintaining gaseous fire-suppression systems. This unit does not apply to any installation, replacement, maintenance and repair functions that are restricted to licensed trades or occupations (subject to relevant state and territory regulations).

Licensing/Regulatory Information

Work in this area must be completed according to relevant legislative, industry, customer and organisational requirements, including policies and procedures relating to occupational health and safety (OHS), and where needed, to ozone depleting substances (ODS) and synthetic greenhouse gases (SGG) emissions.

The unit supports one or more extinguishing agent handling licences prescribed under the Ozone Protection and Synthetic Greenhouse Gas Management Act 1989.

Different states and territories may have regulatory mechanisms that apply to this unit. Candidates are advised to check for regulatory limitations.

This unit does not cover all the requirements of AS 1851 Maintenance of fire protection systems and equipment.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Apply rules and regulations to service operations.	1.1	Requirements of relevant <i>rules and regulations</i> are <i>confirmed</i> and applied to <i>work procedures</i> .
		1.2	Knowledge of <i>ODS and SGG materials</i> and legislative and industry requirements is applied when inspecting and testing gaseous fire-suppression systems.
		1.3	Knowledge of operation of fire protection systems is applied to determine system <i>key functional requirements</i> and operation within design limitations.
		1.4	<i>Compliance requirements are checked</i> and <i>action</i> is taken according to <i>organisational policies and procedures</i> .
2	Research layout and components of gaseous fire-suppression system to be inspected.	2.1	Relevant <i>gaseous fire-suppression system information</i> is gathered.
		2.2	Gaseous fire-suppression system application and method of operation are identified.
		2.3	Gaseous fire-suppression system <i>components</i> are identified and located on <i>installation drawings</i> .
		2.4	<i>Isolation devices</i> and interface controls to other systems are identified and located on installation drawings.

- 3 Prepare to inspect, test and maintain gaseous fire-suppression systems.
- 3.1 Necessary **work permits** are obtained prior to entering customer premises.
 - 3.2 Relevant persons and occupants are advised of intended tests and associated procedures.
 - 3.3 System and surrounding work area are assessed for **hazards** and relevant precautions are taken.
 - 3.4 Relevant **tools, equipment and testing devices** are identified and assembled according to work procedures and organisational requirements.
 - 3.5 Alarm signalling equipment (ASE) is switched to test mode in **back-to-base facilities**.
 - 3.6 Equipment is physically isolated to ensure testing or maintenance procedures do not cause discharge of extinguishing agent.
 - 3.7 Equipment and interface controls to other systems are electrically isolated to ensure no alarms or actions are unduly generated.
 - 3.8 Test equipment is installed and calibrated to verify operation of components and system.
- 4 Inspect and test installed gaseous fire-suppression system.
- 4.1 System components are identified and located on site, and exact correspondence of system layout to installation drawings is verified and anomalies reported.
 - 4.2 **Mechanical inspection tasks** specified for **maintenance schedule periods** in relevant **maintenance information** are safely completed.
 - 4.3 **Mechanical test tasks** specified for maintenance schedule periods in relevant maintenance information are safely completed.
 - 4.4 Inspection and testing results are recorded and faulty equipment is reported according to organisational and legislative requirements.
 - 4.5 Relevant **documentation** is completed according to organisational and **customer requirements**.

5	Conduct preventive maintenance on installed gaseous fire-suppression system.	5.1	<i>Mechanical preventive maintenance tasks</i> specified for maintenance schedule periods and described in relevant maintenance information are safely completed.
		5.2	Faulty equipment is repaired or replaced according to organisational, legislative and customer requirements.
		5.3	Transportation and refilling of gaseous agent containers by authorised refilling station are organised.
		5.4	Preventive maintenance activities, including repairs and replacements of faulty equipment, are recorded according to organisational, legislative and customer requirements.
		5.5	Relevant documentation is completed according to organisational and customer requirements.
6	Reinstate installed gaseous fire-suppression system.	6.1	Installed gaseous fire-suppression system is <i>reinstated</i> as fully operational.
		6.2	Customer premises are left in a clean and tidy condition on completion of work.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- customer service skills
- language, literacy and numeracy skills to:
 - communicate with others clearly and concisely, verbally and in writing
 - interpret information on engineering drawings, such as installation drawings
 - read and comply with work instructions and specifications
 - read and record measurements
 - record and report information neatly and legibly
- planning and organising skills to:
 - estimate time to complete activities

- prioritise tasks
- interpersonal skills to relate to people from a range of social and cultural backgrounds
- skills to work safely when:
 - applying workplace housekeeping procedures
 - handling and transporting gaseous containers according to legislation (including ODS and SGG requirements), manufacturer and work procedures
 - using hand and power tools
- technical skills to:
 - conduct:
 - function system tests with other system interfaces as specified in AS 1851
 - routine mechanical maintenance on equipment as specified in AS 1851
 - visual mechanical inspection, testing and maintenance tasks as specified in AS 1851
- identify whether gaseous agent is still suitable for existing occupancy risk
 - operate:
 - actuators to determine that operation is within design parameters for installed equipment
 - manual controls of gaseous fire-suppression system
 - standardised control functions on a fire alarm panel that interfaces with the gaseous system to conduct functional tests as specified in AS 1851
 - remove and replace:
 - container actuators (note: the fire protection technician may require manufacturers' endorsement for specific actuators)
 - containers from container bank manifold
 - verify visually that system complies with original installation requirements

Required knowledge

- difference between total flooding and local application systems
- difference between various types of extinguishing gaseous agents used
- extent to which pressures and liquid levels in extinguishing agent containers vary according to temperature change
- fire suppressant action of gaseous agents in terms of smothering, cooling and reacting chemically with the fire radical
- how building structures, services and service penetration within and through protected area enclosures influence the holding time of a gaseous agent
- industrial relations issues applicable to inspecting, testing and maintaining gaseous fire-suppression systems
- industry best practice methods used to isolate actuators to prevent ODS and SGG emissions in the workplace
- key features of legislation, regulations, codes and standards, including ODS and SGG, applicable to inspecting, testing and maintaining gaseous fire-suppression systems, including:
 - action to take when a breach of OHS, ODS and SGG or other policy occurs

- container handling, moving and transporting requirements
- environment protection authority, ODS and SGG emission requirements
- implications of not applying legislative requirements to job functions
- manufacturers' requirements and standards applicable to inspecting, testing and maintaining gaseous fire-suppression systems
- occupational hazards of gaseous agent in terms of:
 - no observable adverse effect level (NOAEL)
 - lowest observable adverse effect level (LOAEL)
 - products of combustion from fire and products of decomposition associated with some gaseous agents when extinguishing a fire
- operating principles of:
 - lock-off, directional and pressure-release valves
 - pneumatic and mechanical actuators interfaced with gaseous systems
 - fire alarm components interfaced with gaseous fire-suppression systems
 - gaseous agent discharge nozzles
- operation of different types of equipment used to store and release gaseous extinguishant agent
- pressures generated during release of gaseous agents, pressure rating requirements of pipework and fittings, and the need for adequate support bracing
- reasons for preventing ODS and SGG emissions in the workplace
- relevant federal, state or territory legislation that affects organisational operations, including:
 - anti-discrimination and diversity
 - equal employment opportunity
- safety requirements relevant to inspect, test and maintain procedures
- types of:
 - gaseous fire-suppression agents and how they extinguish fire, including concentration and holding time requirements
 - gaseous fire-suppression systems, including:
 - working principles
 - pre-engineered
 - engineered
- use of flooding factors to check extinguishing agent quality

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	This unit of competency could be assessed by observation of at least
------------------------	--

	two different practical demonstrations of inspecting, testing and maintaining gaseous fire-suppression systems at customers' premises.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified in this unit.</p> <p>In particular the person should demonstrate the ability to:</p> <ul style="list-style-type: none"> • locate, interpret and apply relevant information, standards and specifications • comply with OHS and ODS and SGG regulations (where required), and state and territory legislation applicable to workplace operations • comply with organisational policies and procedures, including quality requirements • communicate and work effectively and safely with others. <p>Competency must be demonstrated in a minimum of two different settings, including:</p> <ul style="list-style-type: none"> • identifying potential hazards and risks • identifying risk-reduction measures • adhering to safety procedures during inspect, test and maintain procedures • identifying installed gaseous fire-suppression systems • identifying and locating system components • identifying, selecting and using tools, equipment and materials effectively to perform inspect, test and maintain procedures on an installed gaseous fire-suppression system • matching installed system to installation drawings • identifying isolation devices and interface controls to other systems • switching alarm signalling equipment to test mode • physically isolating equipment and gaseous fire-suppression systems • electrically isolating equipment and interface controls to other systems • installing and calibrating test equipment • completing specified mechanical inspection tasks, documenting results and reporting faulty equipment • completing specified mechanical test tasks, documenting results and reporting faulty equipment • completing specified mechanical preventive maintenance tasks, repairing or replacing faulty equipment, and documenting results • reinstating system to operational state • completing workplace housekeeping requirements.

Context of and specific resources for assessment	<p>Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none"> • access to customer premises or a simulated workplace environment • assessment documentation • necessary tools, specialist equipment, manuals and relevant documentation, including ODS and SGG policies and work procedures • training and assessment record books.
Method of assessment	<p>Assessment methods must:</p> <ul style="list-style-type: none"> • satisfy the endorsed Assessment Guidelines of the Property Services Training Package • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application • reinforce the integration of employability skills with workplace tasks and job roles • confirm that competency is verified and able to be transferred to other circumstances and environments.
Guidance information for assessment	<p>Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.</p> <p>Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.</p> <p>This unit could be assessed on its own or in combination with other units relevant to the job function.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Rules and regulations may include:</p>	<ul style="list-style-type: none"> • dangerous goods regulations • environmental regulations • licensing arrangements • OHS legislation, regulations and codes • relevant commonwealth and state or territory building Acts, regulations and codes, such as Building Code of Australia (BCA) • relevant Australian standards, such as: <ul style="list-style-type: none"> • AS 1851 Maintenance of fire protection systems and equipment • note: Australian standards are frequently revised and users must always check for currency and amendments • other relevant legislation relating to fire protection equipment, including: <ul style="list-style-type: none"> • international shipping codes • marine codes for different Australian States.
<p>Requirements may be confirmed with:</p>	<ul style="list-style-type: none"> • colleagues • managers • supervisors • team leaders.
<p>Work procedures may include:</p>	<ul style="list-style-type: none"> • assignment instructions • equipment manufacturers’ requirements • instructions from colleagues, supervisors and managers • personal protective equipment requirements • reporting and documentation requirements • specific customer requirements • work instructions to prevent the emission of ODS and SGG in the workplace.
<p>ODS and SGG extinguishing agents may include:</p> <p>Note list format: product name (other names) use</p> <p>Check the latest amendments to the Ozone Protection and Synthetic Greenhouse Gas Management Act for the</p>	<ul style="list-style-type: none"> • ODS and SGG extinguishing agents commonly used in Australia: <ul style="list-style-type: none"> • FM200 (FE-227 Heptafluoropropane, HFC-227ea) used as a total flooding extinguishing agent and as a replacement for Halon 1301 • Halon 1211 (BCF, Halon 1211 BCF, Bromochlorodifluoromethane) used as a streaming agent – requires a special permit in Australia • Halon 1301 (BTM, Halon 1301 BTM, Bromotrifluoromethane) used as a total flooding agent – requires a special permit in Australia • NAF-P-III (HCFC Blend C) used as a streaming agent • NAF-P-IV (HCFC Blend E) used as a streaming agent • NAF-S-III (HCFC Blend A) used as a total flooding agent

<p>current list of ODS and SGG extinguishing agents.</p>	<ul style="list-style-type: none"> • SF6 (Sulfurhexafluoride) used as an inerting agent in sealed high voltage switchgear • ODS and SGG extinguishing agents not commonly used in Australia: <ul style="list-style-type: none"> • Blitz III (HCFC Blend D) used in flooding systems • CFC-11 (Trichlorofluoromethane) may be found as a propellant in some powder fire extinguishers (this product is banned in Australia but may be found on incoming foreign vessels) • FC-2-1-8 (CEA-308) used in flooding systems • FC-3-1-10 (CEA-410) used in flooding systems • FC-5-1-14 (CEA-614) used as a streaming agent • FE-13 (Trifluoromethane, HFC-23) used as a total flooding agent • FE-241 (Chlorotetrafluoroethane, HCFC-124) used as a total flooding agent for non-occupied spaces and as a streaming agent • FE-25 (Pentafluoroethane, HFC-125) used in inerting and explosion suppression applications • FE-36 (Hexafluoropropane, HFC-236fa) used in portable fire extinguishers – is a replacement for Halon 1211 and Halon 1301 • FM100 (HBFC-22B1) used in portable fire extinguishers • Halon 2402 (Dibromotetrafluoroethane) limited use in military systems – requires a special permit in Australia • Halotron I (HCFC Blend B or HCFC-123) used as a total flooding agent and streaming agent • Halotron II (blend of HFC-143a and HFC-125) used as a total flooding agent and as a replacement for Halon 1301 • HCFC-22 (Chlorodifluoromethane) used as a propellant in some powder fire extinguishers (this product is banned in Australia but may be found on incoming foreign vessels) • HFC-134a (Unsaturated tetrafluoroethane) used as a propellant in some powder fire extinguishers.
<p>Key functional requirements relate to interpreting the system functions within design limitations, such as:</p>	<ul style="list-style-type: none"> • gaseous flooding discharge time and holding time, and factors that can effect these key design requirements, including: <ul style="list-style-type: none"> • nozzle location • openings in protected enclosure • orifices • pipe blockages • system is total flooding or local gaseous system suppression of fire mechanism in relation to fire triangle • understanding of environmental and occupational hazards

	caused by gaseous agents.
Checking system compliance requirements may include:	<ul style="list-style-type: none"> • applying inspection, test and survey requirements according to Australian standards • reviewing documentation to verify that installed systems comply with relevant rules and regulations.
Action may include:	<ul style="list-style-type: none"> • advising customer • documenting non-compliance • making equipment safe • reporting, as required.
Organisational policies and procedures may be located in quality assurance and procedures manuals relating to:	<ul style="list-style-type: none"> • documentation and information systems and processes • legal and organisational policies and guidelines, including personnel practices and guidelines outlining work roles, responsibilities and delegations • legislation relevant to service operations • ODS and SGG policies, procedures and programs • OHS policies, procedures and programs • use of electronic job scheduling and communication devices.
Gaseous fire-suppression systems may include:	<ul style="list-style-type: none"> • synthetic gaseous fire-extinguishing agents (liquefied), such as: <ul style="list-style-type: none"> • ODS and SGG materials • Novec 1230 • inert gaseous fire-extinguishing agents (non-liquefied), such as: <ul style="list-style-type: none"> • Inergen • Argonite • nitrogen • carbon dioxide.
Gaseous fire-suppression system information may include:	<ul style="list-style-type: none"> • as installed drawings • Australian standards • design drawings • manufacturers’ manuals.
Components may include:	<ul style="list-style-type: none"> • actuators: <ul style="list-style-type: none"> • mechanical • pyrotechnic • solenoid • fire alarm system interface components, such as: <ul style="list-style-type: none"> • anti-tamper switches • gaseous system controls and indicators on control and indicating equipment (CIE), such as fire indicating panels (FIP) approved to: <ul style="list-style-type: none"> • AS 1603 Automatic fire detection and alarm systems • AS 4428 Fire detection, warning, control and intercom systems – control and indicating equipment

	<ul style="list-style-type: none"> • positional monitoring switches • pressure switches • remote gas control points • warning system equipment, such as: <ul style="list-style-type: none"> • alarm bells • warning lights and strobes • warning speakers.
<p>Installation drawings may include:</p>	<ul style="list-style-type: none"> • installation drawings that meet the requirements of AS 4214 Gaseous fire extinguishing systems, and fire alarm standards: <ul style="list-style-type: none"> • in AS 1670.1 Fire detection, warning, control and intercom systems – System design, installation and commissioning – Fire • in AS 1670.4 Fire detection, warning, control and intercom systems – System design, installation and commissioning – Sound systems and intercom systems for emergency purposes • including: <ul style="list-style-type: none"> • ‘for construction’ drawings • ‘as installed’ or ‘as built’ drawings.
<p>Isolation devices may include:</p>	<ul style="list-style-type: none"> • CIE, including: <ul style="list-style-type: none"> • FIP • gas control panels • mechanical isolation devices • pneumatic isolation devices.
<p>Work permits may include permits to:</p>	<ul style="list-style-type: none"> • ensure that specific OHS requirements are met before entering a work site • enter a restricted area within a work site • enter a work site • enter a work site at specific times.
<p>Hazards may include:</p>	<ul style="list-style-type: none"> • environmental hazards, such as improper use of ODS and SGG, hazardous materials and other chemicals • environmental risks from ODS and SGG emissions that could be caused by: <ul style="list-style-type: none"> • conducting interface tests between actuators, CIE and fire alarm system during inspect, test and maintain procedures • installing and removing container valve assembly, manifold connection components and actuators • servicing and maintaining container valve assemblies • transporting, storing and manual handling ODS and SGG containers • equipment in a work site

	<ul style="list-style-type: none"> • ergonomic, such as incorrect manual-handling methods • hazards associated with electrical or mechanical faults • obstructive, such as blocked access to emergency entry or exit points • people in a work site • sources of potential harm • situations with a potential to cause loss • work methods, plans and procedures.
<p><i>Tools, equipment and testing devices</i> may include:</p>	<ul style="list-style-type: none"> • fire equipment spare parts, including: <ul style="list-style-type: none"> • aerosol test smoke • anti-tamper seals • clamps • service tags • hand tools, including: <ul style="list-style-type: none"> • hammers • pliers • screwdrivers • spanners • spirit levels • power tools, including: <ul style="list-style-type: none"> • battery powered drills • hammer drills • manual-handling aids, including: <ul style="list-style-type: none"> • hand trucks • lifting straps • trolleys • servicing tools and testing devices, including: <ul style="list-style-type: none"> • actuator simulators • barcode readers • container contents-measurement equipment • electrical multimeter • recharging and pressurising equipment • safety equipment • scales • service tag punch.
<p><i>Back-to-base facilities</i> refer to:</p>	<ul style="list-style-type: none"> • monitoring equipment that is connected by ASE from the CIE to a communication path (telephone line or a radio link) and then to a monitoring centre • monitoring centres, which can be operated by or on behalf of a fire authority for the purposes of mobilising and directing firefighting resources to site where CIE is installed.

<p><i>Mechanical inspection tasks</i> may include:</p>	<ul style="list-style-type: none"> • actions to complete mechanical inspection tasks according to AS 1851, such as: <ul style="list-style-type: none"> • checking enclosure for changes in openings, for example any new, unsealed service penetrations • checking that gas discharge pipe lock-off valve (if fitted) is correctly labelled and accessible • checking that gas containers are secure, accessible and free from damage • inspecting each container pressure indicator to check that pressure is within prescribed limits • where there is no container pressure indicator, checking that system discharged indicator has not operated • checking that release mechanisms, including drop weights, are undamaged, accessible and unimpeded • checking gas container enclosure is accessible, adequately illuminated, ventilated and secured against unauthorised entry • checking integrity of all pneumatic piping and fittings • checking that entire protected area enclosure complies with original design • checking that discharge nozzles are clear and unobstructed, correctly aimed and secured • checking actuating devices for any condition likely to adversely affect their operation, such as excessive deposits of dust or paint coating • inspecting all areas adjacent to protected area to ensure that migration of gas does not create a hazard to personnel • inspecting protected area to check that the risk has not changed from original design, such as computer room to combustible storage and equipment • checking that all pipework, flexible connectors and manifolds are free from damage and adequately secured • checking that discharge from all pressure relief devices and vent valves does not create a hazard to personnel • checking that all directional valves and check valves are correctly orientated • determining whether container valve overhaul is due • determining whether container hydrostatic pressure test is due according to AS 2030 Gas cylinders or AS 1851 Maintenance of fire protection systems and equipment • checking age of pyrotechnic actuator to determine if due for replacement.
<p><i>Maintenance schedule</i></p>	<ul style="list-style-type: none"> • monthly

<p><i>periods</i> may be:</p>	<ul style="list-style-type: none"> • six monthly • yearly • five yearly • ten yearly.
<p><i>Maintenance information</i> may include:</p>	<ul style="list-style-type: none"> • Australian standards • manufacturers’ specifications and recommended procedures • service manual instructions • service manuals and bulletins.
<p><i>Mechanical test tasks</i> may include:</p>	<ul style="list-style-type: none"> • actions to complete mechanical test tasks according to AS 1851, such as: <ul style="list-style-type: none"> • simulating a system operation and confirming that discharge actuators and directional valves operate correctly • testing operation of all mechanical manual discharge release systems • testing operation of mechanical automatic discharge release systems not operated through CIE, such as fusible links • operating system lock-off valve and confirming that the system inoperative visual warning device (VWD) operates • confirming, by weighing, liquid level determination or pressure reading (inert gases only), that each gas container is charged with correct quantity of extinguishing agent • testing to ensure correct operation of all automatic pneumatic controls • simulating operation of agent release detection device and confirming indication of agent release at system control panel.
<p><i>Documentation</i> may include:</p>	<ul style="list-style-type: none"> • application for credit forms • certificates of inspection • corrective action reports • customer recommendation forms • equipment recommendation forms • expense claims • job cards • maintenance record systems • motor vehicle fleet cards • petty cash vouchers • product documentation • service agreements • service test record logbooks.
<p><i>Customer requirements</i> may include:</p>	<ul style="list-style-type: none"> • confirming or varying service instructions • following sign-in and sign-out procedures for entry to or exit from premises

	<ul style="list-style-type: none"> • providing non-routine or urgent services • providing routine services • sighting work permits • written or verbal confirmation of services provided and future maintenance schedule.
<p><i>Mechanical preventive maintenance tasks</i> may include:</p>	<ul style="list-style-type: none"> • actions to complete routine mechanical maintenance tasks according to AS 1851, such as: <ul style="list-style-type: none"> • checking operation of mechanical container actuator and lubricating as necessary • checking operation of remote mechanical release system and lubricating as necessary • checking operation of automatic mechanical release system and lubricating as necessary • replacing pyrotechnic container actuator that will exceed its listed lifetime prior to next scheduled maintenance • cleaning dampers and nozzles that are subject to deposit of contaminants, such as cooking oil, hot wax, etc. • actions to conduct non-routine maintenance, such as general isolation to CIE so that building works can be done, then resetting systems after works are completed.
<p><i>Reinstate</i> process may involve:</p>	<ul style="list-style-type: none"> • confirming all interface actuators are isolated and appropriate signage, documentation and lock-off are in place • removing transport caps on actuator outlets, plugs and locking devices according to manufacturer and organisational requirements • re-installing pneumatic actuators and pilot and slave tubes and fittings according to finalised design documentation and installation drawings • checking pneumatic actuator and pilot and slave tubes connection are free from kinks and physically checking for tightness • re-installing electrical and mechanical actuators according to finalised design documentation and installation drawings • physically checking tightness of electrical and mechanical actuators, and that they are correctly set to operate • re-installing manual actuators according to finalised design documentation and installation drawings • physically checking tightness of manual actuators, and that they are correctly set to operate with safety device engaged • activating all interfaced actuators and removing signage, documentation and lock-off for functional testing • advising relevant persons that system is fully operational and providing appropriate technical, maintenance or handover instructions on operation of system

	<ul style="list-style-type: none">• leaving work site clean and tidy with materials disposed of or recycled according to state or territory legislative and industry requirements.

Unit Sector(s)

Fire protection equipment

Custom Content Section

Not applicable.

CPPFES2043A Prevent ozone depleting substance and synthetic greenhouse gas emissions

Modification History

Revised unit

Unit updated and equivalent to PRMPFES43A Prevent ozone depleting substance and synthetic greenhouse gas emissions

Unit Descriptor

This unit of competency specifies the outcomes required to identify and describe agreements, protocols, legislation, regulations, codes of practice and handling licences developed to reduce ozone layer depletion and global warming.

Application of the Unit

This unit of competency supports individuals responsible for:

- complying with legal, industry, regulatory and licensing requirements relating to ozone depleting substance (ODS) and synthetic greenhouse gas (SGG) extinguishing agents used in fire protection
- considering the impact of work practices in the fire protection industry on ozone layer depletion and global warming
- proposing changes to reduce the risk of accidental emissions that contribute to ozone layer depletion and global warming.

Licensing/Regulatory Information

The unit supports one or more fire protection industry extinguishing agent handling licences (EAHL) prescribed under the Ozone Protection and Synthetic Greenhouse Gas Management Act 1989.

Different states and territories may have regulatory mechanisms that apply to this unit. Candidates are advised to check for regulatory limitations.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---|-----|---|
| 1 | Apply rules and regulations to the use of ODS and SGG extinguishing agents. | 1.1 | Requirements of relevant <i>rules and regulations</i> are <i>confirmed</i> and applied to <i>work procedures</i> to prevent ODS and SGG emissions. |
| | | 1.2 | <i>Compliance requirements are checked</i> and <i>action</i> is taken according to organisational policies and procedures, ODS and SGG policies and procedures, and best practice requirements. |
| 2 | Identify ODS and SGG handling licences, trading authorisations and usage permits. | 2.1 | Types of ODS and SGG <i>extinguishing agent handling licences</i> , licence requirements and <i>entitlements of licensees</i> are identified. |
| | | 2.2 | Extinguishant trading authorisations are identified. |
| | | 2.3 | Halon special permit usage requirements are identified. |
| 3 | Apply an understanding of ozone layer depletion and global warming. | 3.1 | Role and functions of <i>ozone layer</i> are identified and explained. |
| | | 3.2 | Factors involved with, and effects of, <i>global warming</i> are identified and described. |
| | | 3.3 | <i>ODS and SGG extinguishing agents</i> used in fire protection industry are identified by type. |
| | | 3.4 | <i>Effect of ozone depletion and global warming</i> on |

human health, environment and fire protection industry work practices is described.

3.5 Relevant fire protection industry ODS and SGG work practices are identified.

3.6 Improvements to ODS and SGG work practices are identified and proposed to reduce the risk of accidental emissions.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- language, literacy and numeracy skills to:
 - communicate with others clearly and concisely, verbally and in writing
 - read and comply with work industry regulations and codes of practice
 - interpret information
- initiative and enterprise skills to:
 - seek advice on license requirements
 - apply understanding of ozone layer depletion and global warming to change and improve fire protection industry work practices
 - identify and act upon learning opportunities
- technology skills to use technology to access information

Required knowledge

- effect of ozone layer
- actions to take where a breach of ODS and SGG policies and procedures occurs
- effect of:
 - ODS and SGG emissions on ozone depletion and global warming
 - ozone depletion and global warming on environment and human health
- factors involved in global warming
- implications of not applying ODS and SGG legislative requirements to the workplace
- key features of:
 - legislation, regulations and standards applicable to ozone protection in the fire protection industry
 - fire protection industry codes of practice
- ODS and SGG substances used in the fire protection industry
- ODS and SGG EAHL features and requirements, authorisations and permit requirements

- relevant federal, state or territory legislation that affects organisational operations

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>This unit of competency could be assessed by oral or written questioning covering:</p> <ul style="list-style-type: none"> • underpinning knowledge of the effects of ODS and SGG emissions and current arrangements • workplace examples of action taken to reduce risk of emissions and responses to potential or actual breaches of legislation.
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified in this unit.</p> <p>In particular the person should demonstrate the ability to:</p> <ul style="list-style-type: none"> • apply understanding of ozone layer depletion and global warming for: <ul style="list-style-type: none"> • discussing the effect of ODS and SGG emissions on the ozone layer and global warming • describing the impact of ozone depletion and global warming on human health and the environment • assessing impact on fire protection industry work practices • proposing changes to fire protection industry work practices to meet ODS and SGG legal requirements • taking action to respond to potential and actual breaches of ODS and SGG regulations • locate, interpret and explain: <ul style="list-style-type: none"> • ODS and SGG legal requirements for handling extinguishing agents in the fire protection industry • EAHL types, associated responsibilities, usage permits and trading authorisations • agreements, protocols, regulatory requirements, fire protection industry code of practice, and Australian standards relevant to EAHL.
<p>Context of and specific resources for assessment</p>	<p>Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.</p>

	<p>Resource implications for assessment include:</p> <ul style="list-style-type: none"> • assessment documentation • necessary legislation and regulatory documents, manuals, textbooks and other relevant documentation • training and assessment record books.
Method of assessment	<p>Assessment methods must:</p> <ul style="list-style-type: none"> • satisfy the endorsed Assessment Guidelines of the Property Services Training Package • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application • reinforce the integration of employability skills with workplace tasks and job roles • confirm that competency is verified and able to be transferred to other circumstances and environments.
Guidance information for assessment	<p>Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.</p> <p>Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.</p> <p>This unit could be assessed on its own or in combination with other units relevant to the job function.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Rules and regulations</i> may include:</p>	<ul style="list-style-type: none"> • dangerous goods regulations • environmental regulations • fire protection industry codes of practice • licensing arrangements, such as EAHL • manufacturers' system manuals • ODS and SGG legislation, codes and regulations, including
---	--

	<ul style="list-style-type: none"> penalties and policing • OHS legislation, regulations and codes • other relevant legislation relating to fire protection equipment, including: <ul style="list-style-type: none"> • international shipping codes • marine codes for different Australian States • requirements of Australian petroleum industry • relevant agreements and protocols • relevant Australian standards, such as: <ul style="list-style-type: none"> • AS 1851 Maintenance of fire protection systems and equipment • note: Australian standards are frequently revised and users must always check for currency and amendments • relevant federal, state and territory Acts, regulations and codes.
Requirements may be <i>confirmed</i> with:	<ul style="list-style-type: none"> • colleagues • managers • supervisors • team leaders.
<i>Work procedures</i> may include:	<ul style="list-style-type: none"> • assignment instructions • equipment manufacturers’ requirements • instructions from colleagues, supervisor or manager • personal protective equipment requirements • reporting and documentation requirements • specific customer requirements.
<i>Checking compliance requirements</i> may include ensuring that:	<ul style="list-style-type: none"> • persons trading in ODS and SGG hold the appropriate trading authorisation or ODS and SGG permit • scope of work to be undertaken is covered by the appropriate license.
<i>Action</i> may include:	<ul style="list-style-type: none"> • advising customer • documenting non-compliance • making equipment safe • reporting, as required.
Types of <i>extinguishing agent handling licence</i> include:	<ul style="list-style-type: none"> • control systems installation, commissioning and decommissioning • fixed system installation and decommissioning • fixed system testing and maintenance • portable fire extinguisher maintenance • recovery, reclamation, fill and recycling • warehouse maintenance.
<i>Entitlements of licensees</i> include:	<ul style="list-style-type: none"> • portable fire extinguisher maintenance licence entitles holder: <ul style="list-style-type: none"> • to charge and recharge a portable fire extinguisher with

	<ul style="list-style-type: none">• non-ODS and SGG agent<ul style="list-style-type: none">• note: a reclaim and refill licence is required to charge or recharge a portable extinguisher with ODS or SGG• repair the extinguisher valve• fixed system installation and decommissioning licence entitles holder to:<ul style="list-style-type: none">• install and decommission a gaseous fire-extinguishing system (fire protection equipment) including to:<ul style="list-style-type: none">• install and disconnect actuation devices (mechanisms) to and from container valves• install and disconnect gaseous agent containers• install and disconnect interconnections to other gaseous system containers• install and disconnect ancillary equipment connections to manifold and pipework• attach and remove transport equipment, such as valve outlet and actuator port caps, plugs and locking devices installed to prevent accidental discharge• commission actuation control devices set to operate and engage safety devices as needed and decommission these devices• fixed system testing and maintenance licence entitles holder to:<ul style="list-style-type: none">• test and maintain a gaseous fire-extinguishing system (fire protection equipment), including to:<ul style="list-style-type: none">• test actuation release systems• disconnect and reconnect actuation devices (mechanisms)• disconnect and reconnect interconnections to other gaseous system containers• disconnect and reconnect ancillary equipment connections from containers to manifold and pipework• test actuation devices (mechanisms)• perform tests and maintenance on any fire detection and alarm system, including any remote operation panel and actuation and control system that interfaces with or forms part of a gaseous fire-extinguishing system• perform tests and maintenance on gaseous agent containers and ancillary equipment connections from containers to manifold and pipework• recovery, reclamation, fill and recycling licence entitles holder to:<ul style="list-style-type: none">• recover, reclaim, fill and recycle an extinguishing agent into and from a fire extinguisher and gaseous fire-extinguishing system container, from and to a bulk agent container
--	---

	<ul style="list-style-type: none"> • warehouse maintenance licence entitles holder to: <ul style="list-style-type: none"> • monitor for leakage stocks of extinguishing agent bulk agent containers in a warehouse and, as needed, to transfer extinguishing agent from a leaking storage container • control systems installation, commissioning and decommissioning licence entitles holder to: <ul style="list-style-type: none"> • install, commission and decommission a fire detection and alarm system, including any remote operation panel and actuation and control system that interfaces with or forms part of a gaseous fire-extinguishing system.
<p><i>Ozone layer</i> facts include:</p>	<ul style="list-style-type: none"> • composed of ozone (O₃), which is a form of oxygen in which the oxygen molecule contains three atoms of oxygen instead of the usual two • ozone forms less than 0.4 parts per million of the atmosphere • about 90% of ozone is in upper part of atmosphere (stratosphere) • most ozone is in the layer from 20 to 25 km above the earth's surface.
<p><i>Global warming</i> involves:</p>	<ul style="list-style-type: none"> • carbon dioxide found in small quantities (about 350 parts per million) in the atmosphere • carbon dioxide trapping infra red (heat) radiation and warming the atmosphere – the greenhouse effect.
<p><i>ODS and SGG extinguishing agents</i> may include:</p> <p>Note list format: product name (other names) use</p> <p>Check the latest amendments to the Ozone Protection and Synthetic Greenhouse Gas Management Act for the current list of ODS and SGG extinguishing agents.</p>	<ul style="list-style-type: none"> • ODS and SGG extinguishing agents commonly used in Australia: <ul style="list-style-type: none"> • FM200 (FE-227 Heptafluoropropane, HFC-227ea) used as a total flooding extinguishing agent and as a replacement for Halon 1301 • Halon 1211 (BCF, Halon 1211 BCF, Bromochlorodifluoromethane) used as a streaming agent – requires a special permit in Australia • Halon 1301 (BTM, Halon 1301 BTM, Bromotrifluoromethane) used as a total flooding agent – requires a special permit in Australia • NAF-P-III (HCFC Blend C) used as a streaming agent • NAF-P-IV (HCFC Blend E) used as a streaming agent • NAF-S-III (HCFC Blend A) used as a total flooding agent • SF₆ (Sulfurhexafluoride) used as an inerting agent in sealed high voltage switchgear • ODS and SGG extinguishing agents not commonly used in Australia: <ul style="list-style-type: none"> • Blitz III (HCFC Blend D) used in flooding systems • CFC-11 (Trichlorofluoromethane) may be found as a propellant in some powder fire extinguishers (this product is banned in Australia but may be found on incoming foreign

	<p>vessels)</p> <ul style="list-style-type: none"> • FC-2-1-8 (CEA-308) used in flooding systems • FC-3-1-10 (CEA-410) used in flooding systems • FC-5-1-14 (CEA-614) used as a streaming agent • FE-13 (Trifluoromethane, HFC-23) used as a total flooding agent • FE-241 (Chlorotetrafluoroethane, HCFC-124) used as a total flooding agent for non-occupied spaces and as a streaming agent • FE-25 (Pentafluoroethane, HFC-125) used in inerting and explosion suppression applications • FE-36 (Hexafluoropropane, HFC-236fa) used in portable fire extinguishers – is a replacement for Halon 1211 and Halon 1301 • FM100 (HBFC-22B1) used in portable fire extinguishers • Halon 2402 (Dibromotetrafluoroethane) limited use in military systems – requires a special permit in Australia • Halotron I (HCFC Blend B or HCFC-123) used as a total flooding agent and streaming agent • Halotron II (blend of HFC-143a and HFC-125) used as a total flooding agent and as a replacement for Halon 1301 • HCFC-22 (Chlorodifluoromethane) used as a propellant in some powder fire extinguishers (this product is banned in Australia but may be found on incoming foreign vessels) • HFC-134a (Unsymmetric tetrafluoroethane) used as a propellant in some powder fire extinguishers.
<p><i>Effect of ozone depletion and global warming on human health and the environment may include:</i></p>	<ul style="list-style-type: none"> • changes to work practices, including those in the fire protection industry • constraints on: <ul style="list-style-type: none"> • aquatic ecosystems • human immune system • increased: <ul style="list-style-type: none"> • incidence of photochemical smog • risk of: <ul style="list-style-type: none"> • cataracts • skin cancer • inhibited growth of plants • reduced production of agriculture.

Fire protection equipment

Custom Content Section

Not applicable.

CPPFES2047A Inspect and test control and indicating equipment

Modification History

Revised unit

Unit updated and equivalent to PRMPFES47A Inspect and test control and indicating equipment

Unit Descriptor

This unit of competency specifies the outcomes required to complete routine monthly and six-monthly inspect and test procedures to verify that control and indicating equipment (CIE) for a fire alarm system functions as intended. The unit involves working safely, isolating and resetting CIE, conducting compliance tests, visually inspecting, identifying non-compliance defects, and fulfilling mandatory reporting requirements.

Application of the Unit

This unit of competency supports fire protection technicians responsible for inspecting CIE and routinely testing their operational functions to ensure that fire alarm systems are working as intended.

Licensing/Regulatory Information

The unit supports one or more extinguishing agent handling licences (EAHL) prescribed under the Ozone Protection and Synthetic Greenhouse Gas Management Act 1989.

Licence to practise: The skills and knowledge described in this unit do not require an electrical licence or an Australian Communications and Media Authority cabling licence to practise.

Service technicians are not permitted to undertake any installation, replacement, maintenance and repair functions that are restricted to licensed trades or occupations (subject to relevant state and territory regulations).

Different states and territories may have regulatory mechanisms that apply to this unit. Candidates are advised to check for regulatory limitations.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--|-----|---|
| 1 | Plan to conduct routine monthly or six-monthly inspect and test operations on CIE. | 1.1 | <i>Occupational health and safety (OHS) policies and procedures</i> for a given work area are obtained and reviewed. |
| | | 1.2 | Established OHS requirements, risk control measures for ozone depleting substance (ODS) and synthetic greenhouse gas (SGG) emission, and <i>organisational requirements</i> are followed in preparation for <i>maintenance activity</i> . |
| | | 1.3 | Safety <i>hazards</i> are noted, and established risk control measures for on-site work are implemented. |
| | | 1.4 | <i>Work permits</i> are organised prior to entering customer premises. |
| | | 1.5 | <i>Relevant persons</i> are consulted to coordinate work effectively with other work site staff. |
| | | 1.6 | Locations of <i>system components and materials</i> are determined from specifications and <i>installation drawings</i> . |
| | | 1.7 | Inspection and test procedures are arranged to suit <i>CIE</i> according to <i>legislative and industry requirements</i> , Australian standards, job schedule and manufacturers' instructions. |
| | | 1.8 | <i>Documentation</i> needed to conduct tests is confirmed according to <i>work procedures</i> and job requirements. |

- 1.9 **Tools, equipment and test devices** are checked for correct operation and safety according to work procedures and job requirements.
- 2 Inspect CIE.
- 2.1 ODS, SGG and OHS policies and procedures are followed and risk control measures are applied when inspecting CIE.
- 2.2 CIE functions to be used to conduct routine tests according to relevant Australian standard, are identified in manufacturers' instructions.
- 2.3 Alarm zone circuits, plant and other **system interfaces** to be isolated to allow conduct of maintenance activity are identified according to OHS, **ODS and SGG extinguishing agent** emission requirements and work procedures.
- 2.4 Circuits and **actuators** to be isolated are identified.
- 2.5 Visual inspections are conducted according to relevant Australian standard for monthly and six-monthly testing.
- 2.6 CIE inspection results are validated against requirements according to relevant Australian standard.
- 3 Test CIE.
- 3.1 ODS, SGG and OHS policies and procedures are followed and risk control measures are applied when testing CIE.
- 3.2 Circuits, actuators, **back-to-base facilities** and other system interfaces are isolated according to work procedures.
- 3.3 Alarm zone circuits, plant and other system interfaces are confirmed as isolated to make sure system cannot be activated during testing.
- 3.4 Monthly and six-monthly tests are performed according to AS 1851, with CIE and components checked to confirm functionality according to manufacturers' instructions, system **finalised design documentation** and organisational requirements.
- 3.5 Methods for dealing with unexpected situations are

- discussed with relevant persons and documented.
- 3.6 Approval of authorised relevant persons is obtained in order to deal safely with unexpected situations.
- 4 Report findings of inspection and testing.
- 4.1 ODS, SGG and OHS policies and procedures, risk control measures and work procedures are followed when reporting inspect and test findings.
- 4.2 Work site and equipment are cleaned and made safe according to work procedures.
- 4.3 Non-compliance defects are identified and reported according to work procedures.
- 4.4 Recommendations for rectifying defects are made according to work procedures.
- 4.5 CIE is reset to operational state.
- 4.6 Documentation is completed according to work procedures and relevant persons are notified.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- customer service skills
- language, literacy and numeracy skills to:
 - communicate with others clearly and concisely, verbally and in writing
 - document test results and non-compliance defects neatly and legibly
 - read and comply with work instructions and specifications
 - read and interpret final design documentation and manufacturers' instructions
 - read and record measurements
- planning and organising skills to:
 - estimate time to complete activities
 - prioritise tasks
- skills to work safely when:
 - applying workplace housekeeping procedures
 - identifying work area hazards in preparation for inspection and test procedures

- removing debris caused by inspect and test operations in the work area
- selecting and using tools, equipment and materials for specific tasks
- interpersonal skills to relate to people from a range of social and cultural backgrounds
- technical skills to:
 - check routine service details of fire alarm system components and materials
 - identify and isolate zone circuits, plant, back-to-base facilities, actuators and other system interfaces
 - perform routine monthly and six-monthly inspect and test procedures according to AS 1851 Maintenance of fire protection systems and equipment
 - physically isolate actuators to inhibit operation
 - reset CIE to operational state
 - test actuators for operation and reset to operational state
 - verify compliance and functionality of CIE against monthly and six-monthly schedules in AS 1851 Maintenance of fire protection systems and equipment

Required knowledge

- action to take when a breach of OHS, ODS and SGG or other policy occurs
- awareness of on-site work permit requirements
- common controls and indicators on CIE
- detection and warning components connected to CIE
- environmental conditions that cause actuators to create false alarms
- federal, state or territory legislation that affects organisational operations, including:
 - anti-discrimination and diversity
 - equal employment opportunity
- industrial relations issues relevant to inspecting and testing CIE
- key features of legislation, regulations, codes and standards applicable to inspecting and testing CIE, including:
 - implications of not applying legislative requirements to job functions
 - intent of Australian standard AS 1851 Maintenance of fire protection systems and equipment, in relation to CIE inspect and test operations
- key functional differences between a conventional and addressable CIE
- key operational principles of CIE specifically interfaced to fire-suppression systems
- local controls (LC), local control stations (LCS), aural alarms, visual warning devices (VWD) and actuators on fire-suppression systems interfaced to CIE
- methodology used to conduct AS 1851 Maintenance of fire protection systems and equipment, monthly and six-monthly maintenance schedules relevant to conventional and addressable CIE
- operation of actuators
- safety requirements for using tools, equipment and materials
- tools, equipment and materials for conducting monthly and six-monthly inspect and test procedures on CIE according to AS 1851 procedures
- types of electrical safeguards used to protect persons and property

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>This unit of competency could be assessed by observation of at least two practical demonstrations of inspecting and testing CIE specifically interfaced to different fire-suppression systems:</p> <ul style="list-style-type: none"> • conventional fire indicating panels and microprocessor analogue fire indicating panel fire detection systems • fire alarm systems that comply with AS 1670 Fire detection, warning, control and intercom systems – Fire • emergency warning and intercommunication systems that comply with AS 1670.4 Fire detection, warning, control and intercom systems - System design, installation and commissioning - Sound systems and intercom systems for emergency purposes • fire alarm systems interfaced with activating mechanisms of a fire-suppression system. <p>The type of CIE interfaced to fire-suppression systems tested should correlate to the workplace setting of the candidate.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified in this unit.</p> <p>In particular the person should demonstrate the ability to:</p> <ul style="list-style-type: none"> • locate, interpret and apply relevant information, standards and specifications • comply with site safety plan, OHS regulations, ODS and SGG regulations (where required), and state and territory legislation applicable to workplace operations • comply with organisational policies and procedures, including quality requirements • communicate and work effectively and safely with others • organise work permits • adhere to safety procedures during inspect and test procedures • identify risk-reduction measures • identify and locate system components and materials • identify, select and use tools, equipment and test equipment • identify and isolate alarm zone circuits, back-to-base facilities, actuators, plant and other system interfaces

	<ul style="list-style-type: none"> • confirm that circuits, plant and other system interfaces are isolated • complete mandatory and optional test and verification requirements applicable to installed fire-suppression systems • perform test procedures on CIE interfaced to fire-suppression systems • visually inspect fire-suppression systems • identify and report non-compliance defects • develop recommendations to rectify defects • reset CIE and fire-suppression system to operational state without unwanted CIE outputs or alarms • complete workplace housekeeping requirements • complete records and documentation.
Context of and specific resources for assessment	<p>Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none"> • access to customer premises or a simulated workplace environment • assessment documentation • necessary tools, specialist equipment, manuals and relevant documentation • training and assessment record books.
Method of assessment	<p>Assessment methods must:</p> <ul style="list-style-type: none"> • satisfy the endorsed Assessment Guidelines of the Property Services Training Package • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application • reinforce the integration of employability skills with workplace tasks and job roles • confirm that competency is verified and able to be transferred to other circumstances and environments.
Guidance information for assessment	<p>Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.</p> <p>Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.</p> <p>This unit could be assessed on its own or in combination with other</p>

	units relevant to the job function.
--	-------------------------------------

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Occupational health and safety policies and procedures</i> may relate to:</p>	<ul style="list-style-type: none"> • assessing work site for hazards and risks prior to preparing it for work procedure • displaying signs and using barriers in work area • employer and employee rights and responsibilities • incident and accident investigation • OHS audits and safety inspections • OHS hierarchy of control • risk assessment and control measures • safe operating procedures and instructions, including: <ul style="list-style-type: none"> • awareness of electrical hazards • emergency procedures • equipment maintenance and use • first aid • following confined spaces procedures • hazard and risk identification and reporting • use and storage of hazardous substances • using personal protective equipment (PPE), including: <ul style="list-style-type: none"> • appropriate gloves and overalls • dust masks • earmuffs or plugs • hard hats • safety boots or shoes • safety glasses or goggles • sunhats • those for working safely: <ul style="list-style-type: none"> • around electrical wiring, cables and overhead powerlines • around tools and equipment • on ladders and raised platforms.
<p><i>Organisational</i></p>	<ul style="list-style-type: none"> • documentation and information systems and processes

<p>requirements may include:</p>	<ul style="list-style-type: none"> • legal and organisational policies and guidelines, including personnel practices and guidelines outlining work roles, responsibilities and delegations • legislation relevant to inspect and test operations for CIE • OHS policies, procedures and programs • procedures and work instructions to prevent the emission of ODS and SGG in the workplace • use of electronic job scheduling and communication devices.
<p>Maintenance activity may include:</p>	<ul style="list-style-type: none"> • actions to conduct routine maintenance according to AS 1851 Maintenance of fire protection systems and equipment • actions to conduct non-routine maintenance, such as general isolation of a system to allow building works to be completed and subsequent resetting of the system after works completed.
<p>Hazards may include:</p>	<ul style="list-style-type: none"> • environmental, including: <ul style="list-style-type: none"> • improper use of hazardous material and other chemicals • improper use or emission of ODS and SGG; emissions may be caused by: <ul style="list-style-type: none"> • conducting interface tests during commissioning, servicing and decommissioning procedures between container activating mechanisms, CIE and fire alarm system • installing and removing container valve assembly, manifold connection components and activating mechanisms • servicing and maintaining container valve assemblies • transporting, storing and manually handling containers containing ODS and SGG agents • ergonomic, such as incorrect manual-handling methods • obstructive, such as blocked access to emergency entry or exit points • any situation with a potential to cause loss • any source of potential harm • equipment in a work site • hazards associated with electrical or mechanical faults • people in a work site • work methods, plans and procedures.
<p>Work permits may include permits to:</p>	<ul style="list-style-type: none"> • enter a work site • enter a work site at specific times • enter a restricted area within a work site • ensure that specific OHS requirements are met before entering a work site.
<p>Relevant persons may</p>	<ul style="list-style-type: none"> • building owners or nominated representatives • colleagues

<p>include:</p>	<ul style="list-style-type: none"> • customers • managers • supervisors • team leaders.
<p><i>System components and materials</i> may include:</p>	<ul style="list-style-type: none"> • colour graphic visual display units (VDUs) • fire indicator panel components • mimic panels • remote indicating equipment, such as: <ul style="list-style-type: none"> • standby batteries • sub-fire indicator panels • fire detection equipment, such as: <ul style="list-style-type: none"> • data gathering control units • analogue and analogue addressable smoke, heat and gas detectors • warning system equipment, such as: <ul style="list-style-type: none"> • alarm bells • mimic and location panels • warning and strobe lights • warning speakers • fire-suppression systems equipment, such as: <ul style="list-style-type: none"> • actuators, such as pneumatic, electrical, mechanical and manual operation • container discharge valves • fittings, including hose fittings • flexible discharge hoses • pilot and slave tubes • interface equipment to other fire protection and building services systems, such as: <ul style="list-style-type: none"> • door system release controls • electrical interface relays and contacts • flow switches and pressure switches • optical couplers • utility shutdown devices • solenoid valves and other activating mechanisms • interface communication devices, such as: <ul style="list-style-type: none"> • remote public address (PA) system outputs • two-way radios • warden intercommunication phones.
<p><i>Installation drawings</i> may include:</p>	<ul style="list-style-type: none"> • installation drawings that meet the requirements of AS 4214 Gaseous fire extinguishing systems, and AS 1670 Fire detection,

	<p>warning, control and intercom systems, parts 1 and 4, including:</p> <ul style="list-style-type: none"> • ‘for construction’ drawings • ‘as installed’ and ‘as built’ drawings.
<p><i>Control and indicating equipment</i> may include:</p>	<ul style="list-style-type: none"> • fire indicating panels (FIP) approved to AS 1603 Automatic fire detection and alarm systems or AS 4428 Fire detection, warning, control and intercom systems – control and indicating equipment • equipment specifically interfaced to fire-suppression systems: <ul style="list-style-type: none"> • actuation circuit supervision indicators • alarm operation requirements • discharge time delays • dual zone operations • inhibit discharge switches • inoperative status indicators • shutdown operations • system operation indicators • system warning indications.
<p><i>Legislative and industry requirements</i> may include:</p>	<ul style="list-style-type: none"> • building surveyor requirements, such as occupancy permits • dangerous goods regulations • environmental regulations, including ODS and SGG legislation, codes and regulations • fire protection industry codes of good practice • licensing arrangements, such as EAHL • manufacturers’ system manuals • OHS legislation, codes and regulations • relevant federal, state and territory building Acts, regulations and codes, such as: <ul style="list-style-type: none"> • Ozone Protection and Synthetic Greenhouse Gas Management Act 1989 • Building Code of Australia (BCA) • relevant Australian standards, such as: <ul style="list-style-type: none"> • AS 1603 Automatic fire detection and alarm systems • AS 1670 Fire detection, warning, control and intercom systems, parts 1 and 4 • AS 1851 Maintenance of fire protection systems and equipment • AS 4214 Gaseous fire extinguishing systems • AS 4428 Fire detection, warning, control and intercom systems – control and indicating equipment • note: Australian standards are frequently revised and users must always check for currency and amendments • other relevant legislation relating to fire protection equipment,

	<p>including:</p> <ul style="list-style-type: none"> • international shipping codes • marine codes for different Australian States • requirements of Australian petroleum industry.
<p>Documentation may include:</p>	<ul style="list-style-type: none"> • corrective action reports • customer recommendation forms • equipment recommendation forms • expense claims • job cards • maintenance record system • manufacturers’ system documentation • product documentation • service agreements • service test record logbooks • test results and test reports.
<p>Work procedures may include:</p>	<ul style="list-style-type: none"> • assignment instructions • equipment manufacturers’ requirements • instructions from colleagues, supervisors and managers • ODS, SGG and OHS requirements • PPE requirements • reporting and documentation requirements • specific customer requirements.
<p>Tools, equipment and test devices may include:</p>	<ul style="list-style-type: none"> • hand tools, including: <ul style="list-style-type: none"> • hammers • pliers • screwdrivers • spanners • spirit levels • fire equipment spare parts, including: <ul style="list-style-type: none"> • anti-tamper seals • batteries • bulbs and globes • service tags • manual-handling aids, including: <ul style="list-style-type: none"> • hand trucks • lifting straps • trolleys • power tools, including: <ul style="list-style-type: none"> • battery powered drills • hammer drills

	<ul style="list-style-type: none"> • servicing tools and test devices, including: <ul style="list-style-type: none"> • barcode readers • electrical multimeters • hydrostatic test equipment • recharging and pressurising equipment • safety equipment • scales • service tag punches • simulator actuators • sound meters.
<p><i>System interfaces</i> may include:</p>	<ul style="list-style-type: none"> • building management systems • building warning systems • controls for pressurisation systems, air conditioning system shutdowns and smoke spills • operating signals between CIE and building services systems, such as utility shutdown devices.
<p><i>ODS and SGG extinguishing agents</i> may include:</p> <p>Note list format: product name (other names) use</p> <p>Check the latest amendments to the Ozone Protection and Synthetic Greenhouse Gas Management Act for the current list of ODS and SGG extinguishing agents.</p>	<ul style="list-style-type: none"> • ODS and SGG extinguishing agents commonly used in Australia: <ul style="list-style-type: none"> • FM200 (FE-227 Heptafluoropropane, HFC-227ea) used as a total flooding extinguishing agent and as a replacement for Halon 1301 • Halon 1211 (BCF, Halon 1211 BCF, Bromochlorodifluoromethane) used as a streaming agent – requires a special permit in Australia • Halon 1301 (BTM, Halon 1301 BTM, Bromotrifluoromethane) used as a total flooding agent – requires a special permit in Australia • NAF-P-III (HCFC Blend C) used as a streaming agent • NAF-P-IV (HCFC Blend E) used as a streaming agent • NAF-S-III (HCFC Blend A) used as a total flooding agent • SF6 (Sulfurhexafluoride) used as an inerting agent in sealed high voltage switchgear • ODS and SGG extinguishing agents not commonly used in Australia: <ul style="list-style-type: none"> • Blitz III (HCFC Blend D) used in flooding systems • CFC-11 (Trichlorofluoromethane) may be found as a propellant in some powder fire extinguishers (this product is banned in Australia but may be found on incoming foreign vessels) • FC-2-1-8 (CEA-308) used in flooding systems • FC-3-1-10 (CEA-410) used in flooding systems • FC-5-1-14 (CEA-614) used as a streaming agent

	<ul style="list-style-type: none"> • FE-13 (Trifluoromethane, HFC-23) used as a total flooding agent • FE-241 (Chlorotetrafluoroethane, HCFC-124) used as a total flooding agent for non-occupied spaces and as a streaming agent • FE-25 (Pentafluoroethane, HFC-125) used in inerting and explosion suppression applications • FE-36 (Hexafluoropropane, HFC-236fa) used in portable fire extinguishers – is a replacement for Halon 1211 and Halon 1301 • FM100 (HBFC-22B1) used in portable fire extinguishers • Halon 2402 (Dibromotetrafluoroethane) limited use in military systems – requires a special permit in Australia • Halotron I (HCFC Blend B or HCFC-123) used as a total flooding agent and streaming agent • Halotron II (blend of HFC-143a and HFC-125) used as a total flooding agent and as a replacement for Halon 1301 • HCFC-22 (Chlorodifluoromethane) used as a propellant in some powder fire extinguishers (this product is banned in Australia but may be found on incoming foreign vessels) • HFC-134a (Unsymmetric tetrafluoroethane) used as a propellant in some powder fire extinguishers.
<p>Actuators (also known as actuation control devices) may include:</p>	<ul style="list-style-type: none"> • electrical operation: signal generated from CIE panel as part of a fire alarm detection system • manual operation: by direct push lever or pull cable system • mechanical operation: via signal from local control station or fire detector • pneumatic operation: from fire detector (typically heat).
<p>Back-to-base facilities include:</p>	<ul style="list-style-type: none"> • monitoring equipment which is connected by alarm signalling equipment (ASE) from CIE to a communication path (telephone line or radio link) to a monitoring centre • monitoring centres can be operated by or on behalf of a fire authority for the purposes of mobilising and directing firefighting resources to the site where the CIE is installed.
<p>Finalised design documentation may include:</p>	<ul style="list-style-type: none"> • documentation that meets the requirements of AS 4214 Gaseous fire extinguishing systems, and AS 1670 Fire detection, warning, control and intercom systems, parts 1 and 4, including: <ul style="list-style-type: none"> • system concentration and calculations • technical bulletins • material safety data sheets on agents and equipment • manufacturers’ information.

CPPHES4005 Assess household energy use and efficiency improvements

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and equivalent to CPPHSA4001A Assess household energy use.
Updated to meet the Standards for Training Packages.

Application

This unit specifies the skills and knowledge required to source and analyse information on household energy use and to advise on ways to improve energy efficiency and reduce energy costs in the home.

This unit is for individuals who work independently as home sustainability assessors using specialised knowledge to complete household energy assessments. It involves completing routine and non-routine tasks and dealing with predictable and sometimes unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

None.

Unit Sector

Home Sustainability.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and organise energy assessment.

1.1 Consult with client to clarify purpose of energy use assessment and respond to questions and concerns.

1.2 Confirm assessment requirements in line with client needs, legislation, regulations, standards, codes and

- government incentive programs for energy efficiency.
- 1.3 Plan energy use assessment in consultation with client and according to work health and safety (WHS) procedures.
 - 1.4 Prepare energy use assessment documentation.
 - 1.5 Confirm that required tools and equipment are available and in working order.
- 2 Compile information on household energy generation, use, and costs.
- 2.1 Gather information on energy use, onsite energy production and storage and energy costs.
 - 2.2 Access and interpret energy bills and metering data.
 - 2.3 Identify main sources of energy use.
 - 2.4 Carry out measurements and observations safely during on-site inspection to estimate energy usage for key energy using appliances.
 - 2.5 Gather information on household occupant behaviours and preferences that impact energy use.
 - 2.6 Record gathered information using suitable data collection tool.
- 3 Analyse data on household energy use.
- 3.1 Identify key features of household energy usage and estimate costs and greenhouse gas emissions for key appliances.
 - 3.2 Reconcile energy use with energy billing data.
 - 3.3 Identify cost effective measures and behavioural opportunities for improving energy efficiency.
 - 3.4 Identify government rebates and other assistance programs for improving household energy efficiency.
 - 3.5 Estimate energy, emissions and cost savings to be gained by implementing measures for improving energy efficiency.

- | | | |
|--|-----|---|
| 4 Provide information on residential renewable energy. | 4.1 | Source technical information on renewal energy production and storage technologies and inform client. |
| | 4.2 | Evaluate suitability of using residential property for renewable energy systems and discuss with client. |
| | 4.3 | Identify feed in tariffs, government rebates and other assistance programs for installing energy production and storage technologies. |
| 5 Report findings of household energy assessment. | 5.1 | Collate results, recommendations and supporting evidence of energy use assessment. |
| | 5.2 | Document options and potential savings and prioritise recommendations for energy efficiency measures in line with client needs. |
| | 5.3 | Explain report, indicative costs and improvements in household energy efficiency to client. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- oral communication skills to interact with clients from diverse social, economic and cultural backgrounds
- numeracy skills to interpret data from gas and electricity meters and accounts and calculate costs and greenhouse gas emissions
- reading skills to interpret data from gas and electricity meters and the outputs of energy measuring tools, technical data from product specifications
- technology skills to use basic computer functions, calculators and measuring tools.

Unit Mapping Information

Supersedes and equivalent to CPPHSA4001A Assess household energy use.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=6f3f9672-30e8-4835-b348-205dfcf13d9b>

Assessment Requirements for CPPHES4005 Assess household energy use and efficiency improvements

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and equivalent to CPPHSA4001A Assess household energy use.
Updated to meet the Standards for Training Packages.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by safely conducting energy use assessments and identifying efficiency improvements for three different households.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- alternative energy production and storage technologies applicable to residential buildings
- energy ratings and power consumption of common household appliances
- energy types and units of measurement
- hazards and risks and types of personal protective equipment (PPE) to be used when conducting on-site assessments of household energy use
- key requirements of relevant codes, standards, regulations and government incentive programs for household energy efficiency
- major systems and other sources of household energy use:
 - cooking
 - refrigeration
 - washing and drying
 - home entertainment and home office equipment
 - heating and cooling
 - internal and external appliances
 - lighting
 - swimming pools and spas
 - water heating
 - water pumps
- methods for interpreting household energy bills:
 - actual and estimated bills

- plans
- tariffs
- strategies for improving household energy efficiency including impact of building shell on heating/cooling energy use, upgrade options and behavioural changes
- trends in energy use and emissions
- types and uses of energy measuring tools.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- residential buildings to allow achievement of the performance evidence
- codes, standards, legislation and government programs relevant to energy efficiency
- manufacturers' product information on domestic appliances, water heating systems, heating and cooling systems, lighting and electronic products
- technical information on energy production and storage technologies
- personal protective equipment and energy measurement and data collection tools and documentation.

CPPHES4007 Assess thermal performance of existing residential buildings

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and equivalent to CPPHSA4004A Assess thermal performance of existing residences using non-rating tools and techniques. Updated to meet the Standards for Training Packages.

Application

This unit specifies the skills and knowledge required to source and analyse information on the thermal performance of existing residences. It includes providing advice on ways to improve thermal performance accounting for ownership and type of building, costs and practicalities of implementing improvement recommendations.

This unit is for individuals who work independently as home sustainability assessors using specialised knowledge to complete thermal performance assessments. It involves completing routine and non-routine tasks and dealing with predictable and sometimes unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

None.

Unit Sector

Home Sustainability.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and organise thermal performance assessment.

1.1 Consult with client to clarify purpose of thermal performance assessment and respond to questions and concerns.

- 1.2 Confirm assessment requirements in line with client needs, legislation, regulations, standards, codes and government incentive programs for improving thermal performance of existing residential buildings.
 - 1.3 Plan thermal performance assessment in consultation with client and according to work health and safety (WHS) requirements.
 - 1.4 Prepare thermal performance assessment documentation and confirm that required tools and equipment are available and in working order.
- 2 Compile and analyse information on thermal performance of residence.
 - 2.1 Gather information from client to clarify building use and construction details.
 - 2.2 Select and fit required personal protective equipment (PPE).
 - 2.3 Carry out measurements and observations during on-site inspection to confirm factors impacting thermal performance.
 - 2.4 Record information using appropriate data collection tool.
 - 2.5 Analyse information to identify strengths and weaknesses in thermal performance of residence.
- 3 Analyse options for improving thermal performance of residence.
 - 3.1 Source technical information on building thermal performance and evaluate suitability for existing residence.
 - 3.2 Identify government rebates and other assistance programs for thermal performance of existing residential buildings.
 - 3.3 Evaluate options for improving thermal performance and reducing emissions of the residence.
 - 3.4 Identify cost effective measures for improving thermal performance of the residence according to organisational requirements.

- | | | |
|--|-----|---|
| 4 Report findings of thermal performance assessment. | 4.1 | Collate results, recommendations and supporting evidence of thermal performance assessment. |
| | 4.2 | Write up options and prioritise recommendations for thermal performance improvements. |
| | 4.3 | Discuss report and indicative costs and improvements in thermal performance with client. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- oral communication skills to interact with clients from diverse social, economic and cultural backgrounds
- numeracy skills to interpret different units of measurement associated with existing residential buildings and their construction features.

Unit Mapping Information

Supersedes and equivalent to CPPHSA4004A Assess thermal performance of existing residences using non-rating tools and techniques.

Supersedes and equivalent to CPPHSA4004A Assess thermal performance of existing residences using non-rating tools and techniques. Updated to meet the Standards for Training Packages.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by conducting thermal performance assessments and identifying thermal performance improvements for a minimum of two different existing residential buildings.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- Australian climate zones, characteristics and data used in thermal performance assessments:
 - diurnal temperature range
 - humidity
 - irradiance
 - minimum and maximum temperature
 - solar geometry
 - wind speed and direction
- building thermal performance principles:
 - glazing, shading and insulation for controlling temperature
 - orientation impacts
 - thermal mass for storing
 - ventilation
- definition of thermal comfort and its role in thermal performance assessments
- hazards and risks and types of personal protective equipment (PPE) to be used when conducting on-site thermal performance assessments
- impact of building design and materials on thermal performance:
 - condensation
 - constraints on choice of building materials

- embodied energy and lifecycle properties of building materials
- thermal performance properties of common building materials
- key requirements of codes, standards, regulations and government incentive programs associated with improving the thermal performance of existing residences
- options for improving thermal performance of existing residences
- passive energy design principles
- physical factors that influence thermal comfort
- relationship between building design, energy consumption and greenhouse gas emissions
- relationship between building thermal performance and thermal comfort
- requirements, documentation and uses of thermal performance ratings
- safe work requirements for on-site thermal performance assessments
- types, advantages and disadvantages of non-rating tools and techniques used to assess thermal performance of residential buildings
- units of measurement for energy and power associated with thermal performance assessments.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- existing residential buildings to allow achievement of the performance evidence
- codes, standards, legislation and government programs relevant to thermal performance of buildings
- required tools and equipment including PPE
- technical reference library and/or (online) access to current technical publications on:
 - building design and materials
 - house energy rating schemes (HERS)
 - building thermal performance for existing buildings
 - Australian climate zones
 - manufacturers' product information on building products and materials.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=6f3f9672-30e8-4835-b348-205dfcf13d9b>

CPPSPS4017 Detect leaks in swimming pools and spas

Modification History

Release 1 This version first released with CPP Property Services Training Package Release 9.0.

Supersedes and is equivalent to CPPSPS4017A Detect leaks in swimming pools and spas. Added in content from CPPSPS4011A Comply with regulatory requirements for swimming pool and spa servicing and WHS. Updated to meet the Standards for Training Packages.

Application

This unit specifies the outcomes required to detect leaks in swimming pools and spas. It includes operating leak-detection equipment and reporting on leak-detection activities.

This unit is suitable for swimming pool and spa technicians who work independently using specialised knowledge and skills to solve predictable and unpredictable problems in:

- private swimming pools and spas
- public swimming pools and spas, including:
 - hydrotherapy and therapeutic exercise pools
 - wading and receiving pools associated with water slides
 - wave pools.

All work must be carried out to comply with workplace procedures, in accordance with state/territory work health and safety (WHS), regulations and legislation that applies to the workplace. Legislative and regulatory requirements apply to swimming pool and spa technicians but vary according to state/territory jurisdictions. Users must check with the relevant regulatory authority before delivery.

Service technicians are not permitted to undertake any installation, replacement, maintenance and repair functions that are restricted to licensed trades or occupations.

Pre-requisite Unit

Nil.

Unit Sector

Swimming pool and spa service

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------------|--|
| 1 Assess job requirements. | 1.1 Identify relevant Australian standards and regulatory, manufacturer and enterprise requirements related to leak detection. |
| | 1.2 Review work instructions and test to confirm that swimming pool and/or spa is leaking in line with enterprise procedures. |
| | 1.3 Confirm location of related services in line with enterprise procedures. |
| | 1.4 Identify hazards and assess and control risks in the work area in line with WHS and enterprise requirements. |
| 2 Detect leaks. | 2.1 Apply relevant regulations, Australian standards and manufacturer, client and enterprise requirements throughout leak detection. |
| | 2.2 Implement leak detection process using appropriate leak-detection equipment. |
| | 2.3 Seek advice from relevant personnel for activities outside scope of own expertise or licensing. |
| | 2.4 Arrange leak repair in line with testing outcomes and enterprise and statutory requirements. |
| 3 Complete leak detection activities. | 3.1 Clean and store leak-detection equipment in line with enterprise and manufacturer requirements |
| | 3.2 Review and report on work in line with enterprise procedures. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- reading skills to source and interpret technical information, regulations, standards and codes of practice
- oral communication skills to interact with clients from diverse social, economic and cultural backgrounds
- numeracy skills to:
 - perform calculations related to water loss in swimming pools and spas
 - interpret data output from electronic leak-detection equipment.

Unit Mapping Information

Supersedes and equivalent to CPPSPS4017A Detect leaks in swimming pools and spas.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPPSPS4017 Detect leaks in swimming pools and spas

Modification History

Release 1 This version first released with CPP Property Services Training Package Release 9.0.

Supersedes and is equivalent to CPPSPS4017A Detect leaks in swimming pools and spas. Added in content from CPPSPS4011A Comply with regulatory requirements for swimming pool and spa servicing and WHS. Updated to meet the Standards for Training Packages.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- Determine job requirements, detect leak and organise repair of leaks in:
 - one swimming pool and one spa made from fibreglass
 - one swimming pool and one spa made from concrete.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- key requirements of relevant commonwealth, state or territory, and local government regulations and Australian standards related to swimming pool and spa servicing:
 - work health and safety
 - public health
 - dangerous goods
 - environment and waste disposal
 - Australian Competition and Consumer Commission product safety guidelines
 - electrical and plumbing regulations related to own work
- enterprise policies and procedures related to:
 - compliance with regulations
 - maintenance of knowledge of regulations
 - roles, responsibilities and limitations of own role
- work instructions:
 - site requirements, including access
 - personal protective clothing and equipment requirements
 - equipment and systems location information

- warranties and guarantees
- hazards and risks associated with swimming pool and spa leak detection
- common structural leak areas:
 - cracks
 - lights
 - main drain and hydrostatic valve
 - pipe openings into pool
 - skimmer bond to pool
 - skimmer throat
 - tile line
 - vinyl liners
- leak-detection equipment:
 - types
 - operating principles
 - safety
 - maintenance procedures
- leak-detection procedures
- signs of potential pool and spa leaks:
 - algae growth or discoloration of water
 - cracks
 - equipment loses prime
 - excess chemical usage
 - excessive water loss
 - pool deck is sinking or lifting
 - pool has air in the system
 - soggy spots around the pool
 - visible equipment leaks
- types of leaks in swimming pools and spas:
 - plumbing leaks
 - pressure leaks
 - static leaks.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be undertaken in the workplace or in a simulated workplace environment.

Candidates must be provided with:

- relevant manufacturer instructions, regulations, codes, standards and enterprise policies and procedures

- relevant tools and equipment, personal protection equipment (PPE)
- technical references with current information on leak detection techniques for swimming pools and spas.

CUASTA403 Operate flying systems

Modification History

Release	Comments
Release 2	This version released with CUA Creative Arts and Culture Training Package version 2.0. Updated assessment conditions section. Updated modification history section to reflect changed name of training package.
Release 1	This version first released with CUA Creative Arts and Culture Training Package version 1.0.

Application

This unit describes the performance outcomes, skills and knowledge required to operate manual and automated flying systems that raise and lower soft hangings and flats, and 'fly' scenery items into and out of performance spaces.

Individuals who apply these skills work autonomously in a team environment as they take responsibility for ensuring the smooth operation of flying systems for productions in the entertainment and events industries.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Media and entertainment production - staging

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for flying operations	1.1 Clarify flying requirements in consultation with relevant personnel and with reference to production documentation 1.2 Plot and run through fly cues, ensuring correct speed and

	<p>timing of each cue</p> <p>1.3 Modify cues as required, in consultation with relevant personnel</p> <p>1.4 Complete pre-show checks to ensure individual components of flying systems are ready for operation and comply with safety requirements</p> <p>1.5 Execute pre-sets and document modifications as required</p>
2. Fly set elements	<p>2.1 Execute fly cues safely according to performance requirements</p> <p>2.2 Use flying systems within their rated capacity and acceptable safety margins</p> <p>2.3 Where counterweight systems are used, keep flown loads and counterweights in balance or under control</p> <p>2.4 Use brake system, handbrake or other stopping devices safely and appropriately</p> <p>2.5 Use control systems according to instructions</p> <p>2.6 Promptly identify problems with flying system operation and rectify or refer to relevant personnel according to organisational procedures and safety regulations</p> <p>2.7 Use communication systems and signals according to organisational procedures and safety requirements</p>
3. Complete post-show tasks	<p>3.1 Reset flying elements at completion of performances according to organisational procedures and safety regulations</p> <p>3.2 Inform relevant personnel of aspects of system operation that require attention</p> <p>3.3 Contribute to evaluations of productions and implement recommendations aimed at improving overall effectiveness of flying operations</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 2.5	<ul style="list-style-type: none"> Interprets production documentation in relation to own duties

Writing	1.3, 1.5	<ul style="list-style-type: none"> • Completes workplace documentation
Oral communication	1.1, 1.3, 2.5, 2.6, 2.7, 3.2, 3.3	<ul style="list-style-type: none"> • Obtains information by listening and questioning • Discusses ideas and solutions when operating flying systems
Numeracy	1.2, 1.3	<ul style="list-style-type: none"> • Calculates timings when plotting and modifying cues
Navigate the world of work	1.1, 1.2, 1.4, 2.1, 2.2, 2.3, 2.4, 2.5, 2.6, 2.7, 3.1	<ul style="list-style-type: none"> • Follows workplace protocols and safety procedures • Undertakes tasks in line with own level of responsibility
Interact with others	1.1, 1.3, 2.5, 2.6, 2.7, 3.2, 3.3	<ul style="list-style-type: none"> • Works collaboratively to achieve shared goals
Get the work done	1.1, 1.2, 1.3, 1.4, 1.5, 2.1, 2.2, 2.3, 2.4, 2.5, 2.6, 2.7, 3.1, 3.2, 3.3	<ul style="list-style-type: none"> • Adopts a methodical and logical approach to operating flying systems • Uses control desks and manual systems to fly production elements • Recognises and takes responsibility for addressing predictable, and some less predictable, problems when operating flying systems • Applies a knowledge of staging and flying systems to work activities • Implements improvements based on outcome of evaluations of flying operations

Assessment Requirements for CUA STA403 Operate flying systems

Modification History

Release	Comments
Release 2	This version released with CUA Creative Arts and Culture Training Package version 2.0. Updated assessment conditions section. Updated modification history section to reflect changed name of training package.
Release 1	This version first released with CUA Creative Arts and Culture Training Package version 1.0.

Performance Evidence

Evidence of the ability to:

- operate flying systems for at least two productions
- follow safety procedures
- work collaboratively.

Note: If a specific volume or frequency is not stated, then evidence must be provided for each of the above points at least once.

Knowledge Evidence

To complete the unit requirements the individual must:

- describe issues and challenges that typically arise when operating flying systems, along with solutions to address them
- explain the link between flying and other aspects of productions and the range of elements that are commonly flown
- explain different ways in which flying systems can be operated
- explain safety issues that impact on flying systems, including regulations about the scope of work that can be undertaken by unlicensed personnel and emergency procedures
- explain sequencing, timing and speed requirements for flying systems in a range of productions

- provide examples of communication systems and correct signals to use when operating flying systems
- explain the following in relation to counterweight systems:
 - loading and unloading cradles
 - safe working loads
 - single and double purchase
 - spreading the load
 - swinging bars
 - where to hang lighting bars and masking.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- a venue in which a theatrical flying system is installed
- a production that requires the operation of flying systems.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

HLTAID011 Provide First Aid

Modification History

Not applicable.

Application

This unit describes the skills and knowledge required to provide a first aid response to a casualty in line with first aid guidelines determined by the Australian Resuscitation Council (ARC) and other Australian national peak clinical bodies.

The unit applies to all persons who may be required to provide a first aid response in a range of situations, including community and workplace settings.

Specific licensing/regulatory requirements relating to this competency, including requirements for refresher training should be obtained from the relevant national/state/territory Work Health and Safety Regulatory Authorities.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes

Performance criteria describe the performance needed to demonstrate achievement of the element.

1. Respond to an emergency situation.

- 1.1. Recognise and assess an emergency situation.
- 1.2. Ensure safety for self, bystanders and casualty.
- 1.3. Assess the casualty and recognise the need for first aid response.
- 1.4. Seek assistance from emergency services.

2. Apply appropriate first aid procedures.

- 2.1. Perform cardiopulmonary resuscitation (CPR) in accordance ARC guidelines.
- 2.2. Provide first aid in accordance with established first aid principles.
- 2.3. Display respectful behaviour towards casualty.
- 2.4. Obtain consent from casualty where possible.
- 2.5. Use available resources and equipment to make the casualty as comfortable as possible.
- 2.6. Operate first aid equipment according to manufacturers' instructions.
- 2.7. Monitor the casualty's condition and respond in accordance with first aid principles.

3. Communicate details of the incident.
 - 3.1. Accurately convey incident details to emergency services.
 - 3.2. Report details of incident in line with appropriate workplace or site procedures.
 - 3.3. Complete applicable workplace or site documentation, including incident report form.
 - 3.4. Maintain privacy and confidentiality of information in line with statutory or organisational policies.
4. Review the incident.
 - 4.1. Recognise the possible psychological impacts on self and other rescuers and seek help when required.
 - 4.2. Contribute to a review of the first aid response as required.

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and not equivalent to HLTAID003 Provide first aid

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=ced1390f-48d9-4ab0-bd50-b015e5485705>

Assessment Requirements for HLTAID011 Provide First Aid

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the workplace or community setting.

There must be evidence that the candidate has completed the following tasks in line with State/Territory regulations, first aid codes of practice, first aid guidelines determined by the Australian Resuscitation Council (ARC) and other Australian national peak clinical bodies and workplace or site procedures:

- managed, in line with ARC guidelines, the unconscious, breathing casualty including appropriate positioning to reduce the risk of airway compromise
- managed, in line with ARC guidelines, the unconscious, non-breathing adult, including:
 - performing at least 2 minutes of uninterrupted single rescuer cardiopulmonary resuscitation (CPR) (5 cycles of both compressions and ventilations) on an adult resuscitation manikin placed on the floor
 - following the prompts of an automated external defibrillator (AED) to deliver at least one shock
 - demonstrating a rotation of single rescuer operators with minimal interruptions to compressions
 - responding appropriately in the event of regurgitation or vomiting
- managed, in line with ARC guidelines, the unconscious, non-breathing infant, including:
 - performing at least 2 minutes of uninterrupted single rescuer CPR (5 cycles both compressions and ventilations) on an infant resuscitation manikin placed on a firm surface
- managed casualties, with the following:
 - anaphylaxis
 - asthma
 - non-life-threatening bleeding
 - choking
 - envenomation, using pressure immobilisation
 - fractures, dislocations, sprains and strains, using appropriate immobilisation techniques
 - minor wound cleaning and dressing
 - nosebleed
 - shock

- responded to at least one simulated first aid incident contextualised to the candidate's workplace or community setting, where the candidate has no knowledge of the casualty's condition prior to starting treatment, including:
 - identifying the casualty's illness or injury through history, signs and symptoms
 - using personal protective equipment (PPE) as required
 - providing appropriate first aid treatment
 - conveying incident details to emergency services or advising casualty on any required post incident action
 - providing an accurate verbal and written report of the incident
 - reviewing the incident.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- guidelines and procedures including:
 - ARC guidelines relevant to the provision of first aid
 - first aid guidelines from Australian national peak clinical bodies
 - potential incident hazards and risk minimisation processes when providing first aid
 - infection control procedures, including use of standard precautions and resuscitation barrier devices
 - requirements for currency of skill and knowledge
 - first aid codes of practice
 - appropriate workplace or site procedures relevant to the provision of first aid
 - contents of first aid kits
- legal, workplace and community considerations including:
 - duty of care requirements
 - own skills and limitations
 - consent and how it relates to the conscious and unconscious casualty
 - privacy and confidentiality requirements
 - awareness of potential need for stress management techniques and available support for rescuers
- considerations when providing CPR, including:
 - upper airway and effect of positional change
 - appropriate duration and cessation of CPR
 - appropriate use of an AED
 - safety and maintenance procedures for an AED
 - chain of survival
 - how to access emergency services
- techniques for providing CPR to adults, children and infants including:
 - how to recognise that a casualty is unconscious and not breathing normally

- rate, ratio and depth of compressions and ventilations
- correct hand positioning for compressions
- basic anatomy, physiology and the differences between adults, children and infants relating to CPR
- signs, symptoms and management of the following conditions and injuries:
 - allergic reaction
 - anaphylaxis
 - asthma
 - non-life-threatening and life-threatening bleeding
 - burns
 - cardiac conditions, including chest pain
 - choking
 - diabetes
 - drowning
 - envenomation - all current treatments
 - eye injuries
 - fractures, dislocations, strains and sprains
 - head, neck and spinal injuries
 - hypothermia
 - hyperthermia
 - minor wounds
 - nose-bleed
 - poisoning
 - seizures
 - shock
 - sharps injuries
 - stroke.

Assessment Conditions

Each candidate to demonstrate skills in an environment that provides realistic in-depth, scenarios and simulations to assess candidates' skills and knowledge.

Due to the nature of this type of training, it is acceptable for the performance evidence to be collected in a simulated environment.

Compression and ventilation skills must be demonstrated on resuscitation manikins following ARC guidelines for the purpose of assessment of CPR procedures.

Assessment must ensure access to:

- adult and infant resuscitation manikins following ARC guidelines for the purpose of assessment of CPR procedures
- adrenaline auto-injector training device

- AED training devices
- workplace first aid kit
- placebo bronchodilator and spacer device
- different types of wound dressings and bandages
- blankets and items to treat for shock
- personal protective equipment (PPE)
- workplace injury, trauma or illness record, or other applicable workplace or site incident report form.

Simulated assessment environments must simulate real-life situations where these skills and knowledge would be performed, with all the relevant equipment and resources of that workplace or community environment.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors and must hold this unit or demonstrate equivalent skills and knowledge to that contained within this unit.

MEM05049 Perform routine gas tungsten arc welding

Modification History

Release 1. Supersedes and is equivalent to MEM05049B Perform routine gas tungsten arc welding

Application

This unit of competency defines the skills and knowledge required to prepare the materials and carry out routine gas tungsten arc welding (GTAW) and applies in a maintenance or manufacturing environment where the weld quality is not required to meet an Australian Standard.

Where welding is required to meet AS 1554 General Purpose or equivalent codes, work health and safety (WHS) regulations and/or licensing requirements Unit MEM05019 Weld using gas tungsten arc welding process should also be selected.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 2

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Fabrication

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, sketches, job sheets or work instructions
2	Prepare materials and equipment for welding	2.1	Identify location of welds in accordance with procedures and job specifications
		2.2	Clean and prepare materials ready for welding
		2.3	Set up welding equipment to meet work requirement
		2.4	Select settings and consumables to suit application
3	Perform routine welding using GTAW	3.1	Weld materials to job requirements
		3.2	Clean welds according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Welds include the following:

- butt
- fillet

Materials include one (1) or more of the following:

- low carbon/mild steels
- aluminium

Prepared includes one (1) or more of the following:

- pre-heating
- setting up jigs
- fixtures
- clamps
- joint preparation

Welding equipment includes the following:

- hoses
- welding leads and gas shrouds
- electrodes
- gas regulator
- liners
- contact tips

Consumables include the following:

- tungsten electrodes, filler wire and shielding gas

Clean includes the following:

- slag and spatter

Unit Mapping Information

Assessment Requirements for MEM05049 Perform routine gas tungsten arc welding

Modification History

Release 1. Supersedes and is equivalent to MEM05049B Perform routine gas tungsten arc welding

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications from sketches and verbal or written job instructions for performing routine gas tungsten arc welding (GTAW)
- cleaning and preparing materials for welding to specifications
- setting up welding equipment, including selecting settings and consumables to suit application
- consistently welding materials to specifications
- cleaning welds in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe welding practices and procedures and use of personal protective equipment (PPE)
- preparatory requirements
- equipment and equipment settings
- shielding gas properties and applications
- weld characteristics.

Assessment Conditions

- Assessors must:
 - have vocational competency in performing routine GTAW process at least to the level being assessed with relevant industry knowledge and experience
 - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

- welding leads and gas shrouds
- gas regulators
- liners
- contact tips

Consumables include the following:

- filler wire and shielding gas

Clean includes the following:

- slag and spatter

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM05050B Perform routine gas metal arc welding

Links

Companion Volume implementation guides are found in VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b7050d37-5fd0-4740-8f7d-3b7a49c10bb2>

Assessment Requirements for MEM05050 Perform routine gas metal arc welding

Modification History

Release 1. Supersedes and is equivalent to MEM05050B Perform routine gas metal arc welding

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures and safe work practices
- identifying and interpreting specifications from sketches and verbal or written job instructions for performing routine gas metal arc welding (GMAW)
- cleaning and preparing materials for welding to specifications
- setting up welding equipment, including selecting settings and consumables to suit application
- consistently welding materials to specifications
- cleaning welds in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe welding practices and procedures and use of personal protective equipment (PPE)
- different current and voltage settings, gas flow rates wire diameters, wire feed speed and other variables to suit typical situations
- material and equipment preparation
- properties and characteristics of materials and consumables
- equipment and equipment settings
- shielding gas properties and applications
- post-welding treatments
- weld characteristics.

Assessment Conditions

- Assessors must:
 - have vocational competency in performing routine GMAW process at least to the level being assessed with relevant industry knowledge and experience

- satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM11011 Undertake manual handling

Modification History

Release 1. Supersedes and is equivalent to MEM11011B Undertake manual handling

Application

This unit of competency defines the skills and knowledge required to lift and move materials manually and/or using basic manual handling equipment in a wide range of environments.

Maximum manual lifting weight is limited to Safe Work Australia recommendations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 2

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Materials handling

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|--------------------------------------|-----|--|
| | | 1.3 | Use appropriate personal protective equipment (PPE) in accordance with SOPs |
| | | 1.4 | Identify job requirements from specifications, job sheets or work instructions |
| 2 | Lift materials manually | 2.1 | Determine material weight correctly utilising most appropriate technique, and assess risks associated with lifting |
| | | 2.2 | Undertake lifting techniques to Safe Work Australia recommended procedures and having regard to types of movement, methods, storage, height and position |
| 3 | Move/shift materials manually | 3.1 | Select appropriate equipment, as required |
| | | 3.2 | Place material safely and securely on moving equipment |
| | | 3.3 | Relocate material ensuring safety of personnel and security of material |
| | | 3.4 | Unload material and place in a safe and secure manner |

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Material weight includes

- determined using scales

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

one (1) or more of the following:

- interpreting signage

Lifting techniques include one (1) or more of the following:

- individual
- team lifting
- use of appropriate lifting equipment

Appropriate equipment includes one (1) or more of the following:

- hand trolleys
- wheelbarrows
- motorised/hand pallet trucks (not sit on)
- hand carts
- dedicated production or process lifting equipment
- baskets, spreader bars, cradles or the like attached to lifting equipment

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM11011B Undertake manual handling

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MEM11011 Undertake manual handling

Modification History

Release 1. Supersedes and is equivalent to MEM11011B Undertake manual handling

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- assessing the risks associated with lifting materials manually and determining the most appropriate technique
- selecting and using the appropriate equipment to move/shift materials ensuring safety of personnel and security of material.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- manual handling techniques, including individual or team lifting
- appropriate equipment associated with move/shift materials
- hazards of incorrect procedures
- Safe Work Australia standards for manual handling.

Assessment Conditions

- Assessors must:
 - have vocational competency in undertaking manual handling at least to the level being assessed with relevant industry knowledge and experience
 - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM13015 Work safely and effectively in manufacturing and engineering

Modification History

Release 1. New unit. Supersedes and not equivalent to MEM13014A Apply principles of occupational health and safety in the work environment, MEM14004A Plan to undertake a routine task, MEM15002A Apply quality systems, MEM15024A Apply quality procedures, MEM16007A Work with others in a manufacturing, engineering or related environment.

Application

This unit of competency defines the skills and knowledge required to work effectively in manufacturing and engineering work situations, including planning routine work and participating in and following work health and safety (WHS) procedures. The unit applies to working either individually or in a team situation and includes contributing to work-related group activities in a manufacturing or engineering workplace.

This unit covers WHS skills associated with carrying out routine operational activities safely and in compliance with legislative and regulatory requirements.

The unit covers the skills associated with participation in quality systems, communication and cooperation with others. The unit applies to workplaces with informal or formal quality management and improvement systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 2

Pre-requisite Unit

Nil.

Competency Field

Work health and safety

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|--|-----|--|
| 1 | Determine job requirements | 1.1 | Identify goals, objectives and task requirements and clarify with appropriate persons, where required |
| | | 1.2 | Prioritise task requirements |
| 2 | Review and modify plan | 2.1 | Adjust timelines, priorities and other planning components to respond to contingencies, as necessary |
| | | 2.2 | Re-examine results of work activity against the plan and identify possible improvements to future performance of work tasks |
| 3 | Work effectively with others in the workplace | 3.1 | Identify own role and responsibilities and relationship to other employees, including employees performing related/interdependent activities |
| | | 3.2 | Identify supervisors and other sources of advice and assistance for own work |
| | | 3.3 | Apply effective interpersonal skills to interact with others and contribute to activities and objectives |
| | | 3.4 | Review and modify own work progress to complement the work of others |
| | | 3.5 | Report own work progress to supervisors and where required to fellow employees using standard operating procedures (SOPs) |
| 4 | Follow safe work practices | 4.1 | Check for and identify hazards in the work area before and during work |
| | | 4.2 | Follow procedures for avoiding or controlling hazards already identified in instructions, signage or other workplace communication |
| | | 4.3 | Identify and report risks and hazards not covered by procedures |

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
		4.4 Select, use and maintain relevant personal protective equipment (PPE) by procedures, as required
		4.5 Recognise emergency situations and take appropriate initial emergency action
		4.6 Follow procedures for responding to emergencies
		4.7 Report incidents, injuries and other WHS non-conformances according to procedures
5	Work within a quality system	5.1 Follow instructions and procedures and perform duties in accordance with standard operating procedures or quality system requirements
		5.2 Ensure conformance of product and process to specifications
		5.3 Report defects and non-conformance to specifications according to procedures
		5.4 Participate in process improvement procedures, where required
6	Participate in workplace health and safety procedures	6.1 Identify workplace health and safety policies and procedures relevant to own work and work area
		6.2 Identify relevant WHS managers and representatives for own work area
		6.3 Provide input to minimise hazards in work area in line with organisation WHS procedures and participative arrangements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Quality systems include one (1) or more of the following

- quality planning
- quality assurance
- quality control
- quality improvement procedures and processes

Task requirements include one (1) or more of the following:

- timeframe
- quality requirements
- outcome and performance requirements
- job history
- checks
- reporting requirements
- tools and equipment
- materials and parts
- supporting documents

Specifications include one (1) or more of the following:

- task lists
- instructions
- manufacturer manuals
- diagrams and schematics
- sketches
- parts lists
- SOPs

Planning includes one (1) or more of the following:

- preparing a plan to complete the task
- organising task into manageable steps including appropriate order and timing
- monitoring the progress of processes related to own responsibilities
- applying relevant WHS instructions
- collecting, sorting, recording results of work
- seeking advice and guidance on setting priorities and timeframes

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- seeking feedback from supervisor, trainer or mentor

Unit Mapping Information

Release 1. New unit. Supersedes and not equivalent to MEM13014A Apply principles of occupational health and safety in the work environment, MEM14004A Plan to undertake a routine task, MEM15002A Apply quality systems, MEM15024A Apply quality procedures, MEM16007A Work with others in a manufacturing, engineering or related environment.

Links

Assessment Requirements for MEM13015 Work safely and effectively in manufacturing and engineering

Modification History

Release 1. New unit. Supersedes and not equivalent to MEM13014A Apply principles of occupational health and safety in the work environment, MEM14004A Plan to undertake a routine task, MEM15002A Apply quality systems, MEM15024A Apply quality procedures, MEM16007A Work with others in a manufacturing, engineering or related environment.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and avoiding or controlling hazards
- reporting hazards, incidents, injuries and other work health and safety (WHS) non-conformances following SOPs
- recognising and responding to emergencies following SOPs
- identifying and obtaining, instructions and information on job requirements, including one or more of the following:
 - verbal or written job instructions
 - specifications
 - SOPs
 - charts
 - lists
- identifying and responding to contingencies, including:
 - equipment breakdowns
 - non-conforming components
 - safety hazards
- recording information into proforma workplace documents, including:
 - production tally forms
 - quality control forms
 - safety incident forms
- performing assigned tasks and checking outcome of own work for conformance to specifications
- identifying own responsibilities within the workplace quality system
- giving and receiving feedback on own and group work
- seeking assistance from supervisors and mentors.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use and application of personal protective equipment
- basic quality system terminology and concept, including:
 - quality assurance
 - quality control
 - quality improvement
- procedures to be followed in performing own work
- objectives, requirements and specifications to which the individual's work is to comply
- costs and consequences of poor quality
- effective interpersonal skills:
 - effective listening
 - basic speaking skills
 - use of workplace terminology and jargon
 - giving and receiving feedback
 - checking and clarifying task-related information
 - verbal, visual and written instructions
 - appropriate modes and methods of communication
- barriers to effective communication
- sources of technical expertise/assistance
- hazards and control measures associated with workplace activities.

Assessment Conditions

- Assessors must:
 - have vocational competency in working safely and effectively in manufacturing and engineering at least to the level being assessed with relevant industry knowledge and experience
 - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills

- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM16006 Organise and communicate information

Modification History

Release 1. Supersedes and is equivalent to MEM16006A Organise and communicate information

Application

This unit of competency covers the skills and knowledge required to access, organise and communicate information related to production, maintenance or associated processes or tasks that apply in manufacturing, engineering or related environments.

For accessing and recording of data requiring system knowledge and judgement, Unit MEM16008 Interact with computing technology should be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 2

Pre-requisite Unit

MEM13015 Work safely and effectively in manufacturing and engineering

Competency Field

Communication

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Access information	1.1	Determine information requirements of tasks and access relevant information from a range of sources
		1.2	Recognise and use workplace terminology correctly

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
2 Organise and analyse information	2.1 Interpret information and organise in accordance with work requirements
	2.2 Determine relevance and implications for immediate work requirements
3 Communicate organised information using established workplace methods	3.1 Identify purpose of communication and appropriate communication method
	3.2 Communicate information using established workplace methods

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Range of sources include using one (1) or more of the following:	<ul style="list-style-type: none"> • job instructions • specifications • standard operating procedures (SOPs) • charts • lists • documents • computer data • drawings • sketches • tables
---	---

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- technical manuals and/or charts
- other applicable reference material

Determining relevance of information includes one (1) or more of the following:

- checking relevance of information to own work
- selecting task relevant information from a larger document or from a diagram
- preparing an opinion based on analysis of simple facts
- expressing an opinion on the cause of faults

Workplace terminology refers to one (1) or more of the following:

- equipment
- processes
- workplace areas
- staff
- procedures

Established workplace methods include using one (1) or more of the following:

- proforma reports
- data entry
- verbal
- drawings

Purpose of communication includes one (1) or more of the following:

- simple incident/non-conformance report
- maintenance request
- production records
- material usage records
- work records
- other standard workplace records

Unit Mapping Information

Assessment Requirements for MEM16006 Organise and communicate information

Modification History

Release 1. Supersedes and is equivalent to MEM16006A Organise and communicate information

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- accessing and recording relevant information from a range of sources
- recognising and using workplace appropriate terminology
- reading, interpreting and following information in workplace documentation
- checking and clarifying information
- organising, categorising and sequencing information
- communicating using appropriate methods and procedures for a variety of situations.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- types of information relevant to the workplace and required tasks
- terminology used in the workplace relevant to own work
- available sources of information
- information analysis techniques appropriate to tasks and position
- methods of categorising and organising information including correct sequencing of information
- methods of recording and communicating information.

Assessment Conditions

- Assessors must:
 - have vocational competency in organising and communicating information at least to the level being assessed with relevant industry knowledge and experience

- satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MSFFF2006 Apply surface coatings by spray gun

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers applying surface coatings by a handheld spray gun.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture finishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Plan and prepare for work	1.1	Characteristics of the surface and the required surface coating are identified from work orders or instructions
		1.2	Processing and application techniques, time and safety requirements are identified and used for work planning
		1.3	Work health and safety (WHS) requirements, including ventilation requirements and personal protection needs, are observed throughout the work
		1.4	Tools, equipment and accessories are identified and checked for safe and effective operation for the surface coating task
		1.5	Surface coatings are identified and prepared, as required, for the surface coating tasks

- | | | | |
|---|--------------------------------|-----|--|
| 2 | Check and prepare for spraying | 2.1 | Products with surface or other faults are identified and faults reported or repaired as appropriate |
| | | 2.2 | Other products and equipment in the workplace are protected from overspray |
| | | 2.3 | Trial applications of surface materials are made to check condition of spray system, spray patterns, equipment operation, materials viscosity and specified surface finish |
| | | 2.4 | Unserviceable components are cleaned or replaced and spray system re-assembled |
| | | 2.5 | Spray pattern faults are identified and rectified in accordance with workplace procedures. |
| | | 2.6 | Material faults are identified and workplace procedures for rectification are followed |
| 3 | Apply surface coating | 3.1 | Surfaces are kept free of contamination |
| | | 3.2 | Surface coatings are applied according to workplace procedures |
| | | 3.3 | Surface build and coverage is checked against workplace requirements for even spread and thickness |
| | | 3.4 | Rectification of surface faults are made in accordance with workplace procedures |
| | | 3.5 | Products are inspected and approved for suitability for further processing |
| 4 | Clean work area | 4.1 | Equipment is cleaned and inspected for serviceable condition and stored appropriately |
| | | 4.2 | Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed |
| | | 4.3 | Work area, including spray booth, is cleaned and returned to approved condition |
| | | 4.4 | Workplace records are completed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate some discretion, judgement and problem solving in the application of surface coatings
- Spray guns include:**
- conventional air spray guns and airless spray guns
 - high volume/low pressure (HVLP) air-assisted and airless spray guns
- Coatings include:**
- pre-catalysed lacquer
 - acid catalysed lacquer and nitro-cellulose lacquer
 - one-pot polyurethane and water-based coatings
 - stains, lacquers, polish, enamels and acrylics
- Tools and equipment include:**
- pressure feed systems
 - spray booth
 - liquid containers
 - air compressor and hoses
 - air regulator
 - positive pressure air-wash masks
 - canister-type face masks
 - screwdrivers
 - shifting spanner and spanners
- Personal protective**
- that prescribed under legislation, regulations and enterprise

equipment includes: policies and practices

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFF2006B Apply surface coatings by spray gun

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSFFF2006 Apply surface coatings by spray gun

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Select and apply surface coatings, including the adjustment of spray equipment, to effect required spray pattern for a minimum of three (3) different surface types and shapes
- Maintain spray equipment and work area, including spray booth
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Identification of spray equipment, processes and procedures
- Characteristics of the coatings and base materials in terms of toxicity, reactivity, flammability, required viscosity and recoatability
- Effects of fumes, heat and other radiations on surface coatings
- Methods to prevent contamination of surfaces during and after surface coating
- Work flow in relation to spraying operations

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to spray equipment, spray booth, coatings and cleaning products.

MSFFM3009 Produce manual and computer-aided production drawings

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers producing manual and computer-aided production drawings.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify object to be drawn	1.1	The purposes and any operational characteristics of object to be drawn are identified
		1.2	Production materials and method are identified
2	Establish drawing criteria and limitations	2.1	Type of drawing to be completed is identified
		2.2	Drawing requirements are established and documented identifying dimensions, angles, shapes and finished sizes
		2.3	Drawing conventions and specifications to be noted on the drawing are identified
		2.4	Appropriate medium for drawings is identified and

- selected
- | | | | |
|---|------------------------------------|-----|---|
| 3 | Quantify and draft initial drawing | 3.1 | Dimensions are plotted from criteria and documented specifications |
| | | 3.2 | Dimensional points are connected to match appropriate drawing views |
| | | 3.3 | Any production notes or special requirements are noted |
| | | 3.4 | Drawing conventions and specifications are noted on the documentation |
| 4 | Complete drawing | 4.1 | Angles, shapes and dimensions are checked against specifications and sample |
| | | 4.2 | Adjustments are made to the drawing within scope of authority |
| | | 4.3 | Drawing is checked for compliance with workplace documentation requirements |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Scope of drawing:

- is to be limited to that used for manufacture/production purposes and is not to encompass original design concepts
- drawing is to be completed using both manual and computer-aided design (CAD) techniques and processes

Unit scope includes:

- drawings in metric scale and covering all dimensions of the furniture and furnishings

Calculations include:

- manual and with the aid of a calculator

- Unit context includes:**
- work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes, and local safe operating procedures
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Personal protective equipment includes:**
- that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
- workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFM3011B Produce manual and computer-aided production drawings.

Assessment Requirements for MSFFM3009 Produce manual and computer-aided production drawings

Modification History

Release 1 - New unit of competency

Performance Evidence

- Identify the factors and criteria relevant to the drawings
- Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- Prepare production drawings of furniture/furnishings:
 - covering a scope of at least three (3) products
 - applying both manual and computer-aided techniques and processes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Furniture design and planning criteria
- Structural geometry
- Measurement techniques and equipment/tools
- Theory and practice of calculations (addition, subtraction, multiplication and division)
- Types, techniques and processes of manual production drawing
- Types of computer-aided drawing equipment, software, techniques and processes
- Conventional signs and markings for drawings

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.

- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to information on the subjects for drawing, computer-aided drawing systems, measuring, calculating and recording devices.

MSFFM3011 Measure and draw site layout for manufactured furniture products

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers measuring and recording site layout details to provide an accurate basis for both manufacture and installation of furniture products.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|---------------------|-----|--|
| 1 | Obtain measurements | 1.1 | The purpose of obtaining measurements is clarified and confirmed |
| | | 1.2 | The most appropriate method of obtaining the measurement is selected and applied |
| | | 1.3 | Accurate measurements are obtained, confirmed and recorded |
| | | 1.4 | Calculations required for the measurement or validation are selected and correctly applied |
| | | 1.5 | Quality assurance requirements, standards and tolerances associated with enterprise operations are recognised and adhered to |

- | | | | |
|---|------------------|-----|---|
| 2 | Draw site layout | 2.1 | Intended use of the site is clarified and confirmed |
| | | 2.2 | A site plan is prepared showing all features and measurements |
| | | 2.3 | A site elevation is completed showing all features and measurements |
| | | 2.4 | Unique and non-complying features which may impact on manufacture and/or installation are highlighted and referred to the appropriate party |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|---|--|
| Unit scope includes: | <ul style="list-style-type: none">• measurement and drawing of site layout related to the manufacture and installation of furniture, cabinets, glass, soft furnishings, upholstery, picture framing and floor covering products |
| Drawing include: | <ul style="list-style-type: none">• manual or computer-aided |
| Measurements: | <ul style="list-style-type: none">• are to be in metric scale, cover all dimensions of the site and furnishings and involve the use of:<ul style="list-style-type: none">• rulers• tape measures• squares• service detectors• laser or equivalent technology |
| Critical dimensions that may impact on | <ul style="list-style-type: none">• the square of the structure• angles of floor to walls |

- manufacture and installation include:**
- walls to ceiling
 - vertical walls
 - horizontal floor and ceiling
 - service locations and critical structural criteria
- Calculations include:**
- area
 - perimeter
 - volume
 - mass
 - scales and ratios (ingredients/elements and triangulation) and require the application of addition
 - subtraction
 - multiplication and division processes
 - calculations are to be performed both manually and with the aid of a calculator
- Unit context includes:**
- work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and local safe operating procedures
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Personal protective equipment includes:**
- that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
- workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFM3013B Measure and draw site layout for manufactured furniture products.

Assessment Requirements for MSFFM3011 Measure and draw site layout for manufactured furniture products

Modification History

Release 1 - New unit of competency

Performance Evidence

- Identify the factors relevant to the measurements and drawings
- Communicate effectively to enable accurate calculations, measurements and drawings
- Accurately measure and record particulars for required sector sites and materials
- Draw accurate, scaled plans and elevations relevant to the site using manual or computer-aided methods
- Identify and communicate on measurements and dimensions which may impact on manufacture and/or installation
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money

Knowledge Evidence

- Furniture design and planning criteria
- Drawing techniques, technologies and processes
- Furniture installation methods, criteria and techniques
- Measurement techniques and equipment/tools
- Theory and practice of calculations (addition, subtraction, multiplication and division)
- Conventional signs and markings for plans and drawings

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.

- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to information on the site and products for measurement and calculation, suitable work area appropriate to the activity, suitable site plans/drawings and/or specifications, and measuring, calculating and recording devices.

MSFFM3019 Set up, operate and maintain automated edge banding machines

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers setting up, operating and maintaining edge banding machines which use automated processes to apply and finish edge treatments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|--|
| 1 | Prepare for work | 1.1 | Work instructions are used to determine job requirements, including quality, materials, equipment and quantities |
| | | 1.2 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.3 | Material for processing is selected and inspected for quality |
| | | 1.4 | Machines and cutting tools are identified and checked for safe and effective operation |
| | | 1.5 | Procedures are determined for minimising waste material |

- 1.6 Procedures are identified for maximising energy efficiency while completing the job
- 2 Set up machines
 - 2.1 Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions
 - 2.2 Trial runs are conducted to check machine operation, accuracy and quality of finished work
 - 2.3 Necessary adjustments are made to machine settings
- 3 Operate machines
 - 3.1 Machine start-up procedure is carried out in accordance with manufacturer instructions
 - 3.2 Material is fed into machine in accordance with manufacturer instructions, tooling requirements, safe handling procedures and standard workplace operating procedures
 - 3.3 Machine is operated in accordance with its designed capacity and purpose, and to manufacturer recommendations
 - 3.4 Machine operation is monitored to ensure product quality and output
 - 3.5 Waste quantities are checked and minimised
 - 3.6 Items that do not meet quality requirements are repaired, recycled or discarded according to workplace procedures
 - 3.7 Problems with the required work and/or the operation of the machine are identified and reported to appropriate persons
- 4 Finalise operation and maintain equipment
 - 4.1 Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures
 - 4.2 Machinery is cleaned and left in a safe mode
 - 4.3 Faulty and/or defective equipment is tagged and reported in accordance with workplace practices
 - 4.4 Unused hardware is collected and stored for re-use or disposal following workplace procedures
 - 4.5 Waste and scrap materials are dealt with following

workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Automated edge banding machines include:**
- standard automated edger (not fully automatic)
 - soft forming machine
- Unit scope includes:**
- applying and processing an edge trim to solid timber or manufactured board
- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating procedures
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate some discretion, judgement and problem solving in the set up and operation of machines
 - competency may be demonstrated in workplaces involved in the manufacture of domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components
- Materials to be processed include:**
- solid timber
 - manufactured board
- Edgings include:**
- solid timber
 - laminates
 - plastics

- non-ferrous materials and foils
 - the cleaning and refurbishing of the gluing station
- Operator maintenance includes:**
- that prescribed under legislation, regulations and enterprise policies and practices
- Personal protective equipment includes:**
- workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures
- Information and procedures include:**

Unit Mapping Information

Supersedes and is equivalent to LMFFM3027B Set up, operate and maintain automated edge banding machines.

Assessment Requirements for MSFFM3019 Set up, operate and maintain automated edge banding machines

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Read and interpret cutting lists and job specifications to prepare for work
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify, set up and operate an automated (not fully automatic) edging machine to complete the following:
 - the set up and application of at least three (3) different edge treatment materials
 - the identification and correction of at least two (2) real or simulated machining faults
- Conduct operator maintenance on the machines and equipment
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of machines
- Characteristics, uses and limitations of board products, edging products and adhesives
- Workplace guidelines regarding acceptable tolerance levels
- Workplace safety policies and procedures
- Procedures for reporting machinery faults and material defects

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to an automated edge banding machine, standard operating procedures, and unprocessed materials.

MSFFM3020 Fabricate synthetic solid surface products

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers fabricating synthetic solid surface furniture and furnishing products.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|---|
| 1 | Prepare for work | 1.1 | Work instructions are used to determine job requirements, including design, tolerances, process, materials, finish and quantity |
| | | 1.2 | Fabrication sequence is planned |
| | | 1.3 | Procedures are determined for checking quality at each stage of the process |
| | | 1.4 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.5 | Suitable work area is selected for the task |
| | | 1.6 | Preparatory drawings and set-outs for tasks are completed |

- 1.7 Cutting list for components is developed
- 1.8 Materials are selected following work instructions
- 1.9 Tools and equipment suitable for fabrication are identified and checked for safe and effective operation
- 2 Complete fabrication
 - 2.1 Materials are set out and prepared according to work instructions and components are marked according to industry practices
 - 2.2 Tools, machines and equipment are used in accordance with safety requirements and manufacturer specifications
 - 2.3 Components are fabricated and checked against set-outs for accuracy tolerances, fit and distortion
 - 2.4 Doors, drawers, shelves or decorative treatments are fitted as required
 - 2.5 Product is prepared for final finish, including the removal of bruises, scratches, dents and marks
 - 2.6 Product is checked against plans at identified checkpoints
- 3 Finalise operation and maintain equipment
 - 3.1 Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures
 - 3.2 Machinery is cleaned and left in a safe mode
 - 3.3 Faulty and/or defective equipment is tagged and reported in accordance with workplace practices
 - 3.4 Unused hardware is collected and stored for re-use or disposal following workplace procedures
 - 3.5 Waste and scrap materials are dealt with following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Synthetic solid surface products include:

- acrylic or polyester sheet-based materials

Synthetic solid surface products include:

- benchtops
- edges
- sinks
- bowls
- other containers and waterproof wall treatments

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating procedures
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work involves reading and interpreting plans, developing set-outs, using hand and/or power tools, equipment and operating machinery

Tools and equipment include:

- measuring tapes or rulers
- hammers
- mallets
- squares
- bevels
- chisels
- planes
- hand saws
- power saws
- power drills/screwdrivers
- air compressor and hoses
- clamps
- screwdrivers
- pincers

Machines include:

- panel saws
- routers

- edge moulders
 - point to point
 - heat applicators
 - sanding and buffing machines
- Materials include:**
- synthetic solid surface materials
 - timber
 - manufactured board
 - glues
 - screws
 - nails
 - dowels
 - knockdown fittings
- Personal protective equipment includes:**
- that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
- workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFM3028B Fabricate synthetic solid surface products.

Assessment Requirements for MSFFM3020 Fabricate synthetic solid surface products

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment or products
 - maintain required production output and product quality
- Fabricate a minimum of three (3) synthetic solid surface material products, including at least one (1) full benchtop
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of synthetic solid surface materials
- Interpretation of plan representation of furniture design
- Preparation of drawings and set-outs
- Identification of hand and/or power tools, materials, machines, equipment, processes and procedures
- Work flow in relation to furniture production

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to plans, hand and/or power tools, machines, equipment, materials and a work area.

MSFFM3022 Set up, operate and maintain computer numerically controlled (CNC) machining and processing centres

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers setting up, operating and maintaining CNC machining and processing centres to produce furniture or components.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|--|
| 1 | Prepare for work | 1.1 | Work instructions are used to determine job requirements, including design, quality, materials, equipment and quantities |
| | | 1.2 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.3 | Material for machining is selected and inspected for appropriate quality |
| | | 1.4 | Procedures are determined for minimising waste material |
| | | 1.5 | Procedures are identified for maximising energy efficiency while completing the job |

- 2 Set up for machining and processing
 - 2.1 CNC program is set to job requirements
 - 2.2 Safety equipment, including emergency stops, gauges, guards and controls are checked
 - 2.3 Machining and processing settings and adjustments are made in accordance with job requirements and machining and processing and tool manufacturer instructions
 - 2.4 Machining and processing, cutting tools and jigs are checked for safe and effective operation
 - 2.5 Trial runs are conducted to check machining and processing operation and quality of finished work
 - 2.6 Final adjustments are made to CNC programs and equipment according to workplace procedures
- 3 Operate machining and processing centres
 - 3.1 Machining and processing centres are operated and monitored to ensure product quality and output
 - 3.2 Waste quantities are checked and minimised
 - 3.3 Problems with the required work are identified and reported to appropriate persons
 - 3.4 Items that do not meet quality requirements are repaired, recycled or discarded according to workplace procedures
 - 3.5 Any authorised changes in working procedures are followed
- 4 Finalise operation and maintain equipment
 - 4.1 Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures
 - 4.2 Machinery is cleaned and left in a safe mode
 - 4.3 Faulty and/or defective equipment is tagged and reported in accordance with workplace practices
 - 4.4 Unused hardware is collected and stored for re-use or disposal following workplace procedures
 - 4.5 Waste and scrap materials are dealt with following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

CNC machining and processing centres include

- a three axis machining centre
- multi-tasking machining centres
- flat-bed routers and mortise

Materials to be machined and processed include:

- solid timber
- manufactured board

Unit scope includes:

- reading and interpreting drawings
- selecting and installing tooling
- setting jigs and fixtures
- programming (sub-programs and parametrics)
- performance of computer-aided design (CAD)/computer-aided manufacture (CAM) functions
- downloading and storage of data to complete detailed profiling
- other specified operations

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating procedures
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving in the set up and operation of machining and processing centres
- competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic

- Tools and equipment include:**
- furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components
 - stand-alone or integral computing systems
 - machine-specific tools
- Personal protective equipment includes:**
- that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
- workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFM3031B Set up, operate and maintain CNC machining and processing centres.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=0601ab95-583a-4e93-b2d4-cfb27b03ed73>

Assessment Requirements for MSFFM3022 Set up, operate and maintain computer numerically controlled (CNC) machining and processing centres

Modification History

Release 1 - New unit of competency

Performance Evidence

- Locate, interpret and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment or products
 - maintain required production output and product quality
- Identify, set up and operate CNC machining and processing centre equipment to complete detailed profiling, including:
 - development and application of sub-program
 - development and application of parametric program, and
 - application of CAD/CAM functions
- Conduct operator maintenance on the machining and processing centre equipment
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of CNC machining and processing centres
- CNC theory, practices and techniques
- Characteristics of materials used and uses of products produced
- Work flow processes
- Procedures for reporting materials, product or equipment faults

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to CNC controlled equipment, standard operating procedures, unprocessed materials.

MSFGG3036 Install commercial glazing products

Modification History

Release 1. Supersedes and is not equivalent to MSFGG3017 Fabricate and install commercial glazing.

Application

This unit describes the skills and knowledge required to identify work requirements, prepare tools and materials, and install flat and curved glazing products in commercial environments such as shopfronts, doors and windows.

This unit applies to individuals installing products. They may or may not also fabricate the products.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking glass and glazing work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

N/A

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify work requirements	1.1 Read work documentation and identify installation requirements 1.2 Identify and follow work health and safety requirements 1.3 Determine required installation methods and materials, and estimate quantities 1.5 Plan a logical work sequence suited to the job and workplace procedures

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
2. Prepare for installation	<p>2.1 Select and check tools and equipment for suitability, serviceability and safety prior to use</p> <p>2.2 Select and confirm type and quantity of components and materials against specifications</p> <p>2.3 Measure and prepare components and materials using required tools in accordance with specifications</p>
3. Identify site conditions and constraints	<p>3.1 Consult customer and obtain permission prior to site inspection</p> <p>3.2 Identify site safety hazards and take corrective action to reduce injury to self and others</p> <p>3.3 Identify other on-site characteristics for their impact on the installation process</p> <p>3.4 Take accurate measurements and confirm against job specification</p> <p>3.5 Apply covering material to protect existing fixtures and fittings in accordance with workplace procedures</p>
4. Prepare frame/opening and materials	<p>4.1 Remove glass in accordance with safety and work requirements</p> <p>4.2 Assess frame and/or opening to ensure suitability for re-glazing in accordance with customer requirements and Australian Standards</p> <p>4.3 Report defective frames for repair or replacement in accordance with workplace procedures</p> <p>4.4 Prepare frame and/or opening to receive glass through check of size against specifications, removal of sealant remains and surface preparation</p> <p>4.5 Prepare fixing and sealing materials by mixing or cutting to length in accordance with job requirements</p>
5. Fit glass	<p>5.1 Fix glass to the frame using the selected method and in accordance with recognised industry procedures and Australian Standards</p> <p>5.2 Use solvents and sealants in accordance with manufacturer recommendations and Australian Standards</p> <p>5.3 Remove excess sealing material and clean glass and frame after fixing</p>
6. Complete work	<p>6.1 Check completed installation for compliance with customer requirements, specifications and Australian Standards</p> <p>6.2 Clean and store tools, equipment and materials in accordance with</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	workplace procedures 6.3 Clean work area, leave in a safe condition and dispose of waste or recycle in accordance with workplace protocols 6.4 Accurately complete required workplace documentation

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Links

Assessment Requirements for MSFGG3036 Install commercial glazing products

Modification History

Release 1. Supersedes and is not equivalent to MSFGG3017 Fabricate and install commercial glazing.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- completed 2 commercial project installations in accordance with work, safety and Australian Standards requirements, to include at least 2 of the following:
 - combined window and door project
 - frameless commercial windows
 - shopfront and door
 - shopfront and door using sub-head and sub-sill.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- Australian Standards, their purpose and key provisions:
 - AS/NZS 4667
 - AS 1288
- mathematical procedures for estimation and measurement
- types, characteristics and uses of commercial glazing products
- commercial glazing product installation:
 - workplace safety system requirements
 - work flow requirements
 - qualities and characteristics of glass and framing materials, including curved glass
 - qualities, characteristics, uses and limitations of component hardware:
 - concealed overhead closer
 - guides
 - hinges
 - locks
 - pivots
 - weather seals
 - wheels

- stays
- site characteristics that may impact installation and how to respond
- installation techniques, the types of problems that may occur and how to avoid and respond
- fabrication methods for different products and how this impacts installation
- basic fabrication techniques for on-site product adjustments
- quality assurance
- types, characteristics, safe use, maintenance and limitations of installation tools and equipment
- uses and limitations of adhesives and sealants in glazing installations
- documentation requirements for installation work.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
 - equipment, tools and materials to complete tasks in the Performance Evidence
 - work orders
 - workplace procedures.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSFID4016 Design colour schemes for interior and exterior spaces

Modification History

Release 1. Supersedes and is not equivalent to MSFID4001 Research, analyse and apply colour for interior spaces.

Application

This unit describes the skills and knowledge required to assess colour requirements, research and experiment with different colour options and create preferred colour schemes for presentation to the client.

This unit applies to interior decorators and designers.

No licensing or certification requirements exist at the time of publication. Relevant legislation, industry standards and codes of practice within Australia must be applied.

Pre-requisite Unit

N/A

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assess colour requirements for the project	1.1 Evaluate project specifications, parameters and constraints, and confirm with client 1.2 Select work resources based on the needs of the project 1.3 Identify and assess the space, its light and continuing colours for impact on potential solutions 1.4 Identify key project stakeholders and establish required communication protocols
2. Research colour schemes for interiors	2.1 Research and analyse colour psychology in accordance with the needs of the project

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>2.2 Research and analyse cultural and historical influences on colour to inform the needs of the project</p> <p>2.3 Research and compile information on the impact of specific colours on the interior space</p>
3. Explore colour schemes	<p>3.1 Use colour wheels to mix and match alternative colour schemes to determine suitability of colours to a space</p> <p>3.2 Explore the use of additive and subtractive colour mixing to inform colour selections</p> <p>3.3 Explore and test colour systems and colour combinations and/or juxtapositions against the brief</p> <p>3.4 Assess effect of light against the impact of colours being proposed for use</p> <p>3.5 Assess visual perception of colours in accordance with the project brief</p> <p>3.6 Match samples using colour mixing techniques</p> <p>3.7 Evaluate colour effect perceptions by use of light to mix and throw coloured light onto surfaces</p> <p>3.8 Ascertain contrast and harmony of colours through selection of colours in accordance with the project brief</p>
4. Finalise and present colour scheme	<p>4.1 Choose final selection of colours based on exploration and key objectives of the project brief</p> <p>4.2 Prepare a visual representation that communicates the key aspects of the preferred solution using rendering media suited to the project</p> <p>4.3 Present recommendations in a format and level of detail suited to the client and scope of the project</p> <p>4.4 Seek client feedback on the proposed solution</p> <p>4.5 Make adjustments to the final design solution based on feedback</p> <p>4.6 Accurately document selection specifications</p>

Foundation Skills

The Foundation Skills describe those required skills (such as, language, literacy, numeracy and employment skills) that are essential to performance:

- technology skills to research colour information using digital media.

Other foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for MSFID4016 Design colour schemes for interior and exterior spaces

Modification History

Release 1. Supersedes and is not equivalent to MSFID4001 Research, analyse and apply colour for interior spaces.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- developed and presented colour schemes in response to 3 different design briefs that individually or cumulatively involve both interiors and exteriors:
 - developed samples to represent colour mixing, matching, combinations and effects
 - visually presented colour schemes using rendering and other techniques to illustrate how ideas meet overall project requirements.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- research sources for information about colour, including current trends
- elements and principles of design
- design process and how ideas progress
- terminology of colour
- colour wheels and how they are used in interior decoration and design
- cultural and historical influences of colour
- colour systems and theories
- colour psychology influences
- use of colour in different types of interior spaces
- processes for additive and subtractive colour mixing
- effects of natural and artificial light on colour and finish types
- types of rendering media and how they are used.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
 - design briefs

- information technology for research
- colour wheels.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

PUAFER004 Respond to facility emergencies

Modification History

Release 1. This is the first release of this unit of competency in the PUA Public Safety Training Package.

Application

This unit of competency involves the skills and knowledge required by occupants to recognise emergencies in a facility, to report emergencies and to take appropriate action during facility emergency situations. It includes preparing for emergency situations, reporting emergencies, responding to emergency warnings and advice, choosing the most appropriate course of action and evacuating from a danger area.

The unit has been developed to cover the facilities as specified in Australian Standard (AS) 3745 and AS4083. For this unit, as covered by AS3745 and AS4083, occupants are people attending a facility on a permanent or temporary basis such as an employee, contractor, student, resident but not a visitor or patient and a facility is a building, structure or workplace that is, or may be, occupied by people (occupants).

All aspects of the unit must be undertaken in accordance with legislative requirements, organisational policies and procedures and accepted safe practices. It applies to occupants who are required to be 'emergency aware' in their facility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Facility Emergency Response

Unit Sector

Public Safety

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

1 Prepare for emergency situations

- 1.1 Facility emergency procedures to be used by occupants are identified and followed
- 1.2 Emergency resources in a facility are identified and located
- 1.3 Emergency response exercises are participated in, in accordance with facility emergency procedures

2 Report emergencies

- 2.1 Emergencies are identified and reported, in accordance with facility emergency procedures
- 2.2 Occupants in any immediate danger from an emergency or potential emergency are alerted, in accordance with facility emergency procedures

3 Respond to emergency warnings and advice

- 3.1 Emergency warnings and advice are responded to, in accordance with facility emergency procedures
- 3.2 Instructions from emergency control organisation or attending emergency services are complied with during an emergency

4 Choose most appropriate course of action

- 4.1 Emergencies that require evacuation are determined
- 4.2 Emergencies that require occupants to shelter-in-place (no evacuation) are determined
- 4.3 Shelter or refuge is assessed to determine suitability and sustainability when a shelter-in-place response is the preferred option
- 4.4 Emergencies that require lockdown are determined
- 4.5 Appropriate cover is assessed when lockdown is required

5 Evacuate from danger area

- 5.1 Need to evacuate from danger area is determined and issued under facility emergency procedures
- 5.2 Work area is prepared for evacuation, in accordance with facility emergency procedures
- 5.3 Area of danger is evacuated, in accordance with facility emergency procedures
- 5.4 Where it is safe to do so, assistance is provided to

occupants who may require it

- 5.5 Evacuation procedures and instructions from emergency control organisation or emergency response personnel are followed
- 5.6 Alternative pathways or methods of evacuation are identified, assessed and chosen, in accordance with facility emergency procedures, if usual means of evacuation are blocked or occupants are endangered
- 5.7 Communication system is used to respond to facility emergencies, in accordance with facility procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to PUAWER004B Respond to facility emergencies.

Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

Assessment Requirements for PUAFER004 Respond to facility emergencies

Modification History

Release 1. This is the first release of this unit of competency in the PUA Public Safety Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- complying with legislation, industry standards, codes of practice and regulations
- evacuating from work area
- following facility emergency procedures and direction of emergency control organisation members and/or attending emergency services
- identifying and evacuating occupants who may require assistance
- identifying and reporting emergencies
- maintaining own safety and the safety of others in emergency situations
- participating in emergency response exercises including briefings, debriefings, simulations, reviews and desk top drills
- preparing for emergency situations
- responding to emergency warnings and advice
- selecting the most appropriate course of action during an emergency

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- circumstances where evacuation may need to be modified
- emergency response exercises including participation in briefings and debriefings
- evacuation alarms and facility emergency procedures including action to take when evacuation to a location external to the building might expose evacuated occupants and/or personnel to a greater level of danger
- facility emergency documentation, policies and procedures
- facility emergency reporting systems and procedures facility emergency warning system, signals and instructions
- legislation, industry standards, codes of practice and regulations
- locations of assembly areas and post evacuation actions

- locations of emergency equipment in a facility
- roles, responsibilities and authority of emergency personnel, emergency control organisations and emergency response teams
- types of emergencies, hazards and evacuation actions associated with each one
- types of occupants who may require assistance
- where Personal Emergency Evacuations Plans (PEEPs) for occupants who have a disability are kept
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
 - that reflect emergency situations that may occur in a facility and include shelter in place, partial evacuation and/or full evacuation
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational policies, facility emergency plan, facility emergency response procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

PUAFIR518 Conduct and record a Bushfire Attack Level (BAL) assessment

Modification History

Release 1. This is the first release of this unit of competency in the PUA Public Safety Training Package.

Application

This unit of competency covers the skills and knowledge to perform Bushfire Attack Level (BAL) assessments.

Individuals undertaking Bushfire Attack Level assessments require a theoretical knowledge of fire, an understanding of regulatory frameworks, an ability to assess a location and consult with clients on the benefits of achieving fire resistance. It includes analysing the cause and effect of bushfire attack and correlating information about site conditions and determining the Bushfire Attack Level for a site.

The unit is applicable to personnel who are responsible for conducting a Bushfire Attack Level assessment as described in industry standards related to the construction of buildings in bushfire prone areas.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions.

Pre-requisite Unit

Not applicable.

Competency Field

Fire

Unit Sector

Fire

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Analyse cause and effect of bushfire attack on buildings

- 1.1 Objectives of planning and building legislation and standards covering development in areas exposed to bushfire are reviewed to identify measures to improve performance of buildings when subject to bush fire attack
- 1.2 Requirements for Bushfire Attack Level (BAL) assessment are identified and complied with including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS), legislative, organisational and certification requirements
- 1.3 Interaction between fuel, topography and weather is assessed for the site and potential bushfire behaviour and its impact on people and property is determined
- 1.4 Potential fire impact on buildings including construction durability and immediate environment is determined
- 1.5 Sources of combustion are identified to determine how they influence the BAL

2 Correlate information about site conditions

- 2.1 The location of the site being assessed is identified
- 2.2 Fire Danger Index (FDI) and/or wind speed is determined for the site
- 2.3 Vegetation classification, type and height is determined for the site
- 2.4 Distance from vegetation to building sites is measured, in accordance with organisational procedures
- 2.5 Slope of land under vegetation is measured, in accordance with organisational procedures

3 Determine BAL for site

- 3.1 Relevant FDI, vegetation classification and type, distance to vegetation and slope are used to determine BALs applicable to the site

- 3.2** BALs appropriate to the site are verified, in accordance with organisational procedures
- 3.3** Details of BAL assessment is documented and reported, in accordance with organisational procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

legislation and standards must include all the following

- AS 3959 Construction of Buildings in Bushfire Prone Areas (or successor)
- NASH Standard - Steel Frame Construction in Bushfire Areas (National Association of Steel Framed Housing)
- National Construction Code (Building Code of Australia)
- planning requirements and relevant state and territory legislation

buildings must include the following

- alterations and additions to existing buildings
- new buildings

Fire Danger Index (FDI) must include one or more of the following

- forest fire and grassland fire danger indexes
- organisational and jurisdiction specific requirements for their use

vegetation type must include one or more of the following

- as defined in AS3959 Construction of Buildings in Bushfire Prone Areas (or successor)
- as specified in organisational and jurisdictional guides

Unit Mapping Information

New unit, no equivalent unit.

Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

Assessment Requirements for PUA FIR518 Conduct and record a Bushfire Attack Level (BAL) assessment

Modification History

Release 1. This is the first release of this unit of competency in the PUA Public Safety Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations and guidelines including safe work practices and procedures
- complying with legislation, regulations, industry standards and codes of practice for undertaking a Bushfire Attack Level (BAL) assessment
- collecting information and determining BAL assessment
- explaining purpose and processes associated with undertaking a BAL assessment to site owners including identifying problems and demonstrating potential responses
- identifying bushfire behaviour and conditions
- maintaining organisational documentation including recording, reporting and maintaining organisational information accurately
- using organisational policies and procedures relevant to undertaking a BAL assessment

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- bushfire behaviour concepts relevant to bushfire attack level assessments including
 - bushfire attack mechanisms including embers, radiant heat and flame contact
 - ember production and transport
 - heat transfer - convection, radiation and conduction
- bushfire behaviour concepts relevant to how bushfires move across different landscapes and vegetation including
 - fire development, growth and scale
 - flame height, fire intensity and rate of spread
 - junction zones and spotting
- Commonwealth, state or territory statutory requirements including licensing, and certification requirements

- communication methods and techniques
- fire weather conditions and impacts on fire behaviour including atmospheric stability, humidity, temperature, wind speed and direction and fire danger indices
- fuel and its impact on fire behaviour including amount, arrangement and moisture status
- organisational policies and procedures for undertaking a BAL assessment including procedures for recording, reporting and maintaining organisational records and information
- process for slope assessment and determination of effective slope
- site constraints and limitations
- sources of combustion including
 - flammable elements and vulnerable features in and around site
 - structures and other sources adjacent to or at proposed site
- vegetation type and classification including forest, woodland, shrubland, scrub, Mallee and/or Mulga, rainforest, grassland, tussock moorland and exclusions
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including guidelines and practices for undertaking BAL assessments

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Students must determine the level of bush fire attack by undertaking a minimum of four calculated Bushfire Attack Level (BAL) assessments in a variety of vegetation types and locations.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
 - AS3959 Construction of buildings in bushfire prone areas (or successor)
 - range of appropriate sites
 - specifications and work instructions
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

RIICCM210E Install trench support

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to install trench support in civil construction, including both installing and removing trench shoring.

It applies to those working in operational roles. They generally work under supervision to undertake a prescribed range of functions involving known routines and procedures and take some responsibility for the quality of work outcomes.

Licensing, legislative and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Users must check requirements with relevant body before applying the unit.

Unit Sector

Civil construction.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and prepare for installing trench support	1.1 Obtain interpret and confirm work requirements 1.2 Access, interpret and apply documentation required to install trench support 1.3 Obtain and interpret emergency procedures and identify steps required to respond to emergencies 1.4 Select and wear personal protective equipment according to site requirements 1.5 Confirm and identify requirements for complying with environmental protection, safety and traffic management signage requirements 1.6 Identify, address and report environmental issues, potential hazards

ELEMENT	PERFORMANCE CRITERIA
	and risks 1.7 Select plant, tools and equipment required to carry out tasks and check for faults 1.8 Identify, confirm, and locate materials required for work application
2. Install trench shoring	2.1 Communicate with plant operator and confirm excavation of trenches complies with site plan, line and depth 2.2 Determine and prepare shoring method according to job requirements 2.3 Set out positioning of shoring according to job requirements 2.4 Position or erect shoring within the trench according to job requirements 2.5 Secure shoring in position according to structural conformity requirements 2.6 Clean out excavation according to site requirements 2.7 Locate ladders for safe access and egress
3. Remove trench shoring	3.1 Release jacking mechanisms and remove ladders 3.2 Check shoring and prepare it for lifting from the trench 3.3 Remove shoring from trench and store it according to site requirements
4. Conduct housekeeping activities	4.1 Clear work area and dispose of or recycle materials according to site requirements 4.2 Clean and maintain condition of equipment, confirm suitability for use, and address and report issues as required within scope of own role 4.3 Manage and report hazards, and maintain a safe working environment 4.4 Process records according to site requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Self-management	<ul style="list-style-type: none"> Monitors and minimises own exposure to worksite risks and hazards during work activities

Unit Mapping Information

Supersedes and is equivalent to RIICCM210D Install trench support.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for RIICCM210E Install trench support

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install trench support on at least two occasions, including:
 - in trenches deeper than 1.5 metres requiring the trench support to be installed, moved along or within the trench, and removed from the trench.

During the above, the candidate must:

- locate and apply required legislation, documentation, policies and procedures
- identify, report and record hazards and risks
- implement the requirements, procedures and techniques for trench support installation including:
 - selecting and using required tools and equipment
 - using shoring methods and systems
 - working in confined spaces
- work with others to install trench support that meet required outcomes, including:
 - communicating with others to receive and confirm work requirements
 - using communication techniques and equipment to convey information to others including signage to advise others of work activity and exclusion zones
 - complying with reporting requirements and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislation required to install trench support
- policies, procedures and documentation required to install trench support, including those relating to:

- hazard and risk management
- work health and safety
- working in confined spaces
- emergency response
- site and equipment safety
- environmental protection waste management
- communication techniques and equipment
- workplace recording and reporting
- site isolation and traffic control responsibilities
- operational, maintenance and basic diagnostic procedures
- project quality requirements
- job plans and specifications
- housekeeping activities, including:
 - cleaning up work area
 - cleaning and maintaining condition of equipment
 - waste management
 - processing records
- principles and techniques required to install trench support, including those related to:
 - organising work activities
 - excavation of:
 - trenches
 - wells
 - pits
 - construction
 - shoring methods
 - erecting shoring, including:
 - using trench shoring mechanisms
 - using shoring securing mechanisms
- types, characteristics, technical capabilities and limitations of plant and equipment required to install trench support, including:
 - shoring systems
 - levelling equipment
 - hand and power tools
 - measuring equipment
 - scaffolding
 - elevated work platforms
 - slings
- materials safety data sheet (SDS) compliance processes
- components of job safety analyses (JSAs), job safety environmental analyses (JSEAs), and safe work method statements (SWMs)

- civil construction terminology related to installing trench support.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
 - personal protective equipment
 - equipment required to install trench support
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

- **Assessor requirements**

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year
	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the RII Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

Companion Volume Implementation Guide is found on VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=88a61002-9a21-4386-aaf8-69c76e675272>

RIICTT306E Install cure in-place linings for existing pipeline systems

Modification History

This unit replaces RIICTT306D Install cure in-place linings for existing pipeline systems. Minor endorseable amendments have been made to Elements, Performance Criteria, Foundation Skills, Performance Evidence and Knowledge Evidence to better reflect current industry practices and clarify training outcomes.

Application

This unit develops the skills and knowledge required to install cure in-place linings for existing pipeline systems in civil construction.

It applies to those working in operational roles. They generally work under supervision and hold some responsibility over installing cure in-place linings for existing pipeline systems.

No licensing, legislation or certification requirements apply to this unit at the time of publication.

Unit Sector

Civil construction

Elements and Performance Criteria

ELEMENT <i>Elements describe the essential outcomes.</i>	PERFORMANCE CRITERIA <i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to install cure in-place linings for existing pipeline systems	1.1 Obtain, interpret and confirm work requirements 1.2 Access, interpret and apply documentation required for installing cure in-place linings for existing pipeline systems and confirm work activity is compliant 1.3 Identify environmental issues and potential hazards, and assess and address risks within scope of own role and according to workplace procedures 1.4 Select and wear personal protective equipment required for work activities 1.5 Complete induction procedures as required by workplace policies and procedures and job role requirements

ELEMENT	PERFORMANCE CRITERIA
	<p>1.6 Identify, obtain and implement signage requirements from the project traffic management plan</p> <p>1.7 Identify and select plant, tools and equipment, check for serviceability and rectify and report any faults as required</p>
2. Perform site survey	<p>2.1 Notify and obtain approval from property owners and occupiers for entry onto their property</p> <p>2.2 Determine site conditions by visual inspection, plans, discussion with land owners and information from service utilities</p> <p>2.3 Located underground utilities according to job requirements and workplace procedures</p> <p>2.4 Record existing site conditions according to job requirements and workplace procedures</p>
3. Initiate rehabilitation work	<p>3.1 Prepare entry and exit pits where specified</p> <p>3.2 Identify, interpret and apply required confined space entry procedures</p> <p>3.3 Monitor process and confirm conformity to design requirements</p> <p>3.4 Maintain system serviceability during rehabilitation works</p>
4. Complete cure in-place lining	<p>4.1 Determine fault with the aid of plans, drawings, CCTV recordings and other mechanisms as required</p> <p>4.2 Select resin impregnated liners required for fault</p> <p>4.3 Apply pressure cleaning to the designated location</p> <p>4.4 Install cure in-place lining material as required</p> <p>4.5 Conduct curing process according to work requirements</p> <p>4.6 Secure and seal termination at ends of process</p> <p>4.7 Open junctions for inspection and operation</p> <p>4.8 Monitor installation process and confirm finished product conforms to design requirements</p>
5. Clean up	<p>5.1 Clear work area and dispose of, reuse and recycle materials as required</p> <p>5.2 Clean, check, perform maintenance on and store plant, tools and equipment and report issues as required or address within scope of own role</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Identifies and interprets information from at times complex workplace procedures, documentation, legislation and regulations
Writing	<ul style="list-style-type: none">Records simple and routine information relating to work activities

Unit Mapping Information

Supersedes and is equivalent to RIICTT306D Install cure in-place linings for existing pipeline systems.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=88a61002-9a21-4386-aaf8-69c76e675272>

Assessment Requirements for RIICTT306E Install cure in-place linings for existing pipeline systems

Modification History

This unit replaces RIICTT306D Install cure in-place linings for existing pipeline systems. Minor endorseable amendments have been made to Elements, Performance Criteria, Foundation Skills, Performance Evidence and Knowledge Evidence to better reflect current industry practices and clarify training outcomes.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install cure in-place linings for existing pipeline systems on at least two occasions including at least two cure in-place linings for existing pipeline systems.

During the above, the candidate must:

- locate, apply and retain on site access to documentation, policies and procedures required for installing cure in-place linings for existing pipeline systems
- implement the requirements, procedures and techniques for installing cure in-place linings for existing pipeline systems, including
 - determining site conditions and locating underground utilities
 - determining pipeline faults and required repair and sealing method
 - complete housekeeping activities
- work with others to install cure in-place linings for existing pipeline systems that meets all of the required outcomes, including:
 - using a range of communication techniques and equipment to convey information to others
 - maintaining written and verbal reporting requirements and procedures
 - organising work activities to meet all task requirements
- identify, obtain, confirm and apply work, safety and signage instructions and requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- civil construction terminology relevant for installing cure in-place linings for existing pipeline systems
- safety data sheets and materials handling methods
- pipeline systems relevant to trenchless technology

- engineering drawings, plans and specifications required for installing cure in-place linings for existing pipeline systems
- key risks relating to installing cure in-place linings for existing pipeline systems, including those associated with:
 - traffic
 - live electrical services
 - confined spaces
 - falls
 - locating near other works in progress
 - manual handling
 - gas
- key policies and procedures, legislation and established requirements for installing cure in-place pipeline systems, including those for:
 - workplace health and safety
 - confined space entry
 - operating and maintaining equipment
 - project quality management
 - site isolation and traffic control responsibilities
 - site condition assessments
 - locating underground utilities
 - waste disposal and recycling
- key factors affecting work activities described in performance evidence above, including:
 - laser control equipment techniques
 - fault types
 - manual handling techniques
 - equipment and liner types, characteristics, technical capabilities and limitations
 - remote units
 - working in a road reserve
 - cure in-place lining installation methods
 - pressure cleaning methods.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
 - equipment required to install cure in-place linings for existing pipelines
 - personal protective equipment
- be conducted in a safe environment; and,
- be assessed in context of this sector's work environment; and,

- be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.
- Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sectors workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor Requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory competency standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements.

This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing a high level of RII training product knowledge
- having an understanding and knowledge of legislations and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.
- It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must hold the relevant vocational competencies and have current industry skills directly relevant to the training and assessment being provided and must work alongside a trainer and/or assessor to conduct the assessment. This means the industry subject matter expert should hold the unit being assessed (or an equivalent unit), and must also demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	AQF** Level	Required assessor or industry subject matter expert experience
Drilling, Metalliferous	1	1 Year

Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this unit of competency is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the RII Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIICWD503E Prepare traffic management plans and traffic guidance schemes

Modification History

This unit replaces RIICWD503D Prepare work zone traffic management plan. Significant endorseable amendments have been made to Elements, Performance Criteria, Foundation Skills, Performance Evidence and Knowledge Evidence to better reflect current industry practices and clarify training outcomes.

Application

This unit describes the skills and knowledge required to perform a preliminary risk assessment of a temporary traffic management site and select, modify and design traffic management plans and traffic guidance schemes in civil construction.

It applies to those working in management roles. They generally work in teams and have some responsibility for the outcomes of others.

No licensing, legislation or certification requirements apply to this unit at the time of publication.

Unit Sector

Civil construction

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1.Establish context for traffic management plan and traffic guidance scheme	1.1 Determine worksite requirements and document context of traffic management plan 1.2 Identify characteristics, constraints and hazards that apply to the worksite 1.3 Complete risk assessment of proposed worksite 1.4 Establish and document the scope and objectives of traffic management plan

2.Prepare traffic management plan	<p>2.1 Monitor and coordinate the progress of personnel involved in the preparation process</p> <p>2.2 Prepare and implement traffic management plan communications strategy for internal and external audiences</p> <p>2.3 Prepare a cost estimate for executing traffic management plan</p> <p>2.4 Document and assemble traffic management plan</p> <p>2.5 Gain plan approval from required authorities</p> <p>2.6 Confirm preparation records are filed according to workplace policies and procedures</p> <p>2.7 Participate in performance review of the preparation process</p>
3. Prepare traffic guidance scheme	<p>3.1 Determine whether to select, modify or design required traffic guidance scheme</p> <p>3.2 Select, modify and develop traffic guidance scheme as required</p>
4.Support and review traffic management plan implementation	<p>4.1 Provide clarification and advice to personnel implementing the traffic management plan as required</p> <p>4.2 Review traffic management plan implementation and recommend changes as required</p> <p>4.3 Contribute to traffic management plan validation process as required</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> • Presents information and provides assistance using industry specific vocabulary • Uses listening and questioning to clarify and confirm understanding
Reading	<ul style="list-style-type: none"> • Identifies and interprets information from workplace procedures, documentation, legislation and regulations
Writing	<ul style="list-style-type: none"> • Produces and completes workplace reports, including risk management matrices, using appropriate vocabulary, grammatical structures and conventions

Unit Mapping Information

Supersedes and is equivalent to RIICWD503D Prepare work zone traffic management plan.

Assessment Requirements for RIICWD503E Prepare traffic management plans and traffic guidance schemes

Modification History

This unit replaces RIICWD503D Prepare work zone traffic management plan. Significant endorseable amendments have been made to Elements, Performance Criteria, Foundation Skills, Performance Evidence and Knowledge Evidence to better reflect current industry practices and clarify training outcomes.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- prepare a work zone traffic management plan and traffic guidance scheme in a manner that is safe and follows workplace policies and procedures on at least two occasions, including:
 - inspecting and identifying hazards and constraints in the work zone in which the traffic management plan will apply
 - carrying out risk assessments
 - interpreting and analysing data
 - calculating flow rates, level of service, capacities and percentages
 - determining traffic management plan capacity requirements
 - documenting scope and authorities to modify the plan during implementation.

During the above, the candidate must:

- locate and apply required legislation, documentation, policies and procedures
- access and interpret required:
 - plans, drawings, specifications and traffic management plan briefs
 - engineering survey information
 - hydrological, meteorological, cultural and heritage data
 - traffic analysis data
- select and apply required traffic management plan implementation techniques
- apply engineering graphical presentation techniques
- work with required personnel to undertake and complete the work zone traffic management plan including:
 - complying with written and verbal reporting requirements and procedures
 - communicating with others to receive and clarify work instructions and coordinate work activities.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislative, workplace and site policies and procedures and required Australian and international standards for:
 - temporary traffic management
 - risk assessment and management
 - statutory compliance
 - work health and safety
 - environmental management
 - cultural and heritage management
 - quality management
 - plan approvals and reviews
 - performance reviews
 - documentation, recording and reporting
- principles of road user behaviour
- principles of traffic management plans and traffic guidance schemes, including:
 - workplace design options
 - techniques for evaluating and selecting preferred options
 - signs, devices and equipment types,
 - characteristics, technical capabilities and limitations
 - geometrics
 - potential traffic hazards, constraints and conditions
- workplace techniques for implementing traffic management plans and traffic guidance schemes, including:
 - operational techniques
 - basic public communications strategies
 - industry and workplace design
 - implementation structures and capabilities
 - team leadership techniques
 - problem solving techniques
 - cost estimation techniques.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
 - traffic management plan
 - traffic guidance scheme
- be conducted in a safe environment; and,

- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor Requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying)	1	1 year
	2	2 years

and Civil Infrastructure		
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the RII Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=88a61002-9a21-4386-aaf8-69c76e675272>

RIIHAN208E Perform dogging

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to perform dogging, including planning for dogging, preparing dogging equipment and moving loads.

It applies to those working in site-based roles. They generally work under supervision to undertake a prescribed range of functions involving known routines and procedures and take some responsibility for the quality of work outcomes.

The work required in this unit relates to the National Standard for High Risk Work but this unit does not provide the licence. Licensing, legislative and certification requirements that apply to this unit can vary between states, territories and industry sectors. Users must check requirements with relevant body before applying the unit.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and prepare for dogging	1.1 Obtain, interpret and confirm work requirements and safety information 1.2 Access, interpret and apply documentation required to perform dogging 1.3 Select and wear personal protective equipment appropriate for work activities 1.4 Develop preliminary dogging plan and site sketch according to job and site requirements 1.5 Check and confirm job feasibility and schedule with load designer and personnel involved in lifting operations. 1.6 Confirm hazards associated with load moving equipment and identify and review measures to eliminate or control hazards according to site requirements 1.7 Finalise and confirm dogging plan according to job and site

ELEMENT	PERFORMANCE CRITERIA
	requirements 1.8 Identify and implement signage and/or barricading according to site requirements
2. Prepare dogging equipment	2.1 Identify, select, inspect, and verify as serviceable dogging equipment, materials and tools required for lifting plan 2.2 Label for repair or disposal unserviceable equipment, materials and tools according to site requirements 2.3 Communicate job sequencing schedule with team within scope of own role 2.4 Calculate load mass and centre of gravity according to manufacturer specifications and site requirements 2.5 Calculate load in slings and equipment according to job requirements
3. Move loads	3.1 Perform load moving according to lifting plan, manufacturer specifications and site requirements 3.2 Perform work at heights in uncompleted structures and/or in confined and enclosed spaces according to legislative and site requirements and manufacturer specifications 3.3 Connect lifting gear to load according to manufacturer specifications and site requirements 3.4 Connect load to movement device using appropriate and certified equipment according to manufacturer specifications and site requirements 3.5 Confirm stability of load by applying load movement, temporary bracing and/or load support procedures according to manufacturer specifications and site requirements 3.6 Direct load to landing position using communication compliant with Australian standards and site procedures
4. Clean up	4.1 Dismantle and inspect load shifting equipment according to manufacturer specifications and site requirements 4.2 Clear work area according to site requirements 4.3 Check, clean, maintain and store tools and equipment according to manufacturer specifications and site requirements 4.4 Apply work completion procedures and notify relevant personnel according to site requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">• Calculates basic measurements including mass and dimensions
Reading	<ul style="list-style-type: none">• Identifies and interprets information from workplace documentation and legislation
Self-management	<ul style="list-style-type: none">• Monitors and minimises own exposure to worksite risks and hazards during activities

Unit Mapping Information

Supersedes and is equivalent to RIIHAN208D Perform dogging.

Links

Companion Volume implementation guides is found on VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=88a61002-9a21-4386-aaf8-69c76e675272>

Assessment Requirements for RIIHAN208E Perform dogging

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- perform dogging on at least two occasions, including:
 - developing preliminary dogging plan, detailing the following points:
 - confirmed details of dogging requirements
 - confirmed dimensions and mass
 - site access and egress
 - suitability and availability of materials
 - tools and equipment
 - identification of potential hazards
 - probable control measures
 - identification of site coordination requirements
 - scheduling resources required for planned lift
 - calculating safe working loads and centre of gravity, including using load charts and sling tags/charts
 - selecting and conducting pre- and post-operational inspections on equipment, including:
 - lifting equipment
 - personal protective equipment
 - communication equipment
 - moving loads in conjunction with crane/hoist including demonstrating the following for loads of varying weights, sizes and shapes:
 - slinging load
 - loading
 - using portable lifting equipment, including blocks and lever hoists
 - lateral load movements or drifting load using multiple lifting devices
 - directing crane/hoist operator in movement of load when load is out of view of crane/hoist operator

- directing crane/hoist operator in movement of load when load is in view of crane/hoist operator
- directing crane/hoist operator in landing load when load is out of the view of crane/hoist operator
- directing crane/hoist operator in landing load when load is in view of crane/hoist operator.

During the above the candidate must:

- locate and apply relevant documentation, policies and procedures and confirm work activity is compliant
- implement requirements, procedures and techniques for performing dogging through:
 - reading work load limit tags
 - using ropes as tag lines
 - using ropes to connect to loads using each of the following knot types:
 - clove hitch
 - rolling hitch
 - single sheet bend
 - bowline
 - calculating mass, dimensions and centre of gravity of load and assessing for lifting requirements
 - identified and using lifting/slinging points on load
 - clearing work area of materials by disposing, reusing or recycling on completion of work activity
- work effectively with others to perform dogging that meets all of the required outcomes through:
 - communicating hazards and determining elimination or control of hazards
 - communicating lifting sequence with others
 - reporting work completion to relevant personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key legislation required to conduct lifting operations, including those relating to:
 - working at heights
- key policies, procedures and documentation required to conduct lifting operations, including:
 - Australian standards and code of practice relating to dogging
 - National Standard for High Risk Work for dogging
 - national certification standards relating to dogging
 - operational and maintenance procedures

- site and equipment safety requirements
- principles and techniques for developing preliminary dogging plan, including:
 - confirmed details of dogging requirements
 - confirmed dimensions and mass
 - site access and egress
 - suitability and availability of materials
 - tools and equipment
 - identification of potential hazards
 - probable control measures
 - identification of site coordination requirements
- signalling methods and communications techniques relating to dogging
- types, characteristics, technical capabilities and limitations of equipment required for dogging, including designs and functions of lifting equipment
- principles and techniques for identifying and responding to relevant hazards and emergencies, including those relating to cranes and load moving equipment
- basic techniques for communicating job activities with others.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
 - personal protective equipment
 - equipment required to perform dogging
 - relevant documentation
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed where infrastructure is available to facilitate lateral load movement using multiple lifting devices; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year
	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIIHAN209E Perform basic rigging

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 3.0.

Application

This unit describes the skills and knowledge required to perform basic rigging, including planning for rigging, preparing rigging equipment and moving loads.

This unit applies to those working in site-based roles.

The work required in this unit relates to the National Standard for High Risk Work but this unit does not provide the licence. Licensing, legislative, regulatory or certification requirements that may apply to this unit can vary between states, territories and industry sectors, and must be sourced from relevant state jurisdictions prior to applying this unit.

Unit Sector

Coal mining

Drilling

Extractive

Metalliferous mining

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan basic rigging operations	1.1 Access, interpret and apply rigging documentation to ensure the work activity is compliant 1.2 Obtain, interpret, clarify and confirm work requirements 1.3 Write preliminary rigging plan and site sketch considering information essential to perform work activity

	<p>1.4 Confirm job feasibility and schedule work activity with the client, the load designer, and other relevant persons to perform the work activity</p> <p>1.5 Identify hazards associated with the use of load moving equipment and review measures to eliminate or control these hazards with appropriate parties and in line with standard operating procedures</p> <p>1.6 Calculate and confirm safe working loads and centre gravity using load charts and standard calculation rules prior to load moving</p> <p>1.7 Finalise and confirm rigging plan, including the scheduling of required resources</p> <p>1.8 Check safety requirements for rigging operations are in accordance with safety plans and policies</p> <p>1.9 Select and wear personal protective equipment required for work activities</p> <p>1.10 Identify and display signage, and erect barricades to isolate the work area in line with workplace procedures</p>
2. Prepare rigging equipment	<p>2.1 Select and inspect resources, materials and rigging equipment to perform work activity in line with job specifications and applicable Australian standards</p> <p>2.2 Confirm lifting equipment is appropriate and safe to perform work activity according to manufacturer's guidelines, engineering specifications and organisational policies and procedures</p> <p>2.3 Label and dispose of lifting equipment identified as inconsistent with manufacturer's guidelines, engineering specifications and organisational policies and procedures</p> <p>2.4 Prepare loads and slings, ensuring protection of the load and associated equipment</p> <p>2.5 Secure whole or part loads to prevent uncontrolled movement</p> <p>2.6 Attach and position slings, or parts of slings, to the load, ensuring safe movement and attach slings, or parts of slings, to hook while the hoist wire is vertical in line with safe work practices</p> <p>2.7 Attach tag lines to the load where specified within work requirements, and according to workplace procedures</p> <p>2.8 Confirm lifting gear is attached to load to Australian standards, manufacturer's guidelines, engineering specifications and organisational policies and procedures</p> <p>2.9 Perform test lifts, ensuring stable and secure movement of loads</p>
3. Move loads using basic rigging techniques and relevant	<p>3.1 Connect lifting gear to load to Australian standards, manufacturer's guidelines, engineering specifications and organisational policies and procedures</p>

equipment to complete work activity	<p>3.2 Connect load to movement device using appropriate and certified equipment</p> <p>3.3 Stabilise loads by application of load movement procedures, temporary bracing and/or by installing or erecting load support appropriate to the work activity</p> <p>3.4 Coordinate and communicate planned activities, including using load moving signals according to workplace procedures</p> <p>3.5 Move loads in line with work activity, workplace procedures and working safely at heights as appropriate to the work environment</p> <p>3.6 Place and secure loads in line with load designer specifications to complete work activity</p> <p>3.7 Dismantle and remove or restore load shifting equipment in a manner that complies with safe work practices</p>
4. Conduct housekeeping activities	<p>4.1 Clean, check, maintain and store plant, tools and equipment according to workplace procedures</p> <p>4.2 Clear work area and dispose of or recycle materials according to workplace procedures</p> <p>4.3 Notify appropriate personnel of work completion</p> <p>4.4 Complete and file documentation and distribute according to workplace requirements</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Skill	Description
Reading	<ul style="list-style-type: none"> Identifies and interprets relevant information from workplace procedures, documentation, legislation and regulations
Numeracy	<ul style="list-style-type: none"> Identifies and comprehends relevant mathematical information in required to determine equipment operating capacities

Unit Mapping Information

Code and title current version	Code and title previous version	Comments	Equivalence status
RIIHAN209E Conduct basic rigging operations (Release 1)	RIIHAN209D Perform basic rigging (Release 3)	Minor updates to all sections to reflect operator's role.	Equivalent unit

Assessment Requirements for RIIHAN209E Perform basic rigging

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 3.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit.

The candidate must demonstrate completion of basic rigging operations that safely, effectively and efficiently follow workplace procedures to carry out work activity on at least two occasions. This includes:

- writing a preliminary rigging plan which must include all of the following points in detail:
 - details of rigging requirements
 - dimensions
 - site access and egress
 - suitability and availability of materials
 - tools and equipment
 - identification of potential hazards
 - control measures
 - identification of site coordination requirements
- selecting and conducting pre- and post- operational inspection of equipment including:
 - plant
 - safety harnesses
 - fall arrest systems
 - communication equipment
- installing and maintaining the following:
 - static lines and safety nets
 - perimeter safety screens and shutters
- erecting the following:
 - material hoists
 - mast climbing personnel platforms
- performing mathematical calculations for estimation and measurement of loads
- using rope to attach tag lines using knots, bend and hitches including:

- sheet bend
- becket hitch
- running bowline knot
- double bowline knot
- using ropes for splices and whipping techniques including:
 - back splice
 - eye splice
 - short splice
 - common whipping
 - sailmakers whipping
 - west country whipping
- moving and relocating plant and equipment including:
 - slinging
 - loading
 - directing
 - moving
 - unloading.

In the course of the above work the candidate must also:

- locate and apply required documentation, policies and procedures
- apply safe work practices and identify and report potential hazards and environmental issues, and assess risks
- select and wear personal protective equipment required for work activities
- erect, dismantle, level, or plumb associated plant and structures to ensure stability
- meet written and verbal reporting requirements and procedures associated with performing basic rigging operations
- check and verify work activity with client, load designer and other relevant personnel,
- provide end of work handover to relevant personnel
- dispose or recycle materials.
-

Knowledge Evidence

The candidate must demonstrate the following knowledge to effectively complete the tasks outlined in the elements and performance criteria of this unit.

Key policies, procedures and relevant standards for vehicle loading cranes, described in the performance evidence above, including those relating to:

- National Standard for high risk work
- site and equipment safety
- Safe Working Load (SWL) and Working Load Limit (WLL)
- role, responsibilities and legislation relating to a dogman
- operation and maintenance of equipment

- materials handling, storage and environmentally friendly waste management.

Key features associated with equipment performance, including:

- equipment and manufacturer guidelines, and engineering specifications
- technical capabilities and limitations.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below.

The assessment must:

- include access to:
 - rigging tools and equipment
 - load to be shifted
 - personal protective equipment
- be conducted in a safe environment
- be assessed in context of this sector's work environment
- be assessed in compliance with relevant legislation and regulations and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements.

This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing a high level of RII training product knowledge
- understanding and knowledge of legislation and regulation relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and

- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together. and for the industry expert to be involved in the assessment judgement. The industry expert must hold the relevant vocational competencies and have current industry skills directly relevant to the training and assessment being provided, and must work alongside a trainer and/or assessor to conduct the assessment. This means the **industry subject matter expert should hold the unit being assessed (or an equivalent unit) and must also demonstrate skills and knowledge from the minimum years of current work experience** after competency has been obtained as **specified** below, including time spent in roles related to the unit being assessed.

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 Year
	2	2 Years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 Years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the RII implementation guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a Unit of Competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIIHAN301E Operate elevating work platform

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 3.0.

Application

This unit describes the skills and knowledge required to operate an elevating work platform at any height.

This unit applies to those working in operational roles.

The work required in this unit relates to the National Standard for High Risk Work but this unit does not provide the licence. Licensing, legislative, regulatory or certification requirements that may apply to this unit can vary between states, territories and industry sectors, and must be sourced prior to applying this unit.

This unit alone does not provide sufficient skill to independently load and unload equipment. To perform this activity safely, personnel must either complete or be assisted by someone who has completed RIIHAN308F Load and Unload Plant or equivalent.

Unit Sector

Coal mining

Metalliferous mining

Drilling

Extractive

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and prepare for operating an elevating work platform	1.1 Access, interpret and apply elevating work platforms documentation for allocated job and ensure work activity is compliant with site policies and procedures to perform the work as planned

	<p>1.2 Obtain, interpret, clarify and confirm work requirements</p> <p>1.3 Confirm hazards, environmental issues, and risks, and implement required control measures according to site risk management plans and processes</p> <p>1.4 Select and wear personal protective equipment required for work activities</p> <p>1.5 Obtain and interpret emergency procedures for elevating work platform in preparation for emergencies and incidents</p> <p>1.6 Coordinate and communicate planned activities with others at the site prior to commencing work activity</p>
<p>2. Operate elevating work platform in line with established requirements to complete work activity</p>	<p>2.1 Carry out pre-start and post-start inspections and checks in line with Australian Standards and workplace procedures</p> <p>2.2 Identify faults or defects and report within scope of own responsibility and according to workplace procedures</p> <p>2.3 Apply site specific requirements for relocating the elevating work platform to work site</p> <p>2.4 Stabilise or position elevating work platform according to work site conditions and requirements</p> <p>2.5 Ensure work site is clear of personnel and other potential hazards</p> <p>2.6 Place any tools and equipment required to perform work activity into bucket or platform according to workplace procedures</p> <p>2.7 Operate elevating work platform within performance capabilities of brand and model of elevating work platform</p> <p>2.8 Use manufacturer approved safety devices fitted to the machine in line with workplace procedures where applicable</p> <p>2.9 Respond accordingly to monitoring systems and alarms according to workplace procedures</p> <p>2.10 Monitor hazards and risks and ensure safety of self, other personnel, plant and equipment</p> <p>2.11 Complete work activity and shut-down equipment in line with work requirements and workplace procedures</p>
<p>3. Conduct housekeeping activities</p>	<p>3.1 Clear work area and dispose, reuse or recycle materials</p> <p>3.2 Move the elevating work platform to a safe space, applying site specific workplace procedures and requirements</p> <p>3.3 Check, clean, maintain and store elevating work platform, tools and equipment according to workplace procedures</p> <p>3.4 Complete and file documentation, and distribute according to workplace requirements</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Skill	Description
Reading	<ul style="list-style-type: none"> Identifies and interprets relevant information and ideas from workplace procedures, documentation, safety alerts, legislation and regulations
Numeracy	<ul style="list-style-type: none"> Identifies and comprehends relevant mathematical information in required to determine equipment operating capacities

Assessment Requirements for RIIHAN301E Operate elevating work platform

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 3.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit.

The candidate must demonstrate completion of operating an elevating work platform that safely, effectively and efficiently follows legislative requirements and workplace procedures to carry out work activity on at least two occasions. This includes:

- planning and preparing for operating elevating work platforms
- selecting and using the required plant, tools and equipment to perform work activity
- identifying site requirements for emergencies at heights
- stabilising or positioning elevating work platform
- using manufacturer approved safety devices fitted to the machine
- moving the elevating work platform to and from work site
- inspecting work platform and identifying faults
- reviewing machine maintenance logbook records
- checking, cleaning, maintaining and storing elevating work platform, tools and equipment

In the course of the above work, the candidate must also:

- locate and apply required documentation, policies and procedures
- select and wear personal protective equipment required for work activities
- monitor and manage equipment performance using indicators and alarms
- use a range of communication techniques and equipment essential to the safe completion of work instructions
- meet written and verbal reporting requirements and procedures associated with operating an elevating work platform

Knowledge Evidence

The candidate must demonstrate the following knowledge to effectively complete the tasks outlined in the elements and performance criteria of this unit.

Key policies, procedures and relevant standards for operating an elevating work platform as described in the performance evidence above, including those relating to:

- National Standard for high risk work
- safe work practices
- operating manuals for elevating work platform
- site personnel and operational safety requirements
- elevating work platform operational procedures
- hazard, incident and emergency identification and implementation of control measures, including the risk of overhead crushes, and distance from power lines
- disposal of hazardous materials

Key site information, including:

- suitability of ground conditions, terrain and structure surfaces
- environmental requirements and constraints related to elevating work platforms

Key features associated with performance of an elevating work platform, including:

- types of elevating work platforms, their characteristics, technical capabilities and limitations

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below.

The assessment must:

- include access to:
 - elevating work platform
 - personal protective equipment required for the activities described in the performance evidence
- be conducted in a safe environment
- be assessed in the context of this sector's work environment
- be assessed in compliance with relevant legislation and regulations and using policies, procedures, and processes directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing a high level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must hold the relevant vocational competencies and have current industry skills directly relevant to the training and assessment being provided, and must work alongside a trainer and/or assessor to conduct the assessment. This means the industry subject matter expert should hold the unit being assessed (or an equivalent unit) and must also demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed.

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 Year
	2	2 Years
Drilling, Coal Mining, Extractive (Quarrying),	3-6	3 Years

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
Metalliferous Mining and Civil Infrastructure		
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors, assessor and/or industry subject matter expert experience should be in line with industry standards for the sector in which it is being assessed and, where no industry standard is specified, should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the RII implementation guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

***While a Unit of Competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and prepare for telescopic materials handler operations	1.1 Access, interpret and apply telescopic materials handler documentation 1.2 Obtain, interpret, clarify and confirm work requirements 1.3 Identify hazards and environmental issues, assess the risks and implement control measures in line with workplace policies 1.4 Select and wear personal protective equipment required for work

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	activities 1.5 Identify, obtain and apply signage requirements in line with workplace procedures 1.6 Select required telescopic materials handler equipment or attachments and confirm the suitability of the work activities 1.7 Coordinate and communicate planned activities with other at the site prior to commencement of work activity
2. Operate telescopic materials handler in line with established requirements	2.1 Perform pre-start and start-up check in line with workplace procedures 2.2 Check telescopic materials handler controls, brakes, attachments and other implements for manoeuvrability and serviceability and ensure faults are rectified or reported within scope of own responsibility and according to workplace procedures 2.3 Assess site and operating hazards and apply safe operating techniques 2.4 Operate telescopic materials handler using techniques suited to equipment capabilities, site and work conditions, and according to workplace procedures
3. Attach, secure, lift, carry and place materials to complete work activity	3.1 Use load handling communication methods as per standard operating procedures with all parties 3.2 Communicate with dogman to establish the weight of the load 3.3 Communicate with dogman to ensure safe working load requirements have been assessed and appropriate slings and lifting gear has been selected, attached and secured in line with workplace procedures 3.4 Locate machinery to ensure stable and effective shift of materials according to work requirements 3.5 Shift the load safely and effectively, using hand, audible and communication signals, in line with workplace procedures 3.6 Park up, shut down, secure and carry out post operational inspection of equipment in line with workplace procedures
4. Select, remove, fit and use attachments for a telescopic materials handler	4.1 Select attachment for the task and move and fit attachment in line with workplace procedures 4.2 Test and confirm correct fitting and operation 4.3 Use attachment within design limits and in accordance with

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	workplace procedures 4.4 Remove, clean and store attachment in line with workplace procedures
5. Relocate the telescopic materials handler	5.1 Prepare machine and equipment for relocation in line with safe work practices 5.2 Transport machine and equipment safely between worksites, observing relevant site codes and traffic management requirements
6. Conduct housekeeping activities	6.1 Clean-up work area and dispose or recycle materials according to workplace procedures. 6.2 Manage and/or report hazards to maintain a safe working environment 6.3 Complete and file or distribute documentation in a manner that complies with workplace practices

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Skill	Description

Assessment Requirements for RIIHAN309F Conduct telescopic materials handler operations

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 3.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit.

The candidate must demonstrate completion of telescope materials handler operations that safely, effectively and efficiently follow workplace procedures to carry out work activity on at least two occasions, and include:

- performing pre-start, start-up and shutdown procedures
- checking controls, brakes and attachments for manoeuvrability and serviceability and rectifying or reporting faults
- operating the telescopic materials handler
- attaching and securing appropriate lifting gear
- shifting the load
- selecting, fitting, testing, using and removing attachments, which must be certified and approved in line with workplace procedures
- transporting the machine and equipment between work sites
- parking and securing equipment

In the course of the above the candidate must also:

- locate and apply required documentation, policies and procedures
- select and wear personal protective equipment required for work activities
- apply safe work practices, identifying and reporting potential hazards and environmental issues, and assess risks
- access, interpret and apply technical information
- apply fault finding techniques
- monitor and manage equipment performance using indicators and alarms
- identify common equipment faults
- use a range of communication techniques and equipment essential to the safe completion of work activity, including hand, audible and other signals
- meet written and verbal reporting requirements and procedures associated with telescopic materials handler operations

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

Key policies and procedures, legislation and established requirements for telescopic materials handler operations, including those relating to:

- isolation and traffic control responsibilities and authorities
- safety data sheet and hazardous materials handling methods
- development and compliance with job safety analyses and safe work method statement
- maintenance and basic diagnostic
- recyclable materials
- housekeeping activities
- environmental management plan

Key factors affecting work activities described in performance evidence above, including:

- telescopic materials handler types, characteristics, technical capabilities and limitations
- calculating safe working loads
- methods of changing machine attachments
- safe operating techniques in varying terrain
- telescopic materials handler and attachment operating techniques

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
 - telescopic materials handler
 - attachments
 - personal protective equipment
- be conducted in a safe environment and,
- be assessed in context of this sector's work environment and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed and
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing a high level of RII training product knowledge
- having an understanding and knowledge of legislations and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must hold the relevant vocational competencies and have current industry skills directly relevant to the training and assessment being provided, and must work alongside a trainer and/or assessor to conduct the assessment. This means the industry subject matter expert should hold the unit being assessed (or an equivalent unit), and must also demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 Year
	2	2 Years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 Years
Other sectors	Where this unit is being assessed outside of the Resources and Infrastructure Sectors, assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and, where no industry standard is specified, should comply with any relevant	

	regulation.
--	-------------

*Guidance on simulated environments has been stipulated in the RII implementation guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a Unit of Competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIIMPO320F Conduct civil construction excavator operations

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 3.0.
Release 2	Editorial corrections.
Release 3	Editorial corrections to performance evidence.

Application

This unit describes the skills and knowledge required to operate excavator operations to lift carry and place materials.

This unit applies to those working in site based roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors, and must be sourced from state jurisdictions prior to applying this unit.

This unit alone does not provide sufficient skill to independently load and unload equipment. To perform this activity safely, personnel must either complete or be assisted by someone who has completed RIIHAN308F Load and Unload Plant or equivalent.

Unit Sector

Civil infrastructure

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and prepare for excavator operations	1.1 Access, interpret and apply excavator operations documentation 1.2 Obtain, interpret, clarify and confirm work requirements 1.3 Identify hazards and environmental issues, assess the risks and implement control measures in line with workplace policies 1.4 Select and wear personal protective equipment required for work

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	activities 1.5 Obtain, identify and implement traffic management signage requirements according to standard operating procedures and safe work practices 1.6 Select required excavator equipment and/or attachments and confirm suitability for work activities 1.7 Obtain and interpret emergency procedures for excavators, and be prepared for fires, accidents and emergencies 1.8 Coordinate and communicate planned activities with others at the site prior to commencement of work activity
2. Operate excavator in line with established requirements	2.1 Carry out prestart and start-up checks in line with workplace procedures 2.2 Identify faults or defects and rectify or report within scope of own responsibility and according to workplace procedures 2.3 Drive and operate excavator using techniques suited to equipment capabilities, site and work conditions, and according to workplace procedures 2.4 Monitor hazards and risks during operations, and ensure safety of self, other personnel, plant and equipment 2.5 Monitor and manage equipment performance using indicators and alarms in line with manufacturers' specifications
3. Lift, carry and place materials to complete work activity	3.1 Establish weight of load and ensure it is within safe operational limits of the machine 3.2 Use lifting gear within safe working load requirements and in line with workplace requirements 3.3 Position machinery and ensure stable and effective shift of materials according to work requirements 3.4 Shift load safely and effectively, using hand, audible and communication signal, in line with workplace procedures 3.5 Park up, shut down, secure and carry out post operational inspection of equipment in line with workplace procedures
4. Select, remove, fit and use attachments for a excavator	4.1 Select attachment for the task 4.2 Fit attachment in line with workplace procedures 4.3 Test attachment and ensure correct fitting and operation

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>4.4 Use attachment within design limits and in accordance with workplace procedures</p> <p>4.5 Remove, clean and store attachments in designated location in line with workplace procedures</p>
5. Prepare to relocate the excavator	<p>5.1 Prepare excavator for relocation</p> <p>5.2 Move excavator safely within and/or between work areas, observing relevant codes and traffic management requirements</p> <p>5.3 Assist loading and unloading machine from float/trailer in line with workplace procedures</p>
6. Conduct housekeeping activities	<p>6.1 Clear work area and dispose of or recycle materials according to workplace procedures</p> <p>6.2 Manage and/or report hazards to maintain a safe working environment</p> <p>6.3 Complete and file or distribute documentation in a manner that complies with workplace practices</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Skill	Description
Reading	<ul style="list-style-type: none"> Identifies and interprets information from workplace procedures, documentation, legislation and regulations
Numeracy	<ul style="list-style-type: none"> Uses equipment operating capacity schedule to confirm safe weight load limits

Assessment Requirements for RIIMPO320F Conduct civil construction excavator operations

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 3.0.
Release 2	Editorial corrections.
Release 3	Editorial corrections to performance evidence.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit.

The candidate must demonstrate completion of excavator operations that safely, effectively and efficiently follows workplace procedures to carry out work activity on at least two occasions, and include:

- conducting prestart checks prior to commencing operations and shutdown procedures on completion of operations
- driving and operating the equipment, and adjusting techniques to site conditions
- completing operations to specification using at least two different material types and activities including:
 - loading, cutting/boxing
 - stripping/spreading
 - lifting and carry materials
 - bulk excavation
 - mixing/backfilling
 - trench excavation
 - stockpiling
 - battering
 - benching
 - site clean up
- selecting, fitting, testing, using and removing at least three attachments, the attachment must be certified and approved in line with workplace procedures and could include, but not limited to, the following:
 - tilt bucket

- buckets
- lifting device
- vibrating compaction wheel
- ripper/tyne
- compaction plate
- compaction wheel
- rock breaker
- auger
- ground engaging tools
- assisting with loading and unloading plant type from float/trailer
- parking and securing equipment

In the course of the above work the candidate must also:

- locate and apply relevant documentation, policies and procedures
- select and wear personal protective equipment required for work activities
- carry out vehicle refuelling requirements and procedures where applicable
- apply safe work practices, identifying and reporting all potential hazards, risks and environmental issues
- apply problem solving and troubleshooting techniques when operating equipment
- monitor and manage equipment performance using indicators and alarms
- identify common equipment faults
- apply levelling techniques
- select and use the required tools and equipment
- apply methods of changing machine attachments
- establish weight of load
- manage changes in the loads centre of gravity during transportation
- use a range of communication techniques and equipment essential to the safe completion of work activity, including hand, audible and other signals
- meet written and verbal reporting requirements and procedures associated with equipment operations
- organise work activities to meet all task requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

Key policies and procedures, legislation and established requirements for excavator operations, including those relating to:

- isolation requirements
- fires, accidents and emergencies
- work health and safety, including signs of operator fatigue and how it should be managed
- site isolation and traffic control responsibilities and authorities

- project quality requirements
- chain of responsibility for loading and unloading of equipment
- operational, maintenance and basic diagnostics
- personal protective equipment
- recyclable materials
- housekeeping activities

Key factors affecting work activities described in performance evidence above, including:

- equipment processes, technical capability and limitations
- drawings and sketches
- ground conditions
- materials characteristics, including density and viscosity

Key features associated with civil construction works, including:

- civil construction terminology
- basic principles of material technology and material compaction for civil works
- basic earthworks calculations
- civil construction activity sequences of road construction, earthworks and drainage.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
 - excavator
 - attachments
 - personal protective equipment
- be conducted in a safe environment; and,
- be assessed in context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor Requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory competency standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing a high level of RII training product knowledge
- having an understanding and knowledge of legislations and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must hold the relevant vocational competencies and have current industry skills directly relevant to the training and assessment being provided and must work alongside a trainer and/or assessor to conduct the assessment. This means the industry subject matter expert should hold the unit being assessed (or an equivalent unit), and must also demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 Year
	2	2 Years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 Years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors, assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being	

	assessed and, where no industry standard is specified, should comply with any relevant regulation.
--	--

*Guidance on simulated environments has been stipulated in the RII implementation guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a Unit of Competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=88a61002-9a21-4386-aaf8-69c76e675272>

RIIRIS202E Respond to site based spills

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to respond to site based spills in the resources and infrastructure industries.

It applies to those working in operational roles. They generally work under supervision to undertake a prescribed range of functions involving known routines and procedures and take responsibility for the quality of work outcomes.

Licensing, legislative and certification requirements may apply to this unit and can vary between states, territories and industry sectors. Users must check requirements with relevant body before applying the unit.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and prepare for responding to site based spills	1.1 Obtain, interpret and confirm work requirements 1.2 Access, interpret and apply documentation required to respond to site based spills 1.3 Coordinate activities with others and establish communication systems to be used during spills 1.4 Identify and address potential risks, hazards and environmental issues, and implement control measures according to workplace procedures 1.5 Select and wear personal protective equipment appropriate for work activities 1.6 Identify effective handling procedures for general and hazardous waste 1.7 Identify and communicate team responsibilities when managing a spill with others as required and according to

ELEMENT	PERFORMANCE CRITERIA
	workplace procedures 1.8 Identify reporting responsibilities when a spill occurs 1.9 Obtain and interpret emergency procedures, and be prepared for emergency situations
2. Assess and identify spill type	2.1 Identify chemicals or products involved in the spill according to workplace procedures 2.2 Locate, read and interpret safety data sheets to identify required action to manage the spill 2.3 Identify hazardous chemicals and their effects 2.4 Determine the potential volume and size of spill according to workplace procedures 2.5 Determine the potential risk to the environment according to workplace procedures
3. Conduct the spill response	3.1 Determine the appropriate method and resources required to control the spill 3.2 Select and wear personal protective equipment appropriate to manage the spill 3.3 Control and contain the spill relative to spill type and size according to workplace procedures 3.4 Communicate and seek assistance from relevant personnel if unable to handle spill independently 3.5 Clean up spill according to job requirements and workplace procedures 3.6 Apply processes for managing and disposing of hazardous waste according to workplace procedures
4. Complete written documentation and reporting requirements	4.1 Communicate spill response to relevant personnel 4.2 Complete written records and reports for spill response according to workplace procedures 4.3 Record and report use of spill response kits for replenishment

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Identifies and interprets information from workplace procedures, documentation and regulations

SKILL	DESCRIPTION
Writing	<ul style="list-style-type: none">• Produces and completes written documents required for workplace procedures and regulatory requirements
Self-management	<ul style="list-style-type: none">• Monitors and minimises own exposure to worksite risks and hazards during activities

Unit Mapping Information

Supersedes and is equivalent to RIIRIS202D Respond to site based spills.

Links

Companion Volume implementation guides is found on VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=88a61002-9a21-4386-aaf8-69c76e675272>

Assessment Requirements for RIIRIS202E Respond to site based spills

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- respond to site based spills on at least two occasions, including:
 - determining the spill type, including minor, medium or major spills
 - locating, interpreting and communicating safety data sheet requirements for spill products
 - implementing spill control measures using spill kits or available resources
 - communicating the spill and likely impact to others
 - coordinating the spill clean-up activity with others
 - controlling and containing the spill
 - implementing clean up and disposal of waste
 - preparing a written report on spill response activity and spill kit resource usage.

During the above, the candidate must:

- locate and apply relevant documentation, policies and procedures and confirm that the work activity is compliant
- implement the requirements, procedures and techniques for responding to site based spills
- work effectively with others to respond to site based spills in a way that meets all required outcomes
- communicate clearly and concisely with others to receive and clarify work instructions and to determine coordination requirements prior to commencing and during work activities.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key legislation required to respond to site based spills
- key policies, procedures and documentation required to respond to site based spills, including:
 - safety data sheet information
 - site procedures for minor, medium and major spills
 - worksite communication, reporting and recording procedures
- principles and techniques for responding to site based spills, including:
 - spill characteristics
 - spill types
 - spill kit usage
 - risks of site based storage
- principles and techniques for identifying relevant hazards and emergencies
- techniques for coordinating and communicating job activities with others.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
 - personal protective equipment
 - equipment related to responding to site based spills
 - relevant documentation
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment

- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year
	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIIRTM203E Work as a safety observer/spotter

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to work safely as a safety observer/spotter in civil construction. This includes identifying and managing worksite hazards, establishing exclusion zones and observing work activities to monitor the safety of the work environment.

It applies to those working in operational roles. They generally work under supervision to undertake a prescribed range of functions involving known routines and procedures and take some responsibility for the quality of work outcomes.

Licensing, legislative and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Users must check requirements with relevant body before applying the unit.

Unit Sector

Civil Construction

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and prepare to work as a safety observer/spotter	1.1 Obtain, interpret, clarify and confirm work instructions 1.2 Access, interpret and apply documentation required to work as a safety observer/spotter 1.3 Select and wear personal protective equipment according to site requirements 1.4 Identify and address potential risks, hazards and environmental issues, and implement control measures within scope of role 1.5 Identify, confirm and apply environmental protection requirements

ELEMENT	PERFORMANCE CRITERIA
	1.6 Obtain and interpret emergency procedures and identify steps required to respond to emergencies 1.7 Coordinate work activities with others according to job requirements and within scope of own role
2. Identify and manage hazards	2.1 Confirm working areas permit vehicle, plant and pedestrian access 2.2 Check where personnel working on foot are in close proximity to moving plant 2.3 Conduct site specific risk assessment and confirm hazards have been identified and safety controls in place from traffic management plan
3. Support work activities	3.1 Operate communication devices to support work activities 3.2 Maintain exclusion, no-go and pedestrian zones according to job and safety requirements 3.3 Maintain sight visibility of work being performed 3.4 Communicate to required personnel any hazards identified during work activities
4. Conduct clean-up activities	4.1 Confirm tools and equipment are cleaned, checked, maintained and stored according to manufacturer specifications and site requirements 4.2 Confirm work area is checked, cleaned and tidy according to site requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Self-management	<ul style="list-style-type: none"> Monitors and minimises own exposure to worksite risks and hazards during work activities
Oral communication	<ul style="list-style-type: none"> Conveys information and instructions to other verbally

Unit Mapping Information

Supersedes and is equivalent to RIIRTM203D Work as a safety observer/spotter.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for RIIRTM203E Work as a safety observer/spotter

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- work as a safety observer/spotter on at least two occasions, including:
 - directing and controlling vehicle traffic
 - directing and controlling pedestrian traffic
 - communicating to drivers and pedestrians using hand signals
 - using communication devices
 - maintaining no-go and exclusion zones.

During the above, the candidate must:

- locate and apply relevant legislation, documentation, policies and procedures
- implement the requirements, procedures and techniques for working as a safety observer/spotter, including:
 - identifying, reporting and recording hazards and risks, and recommending control measures
 - identifying and applying environmental protection requirements
 - conducting pre-start checks and shut down procedures
 - carrying out inspection and fault finding as per manufacturer instructions and organisational requirements
- work with others to complete the operation of working as a safety observer/spotter that meets required outcomes, including:
 - using communication techniques and equipment to convey information to others
 - completing written and verbal reporting requirements
 - organising work activities to meet task requirements
 - communicating with others to receive and clarify work instructions.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislation required to work as a safety observer/spotter
- policies, procedures and documentation required to work as a safety observer/spotter, including those relating to:
 - statutory compliance
 - Australian and other relevant standards
 - work, health and safety
 - emergency response
 - work instructions
 - environmental protection
 - verbal and written communication
 - site and equipment safety
 - mobile traffic control
 - vehicle movements
 - risk assessment and management
 - underground and overhead services
 - equipment operation and maintenance
 - manufacturer specifications for required equipment
 - site requirements and regulations
 - project quality requirements
 - workplace recording and reporting
 - traffic management plans
 - traffic regulations
- principles and techniques to work as a safety observer/spotter, including:
 - plant shadows/blind spots
 - interpreting traffic management plans and diagrams
 - operating communication devices, including whistles, pneumatic horns and handheld radios, to transmit messages
- types, characteristics, technical capabilities and limitations of plant and equipment required to work as a safety observer/spotter.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
 - personal protective equipment
 - safety observer/spotting equipment
- be conducted in a safe environment; and,

- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector’s workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year
	2	2 years

Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the RII implementation guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

***While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIIWHS202E Enter and work in confined spaces

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 5.0.
Release 2	Minor amendment to Knowledge Evidence to correct typographical error.

Application

This unit describes the skills and knowledge required to enter and work in confined spaces in the resources and infrastructure industries.

It applies to those working in operational roles. They generally work under supervision to undertake a prescribed range of functions involving known routines and procedures and take responsibility for the quality of work outcomes.

Licensing, legislative and certification requirements that apply to this unit can vary between states, territories and industry sectors. Users must check requirements with relevant body before applying the unit.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and prepare for working in confined space	1.1 Obtain, interpret and confirm work requirements 1.2 Access, interpret and apply documentation required to enter and work in confined spaces 1.3 Identify and address potential risks, hazards and environmental issues, and implement control measures according to workplace procedures 1.4 Obtain and confirm authorisation of a confined space entry permit

ELEMENT	PERFORMANCE CRITERIA
	<p>that meets regulatory requirements</p> <p>1.5 Select and wear appropriate personal protective equipment for planned work activities</p> <p>1.6 Obtain and interpret emergency procedures with the stand-by person, and be prepared for emergency situations</p> <p>1.7 Identify, obtain and implement signage and barrier requirements according to workplace procedures</p> <p>1.8 Select tools and equipment for the tasks, check for serviceability and rectify or report any faults to relevant personnel</p> <p>1.9 Position rescue equipment by the entry permit</p>
2. Work in confined space	<p>2.1 Gain access to confined space</p> <p>2.2 Test and monitor the atmosphere for harmful elements according to workplace procedures</p> <p>2.3 Correctly apply tagging and lock-out procedures</p> <p>2.4 Enter the confined space according to workplace procedures</p> <p>2.5 Maintain ongoing communication with the stand-by person</p> <p>2.6 Comply with entry permit requirements</p> <p>2.7 Monitor and adhere to allocated entry time</p>
3. Exit confined space	<p>3.1 Exit confined space according to workplace procedures</p> <p>3.2 Recover tools, equipment and materials</p> <p>3.3 Conduct inspection of the confined spaces according to workplace procedures</p> <p>3.4 Remove tagging and lock-out procedures</p> <p>3.5 Complete confined space entry permit requirements according to workplace procedures</p>
4. Clean up	<p>4.1 Clear work area and dispose of materials according to workplace procedures</p> <p>4.2 Remove, clean and store barriers and signs</p> <p>4.3 Conduct equipment inspections to identify faults according to manufacturer specifications and workplace procedures and report to relevant personnel</p> <p>4.4 Conduct routine operational servicing, lubrication and housekeeping activities according to workplace procedures</p> <p>4.5 Process written maintenance records according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Identifies and interprets information from workplace procedures, documentation and regulations
Writing	<ul style="list-style-type: none">Produces and completes written documents required for workplace procedures
Self-management	<ul style="list-style-type: none">Monitors and minimises own exposure to worksite risks and hazards during activities
Oral communication	<ul style="list-style-type: none">Uses a range of communication techniques and systems to communicate with others

Unit Mapping Information

Supersedes and is equivalent to RIIWHS202D Entering and working in confined spaces.

Release 2	Minor amendment to Knowledge Evidence to correct typographical error.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- enter and work in confined spaces on at least two occasions, including:
 - obtaining the required entry permit and instructions for performing work in confined spaces
 - interpreting and applying workplace procedures
 - applying tagging and lock out procedures
 - selecting, wearing and caring for personal protective equipment
 - using atmospheric monitoring devices prior to entering the confined space
 - entering the confined space
 - working in the confined space
 - using atmospheric monitoring devices during confined space activity
 - applying safe materials handling methods
 - exiting the confined space
 - removing tagging and lock out.

During the above, the candidate must:

- locate and apply relevant legislation, documentation, policies and procedures and confirm that the work activity is compliant
- implement the requirements, procedures and techniques for entering and working in confined spaces
- work effectively with others to enter and work in confined spaces in a way that meets all required outcomes

- communicate clearly and concisely with others to receive and clarify work instructions and to determine coordination requirements prior to commencing and during work activities.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key legislation relevant to enter and work in confined spaces
- key policies, procedures and documentation required to enter and work in confined spaces, including:
 - entry and exit procedures, risks and regulations
 - site and equipment safety requirements
 - site isolation and site control responsibilities and authorities
 - safety data sheets
 - incidents and emergency response documentation
- principles and techniques for identifying and responding to:
 - areas that constitute confined spaces
 - types of air contaminants and toxic gases
 - limitations of breathing apparatus
 - relevant hazards and emergencies
- equipment types, characteristics, technical capabilities and limitations
- principles and techniques for using confined space and industry terminology
- techniques for coordinating and communicating job activities with others.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
 - personal protective equipment
 - equipment related to entering and working in confined spaces
 - relevant documentation
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year
	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert	

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
		experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.

*Guidance on simulated environments has been stipulated in the Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIIWHS205E Control traffic with stop-slow bat

Modification History

This unit replaces RIIWHS205D Control traffic with slow-stop bat. Significant endorseable amendments have been made to Elements, Performance Criteria, Foundation Skills, Performance Evidence and Knowledge Evidence to better reflect current industry practices and clarify training outcomes.

Application

This unit describes the skills and knowledge required to control vehicle and pedestrian traffic using stop-slow bats, hand signals and approved communication devices in the resources and infrastructure industries.

It applies to those working in operational roles. They generally work in teams in live traffic environments under some degree of supervision.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented registered training organisations are advised to contextualise the unit of competency by referring to the existing state/territory OHS legislative requirements

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to control traffic	1.1 Select and wear personal protective equipment required for work activities 1.2 Access, interpret and confirm work instructions and plan work 1.3 Access, interpret and apply required workplace policies, procedures, jurisdictional safety and environmental protection requirements 1.4 Obtain and interpret site emergency procedures and prepare for accidents and emergencies 1.5 Select tools and equipment, check for serviceability, and rectify faults and report according to workplace policies and procedures
2. Control traffic and operate	2.1 Adjust approved communication devices according to site

communication devices	<p>requirements</p> <p>2.2 Direct traffic using hand held stop-slow bat and visibly clear and unobstructed hand signals as required</p> <p>2.3 Monitor traffic, make adjustments for changing traffic conditions and position waiting vehicles as required</p> <p>2.4 Communicate messages to other personnel, confirm recipient understanding and clarify as required</p> <p>2.5 Check and perform maintenance on approved communication devices according to requirements</p> <p>2.6 Check communications contact after nominated period of non-contact</p> <p>2.7 Report traffic offenders according to workplace policies and procedures</p>
3. Conduct housekeeping activities	<p>3.1 Confirm and remove signs and devices in line with job requirements and cover as required</p> <p>3.2 Clean, check and store tools and equipment</p> <p>3.3 Report environmental damage and potential for future damage as required</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Applies basic mathematical problem solving processes, including simple addition, subtraction, multiplication and division
Oral communication	<ul style="list-style-type: none"> Listens to short, explicit instructions for work procedures and asks questions to clarify and confirm
Reading	<ul style="list-style-type: none"> Identifies and interprets information from workplace procedures, documentation, legislation and regulations
Technology	<ul style="list-style-type: none"> Identifies purposes, specific functions and key features of common digital systems and tools and operates them as required
Writing	<ul style="list-style-type: none"> Produces and completes workplace reports using appropriate vocabulary, grammatical structures and conventions

Unit Mapping Information

Supersedes and is equivalent to RIIWHS205D Control traffic with stop-slow bat.

Assessment Requirements for RIIWHS205E Control traffic with stop-slow bat

Modification History

This unit replaces RIIWHS205D Control traffic with slow-stop bat. Significant endorseable amendments have been made to Elements, Performance Criteria, Foundation Skills, Performance Evidence and Knowledge Evidence to better reflect current industry practices and clarify training outcomes.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- Control traffic with a stop-slow bat according to traffic guidance schemes in a manner that is safe and follows workplace policies and procedures on at least two occasions, including:
 - directing pedestrian traffic, including at least one of the following:
 - ~ pedestrians with mobility issues
 - ~ pedestrians with prams
 - ~ cyclists
 - using approved communication devices to transmit message and report traffic offenders, including the use of at least one of the following devices:
 - ~ hand held radios
 - ~ telephones.

During the above, the candidate must:

- coordinate operations with pilot vehicle in a shuttle flow work arrangement
- participate in risk assessment and management processes
- identify the type and scope of hazards and their impact and recommend risk control measures
- identify key environmental protection issues and describe required solutions
- locate and complete at least one incident report
- complete housekeeping requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- risk assessment processes and hierarchy of control
- work instructions and procedures for planning work
- jurisdictional safety requirements relevant to temporary traffic management

- environmental protection requirements
- site emergency procedures
- site and equipment safety requirements
- traffic control requirements and procedures for directing the following pedestrian traffic groups:
 - pedestrians with mobility issues
 - pedestrians with prams
 - cyclists
- traffic guidance scheme and traffic management plan compliance
- communication device operations, including:
 - hand held radios
 - telephones
- traffic control equipment types, characteristics, technical capabilities and limitations
- operational and maintenance procedures for equipment
- site isolation and traffic control responsibilities and authorities
- the effects of travel speed and vehicle mass on stopping distances.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
 - stop-slow bat
 - personal protective equipment
 - hand held radio or telephone
- be conducted in a safe environment; and
- be assessed in context of this sector's work environment on a real live road setting under supervision; and
- be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor Requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory competency standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing a high level of RII training product knowledge
- having an understanding and knowledge of legislations and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence as outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must hold the relevant vocational competencies and have current industry skills directly relevant to the training and assessment being provided and must work alongside a trainer and/or assessor to conduct the assessment. This means the industry subject matter expert should hold the unit being assessed (or an equivalent unit), and must also demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 year
	2	2 years
Drilling, Coal Mining and Extractive (Quarrying), Metalliferous Mining and Civil Construction	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any	

	relevant regulation.
--	----------------------

*Guidance on simulated environments has been stipulated in the RII Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIIWHS301E Conduct safety and health investigations

Modification History

This unit replaces RIIWHS301D Conduct safety and health investigations. Significant endorseable amendments have been made to Elements, Performance Criteria, Foundation Skills, Performance Evidence and Knowledge Evidence to better reflect current industry practices and clarify training outcomes.

Application

This unit describes the skills and knowledge required to conduct work related health and safety investigations as a result of an incident and to contribute to a safe workplace.

It applies to individuals who participate in work related health and safety investigations as part of their responsibilities.

Licensing, legislative and certification requirements that apply to this unit can vary between states, territories and industry sectors. Users must check requirements with relevant body before applying the unit.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p><i>Elements describe the essential outcomes.</i></p> <p>1. Determine the objectives and develop investigation plan</p>	<p><i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i></p> <p>1.1 Identify, access and interpret work related health and safety investigation documentation, policies and procedures</p> <p>1.2 Determine the scope of the investigation to create an investigation plan according to workplace policies and procedures</p> <p>1.3 Confirm pre- and post-incident timeframe is consistent with all site and legislative requirements</p> <p>1.4 Determine the need for eliminating safety hazards and address the needs of those involved in the incident and incorporate into investigation plan</p> <p>1.5 Test the proposed objectives to clarify the scope of the investigation</p> <p>1.6 Consult individuals and/or parties in accordance with workplace policies and procedures</p> <p>1.7 Review investigation plan to check it includes agreed timelines, objectives, responsibilities, roles,</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>documentation, actions and outcomes</p> <p>1.8 Communicate investigation plan to relevant individuals and/or parties in accordance with own role and responsibilities</p>
2. Gather information	<p>2.1 Maintain site security and integrity of evidence in accordance with site and legislative requirements</p> <p>2.2 Plan and prepare for the systematic collection of information and data</p> <p>2.3 Schedule information and data collection and completion to ensure minimum backtracking or repeat actions</p> <p>2.4 Confirm methods used to collect and examine information, including interviewing and recording, meet site and legislative requirements</p> <p>2.5 Collect, test and organise all appropriate information according to workplace policies and procedures</p>
3. Evaluate information	<p>3.1 Assess and evaluate information and data for validity and reliability to aid decision making</p> <p>3.2 Undertake further research where information or data is unclear or inadequate, and rectify in accordance with investigation plan</p> <p>3.3 Analyse the evidence to determine causes of the incident in accordance with own role and responsibilities</p> <p>3.4 Draw investigation conclusions in accordance with investigation plan, workplace policies and procedures</p> <p>3.5 Confirm findings and consider objectivity, confidentiality, validity and accuracy</p>
4. Identify courses of action	<p>4.1 Frame options and articulate findings to investigation team, in accordance with own role, responsibilities and workplace policies and procedures</p> <p>4.2 Confirm options are provided in a form which meets the audience requirements, can be easily understood and enables selection of the most appropriate courses of action</p> <p>4.3 Collate courses of action to identify actions for future prevention, in accordance with own role, responsibilities and workplace policies and procedures</p> <p>4.4 Confirm courses of action are implemented and evaluated in accordance with investigation plan and workplace policies and procedures</p>
5. Prepare and present	5.1 Prepare investigation reports according to own job role,

ELEMENT	PERFORMANCE CRITERIA
investigation reports	<p>responsibilities and workplace policies and procedures</p> <p>5.2 Present written and graphical reports using a clear and concise structure and format appropriate to audience</p> <p>5.3 Communicate outcomes to relevant individuals and/or parties according to workplace policies and procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Writing	<ul style="list-style-type: none"> Documents procedures, plans and outcomes using appropriate organisational formats and industry specific terminology Develops reports using structure, format and language appropriate for purpose and audience
Oral communication	<ul style="list-style-type: none"> Uses appropriate language and non-verbal features to provide support, give instructions or request information
Interact with others	<ul style="list-style-type: none"> Identifies and uses appropriate conventions and protocols when communicating with parties involved in various investigation stages Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction Takes a role in helping develop team understanding of investigation requirements

Unit Mapping Information

Supersedes and is equivalent to RIIWH301D Conduct safety and health investigations.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=88a61002-9a21-4386-aaf8-69c76e675272>

Assessment Requirements for RIIWHS301E Conduct safety and health investigations

Modification History

This unit replaces RIIWHS301D Conduct safety and health investigations. Significant endorseable amendments have been made to Elements, Performance Criteria, Foundation Skills, Performance Evidence and Knowledge Evidence to better reflect current industry practices and clarify training outcomes.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit.

The candidate must demonstrate evidence of completion of participating in work related health and safety investigations that safely, effectively and efficiently follows workplace procedures to carry out work activity on at least two occasions. This includes:

- determining objective and authority of the investigation
- creating an investigation plan
- planning and organising activity to gather evidence and data, including but not limited to:
 - lists of witnesses
 - interviews
 - statements
 - audio recordings
 - photographs
 - scale diagrams of area
- undertaking research to gather evidence and data
- engaging others in the investigation process
- questioning and actively listening to those involved in the investigation
- correctly collecting and maintaining the integrity of evidence and procedural fairness
- identifying and/or confirming the linkages between factors and outcomes, causes and effects and direct/indirect causal relationships
- drawing conclusions and identifying appropriate course of action to resolve issue
- communicating outcomes to relevant individuals and/or parties
- writing clearly, concisely and effectively report investigation outcomes and presenting the outcomes to others.

In the course of the above work, the candidate must also:

- locate and apply relevant legislation, documentation, policies and procedures.

Knowledge Evidence

The candidate must demonstrate the following knowledge to effectively complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- commonwealth and state or territory legislation relevant to conducting safety and health investigations
- internal and external sources of work related health and safety information and data relevant to investigations
- applicable organisational work related health and safety policies, procedures, processes and systems relevant to work role
- topic or subject area which is the target for the investigation
- theory of safety and health investigative research and analysis
- symptoms and possible immediate effects of post-traumatic stress in an investigation situation
- industry context to incidents and investigations
- methods for collecting and analysing safety and health information and data
- site procedures and conventions related to work related health and safety investigations
- site risk management processes and their applications
- conventions and requirements for written communications, including report writing.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
 - an incident (live, or simulated based on historical incidents)
 - site investigation plans
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor Requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year
	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the RII Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIIWH302E Implement traffic management plans

Modification History

This unit replaces RIIWH302D Implement traffic management plan. Significant endorseable amendments have been made to Elements, Performance Criteria, Foundation Skills, Performance Evidence and Knowledge Evidence to better reflect current industry practices and clarify training outcomes.

Application

This unit describes the skills and knowledge required to set out, monitor and close down traffic management plans and traffic guidance schemes in civil construction.

It applies to those working in supervisory roles. They generally work in teams in live traffic environments and hold some responsibility for the outcomes of others.

Licensing, legislative and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Users must check requirements with relevant body before applying the unit.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented registered training organisations are advised to contextualise the unit of competency by referring to the existing state/territory OHS legislative requirements.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to implement traffic management plan	1.1 Determine worksite requirements and scope of traffic management plan and traffic guidance scheme 1.2 Identify, address and report potential risks, hazards and environmental issues and determine control measures 1.3 Validate suitability of traffic management plan and traffic guidance scheme to site conditions, traffic volumes and work activities and confirm requirements are met 1.4 Resource personnel to implement traffic management plan and traffic guidance scheme according to workplace policies and procedures 1.5 Confirm required liaison and communication activities are

	<p>carried out according to instructions</p> <p>1.6 Provide traffic guidance scheme implementation instructions to traffic control personnel and clarify and confirm recipient understanding as required</p>
2. Set out traffic guidance scheme	<p>2.1 Check required signs and devices are positioned and installed according to traffic guidance scheme</p> <p>2.2 Inspect traffic guidance scheme and authorise roadwork crew to proceed with work activities</p> <p>2.3 Confirm roadwork crew are protected from work site hazards</p>
3. Monitor traffic guidance scheme	<p>3.1 Confirm traffic flow is being monitored by required personnel according to traffic guidance scheme</p> <p>3.2 Apply adjustments to traffic guidance scheme as necessary to maintain required traffic flow and according to own job role</p> <p>3.3 Monitor work activities and apply required measures to mitigate and address roadwork crew and road user non-conformance</p> <p>3.4 Apply workplace policies and procedures to address offending road users as required</p>
4. Close down work activities	<p>4.1 Direct covering and required removal of equipment, signs and devices according to traffic guidance scheme</p> <p>4.2 Confirm tools and equipment are cleaned, checked, maintained and stored according to workplace policies and procedures</p> <p>4.3 Finalise traffic work zone close-down and complete required reporting</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Applies basic mathematical problem solving processes, including simple addition, subtraction, multiplication and division
Oral communication	<ul style="list-style-type: none"> Presents information and provides assistance using industry specific vocabulary Uses listening and questioning to clarify and confirm understanding
Reading	<ul style="list-style-type: none"> Identifies and interprets information from workplace procedures, documentation, legislation and regulations

Writing	<ul style="list-style-type: none">• Produces and completes workplace reports, including risk management matrices, using appropriate vocabulary, grammatical structures and conventions
---------	--

Unit Mapping Information

Supersedes and is equivalent to RIIWHS302D Implement traffic management plan.

Links

Companion Volume implementation guides are found in VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=88a61002-9a21-4386-aaf8-69c76e675272>

Assessment Requirements for RIIWHS302E Implement traffic management plans

Modification History

This unit replaces RIIWHS302D Implement traffic management plan. Significant endorseable amendments have been made to Elements, Performance Criteria, Foundation Skills, Performance Evidence and Knowledge Evidence to better reflect current industry practices and clarify training outcomes.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- implement traffic management plans in a manner that is safe and follows workplace policies and procedures on at least three separate live traffic projects, including:
 - completing at least two of the following:
 - ~ lane closure
 - ~ lateral shift
 - ~ implementing a traffic management plan at an intersection
 - completing at least one project controlling site construction vehicles.

During the above, the candidate must:

- locate and apply required legislations, documentation, policies and procedures including documentation required for worksite projects and required traffic management
- work with traffic control personnel to implement and complete a traffic management plan and traffic guidance scheme that meets all required outcomes including:
 - confirming all necessary resources are available, including qualified personnel
 - confirming all personnel understand, and are able to implement, their roles, task requirements, safety requirements and reporting requirements
 - communicating with others to resolve resourcing and coordination requirements prior to and during work activities
 - confirming that unattended sites and shut-down procedures are completed according to traffic management plan and traffic guidance scheme
 - complying with written and verbal reporting requirements and procedures, including reporting offending road users.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, regulations, codes and procedures including Austroads Codes of Practice and WHS applicable to temporary traffic management

- temporary traffic management principles
- risk management principles and procedures for identifying, analysing and treating potential hazards and risks
- key principles for implementing WHS, including the role of Job Safety Analysis, Job Safety and Environmental Analysis and Safe Work Method statements.
- scope of authority to modify traffic management plan and traffic guidance scheme
- basic signalling procedures for temporary traffic management
- procedures for selecting, using and placing signs and devices, including sequences of installation and removal and provisions for unattended sites
- radio operations procedures and protocols
- equipment types, characteristics, technical capabilities and limitations, including for required specialist and externally-sourced equipment
- site isolation, traffic control and emergency responsibilities and authorities.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
 - traffic management plan
 - traffic guidance scheme
 - personal protective equipment
 - devices, equipment and signs specified in the performance criteria
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment on a real live road setting under supervision; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor Requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided

- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year
	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the RII Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIIWMG203E Drain and dewater civil construction sites

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to drain and dewater civil construction sites. This includes establishing sedimentation controls, constructing sumps, installing surface or submersible pumps, and draining surface water using surface drains.

It applies to those working in operational roles. They generally work under supervision to undertake a prescribed range of functions involving known routines and procedures and take some responsibility for the quality of work outcomes.

Licensing, legislative and certification requirements that apply to this unit can vary between states, territories and industry sectors. Users must check requirements with relevant body before applying the unit.

Unit Sector

Civil construction

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and prepare to drain and dewater	1.1 Obtain, interpret, clarify and confirm work requirements 1.2 Access, interpret and apply documentation required to drain and dewater civil construction sites 1.3 Obtain and interpret emergency procedures and identify steps required to respond to emergencies 1.4 Select and wear personal protective equipment according to site requirements 1.5 Confirm and identify requirements for complying with environmental protection, safety and traffic management signage

ELEMENT	PERFORMANCE CRITERIA
	<p>requirements</p> <p>1.6 Identify potential hazards and environmental issues, implement control measures within scope of own role and escalate where required</p> <p>1.7 Select plant, tools and equipment required to carry out tasks and check for faults</p> <p>1.8 Identify, confirm and locate materials required for work application</p>
2. Implement sedimentation control measures	<p>2.1 Position sedimentation controls according to job requirements</p> <p>2.2 Construct sedimentation control barriers according to job requirements</p> <p>2.3 Position geotextiles according to job requirements</p>
3. Remove surface water	<p>3.1 Establish temporary drainage systems to drain or divert water to storm water drainage system</p> <p>3.2 Remove slab and site surface water and direct to temporary drainage system</p> <p>3.3 Fill surface holes and depressions according to job requirements</p> <p>3.4 Drain surface water to drainage system</p>
4. Construct sump	<p>4.1 Determine sump position according to job specifications and sump positioning requirements</p> <p>4.2 Construct sumps according to job requirements</p>
5. Remove water from sump	<p>5.1 Install surface or submersible pumps according to job requirements</p> <p>5.2 Locate surface pump close to sump</p> <p>5.3 Pump water to temporary drainage system</p> <p>5.4 Disperse discharged water according to job and site requirements</p>
6. Conduct clean-up activities	<p>6.1 Clear work area and dispose of or recycle materials according to site requirements</p> <p>6.2 Clean, check, perform maintenance on and store plant, tools and equipment according to manufacturer specifications and site requirements</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
--------------	--------------------

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none">• Identifies and interprets information from verbal instructions• Conveys information and instructions to others verbally
Self-management	<ul style="list-style-type: none">• Monitors and minimises own exposure to worksite risks and hazards during work activities

Unit Mapping Information

Supersedes and is equivalent to RIIWMG203D Drain and dewater civil construction site.

Links

Companion Volume Implementation Guide is found on VETNet -

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=88a61002-9a21-4386-aaf8-69c76e675272>

Assessment Requirements for RIIWMG203E Drain and dewater civil construction sites

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- drain and dewater civil construction sites on at least two occasions, including:
 - dewatering a trench or pit using a pump
 - selecting and establishing sedimentation controls
 - selecting, installing and using surface or submersible pumps
 - pumping and dispersing surface and sub-surface water
 - draining surface water from a site using surface drains.

During the above, the candidate must:

- locate and apply required legislation, documentation, policies and procedures
- identify, report and record hazards and risks
- work with others to drain and dewater civil construction sites that meet required outcomes, including:
 - using communication techniques and equipment to convey information to others, including signage to advise others of work activity and exclusion zones
 - communicating with others to receive and clarify work instructions
 - completing written and verbal reporting requirements and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislation required to drain and dewater civil construction sites
- policies, procedures and documentation required to drain and dewater civil construction sites, including those relating to:
 - hazard and risk management

- work health and safety
- emergency response
- site and equipment safety
- environmental protection
- waste management
- communication techniques and equipment
- site isolation and traffic control responsibilities
- operational, maintenance and basic diagnostic procedures
- project quality requirements
- work instructions
- job plans and specifications
- site requirements
- manufacturer specifications for required plant and equipment
- workplace recording and reporting
- principles and techniques required to drain and dewater civil construction sites, including those relating to:
 - dewatering
 - areas to be drained
 - drainage systems
 - project sites
 - sedimentation controls
 - sump positioning
 - interpreting engineering drawings
- types, characteristics, technical capabilities and limitations of plant and equipment required to drain and dewater civil construction sites, including:
 - hoses
 - shovels
 - pumps
 - plastic piping
 - silt fences
- materials safety data sheet (SDS) compliance processes
- components of job safety analyses (JSAs), job safety environmental analyses (JSEAs), and safe work method statements (SWMs)
- civil construction terminology relating to draining and dewatering civil construction sites.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
 - personal protective equipment
 - equipment required to drain and dewater civil construction sites

- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with required legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying)	1	1 year
	2	2 years

and Civil Infrastructure		
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the RII implementation guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

TLIB3011 Set up and rig crane for lift

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to set up and rig a mobile crane for a lift. It includes the systematic positioning and stabilisation of the crane and its assembly prior to lift in a variety of operational contexts.

Work must be carried out in compliance with the relevant state/territory authority mobile crane operations licence/permit requirements and regulations.

Work is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Position and

1.1 Crane is directed to position in accordance with job plan,

stabilise crane

applicable Australian Standards, codes of practice and manufacturer specifications to ensure safe operation

- 1.2 Ground is checked to ensure it is firm enough to bear the load
- 1.3 Appropriate plates or packing are correctly used to adequately distribute load
- 1.4 Outriggers and stabilisers are correctly deployed and positioned in accordance with manufacturer instructions, appropriate Australian Standard and other relevant statutory regulations
- 1.5 Outrigger packing is checked for adequacy prior to and after lift is taken

2 Assemble crane

- 2.1 Block is reeved in accordance with manufacturer instructions
- 2.2 Counterweights are installed in accordance with manufacturer specifications
- 2.3 Attachments are set up in accordance with manufacturer instructions
- 2.4 Qualified rigger is consulted and other personnel are assisted as necessary to ensure efficient and safe assembly and set-up of crane
- 2.5 Straight fly jibs and luffing fly jibs are assembled and fitted in accordance with manufacturer instructions

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB3011A Set up and rig crane for lift.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for TLIB3011 Set up and rig crane for lift

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying procedures for fitting attachments and fly jibs
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- dealing with internal and external customers
- fitting fly jibs and attachments
- interpreting and following operational instructions and prioritising work
- monitoring work activities in terms of planned schedule and modifying activities depending on operational contingencies, risk situations and environments
- monitoring condition of equipment
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using appropriate personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- company work procedures for setting up and rigging a mobile crane at a worksite
- hazard management strategies consistent with the principle of hierarchy of control (with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment)
- mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- operational procedures for crane crews
- operational work systems and equipment
- procedures for fitting attachments and fly jibs
- procedures for identifying and correctly using equipment, processes and procedures
- relevant agreements, codes of practice or other legislative requirements
- relevant WHS/OHS and environmental procedures and regulations
- relevant road rules, regulations, permit and licence requirements for mobile crane operations and rigging mobile cranes.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment of setting up and rigging a mobile crane for a lift must occur in workplace operational situations where it is appropriate to do so. Where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions and involve the movement of equipment, goods, materials and vehicular traffic.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals, including relevant:
 - state/territory regulations and licence/permit requirements pertaining to mobile cranes
 - state/territory road rules
 - state/territory WHS/OHS legislation

- state/territory environmental protection legislation
- relevant materials, tools and equipment
- personal protective clothing and equipment, including:
 - gloves
 - safety headwear and footwear
 - sunscreen, sunglasses and safety glasses
 - two-way radios
 - high visibility clothing.

TLIB3013 Maintain mobile cranes

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to carry out routine maintenance on a mobile crane, in compliance with licence/permit requirements, regulations and work requirements in a variety of operational contexts.

It includes obtaining and confirming job instructions and work specifications, coordinating loading of gear and equipment, assessing job requirements and work areas, designing job plan and setting up work area.

Work is performed under general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes.

This unit applies to maintenance activity on equipment used by the operator and is limited to lubrication, fluid, filter and accessory changing and checks for cracks, surface or structural faults or other damage.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Plan maintenance operations

2 Complete pre-maintenance checks

3 Identify and assess faults found

4 Conduct maintenance operations and safety checks

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Tags, service records, logbooks and crane manufacturer information are read prior to commencing maintenance, and previously identified and manufacturer recommendations are noted
- 1.2 Maintenance schedules are read and maintenance tasks are confirmed to match schedule
- 1.3 Step by step procedure is worked out to minimise time delays and to sequence maintenance processes consistent with manufacturer recommendations
- 2.1 Appropriate safe work area is selected for maintenance tasks
- 2.2 Required tools, consumables and equipment are identified and assembled
- 2.3 Equipment is inspected for visible faults and loose or damaged components
- 3.1 Conditions found are compared with manufacturer information and intended use of crane
- 3.2 Conditions noticed that may cause future difficulties are identified and potential effect on the safe and efficient operation of mobile crane is documented
- 3.3 Potential fault conditions are reported to appropriate personnel
- 4.1 Fluid replacements and lubrication operations are completed
- 4.2 Fluid levels are checked and adjusted
- 4.3 Mechanical components are checked to ensure attachments and tensions are secure
- 4.4 Mechanical adjustments are made
- 4.5 Maintenance plan is followed and appropriate adjustments are made to maintenance plan to deal with unexpected

events

4.6 Own work and crane system operations are checked to ensure crane's operational condition is in accordance with required specifications

4.7 Tools, equipment and unused consumables are returned to appropriate locations and waste is disposed of in accordance with workplace policy and procedures

5 Complete maintenance records

5.1 Accurate reporting of safety check results and maintenance conducted, is completed and filed in accordance with procedures, industry guidelines and statutory requirements

5.2 Clear reference in reports is made to any items that may not yet require maintenance but may affect the future working condition or safety of the mobile crane

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB3013A Maintain mobile cranes.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

Assessment Requirements for TLIB3013 Maintain mobile cranes

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- checking and replenishing fluids and carrying out lubrication processes
- communicating effectively with others
- completing relevant documentation
- dealing with internal and external customers
- identifying and correctly using relevant equipment
- identifying non-conformities that may compromise operational capability
- implementing contingency plans
- interpreting and following operational instructions
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned maintenance schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- planning and prioritising own work, multi-tasking, predicting consequences and identifying improvements
- producing a comprehensive maintenance plan
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using appropriate personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- servicing equipment in terms of maintenance schedule and standard operating procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self, others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- application of relevant agreements, codes of practice or other legislative requirements
- guidelines for the safe use of machinery and equipment
- hazard management strategies consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment
- mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- operational crane systems and equipment
- operational safety and maintenance procedures for crane crews
- relevant WHS/OHS and environmental procedures and regulations
- relevant regulations, permit and licence requirements for mobile crane operational safety and maintenance
- use, characteristics, capabilities and limitations of lubrication and adjustment tools and equipment
- workplace procedures for planning mobile crane jobs and setting up work areas.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so. TLIB3015 Undertake site inspection

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to undertake a site inspection in preparation for a lift requiring a mobile crane in accordance with licence/permit requirements and regulations, in a variety of operational contexts.

It includes arranging a site inspection, clarifying customer requirements, defining job requirements and completing necessary records.

Work is performed with general supervision, with duty of care responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the Performance criteria describe the performance needed to demonstrate

essential outcomes.

achievement of the element.

1 Arrange site inspection

- 1.1 Available information about customer requirements is obtained from relevant personnel
- 1.2 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
- 1.3 Need for site inspection is confirmed through appropriate questioning and discussion
- 1.4 Mutually acceptable meeting time is arranged with customer
- 1.5 Full customer details are recorded in accordance with workplace procedures

2 Clarify customer requirements

- 2.1 Customer needs and perception of job are clearly established through appropriate questioning and discussion
- 2.2 Alternative job methods are suggested, as required, and a safe and cost effective method is negotiated with customer
- 2.3 Client ability to provide necessary competent personnel is ascertained

3 Define job requirements

- 3.1 Information about load and movement requirements is accessed and necessary measurements are taken to enable accurate estimation of job requirements
- 3.2 Specific scheduling needs are ascertained taking into account legislative and customer requirements
- 3.3 Information from site inspection and customer is used to identify hazards and contingencies
- 3.4 Specific site and job requirements are identified
- 3.5 Lift study is arranged as required, to provide additional information to meet customer expectations
- 3.6 Necessity to be on site during lift is assessed in accordance with workplace policy, taking into consideration complexity of job, potential hazards and expertise of available personnel
- 3.7 Need for permits/authorisations is determined

4 Complete records

- 4.1 Required records are updated accurately, legibly and promptly in accordance with workplace procedures
- 4.2 All relevant information about job is included in records

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB3015A Undertake site inspection.

Assessment Requirements for TLIB3015 Undertake site inspection

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using equipment, processes and procedures
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment and sites in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- working collaboratively with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of relevant agreements, codes of practice and legislative requirements
- guidelines relating to the safe use of machinery and equipment
- hazard management consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment
- mobile crane applications, capacities, configurations, safety hazards and control

mechanisms

- operational procedures for crane crews for conducting a site inspection for a lift using a mobile crane
- operational work systems and equipment
- relevant national heavy vehicle legislation and regulatory requirements
- relevant road rules, regulations, permit and licence requirements for mobile crane operation and safety
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- site inspection procedures and protocols.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLID1001 Shift materials safely using manual handling methods

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to shift loads safely using manual handling methods. Work must be carried out in compliance with the relevant work health and safety (WHS)/occupational health and safety (OHS) regulations concerning the manual handling and movement of loads.

It includes assessing the risks associated with relocating the load, planning the relocation process and carrying out the relocation in accordance with the plan.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Assess risks associated with

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Products, goods or materials to be relocated are identified and assessed to determine appropriate relocation method

relocating load

- 1.2 Storage locations are determined and potential routes to be followed are identified
- 1.3 Effect of load relocation on original load base is predicted
- 1.4 Points of balance are estimated
- 1.5 Required clearances are compared to available space and adjustments are made to moving loads to reflect required clearance
- 1.6 Effects of moving contents, which may be loose, liquid, dangerous or hazardous, are considered
- 1.7 Risks in potential routes are considered
- 1.8 Risks to self are identified arising from the required lifting, load carrying, set down or movement of the goods
- 1.9 Manual handling procedures for lifting, lowering and carrying, pushing and pulling are identified
- 1.10 Team lifting processes are considered when moving loads
- 1.11 Appropriate personal protective equipment is determined
- 1.12 Size to weight ratio of items to be manually handled are identified

2 Plan load relocation

- 2.1 Relocation of the load is planned, consistent with the code of practice for manual handling and in accordance with the risk assessment
- 2.2 Process for relocating load is proposed including predicting and planning for potential difficulties
- 2.3 Proposed process is checked for compliance with code of practice and workplace procedures

3 Relocate load

- 3.1 Actions for lifting, lowering and carrying, pulling and pushing a load are in accordance with workplace procedures and WHS/OHS requirements
- 3.2 Applications appropriate for team relocation of load are identified
- 3.3 Team lifting tasks are coordinated
- 3.4 Planned process and route are followed

- 3.5 Relocated materials are set down without damage to goods, personnel or equipment and are checked for stability
- 3.6 Relocation is checked to see it meets work requirements and variance/s are reported

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLID1001A Shift materials safely using manual handling methods.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

Assessment Requirements for TLID1001 Shift materials safely using manual handling methods

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate risks that may exist when manually lifting and handling materials and goods
- applying relevant legislation and workplace procedures
- communicating effectively with others when manually lifting and handling materials and goods
- implementing contingency plans when manually lifting and handling, materials and goods
- interpreting and following operational instructions and prioritising work
- interpreting manual handling risks
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in loads and materials in accordance with standard operating procedures
- reading and interpreting instructions, procedures and information relevant to the manual lifting and handling of materials and goods
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- using correct manual handling practices
- working collaboratively with others when manually lifting and handling materials and goods
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- housekeeping standards and procedures
- relevant WHS/OHS procedures and guidelines concerning the manual lifting and movement of loads
- risks when manually lifting and handling materials and goods, and related precautions to control the risk, including:
 - controlled actions on a movement during lifting
 - distance over which load is to be shifted
 - frequency of shifting operations
 - load on the spine during lifting
 - postures and positions during lifting
 - rotation and side movement of the spine during lifting
 - time allowed for shifting the load
 - type, weight and position of the load
- work layout
- site layout and obstacles
- workplace procedures and policies for manual handling.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice

and operation manuals.

TLID2003 Handle dangerous goods/hazardous substances

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to handle dangerous goods and hazardous substances in accordance with relevant work health safety (WHS)/occupational health and safety (OHS) regulations concerning the safe handling of dangerous goods and hazardous substances, within the transport and logistics industry.

It includes identifying requirements for working with dangerous goods and/or hazardous substances, confirming site incident procedures and selecting handling techniques.

Work is performed under general supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

Assessment Requirements for TLID2003 Handle dangerous goods/hazardous substances

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating and working effectively with others
- completing relevant documentation
- determining required permits
- estimating weight and dimensions of load and any special requirements
- identifying and assessing handling and storage precautions and requirements for dangerous goods/hazardous substances
- identifying and selecting safety requirements for handling dangerous goods/hazardous substances
- identifying containers and goods coding, markings and emergency information panels for mode of transport storage selected
- identifying dangerous goods/hazardous substances using labels, International Maritime Dangerous Goods (IMDG) Code markings, HAZCHEM signs and other relevant identification criteria
- identifying job and site hazards, and planning work to minimise risks
- implementing contingency plans
- maintaining workplace records and documentation
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule, predicting consequences and identifying improvements
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures, regulations, information and signs
- recognising hazards and applying precautions and required action to minimise, control or eliminate recognised hazards
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures

- selecting and using required personal protective equipment (PPE) conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- selecting appropriate equipment and work systems including PPE
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- equipment applications, capacities, configurations, safety hazards and control mechanisms
- housekeeping standards and procedures
- permit and licence requirements
- problems that may arise when handling of dangerous goods and hazardous substances and actions that should be taken to prevent or solve these problems
- relevant aspects of current Australian Dangerous Goods (ADG) Code and relevant Australian Standards
- relevant regulations and codes concerning handling dangerous goods/hazardous substances
- risks when handling dangerous goods/hazardous substances and related precautions to control risk
- workplace procedures for handling and storing dangerous goods/hazardous substances.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy

requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, current ADG Code, codes of practice and operation manuals
- relevant materials, tools, equipment, and personal protective equipment currently used in industry.

TLIF2006 Apply accident-emergency procedures

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package:

- Minor word changes and reordering in Knowledge Evidence
- Minor statement changes in Assessment Conditions.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply accident-emergency procedures in accordance with work health safety (WHS)/occupational health and safety (OHS) codes of practice, regulations and workplace requirements.

It includes responding to an incident, controlling and assisting at an accident or emergency site, finalising accident-emergency processes and completing records.

Work is performed under limited supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|---|
| 1 Respond to an incident | 1.1 Response to incident or accident is in accordance with workplace emergency procedures and relevant regulatory requirements |
| | 1.2 Incident cause and effects details are identified and reported |
| | 1.3 Hazards are identified, risks assessed and control measures implemented |
| | 1.4 Assistance requirements for accidents and emergencies are clarified and reported immediately to appropriate parties |
| | 1.5 Requests for assistance are made to relevant personnel and emergency services |
| 2 Control and assist at accident or emergency site | 2.1 Site is controlled and protected until arrival of authorised personnel |
| | 2.2 Assistance is provided to injured persons within limitations of duty of care responsibilities and workplace procedures |
| | 2.3 Relevant authorities at the site are cooperated with and assisted in accordance with workplace policies |
| 3 Finalise accident - emergency process and complete records | 3.1 Relevant information is exchanged in accordance with state/territory law and workplace procedures |
| | 3.2 Documentation and reports are completed and processed in accordance with workplace and relevant regulatory requirements |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to TLIF2006A Apply accident-emergency procedures.

Assessment Requirements for TLIF2006 Apply accident-emergency procedures

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package:

- Minor word changes and reordering in Knowledge Evidence
- Minor statement changes in Assessment Conditions.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing work environment to identify hazards, assess safety risks and implement appropriate work health and safety (WHS)/occupational health and safety (OHS) control procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace emergency response procedures
- communicating effectively with others
- completing relevant documentation
- modifying activities depending on operational contingencies, risk situations and environments
- negotiating and resolving issues when responding to an accident or an emergency
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures and information
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and appropriately applying technology, information systems and policies during a safety incident, accident or emergency
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS/OHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

- focus of operation of work systems, equipment or management, site and organisational

- operating and emergency procedures
- relevant regulatory and codes of practice requirements applicable in accident/emergency situations
- relevant WHS/OHS and environmental protection policies and procedures
- site layout
- typical problems that can occur during a safety incident, accident or emergency and related actions that can be taken
- workplace emergency, fire and accident procedures
- workplace procedures for accident-emergency response.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIF2010 Apply fatigue management strategies

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply fatigue management strategies within the transport and logistics industry. Work is undertaken in compliance with relevant legislation, regulations, codes and guidelines.

It includes identifying and acting on signs of fatigue and implementing appropriate strategies to minimise fatigue during work activities, in particular when operating equipment, trains, vehicles, load shifting equipment, marine vessels and aircraft.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Identify and act on signs of fatigue

1.1 Potential causes of fatigue are identified and action is taken to minimise their effects in accordance with company procedures

- 1.2 Personal warning signs of fatigue are recognised and necessary steps are taken in accordance with workplace procedures, to ensure that effective work capability and alertness are maintained
- 2 Implement strategies to minimise fatigue**
- 2.1 Workplace procedures are assessed to minimise fatigue
 - 2.2 Factors that increase the risk of fatigue-related accidents and incidents are minimised
 - 2.3 Fatigue management strategies are implemented in accordance with workplace policy
 - 2.4 Lifestyle choices are made that promote the effective long-term management of fatigue
 - 2.5 Effective practices in combating fatigue are adopted and applied
 - 2.6 Personal fatigue management strategies are communicated to relevant people
 - 2.7 Appropriate counter measures are planned to combat fatigue

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIF2010A Apply fatigue management strategies.

Assessment Requirements for TLIF2010 Apply fatigue management strategies

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to changes in rosters and standard operating procedures as they relate to fatigue management
- adjusting lifestyle patterns to ensure effective fatigue management during work activities
- applying precautions and required action to minimise and control the effects of fatigue when carrying out own work functions
- applying relevant legislation and workplace procedures
- communicating effectively with others when applying fatigue management strategies
- identifying and meeting own learning needs about fatigue management related matters
- modifying activities and taking appropriate initiatives to manage fatigue in the workplace depending on work contexts, risk situations and environments
- reading and interpreting instructions, procedures, regulations and signs related to fatigue management and applying them to work activities
- recognising symptoms of fatigue and taking appropriate action in accordance with fatigue management regulations and workplace procedures
- working collaboratively with others to manage and minimise the effects of fatigue during work activities.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- causes and effects of fatigue on workers
- factors that increase fatigue-related accidents
- how fatigue affects workplace performance

- how fatigue contributes to workplace accidents
- lifestyles that promote effective long-term fatigue management
- relevant fatigue management codes, regulations, permit and licence requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) regulations as they relate to fatigue
- risks and hazards created by workplace fatigue
- sources of information on fatigue
- strategies and ways of managing fatigue
- ways of recognising fatigue
- workplace policies and procedures related to fatigue management and the control of factors that can contribute to fatigue and fatigue-related accidents.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

TLIF3084 Follow mobile crane safety procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to follow and apply mobile crane safety procedures, and work health and safety (WHS)/occupational health and safety (OHS) procedures when carrying out mobile crane operations.

It includes identifying and following mobile crane and workplace procedures for hazard identification and risk control, contributing to arrangements for managing WHS/OHS, and completing all relevant safety records.

Mobile crane operations are performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Follow workplace and mobile crane safety procedures for hazard identification and risk control**
 - 1.1 Mobile crane and workplace procedures for dealing with accidents, fire and emergencies are identified and followed
 - 1.2 Mobile crane and workplace procedures for WHS/OHS and related work instructions for controlling risks in a workplace are accurately followed
 - 1.3 Mobile crane hazards and site hazards in the workplace are identified and appropriate action is taken to report them and to minimise or eliminate risk to personnel, workplace and the environment
 - 1.4 Safety regulations and established mobile crane and workplace safety and hazard control practices and procedures are obtained, interpreted and applied to mobile crane operations
 - 1.5 Procedures and precautions necessary for entry into confined spaces in the workplace are correctly followed, as required
 - 1.6 Personal protective clothing and equipment is correctly used in accordance with established safety practices and procedures
 - 1.7 Established mobile crane and workplace emergency and contingency plans are followed in an emergency
- 2 Contribute to arrangements for managing mobile crane safety procedures and WHS/OHS**
 - 2.1 Mobile crane safety hazards and WHS/OHS issues are identified and raised with designated personnel in accordance with workplace procedures and relevant WHS/OHS legislation
 - 2.2 Contributions to WHS/OHS management in the workplace are made in accordance with workplace procedures and provisions of relevant legislation
 - 2.3 Participative arrangements for mobile crane safety procedures and WHS/OHS management in the workplace are contributed to within relevant workplace procedures, scope of responsibilities and own competence
- 3 Complete workplace and WHS/OHS records**
 - 3.1 Mobile crane and WHS/OHS records are completed in accordance with workplace requirements
 - 3.2 WHS/OHS records and legal requirements for

maintaining records of occupational injury and diseases are followed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIF3084A Follow mobile crane safety procedures.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

Assessment Requirements for TLIF3084 Follow mobile crane safety procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- applying basic fatigue management techniques
- applying mobile crane and work health and safety WHS/OHS recording procedures in accordance with workplace requirements
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation, mobile crane safety procedures and workplace procedures
- communicating effectively with others
- completing relevant documentation
- dealing with internal and external customers in large, medium, or small worksites, demolition sites and/or construction sites
- estimating the size, shape and special requirements of loads
- following procedures for identifying mobile crane safety hazards and WHS/OHS issues
- identifying containers and goods coding, Australian Dangerous Goods (ADG) Code and International Maritime Dangerous Goods (IMDG) Code markings and emergency information panels
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading and comprehending simple statements in English
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and

WHS/OHS standards

- taking appropriate action to report identified mobile crane and site hazards in the workplace
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- hazards associated with crane operations on a demolition site
- hazards associated with mobile crane operations on a construction site
- HAZCHEM symbols and implications for safe work and storage
- housekeeping standards and procedures
- how to handle broken or damaged equipment
- lifting personnel using a workcage/workbox
- location and use of safety alarms, emergency shut-off systems, emergency communications systems
- manual and mechanically assisted lifting and load shifting procedures
- mobile crane and workplace emergency and evacuation procedures
- relevant mobile crane safety procedures
- relevant WHS/OHS procedures and guidelines
- reporting procedures for unsafe situations, fire hazards, broken or damaged equipment or fittings, sickness and accidents
- risks associated with mobile cranes, and related precautions to control the risk
- risks associated with multiple crane operations
- signs and signals used for warnings
- site layout and obstacles of container or cargo terminal or wharf
- storage and use of hazardous substances
- terms used in safety data sheets (SDSs)/material safety data sheets (MSDSs)
- transport requirements for goods within a workplace.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so. Where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions and include restricted spaces, exposed conditions and controlled or open environments.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals, including relevant:
 - Australian Standards
 - general duty of care under WHS/OHS legislation
 - mobile crane codes of practice
 - state/territory WHS/OHS legislation and safety codes, including manual handling, noise, confined spaces, smoking, workplace ergonomics
 - workplace relations regulations
 - workers' compensation regulations
- dangerous goods regulations
- personal protective equipment, including:
 - gloves
 - safety headwear and footwear
 - safety glasses
 - two-way radios
 - high visibility clothing
- relevant materials, tools and equipment currently used in industry.

TLILIC0003 Licence to operate a forklift truck

Modification History

Release 1. This is a release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit specifies the skills and knowledge required to operate a forklift truck safely in accordance with all relevant legislative requirements. Competence in this unit, does not in itself result in a HRWL licence to operate this plant.

Forklift truck means a powered industrial truck equipped with lifting media made up of a mast and an elevating load carriage to which is attached a pair of fork arms or other attachments that can be raised 900 mm or more above the ground, but does not include a pedestrian-operated truck or a pallet truck.

A person performing this work is required to hold a forklift truck High Risk Work Licence (HRWL).

This unit requires a person operating a forklift truck to:

- plan for the work/task
- prepare for the work/task
- perform work/task
- pack up

Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit of competency.

This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations and meets Commonwealth, State and Territory HRWL requirements.

The National Assessment Instrument (NAI) is the mandated assessment for the HRWL to operate the relevant licencing class as detailed in this unit.

Pre-requisite Unit

Not applicable

Competency Field

LIC - Licencing Units

Unit Sector

Not applicable

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Plan work/task

- 1.1 Task requirements are identified from work orders or equivalent and confirmed with relevant people and site inspection is conducted in accordance with workplace procedures
- 1.2 Work area operating surface is assessed to determine suitability for operational use of forklift truck in accordance with workplace procedures
- 1.3 Suitability of forklift truck and attachment working load limit (WLL) is determined for the load/s and work/task requirements in accordance with manufacturer requirements and workplace procedures
- 1.4 Working area is inspected and appropriate paths for operating the forklift truck and moving and placing load/s in work area are assessed and managed in accordance with workplace procedures
- 1.5 Hazard and risk control measures are identified and reported to relevant person/s in accordance with workplace procedures
- 1.6 Traffic management plan implementation is confirmed in accordance with workplace procedures
- 1.7 Appropriate communication procedures are identified with relevant people in accordance with workplace procedures
- 1.8 All work is confirmed to ensure coverage of work/task requirements for the relevant work area is in accordance with workplace procedures

- 2 Prepare for work/task**
- 2.1** Consultation with workplace person/s is maintained to ensure workplan is clear and consistent with site requirements in accordance with safe work procedures
 - 2.2** Weather and work environmental conditions are assessed to determine any impact on forklift truck operations in accordance with manufacturer requirements and safe work procedures
 - 2.3** Risk control measures for hazards identified are checked for implementation in accordance with safe work procedures
 - 2.4** Forklift truck is accessed in a safe manner in accordance with manufacturer requirements and workplace procedures
 - 2.5** Forklift truck logbook is checked in accordance with manufacturer, regulatory requirements and safe work procedures
 - 2.6** Pre-start checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with safe work procedures and manufacturer requirements
 - 2.7** Forklift truck is set up correctly with any relevant attachments as per work plan in accordance with relevant manufacturer requirements including data plate and safe work procedures
 - 2.8** Operational checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures
 - 2.9** Hazard and risk control measures are checked for implementation and communicated to people in the work area in accordance with safe work procedures
- 3 Perform work/task**
- 3.1** Weight and positioning of load is assessed to ensure compliance with forklift truck data plate requirements and in accordance with safe work procedures

- 3.2 Forklift truck is operated safely in accordance with manufacturer requirements and safe work procedures
 - 3.3 Loads are monitored constantly when lifting, moving, lowering and placing to ensure stability of load and avoidance of hazards in accordance with safe work procedures
 - 3.4 Unplanned and unsafe situations are responded to in accordance with safe work procedures
 - 3.5 Loads are picked up, transported and placed using all forklift truck movements in accordance with safe work procedures
 - 3.6 Forklift truck is parked, switched off and isolated appropriately in accordance with manufacturer requirements and safe work procedures
- 4 Pack Up**
- 4.1 Forklift truck shutdown procedures are carried out in accordance with manufacturer requirements and safe work procedures
 - 4.2 Forklift truck is secured to prevent unauthorised access/use in accordance with safe work procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLILIC2001 Licence to operate a forklift truck

Links

Assessment Requirements for TLILIC0003 Licence to operate a forklift truck

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and include:

- applying safe operating procedures for a forklift truck including:
 - maintaining safe operating speed
 - travelling with load lowered to an appropriate height for the terrain, operating surface and visibility in relation to direction of travel
- applying relevant forklift truck manufacturer requirements and data plate information and approved modifications to attachments fitted are in accordance with manufacturer requirements
- carrying out pre-start checks, including visual inspection which must include:
 - battery charge as required by manufacturer requirements
 - checking and interpreting data plate/s are relevant to the attachment and the forklift truck
 - checking for signs of paint separation and stressed welds indicating potential structural weakness
 - document evidence of damage
 - engine / mechanical fluid level checks including fuel as required by manufacturer requirements
 - ensuring availability of correct forklift truck logbook and updating records as required
 - ensuring forklift truck tyres or other attachment/s are securely fitted
 - ensuring seat and mirrors are adjusted appropriately and seat belt is functional
 - fluid leaks
 - lights are working effectively
 - safety equipment checks
 - signage and labels to ensure they are visible and legible
 - wheels and tyres for damage/correct inflation if applicable
- conducting and applying risk and hazard assessment strategies including:
 - insufficient lighting
 - other specific hazards including dangerous goods
 - overhead hazards and fixed structures, roof beams and doorways
 - restricted and poorly ventilated areas

- surface suitability based on forklift truck and task requirements
- the risk of collision with people, moving plant and fixed structures
- weather conditions
- complying with Commonwealth, State and Territory Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) legislation, regulations safe work and workplace procedures
- conducting operational checks, which must ensure:
 - all controls are located, identified and tested for functionality
 - all hydraulic functions operated to maximum extension and ensuring attachment (if fitted) movements and control functions are smooth and comply with operating requirements
 - hazard warning systems (e.g. reversing beepers, lights and horns) are functional
 - recording and maintaining accurate information relating to forklift truck operations
 - safety devices as fitted
 - start-up is in accordance with manufacturer requirements
 - steering, transmission and brake functions comply with operating requirements
 - there are no unusual noises
- confirming and following traffic management plan procedures relevant to their role in the work area
- conducting relevant procedures for refuelling and isolating fuel/power source as per manufacturer requirements using appropriate PPE
- determining relevant lifting attachment to perform work/task
- determining lift requirements including:
 - positioning of unusually balanced/shaped loads
 - centre of gravity
 - dynamic nature of load
 - tyne/attachment positioning
 - weight
- ensuring risk control measures within the work area are effective as per workplace procedures
- identifying, isolating and tagging out defective equipment and reporting to authorised person/s
- interpreting and confirming relevant documentation, workplace instructions, safety information, emergency procedures for the work task and relevant area
- interpreting workplace procedures in relation to various environmental conditions
- maintaining communication with other workplace personnel through using worksite procedures including:
 - audible and visual warning devices
 - signage
 - two-way radio
 - verbal instructions
 - written instructions
- maintaining three points of contact whilst accessing and egressing forklift truck and ensuring

- rungs / steps are free of hazards
- operating and monitoring safe forklift truck operations using minimum 250kg dynamic and non-dynamic loads that include:
 - aligning tynes/attachment to load
 - carrying out a lift to 75% of the maximum height
 - conducting trial lift to ensure forklift truck and load are stable, and load is safe to move
 - correctly using horns and mirrors in workplace
 - correctly positioning and using an observer to assist when operating with a load that may restrict vision or be placed out of vision of the operator
 - driving applicable to conditions and moving loads safely
 - driving a forklift truck safely with load in forward and reverse, while maintaining visibility through an obstacle course including:
 - an 'S' bend with a minimum 90 degrees left and right turn
 - ensuring load/s remains stable through pick up, transport and placement
 - forklift truck speed is appropriate to load and surroundings
 - lowering dynamic and non-dynamic loads to appropriate height for travel in forward and reverse
 - picking up, driving, manoeuvring and placing dynamic and non-dynamic loads safely at various heights within a compliant racking system
 - picking up, driving, manoeuvring and placing dynamic and non-dynamic loads safely into/onto an elevated, flat, stable area
 - tilting mast (or forks if applicable) to ensure balance of load
 - using gluts/dunnage appropriately and lowering load safely
 - using tilt and side shift (where fitted) safely to manoeuvre dynamic and non-dynamic loads into allocated space
 - reporting to relevant person/s on site risk control measures that are not in place or are deficient
 - setting up an exclusion zone
 - securely parking forklift truck and isolating in appropriate position including:
 - minimising possible access by unauthorised person/s
 - tynes/attachment lowered to required position in accordance with manufacturer requirements
 - park brake applied
 - switching off, isolating fuel/power source and removing key according to workplace procedures
 - shutting down a forklift truck in accordance with manufacturer requirements and workplace procedures

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and industry standards, codes of practice and guidelines to safely operate a forklift truck
- communication procedures including:
 - audible and visual warning devices
 - hand signals
 - questioning techniques
 - signage
 - traffic warning systems
 - two-way radio
 - written instructions
- forklift truck characteristics and capabilities, manufacturer requirements and instructions for any attachments
- impact of the following on the operation of the forklift truck including:
 - failure/loss of control including brakes and steering
 - failure of equipment during forklift truck operations
 - forklift truck instability causes including:
 - deterioration of ground condition
 - overloading
 - pick up and placement of load
 - irregular loads
 - operating on ramps and uneven surfaces and in restricted spaces
 - use of forklift truck data plate and attachment data plate and appropriate methodology to determine weight of a load is appropriate for forklift truck and any attachment if fitted including the estimation or determination from:
 - labels on the actual load
 - markings on the actual load
 - paperwork such as consignment notes, running sheets and weighbridge dockets
 - weighing a carton and calculating load
- manufacturer requirements, instructions and operator's manual
- problems, and appropriate response procedures to unplanned and/or unsafe environmental conditions including:
 - wind
 - lightning
 - water/ice impacted surface/ground
 - rain
 - extreme heat
 - Ultra violet (UV) exposure
- problems and equipment faults, and implementing appropriate response procedures to unplanned and/or unsafe situations including:
 - lock out and tag out procedures
- relevant procedures for refuelling and recharging forklift truck using appropriate PPE

including:

- gas bottle
- connecting battery to charger and disconnecting battery from charger and reconnecting to forklift truck
- refuelling
- procedures for recording, reporting and maintaining workplace records and information
- risk assessment process including hierarchy of control:
 - elimination
 - substitution
 - isolation
 - engineering controls
 - administrative controls
 - personal protective equipment (PPE)
- safe use and compliance of different types of attachments including:
 - bale clamps
 - carpet spike for carpet rolls
 - drum carrier
 - jib attachment
 - paper roll clamps
 - personnel work platforms
 - rotators
 - slippers/fork extensions on tynes
- suitability and lifting capability of the attachment to be used
- shut down procedures for a forklift truck in accordance with manufacturer requirements
- traffic management plan procedures and requirements
- typical routine problems encountered operating a forklift truck and associated equipment, and adjustments required for correction
- workplace procedures including work plan which may be verbal, documented/written, or electronically generated
- work area operating surface suitability including issues with:
 - backfilled ground
 - bitumen (damaged, cracked)
 - concrete (damaged, cracked)
 - hard compacted soil
 - potholes
 - railway tracks
 - rough uneven or difficult terrain including sloping surfaces, uneven surfaces, steel decks and grates
 - soft soils
 - trench covers
- Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety

and Health (OSH) requirements, safe work and workplace procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

- Simulators must not be used in the assessment of this unit of competency.

Resources for assessment must include access to:

- a suitable forklift truck that complies with AS 2359 Powered industrial trucks and is in a safe/serviceable condition in accordance with manufacturer requirements
- associated equipment for forklift truck operations
- suitable dynamic and non-dynamic loads
- suitable compliant racking system
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including:
 - approved codes of practice and relevant guidance material
 - relevant Australian technical standards
 - manufacturer guidelines (instructions, requirements or checklists), relevant industry standards and operating procedures (where applicable)

TLILIC0005 Licence to operate a boom-type elevating work platform (boom length 11 metres or more)

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package:

- Minor statement changes in unit Application
- Minor changes and re-ordering of Performance Evidence
- Minor re-ordering of Knowledge Evidence
- Minor statement changes in Assessment Conditions.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit specifies the skills and knowledge required to safely operate a boom-type Elevating Work Platform (EWP) where the length of the boom is 11 metres or more in accordance with all relevant legislative requirements. Competence in this unit, does not in itself result in a Risk Work Licence (HRWL) to operate this plant.

Boom-type elevating work platform means a telescoping device, hinged device, or articulated device, or any combination of these, used to support a platform on which personnel, equipment and materials may be elevated.

A person performing this work is required to hold a boom-type elevating work platform HRWL.

This unit requires a person operating an EWP to:

- plan for the work/task
- prepare for the work/task
- perform work/task
- pack up.

Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit of competency.

This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations and meets Commonwealth, State and Territory HRWL requirements.

The National Assessment Instrument (NAI) is the mandated assessment for the HRWL to operate the relevant licencing class as detailed in this unit.

Pre-requisite Unit

Not applicable

Competency Field

LIC - Licencing Units

Unit Sector

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Plan work/task

- 1.1 Task requirements are identified from work orders or equivalent and confirmed with relevant people and a site inspection is completed in accordance with workplace procedures
- 1.2 Work area ground/operating surface is assessed to determine suitability for operational use of EWP in accordance with manufacturer requirements and workplace procedures
- 1.3 EWP capabilities are established for the load/s and work/task requirements in accordance with manufacturer requirements and workplace procedures
- 1.4 Appropriate paths for operating the EWP and moving in work area are assessed and determined in accordance with workplace procedures
- 1.5 Relevant hazard and risk control measures are applied and advised to relevant person/s in accordance with workplace procedures

- 1.6** Traffic management plan implementation is confirmed in accordance with workplace procedures
 - 1.7** Appropriate communication procedures are identified, with relevant people in accordance with workplace procedures
 - 1.8** All work is confirmed to ensure coverage of work/task requirements for the relevant work area in accordance with workplace procedures
- 2 Prepare for work/task**
- 2.1** Consultation with workplace person/s is maintained to ensure workplan is clear and consistent with site requirements in accordance with workplace procedures
 - 2.2** Risk control measures for hazards identified are checked for implementation in accordance with workplace procedures
 - 2.3** Safety equipment including Personal Protective Equipment (PPE) are inspected, fitted correctly and used in accordance with manufacturer requirements and safe work procedures
 - 2.4** EWP is accessed in a safe manner in accordance with manufacturer requirements and safe work procedures
 - 2.5** Pre-start EWP checks are carried out in accordance with manufacturers requirements and safe work procedures
 - 2.6** EWP is started and is checked for any abnormal noises in accordance safe work procedures
 - 2.7** EWP is positioned correctly as per work plan in work area in accordance with relevant manufacturer requirements and safe work procedures
 - 2.8** EWP is stabilised appropriately in accordance with the workplan, relevant manufacturer requirements and safe work procedures

- 2.9** Operational checks from base controls are carried out in accordance with relevant manufacturer requirements and safe work procedures
 - 2.10** All platform controls are located, identified and tested in accordance with manufacturer requirements and safe work procedures
 - 2.11** All damage and defects are reported and appropriate action is taken to rectify in accordance with manufacturer requirements and safe work procedures
 - 2.12** EWP logbook is inspected and is correct for the EWP, is completed and signed in accordance with manufacturer requirements and safe work procedures
 - 2.13** Weather and work environmental conditions are assessed to determine any impact on EWP operation and positioning as per workplan in accordance with manufacturer requirements and safe work procedures
- 3 Perform work/task**
- 3.1** Relevant hazard prevention/control measures identified are checked for implementation in accordance with safe work procedures
 - 3.2** EWP is safely located at point of work in work area in accordance with safe work procedures
 - 3.3** EWP platform is positioned for work tasks and stability and all operations are monitored constantly in accordance with safe work procedures
 - 3.4** Work gear and tools are stowed and secured in accordance with safe work procedures
 - 3.5** EWP is operated using all movements in accordance with safe work procedures and manufacturer requirements
 - 3.6** Unplanned and unsafe situations are responded to in accordance with safe work procedures

- 3.7 All communication signals are correctly interpreted and followed whilst EWP is operated in accordance with safe work procedures
 - 3.8 EWP platform is accessed and egressed in accordance with safe work procedures and manufacturer requirements
 - 3.9 EWP is parked, switched off and isolated appropriately in accordance with manufacturer requirements and safe work procedures
- 4 Pack up**
- 4.1 Post-operational EWP checks are carried out in accordance with manufacturer requirements and safe work procedures
 - 4.2 EWP boom is retracted, lowered, stowed and secured in accordance with manufacturer requirements and safe work procedures
 - 4.3 Safety equipment and PPE is disconnected from platform in accordance with safe work procedures
 - 4.4 Relevant motion locks and brakes are applied as required in accordance with manufacturer requirements and safe work procedures
 - 4.5 Outriggers and/or stabilisers, plates or packing if fitted are stowed and secured in accordance and with manufacturer requirements and safe work procedures
 - 4.6 EWP is shut down in accordance with manufacturer requirements and safe work procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLILIC2005 Licence to operate a boom-type elevating work platform (boom length 11 metres or more)

Assessment Requirements for TLILIC0005 Licence to operate a boom-type elevating work platform (boom length 11 metres or more)

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package:

- Minor statement changes in unit Application
- Minor changes and re-ordering of Performance Evidence
- Minor re-ordering of Knowledge Evidence
- Minor statement changes in Assessment Conditions.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and include:

- advising relevant person/s on site in relation to any hazards and risk elimination/control strategies
- applying safe operating procedures for an Elevating Work Platform (EWP) including all functions within the safe working rated capacity including:
 - boom/s as low as possible and fully retracted whilst travelling (self propelled EWP only)
 - boom/s in line with EWP where practical whilst travelling (self propelled EWP only)
 - EWP stability
 - gently accelerating and braking to minimise boom/s swing (self propelled EWP only)
 - maintaining safe operating speed in relation to the work condition
 - travelling with work platform raised to an appropriate height for the terrain and visibility in relation to direction of travel (self propelled EWP only and in accordance with manufacturers specifications)
- applying emergency procedures
- applying traffic management plan procedures relevant to their role in the work area
- carrying out operational checks on EWP including:
 - testing of all EWP safety devices
 - all controls are located, identified and tested for functionality from the base controls and platform controls
 - hazard warning systems including travel beepers and lights are functional
 - start-up is in accordance with manufacturer requirements
 - steering, transmission and brake functions comply with operating requirements (self

- propelled EWP only)
- there are no unusual noises
- carrying out pre-start checks, including visual inspection which must include:
 - battery fluid level as required by manufacturer requirements
 - checking compliance plate is relevant to the load/s being used on the EWP
 - engine / mechanical fluid level checks as required by manufacturer requirements
 - ensuring availability of correct logbook and updating records as required
 - ensuring EWP platform and attachment/s fitted in platform are secured
 - evidence of damage
 - fluid leaks
 - lights are working effectively (where fitted)
 - safety equipment checks
 - signage and labels to ensure they are visible and legible
 - structural weaknesses including paint separation or stressed welds
 - wheels and tyres for damage/correct inflation if applicable
- checking compliance plate and load chart for reach requirements and load suitability
- clarifying workplan and checking understanding
- complying with Commonwealth, State and/or Territory work health and safety (WHS)/occupational health and safety (OHS)/occupational safety and health (OSH) legislation and regulations
- controlling and operating a boom type elevating work platform ensuring movements and control functions are safe, smooth and comply with operating requirements including:
 - any combination of the movement of the extending boom used to support a platform on which personnel, equipment and materials are elevated to perform the work task/s
 - avoidance of ground depressions
 - correctly using observer guidance of work platform, main chassis and extending boom
 - demonstrating the safe operation of an EWP in forward and reverse, while maintaining visibility (where applicable)
 - driving (where applicable) applicable to conditions and moving platform and load/s safely
 - ensuring warning devices are functioning correctly
 - interpreting directional arrows correctly on platform controls during forward, reverse, left and right
 - lowering boom to its resting position
 - monitoring platform, main chassis and extending boom movement constantly ensuring safe work procedures are followed
 - raising platform and slewing within manufacturer requirements
 - raising platform to its full extent or 75% of the maximum height capacity (whichever is greater)
 - stability of the EWP and the work platform
 - manoeuvring and positioning the platform to perform work task/s safely whilst at its full extent or a minimum height of 75% of the maximum capacity (whichever is greater)

- conducting and applying hazard identification and risk elimination or minimisation strategies including:
 - barricades and controls to prevent the risk of collision with people, moving vehicles and fixed structures
 - environmental conditions including:
 - wind
 - lightning
 - water impacted ground
 - rain
 - extreme heat
 - Ultra Violet (UV) exposure
 - ground conditions (surface and slopes) and assessing work area operating surface suitability based on machine and task requirements
 - overhead hazards including electric lines and service pipes
 - personal protective equipment (PPE)
 - restricted areas and crush points from work platform and external surroundings
 - safety related tags on electrical switches/isolators that have an impact on point of work of EWP operator
 - sufficient lighting
 - suitable area for set-up, positioning and safely operating EWP
 - suitable firm and stable operating surface
 - use of safety observer
- entering work platform correctly including:
 - lowering platform safely and stably to appropriate height to access safely
 - clipping on of fall restraint/arrest device
 - accessing platform safely
- exiting work platform correctly including:
 - lowering platform safely and stably to appropriate height to egress safely
 - unclipping of fall restraint/arrest device
 - exiting platform safely
- identifying, isolating and tagging out defective equipment and reporting to authorised person/s
- inspecting and using relevant safety equipment, including:
 - anchor point/s
 - emergency retrieval system from base controls and platform controls where fitted
 - energy absorber/s
 - lanyard/s
 - safety harness/es
- interpreting and confirming relevant documentation, workplace instructions, safety information and emergency procedures for the work task and relevant area
- interpreting workplace procedures in relation to various work environmental conditions

- maintaining communication with other workplace personnel using appropriate workplace procedures including procedures to ensure all movements are conveyed clearly and succinctly including:
 - 2-way radio
 - audible and visual warning devices
 - making and interpreting hand signals
 - questioning to confirm understanding
 - signage
 - written instructions
- recording and maintaining accurate information relating to EWP operations
- reporting to relevant person/s on site risk control measures that are not in place or deficient
- stabilising procedures for an EWP including:
 - checking levels
 - removing obstacles and obstructions
 - deploying and retracting outriggers (if fitted)
 - establishing correct size plates for packing (if required)
- shutting down a boom type EWP in accordance with manufacturer requirements and workplace procedures
- using and interpreting EWP manufacturer requirements and data, including compliance plate and load chart, to enable correct EWP selection for task including:
 - boom
 - platform
 - weight including outrigger load or wheel load.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and industry standards, codes of practice and guidelines to safely operate an EWP (boom length 11 metres or more) including:
 - nominal reach, measured horizontally from centre point of rotation to outer edge of platform in its most extended position
 - vertical distance from floor of platform to surface supporting elevating work platform with platform at its maximum height
- appropriate mathematical calculations to estimate loads ensuring EWP is not overloaded
- appropriate workplace communication procedures including:
 - 2-way radio
 - audible and visual warning devices
 - questioning techniques
 - signage
 - hand signals

- traffic warning systems
- written instructions
- compliance with permit condition requirements including:
 - from electrical supply authority
 - if operating on roads or footpaths
- EWP characteristics and capabilities, manufacturer requirements and instructions
- hazards including:
 - all ground and /or operating surface hazards
 - traffic including pedestrians, vehicles, other mobile plant and building structures
 - overhead hazards including electric lines, service pipes, doorways, roof beams, and lights
 - obstacles or obstructions
 - insufficient lighting
 - other relevant hazards
- identification and avoidance of person/s potential crush or entrapment points
- identification and avoidance of potential contact with overhead electrical conductor's
- identification and avoidance of potential contact with structures near work platform/boom or chassis
- impact of the following on the operation of the EWP including:
 - failure/loss of control including brakes and steering
 - failure of equipment including hydraulic system
 - EWP and platform instability due to:
 - deterioration of ground/operating surface condition
 - gradient of operating surface
 - overloading
 - poor load placement
 - irregular loads
 - emergency procedures and safety equipment, including the use of:
 - safety harness/es
 - energy absorbers
 - lanyard/s
 - anchor point/s
 - emergency retrieval systems
- lock out and tag out procedures
- problems, and appropriate response procedures to unplanned and/or unsafe environmental conditions
- procedures for recording, reporting and maintaining workplace records and information
- relevant manufacturer requirements and instructions
- relevant procedures for refuelling/recharging EWP using appropriate PPE
- risk assessment process including hierarchy of control:
 - elimination

- substitution
- isolation
- engineering controls
- administrative controls
- personal protective equipment (PPE)
- problems and equipment faults, and implementing appropriate response procedures to unplanned and/or unsafe situations
- procedures for shutting down a boom type EWP in accordance with manufacturer requirements
- relevant documentation requirements
- suitability and lifting capability of the EWP to be used
- traffic management plan procedures and requirements
- typical routine problems encountered operating a EWP and adjustments required for correction
- wind speed factors that affect stability of EWP as per manufacturer requirements
- work area operating surface suitability including issues with:
 - backfilled ground
 - bitumen (damaged, cracked)
 - concrete (damaged, cracked)
 - hard compacted soil
 - potholes
 - railway tracks
 - rough uneven or difficult terrain including sloping surfaces, uneven surfaces, steel decks and grates
 - soft soils
 - trench covers
- work health and safety (WHS)/occupational health and safety (OHS)/occupational safety and health (OSH) and codes of practice requirements for boom type elevating work platforms
- work plan which may be verbal, documented/written, or electronically generated

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace

conditions.

- Simulators must not be used in the assessment of this unit of competency

Resources for assessment must include access to:

- appropriate boom-type elevating work platform (boom length 11 metres or more) in a safe/serviceable condition in accordance with manufacturer requirements
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including:
 - approved codes of practice and relevant guidance material
 - relevant Australian technical standards
 - manufacturer guidelines (instructions, requirements or checklists), relevant industry standards and operating procedures (where applicable).

TLILIC0008 Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity)

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package:

- Minor statement changes in unit Application
- Minor statement changes in Assessment Conditions.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit specifies the skills and knowledge required to operate a non-slewing mobile crane with a Maximum Rated Capacity (MRC) exceeding 3 tonnes safely, in accordance with all relevant legislative responsibilities. Competence in this unit, does not in itself result in a High Risk Work Licence (HRWL) to operate this plant.

A person undertaking this unit must hold:

- a current National HRWL to perform dogging or a current certification for a specific VET course for HRWL to perform dogging that has been issued by, or on behalf of a WHS Regulator

Non-slewing mobile crane means a mobile crane incorporating a boom or jib that cannot be slewed, and includes:

- an articulated mobile crane
- a locomotive crane
- but does not include vehicle tow trucks.

A person performing this work is required to hold a non-slewing mobile crane HRWL.

This unit requires a person operating non-slewing mobile crane with an MRC exceeding 3 tonnes to:

- plan the work/task
- prepare for the work/task
- perform work/task
- pack up

Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit of competency. This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations and meets Commonwealth, State and Territory HRWL requirements.

The National Assessment Instrument (NAI) is the mandated assessment for the HRWL to operate

the relevant licencing class as detailed in this unit.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Plan work/task

- 1.1 Task requirements are identified from work orders or equivalent and a lift plan is confirmed with associated personnel and a site inspection is conducted in accordance with workplace procedures
- 1.2 Work area operating surface is confirmed to determine the quality of ground suitability for operational use of non-slewing mobile crane in accordance with workplace procedures
- 1.3 Non-slewing mobile crane rated capacity (RC) and the lifting gear Working Load Limit (WLL) are established for the load/s and work/task requirements in accordance with manufacturer requirements and workplace procedures
- 1.4 Appropriate paths for operating the mobile crane and moving and placing load/s in work area are assessed and determined in accordance with workplace procedures
- 1.5 Relevant hazard identification and risk elimination/control measures are applied and advised to associated personnel in accordance with workplace

procedures

- 1.6** Traffic management plan implementation is confirmed and followed in accordance with workplace procedures
 - 1.7** Appropriate communication procedures are identified and tested with associated personnel in accordance with workplace procedures
 - 1.8** All tasks are confirmed to ensure requirements for the relevant work area in accordance with a lift plan and workplace procedures
- 2 Prepare for work/task**
- 2.1** Consultation with workplace personnel is established and maintained to ensure lift plan is clear and consistent with site requirements in accordance with a lift plan and workplace procedures
 - 2.2** Risk control measures for hazards identified are checked for implementation in accordance with the lift plan and safe work procedures
 - 2.3** Non-slewing mobile crane is accessed safely in accordance with manufacturer requirements and safe work procedures
 - 2.4** Pre-start crane checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures
 - 2.5** Mobile crane is set up correctly with any lifting gear as per the lift plan in accordance with relevant manufacturer requirements including load chart/s and safe work procedures
 - 2.6** Fly jib (if fitted) is set up as required in accordance with specific manufacturer requirements and safe work procedures
 - 2.7** Operational checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures

- 2.8 Crane logbook is checked to confirm current compliance, is correct for the crane type, is completed and signed and required rectifications have been signed off in accordance with manufacturer requirements and safe work procedures
 - 2.9 Weather and work environment conditions are assessed to determine any impact on mobile crane operations in accordance with manufacturer requirements and safe work procedures
- 3 Perform work/task**
 - 3.1 Lifts are determined within the RC of the non slewing mobile crane in accordance with the load chart/s and lift plan
 - 3.2 Boom/jib and hook block is safely positioned over the load following directions from associated personnel in accordance with the lift plan and safe work procedures
 - 3.3 Lifting gear where required is connected to the load and used safely in accordance with the lift plan, safe work procedures and manufacturer requirements
 - 3.4 Test lift is carried out in accordance with dogging and safe work procedures
 - 3.5 Loads are transferred using relevant crane movements and tag lines as required, in accordance with lift plan and safe work procedures
 - 3.6 Load and crane movement is monitored constantly and crane is operated safely in accordance with lift plan and safe work procedures
 - 3.7 All required communication signals are correctly interpreted and followed whilst crane is operated in accordance with the lift plan and safe work procedures
 - 3.8 Load is lowered and landed safely in accordance with lift plan and safe work procedures
 - 3.9 Lifting gear is disconnected from load and crane is positioned safely and efficiently for next task in accordance with lift plan and safe work procedures
- 4 Pack Up**
 - 4.1 Crane boom/jib, lifting gear and associated equipment is stowed and secured as required in accordance with manufacturer requirements and safe work procedures

- 4.2 Relevant motion locks and brakes are applied as required in accordance with manufacturer requirements and safe work procedures
- 4.3 Crane is shut down and secured to prevent unauthorised access/use in accordance with safe work procedures
- 4.4 Post-operational crane checks are carried out in accordance with legislative responsibilities, safe work procedures and manufacturer requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non -essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLILIC3006 Licence to operate a non-slewing mobile crane (greater than 3 tonnes)

Links

Assessment Requirements for TLILIC0008 Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity)

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package:

- Minor statement changes in unit Application
- Minor statement changes in Assessment Conditions.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant mathematical calculations in conjunction with lift plan and load chart, radius requirements and relevant lifting gear to perform work/task to enable crane to be configured for load including:
 - boom
 - fly-jib (where fitted)
 - line pull
 - mobiling
 - type of hook
 - side slope derations
 - articulation derations
- applying relevant crane movements including:
 - boom/jib up and down (luffing)
 - positioning and using main and auxiliary hook and lifting gear to connect to load safely
 - raise and lower hoist
 - telescope in and out
 - travel and articulating (as required)
- communicating with other workplace personnel through using appropriate worksite procedures including:
 - 2-way radio
 - listening
 - making and interpreting hand signals
 - questioning to confirm understanding
 - signage

- verbal language
- visual aids
- whistles
- written instructions
- complying with Commonwealth, state and territory Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) legislation and safe work procedures
- completing the pre-start check including:
 - battery power level as required by manufacturer requirements
 - engine / mechanical fluid level checks as required by manufacturer requirements
 - presence of correct logbook
 - evidence of damage
 - fluid leaks
 - lights work effectively
 - locating, identifying and confirming all controls
 - mirrors and seat are adjusted appropriately
 - safety equipment checks
 - signage and labels to ensure they are visible and legible
 - checking for signs of paint separation and stressed welds indicating potential structural weakness
 - tyres and wheels for damage/wear and correct inflation (Water/Air)
 - updating records as required
 - visual damage or equipment faults
- conducting and applying risk and hazard strategies including:
 - confirming work area operating surface suitability based on crane and task requirements
 - articulation of crane
 - dynamic loads
 - ground conditions including surface and slopes
 - impact of tyre inflation/condition
 - load swing
 - overloading
 - pick and placement of load
 - asymmetric loads
 - overhead hazards
 - restricted site/s and poorly ventilated area/s
 - risk of collision with people, moving plant and fixed structures
 - adequate lighting
 - weather conditions
- completing operational checks ensuring:
 - all controls are located, identified and tested for functionality

- all hydraulic functions are operated
- lifting gear movements and control functions are smooth and comply with lift plan
- hazard warning systems, safety, audible and visual warning devices are checked to ensure they are functional including:
 - reversing beepers
 - lights
 - horns
 - crane computer alarm (where fitted)
 - anti-two block alarms (where fitted)
- start-up is in accordance with manufacturer requirements and workplace procedures
- there are no unusual noises
- steering, transmission and brake functions comply with operating requirements
- confirming and following traffic management plan procedures relevant to crane operator role in the work area
- determining any defects or faults with operation of crane and reporting to relevant person/s
- ensuring risk control measures within the work area are effective as per workplace procedures
- ensuring stability of load and avoidance of hazards by applying best mobile practice including:
 - allowing for boom deflection
 - boom/jib as low as possible
 - boom/jib in line with crane
 - carrying load near to ground surface
 - crane stability whilst manoeuvring load into position with drive/steering wheels and articulating as required
 - gently accelerating and braking to minimise load swing
 - lowering load safely and stably onto appropriate dunnage taking into consideration swing and restrictions of area
 - minimum boom/jib length
 - minimum speed
 - using handheld taglines/bridling
- following directions of dogger or rigger
- interpreting and confirming relevant documentation for the work task and relevant area
- inputting crane configuration into crane computer (where fitted) and checking operation to accurately reflect crane configuration
- interpreting and acting on communications signals including:
 - hoist down - hand and whistle and radio
 - hoist up - hand and whistle and radio
 - luff boom down - hand and whistle and radio
 - luff boom up - hand and whistle and radio
 - articulate left - hand and whistle and radio

- articulate right - hand and whistle and radio
- stop - hand and whistle and radio
- telescope in - hand and whistle and 2-way radio (where manufacturer requirements allow)
- telescope out - hand and whistle and 2-way radio (where manufacturer requirements allow)
- travel - hand and radio
- maintaining three points of contact whilst accessing crane and ensure rungs / steps are free of hazards
- monitoring load disconnection from hook is safe and ensuring no movement of controls
- observing relevant communication signals from relevant person
- operating an articulated non-slewing mobile crane with a rated capacity (RC) of 12 tonnes or greater to lift four different loads using the main hook through an obstacle course using all crane operational controls while the load is in full view of the crane operator. Loads must consist of:
 - a load of >50% of the Rated Capacity (RC) of the crane with a boom length of >75%, and
 - a round load with a minimum diameter of 300 mm and minimum length of 3 m that requires a dogger to sling, and
 - an asymmetrical load that requires a dogger to sling, and
 - travelling with a load of stillage containing at least ten scaffolding standards or containing a load of steel pipes of equivalent weight that requires a dogger to sling and a boom length of <75%
- positioning the non-slewing mobile crane for safe operation for:
 - application of the task
 - manoeuvring in the workplace
 - aligning of crane boom to the load
 - stability of the non-slewing mobile crane and the load whilst driving to load set down position
- recording and maintaining accurate information relating to crane operations
- reporting to relevant person/s on site risk control measures that are not in place or deficient
- setting up of:
 - fly jib (where fitted)
 - manual boom section (where fitted)
- setting up and validating an exclusion zone
- shutting down a non-slewing mobile crane in accordance with manufacturer requirements and workplace procedures
- stabilising a non-slewing mobile crane for operation by ensuring level and articulation (if required) is checked and within deration load chart requirements
- test-lifting load just clear of lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure:
 - slinging is correct
 - all crane equipment is functioning properly
 - load centre of gravity is correct

- loads of unusual shape or weight distribution are correctly slung
- test-lifting load just clear of lifting plane to allow for checks of crane computer (where fitted) to ensure:
 - load measuring equipment can be used to verify calculated weight of load
 - near capacity loads do not overload crane

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate worksite communication procedures including:
 - listening
 - hand signals
 - questioning techniques
 - signage
 - two-way radios
 - written instructions
 - whistles
- crane configuration mathematical calculations to:
 - estimate loads
 - establish counterweight/s requirements (where fitted)
 - radius requirements
 - relevant lifting gear to perform work/task
- characteristics and impact of factors affecting non-slewing mobile crane stability whilst mobilising loads including:
 - side slope derations
 - articulation derations of crane
 - correct tyre pressure (inflation/condition)
 - driving safely on roadways
 - pick up and carry the load
- crane and lifting gear load chart/s and manufacturer requirements
- lift impacting factors including:
 - centre of gravity
 - dynamic nature of load
 - deflection of boom
 - length
 - radius of lift
 - weight
 - side slope derations
 - articulation derations of crane

- tyre inflation pressures
- hazards including:
 - pack up and crane stability, crane tipping and demolition sites
 - ground stability including ground condition, recently filled trenches and slopes
 - insufficient lighting
 - obstacles or obstruction
 - catching load swing appropriately
 - other specific hazards and dangerous materials
 - overhead hazards including:
 - electric lines
 - service pipes
 - fixed structures
 - Vegetation (Trees)
 - traffic including pedestrians, vehicles and other plant
 - operations on unusual, uneven or difficult terrains
- impact of factors affecting non-slewing mobile crane stability including:
 - overloading
 - pick up and placement of load
 - unbalanced loads
 - articulation of crane
 - correct tyre pressures (inflation/condition)
 - side slope derations
- manufacturer requirements and instructions on shutting down and packing up crane
- mobile non-slewing crane characteristics and capabilities to allow crane configuration to suit a range of loads
- relevant workplace instructions, safety information, emergency procedures
- relevant documentation requirements and procedures for recording, reporting and maintaining workplace records and information
- risk assessment management and mitigation strategies including hierarchy of control:
 - elimination
 - substitution
 - isolation
 - engineering controls
 - administrative controls
 - personal protective equipment (PPE)
- roles and responsibilities of duty holders as per legislative obligations of Work Health and Safety (WHS)/Occupational health and Safety (OHS)/Occupational Safety and Health (OSH) requirements and safe work/workplace procedures
- prestart and operational checks required for a non-slewing mobile crane
- starting procedure of crane as per manufacturer requirements
- set up of:

- jib
- fly jib (where fitted)
- manual boom section (where fitted)
- weather bureau forecasts and environmental conditions that could impact operation
- workplace standards, requirements, policies and procedures for conducting operations for the mobile non-slewing crane
- problems and applying appropriate response procedures to unplanned and/or unsafe situations and environmental conditions
- work area suitability based on relevant ground reports including:
 - backfilled ground
 - bitumen
 - concrete
 - hard compacted soil
 - pre-contaminated soils
 - rock
 - rough uneven ground
 - soft soils

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

- Simulators must not be used in the assessment of this unit of competency.

Resources for assessment must include access to:

- non-slewing articulated mobile crane with an MRC 12 tonnes or greater in safe/serviceable working order in accordance with manufacturer specifications
- appropriate loads as outlined in the performance evidence requirements
- associated personnel to sling and direct loads including:
 - dogger or rigger
- communications equipment including:
 - two-way radios
 - whistles

- personal protective equipment (PPE)
- relevant documentation for operating a non-slewing mobile crane over 3 tonnes including:
 - approved codes of practice and relevant guidance material
 - relevant Australian technical standards
 - manufacturer guidelines (instructions, requirements or checklists), relevant industry standards and operating procedures (where applicable).

TLILIC0010 Licence to operate a slewing mobile crane (up to 20 tonnes)

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package:

- Minor statement changes in unit Application
- Minor statement changes in Assessment Conditions.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit specifies the skills and knowledge required to safely operate a slewing mobile crane with a maximum rated capacity (MRC) up to 20 tonnes, in accordance with all relevant legislative responsibilities. Competence in this unit, does not in itself result in a High Risk Work Licence (HRWL) to operate this plant.

A person undertaking this unit must hold:

- a current National HRWL to perform dogging or a current certification for a specific VET course for HRWL to perform dogging that has been issued by, or on behalf of a WHS Regulator.

Slewing mobile crane means a mobile crane incorporating a boom or jib that can be slewed, but does not include:

- a front-end loader or
- a backhoe or
- an excavator or
- other earth moving equipment, when configured for crane operation.

A person performing this work is required to hold a slewing mobile crane with an MRC up to 20 tonnes high risk work (HRW) licence.

This unit requires a person operating a slewing mobile crane with an MRC up to 20 tonnes to:

- plan for the work/task
- prepare for the work/task
- perform work/task
- pack up

Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit of competency.

This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations and meets Commonwealth, State and Territory HRWL requirements.

The National Assessment Instrument (NAI) is the mandated assessment for the HRWL to operate the relevant licencing class as detailed in this unit.

Pre-requisite Unit

Not applicable

Competency Field

LIC - Licencing Units

Unit Sector

Not applicable

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Plan work/task

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Task requirements are identified from work orders or equivalent and a lift plan is confirmed with associated personnel and a site inspection is conducted in accordance with workplace procedures
- 1.2 Work area operating surface is confirmed to determine ground suitability for operational use of mobile crane in accordance with workplace procedures
- 1.3 Mobile crane rated capacity (RC) and the lifting gear Working Load Limit (WLL) are established for the load/s and work/task requirements in accordance with manufacturer requirements and workplace procedures
- 1.4 Appropriate paths for operating the mobile crane and moving and placing load/s in work area are assessed and determined in accordance with workplace procedures
- 1.5 Relevant hazard identification and risk elimination/control measures are applied and advised to associated personnel in accordance with workplace procedures

- 1.6** Traffic management plan implementation is confirmed in accordance with workplace procedures
 - 1.7** Appropriate communication procedures are identified with associated personnel in accordance with workplace procedures
 - 1.8** All crane and lifting operations are confirmed to ensure relevant work area requirements are correct in accordance with a lift plan and workplace procedures
- 2 Prepare for work/task**
- 2.1** Consultation with workplace personnel is established and maintained to ensure lift plan is clear and consistent with site requirements in accordance with a lift plan and workplace procedures
 - 2.2** Risk control measures for hazards identified are checked for implementation in accordance with the lift plan and safe work procedures
 - 2.3** Mobile crane is accessed safely in accordance with manufacturer requirements and safe work procedures
 - 2.4** Pre-start mobile crane checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures
 - 2.5** Mobile crane is set up correctly with any lifting gear as and stabilised as per the lift plan in accordance with relevant manufacturer requirements including load chart/s and safe work procedures
 - 2.6** Fly jib is set up as required in accordance with specific manufacturer requirements and safe work procedures
 - 2.7** Operational checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures
 - 2.8** Crane logbook is checked to confirm current compliance, is correct for the crane type, is completed and signed and required rectifications have been signed off in accordance with manufacturer requirements and safe work procedures

- 2.9** Weather and work environment conditions are assessed to determine any impact on mobile crane operations in accordance with manufacturer requirements and safe work procedures
- 3 Perform work/task**
- 3.1** Lifts are determined within the RC of the mobile crane in accordance with the load chart/s and lift plan
- 3.2** Boom/jib and hook block is safely positioned over the load following directions from associated personnel in accordance with the lift plan and safe work procedures
- 3.3** Main hook including any lifting gear, where required are connected to the load and used safely in accordance with the lift plan, safe work procedures and manufacturer requirements
- 3.4** Test lift is carried out in accordance with dogging and safe work procedures
- 3.5** Loads are transferred using relevant crane movements and tag lines as required, in accordance with lift plan and safe work procedures
- 3.6** Load and crane movement is monitored constantly and crane is operated safely in accordance with lift plan and safe work procedures
- 3.7** All required communication signals are correctly interpreted and followed whilst crane is operated in accordance with the lift plan and safe work procedures
- 3.8** Load is lowered and landed safely in accordance with lift plan and safe work procedures
- 3.9** Lifting gear is positioned for safe disconnection from the load and crane is positioned for next task in accordance with lift plan and safe work procedures
- 4 Pack up**
- 4.1** Crane boom/jib, lifting gear and associated equipment is stowed and secured as required in accordance with manufacturer requirements and safe work procedures
- 4.2** Crane fly jib is removed to storage position and secured as required in accordance with manufacturer requirements and safe work procedures
- 4.3** Relevant motion locks and brakes are applied as required in accordance with manufacturer requirements

and safe work procedures

- 4.4** Outriggers, plates and/or packing are stowed and secured in accordance with manufacturer requirements and safe work procedures
- 4.5** Crane is shut down and secured to prevent unauthorised access/use in accordance with safe work procedures
- 4.6** Shut down crane checks are carried out in accordance with safe work procedures and manufacturer requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non -essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLILIC3008 Licence to operate a slewing mobile crane (up to 20 tonnes)

Links

Assessment Requirements for TLILIC0010 Licence to operate a slewing mobile crane (up to 20 tonnes)

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package:

- Minor statement changes in unit Application
- Minor statement changes in Assessment Conditions.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant mathematical calculations in conjunction with lift plan and load chart to determine radius requirements and relevant lifting gear to perform work/task to enable crane to be configured for load including:
 - boom
 - counterweight/s
 - fly-jib
 - line pull
 - outrigger positioning
 - type of hook
- applying relevant crane movements including:
 - boom/jib up and down (luffing)
 - catching load swing appropriately
 - positioning and using main and auxiliary hook and lifting gear to connect to load safely
 - raise and lower hoist
 - slew boom/jib
 - telescope in and out (where manufacturer requirements allow)
 - travel
- carrying out operational checks ensuring:
 - all controls are located, identified and tested for functionality
 - all hydraulic functions are operated
 - lifting gear movements and control functions are smooth and comply with lift plan
 - hazard warning systems, safety, audible and visual warning devices are checked for to ensure they are functional including:

- reversing beepers
- lights
- horns
- crane computer alarm (where fitted)
- anti-two block alarms (where fitted)
- start-up is in accordance with manufacturer requirements and safe work procedures
- there are no unusual noises
- steering, transmission and brake functions comply with operating requirements
- conducting and applying risk and hazard assessment strategies including:
 - confirming work area operating surface suitability based on crane and task requirements
 - dynamic loads
 - load swing
 - overloading
 - pick and placement of load
 - tyre pressures or track condition
 - asymmetric loads
 - overhead hazards
 - restricted and poorly ventilated areas
 - risk of collision with people, moving plant and fixed structures
 - adequate lighting
 - weather conditions
- complying with Commonwealth, state and territory Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) legislation and safe work procedures
- communicating with other associated personnel through using appropriate workplace procedures which including:
 - 2-way radio
 - active listening
 - demonstrating and interpreting hand signals
 - questioning to confirm understanding
 - signage/visual aids
 - whistles
 - written instructions
- completing the pre-start check including:
 - boom wiring harness connection
 - engine / mechanical fluid level checks as required by manufacturer requirements
 - ensure rungs / steps are free of hazards
 - fire extinguisher
 - fluid leaks
 - lights work effectively

- locating, identifying and confirming all controls
- mirrors and seat are adjusted appropriately for the operator
- presence of correct logbook
- safety equipment checks
- signage and labels to ensure they are visible and legible
- checking for signs of paint separation and stressed welds indicating potential structural weakness
- tyres and wheels for damage/wear and correct inflation
- updating records as required
- visual damage or equipment faults
- confirming and following traffic management plan procedures relevant to their role in the work area
- determining any defects or faults with operation of crane, recording in relevant documentation and reporting to relevant person/s
- ensuring risk control measures within the work area are effective as per safe work procedures
- following directions of dogger or rigger
- inputting crane configuration into crane computer (where fitted) and checking operation to accurately reflect crane configuration
- interpreting and acting on communications signals including:
 - hoist down - hand and whistle and 2-way radio
 - hoist up - hand and whistle and 2-way radio
 - luff boom down - hand and whistle and 2-way radio
 - luff boom up - hand and whistle and 2-way radio
 - slew left - hand and whistle and 2-way radio
 - slew right - hand and whistle and 2-way radio
 - stop - hand and whistle and 2-way radio
 - telescope in - hand and whistle and 2-way radio (where manufacturer requirements allow)
- telescope out - hand and whistle and 2-way radio (where manufacturer requirements allow)
- interpreting and confirming relevant documentation for the work task and relevant area
- maintaining three points of contact whilst accessing crane
- monitoring load disconnection from hook is safe and ensuring no movement of crane operational controls
- operating a slewing mobile crane configured to a rated capacity (RC) of between 7tonne and up to 20tonne to lift and move four different loads using the main hook through an obstacle course including a 180-degree minimum slew using all crane operational controls while the load is in full view of the crane operator. Loads must consist of:
 - a load of >50% of the Rated Capacity (RC) of the crane with a boom length of >75%, and
 - stillage containing at least ten scaffolding standards or containing a load of steel pipes of equivalent weight that requires a dogger to sling, and
 - an asymmetric load that requires a dogger to sling, and
 - a round load with a minimum diameter of 300 mm and minimum length of 3 m that requires a dogger to sling

- positioning the mobile crane for safe operation for:
 - application of the task/s
 - manoeuvring in the workplace
 - the stability of the mobile crane and the load
- recording and maintaining accurate information relating to crane operations
- reporting to relevant person/s on workplace control measures that are not in place or deficient
- setting up and validating an exclusion zone as per the lift plan
- shutting down a slewing mobile crane in accordance with manufacturer requirements and safe work procedures
- stabilising a slewing mobile crane for operation by:
 - correctly positioning plates or packing
 - deploying outriggers
 - establishing correct size plates or packing in accordance with the lift plan
 - levels are checked
- test-lifting load just clear of lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure:
 - slinging is correct
 - all crane equipment is functioning properly
 - load centre of gravity is correct
 - loads of unusual shape or weight distribution are correctly slung
- test-lifting load just clear of lifting plane to allow for checks of crane computer (where fitted) to ensure:
 - load measuring equipment can be used to verify calculated weight of load
 - near capacity loads do not overload crane

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate workplace communication procedures including:
 - listening
 - hand signals
 - questioning techniques
 - signage
 - two-way radios
 - written instructions
 - whistles
- crane configuration mathematical calculations to:
 - estimate loads
 - radius requirements

- relevant lifting gear to perform work/task
- characteristics and impact of factors affecting non-slewing articulated mobile crane stability whilst mobilising loads compared to slewing crane including:
 - articulation of crane
 - correct tyre pressure (inflation/condition)
 - driving safely on public and private roadways
 - unique handling characteristics of a mobile articulated crane and the emergency procedures in the event of loss of control as per manufacturer recommendations
 - pick up and carry the load
 - side slope derations
- characteristics and impact of factors affecting vehicle loading crane stability whilst mobilising loads compared to slewing crane including:
 - correct tyre pressure (inflation/condition)
 - emergency procedures in the event of incident
 - position of operator
 - use of stabilizers
- characteristics and impact of factors affecting reach stacker stability whilst mobilising loads compared to slewing crane including:
 - correct tyre pressure (inflation/condition)
 - driving safely on road ways
 - emergency procedures in the event of incident
 - impact of boom height and steering on stability
 - use of stabilizers
- crane, lifting gear load chart/s and manufacturer requirements
- lift impacting factors including:
 - centre of gravity
 - dynamic nature of load
 - flex/deflexion of boom
 - length of load
 - radius of boom during lift
 - weight
- set up of:
 - jib
 - fly jib
- hazards including:
 - erection and pack up
 - crane stability
 - ground stability and condition including recently filled trenches and slopes
 - insufficient lighting
 - obstacles or obstruction

- other specific hazards and dangerous materials
- overhead hazards including:
 - electric lines
 - service pipes
 - structures
 - vegetation (trees)
- traffic including pedestrians, vehicles and other plant
- operations on unusual, uneven or difficult terrains
- manufacturer requirements on outrigger procedures
- manufacturer requirements and instructions on shutting down and packing up crane
- mobile slewing crane characteristics and capabilities to allow crane configuration to suit a range of loads
- relevant workplace instructions, safety information, emergency procedures
- relevant documentation requirements and procedures for recording, reporting and maintaining workplace records and information
- risk assessment management and mitigation strategies including hierarchy of control:
 - elimination
 - substitution
 - isolation
 - engineering controls
 - administrative controls
 - personal protective equipment (PPE)
- roles and responsibilities of duty holders as per legislative obligations of Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) requirements, safe work and workplace procedures
- prestart and operational checks required for a slewing mobile crane
- weather bureau forecasts and environmental conditions that could impact operation including:
 - lightning
 - wind
 - water impacted ground
 - Ultra Violet (UV) exposure
- problems and appropriate response procedures to unplanned and/or unsafe situations and environmental conditions
- stability of load and avoidance of hazards using best crane practice including:
 - allowing for boom deflection
 - boom/jib as low as possible
 - carrying load near to ground surface
 - crane stability
 - gently accelerating and braking on slew/boom to minimise load swing
 - lowering load safely onto appropriate dunnage taking into consideration swing and

- restrictions of area
- minimum boom/jib length
- minimum speed
- using handheld taglines as required
- identification of incorrect sling of load
- starting procedure of crane as per manufacturer requirements
- workplace standards, requirements, policies and procedures for conducting safe work operations for the mobile slewing crane
- work area suitability based on relevant ground reports including:
 - backfilled ground
 - bitumen
 - concrete
 - hard compacted soil
 - pre-contaminated soils
 - rock
 - rough uneven ground
 - soft soils

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

- Simulators must not be used in the assessment of this unit of competency.

Resources for assessment that must include access to:

- slewing mobile crane with a Maximum Rated Capacity (MRC) of between 7 tonnes to 20 tonnes in safe/serviceable working order in accordance with manufacturer specifications
- appropriate loads as outlined in the performance evidence requirements
- appropriate personnel to sling and direct loads including:
 - dogger or rigger
- communications equipment including:
 - two-way radios
 - whistles

- relevant personal protective equipment (PPE)
- relevant documentation for operating a slewing mobile crane with a MRC up to 20 tonnes including:
 - approved codes of practice and relevant guidance material
 - relevant Australian technical standards
 - manufacturer guidelines (instructions, requirements or checklists), relevant industry standards and operating procedures (where applicable).

TLILIC0013 Licence to operate a slewing mobile crane (up to 60 tonnes)

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package:

- Minor statement changes in unit Application
- Minor statement changes in Assessment Conditions.

Release 1. This is a new release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit specifies the skills and knowledge required to safely operate a slewing mobile crane with a Maximum Rated Capacity (MRC) up to 60 tonnes, in accordance with all relevant legislative responsibilities. Competence in this unit, does not in itself result in a High Risk Work Licence (HRWL) to operate this plant.

A person undertaking this unit must hold:

- a current National HRWL to perform dogging or a current certification for a specific VET course for HRWL to perform dogging that has been issued by, or on behalf of a WHS Regulator.

Slewing mobile crane means a mobile crane incorporating a boom or jib that can be slewed, but does not include:

- a front-end loader or
- a backhoe or
- an excavator or
- other earth moving equipment, when configured for crane operation.

A person performing this work is required to hold a slewing mobile crane with an MRC up to 60 tonnes HRWL.

This unit requires a person operating a slewing mobile crane with an MRC up to 60 tonnes to:

- plan for the work/task
- prepare for the work/task
- perform work/task
- pack up

Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit of competency.

This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations and meets Commonwealth, State and Territory HRWL requirements.

The National Assessment Instrument (NAI) is the mandated assessment for the HRWL to operate the relevant licencing class as detailed in this unit.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Plan work/task

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Task requirements are identified from work orders or equivalent and a lift plan is confirmed with associated personnel and a site inspection is conducted in accordance with workplace procedures
- 1.2 Work area operating surface is confirmed to determine ground suitability for operational use of mobile crane in accordance with lift plan, safe work and workplace/s procedures
- 1.3 Mobile crane rated capacity (RC) and the lifting gear Working Load Limit (WLL) are established and suitable for the load/s and work/task requirements in accordance with manufacturer requirements and workplace procedures
- 1.4 Appropriate paths for operating the mobile crane and moving and placing load/s in work area are assessed and determined in accordance with workplace procedures
- 1.5 Relevant hazard identification and risk elimination/control measures are applied and advised to associated personnel in accordance with workplace

procedures

- 1.6** Traffic management plan implementation is confirmed in accordance with workplace procedures
 - 1.7** Appropriate communication procedures are identified with associated personnel in accordance with workplace procedures
 - 1.8** All crane and lifting operations are confirmed to ensure relevant work area requirements are correct in accordance with a lift plan and workplace procedures
- 2 Prepare for work/task**
- 2.1** Consultation with workplace personnel is established and maintained to ensure all crane and lifting operations are clear and consistent with site requirements in accordance with a lift plan and workplace procedures
 - 2.2** Risk control measures for hazards identified are checked for implementation in accordance with the lift plan and safe work procedures
 - 2.3** Mobile crane is accessed safely in accordance with manufacturer requirements and safe work procedures
 - 2.4** Pre-start mobile crane checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures
 - 2.5** Mobile crane is set up correctly with any lifting gear and stabilised as per the lift plan in accordance with relevant manufacturer requirements including load chart/s and safe work procedures
 - 2.6** Counterweight/s are set up as required in accordance with the lift plan, relevant manufacturer requirements and safe work procedures
 - 2.7** Fly jib and/or luffing fly are set up as required in accordance with specific manufacturer requirements and safe work procedures
 - 2.8** Operational checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures

- 2.9** Crane logbook is checked to confirm current compliance, is correct for the crane type, is completed and signed and required rectifications have been signed off in accordance with manufacturer requirements and safe work procedures
- 2.10** Weather and work environment conditions are assessed to determine any impact on mobile crane operations in accordance with manufacturer requirements and safe work procedures
- 3 Perform work/task**
- 3.1** Lifts are determined to be within the RC of the mobile crane in accordance with the load chart/s and lift plan
- 3.2** Boom/jib and hook block is safely positioned over the load following directions from associated personnel in accordance with the lift plan and safe work procedures
- 3.3** Main and/or auxiliary hook including any lifting gear, where required are connected to the load and used safely in accordance with the lift plan, safe work procedures and manufacturer requirements
- 3.4** Test lift is carried out in accordance with dogging and safe work procedures
- 3.5** Loads are transferred using relevant crane movements and tag lines as required, in accordance with lift plan and safe work procedures
- 3.6** Load and crane movement is monitored constantly and crane is operated safely in accordance with lift plan and safe work procedures
- 3.7** All required communication signals are correctly interpreted and followed whilst crane is operated in accordance with the lift plan and safe work procedures
- 3.8** Load is lowered and landed safely in accordance with lift plan and safe work procedures
- 3.9** Lifting gear is positioned for safe disconnection from the load and crane is positioned for next task in accordance with lift plan and safe work procedures
- 4 Pack up**
- 4.1** Crane boom/jib, lifting gear and associated equipment is stowed and secured as required in accordance with manufacturer requirements and safe work procedures

- 4.2 Crane fly jib and/or luffing fly and counterweight/s is removed to storage position and secured as required in accordance with manufacturer requirements and safe work procedures
- 4.3 Relevant motion locks and brakes are applied as required in accordance with manufacturer requirements and safe work procedures
- 4.4 Outriggers, plates and/or packing are stowed and secured in accordance with manufacturer requirements and safe work procedures
- 4.5 Crane is shut down and secured to prevent unauthorised access/use in accordance with safe work procedures
- 4.6 Shut down crane checks are carried out in accordance with safe work procedures and manufacturer requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non -essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLILIC4009 Licence to operate a slewing mobile crane (up to 60 tonnes)

Links

Assessment Requirements for TLILIC0013 Licence to operate a slewing mobile crane (up to 60 tonnes)

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package:

- Minor statement changes in unit Application
- Minor statement changes in Assessment Conditions.

Release 1. This is a new release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and must include:

- applying relevant mathematical calculations in conjunction with lift plan and load chart to determine radius requirements and relevant lifting gear to perform work/task to enable crane to be configured for load including:
 - boom
 - counterweight/s
 - fly-jib
 - line pull
 - outrigger positioning
 - type of hook
- applying relevant crane movements in crane operations including:
 - boom/jib up and down (luffing)
 - catching load swing appropriately
 - positioning and using main and auxiliary hook and lifting gear to connect to load safely
 - raise and lower hoist
 - slew boom/jib
 - telescoping in and out (where manufacturer requirements allow)
- conducting and applying hazard and risk assessment strategies including:
 - adequate lighting
 - asymmetric loads
 - confirming work area operating surface suitability based on crane and task requirements
 - dynamic loads
 - lifting and placing load
 - load swing

- overhead hazards
- overloading
- restricted and poorly ventilated areas
- risk of collision with people, moving plant and fixed structures
- tyre pressures or track condition
- weather conditions
- complying with Commonwealth, state and territory Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) legislation and safe work procedures
- communicating with other associated personnel through using appropriate workplace procedures which including:
 - 2-way radio
 - demonstrating and interpreting hand signals
 - questioning to confirm understanding
 - signage/visual aids
 - whistles
 - written instructions
- conducting the pre-start checks including:
 - boom wiring harness connection (where fitted)
 - checking for signs of paint separation and stressed welds indicating potential structural weakness
 - engine / mechanical fluid level checks as required by manufacturer requirements
 - ensure rungs / steps are free of hazards
 - fire extinguisher
 - fluid leaks
 - lights work effectively
 - locating, identifying and confirming all controls
 - mirrors and seat are adjusted appropriately for the operator
 - presence of correct logbook
 - safety equipment checks
 - signage and labels to ensure they are visible and legible
 - tyres and wheels for damage/wear and correct inflation
 - updating records as required
 - visual damage or equipment faults
- conducting operational checks ensuring:
 - all controls are located, identified and tested for functionality
 - all hydraulic functions are operated
 - hazard warning systems, safety, audible and visual warning devices are checked for to ensure they are functional including:
 - reversing beepers

- lights
- horns
- crane computer alarm (where fitted)
- anti-two block alarms (where fitted)
- confirming and following traffic management plan procedures relevant to their role in the work area
- lifting gear movements and control functions are smooth and comply with lift plan
- start-up is in accordance with manufacturer requirements and safe work procedures
- steering, transmission and brake functions comply with operating requirements
- there are no unusual noises
- determining any defects or faults with operation of crane, recording in relevant documentation and reporting to relevant person/s
- ensuring risk control measures within the work area are effective as per safe work procedures
- following directions of dogger or rigger
- inputting crane configuration into crane computer (where fitted) and checking operation to accurately reflect crane configuration
- interpreting and confirming relevant documentation for the work task and relevant area
- interpreting and acting on communications signals including:
 - hoist down - hand and whistle and 2-way radio
 - hoist up - hand and whistle and 2-way radio
 - luff boom down - hand and whistle and 2-way radio
 - luff boom up - hand and whistle and 2-way radio
 - slew left - hand and whistle and 2-way radio
 - slew right - hand and whistle and 2-way radio
 - stop - hand and whistle and 2-way radio
 - telescope in - hand and whistle and 2-way radio (where manufacturer requirements allow)
 - telescope out - hand and whistle and 2-way radio (where manufacturer requirements allow)
- monitoring load disconnection from hook is safe and ensuring no movement of crane operational controls
- maintaining three points of contact whilst accessing crane
- operating a slewing mobile crane configured with at least four parts of line greater than 20tonne and up to 60tonne to lift and move four different loads using the main hook through an obstacle course including a 180-degree minimum slew using all crane operational controls while the load is in full view of the crane operator. Loads must consist of:
 - a load of >50% of the Rated Capacity (RC) of the crane with a boom length of >75%, and
 - stillage containing at least ten scaffolding standards or containing a load of steel pipes of equivalent weight that requires a dogger to sling, and
 - an asymmetric load that requires a dogger to sling, and
 - a round load with a minimum diameter of 300 mm and minimum length of 3 m that requires a dogger to sling
- positioning the mobile crane as per the lift plan for safe operation for:

- application of the task/s
- manoeuvring in the workplace
- the stability of the mobile crane and the load
- recording and maintaining accurate information relating to crane operations
- reporting to relevant person/s on workplace control measures that are not in place or deficient
- setting up and validating an exclusion zone as per the lift plan
- shutting down a slewing mobile crane in accordance with manufacturer requirements and safe work procedures
- stabilising a slewing mobile crane for operation by:
 - correctly positioning plates or packing
 - deploying outriggers
 - establishing correct size plates or packing in accordance with the lift plan
 - levels are checked
- test-lifting load just clear of lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure:
 - slinging is correct
 - all crane equipment is functioning properly
 - load centre of gravity is correct
 - loads of unusual shape or weight distribution are correctly slung
- test-lifting load just clear of lifting plane to allow for checks of crane computer (where fitted) to ensure:
 - load measuring equipment can be used to verify calculated weight of load
 - near capacity loads do not overload crane

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate workplace communication procedures including:
 - hand signals
 - questioning techniques
 - signage
 - two-way radios
 - written instructions
 - whistles
- characteristics and impact of factors affecting non-slewing articulated mobile crane stability whilst mobilising compared to slewing crane including:
 - articulation of crane
 - correct tyre pressure (inflation/condition)
 - driving safely on public and private roadways
 - unique handling characteristics of a mobile articulated crane and the emergency

- procedures in the event of loss of control as per manufacturer recommendations
- pick up and carry the load
- side slope derations
- characteristics and impact of factors affecting vehicle loading crane stability whilst mobiling compared to slewing crane including:
 - correct tyre pressure (inflation/condition)
 - emergency procedures in the event of incident
 - position of operator
 - use of stabilizers
- characteristics and impact of factors affecting reach stacker stability whilst mobiling compared to slewing crane including:
 - correct tyre pressure (inflation/condition)
 - driving safely on road ways
 - emergency procedures in the event of incident
 - impact of boom height and steering on stability
 - use of stabilizers
- crane configuration mathematical calculations to:
 - estimate loads
 - establish counterweight/s requirements
 - radius requirements
 - relevant lifting gear to perform work/task
- crane, lifting gear load chart/s and manufacturer requirements
- factors impacting lift including:
 - centre of gravity
 - dynamic nature of load
 - flex/deflection of boom
 - length of load
 - radius of boom during lift
 - weight
- hazards including:
 - erection and pack up
 - crane stability
 - ground stability and condition including recently filled trenches and slopes
 - insufficient lighting
 - obstacles or obstruction
 - other specific hazards and dangerous materials
 - overhead hazards including:
 - electric lines
 - service pipes
 - structures

- vegetation (trees)
- traffic including pedestrians, vehicles and other plant
- operations on unusual, uneven or difficult terrains
- manufacturer requirements on outrigger procedures
- manufacturer requirements and instructions on shutting down and packing up crane
- mobile slewing crane characteristics and capabilities to allow crane configuration to suit a range of loads
- prestart and operational checks required for a slewing mobile crane
- problems and appropriate response procedures to unplanned and/or unsafe situations and environmental conditions
- relevant workplace instructions, safety information, emergency procedures
- relevant documentation requirements and procedures for recording, reporting and maintaining workplace records and information
- risk assessment management and mitigation strategies including hierarchy of control:
 - elimination
 - substitution
 - isolation
 - engineering controls
 - administrative controls
 - personal protective equipment (PPE)
- roles and responsibilities of duty holders as per legislative obligations of Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) requirements, safe work and workplace procedures
- starting procedure of crane as per manufacturer requirements
- set up of:
 - jib
 - fly jib/luffing fly
 - counterweight/s
- stability of load and avoidance of hazards using best crane practice including:
 - allowing for boom deflection
 - boom/jib as low as possible
 - carrying load near to ground surface
 - crane stability
 - gently accelerating and braking on slew/boom to minimise load swing
 - lowering load safely onto appropriate dunnage taking into consideration swing and restrictions of area
 - minimum boom/jib length
 - minimum speed
 - using handheld taglines as required
 - identification of incorrect sling of load
- typical routine problems encountered operating a crane and equipment, and adjustments

- required for correction
- weather bureau forecasts and environmental conditions that could impact operation including:
 - lightning
 - wind
 - water impacted ground
 - Ultra Violet (UV) exposure
 - workplace standards, requirements, policies and procedures for conducting safe work operations for the mobile slewing crane
 - work area suitability based on relevant ground reports including:
 - backfilled ground
 - bitumen
 - concrete
 - hard compacted soil
 - pre-contaminated soils
 - rock
 - rough uneven ground
 - soft soils

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

- Simulators must not be used in the assessment of this unit of competency.

Resources for assessment must include access to:

- slewing mobile crane with a MRC greater than 20 tonnes and up to 60 tonnes in safe/serviceable working order in accordance with manufacturers specifications
- appropriate loads as outlined in the performance evidence requirements
- appropriate personnel to sling and direct loads including:
 - dogger or rigger
- communications equipment including:
 - two-way radios

- whistles
- relevant personal protective equipment (PPE)
- relevant documentation for operating a slewing mobile crane with a MRC greater than 20 and up to 60 tonnes including:
 - approved codes of practice and relevant guidance material
 - relevant Australian technical standards
 - manufacturer guidelines (instructions, requirements or checklists), relevant industry standards and operating procedures (where applicable).

TLILIC2016 Licence to drive a heavy rigid vehicle

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package.

Modification of assessment conditions to remove an implementation barrier.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to obtain a licence to drive a heavy rigid vehicle. It includes systematically and efficiently controlling all vehicle functions, monitoring traffic and road conditions, managing vehicle condition and performance, and effectively managing hazardous situations.

Heavy rigid vehicle includes:

- a rigid vehicle, not being an unladen prime mover, with a minimum of three axles and a minimum 15 tonnes GVM or
- a modified three axle prime mover with a certified detachable tray (with capacity to carry 75% of its specified GVM) with a GVM of 15 tonnes and holds dual registration (HC & HR) or
- a three axle articulated bus or
- a three axle bus above 15 tonnes GVM.

Assessment of this unit will be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory driver licensing authority.

This unit applies to driving that is carried out in accordance with relevant state/territory driver licensing authority licence requirements and regulations for heavy rigid vehicles.

Driving is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain safety and to operate a heavy rigid vehicle across a variety of driving contexts.

The primary legislative requirements applicable to this unit of competency are state/territory legislation in relation to road use and driver licensing.

This unit addresses the knowledge and skills necessary for the granting of a Heavy Rigid Driver Licence.

Being awarded this unit of competency is a necessary requirement to obtain a Heavy Rigid Driver Licence but is only one of several criteria. Prospective licence applicants should check with the state/territory driver licensing authority for other criteria (such as licence tenure and medical fitness) to confirm other eligibility requirements before undertaking training and/or

assessment.

Pre-requisite Unit

Not applicable.

Competency Field

LIC – Licensing

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Drive a heavy rigid vehicle

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Heavy rigid vehicle is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations, manufacturer instructions and relevant vehicle handling procedures
 - 1.2 Engine power is managed to ensure efficiency and performance, and to minimise engine and gear damage
 - 1.3 Braking system of heavy rigid vehicle is managed and operated efficiently to ensure effective control of vehicle under all conditions
 - 1.4 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving
 - 1.5 Heavy rigid vehicle is driven in reverse, maintaining visibility and achieving accurate positioning
 - 1.6 Heavy rigid vehicle is parked, shutdown and safely secured according to traffic regulations
 - 1.7 Load is safely and effectively restrained
- 2.1 Traffic and road conditions are constantly monitored and acted on to enable safe operation and to ensure no injury to

2 Monitor traffic and

road conditions		people or damage to property, equipment, loads and facilities
	2.2	Interaction with other road users is conducted courteously in accordance with road rules to ensure safe and efficient traffic flow
3 Monitor and maintain vehicle performance	3.1	Vehicle performance is maintained through pre-operational inspections and vehicle checks
	3.2	Appropriate signage, lights and equipment are checked for operational effectiveness and for conformity to prescribed traffic regulations

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLILIC2016B Licence to drive a heavy rigid vehicle.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

Assessment Requirements for TLILIC2016 Licence to drive a heavy rigid vehicle

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package.

Modification of assessment conditions to remove an implementation barrier.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- anticipating and monitoring traffic hazards and taking appropriate action
- applying precautions and required action to eliminate, minimise or control identified hazards
- applying relevant procedures that reflect legislative requirements
- carrying out pre-operational vehicle checks including:
 - checking and topping up fluid levels
 - checking:
 - brakes
 - operation of vehicle lights and indicators
 - tyre pressures
 - visually checking vehicle
- communicating effectively with others
- handling vehicle including:
 - accelerating and braking
 - managing engine performance
 - operating vehicle controls, instruments and indicators
 - positioning and stopping a vehicle
 - reversing a vehicle
 - starting a vehicle
 - steering and manoeuvring a vehicle
 - using defensive driving techniques
- negotiating a range of complex traffic infrastructure (such as roundabouts, traffic lights, stalemate intersections, railway level crossings)
- reading and interpreting relevant instructions, procedures, information and signs.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- driving hazards and related defensive driving techniques
- efficient driving techniques
- engine power management and safe driving strategies
- heavy rigid vehicle controls, instruments and indicators, and their use
- heavy rigid vehicle handling procedures
- pre-operational checks carried out on vehicle and related action
- relevant state/territory driver licensing authority road rules, regulations, permit and licence requirements.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical driving aspects must be assessed in a vehicle typical of the class as approved by the state/territory driver licensing authority. The use of simulators for driver testing is not permitted.

The assessor must use the mandatory assessment tool provided by the state/territory driver licensing authority to conduct the assessment for this unit according to licensing authority requirements.

The state/territory driver licensing authority may prescribe approved routes, which must be used for the final assessment.

Assessment must occur in the following traffic and road conditions:

- on open and/or private roads with moderate inclines and declines
- typical weather conditions.

and may also include traffic and road conditions at a depot, base or warehouse.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- appropriate range of relevant on-road operational or workplace situations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to apply work health and safety (WHS)/occupational health and safety (OHS) regulations and codes of practices in the electrotechnology workplace.

It includes applying safe working practices, following workplace procedures for hazard identification and risk control. It also includes electrotechnology worker responsibilities and application for health and safety, risk management and adherence to safety practices as part of electrotechnology work functions when preparing to enter a work area.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to enter an electrotechnology workplace

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work area access permits are obtained from appropriate person/s in accordance with workplace procedures

- 1.2** Relevant workplace WHS/OHS safety regulations and codes of practices are identified and followed when entering the electrotechnology work area
 - 1.3** Safe work methods for controlling risks are obtained, read and applied prior to undertaking work activity in accordance with WHS/OHS workplace procedures
 - 1.4** Preparation for electrical and non-electrical isolation is carried out to prevent creation of hazards from loss of machine/system/process control in accordance with WHS/OHS workplace procedures
 - 1.5** Tools, equipment and chemicals required for the electrotechnology work are checked for safety and correct functionality in accordance with workplace procedures and regulatory requirements
 - 1.6** Personal protective equipment (PPE) is worn appropriate to the electrotechnology work area and in accordance with workplace procedures
- 2 Apply safe electrotechnology working practices**
- 2.1** Risk control work measures are implemented in accordance with WHS/OHS workplace procedures
 - 2.2** Procedures for dealing with accidents, fires and emergencies are followed in accordance with workplace procedures, scope of responsibility and capabilities
 - 2.3** Safe work methods are applied when working at heights including safe and effective use of safety equipment
 - 2.4** Safe work methods are used when undertaking lifting, lowering, pushing, pulling, carrying or otherwise moving, holding or restraining workplace tasks in accordance with relevant code of practice
 - 2.5** Safe work methods for removing an electric shock victim from a live electrical situation are demonstrated in accordance with workplace emergency management procedures
 - 2.6** Working area is kept clean, neat and tidy in accordance with workplace housekeeping procedures
- 3 Follow electrotechnology workplace procedures for hazard identification and**
- 3.1** Hazards are identified, control measures implemented and reviewed through regular active participation in the consultation process with employer and other employees

risk control

- 3.2** Hazards in the work area are identified and reported to relevant person/s in accordance with workplace procedures
- 3.3** WHS/OHS documentation and incident records are completed in accordance with regulatory requirements and workplace procedures
- 3.4** Workplace instructions are followed in accordance with regulatory requirements and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) regulations, legislation, codes of practices and procedures in the workplace, including:
 - identifying typical hazards associated with work environments and assessing risk/s in an electrotechnology workplace
 - applying and reviewing risk control measures to minimise, control or eliminate identified hazards
 - reporting hazards to relevant person/s
 - applying safe working practices/methods
 - contributing to WHS/OHS consultative processes
- following relevant workplace emergency management procedures and instructions relating to WHS/OHS and emergency incidents
- selecting and using appropriate personal protective equipment (PPE)
- applying correct manual handling techniques
- confirming (safe) isolation of an electrical supply and isolation of potential electrical and non-electrical hazards has been completed by an authorised person
- demonstrating safe methods of removing an electric shock victim from a live electrical situation
- selecting an appropriate ladder for a given situation and performing a safety check before use
- completing relevant WHS/OHS documentation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- effective verbal and written communication techniques
- electrotechnology work environment, including:
 - appropriate fire extinguisher for a given type of fire
 - commonly used workplace safety signs

- relevant industry standard for safe workplace procedures
- risk assessment documentation
- typical hazards associated with a range of work environments
- use of fire extinguishers
- housekeeping and potential hazards in relation to improper housekeeping
- workplace procedures used to control the risks associated with workplace hazards
- legal requirements relevant to WHS/OHS in the workplace, including:
 - appropriate personal protective equipment (PPE)
 - asbestos awareness and reporting hazardous gases, including supervisory requirements and duty of care
 - difference between hazards and risks
 - duty holder responsibilities, as specified in WHS/OHS Acts, regulations and codes of practice
 - employer and employee responsibilities, rights and obligations
 - general aims and objectives of the relevant state or territory legislation relating to WHS/OHS
 - hazards that may be present in the electrotechnology workplace, the harm they can cause and how this harm occurs
 - housekeeping and potential hazards in relation to improper housekeeping
 - major functions of safety committees and representatives
 - powers of health and safety inspectors
 - relevant WHS/OHS regulations, codes and practices
 - underlying principles of WHS
- life support - cardiopulmonary resuscitation (CPR) in the workplace, including:
 - first aid
 - responsibilities of the first aider
 - priorities of first aid management for any accident or injury
 - procedures required at an accident scene
 - legal and ethical issues, which may impact on the management of care
 - 'duty of care'
 - examination of a casualty for injuries
 - effect of cardiopulmonary arrest on the body
 - managing simulated conditions of airway obstruction, respiratory arrest and cardiopulmonary arrest
 - single and two-person CPR
 - signs and symptoms of an altered level of consciousness
 - management of simulation of a casualty with an altered level of consciousness
 - signs and symptoms of shock
 - management of simulation of a casualty in shock
- relevant safe work method statements (SWMS)/job safety analysis (JSA) or risk mitigation processes, including:

- emergency management plan
- hierarchy of WHS/OHS hazard risk control measures
- principles of risk assessment/management and required documentation
- typical hazards associated with electrotechnology work environments and their control, including:
 - asbestos, including:
 - common types of asbestos containing building materials
 - warning signs used to identify the presence of asbestos
 - effects of asbestos on the human body
 - requirements for reporting the presence of asbestos
 - silica, including:
 - types of materials that contain crystalline silica (silica dust)
 - methods of releasing silica dust
 - recommended levels of exposure to crystalline silica
 - effects of crystalline silica on the human body
 - hazardous gases
 - chemicals in the workplace, including:
 - hazardous substances and dangerous goods and their classifications
 - labelling and storage requirements for chemicals
 - purpose and interpretation of safety data sheets (SDS)/material safety data sheets (MSDS)
 - confined spaces, including:
 - control measures for working in a designated confined space
 - hazards associated with working in a confined space
 - workplace situations that could be classified as a confined space
 - physical and psychological hazards, including excessive noise, vibration, thermal stress, radiation, lasers, occupational overuse syndrome, stress, drugs and alcohol
 - safe manual handling principles, including:
 - procedures and methods for manual handling
 - situations that may cause manual handling injuries
 - types of manual handling injuries and their effect
 - working at heights, including:
 - hazards and precautions associated with working on ladders, elevated work platforms (EWP) and scaffolds
 - identification of work area as a height risk and use appropriate safety equipment to prevent a fall
 - working safely with electricity, including:
 - effects of electric shock on the human body
 - protection offered by a residual current device (RCD)
 - need for ensuring the (safe) isolation of an electrical supply

- appropriate method of removing an electric shock victim from a live electrical situation
- precautions that can minimise the chance of electric shock (earthing, extra-low voltage (ELV), fuses, circuit breakers and RCDs)
- common causes of electrical accidents.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, emergency management plan, equipment specifications, regulations, codes of practice and operation manuals
- relevant WHS/OHS legislation, regulations and codes of practice related to hazards management in the electrotechnology industry and workplace.

UEERA0049 Install and start up single head split air conditioning and water heating heat pump systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to position, assemble, install, start up and decommission single head split air conditioning systems and water heating heat pump split systems, up to a maximum of 18 kilowatt (kW) refrigeration capacity.

It includes following standards, codes of practice, regulatory requirements and routine procedures to install equipment, connect pipe work, pressure test, evacuate, perform functional checks and complete required documentation.

To undertake this unit, the learner must have a Trainee Refrigerant Handling Licence as it includes work on refrigeration and air conditioning equipment that carries the risk of a fluorocarbon refrigerant being emitted.

The skills and knowledge described in this unit require a national Refrigerant Handling Licence as it includes work on refrigeration and air conditioning equipment that carries the risk of a fluorocarbon refrigerant being emitted while decanting the refrigerant or manufacturing, installing, commissioning, servicing, maintaining or decommissioning refrigeration and air conditioning equipment.

The skills and knowledge described in this unit may, in some jurisdictions, also require a licence or permit to practice in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEERA0059 Prepare and connect refrigerant tubing and fittings

UEERA0064 Recover, pressure test, evacuate, charge and leak test refrigerants - split systems

Competency Field

Refrigeration and air-conditioning

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to assemble, install and start up split air conditioning and water heat pump system

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** WHS/OHS hazards, risk control methods, relevant standards, codes and legislation are obtained and applied in accordance with workplace procedures
- 1.2** Safety hazards which have not previously been identified are assessed, reported and advice on risk control measures sought from supervisor
- 1.3** Work activities are sequenced in accordance with job schedule
- 1.4** Relevant person/s is consulted to ensure the work is coordinated effectively with others involved on the worksite
- 1.5** Layout of pipe work to be installed is determined from job/task details, including manufacturer specifications and diagrams
- 1.6** Materials needed to carry out the work are obtained in accordance with workplace procedures and checked against job/task requirements
- 1.7** Tools, equipment and testing devices are obtained in accordance with workplace procedures and checked for operation and safety
- 1.8** Appropriately licensed electrician is confirmed to carry out electrical work for the air conditioning and water heat pump system
- 1.9** Appropriately licensed plumber is confirmed to carry out mains water piping work for the heat pump hot water system
- 1.10** Preparatory work is checked to ensure no damage has occurred and complies with job/task requirements in

- accordance with workplace procedures
- 2 Assemble, install and start up split air conditioning and water heat pump system**
- 2.1** Split air conditioning and water heat pump system components are positioned and assembled in accordance with workplace procedures, manufacturer instructions and industry standards
- 2.2** Interconnecting refrigerant piping/tubing is prepared and installed in accordance with workplace procedures, manufacturer instructions and industry standards
- 2.3** Components are pressure tested and evacuated in strict accordance with manufacturer instructions, industry standards and codes of practice
- 2.4** Condensate drains are prepared and installed to the units in accordance with workplace procedures, manufacturer instructions, industry standards and local regulatory requirements
- 2.5** The refrigerant service valves are opened on the pre-charged outdoor unit to enable the refrigerant to enter the evacuated pipe work and the connected unit in strict accordance with manufacturer instructions and industry standards
- 2.6** Unplanned situations are discussed with relevant person/supervisor, documented and dealt with safely in accordance with workplace procedures
- 2.7** Quality checks of installation and start-up are undertaken in accordance with workplace procedures
- 2.8** Notification is given to relevant person/s that the split air conditioning and water heat pump system is ready for electrical and/or mains water connection in accordance with workplace procedures
- 2.9** Split air conditioning and water heat pump work is carried out efficiently without waste of materials or damage to apparatus, circuits, the surrounding environment or services using relevant workplace sustainable energy principles in accordance with workplace procedures
- 3 Test single head split air conditioning and water heat pump system**
- 3.1** Split air conditioning and water heat pump system performance is inspected and tested in accordance with workplace procedures to ensure compliance with industry technical standards, manufacturer specifications

and job/task requirements

- 3.2** Worksite and equipment are cleaned and made safe in accordance with workplace procedures
- 3.3** Work completion is documented and appropriate person/s notified in accordance with workplace procedures
- 4 Decommission split air conditioning and water heat pump system**
 - 4.1** Refrigerant is pumped down and/or recovered from indoor unit, interconnecting refrigerant piping/tubing is removed, and indoor and outdoor refrigerant circuits are sealed in accordance with workplace procedures, manufacturer instructions and industry standards
 - 4.2** Licensed electrician is engaged in accordance with workplace procedures to isolate and disconnect electrical supply and cabling from air conditioning and water heat pump system
 - 4.3** Indoor and outdoor refrigerant pipework, water pipework, condensate drains and electrical conduits/cables are unmounted in accordance with workplace procedures
 - 4.4** Unplanned situations are discussed with appropriate person/s, documented and dealt with safely in accordance with workplace procedures
 - 4.5** Split air conditioning and water heat pump work is carried out efficiently without waste of materials or damage to apparatus, circuits, the surrounding environment or services using relevant workplace sustainable energy principles
 - 4.6** Worksite and equipment are cleaned and made safe in accordance with workplace procedures
 - 4.7** Work completion is documented and appropriate person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Assembling, installing, starting up and decommissioning single head split air conditioning and water heat pump system (hot water or swimming pool) up to a maximum of 18 kW refrigeration capacity must include at least the following:

- condensate drain installation
- decommissioning
- evacuation
- functional performance check
- installation/regulatory documentation
- pipe work connection
- pressure test
- refrigerant pipework installation
- use of safe working procedures and industry standards and code of practice
- unrestricted licensed electrician
- appropriately licensed plumber
- leak testing and fitting of caps to all refrigerant access ports, which could allow refrigerant to escape into the environment

Electrical connection must be carried out by:

Mains water connection must be carried out by:

Making area/worksite safe must include at least the following:

Unit Mapping Information

This unit replaces and is equivalent to UEENEEJ105A Position, assemble and start up single head split air conditioning and water heating heat pump systems.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEERA0049 Install and start up single head split air conditioning and water heating heat pump systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
- applying safe working practices and relevant legislation, industry standards, codes of practice and regulations
- applying sustainable energy principles and practices
- assembling, installing and starting up split air conditioning and/or water heat pump system
- dealing with unplanned events/situations in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
- decommissioning split air conditioning and/or water heat pump system
- determining job/work task requirements and applying workplace procedures, including making equipment/worksites safe
- documenting work activities
- giving notification to appropriate person/s for electrical connections to be completed
- implementing risk control measures
- inspecting and testing single head split air conditioning and/or water heat pump system and documenting performance to manufacturer specifications, including undertaking functional performance checks
- making equipment and worksites safe through leak testing and fitting of caps to refrigerant access ports to stop refrigerant escaping into the environment
- positioning and assembling system components to specifications
- installing and connecting refrigerant piping
- installing and connecting condensate drain piping
- preparing to assemble, install and start up a single head split air conditioning system and/or water heat pump system with a maximum cooling/heating capacity of less than 18 kilowatt (kW)
- pressure testing and evacuating system using manufacturer instructions.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- condensate drain pipe work installation and connections
- refrigerant pipe work installation and connections
- relevant A1 and A2L class refrigerant, systems, piping, tools and equipment
- relevant codes of practice, industry standards, regulations and WHS/OHS legislated requirements, including:
 - AS/NZS 5141 Residential heating and cooling systems - Minimum applications and requirements for energy efficiency, performance and comfort criteria
 - AS/NZS 5149.3 Refrigerating systems and heat pumps - Safety and environmental requirements - Installation site
 - AS/NZS 5149.4 Refrigerating systems and heat pumps - Safety and environmental requirements - Operation, maintenance, repair and recovery
 - Australia and New Zealand Refrigerant Handling Code of Practice - Part 2 Systems other than self-contained low charge systems
 - Ozone Protection and Synthetic Greenhouse Gas Management Regulations
- relevant manufacturer specifications and instructions relevant risk mitigation processes, including safe working practices and risk control measures
- relevant workplace documentation
- relevant workplace policies and procedures
- role of licensed electrician/plumber
- split air conditioning and water heat pump (maximum plant capacity for each system is 18 kW), including:
 - decommissioning split system requirements and procedures installing split systems, including manufacturer instructions, location, mounting and connecting pipe work
 - single head split air conditioning system (up to 18 kW) types, applications, major components, controls, operation and operating conditions
 - split system start-up, including manufacturer instructions, pressure testing, evacuation, checking refrigerant charge, adding refrigerant, leak detection and checking function and performance.
 - split water heating heat pump system (up to 18 kW) types, applications, major components, controls, operation and operating conditions
- sustainable energy principles and practices.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEERA0059 Prepare and connect refrigerant tubing and fittings

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to prepare and connect refrigeration and air conditioning piping/tubing and fittings.

It includes cutting, bending and connecting copper tubes to copper tubes and to brass and steel fittings by flaring and swaging using compression fittings and silver brazing.

The skills and knowledge in this unit will be applied by refrigeration and air conditioning technicians during the installation, service and repair of refrigeration and air conditioning systems.

To undertake this unit, the learner must have a Trainee Refrigerant Handling Licence as it includes work on refrigeration and air conditioning equipment that carries the risk of a fluorocarbon refrigerant being emitted.

The skills and knowledge described in this unit require a national Refrigerant Handling Licence as it includes work on refrigeration and air conditioning equipment that carries the risk of a fluorocarbon refrigerant being emitted while decanting the refrigerant or manufacturing, installing, commissioning, servicing, maintaining or decommissioning refrigeration and air conditioning equipment.

The skills and knowledge described in this unit may, in some jurisdictions, also require a licence or permit to practice in the workplace subject to regulations for undertaking refrigeration and air conditioning work.

Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Refrigeration and air-conditioning

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to fabricate tubing and attach fittings for refrigeration and/or air conditioning system

2 Fabricate tubing and attach fittings for refrigeration and/or air conditioning system

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 WHS/OHS hazards, risk control methods, relevant standards, codes and legislation are obtained and applied
- 1.2 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from supervisor
- 1.3 Nature of work is obtained from documentation or supervisor to determine scope of work to be undertaken
- 1.5 Advice is sought from supervisor to ensure work is coordinated effectively with others
- 1.5 Materials required for the work are accessed in accordance with workplace procedures
- 1.6 Tools, equipment and testing devices to carry out work are obtained and checked for correct operation and safety
- 2.1 Tasks are completed in accordance with workplace safety procedures
- 2.2 Relevant safe work methods are used to cut, flare, swage, bend and silver braze tubing and fittings as they apply to refrigeration and/or air conditioning systems
- 2.3 Refrigerant tubing and fittings are silver brazed with the use of dry nitrogen to prevent contamination
- 2.4 Fabricated tubing and fittings are prepared without waste of materials or damage/contamination to apparatus, the surrounding environment or services using relevant workplace sustainable energy practices in

accordance with workplace procedures

- 2.5** Quality checks are carried out regularly in accordance with workplace procedures, instructions/or specifications, including dimensions and pressure testing

- 3 Complete work and report**
- 3.1** Worksite is cleaned and made safe in accordance with workplace procedures
- 3.2** Supervisor is notified of task completion in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Preparing and connecting refrigerant tubing and fittings must include at least the following:

- cutting, flaring, bending and swaging using compression fittings, silver brazing copper tube to copper tube and brass and steel fittings
- piping/tubing and fittings for high-pressure refrigerants

Unit Mapping Information

This unit replaces and is equivalent to UEENEEJ102A Prepare and connect refrigerant tubing and fittings.

Assessment Requirements for UEERA0059 Prepare and connect refrigerant tubing and fittings

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant industry standards, codes of practice, regulations and work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
- applying sustainable energy principles and practices
- completing documentation and reporting requirements
- identifying and monitoring hazards and using applicable safety data sheets (SDS)/material safety data sheets (MSDS)
- preparing, fabricating and attaching refrigerant tubing and fittings, including:
 - attaching fittings correctly
 - conducting component quality checks
 - cutting, bending and joining refrigerant piping and tubing using appropriate tools and equipment, including compression fittings and high-pressure refrigerants
 - silver brazing copper tubes and fittings using dry nitrogen
- setting up equipment safely.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- copper tube grades, including types, properties, applications and handling
- dissimilar metals, including:
 - aluminium
 - brass
 - steel
 - stainless steel
- potential hazards with refrigerant tubing and fittings

- refrigerant tubing and fittings techniques, including:
 - annealing
 - bending
 - cutting
 - flaring
 - tube expanding
 - joining
 - silver brazing
 - use of dry nitrogen
- refrigeration copper tube fittings and access valves
- relevant legislation, industry standards, codes of practice and regulations
- relevant manufacturer specifications
- relevant risk mitigation processes, including safe working practices
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- SDS/MSDS
- sustainable energy principles and practices
- tools and equipment, including care and maintenance.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEERA0064 Recover, pressure test, evacuate, charge and leak test refrigerants - split systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to undertake the recovery of refrigerants, perform pressure and leak testing, evacuations and refrigerant charging in split air conditioning and heat pump systems.

It includes working safely; applying relevant regulations, industry standards and codes of practice in recovering refrigerants; performing pressure and leak tests; evacuating and charging with refrigerant split systems; and completing all required documentation.

To undertake this unit, the learner must have a Trainee Refrigerant Handling Licence as it includes work on refrigeration and air conditioning equipment that carries the risk of a fluorocarbon refrigerant being emitted.

The skills and knowledge described in this unit require a national Refrigerant Handling Licence as it includes work on refrigeration and air conditioning equipment that carries the risk of a fluorocarbon refrigerant being emitted while decanting the refrigerant or manufacturing, installing, commissioning, servicing, maintaining or decommissioning refrigeration and air conditioning equipment.

The skills and knowledge described in this unit may, in some jurisdictions, also require a licence or permit to practice in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Refrigeration and air-conditioning

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare to recover refrigerant, pressure and leak test, evacuate and charge split systems

1.1 WHS/OHS hazards, risk control methods, relevant standards, codes and legislation are obtained and applied in accordance with workplace procedures

1.2 Safety hazards not previously identified are assessed, reported and advice on risk control measures sought from supervisor

1.3 Nature of the work is obtained from documentation or supervisor to determine the scope of work to be undertaken

1.4 Work activity is appropriately sequenced in accordance with job schedule

1.5 Relevant person/s is consulted to ensure work is coordinated effectively with others involved on the worksite

1.6 Refrigerant, lubricants and cleaning materials for work are obtained in accordance with workplace procedures and checked against job/task requirements

1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

1.8 Preparatory work is inspected and checked to ensure no damage has occurred and complies with workplace procedures and job/task requirements

2 Recover refrigerant, pressure and leak test evacuate and charge split systems

2.1 Checks are carried out to ensure the system and/or component parts are isolated in accordance with workplace procedures

2.2 Machines, plant and circuits are isolated in accordance with workplace procedures

2.3 Refrigerants are safely removed from split system and placed into labelled containers in accordance with regulatory requirements, industry standards and codes of

practice, and any electrical work is referred to a licensed electrician in accordance with workplace procedures.

- 2.4 Precautions are taken to prevent damage to components while pressure testing the system
- 2.5 Pressure testing is conducted using dry nitrogen at a pressure relative to the refrigerant to be used
- 2.6 Leaks are located and rectified using testing methods appropriate to system under test in accordance with industry standards
- 2.7 Split system is evacuated to required level and system is cleaned of all moisture and other containments in accordance with industry standards and codes of practice
- 2.8 A drop test is performed to test evacuation using an electronic vacuum gauge in accordance with industry standards and codes of practice
- 2.9 Component lubricants are checked and maintained in accordance with manufacturer specifications
- 2.10 Split systems are charged with refrigerant in accordance with manufacturer specifications, industry standards and codes of practice
- 2.11 Problematic situations are resolved in accordance with workplace procedures and reported to supervisor
- 2.12 Split systems are pressure and leak tested, evacuated and charged without waste of materials or damage to apparatus, the surrounding environment or services in accordance with relevant workplace sustainable energy practices

3 Report on refrigerant recovery, pressure and leak test, evacuation and charge work

- 3.1 Worksite is cleaned and made safe in accordance with workplace procedures
- 3.2 Contaminated refrigerant is dealt with in accordance with workplace procedures and legislative/regulatory requirements
- 3.3 Completion of work is documented and appropriate person/supervisor notified in accordance with workplace

procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

testing and charging split air conditioning systems must include at least the following:

- determining, using measurement and basic calculations methods, the operating conditions of vapour compression split system, including suction and discharge pressures
- ambient, evaporator and condensing temperatures
- evaporator and condenser temperature differences recovering Class A1 and A2L refrigerant from an existing split system, including split single head air conditioning and/or hot water heat pump systems pressure and leak testing a newly installed system
- evacuating newly installed systems in preparation for charging with refrigerant
- charging newly installed systems with Class A1 and A2L refrigerant

Unit Mapping Information

This unit replaces and is equivalent to UEENEEJ172A Recover, pressure test, evacuate, charge and leak test refrigerants - split systems.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEERA0064 Recover, pressure test, evacuate, charge and leak test refrigerants - split systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - identifying hazards
 - risk control measures
 - using personal protective equipment (PPE)
- applying safe working practices and relevant legislation, industry standards, codes of practice and regulations
- completing required documentation, including reporting refrigerant recovery, pressure and leak tests, evacuations, charging refrigerant work and system operating conditions determining basic operating conditions, including:
 - ambient, evaporation and condensing temperatures
 - evaporator and condenser temperature differences
 - suction and discharge pressures
- recovering, pressure testing, evacuating, charging and leak testing refrigerant in newly installed split systems to requirements using appropriate equipment, tools and measurement devices
- starting up system and performing function checks
- selecting, obtaining and checking relevant equipment, materials, tools and testing devices required to carry out the work, including:
 - A1, A2 and A2L class refrigerants, lubricants and charging equipment
 - oxygen-free dry nitrogen cylinder and regulator
 - pressure and temperature measurement devices
 - pressure testing and refrigerant leak testing equipment and tools
 - refrigeration evacuation equipment and measuring equipment suitable for A1, A2 and A2L class refrigerants
 - refrigerant recovery/reclaim equipment suitable for A1, A2 and A2L class refrigerants
 - refrigeration hand and power tools
 - refrigeration service tools

- single head split air conditioning systems
- using lubricants and cleaning materials safely in accordance with safety data sheets (SDS)/material safety data sheets (MSDS).

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- equipment and procedures for working with refrigerants, including:
 - charging refrigerant into a newly installed split system detecting refrigerant leaks (electronic, bubbles and halide for R22)
 - contaminant detection and removal
 - evacuating newly installed split systems
 - pressure testing systems newly installed split systems using dry nitrogen
 - reclaiming/recovering refrigerants using recovery units and recovery cylinders
- heat and heat transfer
- leak detectors types, applications, operation and procedures
- manifold gauges types, applications, operation and procedures
- pressure temperature relationships and charts
- pressure, units and measurement
- refrigerant conditions, including saturation, superheat and sub-cooling
- relative humidity, unit and measurement
- relevant industry standards, codes of practice and regulations, including WHS/OHS legislated requirements
- relevant manufacturer specifications
- relevant risk mitigation processes, including risk control measures
- safe working practices, safe handling and SDS/MSDS
- sensible and latent heat
- split heat pump Class A1, A2 and A2L refrigerant types, properties and applications
- split heat pump refrigerant oil types, properties and applications
- sustainable energy principles and practices, including:
 - environment protection requirements
 - sustainable energy practices
 - sustainable resources
- system access fittings types, applications, operation and procedures
- temperature, units and measurement
- vapour compression cycle, basic operation and major system components.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training

Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEERL0003 Conduct in-service safety testing of electrical cord connected equipment and cord assemblies

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to conduct in-service safety testing of electrical cord connected equipment and cord assemblies.

It includes working safely, using portable appliance tester (PAT), identifying faults, applying tagging, arranging for repair of faulty equipment and complete testing documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Restricted Licensing

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to test cord connected apparatus and cord assemblies

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and applied
- 1.2** WHS/OHS risk control work preparation measures and procedures are followed

- 1.3 Advice is sought from relevant person/s to ensure work is effectively coordinated with others
 - 1.4 Cord connected apparatus and cord assemblies to be tested are obtained in accordance with workplace procedures
 - 1.5 PAT device is checked for correct operation and safety in accordance with relevant industry standards and workplace procedures
- 2 Test cord connected apparatus and cord assemblies**
 - 2.1 WHS/OHS risk control work measures and procedures are followed
 - 2.2 Measures are followed to ensure that cord connected apparatus and cord assemblies to be tested are not connected to the electrical supply in accordance with relevant industry standards
 - 2.3 Electrical safety requirements and parameters are applied to ensure correct test results are in accordance with relevant industry standards
 - 2.4 Visual inspection and checks of the cord connected apparatus and cord assemblies are carried out in accordance with workplace procedures to detect any abnormal damage or fault
 - 2.5 Approval is obtained in accordance with workplace procedures from relevant person/s before any contingencies are implemented
 - 2.6 PAT routines are followed to test cord connected apparatus and cord assemblies in accordance with workplace procedures
 - 2.7 Unsafe cord connected apparatus and cord assemblies are identified from test results in accordance with workplace procedures
 - 2.8 Testing is undertaken effectively to minimise waste of energy and damage to apparatus
- 3 Tag cord connected apparatus and cord assemblies and document testing activities**
 - 3.1 WHS/OHS work completion risk control measures and procedures are followed

- 3.2 Worksite is cleaned and made safe in accordance with workplace procedures
- 3.3 Cord connected apparatus and cord assemblies are tagged in accordance with workplace procedures for their safety status
- 3.4 Arrangements are made for unsafe cord connected apparatus and cord assemblies to be repaired by relevant person/s
- 3.5 Safety testing activities are documented in accordance with relevant industry standards and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

In-service safety testing must include the following:

- at least two different electrical cords and three different items of cord connected equipment with safety faults, including:
 - a device containing an element
 - a device containing a motor
 - a device containing metal oxide varistors (MOV)

Unit Mapping Information

This unit replaces and is equivalent to UEENEPP026A Conduct in-service safety testing of electrical cord connected equipment and cord assemblies.

Assessment Requirements for UEERL0003 Conduct in-service safety testing of electrical cord connected equipment and cord assemblies

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying appropriate tagging
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
- connecting cords and apparatus to the testing device
- dealing with unplanned events in accordance with problem-solving techniques and workplace procedures
- documenting testing activities, including workplace register
- identifying safe and unsafe cords and apparatus
- preparing to test cord connected apparatus and cord assemblies
- preparing and using the portable appliance tester (PAT)
- safety testing of electrical cord connected equipment and cord assemblies
- tagging tested cord connected apparatus and cord assemblies and document testing activities
- using test results to determine the safety status.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- Australian Standards and Commonwealth/state/territory legislation and regulations including:
 - Australian Standard AS/NZS 3760 In-service safety inspection and testing of electrical equipment
 - Commonwealth/state/territory WHS/OHS Acts and regulations
 - limitations of work that can be undertaken
 - codes of practice and associated guidance material
 - risk management principles

- basic electrical testing concepts, including:
 - basic electrical circuits
 - functions of electrical circuit
 - conductors and insulators
 - basic electrical supply system
 - relationship of electrical quantities
 - effects of electrical currents
 - methods/devices used to negate or minimise electrical shock
 - PAT
 - PAT maintenance and calibration
- electrical equipment and cord assemblies testing, including:
 - classification of electrical equipment
 - inspection of electrical equipment (visual inspections)
 - using PAT:
 - earth continuity testing
 - insulation resistance testing
 - polarity testing (extension cords and IEC cords)
- testing and tagging documentation requirements, including:
 - risk assessment documentation
 - frequency of inspection and testing
 - tagging of equipment
 - records maintenance
- electrical cord testing and tagging documentation requirements
- electrical equipment and cord assemblies testing
- electrical testing concepts
- problem-solving techniques
- relevant job safety assessments or risk mitigation processes
- relevant legislation and regulations
- relevant manufacturer specifications
- relevant testing and tagging of portable and cord connected electrical apparatus
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to conducting in-service safety testing of electrical cord connected equipment and cord assemblies
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERL0004 Disconnect - reconnect electrical equipment connected to low voltage (LV) installation wiring

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to disconnect and reconnect electrical equipment connected to low voltage (LV) installation wiring.

It includes preparing electrical equipment for disconnecting and then reconnecting equipment connected to LV installation wiring. It also includes inspecting and testing the reconnected electrical equipment for safe operation, identifying and reporting electrical faults and providing status reports. This must be incidental to a primary or regular function of the workplace.

The unit excludes disconnecting or reconnecting circuits at a switchboard or to general electrical accessories (including switches, socket outlets and circuit protective devices), or installation of or alteration to any part of the fixed electrical wiring system (defined as electrical installation work).

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations which are designed to operate at voltages greater than 50 volt (V) alternating current (a.c.) or 120 V direct current (d.c.).

The skills and knowledge described in this unit may require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Additional and/or other conditions may also apply under State and Territory legislation and regulations related to licencing, electrical work and work health and safety (WHS)/occupational health and safety (OHS) regulations, which must be confirmed prior to commencing this unit.

In some jurisdictions additional information related to licencing may be required on certification documentation. Further guidance can be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Restricted Licensing

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to disconnect electrical equipment

2 Disconnect electrical equipment

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Electrical equipment disconnection is planned to ensure WHS/OHS policies and procedures are followed
- 1.2 Relevant person/s is consulted to ensure work is coordinated effectively with others involved at the worksite
- 1.3 Safety hazards which have not previously been identified are documented, risks assessed, and control measures determined and implemented in consultation with relevant person/s and in accordance with workplace procedures
- 1.4 Point of isolation of electrical equipment to be disconnected is determined
- 1.5 Tools, equipment and testing devices needed to carry out electrical work are obtained in accordance with workplace procedures and checked for correct operation and safety
- 2.1 WHS/OHS policies and workplace procedures are followed
- 2.2 Electrical equipment is isolated in accordance with relevant electrical installation industry standards and workplace procedures
- 2.3 Isolated equipment is confirmed as de-energised
- 2.4 Conductor connection sequence is recorded and labelled in accordance with workplace procedures

- 2.5 Visual inspection and checks of the electrical equipment and associated wiring are carried out in accordance with workplace procedures to detect any abnormal or obvious damage or fault
 - 2.6 Electrical equipment is disconnected from fixed wiring without damage to other components
 - 2.7 Disconnected conductors/cables are terminated in accordance with relevant industry standards to ensure they are safe and present no potential hazard
 - 2.8 Approval is obtained in accordance with workplace procedures from relevant person/s before any contingencies are implemented
- 3 Prepare to reconnect electrical equipment**
- 3.1 Reconnection is planned to ensure WHS/OHS policies and workplace procedures are followed
 - 3.2 Relevant person/s is consulted to ensure work is coordinated effectively with others involved in the work site
 - 3.3 Point of isolation of the circuit to which the electrical equipment to be connected is determined
 - 3.4 Replacement electrical equipment is selected on the basis of rating and specifications being the same as that of the original electrical equipment
 - 3.5 Appropriate person/s is consulted in the event that replacement electrical equipment is not available
 - 3.6 Original and/or replacement electrical equipment is inspected and tested to ensure it is safe to connect to the electrical supply and use
 - 3.7 Tools, equipment and testing devices needed to carry out electrical work, are obtained in accordance with workplace procedures and checked for correct operation and safety
- 4 Reconnect electrical equipment**
- 4.1 WHS/OHS policies and procedures are followed
 - 4.2 Measures are taken to ensure circuit to which electrical equipment is to be connected remains isolated and de-energised in accordance with relevant electrical installation industry standards and workplace procedures

- 4.3 Earth continuity of the equipment is tested to determine whether it is in accordance with relevant industry standards
 - 4.4 Insulation resistance of the equipment is tested to confirm that it is in accordance with relevant industry standards
 - 4.5 Appropriate person/s is consulted regarding any non-compliant conditions identified during testing
 - 4.6 Electrical equipment is connected in accordance with previously recorded conductor connection sequence and relevant industry standards
 - 4.7 Connections to the equipment are checked to confirm they are correct
 - 4.8 Continuity between exposed conductive parts of the equipment and the main earth or metal switchboard enclosure is confirmed
- 5 **Test the reconnected electrical equipment for safe operation**
 - 5.1 WHS/OHS policies and workplace procedures for the reinstatement of isolated circuits and electrical equipment is followed
 - 5.2 Supply is reinstated to equipment and checked in accordance with established procedures and industry requirements
 - 5.3 Arrangements are made with relevant person/s to test the operation of the electrical equipment in accordance with workplace procedures
 - 5.4 Operational non-conformances are identified and reported in accordance with workplace procedures
- 6 **Complete compliance documentation**
 - 6.1 Equipment status report/s are completed and relevant person/s notified in accordance with task requirements and workplace procedures
 - 6.2 Complete compliance documentation in accordance with industry standards and regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Disconnection and reconnection of electrical equipment must include at least one of the following, and must be selected to align with the candidates' primary trade or work function:

- air conditioning/refrigeration equipment
- instrumentation equipment
- electronic equipment
- electrical equipment
- neon signs
- composite equipment
- control devices
- water heaters
- motors
- gas appliances
- electrical work associated with fixed wiring, circuits at a switchboard or to general electrical equipment, including switches, socket outlets, circuit protective devices etc
- in hazardous areas or on electrical equipment that is part of an explosion-protection technique
- where high fault currents are possible
- which are luminaires

MUST NOT INCLUDE:

disconnect/reconnect electrical equipment connected to supplies up to 1,000 volts (V) alternating current (a.c.) or 1,500 V direct current (d.c.) must not include the following:

Unit Mapping Information

No equivalent unit

Assessment Requirements for UEERL0004 Disconnect - reconnect electrical equipment connected to low voltage (LV) installation wiring

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - selecting and using an appropriate range of personal protective equipment (PPE)
 - hazard identification
 - using risk control measures
 - using safe working practices when carrying out electrical disconnect/reconnect work
 - working safely with low voltage (LV) electrical installations
- determining electrical characteristics of electrical equipment
- selecting tools, equipment and testing devices
- identifying the point of isolation
- preparing to disconnect and reconnect electrical equipment
- disconnecting and reconnecting electrical equipment
- connecting circuits from the schematic diagrams
- connecting and using voltmeters and ammeters, including selecting the correct range in terms of magnitude and whether the supply is alternating current (a.c.) or direct current (d.c.)
- isolating, testing and tagging accessories
- connecting a simple electrical circuit, including supply, control switch and load
- measuring voltage and current within a simple circuit
- producing a wiring diagram of the connections used in following the schematic diagram
- connecting a simple circuit following a wiring diagram
- producing a schematic diagram from the wiring diagram
- using an analogue multimeter for voltage measurement ensuring the following: setting zero, correct scale, a.c. or d.c., polarity and magnitude, avoiding parallax error and estimating between division readings
- using a digital multimeter for voltage measurement ensuring the following: correct range and no active conductors are connected to any meter earth
- measuring resistance using a digital multimeter

- conducting insulation resistance tests using a handheld insulation tester after checking for zero and meter calibration
- checking the polarity of a three-core extension cord using a continuity tester
- measuring current using a clip-on (tong tester) taking each circuit conductor in turn
- terminating cables using stud, screw, tunnel and lug terminal types employing the correct preparation and the relevant terminating tools
- identifying the type and arrangement of circuits supplying equipment that is to be disconnected
- testing the availability of supply for electrical equipment about to be disconnected
- locating isolation device/s, including lockable adjacent switching device, and/or identification of fuse/circuit breaker at switchboard, and use of equipment schedules where provided
- determining the method of isolation to be used; which available device
- isolating a supply at a fuse, ensuring the fuse wedge is removed only after the electrical equipment is turned off and demonstrating why the empty wedge is replaced once the fusible link has been removed
- isolating a supply at a circuit breaker, ensuring the circuit breaker is locked and secured in the open position
- undertaking tests to determine if the electrical equipment is turned off when isolating at a fuse/circuit breaker
- using danger tags at the point of isolation
- identifying the type and arrangement of circuits supplying equipment that is to be disconnected from a single phase and/or multiphase supply of voltages up to 1,000 V a.c. or 1,500 V d.c.
- applying procedures that ensure the safe isolation of the supply to equipment which is to be disconnected
- disconnecting isolated equipment from fixed wiring with minimal damage to wiring system after ensuring no visible faults or damage, and the recording of conductor connection sequence
- applying termination practices in regard to disconnected wiring
- checking the new electrical equipment nameplate details against those of the electrical equipment being replaced
- visually inspecting and testing equipment's electrical characteristics using suitable test equipment to ensure equipment is safe to connect in regard to sufficiently high insulation resistance, arrangements for protection against indirect contact are undamaged and in place, appropriate ingress protection (IP) rating, and arrangements for protection against dangers of mechanical movement are undamaged and in place
- testing compliance of the electrical equipment, i.e. insulation resistance and continuity
- testing the disconnected electrical equipment for faults (open circuits, partial open circuits, short circuits, partial short circuits and earth faults), and recognise any unsatisfactory test results obtained identifying the type and arrangement of circuits supplying equipment that is to be reconnected to a single phase and/or multi-phase supply of voltages up to 1,000 V a.c. or 1,500 V d.c.
- reconnecting electrical equipment to fixed wiring with minimal damage to wiring system
- ensuring continuity between exposed conductive parts of the equipment and the main earth or

metal switchboard enclosure

- restoring supply after ensuring correct connections, and all safety requirements have been met
- testing the supply at the electrical equipment
- restoring all mechanical protection, e.g. terminal covers
- checking operation of reconnected equipment
- dealing with unplanned events/situations in accordance with workplace procedures and in a manner that minimises risk to personnel and equipment
- producing reports and documents to describe a suitable procedure to safely disconnect a component from a single-phase supply and/or multi-phase supply in accordance with workplace, industry and regulatory requirements
- producing reports and compliance documentation for the safe reconnection/commissioning of a component to the supply in accordance with workplace, industry and regulatory requirements
- completing required regulatory compliance documentation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- the basic electrical circuit, including:
 - elements of a simple electric circuit (supply, control switch, protection device and load)
 - definition, the symbol and the abbreviation of the unit for electromotive force, potential difference, current and resistance
 - types of electrical load
 - need for devices to afford electrical protection and the mechanisms used in protection devices, including resetting
 - a.c supply (both single and multi-phase) and d.c. supply
 - need for isolating, testing and tagging electrical circuits
- relationships in an electrical circuit, including:
 - relationship between voltage, current and resistance
 - definition of power in electrical terms (for d.c. or resistive a.c. circuits)
 - electrical diagrams, including:
 - symbols used for fuse, circuit breaker, isolator, normally open contacts, normally closed contacts, coil, energy meter, a.c. motor and transformer
 - using a block diagram as means of developing concepts and understanding
 - function of single line diagrams, including their application in three phase systems
 - definition of a circuit or schematic diagrams
 - wiring diagrams
- test equipment selection and care, including:
 - fault currents and the implications of incorrectly connecting a meter to a high fault current

source

- category ratings of multimeters in terms of their breaking capacity (fault current interruption) and identification of the appropriate category of instrument for typical domestic work and for typical commercial work
- regulatory requirements in regard to the maintenance and testing of test instrumentation
- steps and procedures for the safe use, care and storage of electrical instruments
- selecting test equipment for given situations
- test equipment - voltage measurement, including:
 - voltage measurement - meters connected in parallel
- test equipment - resistance measurement, including:
 - insulation resistance, and the required minimum values for insulation resistance LV equipment (including the insulation resistance values for electrical equipment incorporating heating elements)
 - insulation resistance needs to be measured at higher than supply voltage and the voltages to be used
 - continuity and what a continuity tester does
- test equipment - current measurement, including advantage/s of the clip-on method of current measurement
- cable connections, including:
 - construction of typical power cables
 - principle of operation of the following types of terminals stud, screw, tunnel and lugs
 - cable preparation and terminating methods appropriate to each type of terminal, including any special requirements which apply
- protection for safety, including:
 - dangers associated with earth-faults
 - protection of persons against electric shock from earth-faults
 - maintaining a low earth-fault current path resistance
 - components in an earth-fault current path
 - regulatory issues/requirements/limitations in regard to working live
- safety testing preparation and procedures, including:
 - faulty earth-fault current paths
 - using safe working practices when carrying out fault-finding work
 - identification of earthing system components
 - unsatisfactory resistance of a fault current path
 - actions to rectify unsatisfactory resistance of an earth-fault current path or insulation
- isolating supplies, including:
 - regulatory requirements in regard to working de-energised, and ensuring and maintaining isolation
 - reasons for advising all personnel likely to be affected
 - preventing others wanting to remake supply
 - reason for isolation and approximate time of outage to allow planning of alternate

activities

- identification of the type and arrangement of circuits supplying equipment that is to be disconnected
- use of and reason for danger tags at the point of isolation
- reason for the following steps: testing on a known live supply, testing for isolation, retesting on a known live supply after confirming isolation
- disconnecting electrical equipment - LV, including:
 - identification of the type and arrangement of circuits supplying equipment that is to be disconnected from a single phase and/or multi-phase supply of voltages up to 1,000 V a.c. or 1,500 V d.c.
 - procedures that ensure the safe isolation of the supply to equipment which is to be disconnected
 - disconnection of isolated equipment from fixed wiring with minimal damage to wiring system after ensuring no visible faults or damage, and the recording of conductor connection sequence
- reconnecting electrical equipment - LV, including:
 - importance of checking the new electrical equipment nameplate details against those of the electrical equipment being replaced
 - need to visually inspect and test the equipment's electrical characteristics using suitable test equipment to ensure equipment is safe to connect in regard to sufficiently high insulation resistance, arrangements for protection against indirect contact are undamaged and in place, appropriate IP rating, and arrangements for protection against dangers of mechanical movement are undamaged and in place
 - procedures for equipment with unsatisfactory results - unsuitability for reconnection
 - identification of the type and arrangement of circuits supplying equipment that is to be reconnected to a single phase and/or multi-phase supply of voltages up to 1,000 V a.c. or 1,500 V d.c.
 - procedures ensuring isolation of supply
 - engaging appropriately qualified person to rectify any non-compliance
- produce documentation and reports in accordance with workplace, industry and regulatory requirements, including:
 - need to produce status reports and documents to locate and identify isolation mechanisms for a wide range of circuits and associated loads
 - production of reports and documents to use a suitable procedure to safely disconnect a component from a single-phase supply and/or multi-phase supply
 - content required in reports and documents used to safely determine the suitability of a component for reconnection to supply
 - production of reports and documents for the safe reconnection/commissioning of a component to the supply.
 - need to comply with regulatory compliance documentation requirements.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, including where not permissible under regulatory and licencing requirements, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources used should reflect current industry practices in relation to disconnecting and reconnecting electrical equipment connected to a LV supply
- applicable documentation, including workplace procedures, equipment specifications, regulations, standards, codes of practice and operation manuals.

Release 6.2	10 March, 2021	<p>Minor update:</p> <p>Qualifications:</p> <p>CPC10120 Certificate I in Construction</p> <ul style="list-style-type: none"> • <i>Change of unit title BSBSUS211 Participate in environmentally sustainable work practices in Elective units to BSBSUS211 Participate in sustainable work practices.</i> <p>CPC20120 Certificate II in Construction</p> <ul style="list-style-type: none"> • <i>Imported unit codes updated in Elective list:</i> <ul style="list-style-type: none"> • <i>RIICCM210D Install trench support to RIICCM210E Install trench support</i> • <i>RIIWMG203D Drain and dewater civil construction site to RIIWMG203E Drain and dewater civil construction sites.</i> <p>CPC20220 Certificate II in Construction Pathways</p> <ul style="list-style-type: none"> • <i>Imported unit codes updated in Elective list:</i> <ul style="list-style-type: none"> • <i>RIICCM210D Install trench support to RIICCM210E Install trench support</i> • <i>RIIWMG203D Drain and dewater civil construction site to RIIWMG203E Drain and dewater civil construction sites.</i> <p>CPC30420 Certificate III in Demolition</p> <ul style="list-style-type: none"> • <i>Imported unit code in Elective units updated from RIIRTM203D Work as a safety observer/spotter to RIIRTM203E Work as a safety observer/spotter.</i> <p>CPC32420 Certificate III in Plumbing</p> <ul style="list-style-type: none"> • <i>Addition of CPCPCM2052 Weld mild steel using oxy-acetylene equipment and CPCPCM2055 Work safely on roofs to unit grid.</i> <p>CPC40120 Certificate IV in Building and Construction</p> <ul style="list-style-type: none"> • <i>Imported Elective unit BSBWOR501 Manage personal work priorities and professional development updated to BSBPEF501 Manage personal and professional development.</i> <p>CPC40920 Certificate IV in Plumbing and Services</p> <ul style="list-style-type: none"> • <i>Change of unit title CPCPWT3027 Connect irrigation systems from drinking water service in Group B electives to CPCPWT3027 Install backflow prevention devices.</i>
-------------	----------------	---

		<p>Units of Competency:</p> <p>CPCCBC5011 Manage environmental management practices and processes in building and construction</p> <ul style="list-style-type: none"> • <i>PC 2.4 has been amended to read: 'Evaluate a new project to determine its impact on existing environmental planning obligations.'</i> <p>CPCCOM1014 Conduct workplace communication</p> <ul style="list-style-type: none"> • <i>Correction to unit mapping metadata.</i> <p>CPCCPB3016 Install and finish columns</p> <ul style="list-style-type: none"> • <i>Removed duplicated comma in Knowledge Evidence.</i> <p>CPCCSP3001 Apply float and render to straight and curved surfaces</p> <ul style="list-style-type: none"> • <i>Correction to prerequisite unit code from CPPWHS2001 Apply WHS requirements, policies and procedures in the construction industry to CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.</i> <p>CPCCSP3007 Apply plaster by projection machine</p> <ul style="list-style-type: none"> • <i>Correction to prerequisite unit code from CPPWHS2001 Apply WHS requirements, policies and procedures in the construction industry to CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.</i> <p>CPCCWC3001 Install and finish plasterboard and fibre cement sheeting to curved wall and ceiling substrates</p> <ul style="list-style-type: none"> • <i>Correction to prerequisite unit code from CPPWHS2001 Apply WHS requirements, policies and procedures in the construction industry to CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.</i> <p>CPCCWC3002 Install and finish plasterboard and fibre cement sheeting to arch substrate</p> <ul style="list-style-type: none"> • <i>Correction to prerequisite unit code from CPPWHS2001 Apply WHS requirements, policies and procedures in the construction industry to CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.</i> <p>CPCCWC3003 Install dry wall passive fire-rated systems</p> <ul style="list-style-type: none"> • <i>Correction to prerequisite unit code from CPPWHS2001 Apply WHS requirements, policies</i>
--	--	--

		<p><i>and procedures in the construction industry to CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.</i></p> <p>CPCCWC3004 Install suspended ceilings</p> <ul style="list-style-type: none"> <i>Correction to prerequisite unit code from CPPWHS2001 Apply WHS requirements, policies and procedures in the construction industry to CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.</i> <p>CPCPFS3038 Test and maintain fire hydrant and hose reel installations</p> <ul style="list-style-type: none"> <i>PC2.1 Identify and calculate materials required to complete the task.</i> <i>PC2.2 Identify potential hazards and determine and implement control measures and personal protective equipment (PPE) requirements.</i> <i>PC2.3 Determine job priorities and sequence job tasks in consultation with others on site.</i> <p>The PCs have been repositioned to be consistent with the related CPCPFS sector units of competency.</p> <p>CPCPGS3053 Disconnect and reconnect Type A gas appliances</p> <ul style="list-style-type: none"> <i>Removed reference to ‘power supply’ in Knowledge Evidence, duplicates ‘electrical supply including direct wired appliances’ already noted in Knowledge Evidence.</i> <p>CPCPGS3056 Size and install consumer gas piping systems</p> <ul style="list-style-type: none"> <i>Included PC 2.3, ‘Select appropriate tools and equipment including personal protective equipment (PPE)’.</i> <p>CPCPGS3061 Install and commission Type A gas appliances</p> <ul style="list-style-type: none"> <i>Amended Element 1 as follows: Identify installation requirements for Type A gas appliances.</i> <p>CPCPGS4023 Install, commission and service Type B gas appliances</p> <ul style="list-style-type: none"> <i>Updated imported prerequisite unit UEENEEP012A Disconnect/reconnect composite appliances connected to low voltage installation wiring to UEERL0004 Disconnect-reconnect electrical equipment connected to low voltage (LV) installation</i>
--	--	--

		<p>wiring.</p> <p>CPCPMS3033 Install small bore heating systems</p> <ul style="list-style-type: none"> • <i>Correction to prerequisite unit code from CPCPCM2043A Carry out WHS requirements to CPCPCM2043 Carry out WHS requirements.</i> <p>CPCPPS5033 Design vacuum drainage systems</p> <ul style="list-style-type: none"> • <i>Removed duplicated heading from Performance Evidence.</i> <p>CPCPRF3021 Receive roofing materials</p> <ul style="list-style-type: none"> • <i>Correction to prerequisite unit code from CPCPCM2043A Carry out WHS requirements to CPCPCM2043 Carry out WHS requirements.</i> <p>CPCPSN3011 Plan the layout of a residential sanitary plumbing system and fabricate and install sanitary stacks</p> <ul style="list-style-type: none"> • <i>Removed duplicative point from Knowledge Evidence: WHS requirements for fabricating and installing sanitary stacks.</i> <p>CPCPWT3027 Install backflow prevention devices</p> <ul style="list-style-type: none"> • <i>Correction to prerequisite unit code from CPCPCM2043A Carry out WHS requirements to CPCPCM2043 Carry out WHS requirements.</i> <p>Refer to Companion Volume Implementation Guide for further information.</p>
Release 6.1	15 January, 2021	<p>Minor update</p> <p>Qualifications:</p> <p>CPC20120 Certificate II in Construction</p> <ul style="list-style-type: none"> • <i>Imported unit code corrected in elective list: RIICCM210E Install trench support to RIICCM210D Install trench support.</i> <p>CPC20220 Certificate II in Construction Pathways</p> <ul style="list-style-type: none"> • <i>Imported unit code corrected in Group I elective list: RIWHS205D Control traffic with stop-slow bat to RIWHS205E Control traffic with stop-slow bat.</i> <p>CPC30220 Certificate III in Carpentry</p> <ul style="list-style-type: none"> • <i>Unit code corrected in Group A - Specialist Electives: CPCCCO3048* Construct tilt panels on site to CPCCON3048* Construct tilt panels on site.</i>

		<p>CPC31220 Certificate III in Wall and Ceiling Lining</p> <ul style="list-style-type: none"> • <i>Unit code corrected in elective list: CPCCSH3007 Install prefabricated internal shopfitting units to CPCSHHP3007 Install prefabricated internal shopfitting units.</i> <p>CPC31920 Certificate III in Joinery</p> <ul style="list-style-type: none"> • <i>Unit codes corrected in Group B - General Electives list:</i> <ul style="list-style-type: none"> • <i>CPCCSH3001 Fabricate shopfitting components using CNC machines to CPCSHHP3001 Fabricate shopfitting components using CNC machines</i> • <i>CPCCSH3005 Apply and trim decorative additions to shopfitting and components to CPCSHHP3005 Apply and trim decorative additions to shopfittings and components</i> • <i>CPCCSH3006 - Prepare shopfittings and surfaces and apply liquid finishes to CPCSHHP3006 - Prepare shopfittings and surfaces and apply liquid finishes.</i> <p>CPC32620 Certificate III in Roof Plumbing</p> <ul style="list-style-type: none"> • <i>Included CPCCCM2008 Erect and dismantle restricted height scaffolding and CPCCCM2012 Work safely at heights in the metadata unit grid.</i> <p>CPC32820 Certificate III in Fire Protection</p> <ul style="list-style-type: none"> • <i>Unit code corrected in core unit list: CPCPCM2019 Carry out interactive workplace communication to CPCPCM2039 Carry out interactive workplace communication.</i> <p>CPC40120 Certificate IV in Building and Construction</p> <ul style="list-style-type: none"> • <i>Addition of 3 units of competency to the General Electives:</i> <ul style="list-style-type: none"> • <i>CPCBIM4001 Plan to comply with BIM requirements for construction work.</i> • <i>CPCBIM4002 Use BIM processes to carry out construction work</i> • <i>CPCBIM4003 Contribute to BIM deliverables for construction work.</i> <p>CPC50320 Diploma of Building and Construction (Management)</p> <ul style="list-style-type: none"> • <i>Addition of 3 units of competency to the General Electives:</i> <ul style="list-style-type: none"> • <i>CPCBIM4001 Plan to comply with BIM</i>
--	--	---

		<p><i>requirements for construction work.</i></p> <ul style="list-style-type: none"> • <i>CPCBIM4002 Use BIM processes to carry out construction work</i> • <i>CPCBIM4003 Contribute to BIM deliverables for construction work.</i> • <i>Updated imported elective unit from CPPBDN5012A Produce and present 3-D to models of small-scale building designs to CPPBDN5101 Produce digital 3-D models of building designs.</i> <p>CPC80215 Graduate Diploma of Building Surveying</p> <ul style="list-style-type: none"> • <i>Deleted: CPC80215 Graduate Diploma of Building Surveying is deleted due to low enrolments and lack of industry demand, as per the Australian Industry and Skills Committee (AISC) directive.</i> <p>Units of Competency:</p> <p>CPCCCJN3004 Manufacture and assessmle joinery components</p> <ul style="list-style-type: none"> • <i>Rectified PC 3.1: 'Check components for accuracy, quality and suitabilityby dry-assembling components in their assembled positions'.</i> <p>CPCCCBS8001 Manage building surveying risks and ensure compliance with ethical and professional standards</p> <ul style="list-style-type: none"> • <i>Deleted due to low enrolments and lack of industry demand, as per the Australian Industry and Skills Committee (AISC) directive.</i> <p>CPCCCBS8002 Manage information on construction methods, materials and services for a building surveying team</p> <ul style="list-style-type: none"> • <i>Deleted due to low enrolments and lack of industry demand, as per the Australian Industry and Skills Committee (AISC) directive.</i> <p>CPCCCBS8003 Manage information on compliance requirements for a building surveying team</p> <ul style="list-style-type: none"> • <i>Deleted due to low enrolments and lack of industry demand, as per the Australian Industry and Skills Committee (AISC) directive.</i> <p>CPCCCBS8004 Advise on compliance of building design documentation</p> <ul style="list-style-type: none"> • <i>Deleted due to low enrolments and lack of industry demand, as per the Australian Industry and Skills Committee (AISC) directive.</i>
--	--	--

		<p>CPCCBS8005 Manage planning approval processes for all building types</p> <ul style="list-style-type: none"> Deleted due to low enrolments and lack of industry demand, as per the Australian Industry and Skills Committee (AISC) directive. <p>CPCCBS8006 Manage building approval processes for all building types</p> <ul style="list-style-type: none"> <i>Deleted due to low enrolments and lack of industry demand, as per the Australian Industry and Skills Committee (AISC) directive.</i> <p>CPCCBS8007 Monitor building work and advise on compliance issues</p> <ul style="list-style-type: none"> <i>Deleted due to low enrolments and lack of industry demand, as per the Australian Industry and Skills Committee (AISC) directive.</i> <p>CPCCBS8008 Conduct and manage the completion of building inspections and audits</p> <ul style="list-style-type: none"> <i>Deleted due to low enrolments and lack of industry demand, as per the Australian Industry and Skills Committee (AISC) directive.</i> <p>CPCCBS8009 Lead a building surveying team</p> <ul style="list-style-type: none"> <i>Deleted due to low enrolments and lack of industry demand, as per the Australian Industry and Skills Committee (AISC) directive.</i> <p>CPCCBS8010 Liaise and coordinate with head contractors on building projects</p> <ul style="list-style-type: none"> <i>Deleted due to low enrolments and lack of industry demand, as per the Australian Industry and Skills Committee (AISC) directive.</i> <p>CPCCBS8011 Assess and advise on performance-based solutions for all types of buildings</p> <ul style="list-style-type: none"> <i>Deleted due to low enrolments and lack of industry demand, as per the Australian Industry and Skills Committee (AISC) directive.</i> <p>Refer to Companion Volume Implementation Guide for further information.</p>
Release 6.0	8 January, 2021	<p>Building Surveying</p> <p>Revision of 1 qualification</p> <ul style="list-style-type: none"> CPC60121 Advanced Diploma of Building Surveying

		<p>Development of 1 new unit of competency</p> <p>Revision of 16 units of competency.</p> <p>Business Information Modelling (BIM)</p> <p>Development of 3 new units of competency.</p> <p>Skill sets</p> <p>Development of 2 new Skill Sets:</p> <ul style="list-style-type: none"> • CPCSS00005 Provide Building Surveying Services for Residential Buildings up to Three Storeys • CPCSS00006 Apply BIM Processes to Construction Work. <p>Minor update</p> <p>CPC40920 Certificate IV in Plumbing Services</p> <ul style="list-style-type: none"> • Typographical error rectified in unit CPCPWT4023. <p>Refer to Companion Volume Implementation Guide for further information.</p>
Release 5.1	23 December, 2020	<p>Bricklaying, Blocklaying and Stonemasonry</p> <p>2 Qualifications and 9 Units of competency</p> <p>Qualifications</p> <p>CPC32320 Certificate III in Stonemasonry</p> <ul style="list-style-type: none"> • <i>Minor changes to Core unit list for clarity. Correction to Release 1 version history.</i> <p>CPC33020 Certificate III in Bricklaying and Blocklaying</p> <ul style="list-style-type: none"> • <i>Title change in unit list for CPCCBL3017 Carry out tuck pointing brickwork.</i> <p>Units of competency</p> <p>CPCCBL3009 Install flashings and damp proof course</p> <ul style="list-style-type: none"> • <i>Knowledge Evidence formatted for clarity.</i> <p>CPCCBL3010 Construct masonry arches</p> <ul style="list-style-type: none"> • <i>Performance Evidence formatted for clarity.</i> <p>CPCCBL3011 Construct curved walls</p> <ul style="list-style-type: none"> • <i>Knowledge Evidence formatted for clarity</i> <p>CPCCBL3018 Install aerated autoclaved concrete products</p> <ul style="list-style-type: none"> • <i>Knowledge Evidence formatted for clarity</i>

		<p>CPCST2005 Carry out load slinging of off-site materials</p> <ul style="list-style-type: none"> • <i>Knowledge Evidence formatted for clarity.</i> <p>CPCST4004 Initiate the heritage works process</p> <ul style="list-style-type: none"> • <i>Typographical error corrected in Assessment Conditions.</i> <p>CPCST4005 Prepare drawings for heritage works</p> <ul style="list-style-type: none"> • <i>Unit Sector changed. Element 2.4 added to Performance Criteria. Foundation Skills formatted for clarity.</i> <p>CPCST4006 Prepare report for heritage restoration work</p> <ul style="list-style-type: none"> • <i>Knowledge Evidence formatted for clarity</i> <p>CPCST4007 Construct a fire brick wall and arch using refractory materials</p> <ul style="list-style-type: none"> • <i>Elements and Performance Criteria 1.1 rewritten for clarity.</i> <p>Building and Construction</p> <p>6 revised qualifications and 9 revised units of competency</p> <p>Qualifications</p> <p>CPC10120 Certificate I in Construction</p> <ul style="list-style-type: none"> • <i>Unit list typographical error corrected in code CPCWHS2001.</i> <p>CPC20220 Certificate II in Construction Pathways</p> <ul style="list-style-type: none"> • <i>Group I: General elective unit list is updated by removing "A" from the unit codes CPCPCM2043 and CPCPRF2022 and adding CPCPCM2055 Work safely on roofs as prerequisite requirement.</i> <p>CPC40120 Certificate IV in Building and Construction</p> <ul style="list-style-type: none"> • <i>Imported unit BSBPEF501 Manage personal and professional development replaced by BSBWOR501 Manage personal work priorities and professional development. Units listed alphanumerically.</i> <p>CPC40320 Certificate IV in Building Project Support</p> <ul style="list-style-type: none"> • <i>Imported unit BSBPMG522 Undertake project work replaced by BSBPMG430 Undertake project work.</i> <p>CPC50320 Diploma of Building and Construction</p>
--	--	--

(Management)

- *Correction to titles for imported elective units BSBOPS502 and BSBOPS505. Imported elective units BSBLDR522 Manage people performance and BSBLDR523 Lead and manage effective workplace relationships removed from Elective units.*

CPC60220 Advanced Diploma of Building and Construction (Management)

- *Mapping statement corrected. General elective units listed alphanumerically.*

Units of competency

CPCCCBC4002 Manage work health and safety in the building and construction workplace

- *Typographical error in Element and Performance Criteria 2.4 corrected.*

CPCCCBC4003 Select, prepare and administer a construction contract

- *Typographical error in Element and Performance Criteria 3.3 corrected*

CPCCCBC4007 Plan building and construction work

- *Performance Evidence formatted for clarity.*

CPCCCBC4008 Supervise site communication and administration processes for building and construction projects

- *Typographical error in Element 4 corrected. Typographical corrections in Performance Evidence.*

CPCCCBC4010 Apply structural principles to residential and commercial constructions

- *Correction to mapping*

CPCCCBC4022 Supervise tilt-up work

- *Weight corrected in Performance Evidence.*

CPCCCBC5005 Select and manage building and construction contractors

- *Performance Evidence formatted for clarity.*

CPCCCBC6013 Evaluate concrete performance for multi-storey buildings

- *Minor typographical error corrected in Foundation Skills.*

CPCSUS5001 Develop workplace policies and procedures for sustainability

- *Knowledge Evidence formatted for clarity.*

Building Completions

18 revised Units of competency

CPCCPB3019 Inspect equipment for serviceability

- *Knowledge Evidence formatted for clarity.*

CPCCRT2001 Handle roof tiling materials

- *Correction to Elements and Performance Evidence 4.1 and 4.2.*

CPCCRT3005 Slate a roof

- *Performance Evidence and Knowledge Evidence formatted for clarity. Changes to Performance Evidence.*

CPCCRT3006 Fix shingles to roofs and facades

- *Performance Evidence formatted for clarity.*

CPCCSP3003 Apply trowelled texture coat finishes

- *Minor edits to formatting in Element and Performance Criteria.*

CPCCSP3004 Restore and renovate solid plasterwork

- *Performance Evidence formatted for clarity.*

CPCCWC3002 Install and finish plasterboard and fibre cement sheeting to arch substrate

- *Formatting correction to Elements and Performance Criteria*

CPCCWF3005 Install decorative tiling

- *Knowledge Evidence formatted for clarity.*

CPCCWF3006 Install mosaic tiling

- *Correction to Elements and Performance Criteria 1 through 3.*

CPCCWF3008 Tile pools and spas

- *Knowledge Evidence formatted for clarity.*

CPCCWP2001 Handle waterproofing materials and components

- *Change to Unit Sector.*

CPCCWP2002 Use waterproofing tools and equipment

- *Change to Unit Sector.*

CPCCWP2004 Prepare surfaces for waterproofing application

- *Addition of points 1.6 and 1.7 to the Performance Criteria. Change to Unit Sector.*

CPCCWP3001 Apply waterproofing system to below ground level wet areas

- *Knowledge Evidence formatted for clarity. Change to Unit Sector.*

CPCCWP3002 Apply waterproofing process to internal wet areas

- *Changes to Performance Evidence and Unit Sector*

CPCCWP3003 Apply waterproofing process to external above-ground wet areas

- *Change to Unit Sector.*

CPCCWP3004 Apply waterproofing remedial processes

- *Change to Unit Sector.*

CPCCWP3005 Assess construction waterproofing processes

- *Change to Unit Sector.*

Carpentry and Joinery

1 revised Qualification and 9 Units of competency

Qualification

CPC30220 Certificate III in Carpentry

- *Rectified qualification to reflect endorsed version.*

Units of competency

CPCCCA2002 Use carpentry tools and equipment

- *Knowledge Evidence formatted for clarity.*

CPCCCA3005 Construct ceiling frames

- *Performance Criteria 3.3 removed*

CPCCCA3006 Erect roof trusses

- *Performance Evidence formatted for clarity*

CPCCCA3007 Construct Pitched Roofs

- *Title change. Knowledge Evidence formatted for clarity.*

CPCCCA3025 Read and interpret plans, specifications and drawings for carpentry work

- *Knowledge Evidence formatted for clarity*

CPCCCA3028 Erect and dismantle formwork for footings and slabs on ground

- *Equivalency changed to non-equivalent.*

CPCCJN3002 Use computer-controlled machinery

- *Typographical error in Mapping corrected for clarity*

CPCCJN3003 Manufacture components for doors, windows and frames

- *Performance Evidence formatted for clarity.*

CPCWHS3001 Identify construction work hazards and select risk control strategies

- *Minor typographical error corrected in Elements and Performance Criteria 3.5. Knowledge Evidence is formatted for clarity.*

Concreting

Revised 3 units of competency

CPCCON3055 Install topping slabs

- *Performance Evidence and Knowledge Evidence corrected.*

CPCCON3056 Conduct concrete pump delivery operations

- *Performance Criteria 3.1 rectified.*

CPCCON3057 Core concrete

- *Minor edits to formatting.*

Construction Pathways

1 revised Qualification and 5 Units of competency

Qualification

CPCCCO2013 Carry out concreting to simple forms

- *Knowledge Evidence formatted for clarity.*

Units of competency

CPCCOM1012 Work effectively and sustainably in the construction industry

- *Rectified to reflect endorsed version.*
CPCCOM1013 Plan and organise work
- *Rectified to reflect endorsed version.*
CPCCOM1014 Conduct workplace communication
- *Rectified to reflect endorsed version.*
CPCCOM1015 Carry out measurements and calculations
- *Rectified to reflect endorsed version.*
CPCCOM2001 Read and interpret plans and specifications
- *Knowledge Evidence formatted for clarity.*

Demolition

1 revised Qualification and 4 Units of competency

Qualification

CPC41020 Certificate IV in Demolition

- *Inclusion of CPCCWH2001 Apply WHS requirements, policies and procedures in the construction industry to the General Elective units*

Units of competency

CPCCDE3014 Remove non-friable asbestos

- *Rectified pre-requisite unit.*

CPCCDE3024 Operate mobile plant on suspended floors on demolition sites

- *Performance Criteria numbering rectified in Elements 3 and 6.*

CPCCDE3025 Operate remote-controlled plant on demolition sites

- *Rectified naming of Element 5.*

CPCCDE3026 Operate excavators at ground level to demolish building elements

- *Minor typographical errors rectified.*

High Risk Work

4 revised Qualifications and 10 Units of competency

Qualifications

CPC30720 Certificate III in Rigging

- *Typographical error in unit code corrected for clarity.*

CPC30920 Certificate III in Scaffolding

- *Typographical error in unit code corrected for clarity.*

CPC31120 Certificate III in Steelfixing

- *Typographical error in unit code corrected for clarity.*

CPC32920 Certificate III in Construction Crane Operations

- *Typographical error in unit code corrected for clarity.*

Units of competency

CPCCCO2014 Carry out concrete work

- *Correction to Foundation Skills.*

CPCCLDG3001 Licence to perform dogging

- *Minor edits to formatting*

CPCCLSF2001 Licence to erect, alter and dismantle scaffolding basic level

- *Minor edits to formatting.*

CPCCLSF4001 Licence to erect, alter and dismantle scaffolding advanced level

- *Minor edits to formatting.*

CPCCLTC4001 Licence to operate a tower crane

- *Minor edits to formatting.*

CPCCLTC4002 Licence to operate a self-erecting tower crane

- *Missing text in Element and Performance Criteria Point 2 corrected.*

CPCCRI3013 Perform intermediate rigging

- *Correction to Unit Mapping.*

CPCCRI3015 Perform advanced tilt-up slab erection

- *Minor edits to formatting.*

CPCCSC2002 Erect and dismantle basic scaffolding

- *Minor edits to formatting*

CPCCSC3001 Erect and dismantle intermediate scaffolding

- *Minor edits to formatting.*

Painting and Decorating

1 revised Qualification and 5 Units of competency

Qualification

CPC30620 Certificate III in Painting and Decorating

- *Typographical error in unit code corrected for clarity*

Units of competency

CPCCPD2013 Remove and replace doors and door and window components

- *Correction to Elements and Performance Criteria. Removal of duplicate Performance Criteria 4.5.*

CPCCPD3021 Prepare existing coated surface for painting

- *Minor edits to formatting.*

CPCCPD3023 Apply texture coat paint finishes by brush, roller and spray

- *Minor edits to formatting.*

CPCCPD3025 Match specific paint colours

- *Correction to unit mapping.*

CPCCPD3027 Remove and apply wallpaper

- *Minor edits to formatting.*

Plumbing

5 revised Qualifications and 78 units of competency.

Qualifications

CPC20720 Certificate II in Drainage

- *Correction to unit title CPCPCM3022 in Elective units*

CPC32420 Certificate III in Plumbing

- *Addition of CPCPRF2024 Fabricate roof coverings*

for curved structures to Group D Elective units.

CPC32620 Certificate III in Roof Plumbing

- *Addition of CPCPRF2024 Fabricate roof coverings for curved structures to Elective units.*

CPC32720 Certificate III in Gas Fitting

- *Title changed for CPCPCM3022 and an asterisk added to MEM11011 and MEM16006 for clarity.*

CPC32820 Certificate III in Fire Protection

- *Correction to unit title CPCPCM3022 in Elective units.*

Units of competency

CPCCPF3031

- *Knowledge Evidence is formatted for clarity.*

CPCCSV5009 Assess the impact of fire on building materials

- *Changes to the Application.*

CPCPCM2043 Carry out WHS requirements

- *Knowledge Evidence formatted for clarity.*

CPCPCM2043 Carry out WHS requirements

- *Knowledge Evidence formatted for clarity.*

CPCPCM2045 Handle and store plumbing materials

- *Correction to the Application*

CPCPCM2049 Cut using oxy acetylene equipment

- *Minor title change. Changes to Elements and Performance Criteria 2.3 and 3.1.*

CPCPCM2053 Weld using metal arc welding equipment

- *Performance Evidence formatted for clarity.*

CPCPCM2055 Work safely on roofs

- *Performance Evidence formatted for clarity.*

CPCPCM3022 Weld polymer pipes using fusion method

- *Changes to Pre-requisite unit.*

CPCPCM3023 Fabricate and install non-ferrous pressure piping

- *Changes to Element and Performance Criteria 2.2 and 3.5.*

CPCPCM3024 Prepare simple drawings

- *Knowledge Evidence formatted for clarity.*

CPCPCM3025 Install trench support

- *Typographical errors corrected in Element 1.3 and 3.1.*

CPCPCM4011 Carry out work-based risk control processes

- *Unit Sector added to unit.*

CPCPCM4012 Estimate and cost work

- *Changes to Elements and Performance Criteria 2.6.*

CPCPCM4013 Produce 2-D architectural drawings using design software

- *Changes to Knowledge Evidence.*

CPCPCM5010 Design complex sanitary plumbing and drainage systems

- *Changes to Elements and Performance Criteria 3.1 and 3.5.*

CPCPCM5011 Design complex cold water systems

- *Change to Elements and Performance Criteria 3.6.*

CPCPCM5012 Design complex stormwater and roof drainage systems

- *Changes to Application and Elements and Performance Criteria 4.4.*

CPCPCM5013 Design complex (non-solar) heated water systems

- *Changes to Elements and Performance Criteria 1.8.*

CPCPCM5014 Design sewer infrastructure systems

- *Changes to Elements and Performance Criteria 5.4.*

CPCPDR2021 Locate and clear blockages

- *Change to Elements and Performance Criteria 1.2 and 3.1.*

CPCPDR2025 Install stormwater and sub-soil drainage systems and drain work site

- *Changes to Elements and Performance Criteria 4.1.*

CPCPDR2026 Install prefabricated inspection openings and inspection chambers

- *Changes to Elements and Performance Criteria 3.2.*

CPCPDR3021 Plan layout and install below ground

sanitary drainage systems

- *Changes to Pre-requisite unit and Elements and Performance Criteria 1.3.*

CPCPDR4011 Design and size sanitary drainage systems

- *Performance Evidence formatted for clarity.*

CPCPDR4011 Design and size sanitary drainage systems

- *Performance Evidence formatted for clarity.*

CPCPDR4012 Design and size stormwater drainage systems

- *Element 2 title corrected. Performance Evidence formatted for clarity.*

CPCPFS2021 Connect static storage tanks for fixed fire protection systems

- *Duplicate Element and Performance Criteria 1.3 deleted.*

CPCPFS2022 Install portable fire equipment

- *Typographical error corrected in Element 2.1.*

CPCPFS3030 Design fire sprinkler systems using pre-calculated charts and tables

- *Performance Evidence formatted for clarity.*

CPCPFS3034 Install control valve assemblies, actuating devices and local alarms

- *Changes to Elements and Performance Criteria 1.1.*

CPCPFS3036 Install special hazard systems

- *Change to Elements and Performance Criteria 2.3.*

CPCPFS3038 Test and maintain fire hydrant and hose reel installations

- *Knowledge Evidence formatted for clarity.*

CPCPFS3040 Conduct basic functional testing of water-based fire-suppression systems

- *Changes to Elements and Performance Criteria 1.1, 2.1, 3.5 and 3.8.*

CPCPFS3041 Inspect and test fire pumpsets

- *Changes to Elements and Performance Criteria 2.1, 2.3 and 3.8. Performance Evidence is formatted for clarity.*

CPCPFS3042 Conduct annual routine service of complex water-based fire-suppression systems

- *Changes to Elements and Performance Criteria 1.3, 2.1, and 2.2.*

CPCPFS3043 Conduct functional water flow testing

- *Typographical error corrected in Element 1.6.*

CPCPFS3046 Test the integrity of water-based fire protection systems using pressure

- *Performance Evidence formatted for clarity.*

CPCPFS3049 Conduct preventive maintenance on fixed fire pumpsets

- *Typographical errors corrected in Pre-requisite unit and Element and Performance Criteria 1.3.*

CPCPFS4022 Commission and maintain special hazard fire suppression systems

- *Changes to Foundation Skills. Typographical error corrected in Elements and Performance Criteria 4.2.*

CPCPFS4024 Design residential fire sprinkler systems

- *Changes to Pre-requisite unit.*

CPCPFS4025 Commission fire alarm and detection system interface devices

- *Performance Evidence formatted for clarity.*

CPCPFS4027 Commission fire sprinkler systems

- *Knowledge Evidence formatted for clarity.*

CPCPFS5012 Design fire hydrant and hose reel systems

- *Changes to Foundation Skills. Typographical errors corrected in Elements and Performance Criteria 2.1, 2.2, and 2.7.*

CPCPGS3049 Install gas appliance flues

- *Performance Evidence formatted for clarity.*

CPCPGS3052 Maintain Type A gas appliances

- *Changes to Elements and Performance Criteria 3.4.*

CPCPGS3056 Size and install consumer gas piping systems

- *Changes to Application*

CPCPGS3060 Install LPG storage of aggregate storage capacity exceeding 500 litres and less than 8 kl

- *Change to Pre-requisite unit.*

CPCPGS3061 Install and commission Type A gas appliances

- *Changes to Elements and Performance Criteria 1 and 4.1.*

CPCPGS4023 Install, commission and service Type B gas appliances

- *Typographical error corrected in Element and Performance Criteria 6.2.*

CPCPIG2021 Design domestic urban irrigation systems

- *Changes to Application and Elements and Performance Criteria 1.6.*

CPCPIG3022 Install and commission domestic irrigation pumps

- *Knowledge Evidence formatted for clarity.*

CPCPMS3032 Select and fit insulation and sheathing

- *Changes to Application and Typographical errors corrected in Elements and Performance Criteria 3.3.*

CPCPMS3034 Install and test medical gas pipeline systems

- *Changes to Application and Elements and Performance Criteria 1, 2, 3.*

CPCPMS3035 Install and test ducting systems

- *Typographical error corrected in Element and Performance Criteria 3.4.*

CPCPMS3036 Install air handling units

- *Knowledge Evidence formatted for clarity.*

CPCPMS3037 Install and commission a single head split system air conditioning

- *Elements and Performance Criteria 3.9 and 3.10 is deleted.*

CPCPMS3038 Install air conditioning control equipment

- *Typographical error corrected in Element 2.1.*

CPCPMS3039 Maintain mechanical services equipment

- *Typographical error corrected in Application and Element 2.1.*

CPCPMS4022 Commission air and water systems

- *Knowledge Evidence formatted for clarity.*

CPCPMS5012 Design sound attenuated hydraulic services

- *Knowledge Evidence formatted for clarity.*

CPCPMS5013 Design hydronic heating and cooling systems

- *Performance Evidence formatted for clarity.*

CPCPPS5000 Design gas bulk storage systems

- *Element and Performance Criteria 2.9 rewritten for clarity.*

CPCPPS5014 Locate and maintain piping systems

- *Performance Evidence formatted for clarity.*

CPCPPS5025 Design grey water re-use systems

- *Typographical error corrected in Element 1.7.*

CPCPPS5033

- *Changes to Pre-requisite unit. Performance Evidence is reformatted for clarity.*

CPCPRF2022 Select and install roof sheeting and wall cladding

- *Typographical error corrected in Element 5 and Performance Evidence reformatted for clarity.*

CPCPRF2024 Fabricate roof coverings for curved structures

- *Typographical error corrected in Element and Performance Criteria 3.4.*

CPCPRF3024 Install roof components

- *Typographical error corrected in Element and Performance Criteria 1.1.*

CPCPRF3027 Select and install a heritage roof system

- *Typographical error corrected in Element 1.1.*

CPCPSN3011 Plan the layout of a residential sanitary plumbing system and fabricate and install sanitary stacks

- *Change to Pre-requisite unit. Correction to Knowledge Evidence.*

CPCPSN3011 Plan the layout of a residential sanitary plumbing system and fabricate and install sanitary stacks

- *Change to Pre-requisite unit. Correction to Knowledge Evidence.*

CPCPSN3026 Install sewerage pumpsets

- *Typographical error corrected in Element 1.1.*

CPCPWT3022 Install and commission water heating systems and adjust controls and devices

- *Minor change in Performance Evidence for clarity.*

CPCPWT3027 Install backflow prevention devices

- *Typographical error in Elements and Performance Criteria 1 corrected.*

CPCPWT3029 Install water pipe systems

- *Changes to Knowledge Evidence.*

CPCPWT3030 Install home fire sprinkler systems

- *Typographical error corrected in Element 1.1.*

CPCSFS5017 Create detailed designs for foam suppression systems

- *Application reformatted and typographical error in Knowledge Evidence corrected.*

Shopfitting

3 revised Units of competency

CPCSHP3002 Fabricate and assemble shopfront structures

- *Rectified numbering of Performance Criteria.*

CPCSHP3009 Demolish shopfronts and bulkheads

- *Performance Criteria numbering rectified and Modification History rectified.*

CPCSHP3010 Prepare shop floors for new coverings

- *Minor edits to formatting.*

Signs and Graphics

1 revised Qualification and 1 revised Unit of competency

Qualification

CPC30216 Certificate III in Signs and Graphics

- *Imported units updated to current releases*

CPCSS00005 Provide Building Surveying Services for Residential Buildings up to Three Storeys

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Version 6.0.
- Updated to reflect current industry requirements for the building surveying scope to incorporate residential buildings up to three storeys and a maximum of 2,000 square metres.
- Two new units included in the skill set:
- CPCCBS6103 Identify and apply legal and ethical requirements to building surveying functions
 - CPCCBS6118 Assess and advise on performance solutions for Class 1 and 10 buildings to three storeys.

Description

This skill set covers the competencies required by restricted building surveyors or certifiers who implement statutory building surveying requirements or provide advisory building surveying services limited to Class 1 and 10 buildings as defined in the National Construction Code (NCC), up to three storeys and not exceeding 2,000 square metres in floor area.

Pathways Information

Completion of this skill set provides credit towards CPC60120 Advanced Diploma of Building Surveying.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this Skill Set at the time of publication.

Skill Set Requirements

- CPCCBS6101 Research and evaluate construction methods and materials for Class 1 and 10 buildings to three storeys
- CPCCBS6103 Identify and apply legal and ethical requirements to building surveying functions

- CPCCBS6104 Assess and advise on compliance of design documentation for Class 1 and 10 buildings to three storeys
- CPCCBS6107 Prepare planning and development applications for buildings to three storeys
- CPCCBS6108 Process building applications for Class 1 and 10 buildings to three storeys
- CPCCBS6110 Conduct and report on building surveying audits of Class 1 and 10 buildings to three storeys
- CPCCBS6112 Conduct and report on initial construction inspections of Class 1 and 10 buildings to three storeys
- CPCCBS6114 Conduct and report on advanced and final inspections of Class 1 and 10 buildings to three storeys
- CPCCBS6118 Assess and advise on performance solutions for Class 1 and 10 buildings to three storeys

Target Group

This skill set is for people currently working as, or intending to work as, private or municipal building surveyors specifically limited to Class 1 and 10 buildings as defined in the NCC.

Suggested words for Statement of Attainment

These units from CPC Construction, Plumbing and Services Training Package meet industry requirements for restricted building surveyors to undertake building surveying services limited to Class 1 and 10 buildings as defined in the NCC.

CPCSS00006 Apply BIM Processes to Construction Work

Modification History

Release 1 This Skill Set first released with CPC Construction, Plumbing and Services Training Package Release 6.0.

Description

This Skill Set addresses the skills and knowledge required to apply Building Information Modelling (BIM) processes when conducting construction work on a BIM project.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pathways Information

Units from this Skill Set can contribute to credit towards CPC40120 Certificate IV in Building and Construction and CPC50320 Diploma of Building and Construction (Management).

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this Skill Set at the time of publication.

Skill Set Requirements

- CPCBIM4001 Plan to comply with BIM requirements for construction work
- CPCBIM4002 Use BIM processes to carry out construction work
- CPCBIM4003 Contribute to BIM deliverables for construction work

Target Group

This Skill Set is for builders, tradespersons, project and site managers who work on projects that incorporate BIM interaction, collaboration and deliverables.

Suggested words for Statement of Attainment

These units of competency from the CPC Construction, Plumbing and Services Training Package meet industry requirements for applying Building Information Modelling (BIM) processes to construction.
