 - 3.1 Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.

- 3.2 Clean, check, maintain and store tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCON3057 Core concrete

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Minor edits to formatting.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by coring concrete on two different occasions including coring one hole in a vertical concrete surface, clear through a minimum of 100 millimetres in depth.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of legislation, regulations, codes and Australian Standards relevant to concrete coring tasks:
 - environmental protection and waste disposal
 - tolerances for alignment associated with core drilling diameters and lengths
 - work health and safety (WHS)
- concrete coring processes and techniques:
 - setting out and marking up drill holes
 - methods for safely securing and removing plugs
- core drilling system components and applications:
 - diamond drill bit
 - drilling accessories
 - drill motor
 - drill stand
- typical hazards associated with concrete coring using drilling systems, and risk control methods for each:
 - electrocution
 - silica dust exposure
 - toxic fumes

- workplace requirements for coring concrete:
 - cleaning up the work area
 - maintaining and storing tools and equipment
 - quality
 - reporting problems
 - safety requirements including dust suppression and personal protective equipment (PPE).

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to documentation, specifications, concrete, tools and equipment required to achieve the performance evidence.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCPA3001 Prepare subgrade, base and bedding course for segmental paving

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPA3001A Prepare subgrade, base and bedding course for segmental paving. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to use various materials to prepare subgrade, base and bedding courses in preparation for laying segmental paving. It includes identifying soil types, determining levels and grades, calculating material and screeding and compacting base materials.

This unit applies to those who pave external areas on new and existing sites. It is suitable for people operating with some autonomy. A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Bricklaying and Blocklaying

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Plan the work.
 - 1.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 1.2 Read and interpret subgrade, base and bedding material requirements from current plans, specifications, standards and codes.
 - 1.3 Follow relevant information from workplace procedures, workplace safety and environmental documentation.
 - 1.4 Identify type and class of soil using soil charts and determine its properties.
 - 1.5 Determine subgrade requirements from penetration test results.
 - 1.6 Calculate material quantities using measurements and formulas.
 - 1.7 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.8 Identify underground services and potential hazards and determine and implement control measures.
 - 2 Prepare for work.
 - 2.1 Select and check condition of equipment and tools and report any damage or faults to relevant person.
 - 2.2 Check conformity of materials against the specifications and place materials in preparation for the work.
 - 2.3 Identify drainage needs and apply remedial action.
 - 2.4 Identify termite barriers and damp-proof courses and ensure integrity is maintained and not compromised during paving construction.
 - 3 Excavate the site and install base course.
 - 3.1 Set out finish height of pavers, grades and excavation depth according to plan and specifications.
 - 3.2 Calculate the bulking factor for different soil types.
 - 3.3 Remove top soil, weeds and their roots.

	3.4	Excavate site to required depth and remove spoil using appropriate equipment.
	3.5	Distribute and compact base material.
4 Install bedding course material.	4.1	Install geotextile material as a drainage or a separation layer.
	4.2	Stabilise bedding course for area with slopes of greater than 1:15 and install transverse concrete supports for driveways with a sloping pavement of greater than 5 metres.
	4.3	Distribute and compact bedding material.
5 Screed base material.	5.1	Screed bedding material to set out heights.
	5.2	Remove excess material.
6 Clean up.	6.1	Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
	6.2	Clean tools and equipment, check for serviceability and report damage or faults.
	6.3	Store and secure tools and equipment following workplace procedures.

Foundation Skills

Candidates require:

- technology skills to:
 - use digital tools and devices to source job information and communicate effectively with others.

Unit Mapping Information

Supersedes and is equivalent to CPCCPA3001A Prepare subgrade, base and bedding course for segmental paving

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCCPA3001 Prepare subgrade, base and bedding course for segmental paving

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPA3001A Prepare subgrade, base and bedding course for segmental paving. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by preparing an area of a minimum of 2.0 m x 3.0 m for segmental paving.

In doing this, the candidate must:

- excavate the area to be paved using manual and mechanical means
- install suitable surface and subsoil drainage
- compact subgrade, based and bedding courses to required compaction specifications
- screed bedding material flat and avoid any ponding.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of approved paving materials:
 - various bedding materials
 - types of segmental pavers
 - waterproofing materials
 - geotextile materials
 - mortar ingredients and consistency
- soil types
- processes and techniques relating to paving:
 - manual and mechanical excavation
 - compacting subgrades, bases and bedding courses
 - stabilising bedding sand
 - laying of various paving patterns
- terminology relating to paving
- principles of California bearing ratio (CBR)
- brick and paver expansion, and control and articulation joints

- functional and operational features of plant, equipment and hand and power tools:
 - skid steer loader
 - backhoe
 - excavator
 - plate compactors
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - hazardous manual tasks
 - overhead and underground hazards
 - operating excavation and compacting equipment
 - exposure to silica
 - exposure to loud noise
- features of working drawings and specifications
- environmental requirements for workplace processes and waste disposal
- specifications relating to preparing subgrades, bases and bedding for paving.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCPA3002 Lay segmental paving

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPA3002A Lay segmental pavers. Minor title change. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to lay segmental pavers on prepared subgrade and base. It applies to people who set out and lay a range of segmental pavers to external areas of new and existing sites.

This unit is suitable for people operating with some autonomy. A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Bricklaying and Blocklaying

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan the work.

1.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.

- 1.2 Read, interpret and apply laying segmental paving requirements from current plans, specifications, standards and codes.
 - 1.3 Follow requirements in workplace safety and environmental documentation and workplace procedures relevant to work activity.
 - 1.4 Use measurements and apply formulas to calculate material quantities.
 - 1.5 Determine job priorities and sequence job tasks in consultation with others on site.
- 2 Prepare for work.
- 2.1 Select and check condition of equipment and tools and report any damage or faults to relevant person.
 - 2.2 Check conformity of materials and pavers for fit for purpose, size, dimension, colour and imperfections.
 - 2.3 Stack rejected pavers aside to use for cuts.
 - 2.4 Stack pavers in preparation for the work.
- 3 Lay pavers.
- 3.1 Set out stringline grid squares to establish guide levels and lines.
 - 3.2 Lay pavers to design pattern with localised stresses between adjacent pavers reduced.
 - 3.3 Check, adjust and maintain allowable tolerances during laying of pavers.
- 4 Clean up.
- 4.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 4.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 4.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Candidates require:

- technology skills to:
 - use digital tools and devices to source job information and communicate effectively with others.

Unit Mapping Information

Supersedes and is equivalent to CPCCPA3002A Lay segmental pavers

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCCPA3002 Lay segmental paving

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPA3002A Lay segmental pavers. Minor title change. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by laying segmental paving, to a specified design, to an area of a minimum of 2.0 m x 3.0 m.

In doing this, the candidate must:

- lay specified pavers to a flat surface avoiding ponding
- maintain equal joints and spacing to allowable tolerances stated in manufacturer's specifications.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of approved paving materials:
 - various bedding materials
 - types of segmental pavers
 - waterproofing materials
 - geotextile materials
 - mortar ingredients and consistency
- processes and techniques relating to paving:
 - stabilising bedding sand
 - laying of various paving designs and patterns
 - efficient laying practices:
 - with consideration of direction of fall or slope of job
 - good access to materials
 - minimising cuts
 - working around existing structures and penetrations
- construction terminology relating to paving

- brick and paver expansion and, control and articulation joints
- functional and operational features of plant, equipment and hand and power tools
- workplace safety requirements:
 - job safety and environmental analysis (JSEA)
 - hazardous manual tasks
 - electrical hazards
 - exposure to silica
 - exposure to loud noise
- current and relevant Australian standards and building codes
- features of working drawings and specification
- environmental requirements for workplace processes and waste disposal
- manufacturer's specifications relating to paving products.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCPA3003 Cut segmental paving

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPA3003A Cut segmental pavers. Minor title change. Updated to meet the Standards for Training Packages.

Application

This unit specifies the skills and knowledge required to measure, mark and cut segmental paving. It includes the use of paver cutting tools.

This unit applies to those who cut segmental pavers as part of the completion of paving work on external areas of new and existing sites. It is suitable for people operating with some autonomy. A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Bricklaying and Blocklaying

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan the work.

1.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.

- | | | |
|-------------------------------|-----|---|
| | 1.2 | Follow requirements in workplace safety and environmental documentation and workplace procedures. |
| | 1.3 | Determine job priorities and sequence job tasks in consultation with others on site. |
| 2 Prepare for and cut pavers. | 2.1 | Select and check condition of cutting equipment and tools and report any damage or faults to relevant person. |
| | 2.2 | Check conformity of pavers to be cut and place materials in preparation for cutting. |
| | 2.3 | Set up, stabilise and level cutting saw and appropriately discharge overflow water. |
| | 2.4 | Determine if saw blades are water cooled and examine for sharpness and damage. |
| | 2.5 | Measure, mark and accurately cut and trim pavers. |
| 3 Clean up. | 3.1 | Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements. |
| | 3.2 | Clean tools and equipment, check for serviceability and report damage or faults. |
| | 3.3 | Store and secure tools and equipment following workplace procedures. |

Foundation Skills

Candidates require:

- numeracy skills to:
 - read and accurately transfer measurements to materials for cutting
- technology skills to:
 - use digital tools and devices to source job information and communicate effectively with others.
 -

Unit Mapping Information

Assessment Requirements for CPCCPA3003 Cut segmental paving

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPA3003A Cut segmental pavers. Minor title change. Updated to meet the Standards for Training Packages.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by measuring and cutting all required pavers for a paving project, minimum of 2.0 m x 3.0 m.

In doing this, the candidate must:

- use a wet cut brick saw to cut paver shapes
- use a bolster and other hand tools to trim cut pavers.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of specified paving products
- processes and techniques relating to paving:
 - laying of various paving patterns
 - cutting angles, concave, convex, straight and undercuts and insert cuts
- terminology relating to paving
- brick and paver expansion and, control and articulation joints
- functional and operational features of plant, equipment and hand and power tools
- workplace safety requirements:
 - job safety and environmental analysis (JSEA)
 - hazardous manual tasks
 - electrical hazards
 - noise reduction
 - dust suppression
 - exposure to loud noise
 - exposure to silica
- environmental requirements for workplace processes and waste disposal.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCPA3004 Finish segmental paving

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPA3004A Finish segmental paving.
Minor title change. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to finish paving work by setting pavers using a variety of materials.

This unit applies to those who finish paving on external areas on new and existing sites. It is suitable for people operating with some autonomy. A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Bricklaying, Blocklaying and Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare the work.

1.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.

- 1.2 Read, interpret and apply finish segmental paving requirements from current plans and specifications.
 - 1.3 Follow requirements in workplace safety and environmental documentation and workplace procedures.
 - 1.4 Use measurements and apply formulas to calculate material quantities.
 - 1.5 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.6 Select and check condition of equipment and tools and report any damage or faults to relevant person.
 - 1.7 Check conformity of materials against the specifications and place materials in in preparation for the work.
- 2 Set segmental pavers.
- 2.1 Secure paved area with an edging course as specified.
 - 2.2 Set segmental pavers with specified material and compact.
 - 2.3 Repeat setting process as required to ensure joints are full.
 - 2.4 Check paving for chipped, cracked or damaged pavers and replace.
- 3 Clean up.
- 3.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 3.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 3.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Candidates require:

- technology skills to:

- use digital tools and devices to source job information and communicate effectively with others.

Unit Mapping Information

Supersedes and is equivalent to CPCCPA3004A Finish segmental paving

Assessment Requirements for CPCCPA3004 Finish segmental paving

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPA3004A Finish segmental paving.
Minor title change. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by setting and finishing a paving project, minimum of 2.0 m x 3.0 m.

In doing this, the candidate must:

- secure the edging course in mortar
- set paving in sand, pebbles or mortar.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of approved paving materials:
 - types of segmental pavers
 - mortar ingredients and consistency
 - setting materials
 - sealing products
- processes and techniques relating to paving:
 - securing edging course using different methods
 - compacting and rolling during setting
- terminology relating to paving
- effect of salt and chlorine in pools on pavers, mortar and other bonding agents
- principles of vertical interlock, rotational interlock and horizontal interlock
- brick and paver expansion and, control and articulation joints
- functional and operational features of plant, equipment and hand and power tools:
 - plate compactors
 - rollers
- workplace safety requirements:
 - job safety and environmental analysis (JSEA)

- hazardous manual tasks
- exposure to silica
- exposure to loud noise
- environmental requirements for workplace processes and waste disposal.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCPA3005 Maintain and repair segmental paving

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPA3005A Maintain and repair segmental paving. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to undertake remedial action when maintaining and repairing segmental paving. It includes removing and replacing damaged or worn pavers and paving joints.

This unit applies to people who maintain and repair segmental pavers to external areas on new and existing sites. It is suitable for people operating with some autonomy. A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Bricklaying, Blocklaying and Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan the work.

1.1 Select, fit correctly and use personal protective

- equipment (PPE) appropriate for job.
- 1.2 Read, interpret and apply maintenance and repair of segmental paving requirements from specifications and work instructions.
 - 1.3 Follow requirements in workplace safety and environmental documentation and workplace procedures.
 - 1.4 Assess paved area for damage, wear or settlement.
 - 1.5 Identify factors relating to problems and develop remedial action.
 - 1.6 Use measurements and apply formulas to calculate material quantities.
- 2 Prepare for work.
- 2.1 Determine job priorities and sequence job tasks in consultation with others on site.
 - 2.2 Select and check condition of equipment and tools and report any damage or faults to relevant person.
 - 2.3 Check conformity of materials for size, dimension, colour and imperfections.
- 3 Carry out remedial action.
- 3.1 Remove required pavers without damage to surrounding pavers.
 - 3.2 Compact subgrade and reinstate pavers maintaining uniform joints.
 - 3.3 Set joints with matching material.
 - 3.4 Identify stains and undertake appropriate cleaning methods.
 - 3.5 Recognise causes of efflorescence and minimise condition.
- 4 Clean up.
- 4.1 Clear the work area, and dispose of, reuse or recycle workplace and environmental requirements
 - 4.2 Clean tools and equipment, check for serviceability and

report damage or faults.

- 4.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Candidates require:

- technology skills to use digital tools and devices to source job information and communicate effectively with others.

Unit Mapping Information

Supersedes and is equivalent to CPCCPA3005A Maintain and repair segmental paving

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCPA3005 Maintain and repair segmental paving

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPA3005A Maintain and repair segmental paving. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by removing and replacing a minimum of 12 damaged or worn pavers and repairing a minimum of 1.5 metres square sunken pavers.

In doing this, the candidate must:

- remove damaged, worn or sunken pavers without damage to surrounding pavers
- spread and compact bed to height of existing bed
- replace or return pavers with even and consistent joints
- set joints fully and clean area.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of specified paving materials:
 - sealing products
 - masonry cleaning chemicals
- processes and techniques relating to paving:
 - removing damaged pavers using various methods
 - laying of various paving designs and patterns
 - using various hand and pressure cleaning methods
- terminology relating to paving
- functional and operational features of plant, equipment and hand and power tools:
 - wet cut saw
 - plate compactors
 - rollers
- workplace safety requirements:
 - job safety and environmental analysis (JSEA)

- hazardous manual tasks
- electrical hazards
- exposure to silica
- exposure to loud noise
- environmental requirements for workplace processes and waste disposal.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCPB3001 Fix standard plasterboard wall sheets

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3001A Fix standard plasterboard wall sheets. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to fix standard plasterboard wall sheets to comply with manufacturers' and job specifications.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit CPCCWHS1001 Prepare to work safely in the construction industry meets this requirement.

Licensing, legislative and/or certification requirements may apply to this unit in some states/territories.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plasterboard

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|--|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions, determine sign-off requirements, plan sequence of work and complete notifications. |
|---------------------|--|

- 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.
 - 1.3 Select and use personal protective equipment (PPE) for each stage of the task.
 - 1.4 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Collect evidence that the carpenter has completed the substrate to be plaster ready.
 - 1.6 Select tools and equipment, check for serviceability and report any faults that may affect the safe operation of the equipment, tag equipment and set aside.
 - 1.7 Select materials required for task, including insulation, calculate quantities, handle safely and prepare and position ready for use.
- 2 Plan and cut wall sheets.
- 2.1 Determine work sequences, fixing processes and back blocking wall sheets from manufacturers' specifications and AS/NZS2589 Gypsum linings - application and finishing.
 - 2.2 Match sheet size to wall dimensions.
 - 2.3 Plan cuts to locate joints over windows and doors to minimise effects of movement.
 - 2.4 Plan cutting process to minimise dust exposure.
 - 2.5 Mark cables without brackets as directed.
 - 2.6 Follow manufacturers' specifications for cutting process and provision for penetrations.
 - 2.7 Cut sheets to minimise waste and number of joints, maximise board use, and leave openings for power points.

- | | | | |
|---|---------------------------|-----|--|
| 3 | Fix standard wall sheets. | 3.1 | Hang and fix sheets using manual handling techniques and following manufacturers' specifications, ensuring the sheets have appropriate gap from the floor. |
| | | 3.2 | Check work to ensure stop-up activities can be easily completed. |
| | | | |
| 4 | Clean up. | 4.1 | Clear work area and dispose of, reuse or recycle materials. |
| | | 4.2 | Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCPB3001A Fix standard plasterboard wall sheets

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCPB3001 Fix standard plasterboard wall sheets

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3001A Fix standard plasterboard wall sheets. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by fixing a minimum 15 square metres of plasterboard wall sheets, including:

- butt joints between studs
- backblocking joints
- provisions for a door and a window opening
- joints positioned over windows and doors away from the corner of the opening
- a penetration for electrical and plumbing services.

All work must be performed to the standard required in the workplace and must comply with Commonwealth and state/territory laws and regulations, the National Construction Code, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards for fixing plasterboard sheets, including AS/NZS2589 Gypsum linings - application and finishing
- levels of finish, including notifications required for application for level 5
- requirements for spacing of stud adhesive and temporary blocks
- quality policies and standards for fixing plasterboard sheets
- safety requirements, including personal protective equipment (PPE), job safety analyses and safety data sheets
- processes for safe handling and lifting of standard plasterboard sheets
- environmental requirements for fixing standard plasterboard sheets
- manufacturers' product specifications for fixing wall sheets
- types and uses of adhesives and fasteners for fixing standard plasterboard sheets

- materials storage and environmentally friendly waste management
- plans, drawings and specifications for fixing standard plasterboard sheets
- plasterboard fixing techniques for standard plasterboard sheets
- plasterboard materials
- processes for the calculation of material requirements for fixing standard plasterboard sheets
- types of tools and equipment for fixing standard plasterboard sheets.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCPB3002 Fix standard plasterboard ceiling sheets

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3002A Fix standard plasterboard ceiling sheets. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to hang and fix standard plasterboard ceiling sheets.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001* Prepare to work safely in the construction industry meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plasterboard

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|---|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions, determine sign-off requirements for plaster-ready background, plan sequence of work and complete notifications. |
|---------------------|---|

- 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.
 - 1.3 Select and use personal protective equipment (PPE) for each stage of the task.
 - 1.4 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Collect evidence that the carpenter has completed the substrate to be plaster ready.
 - 1.6 Select tools and equipment, check for serviceability and report any faults that may affect the safe operation of the equipment, tag equipment and set aside.
 - 1.7 Select materials required for task, including insulation, calculate quantities, handle safely and prepare and position ready for use.
- 2 Plan and cut ceiling sheets.
- 2.1 Check framing is suitable for fixing the ceiling sheets.
 - 2.2 Match sheet size to ceiling dimensions and plan cuts to minimise waste and joints while maximising board use.
 - 2.3 Select screw types to suit metal or timber ceiling frame, or furring channel.
 - 2.4 Plan cuts to locate joints where the effect of glancing light highlighting jointing is minimised.
 - 2.5 Follow manufacturers' specifications for cutting process and provision for penetrations.
 - 2.6 Cut sheets, minimising dust exposure to others, and drilling or sawing openings as required.
- 3 Fix standard ceiling sheets to frames and furring channel.
- 3.1 Hang and fix sheets using manual handling techniques and following manufacturers' specifications.
 - 3.2 Check completed work to ensure stop-up activities can

be easily completed.

- 4 Clean up.
 - 4.1 Clear work area and dispose of, reuse or recycle materials.
 - 4.2 Clean, check, maintain and store plant, tools and equipment in accordance with manufacturers' specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCPB3002A Fix standard plasterboard ceiling sheets

Links

Assessment Requirements for CPCCPB3002 Fix standard plasterboard ceiling sheets

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3002A Fix standard plasterboard ceiling sheets. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by fixing two butted 15 square metres of plasterboard ceiling sheets to each of:

- a frame
- furring channels.

All work must be performed to the standard required in the workplace and must comply with Commonwealth and state/territory laws and regulations, the National Construction Code, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards for fixing standard plasterboard ceiling sheets, including AS/NZS2589 Gypsum linings - application and finishing
- levels of finish, including notifications required for application for level 5
- requirements for spacing of stud adhesive and temporary blocks
- quality policies and standards for fixing standard plasterboard ceiling sheets
- safety requirements fixing standard plasterboard sheets, including personal protective equipment (PPE), job safety analyses, safe work method statements and safety data sheets
- processes for safe handling and lifting of ceiling sheets
- environmental requirements for fixing standard plasterboard ceiling sheets
- manufacturers' product installation procedures and nominated specifications for fixing standard ceiling sheets
- types and uses of adhesives and fasteners for fixing standard plasterboard ceiling sheets
- techniques for fixing standard plasterboard ceiling sheets
- plasterboard materials

- materials storage and environmentally friendly waste management
- processes for fixing plasterboard ceiling sheets to furring channels and timber and metal frames
- plans, drawings and specifications fixing standard plasterboard ceiling sheets
- processes for the calculation of material requirements for fixing standard ceiling sheets
- types and uses of tools and equipment types for fixing standard plasterboard ceiling sheets.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPB3003 Fix battens

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3003A Fix battens. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to fix battens to ceiling joists or roof trusses when preparing to fix ceiling system sheets.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plasterboard

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|---|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions and plan sequence of work. |
| | 1.2 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and |

- environmental requirements, manufacturers' specifications, and workplace requirements.
- 1.3 Select and use personal protective equipment (PPE) for each stage of the task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults that may affect the safe operation of the equipment, tag equipment and set aside.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
 - 1.7 Check joists and trusses are suitable for fixing battens and note any requirement to correct unevenness.
 - 1.8 Select fasteners to fix battens.
- 2 Cut and fix battens.
- 2.1 Use packing materials to correct uneven joists.
 - 2.2 Measure and cut battens.
 - 2.3 Fix battens using selected fasteners at specified centres following manufacturers' specifications and allowing for control joints.
 - 2.4 Check completed work for alignment and fixing.
- 3 Clean up.
- 3.1 Clear work area and dispose of, reuse or recycle materials.
 - 3.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Assessment Requirements for CPCCPB3003 Fix battens

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3003A Fix battens. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by fixing battens for a 9 square metre ceiling, including at least one control joint.

All work must be performed to the standard required in the workplace and must comply with Commonwealth and state/territory laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of Australian Standards for fixing battens
- quality policies and standards for fixing battens
- safety requirements for fixing battens, including personal protective equipment (PPE), job safety analyses, safe work method statements and safety data sheets
- environmental requirements for fixing battens
- plans, drawings and specifications for fixing battens
- batten fixing techniques
- control joints
- types of tools and equipment for fixing battens.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures

- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPB3004 Fix wet area sheets

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3004A Fix wet area sheets. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to fix wet area sheets to comply with manufacturer and job specifications.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Assessment Requirements for CPCCPB3006 Fix fibre cement board

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3006A Fix fibre cement board. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by fixing a minimum 15 square metres of fibre cement board.

All work must be performed to the standard required in the workplace and must comply with Commonwealth and state/territory laws and regulations, the National Construction Code, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards for fixing fibre cement boards
- quality policies and standards for fixing fibre cement boards
- requirements for wet areas that will be tiled, and for wet areas that will be non-tiled
- safety requirements for fixing fibre cement boards, including personal protective equipment (PPE), job safety analyses, safe work method statements and safety data sheets
- processes for safe handling and lifting of fibre cement boards
- environmental requirements for fixing fibre cement boards
- manufacturers' product installation procedures and nominated specifications for fixing fibre cement boards
- types and uses of adhesives and fasteners for fibre cement boards
- fibre cement board materials
- materials storage and environmentally friendly waste management
- plans, drawings and specifications for fixing fibre cement boards
- fixing techniques for fibre cement boards
- processes for the calculation of material requirements for fixing fibre cement boards
- types of tools and equipment for fixing fibre cement boards.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPB3007 Apply levels of finish standards to planning and inspection of own work

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3007A Apply levels of finish standards to planning and inspection of own work. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to identify the level of finish standards and their application to the planning and inspection of own work.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plasterboard

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Prepare for task.

1.1 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian

- Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.
- 1.2 Select and use personal protective equipment (PPE) for each stage of the task.
- 2 Plan to achieve required levels of finish.
- 2.1 Assess workplace documents and specifications to establish and describe required levels of finish and related process requirements.
- 2.2 Plan use of materials and work processes to meet required level of finish.
- 3 Inspect completed work for level of finish.
- 3.1 Assess distinguishing features of levels of finish in the completed work against finish requirements.
- 3.2 Describe effects of framing tolerances, windows, light fittings and location of joints on finish of plasterboard.
- 3.3 Inspect build-up on joints for effect on level of finish.
- 3.4 Describe and assess classification level of finish of inspected work, identify problems to level of finish and select method of rectification.
- 3.5 Determine and describe requirements for painting of finished surface

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCCPB3007 Apply levels of finish standards to planning and inspection of own work

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3007A Apply levels of finish standards to planning and inspection of own work. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by planning, inspecting and reporting on application of level 3, 4 and 5 finishes to a minimum of 15 square metres of own work.

All work must be performed to the standard required in the workplace and must comply with Commonwealth and state/territory laws and regulations, the National Construction Code, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards for applying levels of finish standards to planning and inspection of work
- quality policies and standards for applying levels of finish standards to planning and inspection of work
- safety requirements for applying levels of finish standards to planning and inspection of work
- features and applications of each level of finish
- manufacturers' product installation procedures and nominated specifications for the work process to produce level 3, 4 and 5 finishes
- effect of quality of work of other trades on plastering finishes
- methods of rectification of problems finishes
- faults in building structure, materials quality and finished joints and edges that will influence finish
- documentation of finishes and their application.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPB3008 Mix plastering compounds

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3008A Mix plastering compounds.
Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to mix plastering compounds using hand and mechanical mixing techniques.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plasterboard

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|---------------------|-----|---|
| 1 Plan and prepare. | 1.1 | Read and interpret work instructions and plan sequence of work. |
| | 1.2 | Plan all work to comply with laws and regulations, work health and safety (WHS) and environmental |

- requirements, manufacturers' specifications, and workplace requirements.
- 1.3 Select and use personal protective equipment (PPE) for each stage of the task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Select materials, equipment and work area.
- 2.1 Select plastering compounds compatible with task requirements.
 - 2.2 Select processes and equipment for mixing compounds.
 - 2.3 Select suitable work area to minimise dust exposure to self and others, and to minimise manual handling risks when shifting, mixing and blending.
- 3 Mix compound.
- 3.1 Mix compound using hand and mechanical mixing techniques, tools and equipment.
 - 3.2 Adjust mixture consistency to suit intended use.
- 4 Clean up.
- 4.1 Clear work area and dispose of, reuse or recycle materials.
 - 4.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' recommendations.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCCPB3008 Mix plastering compounds

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3008A Mix plastering compounds.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by mixing a minimum three different plaster compounds to specification. Both hand and mechanical techniques must be used.

All work must be performed to the standard required in the workplace and must comply with Commonwealth and state/territory laws and regulations, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- quality policies and standards for mixing plaster compounds
- safety requirements for mixing plaster compounds, including personal protective equipment (PPE), job safety analyses, safe work method statements and safety data sheets
- environmental requirements for mixing plaster compounds
- manufacturers' specifications for mixing plaster compounds
- hand and mechanical mixing techniques, tools and equipment
- processes for adjusting mixture consistency to suit intended use.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPB3009 Finish plasterboard joints manually

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3009A Finish plasterboard joints manually. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to manually finish plasterboard joints.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plasterboard

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|---------------------|-----|---|
| 1 Plan and prepare. | 1.1 | Read and interpret work instructions and plan sequence of work. |
| | 1.2 | Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and |

- environmental requirements, manufacturers' specifications, and workplace requirements.
- 1.3 Select and use personal protective equipment (PPE) for each stage of the task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults that may affect the safe operation of the equipment, tag equipment and set aside.
- 2 Finish joints.
- 2.1 Select base coat, cement and tape.
 - 2.2 Mix plaster coats to manufacturers' specifications.
 - 2.3 Apply tape to plasterboard joints and smooth the tape, avoiding wrinkles.
 - 2.4 Apply plaster base coat over tape, overlapping to specifications, and allow to dry.
 - 2.5 Check for plaster build up, and sand to create a smooth finish.
 - 2.6 Apply plaster finish, overlapping the joint to specifications.
 - 2.7 Sand to specified finish.
 - 2.8 Check completed work and rectify any nonconformances to specifications.
- 3 Clean up.
- 3.1 Clear work area and dispose of, reuse or recycle materials.
 - 3.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCPB3009A Finish plasterboard joints manually

Assessment Requirements for CPCCPB3009 Finish plasterboard joints manually

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3009A Finish plasterboard joints manually. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by manually finishing plasterboard joints, including a minimum:

- two vertical joints between standard-size plasterboard sheets
- two horizontal joints between standard-size plasterboard sheets
- two vertical corner joints between standard-size plasterboard sheets
- two internal corner joints between standard-size plasterboard wall sheets and ceiling sheets
- two external corner joints between standard-size plasterboard wall sheets and ceiling sheets
- a minimum 300mm x 300mm niche.

All work must be performed to the standard required in the workplace and must comply with Commonwealth and state/territory laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of Australian Standards for finishing plasterboard joints manually
- quality policies and standards for finishing plasterboard joints manually
- safety requirements for finishing plasterboard joints manually, including personal protective equipment (PPE), job safety analyses, safe work method statements and safety data sheets
- environmental requirements for finishing plasterboard joints manually
- types and uses of materials for finishing plasterboard joints manually
- finishing techniques, including:

- processes for finishing system joints
- quality checks for joint finishing
- work sequence
- manufacturers' product specifications for finishing plasterboard joints manually
- processes for the calculation of material requirements for finishing plasterboard joints manually
- types of tools and equipment for finishing plasterboard joints manually.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPB3010 Manually sand plaster work

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3010A Manually sand plaster work.
Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to hand sand joints in plaster walls, ceilings and cornices.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plasterboard

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|---------------------|-----|---|
| 1 Plan and prepare. | 1.1 | Read and interpret work instructions, determine required level of finish, and plan sequence of work. |
| | 1.2 | Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and |

- environmental requirements, manufacturers' specifications, and workplace requirements.
- 1.3 Select and use personal protective equipment (PPE) for each stage of the task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults that may affect the safe operation of the equipment, tag equipment and set aside.
- 2 Sand joints.
- 2.1 Check that joints are dry and fully cured.
 - 2.2 Set up sanding floats, dust suppression/protection, and warning signs and barricades.
 - 2.3 Sand plaster work to required standard of finish, including taking care not to over-sand.
- 3 Inspect and complete work.
- 3.1 Inspect completed sanding work for specified level of finish.
 - 3.2 Carefully brush down sanded area with soft bristle brush.
- 4 Clean up.
- 4.1 Clear work area and dispose of, reuse or recycle materials.
 - 4.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Assessment Requirements for CPCCPB3010 Manually sand plaster work

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3010A Manually sand plaster work.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by manually sanding plaster work, including a minimum:

- two vertical joints between standard-size plasterboard sheets
- two horizontal joints between standard-size plasterboard sheets
- two vertical corner joints between standard-size plasterboard sheets
- two internal corner joints between standard-size plasterboard wall sheets and ceiling sheets
- two external corner joints between standard-size plasterboard wall sheets and ceiling sheets
- a 300 mm x 300 mm niche.

All work must be performed to the standard required in the workplace and must comply with Commonwealth and state/territory laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of Australian Standards for manually sanding plaster work
- workplace quality policies and standards for manually sanding plaster work
- safety requirements for manually sanding plaster work, including personal protective equipment (PPE), job safety analyses, safe work method statements and safety data sheets
- reasons for use of P1 rating (protection against mechanically generated particles) or P2 rating (protection against mechanically and thermally generated particles) mask and protective clothing when sanding topcoats
- environmental requirements for manually sanding plaster work
- processes for checking that joints are dry and fully cured
- manufacturers' components and materials

- effects of glancing light on plasterboard joints when paint is applied
- types of tools and equipment for manually sanding plaster work.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPB3012 Cut and fix paper-faced cornices

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3012A Cut and fix paper-faced cornices. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to measure, cut and fix paper-faced cornices.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit CPCCWHS1001 *Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plasterboard

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|---|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions and plan sequence of work. |
| | 1.2 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and |

- environmental requirements, manufacturers' specifications, and workplace requirements.
- 1.3 Select and use personal protective equipment (PPE) for each stage of the task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults that may affect the safe operation of the equipment, tag equipment and set aside.
- 2 Plan, measure and cut cornices.
- 2.1 Select specified style of paper-faced cornice.
 - 2.2 Plan requirements to enable safe work at heights.
 - 2.3 Measure and record cornice lengths for each wall/ceiling.
 - 2.4 Handle cornice following safe manual handling procedures.
 - 2.5 Use recorded measurements to select cornice materials, allowing for mitre requirements.
 - 2.6 Cut cornice using safe manual handling procedures.
- 3 Fix cornice.
- 3.1 Prepare cornice adhesive to manufacturers' specifications, adjusting consistency of mix to suit selected hand or mechanical application method.
 - 3.2 Apply minimum 10mm bead of adhesive to cornice.
 - 3.3 Fit cornice using methods of temporary or permanent fixing to hold the cornice in place at the wall and ceiling junction.
 - 3.4 Apply adhesive to mitres.
- 4 Finish work.
- 4.1 Remove adhesive from cornice faces.
 - 4.2 Fill and sand/polish mitres and joints.
 - 4.3 Remove temporary fixings and fill holes.

- 5
 - 5.1 Clear work area and dispose of, reuse or recycle materials.
 - 5.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCPB3012A Cut and fix paper-faced cornices.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCPB3012 Cut and fix paper-faced cornices

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3012A Cut and fix paper-faced cornices.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by installing a minimum of 5 linear metres of each of 55 mm, 90 mm and profile paper-faced cornice. Each installation must include at least one internal mitre, one external mitre, one splayed mitre and one butt joint mitre.

All work must be performed to the standard required in the workplace and must comply with Commonwealth and state/territory laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the and Australian Standards for cutting and fixing paper-faced cornices
- quality policies and standards for cutting and fixing paper-faced cornices
- safety requirements for cutting and fixing paper-faced cornices, including personal protective equipment (PPE), job safety analyses, safe work method statements and safety data sheets, and working safely at heights
- techniques for cutting, safe lifting, temporary and permanent fixing of cornice
- requirements for working safely at heights when cutting and fixing paper-faced cornices
- manufacturers' specifications for preparing adhesives and fixing cornices
- methods of using levels to align paper-faced cornice
- plans, drawings and specifications for cutting and fixing paper-faced cornices
- processes for measuring, calculating and recording cornice requirements
- types of tools and equipment for cutting and fixing paper-faced cornices.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPB3015 Install acoustic and thermal environmental protection systems

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and equivalent to CPCCPB3015A Install acoustic and thermal environmental protection systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to install wall and ceiling systems that satisfy environmental requirements in terms of acoustic ratings and energy efficiency ratings in accordance with sustainable building practices.

It includes planning and preparation for work, installation of insulation to wall cavities and plenum, installation of acoustic systems and completion of post work clean-up activities.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plasterboard

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Plan and prepare.
 - 1.1 Read and interpret work instructions and plan sequence of work.
 - 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.
 - 1.3 Select and use personal protective equipment (PPE) for each stage of the task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults that may affect the safe operation of the equipment, tag equipment and set aside.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
 - 2 Install blanket insulation to walls.
 - 2.1 Determine stud configuration for installation processes.
 - 2.2 Install safety wire mesh.
 - 2.3 Install insulating blanket in full length runs where practicable or, if joined, make joints at centre of frame member.
 - 2.4 Abut adjacent runs of blanket insulation with closed joints.
 - 3 Install acoustic systems.
 - 3.1 Select specified acoustic materials in accordance with manufacturers' specifications for walls and ceiling.
 - 3.2 Select specified acoustic plaster sheeting and acoustic ceiling tiles in accordance with manufacturers' weighted sound reduction index (RW rating).
 - 3.3 Fix and seal acoustic plaster sheeting and acoustic tiles to walls and ceiling.

- 4 Clean up.
 - 4.1 Clear work area and dispose of, reuse or recycle materials.
 - 4.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCPB3015A Install acoustic and thermal environmental protection systems

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCPB3015 Install acoustic and thermal environmental protection systems

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and equivalent to CPCCPB3015A Install acoustic and thermal environmental protection systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by installing a minimum:

- 9 square metres of blanket insulation to a stud wall/ceiling
- 9 square metres of acoustic plaster sheeting to walls and ceiling
- 9 square metres of acoustic tiles to ceiling.

All work must be performed to the standard required in the workplace and must comply with Commonwealth and state/territory laws and regulations, the National Construction Code, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards for installing acoustic and thermal environmental protection systems
- regulation and building codes related to acoustic and thermal protection requirements and systems
- sustainable building practices related to acoustic and thermal protection requirements and systems
- quality policies and standards for installing acoustic and thermal environmental protection systems
- safety requirements for installing acoustic and thermal environmental protection systems, including personal protective equipment (PPE), job safety analyses, safe work method statements and safety data sheets
- acoustic and thermal protection systems materials
- acoustic protection systems installation techniques
- basic acoustic theory

- thermal system installation techniques
- basic thermal theory related to heat loss
- materials storage and environmentally friendly waste management
- plans, drawings and specifications for installing acoustic and thermal environmental protection systems
- processes for the calculation of material requirements for installing acoustic and thermal environmental protection systems
- types of acoustic protection systems available for wall and ceiling application and their characteristics, strengths and limitations
- types of thermal protection systems available for wall and ceiling application and their characteristics, strengths and limitations
- types and uses of tools and equipment installing acoustic and thermal environmental protection systems.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPB3016 Install and finish columns

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.

Removed duplicated comma in Knowledge Evidence.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3016A Install and finish columns.
Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to install and finish columns.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plasterboard

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare.
 - 1.1 Read and interpret work instructions and plan sequence of work.
 - 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.
 - 1.3 Select and use personal protective equipment (PPE) for each stage of the task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults that may affect the safe operation of the equipment, tag equipment and set aside.
- 2 Select materials and processes.
 - 2.1 Identify manual handling risks associated with shifting and lifting columns.
 - 2.2 Select processes for installing columns.
 - 2.3 Select specified columns, fasteners and compounds compatible with column materials.
- 3 Install columns
 - 3.1 Prepare to install columns.
 - 3.2 Fit collars and finials.
 - 3.3 Use matching stopping material to stop and finish column joints and edges.
 - 3.4 Finish ends of columns and collars.
- 4 Clean up.
 - 4.1 Clear work area and dispose of, reuse or recycle materials.
 - 4.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCPB3016A Install and finish columns

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCCPB3016 Install and finish columns

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.

Removed duplicated comma in Knowledge Evidence.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3016A Install and finish columns.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by installing a minimum of two floor-to-ceiling columns.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards for installing and finishing columns
- policies and standards for installing and finishing columns
- safety requirements for installing and finishing columns, including personal protective equipment (PPE), job safety analyses, safe work method statements and safety data sheets
- manufacturers' specifications for installing and finishing columns
- names and architectural styles for different types of columns
- types and uses of columns
- materials storage and environmentally friendly waste management
- plans, drawings and specifications for installing and finishing columns
- techniques and processes for installing and finishing columns
- processes for the calculation of material requirements for installing and finishing columns
- types of tools and equipment for installing and finishing columns.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPB3017 Rectify faults in drywall applications

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPB3017A Rectify faults in plaster applications. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to identify and rectify faults in drywall applications. It includes determining the causes of faults.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plasterboard

Assessment Requirements for CPCCPB3017 Rectify faults in drywall applications

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPB3017A Rectify faults in plaster applications. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by determining the causes and rectifying a minimum of two examples of each the following faults in drywall applications:

- faults in installation of drywall
- product faults
- faults in sanding and setting.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the Australian Standards relevant to rectifying faults in drywall applications
- quality policies and standards for rectifying faults in drywall applications
- safety requirements for rectifying faults in drywall applications, including personal protective equipment (PPE), job safety analyses, safe work method statements and safety data sheets
- identification of faults in materials, installation and finish quality
- manufacturers' product installation procedures and specifications for rectifying faults in plaster applications
- fault types, causes and rectification methods, including:
 - fault types
 - board fracture
 - bullnose
 - positive and negative edge angle (chisel edge)

- damaged edges
- end peel
- hinge drywall
- hollow joints
- over-built joints
- ink bleed through
- joint tape bubbles
- parrot beak
- pinholes
- scuffing
- shoulders
- wavy drywall.
- fault causes
 - external causes
 - inappropriate selection of work methods or level of finish
 - materials or material selection faults
 - poor workmanship
- types and uses of rectification materials
- materials storage and environmentally friendly waste management
- plans, drawings and specifications for rectifying faults in drywall applications
- techniques and processes for rectifying faults in drywall applications
- processes for the calculation of material requirements for rectifying faults in drywall applications
- types of tools and equipment for rectifying faults in drywall applications.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPB3018 Use vacuum and electric sanding equipment to finish plaster work

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3018A Use vacuum and electric sanding equipment to finish plaster work. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to machine sand plaster joints in walls and ceilings.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plasterboard

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare.

1.1 Read and interpret work instructions, determine required standard of finish, and plan sequence of work.

- 1.2 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.
 - 1.3 Select and use related personal protective equipment (PPE) for each stage of the task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults that may affect the safe operation of the equipment, tag equipment and set aside.
- 2 Mechanically sand joints and screw heads.
 - 2.1 Select sanding grit to minimise liner paper damage, set up sanding equipment, leads and dust protection.
 - 2.2 Use stance and posture to hold and manipulate sanding equipment to minimise manual handling risks.
 - 2.3 Complete sanding joints and screw heads to required standard of finish, taking care to not over-sand.
 - 2.4 Inspect completed sanding work for quality.
 - 2.5 Report any sand-through areas.
 - 2.6 Brush down sanded area.
- 3 Clean up.
 - 3.1 Clear work area and dispose of, reuse or recycle materials.
 - 3.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCPB3018A Use vacuum and electric sanding equipment to finish plaster work

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCPB3018 Use vacuum and electric sanding equipment to finish plaster work

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3018A Use vacuum and electric sanding equipment to finish plaster work. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by using vacuum and electric sanding equipment to finish plaster work in a minimum 12 square metre room with plastering to all four walls and the ceiling, with at least one door and one window, and plaster to internal and external corner joints.

All work must be performed to the standard required in the workplace and must comply with Commonwealth and state/territory laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of Australian Standards for using vacuum and electric sanding equipment to finish plaster work
- quality policies and standards for using vacuum and electric sanding equipment to finish plaster work
- safety requirements for using vacuum and electric sanding equipment to finish plaster work, including personal protective equipment (PPE), job safety analyses, safe work method statements and safety data sheets
- environmental requirements for using vacuum and electric sanding equipment to finish plaster work
- reasons for use of P1 rating (protection against mechanically generated particles) or P2 rating (protection against mechanically and thermally generated particles) mask and protective clothing when emptying and cleaning equipment and disposing of dust
- effects of glancing light on plasterboard joints when paint is applied
- factors that influence level of finish

- manufacturers' specifications for using vacuum and electric sanding equipment to finish plaster work.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPB3019 Inspect equipment for serviceability

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3019A Inspect equipment for serviceability. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the outcomes required for equipment users to inspect and report on the safety and operational effectiveness of equipment, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plasterboard

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Plan and prepare.
 - 1.1 Read and interpret work instructions and plan work.
 - 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.
 - 1.3 Select and use related personal protective equipment (PPE) for each stage of the task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
 - 2 Inspect equipment.
 - 2.1 Select tools and equipment, check for serviceability and rectify or report any faults.
 - 2.2 Inspect equipment prior to transport and set up.
 - 2.3 Read and comply with manufacturer's instructions for equipment.
 - 2.4 Check warning systems for operational effectiveness.
 - 3 Identify and assess impact of faults on work requirements.
 - 3.1 Identify faults and assess potential effect of the fault on operation of equipment for the required work.
 - 3.2 Assess equipment wear, identifying likely requirements for future repair.
 - 3.3 Report faults that may affect the safe operation of the equipment to appropriate personnel for rectification, and tag and set aside equipment for repair.
 - 3.4 Make accurate reports of the results of the inspection and testing.
 - 3.5 Ensure records are clear, unambiguous and concise with clear reference made to items that may require replacement or repair in the future.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCPB3019A Inspect equipment for serviceability

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCCPB3019 Inspect equipment for serviceability

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3019A Inspect equipment for serviceability. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by demonstrating the ability to:

- select and use appropriate equipment and work methods
- identify faults in equipment
- apply knowledge of industry products to identify:
 - manufacturers' instructions for equipment
 - wear that may require maintenance in the future
 - compatible components for running repairs
- follow work instructions, operating procedures and inspection practices to:
 - identify damage to goods, equipment or products
- maintain workplace records in relation to materials, plant and equipment use.

All work must comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards for inspecting equipment for serviceability
- workplace quality policies and standards for inspecting equipment for serviceability
- safety requirements for inspecting equipment for serviceability
- environmental requirements for inspecting equipment for serviceability

- application of product and process knowledge to identify problems and predict consequences
- identifying potential for health and safety risks from workplace information and labels
- identifying the purpose of tags and logs of use for equipment
- implications for work output, safe operations and quality for instructions to be followed
- job safety analysis (JSA) and safe work method statements
- manufacturers' inspection procedures and specifications for the equipment:
 - pre-operational functional safety check procedures and manufacturer specifications for:
 - damage
 - leaks
 - obstructions that may limit operational capability
 - worn requirements
- names and functions of equipment, components and materials:
 - materials:
 - beads
 - cement render
 - fibre cement sheets
 - finishing materials
 - plaster compounds
 - plasterboard
 - platerglass sheets
 - water resistant plasterboard
 - tools and equipment:
 - broad knives
 - brooms
 - drills
 - drop saws
 - hand and power drills
 - hand saws
 - keyhole saws
 - ladders
 - measuring tapes and rules
 - paintbrushes
 - plasterboard hammers
 - plasterer's trowels
 - scaffold
 - screw guns
 - sheet lifters
 - T squares

- taping knives
- trestles and planks
- operating principles and working components of equipment used
- quality requirements:
 - Australian standards
 - internal company quality policy and standards
 - manufacturer specifications
 - workplace operations and procedures
- requirements to plan own work:
 - assessment of conditions and hazards
 - determination of work requirements and safety plans and policies
 - equipment defect identification
 - information:
 - diagrams or sketches
 - instructions issued by authorised organisational or external personnel
 - manufacturer specifications and instructions, where specified
 - material safety data sheets (MSDS)
 - memos
 - regulatory and legislative requirements pertaining to equipment for serviceability
 - relevant Australian standards
 - safe work procedures relating to equipment for serviceability
 - signage
 - verbal, written and graphical instructions
 - work bulletins
 - work schedules, plans and specifications:
 - work site inspection
- safely use equipment, shift and handle products and materials:
 - emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
 - hazard control
 - hazardous materials and substances
 - organisational first aid
 - PPE prescribed under legislation, regulations and workplace policies and practices
 - safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - traffic control
 - restricted access barriers
 - trip hazards

- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety:
 - clean-up management
 - dust and noise
 - vibration
 - waste management.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPB3020 Match, mitre and install cast ornamental cornices

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3020A Match, mitre and install cast ornamental cornices. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to measure, match, cut and fix cast ornamental cornices.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plasterboard

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|---|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions and plan sequence of work. |
|---------------------|---|

- 1.2 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.
 - 1.3 Select and use personal protective equipment (PPE) for each stage of the task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults that may affect the safe operation of the equipment, tag equipment and set aside.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Plan and measure for cornice work.
- 2.1 Select specified style of cornice.
 - 2.2 Plan requirements to enable safe work at heights.
 - 2.3 Measure and record cornice lengths for each wall/ceiling.
 - 2.4 Handle cornice following safe manual handling procedures.
 - 2.5 Use recorded measurements to select cornice materials, allowing for mitre requirements.
- 3 Cut cornice lengths.
- 3.1 Determine and mark matching points for ornamental cornice.
 - 3.2 Cut cornice using safe manual handling procedures.
 - 3.3 Check pattern match.
- 4 Fix cornice.
- 4.1 Prepare cornice adhesive to manufacturers' specifications, adjusting consistency of mix to suit selected hand or mechanical application method.
 - 4.2 Apply minimum 10mm bead of adhesive to cornice.
 - 4.3 Fit cornice using methods of temporary or permanent

- fixing to hold the cornice in place at the wall and ceiling junction.
- 4.4 Apply adhesive to mitres.
- 5 Finish work.
- 5.1 Remove excess cornice adhesive.
- 5.2 Fill and smooth joins, pattern matches and junctions.
- 5.3 Remove temporary fixings and supports and fill holes.
- 6 Clean up.
- 6.1 Clear work area and dispose of, reuse or recycle materials.
- 6.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCPB3020A Match, mitre and install cast ornamental cornices

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCPB3020 Match, mitre and install cast ornamental cornices

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3020A Match, mitre and install cast ornamental cornices. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by matching, cutting mitres and installing a minimum of 12 metres of ornamental cornice.

All work must be performed to the standard required in the workplace and must comply with Commonwealth and state/territory laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of Australian Standards for matching mitre and installing cast ornamental cornices
- workplace quality policies and standards for matching mitre and installing cast ornamental cornices
- safety requirements for matching mitres and installing cast ornamental cornices, including personal protective equipment (PPE), job safety analyses, safe work method statements and safety data sheets, working safely at heights
- techniques for cutting, safe lifting, temporary and permanent fixing of cornice
- methods of using levels to align ornamental cornice
- manufacturers' specifications for preparing adhesives
- identifying faults in materials and construction that may influence the matching mitres process
- types and uses of ornamental cornice profiles and sizes
- plans, drawings and specifications for cutting and fixing ornamental cornices
- processes for measuring, calculating and recording cornice requirements
- types of tools and equipment for cutting and fixing ornamental cornices.

Assessment Conditions

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPB3021 Install and fix residential acoustic plaster products

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3021A Install and fix residential acoustic plaster products. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to install residential acoustic plaster systems.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001* Prepare to work safely in the construction industry meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plasterboard

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|---------------------|-----|---|
| 1 Plan and prepare. | 1.1 | Read and interpret work instructions and plan sequence of work. |
| | 1.2 | Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian |

Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.

- 1.3 Select and use personal protective equipment (PPE) for each stage of the task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select materials required for task, including fasteners, sealers and penetration seals compatible with system performance requirements, calculate quantities, handle safely and prepare and position ready for use.
 - 1.6 Select tools and equipment, check for serviceability and report any faults that may affect the safe operation of the equipment, tag equipment and set aside.
- 2 Fix acoustic system.
- 2.1 Install acoustic systems to manufacturers' specifications.
 - 2.2 Caulk edges of board.
 - 2.3 Check completed work to confirm that it meets installation specifications and requirements.
- 3 Clean up.
- 3.1 Clear work area and dispose of, reuse or recycle materials.
 - 3.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCCPB3021 Install and fix residential acoustic plaster products

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3021A Install and fix residential acoustic plaster products. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by installing a minimum 15 square metres of an acoustic plaster system to walls and ceiling.

All work must be performed to the standard required in the workplace and must comply with the National Construction Code, Commonwealth and state/territory laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards for installing and fixing residential acoustic plaster products
- quality policies and standards for installing and fixing residential acoustic plaster products
- safety requirements for installing and fixing residential acoustic plaster products, including personal protective equipment (PPE), job safety analyses, safe work method statements and safety data sheets
- environmental requirements for installing and fixing residential acoustic plaster products
- techniques for selecting materials required for task, including fasteners, sealers and penetration seals compatible with system performance requirements
- manufacturers' specifications for installing and fixing residential acoustic plaster products
- types and uses of tools and equipment for installing and fixing residential acoustic plaster products.

Assessment Conditions

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPB3022 Use mechanical jointing equipment to finish joints

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3022A Use mechanical jointing equipment to finish joints. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to use mechanical taping and filling tools to finish joints.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plasterboard

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|---|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions and plan sequence of work. |
|---------------------|---|

- 1.2 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.
 - 1.3 Select and use personal protective equipment (PPE) for each stage of the task.
 - 1.4 Inspect work site, assess hazards and apply risk controls.
 - 1.5 Select tools and equipment, check for serviceability and report any faults that may affect the safe operation of the equipment, tag equipment and set aside.
 - 1.6 Select materials required for task, including compound, calculate quantities, handle safely and prepare and position ready for use.
- 2 Prepare for work.
- 2.1 Locate penetrations and openings and erect barriers at identified points.
 - 2.2 Clear and clean floor.
 - 2.3 Mix compound to required consistency using safe work methods when mechanically mixing compound.
 - 2.4 Adjust tool handle to required length.
 - 2.5 Maintain correct posture during operations and rotate tasks in accordance with work site risk assessment.
- 3 Reinforce and fill joints using mechanical filling and taping equipment.
- 3.1 Tape and fill joints with minimum compound loaded for immediate use, so that they are smooth, even and reinforced to form a seamless appearance.
 - 3.2 Tape and fill internal angles to achieve a perceived smooth and even appearance, ensuring there is sufficient compound under the tape.
 - 3.3 Complete flat joints.
- 4 Finish joints mechanically.
- 4.1 Complete finishing joints with minimum compound loaded for immediate use.

- 4.2 Finish joints to produce a smooth and even seamless appearance, ensuring that the box crown is set correctly.
 - 4.3 Maintain correct posture during operations and rotate tasks in accordance with work site risk assessment.
- 5 Clean up.
- 5.1 Clear work area and dispose of, reuse or recycle materials.
 - 5.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCPB3022A Use mechanical jointing equipment to finish joints

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCPB3022 Use mechanical jointing equipment to finish joints

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3022A Use mechanical jointing equipment to finish joints. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by using mechanical filling and taping equipment to finish a minimum of 3 metres of each of the following:

- smooth and even crowned joints
- internal angles
- external angles
- ceiling joints
- square set joints.

All work must be performed to the standard required in the workplace and must comply with Commonwealth and state/territory laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of Australian Standards for using mechanical equipment to finish joints
- quality policies and standards for using mechanical equipment to finish joints
- safety requirements for using mechanical equipment to finish joints, including personal protective equipment (PPE), job safety analyses, safe work method statements and safety data sheets
- environmental requirements for using mechanical equipment to finish joints
- processes and techniques for using mechanical equipment to finish joints
- manufacturers' specifications for equipment and materials
- types of mechanical tools and equipment for finishing joints.

Assessment Conditions

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPB3026 Erect and maintain trestle and plank systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3026B Erect and maintain trestle and plank systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to erect and monitor trestle and plank work platforms.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plasterboard

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|---|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions and plan sequence of work. |
| | 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian |

- Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.
- 1.3 Select and use personal protective equipment (PPE) for each stage of the task.
 - 1.4 Select tools and equipment, check for serviceability and report any faults that may affect the safe operation of the equipment, tag equipment and set aside.
- 2 Prepare work site.
- 2.1 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 2.2 Clean work area of unnecessary materials.
 - 2.3 Assess risks to other workers, power supply and other services.
 - 2.4 Plan access to erected trestle and plank platform.
 - 2.5 Plan access of plaster products and tools from the plank.
- 3 Erect trestle and plank system.
- 3.1 Identify whether situation is appropriate for the use of trestle and plank system.
 - 3.2 Select type of trestle and plank system and work method to meet Australian Standard AS6001-1999.
 - 3.3 Compare benefits of different trestle and plank systems.
 - 3.4 Inspect trestles and planks for serviceability as required by the Australian standards and report faults.
 - 3.5 Position trestles for the work and the planks to be used.
 - 3.6 Fit planks to the trestles at the required height using authorised procedures and within regulatory restrictions.
- 4 Inspect system.
- 4.1 Inspect trestle and plank work platform before and during use.
 - 4.2 Report faults and rectify or label system to prevent use pending repair.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCPB3026B Erect and maintain trestle and plank systems

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCCPB3026 Erect and maintain trestle and plank systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPB3026B Erect and maintain trestle and plank systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by erecting the following for a ceiling lining construction job:

- A A-frame trestle scaffold of a minimum 500mm width and 3m length
- A H-frame trestle scaffold of a minimum 500mm width and 3m length.

All work must be performed to the standard required in the workplace and must comply with Commonwealth and state/territory laws and regulations, national construction codes, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards for erecting and maintaining trestle and plank systems, including Australian standards, AS/NZS4576 Guidelines for Scaffolding
- quality policies and standards for erecting and maintaining trestle and plank systems
- safety requirements for erecting and maintaining trestle and plank systems, including personal protective equipment (PPE), job safety analyses, safe work method statements and safety data sheets
- environmental requirements for erecting and maintaining trestle and plank systems
- faults in operation of equipment, including:
 - loose components
 - damage to trestles or planks
 - displacement of components
- identifying potential for health and safety risks from workplace information and labels
- identifying the purpose of tags and logs of use for equipment
- job safety analysis (JSA) and safe work method statements

- manufacturers' specifications for tools and equipment
- types of tools and equipment for erecting and maintaining trestle and plank systems.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPD2011 Handle and store painting and decorating materials

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD2011A Handle painting and decorating materials. Minor title change. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to handle, sort and store painting and decorating materials.

The unit includes handling, sorting, storing, protecting and distributing materials and cleaning-up.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

Completion of the general construction industry training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of CPCCWHS1001 *Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS200 Apply WHS requirements, policies and procedures in the construction industry
1

Unit Sector

Painting and Decorating

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Plan and prepare.
 - 1.1 Review work instructions to handle painting and decorating materials.
 - 1.2 Plan all work to meet relevant requirements of work health and safety (WHS), Commonwealth and state or territory legislation, environmental plans and obligations, manufacturers' specifications, and workplace requirements.
 - 1.3 Select and fit personal protective equipment (PPE) as required for each task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and rectify/report any faults.
 - 2 Identify, handle and store painting and decorating materials and components.
 - 2.1 Check materials and components for conformity to material schedule, plans, specifications and environmental characteristics.
 - 2.2 Identify handling characteristics of materials and components from safety data sheets (SDS) and regulatory requirements and use safe and effective handling techniques.
 - 2.3 Check that storage locations meet fire safety, ventilation and product-dispersal requirements.
 - 2.4 Sort materials by type and size and stack for ease of identification and retrieval.
 - 2.5 Protect material and components against physical and water damage and store clear of traffic ways.
 - 3 Select and distribute materials and components for use.
 - 3.1 Select, safely handle and distribute materials from stack to required job location.
 - 3.2 Store materials to best serve their subsequent use.
 - 3.3 Prepare work areas, including removing objects and using drop sheets to protect surrounding surfaces.

- 4 Clean up.
 - 4.1 Clean up in accordance with all legislative and workplace requirements for safety, waste disposal, safe handling and protection of the environment.
 - 4.2 Identify hazardous material for separate handling by authorised personnel.
 - 4.3 Clear work area, reuse or recycle materials and place waste and unwanted materials into job waste bins or rubbish stockpile.
 - 4.4 Check and maintain tools and equipment and clean with appropriate solvents.
 - 4.5 Dispose of paint waste and of water and solvents used in cleaning tools and equipment in an environmentally sustainable manner.
 - 4.6 Store tools, equipment and sealed unused materials to avoid spontaneous ignition.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCPD2011A Handle painting and decorating materials.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCPD2011 Handle and store painting and decorating materials

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD2011A Handle painting and decorating materials. Minor title change. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by safely handling and storing painting and decorating materials for two painting and decorating activities, including, on each occasion:

- a range of coatings
- two each of:
 - cleaning solvents
 - fillers
 - adhesives
- wall and decorative covering materials.

All work must be performed to the standard required in the workplace and must meet the requirements of work health and safety (WHS), Commonwealth and state or territory legislation, manufacturers' specifications and environmental plans and obligations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safety data sheets (SDS)
- safety requirements relevant to handling and storing painting and decorating materials
- environmental requirements relevant to handling and storing painting and decorating materials
- waste management, including:
 - solid waste and paint sludge disposal techniques relating to relevant legislation, local council regulations and Environmental Protection Authority (EPA)
 - alternative and natural paint and paint materials
- basic spontaneous combustion theory, causes and controls of spontaneous ignition

- types of paints, including the characteristics and uses of paint materials with various volatile organic compound (VOC) levels and alternative and natural paints
 - materials:
 - paints:
 - water-based
 - solvent-based
 - two-pack
 - textures
 - cleaning solvents
 - coatings
 - fillers and adhesives
 - wall and decorative covering materials
 - quality requirements for handling painting and decorating materials
 - types, titles, packaging and storage requirements for common painting and decorating materials
 - painting and decorating terminology
 - Australian Paint Approval Scheme (APAS) classifications.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPD2012 Use painting and decorating tools and equipment

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD2012A Use painting and decorating tools and equipment. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to select, use, store and maintain a range of commonly used painting and decorating tools and equipment.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

Completion of the general construction industry training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS200 Apply WHS requirements, policies and procedures in the construction industry
1

Unit Sector

Painting and Decorating

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare.

1.1 Review work instructions to use painting and decorating

tools and equipment.

- 1.2 Plan all work to meet relevant requirements of work health and safety (WHS), Commonwealth and state or territory legislation, environmental plans and obligations, manufacturers' specifications, and workplace requirements.
- 2 Select and prepare hand and power tools and equipment.
 - 2.1 Select tools and equipment, including personal protective equipment (PPE) for the task and identify their functions, limitations and safe methods of operation.
 - 2.2 Fit personal protective equipment (PPE) as required for each task.
 - 2.3 Check tools, equipment and hoses for serviceability, leads are tagged and rectify and report faults.
 - 2.4 Check and maintain power tool and equipment guards, retaining bolts, couplings, gauges and controls.
 - 2.5 Conduct pre-operational checks according to manufacturers' recommendations.
- 3 Use tools and equipment.
 - 3.1 Follow start-up and shut-down procedures according to workplace practices.
 - 3.2 Use tools and equipment safely and effectively.
 - 3.3 Locate tools and equipment safely when not in immediate use.
 - 3.4 Clean, check, maintain and store tools and equipment on conclusion of task.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCPD2012A Use painting and decorating tools and equipment.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCPD2012 Use painting and decorating tools and equipment

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD2012A Use painting and decorating tools and equipment. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by using, maintaining and storing all the tools and equipment listed below over the course of three separate painting and decorating tasks, with each task involving an area of at least six square metres.:

- brushware and accessories
- buckets
- covers and drop sheets
- duster brushes
- filling knives and blades
- hammers and nail punches
- hand sanders
- heat guns
- mechanical sanders, including:
 - belt
 - disc
 - orbital
 - random orbital
- paint pots
- paint stirrers
- putty knives
- roller frames and accessories
- scrapers
- wire brushes
- high-pressure washers
- water treatment units.

All work must be performed to the standard required in the workplace and must meet the requirements of work health and safety (WHS), Commonwealth and state or territory legislation, manufacturers' specifications, and environmental plans and obligations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safety requirements relevant to using painting and decorating tools and equipment
- environmental requirements relevant to using painting and decorating tools and equipment
- types, characteristics, uses and limitations of painting and decorating hand tools, power tools and equipment, including:
 - brushware and accessories
 - buckets
 - covers and drop sheets
 - duster brushes
 - filling knives and blades
 - hammers
 - hand sanders
 - heat guns
 - mechanical sanders:
 - belt
 - disc
 - orbital
 - random orbital
 - nail punches
 - paint pots
 - paint stirrers
 - putty knives
 - roller frames and accessories
 - scrapers
 - wire brushes
 - high-pressure washers
 - water treatment units
 - dust extraction units.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures.
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPD2013 Remove and replace doors and door and window components

Modification History

Release 2 This version first released with CPC Property Services Training Package Release 5.1.

Correction to Elements and Performance Criteria. Removal of duplicate Performance Criteria 4.5.

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD2013A Remove and replace doors and door and window components. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to remove and replace doors and door and window furniture for the purpose of painting.

The unit includes planning and preparation for the work, removal and replacement of doors and door and window furniture, and completion of clean-up activities.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

Completion of the general construction industry training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of CPCCWHS1001 *Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Painting and Decorating

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------------|--|
| 1 Plan and prepare. | 1.1 Review work instructions for requirements to remove and replace doors and windows components. |
| | 1.2 Plan all work to meet relevant requirements of work health and safety (WHS), Commonwealth and state or territory legislation, environmental plans and obligations, manufacturers' specifications and workplace requirements. |
| | 1.3 Select and fit personal protective equipment (PPE) as required for each task. |
| | 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades. |
| | 1.5 Select tools and equipment, including personal protective equipment (PPE), check for serviceability and rectify/report any faults. |
| 2 Remove door and window components. | 2.1 Remove door and window components carefully, including doors, screens and fittings and door and window furniture. |
| | 2.2 Remove components without damaging surrounding areas and objects. |
| | 2.3 Locate or store components safely. |
| 3 Install glass to doors and windows. | 3.1 Use safe handling techniques for glass to remove old panes of glass from doors and windows safely, without undue damage and demonstrating correct hacking procedure. |
| | 3.2 Determine the correct fixing method for installation of replacement glass. |
| | 3.3 Measure and source type and style of glass for replacement in keeping with the finish and purpose of door or window. |
| | 3.4 Clean, repair and prime door or window aperture before |

- installation of replacement glass.
- 3.5 Use safe handling techniques for glass to install replacement glass to specification and required finish.
- 4 Replace doors and door and window furniture.
- 4.1 Handle, place, hang and fix doors carefully into original position.
- 4.2 Refit door furniture and fix back into place without marking door or surrounds.
- 4.3 Refit window furniture and fix back into place without marking window surfaces or surrounds.
- 4.4 Replace screens securely in position without damage to surrounds.
- 5 Clean up.
- 5.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal, materials handling and protection of the environment.
- 5.2 Clear work area and reuse, recycle or dispose of materials and waste.
- 5.3 Check, maintain and store tools and equipment and rectify/report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCPD2013A Remove and replace doors and door and window components.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCPD2013 Remove and replace doors and door and window components

Modification History

Release 2 This version first released with CPC Property Services Training Package Release 5.1.

Correction to Elements and Performance Criteria. Removal of duplicate Performance Criteria 4.5.

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD2013A Remove and replace doors and door and window components. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by safely and effectively removing and replacing as a minimum:

- one door with an independent screen
- furniture from two different door types:
 - closers
 - handles
 - hinges
 - latches
 - locks
 - safety chains
 - screens
- furniture from two different window types with at least one having independent screens:
 - brackets
 - catches
 - handles
 - locks
 - screens
 - stays.

All work must be performed to the standard required in the workplace and must meet the requirements of work health and safety (WHS), Commonwealth and state or territory legislation, manufacturers' specifications, and environmental plans and obligations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safety requirements relevant to removing and replacing doors and door and window components
- environmental requirements relevant to removing and replacing doors and door and window components
- correct and safe procedures for removal and replacement of glass
- safe handling techniques for glass
- door and window furniture removal and replacement techniques for:
 - door furniture:
 - closers
 - handles
 - hinges
 - latches
 - locks
 - safety chains
 - screens
 - window furniture:
 - brackets
 - catches
 - handles
 - locks
 - screens
 - stays
- painting and decorating and basic carpentry terminology relevant to removing and replacing doors and door and window components
- quality requirements relevant to removing and replacing doors and door and window components
- types, uses and limitations of tools used in the removal and replacement of door and window furniture.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

Minor edits to formatting.
- Release 1 This version first released with CPC Property Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCPD3021A Prepare surfaces for painting.
Minor title change. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to restore, repair and prepare different material surfaces for the application of paint.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS200 Apply WHS requirements, policies and procedures in the construction industry
1

Unit Sector

Painting and Decorating

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Plan and prepare.
 - 1.1 Review work instructions to prepare surfaces for painting.
 - 1.2 Plan all work to meet relevant requirements of Australian Standards, work health and safety (WHS), Commonwealth and state or territory legislation, environmental plans and obligations, manufacturers' specifications, and workplace requirements.
 - 1.3 Select and fit personal protective equipment (PPE) as required for each task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and rectify/report any faults.
 - 2 Prepare previously coated surfaces.
 - 2.1 Determine and test condition and nature of existing substrate and surface material by performing adhesion test.
 - 2.2 Select surface preparation method in accordance with environmental, finish and substrate requirements.
 - 2.3 Prepare surfaces by removing unwanted coatings and loose debris.
 - 2.4 Repair surface defects, apply suitable primer, stop, fill and sand imperfections to smooth finish ready for painting.
 - 3 Clean up.
 - 3.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal, materials handling and protection of the environment.
 - 3.2 Clear work area, reuse or recycle materials and place waste and unwanted materials into job waste bins or rubbish stockpile.
 - 3.3 Check and maintain tools and equipment and clean with appropriate solvents.
 - 3.4 Dispose of paint waste and of water and solvents used in

cleaning tools and equipment in an environmentally sustainable manner.

- 3.5 Store tools, equipment and sealed unused materials to avoid spontaneous ignition.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCPD3021A Prepare surfaces for painting.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCPD3021 Prepare existing coated surface for painting

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Minor edits to formatting.
- Release 1 This version first released with CPC Property Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCPD3021A Prepare surfaces for painting.
Minor title change. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by preparing the following previously coated surfaces for painting:

- an external timber surface to a minimum of two square metres
- two internal surfaces
 - one plaster to a minimum of two square metres
 - one timber to a minimum of two square metres
- a metal surface to a minimum of two lineal metres
- a masonry surface to a minimum of two square metres

In preparing these surfaces the following equipment must be used:

- chemical strippers
- drop sheets
- duster brushes
- filling knives and blades
- hammers
- hand sanders
- heat removal equipment
- mechanical sanders
- nail punches
- scrapers
- water blasters
- wire brushes.

All work must be performed to the standard required in the workplace and must meet the requirements of Australian Standards, work health and safety (WHS), Commonwealth and state or territory legislation, manufacturers' specifications, and environmental plans and obligations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safety requirements relevant to preparing existing coated surface for painting
- environmental requirements relevant to preparing existing coated surface for painting
- corrosion processes and techniques for the protection of metals relevant to preparing existing coated surface for painting
- hazards and risk reduction procedures associated with lead, asbestos, solvents, chemicals, silica and dust
- techniques for removing substrate and surface contaminants:
 - dust
 - films of grease
 - mild chalking
 - mild efflorescence
 - mould
 - paint films that are:
 - blistering
 - corrosion
 - flaking
 - peeling
 - cracking
 - smoke damage
- prevention and/or rectification procedures for surface coating defects
- procedures, products and techniques associated with preparation of existing surfaces:
 - chemical stripping
 - grinding
 - sanding
 - scraping (mechanical and hand)
 - use of heat guns
 - washing down
 - water blasting
- types, characteristics, uses and limitations of tools and equipment:
 - drop sheets
 - duster brushes
 - filling knives and blades
 - hammers

- hand sanders
- heat removal equipment
- mechanical sanders
- nail punches
- scrapers
- water blasters
- wire brushes
- adhesion testing and remedial actions
- quality requirements relevant to preparing existing coated surface for painting.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPD3022 Apply paint by brush and roller

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD3022A Apply paint by brush and roller. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to apply brushed or rolled paint coatings to different materials to form a protective and decorative painted finish.

The unit includes preparation of the work area, mixing of materials, application of paint, finishing of the surface and completion of clean-up activities.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing these tasks with a high degree of self direction.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS200 Apply WHS requirements, policies and procedures in the construction
1 industry

Unit Sector

Painting and Decorating

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare.
 - 1.1 Review work instructions to apply paint by brush and roller.
 - 1.2 Plan all work to meet relevant requirements of work health and safety (WHS), Commonwealth and state or territory legislation, environmental plans and obligations, manufacturers' specifications, and workplace requirements.
 - 1.3 Conduct work with regard to responsibilities in heritage-listed buildings.
 - 1.4 Select and fit personal protective equipment (PPE) as required for each task.
 - 1.5 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Identify materials appropriate to the work application, calculate quantities and prepare, handle safely and locate ready for use.
 - 1.7 Select tools and equipment, check for serviceability and report any faults.

- 2 Prepare work area and materials.
 - 2.1 Check that materials and substrate surfaces are prepared in accordance with manufacturers' recommendations and relevant Australian Standards.
 - 2.2 Protect surrounding surfaces with drop sheets, masking or removal of objects.
 - 2.3 Check that where doors, windows and associated furniture are removed they are safely stacked, stored and protected.
 - 2.4 Check work site to ensure provision of adequate ventilation and implementation of precautions to prevent fire and explosion.
 - 2.5 Implement measures to ensure application area remains free of dust and foreign matter.
 - 2.6 Mix each of oil based, water based and two pack paint, to designed proportion, consistency, specified ratio and drying time.

- 2.7 Stir paint and colours thoroughly using separate stirring sticks or other devices.
- 3 Apply paint with brush or roller.
 - 3.1 Select brush, roller or brush/roller combination for surface profile, size of area, type of paint and finish.
 - 3.2 Apply paint to achieve required level of opacity, finish, texture and sheen.
- 4 Clean up.
 - 4.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal, materials handling and protection of the environment.
 - 4.2 Clear work area, reuse or recycle materials and place waste and unwanted materials into job waste bins or rubbish stockpile.
 - 4.3 Check and maintain tools and equipment and clean with appropriate solvents.
 - 4.4 Dispose of paint waste and water and solvents used in cleaning painting equipment in an environmentally sustainable manner.
 - 4.5 Store tools, equipment and sealed unused materials to avoid spontaneous ignition.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCPD3022A Apply paint by brush and roller.

Assessment Requirements for CPCCPD3022 Apply paint by brush and roller

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD3022A Apply paint by brush and roller. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by applying paint finishes by brush, roller or a brush roller combination to a range of surfaces, including:

- one room, at a minimum of three metres by three metres, including the ceiling
- a timber panel door:
 - one oil based application
 - one water based application
- a flush door:
 - one oil based application
 - one water based application
- a timber window, including architrave and frame with moving parts (e.g. box frame, hopper and awning)
- a timber surface to minimum of one square metre using two pack.

All finishes must be to specification, including in terms of defects, thickness, sheen, opacity, colour and sharpness.

All work must be performed to the standard required in the workplace and must meet the requirements of work health and safety (WHS), Commonwealth and state or territory legislation, manufacturers' specifications, and environmental plans and obligations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safety requirements relevant to applying paint by brush and roller
- environmental requirements relevant to applying paint by brush and roller
- processes for the calculation of material requirements relevant to applying paint by brush and roller
- quality requirements relevant to applying paint by brush and roller

- responsibilities with regard to:
 - environmental requirements
 - heritage listed buildings
- paint coatings:
 - solvent-based
 - two-pack
 - water repellent for timber
 - water-based
 - sealers
 - primers
 - sealer and undercoats
 - intermediate coats
 - finish coats
- surface coating technology, including specification of paint systems for interior and exterior painting projects to maximise durability, protection and aesthetic considerations
- testing processes for paint applied by brush and roller
- theoretical principles relating to adhesion and cohesion of paint
- theoretical principles relating to pigmentation and colouring agents, drying and curing processes and the role of solvents
- wet film thickness tests
- types, uses and limitations of commonly used tools and equipment:
 - brushware and accessories
 - drop sheets
 - paint pots and buckets
 - paint stirrers
 - roller frames
 - roller sleeves, lambs' wool rollers, foam rollers, micro-fibre rollers, nylon rollers and applicator pads
- variances in work carried out within sectors of painting and decorating industry for:
 - new building (residential, commercial and high rise)
 - maintenance, renovation and refurbishment
 - restoration
 - conservation.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPD3023 Apply texture coat paint finishes by brush, roller and spray

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Minor edits to formatting.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and equivalent to CPCCPD3023A Apply texture coat paint finishes by brush, roller and spray. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to apply texture coat paint finishes to different surfaces using brush, roller and spray.

The unit includes preparation of the work area and materials, application of the texture coat paint and completion of clean-up activities.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for CPCCPD3023 Apply texture coat paint finishes by brush, roller and spray

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Minor edits to formatting.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCPD3023A Apply texture coat paint finishes by brush, roller and spray. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by preparing and applying texture coat paints using:

- brush and roller
 - complete a wall from floor to ceiling with two hard edges to a minimum of six square metres
- by spray to:
 - complete a wall, from floor to ceiling with two hard edges to a minimum of six square metres

All work must be performed to the standard required in the workplace and must meet the requirements of work health and safety (WHS), Commonwealth and state or territory legislation, manufacturers' specifications, and environmental plans and obligations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safety requirements relevant to applying texture coat finishes by brush and roller
- environmental requirements relevant to applying texture coat finishes by brush and roller
- waste management:
 - materials storage and environmentally sustainable waste management, including correct disposal of water-based, latex-based and solvent-based paints
 - solid waste and paint sludge disposal techniques and relevant legislation, including Environmental Protection Authority (EPA) and local council regulations
- requirements of AS2311 Guide to the painting of building

- processes for the calculation of material requirements relevant to applying texture coat finishes by brush and roller
- quality requirements relevant to applying texture coat finishes by brush and roller
- surface preparation techniques related to texture coatings
- texture coat paint systems technology
- common defects in texture coats, and methods of rectification
- applicator system types, characteristics, uses and limitations relevant to applying texture coat finishes by brush and roller
- types, characteristics, uses and limitations of tools and equipment relevant to applying texture coat finishes by brush and roller
- texture coatings and their properties, uses and limitations.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures.
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare.
 - 1.1 Review work instructions to apply paint by spray.
 - 1.2 Plan all work to meet relevant requirements of work health and safety (WHS), Commonwealth and state or territory legislation, environmental plans and obligations, manufacturers' specifications, and workplace requirements.
 - 1.3 Select and fit personal protective equipment (PPE) as required for each task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults.
- 2 Prepare materials and application area.
 - 2.1 Check that materials and substrate surfaces are prepared in accordance with manufacturers' recommendations and relevant Australian Standards.
 - 2.2 Protect surrounding surfaces with drop sheets, masking or removal of objects.
 - 2.3 Check that where doors, windows and associated furniture are removed they are safely stacked, stored and protected.
 - 2.4 Check work site to ensure provision of adequate ventilation and implementation of precautions to prevent fire and explosion.
 - 2.5 Implement measures to ensure application area remains free of dust and foreign matter.
 - 2.6 Set up area to suit selected spray system.
 - 2.7 Mix and adjust viscosity of paint to allow for application process for spray paint finishing materials.
- 3 Set up and test spray equipment.
 - 3.1 Set up and test spray system equipment, accessories and lines to manufacturers' specifications.
 - 3.2 Check fittings are secure.

- 3.3 Test safety devices are performing to manufacturers' specifications and report defects.
- 4 Apply paint using spray system.
 - 4.1 Operate spray equipment following standard operating procedures and manufacturers' recommendations.
 - 4.2 Identify defects in coating and take corrective action to achieve required finish.
 - 4.3 Apply paint using application technique to achieve an even finish with required opacity and sheen levels and to specification.
- 5 Clean up.
 - 5.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal, materials handling and protection of the environment.
 - 5.2 Clear work area, reuse or recycle materials and place waste and unwanted materials into job waste bins or rubbish stockpile.
 - 5.3 Check and maintain spray system, tools and equipment and clean with appropriate solvents.
 - 5.4 Dispose of paint waste and of water and solvents used in cleaning tools and equipment in an environmentally sustainable manner.
 - 5.5 Store spray system, tools, equipment and sealed unused materials to avoid spontaneous ignition.

Assessment Requirements for CPCCPD3024 Apply paint by spray

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD3024A Apply paint by spray. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- applying paint by spray using one alkyd or solvent paint system to a surface of at least six square metres
- airless application and back rolling of acrylic paint system to a surface of at least 50 square metres of:
 - plaster surface
 - masonry surface
 - timber surface
- applying paint by spray using high volume, low pressure (HVLP) spray, or air assisted airless spray, to a surface of at least six square metres
- applying paint by spray to both faces of a standard size door.

The above work must include applying paint by spray to walls, ceilings, architraves and skirting.

All work must be to specification and be performed to the standard required in the workplace and must meet the requirements of work health and safety (WHS), Commonwealth and state or territory legislation, manufacturers' specifications, and environmental plans and obligations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- technical data sheets and safety data sheets (SDS)
- safety requirements relevant to applying paint by spray
- environmental requirements relevant to applying paint by spray
- workplace and equipment safety requirements including respiratory protection
- paint types, their uses and limitations for spray painting:
 - solvent-based (alkyd, urethane, urethane/alkyd, urethane oil or modified alkyd resins)
 - two pack including isocyanate

- water based
- water repellents for timber
- low odour and low-VOC (Volatile Organic Compound) paint
- alternative and natural paint and paint materials
- painting and decorating terminology relevant to applying paint by spray
- preparatory materials relevant to spray operations
- processes for the calculation of material requirements relevant to applying paint by spray
- quality requirements relevant to applying paint by spray
- rules, regulations, Australian Standards and codes of practice of spray painting
- solid waste and paint sludge disposal techniques and relevant legislation, including Environmental Protection Authority (EPA) and local council regulations
- injection injury
- corrective actions including back rolling
- types, characteristics, uses and limitations of tools and equipment:
 - brushes
 - drop sheets
 - masking equipment
 - respirators
 - sanders
 - vacuum cleaners
 - spray equipment, accessories and lines:
 - hoses
 - regulators
 - spray guns
 - spray tips and filters
 - spray systems:
 - air-assisted spray units
 - airless spray units
 - diaphragm and piston airless spray unit (electrical, pneumatic and petrol)
 - high volume, low pressure (HVLPP) spray applications
 - electrostatic spray systems
 - spray tips, filters and fittings
- techniques for the application of paint by spray
- compatibility of surface coating to substrates.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures.
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPD3025 Match specific paint colours

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Correction to unit mapping.
- Release 1 This version first released with CPC Property Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCPD3025A Match specific paint colours.
Minor title change. Updated to meet to the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to colour-match new and existing painting finishes.

The unit includes matching of paint colour to a specified sample.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS200 Apply WHS requirements, policies and procedures in the construction
1 industry

Painting and Decorating

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------|---|
| 1 Plan and prepare. | 1.1 Review work instructions to interpret and match paint colour. |
| | 1.2 Plan all work to meet relevant requirements of work health and safety (WHS), Commonwealth and state or territory legislation, environmental plans and obligations, manufacturers' specifications, and workplace requirements. |
| | 1.3 Select tools and equipment, including personal protective equipment (PPE), check for serviceability and report any faults. |
| 2 Match paint colour to sample. | 2.1 From a provided colour sample, determine paint type and sheen level. |
| | 2.2 Select paint type, paint base and colourants for colour match. |
| | 2.3 Mix and match colour against sample and allow to dry. |
| | 2.4 Test dry paint to establish accuracy of match of colour, adjusting and repeating testing process as required. |
| | 2.5 Record details of colourants used to achieve the paint match. |
| 3 Clean up. | 3.1 Clear work area and check and maintain tools and equipment and clean with appropriate solvents without damage. |
| | 3.2 Dispose of water and solvents used in cleaning tools and equipment in an environmentally sustainable manner. |
| | 3.3 Store tools, equipment and sealed unused materials to avoid spontaneous ignition. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCPD3025A Match specified paint colour.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCPD3025 Match specific paint colours

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Correction to unit mapping.
- Release 1 This version first released with CPC Property Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCPD3025A Match specific paint colours.
Minor title change. Updated to meet to the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by colour-matching a minimum of four previously-painted samples:

- two different solvent-based paints
- two different latex/acrylic paints.

The above samples must include:

- a minimum of two samples in-situ
- two different sheen levels
- use of a minimum of three colour tints in each colour to be matched.

All work must be performed to the standard required in the workplace and must meet the requirements of work health and safety (WHS), Commonwealth and state or territory legislation, manufacturers' specifications, and environmental plans and obligations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safety requirements relevant to interpreting and matching specified paint colours
- environmental requirements relevant to interpreting and matching specified paint colours
- colour principles related to monochromatic, complementary, split complementary, analogous and triadic colours
- colour theory related to primary, secondary, tertiary and intermediate colours
- tints, tones, pastels and shades and their effect in relation to colour
- use of paint colourants relevant to interpreting and matching specified paint colours

- use of tint bases relevant to interpreting and matching specified paint colours
- use of advancing and receding colour schemes relevant to interpreting and matching specified paint colours
- colours used in heritage painting or restoration
- effect, over time, of light on colours
- factors that affect the apparent colour of paint:
 - age and deterioration of painted sample if in-situ
 - colour and opacity of the paint
 - colour considerations regarding durability of colours in exterior locations
 - colour of drapes and other furnishings
 - colour of surface covered by paint
 - gloss level and paint type
 - lighting conditions for paint-matching
- types, characteristics, uses and limitations of tools and equipment:
 - hand-held spectrometers
 - colorant dispenser
 - mixing receptacles
 - paintbrushes
 - stirring implements
 - mechanical paint mixers (shakers)
- use of the colour wheel in paint-matching
- presentation of paint formulas
- quality requirements relevant to matching paint colours.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures.
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPD3026 Apply stains and clear timber finishes

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD3026A Apply stains and clear timber finishes. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to apply stains and clear timber finishes to different material surfaces, including previously stained or finished timber, to form a protective and decorative finish.

The unit includes preparation of the work area and materials, staining of bare timber, application of clear finishes and completion of clean-up activities.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS200 Apply WHS requirements, policies and procedures in the construction
1 industry

Unit Sector

Painting and Decorating

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare.
 - 1.1 Review work instructions to apply stains and clear timber finishes.
 - 1.2 Plan all work to meet relevant requirements of work health and safety (WHS), Commonwealth and state or territory legislation, environmental plans and obligations, manufacturers' specifications, and workplace requirements.
 - 1.3 Select and fit personal protective equipment (PPE) as required for each task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.

- 2 Prepare work area and surfaces.
 - 2.1 Strip and prepare existing stained or finished surfaces for application using appropriate techniques.
 - 2.2 Protect surrounding surfaces with drop sheets, masking or removal of objects.
 - 2.3 Check that where doors, windows and associated furniture are removed they are safely stacked, stored and protected.
 - 2.4 Check work site to ensure provision of adequate ventilation and implementation of precautions to prevent fire and explosion.
 - 2.5 Implement measures to ensure application area remains free of dust and foreign matter.

- 3 Stain bare timber surface.
 - 3.1 Match stain colour to previously stained timber.
 - 3.2 Select application method for the specified surface, allowing for aesthetics durability, area size and type of finish.
 - 3.3 Select materials appropriate to the work application, calculate quantities and prepare and handle safely.
 - 3.4 Select tools and equipment, check for serviceability and rectify and report any faults.
 - 3.5 Prepare stain to required proportions and consistency.

- 3.6 Apply stain to timber surface according to work instructions.
- 3.7 Mix colour-matched wood filler and apply to timber.
- 4 Apply clear finish.
 - 4.1 Apply coats of selected clear finish to achieve required finish and sheen.
 - 4.2 Allow required drying and curing time between coats.
- 5 Clean up.
 - 5.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal, materials handling and protection of the environment.
 - 5.2 Clear work area, reuse or recycle materials and place waste and unwanted materials into job waste bins or rubbish stockpile.
 - 5.3 Check and maintain tools and equipment and clean with appropriate solvents.
 - 5.4 Dispose of paint waste and water and solvents used in cleaning tools and equipment in an environmentally sustainable manner.
 - 5.5 Store tools, equipment and sealed unused materials to avoid spontaneous ignition.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCPD3026A Apply stains and clear timber finishes.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCPD3026 Apply stains and clear timber finishes

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD3026A Apply stains and clear timber finishes. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by preparing surfaces and applying stains and clear timber finishes to:

- two different previously-treated timber surfaces, each a minimum of two square metres or two lineal metres
- three different bare timber surfaces, one with tannin stains, each a minimum of two square metres or two lineal metres.

In completing these tasks, a minimum of the following materials must be used:

- timber bleach
- one oil-based stain product
- one water-based timber stain
- one spirit-based timber stain
- one water-based clear finish
- one oil-based clear finish
- one liming white finish
- sanding sealer
- stopping and filling applications.

All finishes must be to specification.

All work must be performed to the standard required in the workplace and must meet the requirements of work health and safety (WHS), Commonwealth and state or territory legislation, manufacturers' specifications, and environmental plans and obligations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safety requirements relevant to applying stains and clear timber finishes
- environmental requirements relevant to applying stains and clear timber finishes

- materials storage and environmentally sustainable waste management, including correct disposal of water-based, latex-based and solvent-based paints and finishes
- hazards associated with solvents, chemicals and dust relevant to applying stains and clear timber finishes
- types, properties, uses and limitations of fillers, clear timber finishes and timber stains:
 - grain fillers (water, spirit or oil)
 - putty
 - single pack clear finish
 - timber stains (water, spirit, oil or slightly pigmented varnish/polyurethane)
 - natural timber oil and preservatives
 - acrylic clear and two pack epoxy clear, shellac, tinting agents and waxes
 - water and alkyd clears
 - sanding sealers
 - lacquers
 - timber bleaches
 - two pack polyurethane
 - water repellents
 - timber preservatives
- application methods:
 - brush
 - paint pad (sponge)
 - rag
 - roller
 - spray
- finishes, including matt, satin and gloss
- tannin stains
- types, characteristics, uses and limitations of tools and equipment relevant to applying stains and clear timber finishes
- processes for the calculation of material requirements relevant to applying stains and clear timber finishes
- quality requirements relevant to applying stains and clear timber finishes.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPD3027 Remove and apply wallpaper

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Minor edits to formatting.
- Release 1 This version first released with CPC Property Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCPD3027A Apply wallpaper. Minor title change. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to apply wallpaper to walls of different materials to form a protective and decorative finish.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS200 Apply WHS requirements, policies and procedures in the construction industry
1

Unit Sector

Painting and Decorating

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Plan and prepare.
 - 1.1 Review work instructions for details of requirements to apply wallpaper.
 - 1.2 Plan all work to meet relevant requirements of work health and safety (WHS), Commonwealth and state or territory legislation, environmental plans and obligations, manufacturers' specifications, and workplace requirements.
 - 1.3 Prepare plan for hanging wallpaper.
 - 1.4 Select and fit personal protective equipment (PPE) as required for each task.
 - 1.5 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Identify the types and quantities of materials required for the task and safely prepare and position ready for use.
 - 1.7 Check wallpaper for conformity to pattern number, batch number and other shading requirements.
 - 1.8 Select tools and equipment, check for serviceability and report any faults.
 - 2 Remove wallpaper and prepare surface.
 - 2.1 Determine type, condition and nature of existing wallpaper.
 - 2.2 Select surface preparation method in accordance with environmental, finish and substrate requirements.
 - 2.3 Remove wallpaper using appropriate tools.
 - 2.4 Prepare surfaces by removing loose debris.
 - 2.5 Repair surface defects and imperfections, and stop, fill and sand to smooth finish.
 - 2.6 Conduct adhesion test and take any required remedial action.
 - 3 Prepare to apply
 - 3.1 Seal wall using appropriate material.

- wallpaper.
- 3.2 Prepare adhesives in accordance with safe workplace procedures.
 - 3.3 Apply size coating to work area and allow to dry.
- 4 Apply wallpaper/lining paper to walls and ceilings.
- 4.1 Apply wallpaper/ lining paper ensuring an even surface, seams are butted, paper is plumb and pattern matches.
 - 4.2 Trim accurately around fittings.
 - 4.3 Remove residue for a clean finish.
- 5 Clean up.
- 5.1 Clean-up, meeting all legislative and workplace requirements for safety, waste disposal, materials handling and protection of the environment.
 - 5.2 Clear work area, reuse or recycle materials and place waste and unwanted materials into job waste bins or rubbish stockpile.
 - 5.3 Check and maintain tools and equipment and clean with appropriate solvents.
 - 5.4 Dispose of waste and water and solvents used in cleaning tools and equipment in an environmentally sustainable manner.
 - 5.5 Store tools, equipment and unused materials in accordance with workplace practices.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCPD3027A Apply wallpaper.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCPD3027 Remove and apply wallpaper

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Minor edits to formatting.
- Release 1 This version first released with CPC Property Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCPD3027A Apply wallpaper. Minor title change. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- removing a minimum of six square metres of wallpaper
- preparing and applying a minimum of six square metres of lining paper
- preparing and applying a minimum of six square metres of vinyl wallpaper
- preparing and applying a minimum of six square metres of unpasted wallpaper.

In removing this wallpaper, the following procedures, products and techniques must be included:

- dry stripping
- soaking
- steam stripping

In applying this wallpaper, a minimum of the following must be included:

- walls and internal and external corners
- a reveal
- a window
- an arch
- walls containing power points and switches
- a ceiling to a minimum of three metres by three strips wide
- one set pattern
- one drop pattern
- one random pattern.

All work must be performed to the standard required in the workplace and must meet the requirements of work health and safety (WHS), Commonwealth and state or territory legislation, manufacturers' specifications, and environmental plans and obligations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safety requirements relevant to applying wallpaper
- environmental requirements relevant to applying wallpaper
- painting and decorating terminology
- use and application of woven and non-woven wallpaper
- plans, drawings and specifications relevant to applying wallpaper
- plans for hanging wallpaper
- common wallpapering defects
- compatibility of preparatory materials and wallpaper
- types of wallpaper:
 - borders
 - lining paper
 - unpasted and ready pasted wallpapers (simplex and duplex)
 - vinyl wallpaper
 - washable wallpaper
 - paste on wall
- types of wallpaper adhesives:
 - cellulose
 - latex
 - acetate
 - starch
 - other special adhesive blends
- preparation for wallpaper applications for walls:
 - set plaster
 - flat surfaces
 - curved surfaces
- surface preparation for:
 - fibre cement products
 - fibrous plaster
 - medium density fibre board
 - plasterboard
 - lined surface
 - rendered surface
- types, characteristics, uses and limitations of tools and equipment relevant to applying wallpaper
- procedures used to apply straight pattern match, drop pattern match and random match wallpapers
- use of laser levels relevant to applying wallpaper

- procedures, products and techniques associated with removal of wallpaper, including:
 - dry stripping
 - soaking
 - steam stripping
- processes for the calculation of material requirements relevant to applying wallpaper
- quality requirements relevant to applying wallpaper
- surface preparation techniques for the application of wallpaper
- types and properties of wall coverings and their suitability to various substrates
- types, uses and limitations of commonly used wallpaper adhesives
- wallpaper hanging processes and techniques.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures.
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPD3028 Apply decorative paint finishes

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD3028A Apply decorative paint finishes. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to apply decorative paint finishes to a range of different material surfaces.

The unit includes:

- preparation of the application area
- application of:
 - mirror paint finishes
 - broken colour effects
 - modern acrylic finishes
 - lining by brush
 - basic stencilling
 - basic special effects
- completion of clean-up activities.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing these tasks with a high degree of self direction.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS200 Apply WHS requirements, policies and procedures in the construction
1 industry

Unit Sector

Painting and Decorating

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|-----------------------------|---|
| 1 Plan and prepare. | 1.1 Review work instructions to apply decorative paint finishes and select method of application. |
| | 1.2 Plan all work to meet relevant requirements of work health and safety (WHS), Commonwealth and state or territory legislation, environmental plans and obligations, manufacturers' specifications, and workplace requirements. |
| | 1.3 Select and fit personal protective equipment (PPE) as required for each task. |
| | 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades. |
| | 1.5 Identify the types and quantities of materials required for the task and safely prepare and position ready for use. |
| | 1.6 Select tools and equipment, check for serviceability and report any faults. |
| 2 Prepare application area. | 2.1 Check that materials and substrate surfaces are prepared in accordance with manufacturer recommendations and relevant Australian Standards. |
| | 2.2 Protect surrounding surfaces by drop sheets, masking or removal of objects. |
| | 2.3 Check work site to ensure provision of adequate ventilation and implementation of precautions to prevent fire and explosion. |
| | 2.4 Implement measures to ensure application area remains free of dust and foreign matter. |
| | 2.5 Set-up area to apply decorative paint finishes. |

- | | | | |
|---|--------------------------------|-----|---|
| 3 | Apply mirror paint finish. | 3.1 | Apply prime and intermediate coats, allow to dry thoroughly and sand to a smooth, even finish. |
| | | 3.2 | Adjust paint viscosity to suit climatic conditions and selected application method. |
| | | 3.3 | Prepare surface for final coat of mirror paint finish. |
| | | 3.4 | Apply final coat without imperfections, flowing out to an even, smooth finish and meeting all requirements. |
| 4 | Apply broken colour effects. | 4.1 | Apply ground coat evenly to prepared surface to specified colour and consistency. |
| | | 4.2 | Apply scumble glaze to prepared base coat and produce broken colour effect to match sample. |
| | | 4.3 | Apply clear coating to achieve an even finish to specified sheen level. |
| 5 | Apply modern acrylic finishes. | 5.1 | Prepare surface for application of acrylic finish. |
| | | 5.2 | Apply acrylic finish to achieve an even finish to specification. |
| 6 | Apply lining by brush. | 6.1 | Set out lining work to designed effect on prepared surface. |
| | | 6.2 | Select paint materials, applicators and brushware for lining work. |
| | | 6.3 | Apply application techniques to produce designed lining work effects and finish to requirements. |
| 7 | Apply basic stencilling. | 7.1 | Use specified transfer method and cut design accurately using a register mark. |
| | | 7.2 | Lay out stencil design on recommended material. |
| | | 7.3 | Place and tape initial stencil to designed location. |
| | | 7.4 | Apply paint to achieve designed effect. |

- | | | | |
|---|-------------------------------|-----|--|
| 8 | Apply basic special finishes. | 8.1 | Select special effect materials, applicators and brushware. |
| | | 8.2 | Apply a range of traditional and modern special finishes to produce specified effects and finish. |
| 9 | Clean up. | 9.1 | Clean up, meeting all legislative and workplace requirements for safety, waste disposal, materials handling and protection of the environment. |
| | | 9.2 | Clear work area, reuse or recycle materials and place waste and unwanted materials into job waste bins or rubbish stockpile. |
| | | 9.3 | Check and maintain tools and equipment and clean with appropriate solvents. |
| | | 9.4 | Dispose of paint waste and water and solvents used in cleaning tools and equipment in an environmentally sustainable manner. |
| | | 9.5 | Store tools, equipment and sealed unused materials to avoid spontaneous ignition. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCPD3028A Apply decorative paint finishes.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCPD3028 Apply decorative paint finishes

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD3028A Apply decorative paint finishes. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by completing the following decorative finishes to specifications:

- a mirror finish to one side of a flat panel door
- a mirror finish to one side of a four-panel door
- two broken colour effects on a minimum of a six square metre surface, including an internal corner
- two modern acrylic finishes, each on a minimum six square metre surface
- use of a minimum of three lineal metres of lining within a decorative finish on a minimum six square metre surface
- a basic stencil finish repeated six times and including an internal corner
- basic imitation marbling, imitation wood graining, each on a on a minimum of a two square metre surface
- basic gilding special effects on a ceiling rose or decorative feature.

All work must be performed to the standard required in the workplace and must meet the requirements of work health and safety (WHS), Commonwealth and state or territory legislation, manufacturers' specifications, and environmental plans and obligations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safety requirements relevant to applying decorative paint finishes
- environmental requirements relevant to applying decorative paint finishes
- types, properties, uses and limitations of decorative paint finishes materials
- types, characteristics, uses and limitations of tools and equipment relevant to applying decorative paint finishes
- Australian Paint Approval Scheme (APAS) classifications
- compatibility of surface coatings to substrates
- decorative painted finishes technology

- techniques for traditional and modern special finishes:
 - broken colour effects
 - lines
 - mirror finish
 - gilding
 - stencilling
 - basic imitation marbling
 - basic imitation wood graining
- techniques for acrylic finishes:
 - suede
 - metalescence
 - pearlescence/illuminescence
 - lime washes
- materials storage and environmentally sustainable waste management, including correct disposal of water-based, latex-based and solvent-based paints
- plans, drawings and specifications relevant to applying decorative paint finishes
- processes for the calculation of material requirements relevant to applying decorative paint finishes
- quality requirements relevant to applying decorative paint finishes
- solid waste and paint sludge disposal techniques and relevant legislation, including Environmental Protection Authority (EPA) and local council regulations.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPD3029 Remove graffiti and apply anti-graffiti coatings

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD3029A Remove graffiti and apply protective coatings. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to remove graffiti and apply preventative materials to different surfaces to form graffiti-resistant surface systems.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS200 Apply WHS requirements, policies and procedures in the construction industry
1

Unit Sector

Painting and Decorating

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare.	1.1 Review work instructions to remove graffiti and apply protective coatings.
---------------------	--

- 1.2 Plan all work to meet relevant requirements of work health and safety (WHS), Commonwealth and state or territory legislation, environmental plans and obligations, manufacturers' specifications, and workplace requirements.
 - 1.3 Select and fit personal protection equipment PPE as required for each task.
 - 1.4 Inspect work site, inspect and identify existing coating, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Identify materials appropriate to the work application, calculate quantities and prepare, handle safely and locate ready for use.
 - 1.6 Select tools and equipment, check for serviceability and rectify and report any faults.
- 2 Prepare site and materials.
 - 2.1 Set-up site area for graffiti removal and preventative application processes.
 - 2.2 Protect surrounding surfaces with drop sheets, masking or removal of objects.
 - 2.3 Check work site to ensure provision of adequate ventilation and implementation of precautions to prevent fire and explosion.
 - 2.4 Install storm water protection systems.
- 3 Remove graffiti.
 - 3.1 Apply selected removal processes to remove graffiti.
 - 3.2 Remove graffiti from affected area following manufacturers' specifications.
- 4 Apply anti-graffiti coating.
 - 4.1 Clean and prepare substrate surfaces for application of sacrificial and non-sacrificial anti-graffiti coatings.
 - 4.2 Prepare and apply selected anti-graffiti coatings following manufacturers' specifications.

- 5 Clean up.
 - 5.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal, materials handling and protection of the environment.
 - 5.2 Clear work area, reuse or recycle materials and place waste and unwanted materials into job waste bins or rubbish stockpile.
 - 5.3 Check and maintain tools and equipment and clean with appropriate solvents.
 - 5.4 Dispose of paint waste and water and solvents used in cleaning tools and equipment in an environmentally sustainable manner.
 - 5.5 Store tools, equipment and sealed unused materials to avoid spontaneous ignition.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCPD3029A Remove graffiti and apply protective coatings.

Links

Assessment Requirements for CPCCPD3029 Remove graffiti and apply anti-graffiti coatings

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD3029A Remove graffiti and apply protective coatings. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- removing graffiti using two approved removal methods, from two different substrates, each at least two square metres
- preparing and applying one sacrificial anti-graffiti coating on a masonry surface of at least two square metres
- preparing and applying one two-pack non-sacrificial anti-graffiti coating on a metal surface of at least two square metres.

All work must be performed to the standard required in the workplace and must meet the requirements of work health and safety (WHS), Commonwealth and state or territory legislation, manufacturers' specifications, and environmental plans and obligations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safety requirements relevant to removing graffiti and applying anti-graffiti coatings
- environmental requirements relevant to removing graffiti and applying anti-graffiti coatings
- storm water protection systems
- safe use of tools and equipment relevant to removing graffiti and applying anti-graffiti coatings
- types, properties, uses and limitations of sacrificial and non-sacrificial preventative coatings
- types, characteristics, uses and limitations of tools and equipment relevant to removing graffiti and applying anti-graffiti coatings
- types and properties of commonly used materials used by graffiti artists
- types, characteristics, uses and limitations of graffiti removal materials
- types, uses, limitations and operating techniques for graffiti removal equipment
- sacrificial and non-sacrificial anti-graffiti material technologies and applications

- surface preparation techniques for anti-graffiti coatings
- manufacturers' specifications relevant to removing graffiti and applying anti-graffiti coatings
- processes for the calculation of material requirements relevant to removing graffiti and applying anti-graffiti coatings
- quality requirements relevant to removing graffiti and applying anti-graffiti coatings.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures.
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCPD3030 Apply protective paint coating systems

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD3030B Apply protective paint coating systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to apply specialised paint coating systems as a protective measure against atmospheric conditions, sanitation and hygiene risks and the impacts of high traffic areas.

The unit includes preparation of the work area and materials, application of the coating system and clean-up activities.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS200 Apply WHS requirements, policies and procedures in the construction industry
1

Unit Sector

Painting and Decorating

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare.
 - 1.1 Review work instructions to apply protective paint coating systems and select method of application consistent with the job location, type of paint, type and condition of surface and climatic conditions.
 - 1.2 Plan all work to meet relevant requirements of work health and safety (WHS), Commonwealth and state or territory legislation, environmental plans and obligations, manufacturers' specifications, and workplace requirements.
 - 1.3 Select and fit personal protective equipment (PPE) as required for each task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Identify materials appropriate to the work application, calculate quantities and prepare, handle safely and locate ready for use.
 - 1.6 Select tools and equipment, check for serviceability and rectify and report any faults.
- 2 Prepare work site and surfaces.
 - 2.1 Protect surrounding surfaces with drop sheets, masking or removal of objects.
 - 2.2 Ensure ventilation is adequate and implement precautions to prevent fire and explosion.
 - 2.3 Implement measures to ensure application area remains free of dust and foreign matter.
 - 2.4 Determine suitability of surface for protective paint coating and select surface preparation method to meet substrate requirements.
 - 2.5 Prepare surface, repair, stop and fill imperfections, and sand to a smooth finish ready for the protective coating.
 - 2.6 Prepare and mix protective coatings to manufacturers' specifications.
- 3 Apply protective coating.
 - 3.1 Apply and finish protective coating system to requirements.

- 3.2 Perform wet film thickness measurement on wet surface for quality assurance and rectify any issues.
 - 3.3 Perform dry film thickness measurement on dry surface for quality assurance and rectify any issues.
- 4 Clean-up.
- 4.1 Clean-up in accordance with all legislative and workplace requirements for safety, waste disposal, materials handling and protection of the environment.
 - 4.2 Identify hazardous material for separate handling by authorised personnel.
 - 4.3 Clear work area, reuse or recycle materials and place waste and unwanted materials into job waste bins or rubbish stockpile.
 - 4.4 Check and maintain tools and equipment and clean with appropriate solvents.
 - 4.5 Dispose of paint waste and water and solvents used in cleaning tools and equipment in an environmentally sustainable manner.
 - 4.6 Store tools and equipment, and seal and segregate unused materials to avoid spontaneous ignition.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCPD3030B Apply protective paint coating systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCPD3030 Apply protective paint coating systems

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD3030B Apply protective paint coating systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by preparing and applying:

- two different water-based protective paint coating systems:
 - one to a metal surface of at least one square metre
 - one to a masonry surface of at least one square metre
- two different solvent-based protective paint coating systems, one a two-pack system:
 - one to a metal surface of at least one square metre
 - one to a masonry surface of at least one square metre.

All work must be performed to the standard required in the workplace and must meet the requirements of work health and safety (WHS), Commonwealth and state or territory legislation, manufacturers' specifications, and environmental plans and obligations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safety requirements relevant to applying protective paint coating systems
- environmental requirements relevant to applying protective paint coating systems
- Australian Paint Approval Scheme (APAS) classifications
- hazards associated with solvent vapour, chemical fumes, gases, harmful dusts, metal chips, abrasive grit and asbestos fibres
- impact of atmospheric conditions and high traffic on new and existing structures and coatings
- plans, drawings and specifications relevant to applying protective paint coating systems
- processes for the calculation of material requirements relevant to applying protective paint coating systems
- surface preparation methods and tools relevant to applying protective paint coating systems

- protective surface coating products and their uses and limitations:
 - polyurethane primer (two pack)
 - epoxy primer (two pack)
 - high build epoxy
 - high build chlorinated rubber
 - 2-pak polyurethane
 - 2-pak surface tolerant epoxy
 - micaceous iron oxide
 - zinc phosphate primer
 - modified acrylic epoxies
- applications of protective paint coating systems, including:
 - corrosion control
 - decoration
 - hygiene and sanitation protection
 - trafficable areas
- dry and wet testing techniques
- types of commonly used protective paint coatings, their uses and limitations
- quality requirements relevant to applying protective paint coating systems
- materials storage and environmentally sustainable waste management, including correct disposal of water-based, latex-based and solvent-based paints
- solid waste and paint sludge disposal techniques and relevant legislation, including Environmental Protection Authority (EPA) and local council regulations
- workplace and equipment safety requirements.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPD3031 Work safely with lead-painted surfaces in the painting industry

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD3031A Implement safe lead paint and asbestos work practices in the painting industry. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to safely treat lead paint hazards.

The unit includes hazard identification, preparation of the work area, removal of contaminated material, encapsulation of contaminated material and completion of clean-up activities.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS200 Apply WHS requirements, policies and procedures in the construction industry
1

Unit Sector

Painting and Decorating

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Plan and prepare.
 - 1.1 Review circumstances in which lead-based paint hazards may be encountered.
 - 1.2 Review work instructions to implement safe lead paint work practices, and test for lead-based paint.
 - 1.3 Select and fit personal protective equipment (PPE) as required for each task.
 - 1.4 Plan all work to meet relevant requirements of work health and safety (WHS), Commonwealth and state or territory legislation, environmental plans and obligations, manufacturers' specifications, and workplace requirements.
 - 1.5 Inspect work site, assess hazards, arrange for lead tests on soils, and apply risk controls.
 - 1.6 Select tools and equipment, check for serviceability and report any faults.
 - 2 Define and prepare work area.
 - 2.1 Select process for the identification, management and treatment of lead-based paints.
 - 2.2 Establish, close off and maintain a safe working area around lead-based painted surfaces using temporary control measures, barriers and signage.
 - 2.3 Remove furnishings and food stuffs cover other surfaces and water storage, and seal doors and windows.
 - 2.4 Apply debris and waste management procedures for control of lead paint contamination from flake, chalk and dust.
 - 2.5 Prepare surface of paint containing lead for removal or covering.
 - 2.6 Position tools and equipment for job requirements.
 - 3 Remove lead paint.
 - 3.1 Select removal processes for paint containing lead.
 - 3.2 Quarantine contamination area and protect people at risk in accordance with regulatory requirements.

- 3.3 Apply removal processes for paint containing lead.
 - 3.4 Select and apply methods for the containment and disposal off-site of paint containing lead to regulatory requirements.
- 4 Apply covering coating to lead-based paint.
 - 4.1 Assess and select methods for applying covering coating of paint containing lead on existing surfaces by over-painting or encapsulation in accordance with regulatory requirements.
 - 4.2 Assess suitability of work area for covering of paint containing lead.
 - 4.3 Apply covering coating to paint containing lead.
 - 4.4 Prepare surface of covering coating for subsequent paint coatings.
- 5 Clean up.
 - 5.1 Arrange for testing of work site to ensure that no further contamination has occurred.
 - 5.2 Clean up meeting all legislative and workplace requirements for safety, waste disposal, materials handling and protection of the environment.
 - 5.3 Clear work area, reuse or recycle materials and place waste and unwanted materials into job waste bins or rubbish stockpile.
 - 5.4 Check and maintain tools and equipment and clean with appropriate solvents.
 - 5.5 Dispose of paint waste and of water and solvents used in cleaning tools and equipment in an environmentally sustainable manner.
 - 5.6 Store tools, equipment and sealed unused materials to avoid spontaneous ignition.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCPD3031A Implement safe lead paint and asbestos work practices in the painting industry.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCCPD3031 Work safely with lead-painted surfaces in the painting industry

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD3031A Implement safe lead paint and asbestos work practices in the painting industry. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- preparing at least 6 square metres of paint containing lead for covering coating
- applying a chemical stripping treatment to of at least 2 square metres/3 lineal metres of paint containing lead
- applying a non-chemical stripping treatment to at least 2 square metres/3 lineal metres of paint containing lead
- using a paint system to cover coat or encapsulate at least 2 square metres/3 lineal metres of paint containing lead.

All work must be performed to the standard required in the workplace and must meet the requirements of work health and safety (WHS), Commonwealth and state or territory legislation, manufacturers' specifications, and environmental plans and obligations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- industry standards recommendations for lead contamination
- current regulatory requirements and industry standards for safe removal of lead and covering of paint containing lead
- indicators of the presence of paints containing lead
- the application of paints containing lead and implications for removal, covering and encapsulation
- safety requirements relevant to implementing safe lead work practices in the painting industry
- environmental requirements relevant to implementing safe lead work practices in the painting industry
- process for preparing for surfaces for covering or removal of paint containing lead:

- wet scraping and sanding
- dry power sanding
- chemical stripping
- non-chemical stripping
- low temperature heat processes
- types, characteristics, uses and limitations of tools, equipment and materials:
 - chemical strippers (caustic based, flammable and methylene chloride)
 - containment receptacles (heavy duty)
 - disposable heavy duty plastic
 - disposable personal boot covers and coveralls
 - high efficiency particulate accumulator (HEPA) filtered vacuum cleaners and filtered sanders
 - measuring tapes and rules
 - respirators to meet Australian Standards
- testing for presence of lead
- non-chemical and chemical removal processes for lead paint:
 - use of HEPA vacuum and sanders
 - dry scraping
 - wet sanding
 - wet scraping
 - bicarbonate of soda blasting
 - chemical stripping
- products available for chemical stripping treatments, their uses and limitations
- contaminant control techniques and processes for lead-based paint flakes, dust and chalk
- health risks associated with lead, lead-based paint products
- materials storage and environmentally friendly waste management
- plans, drawings and specifications relevant to implementing safe lead work practices in the painting industry
- processes for the calculation of material requirements relevant to implementing safe lead work practices in the painting industry.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPD3032 Apply advanced wall coverings

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD3032A Apply advanced wallpaper techniques. Title change. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to apply wall coverings to walls and ceilings to form a protective and decorative finish.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS200 Apply WHS requirements, policies and procedures in the construction industry
1

Unit Sector

Painting and Decorating

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare.

1.1 Review work instructions for details of requirements to

- apply wall coverings.
- 1.2 Plan all work to meet relevant requirements of work health and safety (WHS), Commonwealth and state or territory legislation, environmental plans and obligations, manufacturers' specifications, and workplace requirements.
 - 1.3 Select and fit personal protective equipment (PPE) as required for each task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Identify the types and quantities of materials required for the task and safely prepare and position ready for use.
 - 1.6 Select tools and equipment, check for serviceability and report any faults.
- 2 Prepare to apply wall coverings.
- 2.1 Prepare surfaces for wall coverings by removing existing coating and loose debris, repairing, stopping and filling imperfections, and sanding to smooth finish.
 - 2.2 Prepare and document plan for hanging wall coverings.
 - 2.3 Check materials for conformity to dye lot, batch number and other shading requirements in accordance with client requirements.
 - 2.4 Prepare adhesives in accordance with requirements.
 - 2.5 Apply size coating to work area.
- 3 Apply wall coverings.
- 3.1 Apply wall coverings to work area ensuring an even surface, seams are butted/double-cut, paper is plumb, and pattern is matched correctly.
 - 3.2 Trim accurately around fittings with minimal impact on surroundings.
- 4 Clean up.
- 4.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal, materials handling and protection of the environment.

- 4.2 Clear work area, reuse or recycle materials and place waste and unwanted materials into job waste bins or rubbish stockpile.
- 4.3 Check and maintain tools and equipment and clean with appropriate solvents.
- 4.4 Dispose of waste and water and solvents used in cleaning tools and equipment in an environmentally sustainable manner.
- 4.5 Store tools, equipment and unused materials.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCPD3032A Apply advanced wallpaper techniques.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCPD3032 Apply advanced wall coverings

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD3032A Apply advanced wallpaper techniques. Title change. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by applying wall coverings for a minimum of two tasks, each for at least six square metres, including:

- one anaglypta
- one wall covering requiring double-cutting on surfaces containing power points, vents and switches from the following -
 - suede grass weaves
 - other commercial grade materials
 - fronrunner
 - linen backed vinyl
 - flock
 - lyncrusta
 - metallic foils
 - photo murals

In performing these tasks, the adhesives used can be cellulose, latex, polyvinyl alcohol (PVA) or starch.

All work must be performed to the standard required in the workplace and must meet the requirements of work health and safety (WHS), Commonwealth and state or territory legislation, manufacturers' specifications, and environmental plans and obligations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safety requirements relevant to applying wall coverings
- environmental requirements relevant to applying advanced wall coverings
- common wall covering defects

- compatibility of preparatory materials and wall coverings
- plans, drawings and specifications relevant to applying wall coverings
- procedures used to apply straight pattern match, drop pattern match and random match wall coverings
- processes for the calculation of material requirements relevant to applying advanced wall coverings techniques
- quality requirements relevant to applying advanced wall coverings techniques
- surface preparation techniques for the application of wall coverings and specialty materials
- types and properties of wall coverings and their suitability to various substrates
- types, uses and limitations of commonly used adhesives relevant to applying advanced wall coverings techniques
- wall coverings hanging processes and techniques
- types of wall coverings and specialty materials:
 - anaglypta
 - flock
 - frontrunner
 - linen backed vinyl
 - lyncrusta
 - metallic foils
 - photo murals
 - suede grass weaves
 - other commercial grade materials
- types of wall coverings adhesives:
 - cellulose
 - latex
 - polyvinyl acetate (PVA)
 - starch
 - other special adhesive blends
- wall coverings applications for walls:
 - set plaster
 - plasterboard
 - fibrous plaster
 - medium density fibre board
 - fibre cement products
 - flat or curved
- wall covering tools and equipment, their uses and limitations.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website -

CPCCPD3033 Apply intumescent coatings

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD3033A Apply intumescent coatings.
Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to apply intumescent coatings to a range of material surfaces.

The unit includes preparation of the application area, application of the specialist coatings and completion of clean-up activities.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS200 Apply WHS requirements, policies and procedures in the construction
1 industry

Unit Sector

Painting and Decorating

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare.
 - 1.1 Review work instructions to apply intumescent coatings.
 - 1.2 Plan all work to meet relevant requirements of work health and safety (WHS), Commonwealth and state or territory legislation, environmental plans and obligations, manufacturers' specifications, and workplace requirements.
 - 1.3 Select and fit personal protective equipment (PPE) as required for each task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Identify materials appropriate to the work application, calculate quantities and prepare, handle safely and locate ready for use.
 - 1.6 Select tools and equipment, check for serviceability and rectify and report any faults.
- 2 Prepare work area and surfaces.
 - 2.1 Set-up area for application processes to suit surfaces to be coated.
 - 2.2 Protect surrounding surfaces with drop sheets, masking or removal of objects.
 - 2.3 Check that where doors, windows and associated furniture are removed they are safely stacked, stored and protected.
 - 2.4 Check work site to ensure provision of adequate ventilation and implementation of precautions to prevent fire and explosion.
 - 2.5 Implement measures to ensure application area remains free of dust and foreign matter.
 - 2.6 Check surface to be coated for sufficient clearance for the expansion of the coating in the case of a fire.
 - 2.7 Strip surface completely of any pre-existing finish.
- 3 Apply priming and intumescent coatings
 - 3.1 Apply priming coat to ensure adhesion of intumescent coating.

- to timber.
- 3.2 Apply intumescent coating by brush, roller or airless spray, maintaining required temperature and humidity.
 - 3.3 Use measuring gauges to determine wet film thickness.
 - 3.4 Apply top/finish coat to manufacturers' specifications.
 - 3.5 Protect the finish against abrasion and humidity during drying and curing.
 - 3.6 Use measuring gauges to determine dry film thickness to ensure completed coat meets manufacturer's specifications.
- 4 Apply priming and intumescent coatings to structural metal.
- 4.1 Blast or wire-brush metal surface to prepare for intumescent coating.
 - 4.2 De-grease galvanised steel.
 - 4.3 Measure the temperature of the surface to ensure it meets the manufacturers' specifications.
 - 4.4 Apply priming coat to ensure adhesion of coating.
 - 4.5 Apply intumescent coating by brush, roller or airless spray, maintaining required temperature and humidity.
 - 4.6 Use measuring gauges to determine wet film thickness.
 - 4.7 Apply top/finish coat to manufacturers' specifications.
 - 4.8 Protect the finish against abrasion and humidity during drying and curing.
 - 4.9 Use measuring gauges to determine dry film thickness to ensure completed coat meets manufacturers' specifications.
- 5 Clean up.
- 5.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal, materials handling and protection of the environment.
 - 5.2 Clear work area, reuse or recycle materials and place waste and unwanted materials into job waste bins or rubbish stockpile.

- 5.3 Check and maintain tools and equipment and clean with appropriate solvents.
- 5.4 Dispose of paint waste and water and solvents used in cleaning tools and equipment in an environmentally sustainable manner.
- 5.5 Store tools, equipment and sealed unused materials to avoid spontaneous ignition.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCPD3033A Apply intumescent coatings.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCPD3033 Apply intumescent coatings

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD3033A Apply intumescent coatings.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by preparing and applying the following intumescent coating applications to film thickness specification:

- one application on a minimum two square metre or three linear metre timber surface
- one application on a minimum two square metre or three linear metre structural steel surface.

All work must be performed to the standard required in the workplace and must meet the requirements of work health and safety (WHS), Commonwealth and state or territory legislation, manufacturers' specifications, and environmental plans and obligations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safety requirements relevant to applying intumescent coatings
- environmental requirements relevant to applying intumescent coatings
- manufacturers' specifications for applying intumescent coatings
- materials, including:
 - primers
 - water-based intumescent coatings
 - solvent-based intumescent coatings
 - suitable clear finishes for protection of the coating
 - structural metal, including:
 - beams
 - columns
- job site and humidity requirements
- chemical properties of intumescent coatings
- chemical reaction in fire situation

- coating requirements for structural metal work, including coating performance differences between hollow and concrete-filled structures
- coating requirements for timber
- compatibility of coatings to substrates
- fire resistance level (FRL) rating of intumescent coatings for a range of construction materials
- materials storage and environmentally friendly waste management
- interpreting plans and specifications for intumescent coatings
- processes for the calculation of material requirements relevant to applying intumescent coatings
- quality requirements relevant to applying intumescent coatings
- volume solids behaviour and impact on intumescent coatings performance.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures.
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPD3034 Apply advanced decorative paint finishes

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD3034A Apply advanced decorative paint finishes. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to apply advanced decorative paint finishes to a range of different material surfaces.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS200 Apply WHS requirements, policies and procedures in the construction industry
1

Unit Sector

Painting and Decorating

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|---|
| 1 Plan and prepare. | 1.1 Review work instructions for details of requirements to apply advanced decorative paint finishes and select |
|---------------------|---|

- method of application.
- 1.2 Plan all work to meet relevant requirements of work health and safety (WHS), Commonwealth and state or territory legislation, environmental plans and obligations, manufacturers' specifications, and workplace requirements.
 - 1.3 Select and fit personal protective equipment (PPE) as required for each task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Identify the types and quantities of materials required for the task and safely prepare and position ready for use.
 - 1.6 Select tools and equipment, check for serviceability and report any faults.
- 2 Prepare application area.
- 2.1 Check that materials and substrate surfaces are prepared in accordance with manufacturers' recommendations and relevant Australian standards.
 - 2.2 Protect surrounding surfaces with drop sheets, masking or removal of objects.
 - 2.3 Check work site to ensure provision of adequate ventilation and implementation of precautions to prevent fire and explosion.
 - 2.4 Implement measures to ensure application area remains free of dust and foreign matter.
 - 2.5 Set-up area to apply advanced decorative paint finishes.
- 3 Produce advanced imitation effects.
- 3.1 Apply base coat evenly to specified colour and consistency to prepared surface.
 - 3.2 Mix effects medium to designed proportions and colour and apply to produce specified effect.
 - 3.3 Apply clear coating to achieve an even finish to specified sheen level.

- | | | |
|--|-----|--|
| 4 Apply advanced stencilled effects. | 4.1 | Select stencil design and lay-out on recommended material. |
| | 4.2 | Use specified multi-layering transfer method and cut design accurately for multiple colours using a register mark. |
| | 4.3 | Place and tape initial stencil to designed location and apply paint to produce first colour. |
| | 4.4 | Locate subsequent stencils and overlays accurately to pattern with each separate colour applied to produce designed finish. |
| 5 Apply advanced lining. | 5.1 | Set out complex pattern lining to specification using template. |
| | 5.2 | Apply complex pattern lining to appropriate surfaces for decorative purposes. |
| 6 Apply advanced gilding. | 6.1 | Apply size to receive gilding. |
| | 6.2 | Apply gilding finishing techniques, including powders and other specified finishes. |
| 7 Apply large-scale decorative effect. | 7.1 | Set out specified design to surface. |
| | 7.2 | Apply decorative effect to specification. |
| 8 Clean up. | 8.1 | Clean up, meeting all legislative and workplace requirements for safety, waste disposal, materials handling and protection of the environment. |
| | 8.2 | Clear work area, reuse or recycle materials and place waste and unwanted materials into job waste bins or rubbish stockpile. |
| | 8.3 | Check and maintain tools and equipment and clean with appropriate solvents. |
| | 8.4 | Dispose of paint waste and water and solvents used in cleaning tools and equipment in an environmentally |

sustainable manner.

- 8.5 Store tools, equipment and sealed unused materials to avoid spontaneous ignition.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCPD3034A Apply advanced decorative paint finishes.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCPD3034 Apply advanced decorative paint finishes

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD3034A Apply advanced decorative paint finishes. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by applying the following advanced decorative finishes:

- one marble effect on a minimum three square metre surface
- one wood graining effect on a minimum three square metre surface
- design and cutting of a multi-plate stencil and at least six applications of the stencil in a specified pattern on an appropriate surface
- complex pattern lining on a minimum three lineal metre surface
- a gilded finish to highlight a decorative feature
- a large scale mural or trompe l'oeil.

All work must be performed to the standard required in the workplace and must meet the requirements of work health and safety (WHS), Commonwealth and state or territory legislation, manufacturers' specifications, and environmental plans and obligations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safety requirements relevant to applying advanced decorative paint finishes
- environmental requirements relevant to applying advanced decorative paint finishes
- Australian Paint Approval Scheme (APAS) classifications
- types of advanced imitation effects:
 - imitation granite
 - imitation marble
 - lapis effects
 - complex imitation wood grain using inlays
- types of advanced lining, special finishes and techniques:
 - advanced stencils
 - gold leaf and gilding powder

- finishing techniques, including waxes and other finishes
- murals and trompe l'oeil
- achieving advanced imitation effects using:
 - brush-grainer
 - chamois
 - check roller
 - crayons
 - cutters
 - feathers
 - fitches
 - floggers
 - heart grain simulator
 - mottlers
 - over-grainers
 - pencils
 - rubber combs
 - softeners
 - sponges
 - steel combs
 - stippling brushes
 - veining horn
- stencilling tools:
 - cutting boards
 - cutting knives and scalpels
 - drawing and tracing materials
 - stencil brushes
 - stencil materials
- types, properties, uses and limitations of the following materials relevant to decorative finishes:
 - clear finishes
 - fillers
 - linseed oil
 - manufacturers' proprietary products
 - oil-based products
 - scumbling mediums
 - stainers
 - terebine dryers
 - water-based products
 - waxes
- colour fleck materials and application techniques

- compatibility of surface coatings to substrates
- decorative painted finishes technology
- materials storage and environmentally sustainable waste management, including correct disposal of water-based, latex-based and solvent-based paints
- painting and decorating terminology relevant to applying advanced decorative paint finishes
- plans, drawings and specifications relevant to applying advanced decorative paint finishes
- processes for the calculation of material requirements relevant to applying advanced decorative paint finishes
- quality requirements relevant to applying advanced decorative paint finishes
- solid waste and paint sludge disposal techniques and relevant legislation, including Environmental Protection Authority (EPA) and local council regulations.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures.
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCPD3035 Prepare uncoated surfaces for painting

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

New unit.

Application

This unit of competency specifies the skills and knowledge required to prepare uncoated surfaces for the application of paint.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS200 Apply WHS requirements, policies and procedures in the construction industry
1

Unit Sector

Painting and Decorating

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare.

1.1 Review work instructions to prepare uncoated surfaces for painting.

- 1.2 Plan all work to meet relevant requirements of Australian Standards, work health and safety (WHS), Commonwealth and state or territory legislation, environmental plans and obligations, manufacturers' specifications, and workplace requirements.
 - 1.3 Select and fit personal protective equipment (PPE) as required for each task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults.
- 2 Prepare uncoated surfaces.
- 2.1 Determine and test condition and nature of substrate and surface material by conducting a moisture test.
 - 2.2 Select surface preparation method in accordance with environmental, finish and substrate requirements.
 - 2.3 Prepare surfaces by removing loose debris.
 - 2.4 Repair and fill surfaces to a smooth finish ready for painting.
- 3 Clean up.
- 3.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal, materials handling and protection of the environment.
 - 3.2 Check and maintain tools and equipment and clean with appropriate solvents.
 - 3.3 Store tools, equipment and sealed unused materials to avoid spontaneous combustion.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCPD3035 Prepare uncoated surfaces for painting

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

New unit.

Performance Evidence

- To demonstrate competency, a candidate must meet the performance criteria of this unit by preparing a minimum of one square metre of each of the following uncoated surfaces for painting:
- an external timber surface
- an internal timber surface
- a plaster surface
- a metal surface
- a masonry surface
- a concrete floor
- exterior cement sheet cladding.

In preparing these surfaces the following equipment must be used:

- drop sheets
- duster brushes
- filling knives and blades
- hand sanders
- mechanical sanders
- water blasters
- nail punches
- putty knives
- scrapers
- wire brushes
- moisture meter.

All work must be performed to the standard required in the workplace and must meet the requirements of Australian Standards, work health and safety (WHS), Commonwealth and state or territory legislation, manufacturers' specifications, and environmental plans and obligations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safety requirements relevant to preparing new surfaces for painting
- environmental requirements relevant to preparing new surfaces for painting
- corrosion processes and techniques for the protection of metals relevant to preparing new surfaces for painting
- processes for preparing uncoated substrates for painting:
 - hard wood and soft wood surfaces
 - plaster surfaces
 - ferrous and non-ferrous metal surfaces
 - masonry surfaces
 - concrete floors
 - tilt panels
 - exterior cement sheet cladding
- techniques for removing substrate and surface contaminants, including:
 - dust
 - films of grease
 - mild efflorescence
 - saponification
 - mould
- procedures, products and techniques associated with preparation of new surfaces
- types, characteristics, uses and limitations of tools and equipment for preparing new surfaces for painting
- acid etching and grinding of concrete surfaces in preparation for painting
- moisture and pH testing and remedial actions
- quality requirements relevant to preparing new surfaces for painting.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures.
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCPD3036 Work safely to encapsulate non-friable asbestos in the painting industry

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD3031A Implement safe lead paint and asbestos work practices in the painting industry. Safe lead practice aspects removed and incorporated into separate unit. Safe treatment of asbestos material strengthened. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to safely encapsulate non-friable asbestos hazards.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Relevant state and territory regulatory authorities should be consulted to confirm requirements to encapsulate non-friable asbestos.

Pre-requisite Unit

CPCCWHS200 Apply WHS requirements, policies and procedures in the construction industry
1

Unit Sector

Painting and Decorating

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare.
 - 1.1 Review circumstances in which asbestos hazards may be encountered.
 - 1.2 Review work instructions and building information to implement safe asbestos work practices, and to determine the location of asbestos.
 - 1.3 Select and fit personal protective equipment (PPE) as required for each task.
 - 1.4 Plan all work to meet relevant requirements of work health and safety (WHS), Commonwealth and state or territory legislation, environmental plans and obligations, manufacturers' specifications, and workplace requirements.
 - 1.5 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Select tools and equipment, check for serviceability and report any faults.

- 2 Define and prepare work area.
 - 2.1 Identify sections within the work area where non-friable asbestos might be found.
 - 2.2 Establish and maintain a safe working area around substrates that might contain asbestos, and apply temporary control measures, barriers and signage to ensure substrates are not disturbed.
 - 2.3 Protect furnishings, other surfaces, surrounding ground areas, drinking vessels, water storage and foodstuffs and seal doors and windows.
 - 2.4 Arrange for testing to confirm the presence of asbestos.

- 3 Encapsulate asbestos.
 - 3.1 Assess and select methods, tools and equipment and PPE for the encapsulation of asbestos on existing surfaces in accordance with regulatory requirements.
 - 3.2 Assess suitability of work area for asbestos encapsulant coating.
 - 3.3 Apply a water based asbestos encapsulant coating to manufacturers' specifications.

- 4 Clean up.
 - 4.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal, materials handling and protection of the environment.
 - 4.2 Clear work area, reuse or recycle materials and place waste and unwanted materials into job waste bins or rubbish stockpile.
 - 4.3 Check and maintain tools and equipment and clean with appropriate solvents.
 - 4.4 Dispose of paint waste and water and solvents used in cleaning tools and equipment in an environmentally sustainable manner.
 - 4.5 Store tools, equipment and sealed unused materials to avoid spontaneous ignition.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCPD3031A Implement safe lead paint and asbestos work practices in the painting industry.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCPD3036 Work safely to encapsulate non-friable asbestos in the painting industry

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCPD3031A Implement safe lead paint and asbestos work practices in the painting industry. Safe lead practice aspects removed and incorporated into separate unit. Safe treatment of asbestos material strengthened. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by using a paint system to encapsulate at least six square metres of non-friable asbestos.

All work must be performed to the standard required in the workplace and must meet the requirements of work health and safety (WHS), Commonwealth and state or territory legislation, manufacturers' specifications, and environmental plans and obligations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- industry standards' recommendations for asbestos contamination
- current regulatory requirements and industry standards for encapsulation of asbestos
- responsibilities and limitations when working with asbestos, including when to report the presence of asbestos
- safety requirements relevant to implementing safe asbestos work practices in the painting industry
- personal protective equipment (PPE)
- sources and types of asbestos, including:
 - asbestos-containing materials (ACM)
 - loose-fill asbestos
 - naturally-occurring asbestos
 - friable and non-friable asbestos
- identifying the presence of asbestos
- environmental requirements relevant to implementing safe asbestos work practices in the painting industry
- building information on asbestos, including asbestos registers
- products for encapsulating asbestos, their uses and limitations

- encapsulation treatments for asbestos, their uses and limitations
- health risks associated with asbestos
- materials storage and environmentally friendly waste management in the painting industry
- processes for the calculation of material requirements.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures.
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCR3001 Operate personnel and materials hoists

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCR3001A Operate personnel and materials hoists. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to safely and efficiently operate personnel and materials hoists for moving people and equipment to various heights in a multi-storey structure. It includes conducting pre-operational checks, operation, shutdown and post-operational checks of hoist equipment.

It applies to hoist operators who would be expected to take responsibility for organising and completing these tasks with a high degree of self direction.

Completion of the general construction induction training program, specified in the Safe Work Australia model Code of Practice: Construction Work, is required by anyone carrying out construction work. Achievement of CPCCWHS1001 Prepare to work safely in the construction industry meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare to 1.1 Interpret work order and associated documentation and

- operate personnel and materials hoist.
- 1.2 clarify requirements with relevant persons.
- 1.3 Plan all work to comply with relevant legislation, regulations, standards, codes, work health and safety, environmental and workplace requirements.
- 1.4 Select hoist, tools and equipment required for work tasks, check for serviceability and rectify or report identified faults.
- 1.4 Erect required safety signage and barricades and select and fit personal protective equipment (PPE).
- 2 Conduct and record personnel and materials hoist safety and equipment checks.
- 2.1 Confirm required signalling system with relevant persons.
- 2.2 Assess if weather conditions allow safe hoist operation.
- 2.3 Check hoist equipment and site for damage, structural weakness or interference.
- 2.4 Check mechanical, electrical and safety functions in accordance with manufacturer requirements.
- 2.5 Conduct a test run without a load through the full height of the hoist's travel, checking the operation and security of the mast and wall bolting.
- 2.6 Check and test braking system.
- 2.7 Check and challenge safety systems.
- 2.8 Record results of checks and tests in hoist logbook and report problems in accordance with regulatory and workplace requirements.
- 3 Operate personnel and materials hoist.
- 3.1 Conduct calculations and checks to ensure loads conform with safe load capacity of hoist.
- 3.2 Operate hoist safely in accordance with manufacturer and regulatory requirements.
- 3.3 Shut down hoist, render safe and make secure at end of work period, in accordance with manufacturer requirements.

- 3.4 Conduct and record post-operational checks.
- 4 Clean up.
 - 4.1 Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
 - 4.2 Clean, check, maintain and store tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCR13001A Operate personnel and materials hoists.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCR13001 Operate personnel and materials hoists

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCR13001A Operate personnel and materials hoists. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by operating a personnel and materials hoist to lift:

- two loads of different materials between floors in a multi-storey building
- two groups of personnel between floors in a multi-storey building.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace and regulatory requirements for operating personnel and materials hoists under applicable Commonwealth, state or territory work health and safety (WHS) legislation, Australian Standards and codes of practice:
 - job safety and environmental analyses (JSEAs)
 - safe work method statements (SWMSs)
 - safety data sheets (SDSs)
 - safety manuals and instructions for plant, tools and equipment
 - signage and barricades
 - personal protective equipment (PPE)
 - working at heights requirements
 - environmental and worksite safety plans
 - reporting problems
- mathematical processes for calculating load mass to ensure conformity to safe load capacity of hoist
- safety and equipment checks for personnel and materials hoists
- signalling methods and communications
- processes for completing logbooks and site records
- requirements for cleaning up work area, maintaining and storing tools, equipment and materials, and for environmentally friendly waste management.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- industry-standard equipment required to perform the tasks specified in Performance Evidence
- appropriate workplace information and records, including policies, procedures and legislative requirements.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCR13012 Perform basic rigging

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCR13012A Perform basic rigging. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to erect or install permanent steel structures, dismantle structural steel, and move or locate plant and equipment using a range of basic rigging and dogging techniques. It includes load distribution.

It applies to workers who perform rigging duties for erection and installation of steel structures and for moving plant and equipment, and who would be expected to take responsibility for organising and completing these tasks with a high degree of self direction.

Completion of the general construction induction training program, specified in the Safe Work Australia model Code of Practice: Construction Work, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare to	1.1 Interpret work order and associated documentation and
-----------------------	---

- perform basic rigging. clarify requirements with relevant persons.
- 1.2 Plan all work to comply with relevant legislation, regulations, standards, codes, work health and safety, environmental and workplace requirements.
 - 1.3 Select plant, tools and equipment required for work tasks, check for serviceability and rectify or report identified faults.
 - 1.4 Erect required safety signage and barricades and select and fit personal protective equipment (PPE).
- 2 Check basic rigging equipment.
- 2.1 Inspect lifting equipment in accordance with manufacturer and workplace requirements.
 - 2.2 Label, reject and dispose of any lifting equipment identified as inconsistent with manufacturer requirements, to prevent its use in any circumstance.
- 3 Connect basic rigging equipment.
- 3.1 Calculate and confirm load mass and load distribution.
 - 3.2 Secure whole or part loads to prevent uncontrolled movement.
 - 3.3 Attach slings, or parts of slings, to load, and position them to ensure safe movement and to protect load and associated equipment.
 - 3.4 Attach slings, or parts of slings, to hook while hoist wire is vertical.
 - 3.5 Attach tag lines to load as specified.
 - 3.6 Check load distribution.
 - 3.7 Perform test lifts to ensure safe and secure movement of load as specified.
- 4 Move and position loads using basic rigging equipment.
- 4.1 Determine load destination and prepare landing area to accept load.
 - 4.2 Assemble lifting or pulling device and erect where specified.

- 4.3 Move load safely to required destination and secure in position in accordance with work order and workplace requirements.
 - 4.4 Use standard communication signals to coordinate safe movement of load.
- 5 Remove basic rigging equipment.
 - 5.1 Dismantle lifting/moving equipment and packing, return to resting position and inspect for wear.
 - 5.2 Complete logbook and site records in accordance with workplace requirements.
- 6 Clean up.
 - 6.1 Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
 - 6.2 Clean, check, maintain and store tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCR13012A Perform basic rigging.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCR13012 Perform basic rigging

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCR13012A Perform basic rigging. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by performing basic rigging to complete the following three tasks:

- install and use a fall arrest system to sling, receive, place and brace a minimum 16 m² and a minimum of 5 m high module of structural steel in the correct sequence
- set up, place, install and brace perimeter safety screen and jump for two floors and a loading bay
- skid, locate and install heavy industrial equipment using winches and creeper skids for at least one tonne of plant.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace and regulatory requirements for performing basic rigging under applicable Commonwealth, state or territory work health and safety (WHS) legislation and codes of practice:
 - job safety and environmental analyses (JSEAs)
 - safe work method statements (SWMSs)
 - safety data sheets (SDSs)
 - safety manuals and instructions for plant, tools and equipment
 - signage and barricades
 - personal protective equipment (PPE)
 - environmental and worksite safety plans
 - reporting problems
- mathematical processes for calculating load mass and distribution
- techniques for performing basic rigging:
 - assessing lifting tasks for time required for completion

- determining most efficient order for lifting tasks to coordinate with other site activities and to use resources efficiently
- documenting schedules
- modifying schedules
- communicating schedules and changes to schedules to crane crew and team members
- requirements for cleaning up work area, maintaining and storing tools, equipment and materials, and for environmentally friendly waste management.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- industry-standard equipment required to perform the tasks specified in the Performance Evidence
- appropriate workplace information and records, including policies, procedures and legislative requirements.

CPCCR13013 Perform intermediate rigging

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Correction to Unit Mapping.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCR13013A Perform intermediate rigging.
Unit mapping corrected. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to use intermediate rigging techniques to move and position loads including cranes and precast tilt-up slabs. It includes load distribution and calculation.

It applies to workers who perform rigging duties and who would be expected to take responsibility for organising and completing these tasks with a high degree of self direction.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Plan and prepare to perform intermediate rigging.	1.1 Interpret work instructions and associated documentation and clarify requirements with relevant persons. 1.2 Plan all work to comply with relevant legislation, regulations, standards, codes, work health and safety, environmental and workplace requirements. 1.3 Erect required safety signage and barricades and select and fit personal protective equipment (PPE) appropriate for work activities.
2 Select and check intermediate rigging equipment.	2.1 Select resources, materials and equipment in accordance with load charts, and inspect for compliance with work instructions. 2.2 Inspect lifting equipment in accordance with manufacturer and workplace requirements. 2.3 Label, reject and dispose of any lifting equipment identified as inconsistent with manufacturer requirements, to prevent its use in any circumstance. 2.4 Determine and select elevated work platforms and other means of mechanical access systems as specified. 2.5 Install fall arrest equipment with ground level installation. 2.6 Determine and select personnel cartage systems.
3 Connect intermediate rigging equipment.	3.1 Calculate and confirm load mass and load distribution. 3.2 Sling loads to ensure encapsulation of whole load. 3.3 Sling part loads to ensure full encapsulation of a part load. 3.4 Sling whole or part loads to protect loads and secure to prevent uncontrolled movement. 3.5 Attach load steorage lines and use to prevent unnecessary

load movement.

- | | | |
|---|-----|--|
| 4 Move and position loads using intermediate rigging equipment. | 4.1 | Determine load lifting/shifting order to minimise necessity for double lifts. |
| | 4.2 | Connect lifting/shifting equipment to load. |
| | 4.3 | Perform test lift/shift to ensure lift suitability. |
| | 4.4 | Move load safely to required destination and secure in position in accordance with work instructions and workplace requirements. |
| | 4.5 | Use standard communication signals to coordinate safe movement of load. |
| 5 Remove intermediate rigging equipment. | 5.1 | Dismantle lifting/moving equipment and packing, return to resting position and inspect for wear. |
| | 5.2 | Complete logbook and site records in accordance with workplace requirements. |
| 6 Clean up. | 6.1 | Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements. |
| | 6.2 | Clean, check, maintain and store tools and equipment in accordance with manufacturer and workplace requirements. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCR13013A Perform intermediate rigging.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCR13013 Perform intermediate rigging

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Correction to Unit Mapping.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCR13013A Perform intermediate rigging.
Unit mapping corrected. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria and perform intermediate rigging to move and position two loads involving:

- erecting and dismantling at least one lattice boom crane and fly using correct rigging and slinging techniques
- erecting a multi-point precast tilt-up slab of at least ten tonnes with correct rigging, slinging and de-rigging techniques, including determining lifting points, temporary supports and permanent fixing points from drawings.

Candidates must apply both single and dual lifting techniques.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace and regulatory requirements for performing intermediate rigging under applicable Commonwealth, state or territory work health and safety (WHS) legislation and codes of practice:
 - job safety and environmental analyses (JSEAs)
 - safe work method statements (SWMSs)
 - safety data sheets (SDSs)
 - safety manuals and instructions for plant, tools and equipment
 - signage and barricades
 - personal protective equipment (PPE)
 - working at heights requirements

- environmental and worksite safety plans
- reporting problems
- scope of work for performing intermediate rigging:
 - calculations:
 - load charts
 - fleet angles
 - diverter sheaves
 - lead loads
 - head loads
 - load angle factors
 - multiple fall
 - load share distribution
 - precast compliance charts
 - safe working loads
 - load slinging methods:
 - straight sling
 - adjustable sling
 - reeved sling
 - inclined sling
 - using lifting techniques, including single and dual lifts
- types, characteristics and limitations of tools and equipment required for performing intermediate rigging:
 - chain slings
 - flexible steel wire rope (FSWR) slings
 - natural or synthetic fibre slings
 - lifting devices:
 - shackles
 - turn buckles
 - jacks
 - chain winches
 - hand-operated creeper winches
 - chain blocks
 - pulley blocks
 - come-alongs
 - air winches
 - trolleys
 - eye bolts
 - rigging screws
 - lifting lugs
 - lifting clutches

- snatch blocks
- load shifting equipment:
 - skates
 - hydraulic jacks
 - winches
 - rails
- personnel cartage systems, including man boxes and elevated work platforms
- requirements for using tools, equipment and materials for performing advanced structural steel erection:
 - safe operating procedures
 - operational, maintenance and basic diagnostic procedures
 - workplace and equipment safety requirements
- signalling methods and communications
- processes for completing logbooks and site records
- requirements for cleaning up work area, maintaining and storing plant, tools, equipment and materials, and for environmentally friendly waste management.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- industry-standard equipment required to perform the tasks specified in the Performance Evidence
- appropriate workplace information and records, including policies, procedures and legislative requirements.

CPCCR13014 Perform advanced structural steel erection

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCR13014A Perform advanced structural steel erection. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to erect or install permanent steel structures, and to coordinate the slinging, stability, lifting, moving and placement of loads in conjunction with the crane operator. It includes selection of equipment, and load distribution and calculation.

It applies to workers who erect and install permanent steel structures, and who would be expected to take responsibility for organising and completing these tasks with a high degree of self direction.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare to perform advanced structural steel erection.
 - 1.1 Interpret work order and associated documentation and clarify requirements with relevant persons.
 - 1.2 Plan all work to comply with relevant legislation, regulations, standards, codes, work health and safety, environmental and workplace requirements.
 - 1.3 Select plant, tools and equipment required for work tasks, check for serviceability and rectify or report identified faults.
 - 1.4 Calculate materials quantities.
 - 1.5 Acquire materials for task and locate them safely ready for use.

- 2 Select and check equipment.
 - 2.1 Erect required safety signage and barricades and fit personal protective equipment (PPE).
 - 2.2 Select resources, materials, tools and equipment in accordance with load charts and inspect for compliance with work order.
 - 2.3 Inspect lifting equipment in accordance with manufacturer and workplace requirements.
 - 2.4 Label, reject and dispose of any lifting and load-shifting equipment identified as inconsistent with manufacturer requirements, to prevent its use in any circumstance.
 - 2.5 Select elevated work platforms and other means of mechanical access systems as specified.
 - 2.6 Install fall arrest equipment.
 - 2.7 Select personnel cartage systems.

- 3 Connect equipment.
 - 3.1 Calculate and confirm load mass and load distribution.
 - 3.2 Sling loads to protect load and prevent damage to slings.
 - 3.3 Secure whole or part loads to prevent uncontrolled movement.
 - 3.4 Attach slings, or parts of slings, to load and position them to ensure safe movement.

- 3.5 Attach slings, or parts of slings, to hook while hoist wire is vertical.
 - 3.6 Attach tag lines to load as specified.
 - 3.7 Perform test lifts to ensure safe and secure movement of load as specified.
- 4 Move and position loads.
- 4.1 Determine load destination and prepare landing area to accept load.
 - 4.2 Assemble lifting or pulling device and erect as specified.
 - 4.3 Move load safely to required destination and secure in position in accordance with work order and workplace requirements.
 - 4.4 Use standard communication signals to coordinate safe movement of load.
- 5 Remove equipment.
- 5.1 Dismantle lifting/moving equipment and packing, return to resting position and inspect for wear.
 - 5.2 Complete logbook and site records in accordance with workplace requirements.
- 6 Clean up.
- 6.1 Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
 - 6.2 Clean, check, maintain and store plant, tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCRI3014A Perform advanced structural steel erection.

Assessment Requirements for CPCCR13014 Perform advanced structural steel erection

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCR13014A Perform advanced structural steel erection. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by performing advanced structural steel erection to complete the erection of one portal frame building, including trusses, bracing, purlins and girts, and incorporating at least one strongback lift and one bowstring lift.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace and regulatory requirements for performing advanced steel erection under applicable Commonwealth, state or territory work health and safety (WHS) legislation and codes of practice:
 - job safety and environmental analyses (JSEAs)
 - safe work method statements (SWMSs)
 - safety manuals and instructions for plant, tools and equipment
 - signage and barricades
 - personal protective equipment (PPE)
 - working at heights requirements
 - environmental and worksite safety plans
 - reporting problems
- scope of work for performing advanced structural steel erection:
 - calculations:
 - load charts
 - fleet angles
 - diverter sheaves
 - lead loads
 - head loads
 - load angle factors

- multiple fall
- load share
- precast compliance charts
- safe working loads
- load slinging methods:
 - straight sling
 - adjustable sling
 - reeved sling
 - inclined sling
- using advanced lifting techniques, including strongbacks and bowstrings
- installing steel components:
 - columns
 - beams
 - bracing
 - rafters
 - purlins
 - girts
 - bridging and fly bracing
 - trusses
 - freestanding structures
 - portal frame buildings
- types, characteristics and limitations of tools, equipment and materials required for performing advanced structural steel erection:
 - chain slings
 - flexible steel wire rope (FSWR) slings
 - air winches
 - chain blocks
 - chain winches
 - come-alongs
 - drifts
 - eye bolts
 - hammers
 - hand operated creeper winches
 - jacks
 - podgers
 - pulley blocks
 - shackles
 - shifting spanners
 - sledge hammers
 - spirit levels and automatic levels

- tape measures
- trolleys
- turn buckles
- wedges
- wrenches
- requirements for use of tools, equipment and materials for performing advanced structural steel erection:
 - safe operating procedures
 - operational, maintenance and basic diagnostic procedures
 - workplace and equipment safety requirements
- signalling methods and communications
- processes for completing logbooks and site records
- requirements for cleaning up work area, maintaining and storing plant, tools, equipment and materials, and for environmentally friendly waste management.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- industry-standard equipment required to perform the tasks specified in the Performance Evidence
- appropriate workplace information and records, including policies, procedures and legislative requirements.

3 Erect tilt-up slabs.	<p>3.1 Review lift plan and determine job sequencing schedule and documentation, and communicate this information to relevant persons to ensure coordination.</p>

- 3.2 Calculate and confirm load mass and load distribution.
 - 3.3 Determine erection sequence for tilt-up slab components.
 - 3.4 Assemble and erect lifting or pulling devices for movement of loads.
 - 3.5 Sling load.
 - 3.6 Shift load in accordance with job safety and environmental analysis (JSEA) and safe work method statement (SWMS).
 - 3.7 Maintain stability of load during lifting, tilting and transportation.
 - 3.8 Direct load to landing position in accordance with engineering specifications.
- 4 Position and anchor tilt-up slabs.
 - 4.1 Position tilt slab components in accordance with engineering specifications.
 - 4.2 Achieve shape of structure by checking dimensions and applying temporary bracing.
 - 4.3 Anchor tilt slab components in accordance with manufacturer requirements and engineering specifications.
- 5 Remove rigging equipment.
 - 5.1 Dismantle lifting/shifting equipment and packing, return to resting position and inspect for wear.
 - 5.2 Complete logbook and site records in accordance with workplace requirements.
- 6 Clean up.
 - 6.1 Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
 - 6.2 Clean, check, maintain and store tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCRI3015A Perform advanced tilt-up slab erection.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCR13015 Perform advanced tilt-up slab erection

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Minor edits to formatting.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCR13015A Perform advanced tilt-up slab erection. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by performing advanced tilt-up slab erection to erect:

- one multi-point precast tilt-up slab of at least 10 tonnes
- one cast *in situ* tilt-up slab of at least 10 tonnes.

Each task must be performed using correct rigging, slinging and de-rigging techniques, including:

- determining lifting points, temporary supports and permanent fixing points from panel erection drawings by following the lift plan
- positioning and bracing the slab
- safe unloading from the truck
- rotating panel from one plane to another
- incorporating at least two bracing techniques.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace and regulatory requirements for performing advanced tilt-up slab erection under applicable Commonwealth, state or territory work health and safety (WHS) legislation and codes of practice:
 - job safety and environmental analyses (JSEAs)
 - safe work method statements (SWMSs)
 - safety manuals and instructions for plant, tools and equipment
 - signage and barricades

- personal protective equipment (PPE)
- working at heights requirements
- environmental and worksite safety plans
- reporting problems
- scope of work for performing advanced tilt-up slab erection:
 - calculations:
 - load charts
 - fleet angles
 - diverter sheaves
 - lead loads
 - head loads
 - load angle factors
 - multiple fall
 - load share
 - precast compliance charts
 - safe working loads
 - load slinging methods:
 - straight sling
 - adjustable sling
 - reeved sling
 - inclined sling
 - advanced lifting techniques:
 - rotation (turning panel from one plane to another)
 - standard lift from a truck
 - lift from flat on ground
 - tilt-up slabs:
 - prefabricated and cast *in situ* tilt-up slabs
 - slabs with cast-in lifting and/or bracing inserts
 - bracing of tilt-up slabs:
 - lateral bracing
 - end bracing
 - main bracing
 - knee bracing
 - deadman bracing
- types, characteristics and limitations of tools, equipment and materials required for performing advanced tilt-up slab erection:
 - chain slings
 - flexible steel wire rope (FSWR) slings
 - air winches
 - chain blocks

- chain winches
- come-alongs
- drifts
- eye bolts
- hammers
- hand operated creeper winches
- jacks
- podgers
- pulley blocks
- shackles
- shifting spanners
- sledge hammers
- spanners
- spirit levels and automatic levels
- tape measures
- trolleys
- turn buckles
- wedges
- wrenches
- requirements for use of tools, equipment and materials for performing advanced tilt-up slab erection:

CPCCR13016 Perform advanced tower crane erection

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCR13016A Perform advanced tower crane erection. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to conduct advanced tower crane erection. It includes coordinating the slinging, stability, lifting, moving and placement of tower cranes and tower crane sections in conjunction with the crane operator, and selecting equipment and load distribution and calculation.

It applies to workers who erect tower cranes and coordinate all aspects of lifting, moving and placing sections, and who would be expected to take responsibility for organising and completing these tasks with a high degree of self direction.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare to perform advanced tower crane erection.
 - 1.1 Interpret work order and associated documentation and clarify requirements with relevant persons.
 - 1.2 Plan all work to comply with relevant legislation, regulations, standards, codes, work health and safety, environmental and workplace requirements.
 - 1.3 Plan and implement required risk controls.
 - 1.4 Review crane erection, rigging and dismantling plan to ensure conformity with manufacturer and engineering specifications.
 - 1.5 Check foundation that will support crane base is structurally suitable and conforms with engineering standards.
 - 1.6 Conduct required calculations to determine load mass and distribution.

- 2 Select and check equipment.
 - 2.1 Erect required safety signage and barricades and fit personal protective equipment (PPE).
 - 2.2 Select resources, materials, tools and equipment in accordance with load charts and inspect for compliance with work order.
 - 2.3 Inspect lifting equipment in accordance with manufacturer and workplace requirements.
 - 2.4 Label, reject and dispose of any lifting and load-shifting equipment identified as inconsistent with manufacturer requirements, to prevent its use in any circumstance.
 - 2.5 Select elevated work platforms and other means of mechanical access systems as specified.
 - 2.6 Install fall arrest equipment.
 - 2.7 Select personnel cartage systems.
 - 2.8 Calculate and confirm load mass and load distribution.

- 3 Assemble and erect crane.
 - 3.1 Locate base of crane and position in accordance with manufacturer and engineering specifications.

- 3.2 Erect bottom tower and climbing frame/transition piece, and install, level and plumb in accordance with manufacturer and engineering specifications.
 - 3.3 Install and secure tower braces or guys to support tower crane.
 - 3.4 Assemble, erect and install mast, turntable, machine deck and power pack of crane in accordance with manufacturer requirements.
 - 3.5 Assemble and erect main jib and counter jib in accordance with manufacturer requirements.
 - 3.6 Lift counterweights into cradles and secure in accordance with manufacturer requirements.
 - 3.7 Install wire ropes, hook and block reeving in accordance with manufacturer requirements.
- 4 Climb (raise/lower) tower crane.
 - 4.1 Remove drop ladder, and place and secure monorail.
 - 4.2 Secure crane and place at balance point ready for climbing.
 - 4.3 Remove tower bolts to transition piece, fit drifts and check rollers.
 - 4.4 Move tower section into place in accordance with manufacturer requirements.
 - 4.5 Reconnect crane with bolts and conduct a visual check of all components and connectors.
- 5 Dismantle tower crane.
 - 5.1 Disconnect electrical and hydraulic lines safely.
 - 5.2 Dismantle power pack, counterweights, climbing frame and crane deck, and lower safely to the ground.
- 6 Clean up.
 - 6.1 Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
 - 6.2 Clean, check, maintain and store tools and equipment in

accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCR13016A Perform advanced tower crane erection.

Assessment Requirements for CPCCR13016 Perform advanced tower crane erection

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCR13016A Perform advanced tower crane erection. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by performing advanced tower crane erection to:

- fully erect and rig one hammerhead tower crane, including a jib
- fully erect and rig one luffing boom tower crane, including a jib
- complete the raising of one hammerhead tower crane by installing at least two extra sections
- complete the raising of one luffing boom tower crane by installing at least two extra sections.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace and regulatory requirements for performing advanced tower crane erection under applicable Commonwealth, state or territory work health and safety (WHS) legislation and codes of practice:
 - job safety and environmental analyses (JSEAs)
 - safe work method statements (SWMSs)
 - safety manuals and instructions for plant, tools and equipment
 - signage and barricades
 - personal protective equipment (PPE)
 - working at heights requirements
 - environmental and worksite safety plans
 - reporting problems
- scope of work for performing advanced tower crane erection:
 - calculations:
 - load charts
 - fleet angles

- diverter sheaves
- lead loads
- head loads
- load angle factors
- multiple fall
- load share
- precast compliance charts
- safe working loads
- load slinging methods:
 - straight sling
 - adjustable sling
 - reeved sling
 - inclined sling
- cranes used for erecting tower cranes:
 - fixed cranes
 - tower cranes
 - hydraulic mobile cranes
 - lattice boom mobile cranes
 - slewing cranes
- tower cranes:
 - hammerhead tower cranes
 - luffing boom tower cranes
 - self-erecting tower cranes
- tower crane components:
 - crane bases
 - bottom towers
 - tower sections
 - climbing frame/transition pieces
 - tower braces
 - guys
 - masts
 - turntables
 - machine decks
 - power packs
 - main jibs
 - counter jibs
 - counterweights
 - wire ropes
 - hook and block reeving
 - connecting bolts

- types, characteristics and limitations of tools, equipment and materials required for performing advanced tower crane erection:
 - chain slings
 - flexible steel wire rope (FSWR) slings
 - natural or synthetic fibre slings
 - air winches
 - chain blocks
 - chain winches
 - come-alongs
 - drifts
 - eye bolts
 - hammers
 - hand operated creeper winches
 - jacks
 - plumbing/levelling equipment
 - pneumatic wrenches
 - podgers
 - pulley blocks
 - shackles
 - shifting spanners
 - sledge hammers
 - spanners
 - spirit levels and automatic levels
 - tape measures
 - torque multipliers
 - trolleys
 - turn buckles
 - wedges
 - wrenches
- requirements for use of tools, equipment and materials for performing advanced tower crane erection:
 - safe operating procedures
 - operational, maintenance and basic diagnostic procedures
 - workplace and equipment safety requirements
- signalling methods and communications
- requirements for cleaning up work area, maintaining and storing plant, tools, equipment and materials, and for environmentally friendly waste management.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- industry-standard equipment required to perform the tasks specified in the Performance Evidence
- appropriate workplace information and records, including policies, procedures and legislative requirements.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCR2001 Handle roof tiling materials

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Correction to Elements and Performance Evidence 4.1 and 4.2.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCR2001A Handle roof tiling materials.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to safely handle and store roof tiling materials.

It includes the preparation, handling, sorting, stacking, distribution and disposal of tiling materials, following environmental principles, in the application of the tiles to a roof.

The unit is suitable for those with basic skills and knowledge undertaking tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Roof tiling

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

essential outcomes.	demonstrate achievement of the element.
1 Plan and prepare to handle roof tiling materials.	<p>1.1 Read and interpret work instructions and plan sequence of work.</p> <p>1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.</p> <p>1.3 Select and use personal protective equipment (PPE) for each stage of the task.</p> <p>1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.</p> <p>1.5 Select tools and equipment, check for serviceability and report any faults.</p>
2 Receive, sort and distribute roof tiling materials.	<p>2.1 Check roof tiling materials for compliance to material schedule, plans, quality requirements and specifications.</p> <p>2.2 Identify handling characteristics of roof tiling materials and apply safe and effective handling techniques.</p> <p>2.3 Check that fall safety devices have been installed correctly.</p> <p>2.4 Handle, assemble and erect elevator at job location.</p> <p>2.5 Sort roof tiling materials by material types and sizes, and stack for ease of identification and retrieval for task sequence.</p> <p>2.6 Use safe manual handling techniques to transfer and load roof tiling materials onto roof, support and distribute evenly.</p>
3 Handle and remove surplus material from roof.	<p>3.1 Handle surplus materials safely and effectively.</p> <p>3.2 Identify hazardous material for separate handling by authorised personnel.</p> <p>3.3 Load and transfer surplus roof tiling materials from roof to ground.</p>

- 3.4 Clear roof, guttering and downpipes of waste and surplus material.
- 4 Clean up.
 - 4.1 Clear work area, store or dispose of materials, and reuse or recycle in compliance with environmental requirements, legislation, regulations and codes of practice.
 - 4.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCR2001A Handle roof tiling materials.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCR2001 Handle roof tiling materials

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Correction to Elements and Performance Evidence 4.1 and 4.2.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCR2001A Handle roof tiling materials.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by:

- transferring sufficient materials to sark, batten and tile a minimum 45 square metres of roof from ground level to the roof working area
- relocating waste materials from the roof working area to ground level
- disposing of waste material.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of Australian Standards for handling roof tiling materials
- quality policies and standards for handling roof tiling materials
- safety requirements for handling roof tiling materials, including:
 - safety data sheets
 - job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
 - personal protective equipment (PPE)
- environmental requirements for handling roof tiling materials
- handling characteristics of roof tiling materials:

- adhesives
 - concrete and terracotta tiles
 - fastenings and other mechanical fixings
 - flashings
 - bedding
 - sarking materials
 - timber and metal battens
 - flexible pointing material
 - lead
 - shingles
 - slate
- types and uses of materials storage and environmentally friendly waste management
 - types and uses of plans, drawings and specifications for handling roof tiling materials
 - types and uses of tools and equipment for handling roof tiling materials
 - roof construction systems, structures and tiling loading considerations
 - roof tiling materials handling and disposal techniques and processes.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCR2002 Use roof tiling tools and equipment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCR2002A Use roof tiling tools and equipment. Updated to meet the Standards for Training Packages.

Application

This unit of competency specifies the skills and knowledge required to safely and effectively use hand and power tools and equipment for roof tiling.

The unit is suitable for those with basic skills and knowledge working under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Roof tiling

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Plan and prepare to use roof tiling tools and equipment. | 1.1 Read and interpret work instructions and plan sequence of work. |
| | 1.2 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and |

- environmental requirements, manufacturers' specifications, and workplace requirements.
- 1.3 Select and use personal protective equipment (PPE) for each stage of the task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
- 2 Select and check tools and equipment.
- 2.1 Identify functions and limitations of tools and equipment used in roof tiling.
 - 2.2 Select tools and equipment for the task based on their functions and limitations, check for serviceability and report any faults.
 - 2.3 Check that power tools and electrical leads are tested and tagged.
 - 2.4 Conduct pre-operational checks on tools and equipment to manufacturers' specifications.
 - 2.5 Examine power tools and equipment to ensure guards are fitted and working, blades and attachments are secured, and switches are operational.
- 3 Use tools and equipment.
- 3.1 Connect power and/or compressed air supply to work area.
 - 3.2 Perform start up and shut down procedures in accordance with manufacturers' specifications.
 - 3.3 Use tools safely and effectively according to manufacturers' specifications.
 - 3.4 Switch-off and locate tools safely when not in immediate use.
 - 3.5 Inspect, maintain and tag tools and equipment and report any faults.
 - 3.6 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCRT2002A Use roof tiling tools and equipment.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCR2002 Use roof tiling tools and equipment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCR2002A Use roof tiling tools and equipment. Updated to meet the Standards for Training Packages.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by selecting, checking and using tools and equipment to tile a minimum 25 square metres of roof, including at least 1.5 metres each of top ridge, hip, valley and gable.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of Australian Standards for using tiling tools and equipment
- workplace quality policies and standards for using tiling tools and equipment
- safety requirements for using tiling tools and equipment, including:
 - job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
 - safety data sheets (SDS)
 - personal protective equipment (PPE)
- measuring and marking using tiling tools and equipment
- purpose and safe use of tiling tools and equipment:
 - bedding frames
 - blowers
 - chisels
 - concrete mixers
 - elevators
 - embossing mallets
 - fall safety devices

- gutter protectors
- hammers
- hand/bush saws
- ladders
- measuring tapes and rules
- nail guns
- pincers
- power drills, grinders, saws
- shovels
- squares
- string and chalk lines
- tile cutters
- trowels
- breaks or cutting irons
- guillotines
- small compressors
- small petrol or diesel engines.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

CPCCR3001 Tile regular roofs

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and equivalent to CPCCR3001A Tile regular roofs. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to install roof tiles to a range of regular roof structure types.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Roof tiling

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|---|-----|---|
| 1 | Plan and prepare to tile regular roofs. | 1.1 | Read and interpret work instructions and plan sequence of work. |
| | | 1.2 | Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian |

- Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.
- 1.3 Select and use personal protective equipment (PPE) for each stage of the task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults.
 - 1.6 Select materials required for task, calculate quantities, handle safely, and prepare and position ready for use.
- 2 Prepare roof face.
- 2.1 Check that fall safety devices have been installed correctly.
 - 2.2 Handle, assemble and erect elevator at job location.
 - 2.3 Check roof surface and structure for stability, and for safe access to roof for tile installation.
 - 2.4 Set out roof surface, and sark.
- 3 Cut and fix battens.
- 3.1 Measure and cut battens.
 - 3.2 Fix battens using fasteners at specified centres.
 - 3.3 Check completed battens for alignment and fixing.
- 4 Install tiles.
- 4.1 Load, support and evenly distribute tiles on roof.
 - 4.2 Spread out, secure and install roof tiles.
 - 4.3 Bed roof tiles using specified bedding mix and maintaining alignment.
 - 4.4 Point roof tiles to a flush, smooth finish to job specifications.

- 5 Clean up.
 - 5.1 Clear roof, guttering and downpipes of waste and surplus material.
 - 5.2 Clear work area, dispose of materials, and reuse or recycle in compliance with legislation, regulations and codes of practice.
 - 5.3 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCR3001A Tile regular roofs.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCR3001 Tile regular roofs

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCR3001A Tile regular roofs. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by tiling roof construction systems and structures, including:

- gable
- hip
- hip and valley
- skillion
- Dutch gable valley
- Dutch gable hip
- gusset valley
- broken hip (dog leg)
- butt ridging
- dog leg valley.

These roof construction systems and structures must include those with:

- metal battens and metal frame
- metal battens and timber frame
- timber battens and metal frame
- timber battens and timber frame.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the NCC and Australian Standards for tiling regular roofs
- workplace quality policies and standards for tiling regular roofs
- safety requirements for tiling regular roofs, including:

- job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
- safety data sheets (SDS)
- personal protective equipment (PPE)
- environmental requirements for tiling regular roofs
- characteristics and applications of roof tiling materials:
 - adhesives
 - concrete and terracotta tiles
 - fastenings and other mechanical fixings
 - flashings
 - bedding
 - sarking
 - timber and/or metal battens
 - flexible pointing material
- types and uses of materials storage and environmentally friendly waste management
- measuring and marking for tiling regular roofs
- types and uses of plans, drawings and specifications for tiling regular roofs
- types and uses of tools and equipment for tiling regular roofs
- processes for the calculation of materials requirements for tiling regular roofs
- types and uses of roof construction systems and structures and tiling considerations for regular roofs:
 - gable
 - hip
 - hip and valley
 - pitched roofs $\leq 27^\circ$
 - skillion
 - Dutch gable
 - Dutch gable hip
 - downpipe spreaders
 - long rafter sarking
 - Dutch gable valley
 - gusset valley
 - broken hip (dog leg)
 - butt ridging
 - dog leg valley
- roof tiling techniques and processes
- common defects and solutions in roof tiling.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCR3002 Tile irregular roofs

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCR3002A Tile irregular roofs. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to install roof tiles to roofs incorporating irregular shapes, unequal pitches and dormer windows with tiled surrounds.

It includes the preparation, setting out, installing and fixing of tiles to a roof.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Roof tiling

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1	Plan and prepare to tile irregular roofs.	1.1	Read and interpret work instructions and plan sequence of work.
---	---	-----	---

- 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.
 - 1.3 Select and use personal protective equipment (PPE) for each stage of the task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Prepare roof face.
- 2.1 Check that fall safety devices have been installed correctly.
 - 2.2 Handle, assemble and erect elevator at job location.
 - 2.3 Check roof surface and structure for stability, and for safe access to roof for tile installation.
 - 2.4 Set out roof surface, and sark.
- 3 Install tiles.
- 3.1 Load, support and evenly distribute tiles on roof.
 - 3.2 Spread out, secure and install roof tiles.
 - 3.3 Bed hip and ridge tiles using specified bedding mix, maintaining alignment.
 - 3.4 Point hips, ridges and gables in flexible pointing to a smooth and even finish.
- 4 Tile roof openings and lay back surfaces and/or facades.
- 4.1 Check opening surrounds for soakers and flashings and prepare for tiles.
 - 4.2 Tile surrounds and flashings.
 - 4.3 Distribute and secure tiles to steep and vertical surfaces

to Australian Standards.

- 5 Clean up.
 - 5.1 Clear roof, guttering and downpipes of waste and surplus material.
 - 5.2 Clear work area, dispose of materials, and reuse or recycle in compliance with legislation, regulations and codes of practice.
 - 5.3 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCR3002A Tile irregular roofs.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCRT3002 Tile irregular roofs

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCRT3002A Tile irregular roofs. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by:

tiling roof construction systems and structures, including:

- roofs constructed to irregular shaped plans where corners are not right-angled
- bastard valley
- eight hip hex
- splayed gable
- butt ridging
- mitred apex
- steep hip and valley roof (minimum 35° pitch)
- soldier course valley
- turrets
- unequal pitch surfaces
- Cape Cod
- mansard
- bellcast
- pyramid or four way apex
- openings in irregular roofs, including:
 - chimneys
 - roof ventilators
 - cupolas
 - dormer windows
 - two storey inserts
 - skylights
 - pipes
 - flues.

These roof construction systems and structures must include those with:

- metal battens and metal frame
- metal battens and timber frame
- timber battens and metal frame
- timber battens and timber frame.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the NCC and Australian Standards for tiling irregular roofs
- workplace quality policies and standards for tiling irregular roofs
- safety requirements for tiling irregular roofs, including:
 - job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
 - safety data sheets (SDS)
 - personal protective equipment (PPE)
- environmental requirements for tiling irregular roofs
- characteristics and applications of roof tiling materials:
 - adhesives
 - concrete and terracotta tiles
 - fastenings and other mechanical fixings
 - flashings
 - bedding
 - sarking materials
 - timber and metal frames and battens
 - flexible pointing material
 - shingles
 - slate
 - storm seal/prestite
 - bed and point valleys
- types and uses of materials storage and environmentally friendly waste management
- measuring and marking for tiling irregular roofs
- types and uses of plans, drawings and specifications for tiling irregular roofs
- types and uses of tools and equipment for tiling irregular roofs
- processes for the calculation of materials requirements for tiling irregular roofs
- types and uses of roof construction systems and structures, and tiling considerations for irregular roofs, including:
 - roofs constructed to irregular shaped plans where corners are not right-angled

- bastard valley
- eight hip hex
- splayed gable
- butt ridging
- mitred apex
- steep hip and valley roof (minimum 35° pitch)
- soldier course valley
- turrets
- unequal pitch surfaces
- Cape Cod
- mansard
- bellcast
- pyramid or four way apex
- openings in irregular roofs:
 - chimneys
 - roof ventilators
 - cupolas
 - dormer windows
 - two storey inserts
 - skylights
 - pipes
 - flues
- roof tiling techniques and processes.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCR3003 Repair and replace valleys, valley irons and flashings

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCR3003B Repair and replace valleys, valley irons and flashings. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to repair and replace valley roof sections and flashings on different types and styles of tiled roof structures.

It includes the preparation, set out, repair, replacement and pointing of tiles to valley sections of roof structures.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Roof tiling

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare to repair and replace valleys, valley irons and flashings.
 - 1.1 Read and interpret work instructions and plan sequence of work.
 - 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.
 - 1.3 Select and use personal protective equipment (PPE) for each stage of the task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.

- 2 Prepare valley section for repair.
 - 2.1 Locate damaged area from plans and specifications.
 - 2.2 Check that fall safety devices have been installed correctly.
 - 2.3 Identify tiles to be repaired or replaced from a removed sample.
 - 2.4 Remove damaged tiles with minimum disturbance to remaining roof tiles.
 - 2.5 Relocate existing tiles to blend aesthetically with new tiles.
 - 2.6 Remove pointing or bedding over valley irons, flashings and affected roof tiles without damage.
 - 2.7 Clean damaged area and remove waste.
 - 2.8 Check roof structure valleys and flashing installations for soundness and adequacy.

- 3 Repair valley sections.
 - 3.1 Repair/replace damaged structural components of valley section of roof.

- 3.2 Replace/install roof tie down fixings to roof structure.
 - 3.3 Fabricate and install valley flashings.
- 4 Install roof tiles to valley and flashing sections.
 - 4.1 Inspect each replacement tile for match to original tiles.
 - 4.2 Mix bedding to Australian Standards.
 - 4.3 Lay tiles to existing design, gauge, alignment and bond specifications.
- 5 Apply bedding and pointing material.
 - 5.1 Apply bedding and pointing/storm seal material to Australian Standards.
 - 5.2 Point joints/collars to match finish to existing surrounds.
- 6 Clean up.
 - 6.1 Remove loose material from roof tile surface, clear work area, dispose of materials, and reuse or recycle in compliance with legislation, regulations and codes of practice.
 - 6.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCR3003B Repair and replace valleys, valley irons and flashings.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCR3003 Repair and replace valleys, valley irons and flashings

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCR3003B Repair and replace valleys, valley irons and flashings. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by removing, replacing and/or installing valley irons and flashings to include:

- side flashing
- step flashing
- soaker flashings
- vent pipe flashing
- valley iron and valley board
- valley flashing (e.g. Dutch gable flashing)
- Dutch gable hip flashing
- skylight flashing
- chimney flashing
- brick pillar flashing
- front apron flashing
- butt ridge flashing
- secret hip flashing.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the NCC and Australian Standards for repairing and replacing valleys, valley irons and flashings
- workplace quality policies and standards for repairing and replacing valleys, valley irons and flashings

- safety requirements or repairing and replacing valleys, valley irons and flashings, including:
 - job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
 - safety data sheets (SDS)
 - personal protective equipment (PPE)
- techniques and procedures for repairing tiled roof valleys, valley irons and flashings
- environmental requirements for repairing and replacing valleys, valley irons and flashings
- characteristics and applications of materials used in repairing tiled roof valleys, valley irons and flashings
- processes for installation of roof battens, sarking and flashing
- types and uses of materials storage and environmentally friendly waste management
- measuring and marking for repairing and replacing valleys, valley irons and flashings
- types and uses of plans, drawings and specifications for repairing and replacing valleys, valley irons and flashings
- types and uses of tools and equipment for repairing and replacing valleys, valley irons and flashings
- types and uses of flashing:
 - side flashing
 - step flashing
 - soaker flashings
 - vent pipe flashing
 - valley flashing (e.g. Dutch gable flashing)
 - Dutch gable hip flashing
 - skylight flashing
 - chimney flashing
 - brick pillar flashing
 - front apron flashing
 - butt ridge flashing
 - secret hip flashing
- types and uses of valley iron and valley board
- processes for the calculation of material requirements for repairing and replacing valleys, valley irons and flashings
- roof construction systems and structures and tiling considerations.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCR3004B Repair and renovate tile roofs.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by repairing and renovating a minimum one square metre of tiles, including damaged hip cuts, re-bedding and pointing, and replacing:

- damaged battens
- damaged sarking
- flashing and or sarking under downpipe spreader.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the NCC and Australian Standards for repairing and renovating tile roofs
- workplace quality policies and standards for repairing and renovating tile roofs
- safety requirements for repairing and renovating tile roofs, including:
 - job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
 - safety data sheets (SDS)
 - personal protective equipment (PPE)
- environmental requirements for repairing and renovating tile roofs
- characteristics and applications of roof tiling materials
- installation of roof battens, sarking and flashing
- leak detection and causes of leaks in roofs
- types and uses of materials storage and environmentally friendly waste management

- measuring and marking for repairing and renovating tile roofs
- types and uses of plans, drawings and specifications for repairing and renovating tile roofs
- types and uses of tools and equipment for repairing and renovating tile roofs
- processes for the calculation of material requirements for repairing and renovating tile roofs
- types and uses of roof construction systems and structures and tiling considerations
- roof tiling techniques and procedures and the process of repairing/renovating tiled roofs.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCR3005 Slate a roof

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Performance Evidence and Knowledge Evidence formatted for clarity. Changes to Performance Evidence.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and equivalent to CPCCR3005B Slate a roof. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to install slate on a conventional hip and valley roof.

It includes preparing, setting out and installing slate to a roof and replacing damaged slates.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Roof tiling

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

essential outcomes.	demonstrate achievement of the element.
1 Plan and prepare to slate a roof.	<p>1.1 Read and interpret work instructions and plan sequence of work.</p> <p>1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.</p> <p>1.3 Select and use personal protective equipment (PPE) for each stage of the task.</p> <p>1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.</p> <p>1.5 Select tools and equipment, check for serviceability and report any faults.</p> <p>1.6 Select materials required for task, calculate quantities, handle safely, and prepare and position ready for use.</p>
2 Prepare roof face.	<p>2.1 Check that fall safety devices have been installed correctly.</p> <p>2.2 Handle, assemble and erect elevator at job location.</p> <p>2.3 Set out roof surface, board and/or batten, sark and strike.</p> <p>2.4 Check roof surface and structure for stability, and for safe access to roof.</p>
3 Prepare slate.	<p>3.1 Load onto, support and evenly distribute slate on roof.</p> <p>3.2 Grade, mark and hole slate to alignment requirements.</p>
4 Lay and secure slate.	<p>4.1 Lay and secure slate to designed layout of gauge, bond and line.</p> <p>4.2 Finish ridges and hips in accordance with placement of slate.</p> <p>4.3 Install, measure, prepare, fit and fix hip covering.</p>

- | | | | |
|---|-----------------|-----|--|
| 5 | Replace slates. | 5.1 | Remove damaged slate avoiding damage to surrounding slates. |
| | | 5.2 | Prepare and fix replacement slate to match surrounds. |
| 6 | Clean up. | 6.1 | Clear roof and guttering, and remove waste and surplus material |
| | | 6.2 | Clear work area and dispose of, reuse or recycle materials in accordance with legislation, regulations, codes of practice and job specification. |
| | | 6.3 | Clean, check, maintain and store plant, tools and equipment in accordance with manufacturers' specifications. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCR3005B Slate a roof.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCRT3005 Slate a roof

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Performance Evidence and Knowledge Evidence formatted for clarity. Changes to Performance Evidence.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and equivalent to CPCCRT3005B Slate a roof. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by:

- slating a roof frame, incorporating:
 - setting out, boarding/battening, sarking and striking
 - a 1.5 metre mitred hip
 - a 1.5 metre valley
 - a 1.5 metre gable with flashings to a wall or abutment
 - a 1.5 metre top ridge
 - use of hook fixing systems
 - bedding and pointing
- removing and replacing a minimum of three damaged slates.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the NCC and Australian Standards for slating a roof
- workplace quality policies and standards for slating a roof
- safety requirements for slating a roof, including:

- job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
- safety data sheets (SDS)
- personal protective equipment (PPE)
- environmental requirements for slating a roof
- characteristics and applications of slate and slating materials:
 - hip finishes:
 - mitred
 - lead
 - ridge
 - metal
 - preparation materials/processes:
 - battened and felted (sarked)
 - boarded and felted (sarked)
 - boarded
 - felted (sarked)
 - battened and boarded, felted (sarked)
 - counter-battened
 - battened
- installation of roof battens, sarking and flashing
- processes for using hook fixing systems when changing slate
- incorporating patterns to laying of slate
- types and uses of materials storage and environmentally friendly waste management
- measuring and marking for slating a roof
- types and uses of plans, drawings and specifications for slating a roof
- processes for setting out:
 - head lap
 - side lap
 - angle of creep
- types and uses of tools and equipment for slating a roof
- processes for the calculation of material requirements for slating a roof
- types and uses and slating considerations of roof construction systems and structures
- slating techniques and procedures.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCR3006 Fix shingles to roofs and facades

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Performance Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and equivalent to CPCCR3006B Fix shingles to roofs and facades.
Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to fix timber shingles or shakes to provide a waterproof covering to roofs, walls and facades.

It includes preparation, installation and finishing of the covered surface.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Roof tiling

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Plan and prepare to fix shingles to roofs and facades.
 - 1.1 Read and interpret work instructions and plan sequence of work.
 - 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.
 - 1.3 Select and use personal protective equipment (PPE) for each stage of the task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults.
 - 1.6 Select materials required for task, calculate quantities, handle safely, and prepare and position ready for use.
 - 2 Prepare roof face.
 - 2.1 Check that fall safety devices have been installed correctly.
 - 2.2 Handle, assemble and erect elevator at job location.
 - 2.3 Set out roof surface, board/batten, sark and strike.
 - 2.4 Check roof surface and structure for stability and for safe access to roof.
 - 3 Install shingles/shakes.
 - 3.1 Load, support and distribute shingles/shakes evenly on roof.
 - 3.2 Lay sarking below initial course of shingles/shakes.
 - 3.3 Fix shingles/shakes in line, with spacing and guttering overhang.
 - 3.4 Lay subsequent courses with sarking and shingles.
 - 3.5 Maintain staggered joints and bonds with overlapping shingles/shakes.

- 3.6 Split shingles/shakes and cut to form junctions with walls or roof surfaces.
 - 3.7 Finish valleys.
 - 3.8 Finish gable ends to line and overhang.
- 4 Finish hips and ridges.
- 4.1 Select same-size shingles/shakes for hips and ridges.
 - 4.2 Bevel-cut edges of shingles/shakes to provide butt joints in capping sections.
 - 4.3 Cover, fix and finish hips and ridges to line.
- 5 Clad walls and facades.
- 5.1 Select method of finishing shingles/shakes on wall or facade.
 - 5.2 Sheet and fix sheathed surfaces to framework.
 - 5.3 Set out wall or facade spacing for battens and exposure of shingles/shakes.
 - 5.4 Fit sarking and shingles/shakes.
 - 5.5 Construct junctions at corners to finishes.
 - 5.6 Finish flashings.
- 6 Clean up.
- 6.1 Clear work area and dispose of materials, and reuse or recycle materials in accordance with legislation, regulations, codes of practice.
 - 6.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCR3006B Fix shingles to roofs and facades.

Assessment Requirements for CPCCR3006 Fix shingles to roofs and facades

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Performance Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and equivalent to CPCCR3006B Fix shingles to roofs and facades.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by fixing shingles and/or shakes to:

- a roof frame, incorporating:
 - setting out, boarding and/or battening, sarking and striking
 - a 1.5 metre hip
 - a 1.5 metre valley
 - a 1.5 metre gable
 - a 1.5 metre top ridge
- an external wall of minimum 1 square metre, incorporating:
 - an internal corner with flashing
 - sarking, battening and finishing.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the NCC and Australian Standards for fixing shingles to roofs and facades
- workplace quality policies and standards for fixing shingles to roofs and facades
- safety requirements for fixing shingles to roofs and facades, including:

- job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
- safety data sheets (SDS)
- personal protective equipment (PPE)
- environmental requirements for fixing shingles to roofs and facades
- characteristics and applications of shingle/shake materials:
 - shingles/shakes:
 - terracotta
 - timber
 - timber shingles/shakes:
 - straight split
 - taper split
 - hand split
 - re-sawn
- processes for installation of roof battens, sarking and flashing:
 - preparation for shingles/shakes on roof surfaces:
 - battened/boarded and sarked
 - boarded, counter battened and sarked
- types and uses of materials storage and environmentally friendly waste management
- measuring and marking for fixing shingles to roofs and facades
- types and uses of plans, drawings and specifications for fixing shingles to roofs and facades
- types and uses of tools for fixing shingles to roofs and facades
- processes for the calculation of material requirements for fixing shingles to roofs and facades
- quality requirements for fixing shingles to roofs and facades
- types and uses of roof and facade construction systems and structures and shingling considerations:
 - hip finishes:
 - mitred
 - lead
 - ridge
 - metal
 - bonnet
 - roof protrusions:
 - chimneys
 - dormer windows
 - two storey insert
 - skylights
 - pipes and flues
 - roof ventilators

- cupolas
 - joining at wall corners:
 - butted against boards
 - laced with flashing behind for internal
 - butted against timber stop for both external and internal
- roof and facade shingling techniques and procedures.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCSC2001 Handle and position scaffolding tools, equipment and components

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCSC2001A Safely handle and use scaffolding tools and equipment. Updated to meet the Standards for Training Packages.

Application

This unit specifies the skills and knowledge required to handle and locate scaffolding tools, equipment and components. It includes selecting, moving, locating, positioning and storing scaffolding tools, equipment and components.

It applies to those who work under the direction of more experienced workers to support dogging activities.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1	Plan and prepare to	1.1	Read work order and associated documentation and
---	---------------------	-----	--

- handle, move and locate scaffolding tools, equipment and components.
- 1.2 clarify work tasks with relevant persons.
- 1.2 Plan all work to comply with relevant legislation, regulations, standards, codes, work health and safety (WHS), environmental and workplace requirements.
- 1.3 Select tools and equipment required for work tasks, check for serviceability and rectify or report identified faults.
- 1.4 Select and fit personal protective equipment (PPE) appropriate for work activities.
- 2 Handle, move, sort and stack scaffolding tools, equipment and components.
- 2.1 Move scaffolding tools, equipment and components manually using safe manual handling techniques.
- 2.2 Stack or band scaffolding tools, equipment and components for mechanical handling in accordance with work order.
- 2.3 Load, unload, move or locate scaffolding tools, equipment and components at specified location, assist mechanical handling equipment operator and ensure safe handling.
- 2.4 Sort scaffolding tools, equipment and components, and stack for ease of identification and retrieval, in accordance with task sequence and job location.
- 2.5 Protect scaffolding tools, equipment and components against physical and water damage, and store clear of access ways for ease of identification, retrieval and distribution.
- 3 Store scaffolding tools, equipment and components.
- 3.1 Use safe handling techniques to move scaffolding tools, equipment and components manually or mechanically to storage area after conclusion of scaffolding task.
- 3.2 Clean, check, maintain and store scaffolding tools, equipment and components in accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCSC2001A Safely handle and use scaffolding tools and equipment.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCSC2001 Handle and position scaffolding tools, equipment and components

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCSC2001A Safely handle and use scaffolding tools and equipment. Updated to meet the Standards for Training Packages.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by handling and locating scaffolding tools, equipment and components for three different scaffolding tasks.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace and regulatory requirements for handling and positioning scaffolding tools, equipment and components under applicable Commonwealth, state or territory work health and safety (WHS) legislation and codes of practice:
 - job safety and environmental analyses (JSEAs)
 - safe work method statements (SWMSs)
 - safety data sheets (SDSs)
 - signage
 - environmental and worksite safety plans
 - reporting problems
- interpreting task plans and specifications relating to safely handling and locating scaffolding tools, equipment and components
- types, characteristics, uses and limitations of scaffolding tools and equipment:
 - hammers
 - ladders
 - nips
 - pallet trolleys
 - planks, including laminated
 - spanners
 - spirit levels

- tape measures
- processes for assisting mechanical handling equipment operator, including signalling methods
- storage requirements for scaffolding tools, equipment and components.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- industry-standard equipment used to perform the tasks specified in the Performance Evidence
- appropriate workplace information and records, including policies, procedures and legislative requirements.

CPCSC2002 Erect and dismantle basic scaffolding

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Minor edits to formatting.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCSC2002A Erect and dismantle basic scaffolding. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to erect and dismantle a range of modular scaffolding systems to provide work platforms for construction purposes. Scaffolding systems include edge protection, access ways and falsework (scaffold support systems for formwork).

It applies to those who work under the direction of more experienced workers to erect and dismantle a range of modular scaffolding systems.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Plan and prepare to erect and dismantle basic scaffolding. | 1.1 Read work order and associated documentation and clarify work tasks with relevant persons. |
| | 1.2 Plan all work to comply with relevant legislation, regulations, standards, codes, work health and safety (WHS), environmental and workplace requirements. |
| | 1.3 Select plant, tools and equipment, check for serviceability and rectify or report any faults. |
| | 1.4 Select and inspect scaffolding and components, and label and reject damaged components. |
| | 1.5 Calculate expected loading on scaffold and supporting structure using load tables and manufacturer specifications. |
| | 1.6 Identify site access and egress routes. |
| 2 Whip, tie, splice and inspect ropes. | 2.1 Inspect whipping cord and fibre rope for damage and wear. |
| | 2.2 Whip designated rope ends in accordance with work order and regulatory requirements. |
| | 2.3 Splice designated rope ends in accordance with work order and regulatory requirements. |
| | 2.4 Apply and inspect bends and hitches in accordance with work order. |
| 3 Erect basic scaffolding. | 3.1 Erect required safety signage and barricades and fit personal protective equipment (PPE). |
| | 3.2 Select sole board/base plate in accordance with regulatory and manufacturer requirements. |
| | 3.3 Set out and erect scaffolding in accordance with regulatory and manufacturer requirements. |
| | 3.4 Erect and install static lines where specified in |

- accordance with regulatory requirements.
- 3.5 Assemble and erect lifting device as specified.
- 4 Inspect, repair and alter erected basic scaffolding.
- 4.1 Inspect erected modular scaffolding for damage, corrosion, wear and compatibility.
- 4.2 Check current use of scaffolding against original design and confirm that it is in accordance with regulations and specifications.
- 4.3 Inspect and confirm scaffolding stability.
- 4.4 Carry out alteration or repair as necessary and within own level of responsibility.
- 4.5 Complete and date inspection log and handover certificate, ready for signing by a certified scaffolder.
- 5 Dismantle basic scaffolding.
- 5.1 Isolate scaffolding with appropriate signage and barricades to ensure safe dismantling.
- 5.2 Dismantle scaffolding, reversing procedure followed for erection.
- 6 Clean up.
- 6.1 Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
- 6.2 Clean, check, maintain and store tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCSC2002A Erect and dismantle basic scaffolding.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCSC2002 Erect and dismantle basic scaffolding

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Minor edits to formatting.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCSC2002A Erect and dismantle basic scaffolding. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by:

- planning, erecting and dismantling a modular scaffolding system, in accordance with job safety and environmental analyses (JSEAs), safe work method statements (SWMSs) and regulations, and including:
 - five bays with an internal and external return
 - four lifts, including ties
 - ladder and stair access
 - fall and edge protection
- whipping, splicing, tying and inspecting five fibre ropes in accordance with regulations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace and regulatory requirements for erecting and dismantling basic scaffolding under applicable Commonwealth, state or territory work health and safety (WHS) legislation and codes of practice:
 - JSEAs
 - SWMSs
 - safety manuals and instructions for plant, tools and equipment
 - signage and barricades
 - personal protective equipment (PPE)
 - working at heights requirements

- environmental and worksite safety plans
- reporting problems
- erection of scaffolding:
 - placement
 - sequencing
 - squaring
 - levelling
 - tying to structure
- scaffolding for:
 - work platforms
 - edge protection
 - access ways
 - falsework
 - grandstands
 - covered walkways
- lifting devices:
 - cantilevered hoists
 - gin wheels
- establishment of footings, including the review of JSEAs and SWMSs to determine the bearing capacity of ground or working surfaces
- whipping methods:
 - common
 - west countryman
 - American
 - sail makers
- splicing methods:
 - end splice
 - eye splice
- types of bends and hitches:
 - clove hitch around a tube
 - rolling hitch around a tube
 - single bow line
 - timber hitch
 - half hitch around a plank
 - sheet bend to another rope
- alteration and repair due to storm damage, accidents, misuse and process
- types, characteristics and limitations of tools, equipment and components required for erecting and dismantling basic scaffolding:
 - adjustable base plates
 - bends and hitches

- box spanners
- braces
- bracket scaffolds (tank and formwork)
- cantilevered hoists (materials only with maximum capacity of 500 kg)
- couplers and accessories
- fibre ropes
- guard rails
- hammers
- ledgers
- mesh guards
- mid rails
- modular and prefabricated scaffolds
- podgers
- hammers
- prefabricated components
- scaffold belts
- scaffolding planks
- spirit levels
- stairs or ladders
- standards
- steel and aluminium tubes
- tape measures
- torpedo levels
- transoms
- wire nips
- wrenches
- requirements for use of tools, equipment and materials for erecting and dismantling basic scaffolding:
 - safe operating procedures
 - operational, maintenance and basic diagnostic procedures
 - workplace and equipment safety requirements
- signalling methods and communications
- requirements for cleaning up work area, maintaining and storing plant, tools, equipment and materials, and for environmentally friendly waste management.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- industry-standard equipment required to perform the tasks specified in the Performance Evidence
- appropriate workplace information and records, including policies, procedures and legislative requirements.

CPCSC3001 Erect and dismantle intermediate scaffolding

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Minor edits to formatting.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCSC3001A Erect and dismantle intermediate scaffolding. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to safely erect and dismantle all types of tube and coupler scaffolding systems to provide work platforms for construction purposes and all work associated with modular scaffolding systems. Scaffolding systems include edge protection, access ways and falsework (scaffold support systems for formwork).

It applies to workers erecting and dismantling a range of modular scaffolding systems who would be expected to take responsibility for organising and completing these tasks with a high degree of self direction.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Plan and prepare to erect and dismantle intermediate scaffolding.	1.1 Interpret work order and associated documentation and clarify requirements with relevant persons.
	1.2 Plan all work to comply with relevant legislation, regulations, standards, codes, work health and safety, environmental and workplace requirements.
	1.3 Select plant, tools and equipment required for work tasks, check for serviceability and rectify or report identified faults.
	1.4 Select and inspect scaffolding and components, and label and reject damaged components.
	1.5 Determine expected loading on scaffold and supporting structure using load tables and manufacturer specifications.
	1.6 Determine site access and egress routes.
2 Erect intermediate scaffolding.	2.1 Erect required safety signage and barricades and fit personal protective equipment (PPE).
	2.2 Select sole board/base plate in accordance with regulatory and manufacturer requirements.
	2.3 Set out and erect scaffolding in accordance with regulatory and manufacturer requirements.
	2.4 Erect and install static lines as specified in accordance with regulatory requirements.
	2.5 Assemble and erect lifting device as specified.
3 Inspect, repair and alter erected intermediate scaffolding.	3.1 Inspect erected tube and coupler scaffolding for damage, corrosion, wear and compatibility, and immediately isolate, label, tag and reject or replace faulty components.
	3.2 Check current use of scaffolding against original design and confirm that it is in accordance with regulations and

- specifications.
- 3.3 Inspect and confirm scaffolding stability.
 - 3.4 Carry out alteration or repair as necessary and within own level of responsibility.
 - 3.5 Complete and date inspection log and handover certificate, ready for signing by a certified scaffolder.
- 4 Dismantle intermediate scaffolding.
- 4.1 Isolate scaffolding with appropriate signage and barricades to ensure safe dismantling.
 - 4.2 Dismantle scaffolding, reversing procedure followed for erection.
- 5 Clean up.
- 5.1 Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
 - 5.2 Clean, check, maintain and store tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCSC3001A Erect and dismantle intermediate scaffolding.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCSC3001 Erect and dismantle intermediate scaffolding

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Minor edits to formatting.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCSC3001A Erect and dismantle intermediate scaffolding. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by erecting and dismantling tube and coupler intermediate scaffolding, in accordance with job safety and environmental analyses (JSEAs), safe work method statements (SWMSs) and regulations, including:

- three bays and two lifts with an internal or external return
- one barrow ramp
- one spur
- fall and edge protection.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace and regulatory requirements for erecting and dismantling intermediate scaffolding under applicable Commonwealth, state or territory work health and safety (WHS) legislation, Australian Standards and codes of practice:
 - JSEAs
 - SWMSs
 - safety manuals and instructions for plant, tools and equipment
 - signage and barricades
 - personal protective equipment (PPE)
 - working at heights requirements
 - environmental and worksite safety plans
 - reporting problems

- clipping, tubing and fitting scaffolding with mast climbers, cantilevers, barrow ramps, spurs, longitudinal and transverse braces, random planks, putlogs and modular scaffolding:
 - planning
 - design
 - erection
 - alteration
 - dismantling
- erection of scaffolding:
 - placement
 - sequencing
 - squaring
 - levelling
 - tying to structure
- scaffolding for:
 - work platforms
 - edge protection
 - access ways
 - falsework
 - grandstands
 - covered walkways
- lifting devices:
 - mast climbers
 - cantilevered hoists
 - gin wheels
- establishment of footings, including the review of JSEAs and SWMSs to determine the bearing capacity of ground or working surfaces
- alteration and repair due to storm damage, accidents, misuse and process
- types, characteristics and limitations of tools, equipment and components required for erecting and dismantling intermediate scaffolding:
 - barrow ramps
 - box spanners
 - bracket scaffolds (tank and formwork)
 - cantilevered hoists (materials only with maximum capacity of 500 kg)
 - cantilevers
 - clips
 - couplers and accessories
 - gin wheels
 - hammers
 - ladders

- perimeter safety screens and shutters
- prefabricated components
- ropes
- scaffolding planks
- spirit levels
- spurs
- stairs
- steel and aluminium tubes
- tape measures
- tube and fitting scaffolding with mast climbers
- requirements for use of tools, equipment and materials for erecting and dismantling intermediate scaffolding:
 - safe operating procedures
 - operational, maintenance and intermediate diagnostic procedures
 - workplace and equipment safety requirements
- signalling methods and communications
- requirements for cleaning up work area, maintaining and storing tools, equipment and materials, and for environmentally friendly waste management.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- industry-standard equipment required to perform the tasks specified in the Performance Evidence
- appropriate workplace information and records, including policies, procedures and legislative requirements.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCSF2001 Handle steelfixing materials

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCSF2001A Handle steelfixing materials. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to safely and effectively handle, sort and store steelfixing materials. It includes identifying a range of commonly used materials, planning and preparing for work, safe and effective handling, sorting and storage of steelfixing materials, and completing clean-up activities.

It applies to those who work under the direction of more experienced workers to support steelfixing activities.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Steelfixing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare to handle steelfixing

1.1 Read work order and associated documentation and clarify work tasks with relevant persons.

- materials.
- 1.2 Plan all work to comply with relevant legislation, regulations, standards, codes, work health and safety (WHS), environmental and workplace requirements.
 - 1.3 Select plant, tools and equipment, check for serviceability and rectify or report any faults.
 - 1.4 Erect required safety signage and barricades and fit personal protective equipment (PPE).
- 2 Handle, sort and stack steelfixing materials and components.
- 2.1 Identify and check materials and components to ensure they conform with material schedule, plans, quality requirements and specifications.
 - 2.2 Handle materials and components safely and effectively.
 - 2.3 Sort materials and components to suit material type and size, and stack for ease of identification and retrieval in accordance with task sequence.
 - 2.4 Protect materials and components against physical damage and stack/store clear of traffic-ways.
 - 2.5 Use dust suppression procedures to minimise health risk to people in the work area.
- 3 Handle and remove waste safely.
- 3.1 Handle waste materials and components correctly and safely in accordance with regulatory and workplace requirements.
 - 3.2 Identify hazardous material for separate handling in accordance with safety data sheets (SDSs) and regulatory requirements.
 - 3.3 Remove non-toxic materials using correct procedures in accordance with workplace requirements.
- 4 Clean up.
- 4.1 Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
 - 4.2 Clean, check, maintain and store tools and equipment in accordance with manufacturer and workplace

requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCSF2001A Handle steelfixing materials.

Assessment Requirements for CPCCSF2001 Handle steelfixing materials

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCSF2001A Handle steelfixing materials.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by handling the following steelfixing materials on two occasions at two different sites:

- wire ties
- ligatures and spacer/spreader assemblies
- deformed bars
- plain rods
- bar chairs
- mesh sheets of plain bars
- mesh sheets of deformed bars
- scaffolding components
- pipe sections
- structural steel sections.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace and regulatory requirements for handling steelfixing materials under applicable Commonwealth, state or territory work health and safety (WHS) legislation and codes of practice:
 - job safety and environmental analyses (JSEAs)
 - safe work method statements (SWMSs)
 - safety data sheets (SDSs)
 - safety manuals and instructions for plant, tools and equipment
 - signage and barricades
 - personal protective equipment (PPE)
 - working at heights requirements
 - environmental and worksite safety plans

- reporting problems
- scope of work for handling steelfixing materials:
 - steelfixing materials:
 - wire ties
 - ligatures and spacer/spreader assemblies
 - deformed bars
 - plain rods
 - bar chairs
 - mesh sheets of plain bars
 - mesh sheets of deformed bars
 - scaffolding components
 - pipe sections
 - structural steel sections
 - methods of protecting stacked/stored materials:
 - covering
 - tying or banding
 - barricades
 - signs
 - locking away (hazardous materials)
- types, characteristics, uses and limitations of tools, equipment and materials required for handling steelfixing materials:
 - angle grinders
 - bolt cutters
 - general and hand-held power tools
 - measuring tapes and rules
 - mesh guillotines
 - oxy-acetylene sets and cutting attachments
 - reinforcement benders
 - tie wire reels
 - wire nippers
- requirements for tools, equipment and materials to erect and dismantle intermediate scaffolding:
 - safe operating procedures
 - operational, maintenance and intermediate diagnostic procedures
 - workplace and equipment safety requirements
- signalling methods and communications
- requirements for cleaning up work area, maintaining and storing plant, tools, equipment and materials, and for environmentally friendly waste management.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- industry-standard equipment required to perform the tasks specified in the Performance Evidence
- appropriate workplace information and records, including policies, procedures and legislative requirements.

CPCCSF2002 Use steelfixing tools and equipment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCSF2002A Use steelfixing tools and equipment. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to safely and effectively use steelfixing tools, plant and equipment. It includes identification, selection, storage, safe use and maintenance of a range of commonly used steelfixing tools, plant and equipment.

It applies to those who work under the direction of more experienced workers to support steelfixing activities.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Steelfixing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare to use steelfixing tools,

1.1 Read work order and associated documentation and clarify work tasks with relevant persons.

- plant and equipment.
- 1.2 Plan all work to comply with relevant legislation, regulations, standards, codes, work health and safety (WHS), environmental and workplace requirements.
 - 1.3 Identify hazards and identify risk controls.
 - 1.4 Erect required safety signage and barricades and fit personal protective equipment (PPE).
- 2 Select and check steelfixing tools, plant and equipment.
- 2.1 Identify functions, operation and limitations of steelfixing tools, plant and equipment in accordance with manufacturer and workplace requirements.
 - 2.2 Review and follow WHS requirements for using steelfixing hand tools, power tools, plant and equipment.
 - 2.3 Select tools and equipment, including leads and hoses, tags, serviceability and safety, and rectify or report any faults.
 - 2.4 Check power tool guards, retaining bolts, couplings, gauges and controls, and maintain them in accordance with manufacturer requirements.
 - 2.5 Select equipment to hold or support material during operation.
 - 2.6 Perform pre-operational checks, including lubricants, hydraulic fluid and water, in accordance with manufacturer requirements.
- 3 Use steelfixing tools, plant and equipment.
- 3.1 Connect power and compressed air supply to work area.
 - 3.2 Follow start-up and shutdown procedures in accordance with manufacturer requirements.
 - 3.3 Use tools, plant and equipment safely and effectively in accordance with manufacturer and WHS requirements.
 - 3.4 Place tools, plant and equipment in safe location when not in immediate use.
- 4 Clean up.
- 4.1 Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace

requirements.

- 4.2 Clean, check, maintain and store tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCSF2002A Use steelfixing tools and equipment.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCSF2002 Use steelfixing tools and equipment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCSF2002A Use steelfixing tools and equipment. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by using steelfixing tools and equipment to complete two steelfixing tasks, using each of the following on at least one occasion:

- bolt cutters
- wire nippers
- tie wire reels
- angle grinders
- measuring tapes and rules
- general and hand-held power tools
- mesh guillotines
- cutting attachments
- generators for angle grinders
- reinforcement benders
- welding sets.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace and regulatory requirements for using steelfixing tools and equipment under applicable Commonwealth, state or territory work health and safety (WHS) legislation and codes of practice:
 - job safety and environmental analyses (JSEAs)
 - safe work method statements (SWMSs)
 - safety manuals and instructions for plant, tools and equipment
 - signage and barricades
 - personal protective equipment (PPE)
 - working at heights requirements

- environmental and worksite safety plans
- reporting problems
- steelfixing materials:
 - deformed bars
 - ligatures and spacer/spreader assemblies
 - mesh sheets of deformed bars
 - mesh sheets of plain bars
 - plain rods
 - wire ties
- types, characteristics and limitations of steelfixing tools and equipment:
 - bolt cutters
 - wire nippers
 - tie wire reels
 - angle grinders
 - measuring tapes and rules
 - general and hand power tools
 - generators for angle grinders
 - reinforcement benders
 - welding sets
 - mesh guillotines
 - cutting attachments
- requirements for using steelfixing tools and equipment:
 - safe operating procedures
 - operational, maintenance and intermediate diagnostic procedures
 - workplace and equipment safety requirements
- requirements for cleaning up work area, maintaining and storing plant, tools, equipment and materials, and for environmentally friendly waste management.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- industry-standard equipment required to perform the tasks specified in the Performance Evidence
- appropriate workplace information and records, including policies, procedures and legislative requirements.

CPCCSF2005 Arc weld reinforcement steel

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCSF2005A Arc weld reinforcement steel.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to arc weld reinforcement to non-load bearing structural components as part of the construction process. It does not include specialist welding techniques.

It includes planning and preparing for the work, setting up for welding, welding the reinforcement, checking the reinforcement and completing clean-up activities.

It applies to those who work under the direction of more experienced workers to arc weld reinforcement steel.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Steelfixing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare to arc 1.1 Read work order and associated documentation and

- | | | |
|--|-----|---|
| weld reinforcement steel. | | clarify work tasks with relevant persons. |
| | 1.2 | Plan all work to comply with relevant legislation, regulations, standards, codes, work health and safety (WHS), environmental and workplace requirements. |
| | 1.3 | Identify hazards and determine risk controls. |
| | 1.4 | Select plant, tools and equipment, check for serviceability and rectify or report any faults. |
| | 1.5 | Calculate materials quantities. |
| 2 Prepare work area to arc weld reinforcement steel. | 2.1 | Erect required safety signage and barricades and fit personal protective equipment (PPE). |
| | 2.2 | Obtain, prepare, and safely handle materials and locate them ready for use. |
| | 2.3 | Select fire extinguisher and locate so it is readily accessible before and during operations. |
| | 2.4 | Clean area of flammable material, scale and loose residual debris from reinforcement before welding. |
| 3 Arc weld reinforcement steel. | 3.1 | Weld reinforcement in accordance with job specifications and workplace requirements. |
| | 3.2 | Carry out tack welds to meet specifications relating to the diameter of the bar. |
| | 3.3 | Carry out welding at the required distance from bends or re-bends of reinforcement bars. |
| 4 Check reinforcement before use. | 4.1 | Check location and position of reinforcement and fixing ties for accuracy. |
| | 4.2 | Check depth of coverage, clearance, spacing and overlap before use. |
| 5 Clean up. | 5.1 | Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace |

requirements.

- 5.2 Clean, check, maintain and store plant, tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCSF2005A Arc weld reinforcement steel.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCSF2005 Arc weld reinforcement steel

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCSF2005A Arc weld reinforcement steel.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by arc welding reinforcement steel materials listed below for a minimum of five separate tasks:

- deformed bars
- plain rods
- mesh sheets of plain bars
- mesh sheets of deformed bars.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace and regulatory requirements for arc welding reinforcement steel under applicable Commonwealth, state or territory work health and safety (WHS) legislation and codes of practice:
 - job safety and environmental analyses (JSEAs)
 - safe work method statements (SWMSs)
 - safety manuals and instructions for plant, tools and equipment
 - signage and barricades
 - personal protective equipment (PPE)
 - working at heights requirements
 - environmental and worksite safety plans
 - reporting problems
- reinforcing material to be welded:
 - deformed bars
 - plain rods
 - mesh sheets of plain bars
 - mesh sheets of deformed bars

- materials:
 - bar chairs
 - deformed bars
 - ligatures and spacer/spreader assemblies
 - mesh sheets of deformed bars
 - mesh sheets of plain bars
 - plain rods
 - welding consumables
 - wire ties
- types, characteristics and limitations of arc welding plant, tools and equipment:
 - manual metal arc welding (MMAW) equipment
 - angle grinders
 - bolt cutters
 - measuring tapes and rules
 - mesh guillotine
 - reinforcement benders
 - tie wire reels
 - wire nippers
- requirements for using arc welding plant, tools and equipment:
 - safe operating procedures
 - operational, maintenance and intermediate diagnostic procedures
 - workplace and equipment safety requirements
- requirements for cleaning up work area, maintaining and storing tools, plant, equipment and materials, and for environmentally friendly waste management.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- industry-standard equipment required to perform the tasks specified in the Performance Evidence
- appropriate workplace information and records, including policies, procedures and legislative requirements.

CPCCSF2006 Machine-cut reinforcement materials

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCSF2006A Machine cut reinforcement materials. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to machine-cut reinforcement material components that form part of the construction process. It includes preparing and planning for the work, setting up the machine, cutting the reinforcing materials and completing clean-up activities.

It applies to those who work under the direction of more experienced workers to cut reinforcement materials with machine-cutting equipment for a construction project.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Steelfixing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare to machine-cut

1.1 Read work order and associated documentation and clarify work tasks with relevant persons.

- | | | |
|--|-----|---|
| reinforcement materials. | 1.2 | Plan all work to comply with relevant legislation, regulations, standards, codes, work health and safety (WHS), environmental and workplace requirements. |
| | 1.3 | Identify hazards and determine risk controls. |
| | 1.4 | Select cutting machine, tools and equipment, check for serviceability and rectify or report any faults. |
| 2 Set up work area to machine-cut reinforcement materials. | 2.1 | Erect required safety signage and barricades and fit personal protective equipment (PPE). |
| | 2.2 | Conduct measurements and select cutting method in accordance with task specification and site conditions. |
| | 2.3 | Clean area of flammable material and erect barriers to contain waste material from cutting process. |
| | 2.4 | Provide a secure and safe work environment with stable base and platform for the reinforcing material. |
| | 2.5 | Set up cutting machine for operation in accordance with task specifications and manufacturer requirements. |
| 3 Machine-cut reinforcement materials. | 3.1 | Operate cutting machine safely in accordance with manufacturer and workplace requirements. |
| | 3.2 | Cut or dock reinforcement steel to prescribed lengths and configurations in accordance with task specifications. |
| | 3.3 | Cut fabric reinforcement to ensure allowances for element penetrations. |
| | 3.4 | Stack and bundle cut lengths to be included in reinforcing layout. |
| 4 Clean up. | 4.1 | Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements. |
| | 4.2 | Clean, check, maintain and store tools and equipment in accordance with manufacturer and workplace requirements. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCSF2006A Machine cut reinforcement materials.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCSF2006 Machine-cut reinforcement materials

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCSF2006A Machine cut reinforcement materials. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by machine-cutting each of the following reinforcement steel materials using a guillotine shear/cropper and an angle grinder:

- deformed bars
- mesh sheets of deformed bars
- mesh sheets of plain bars
- plain rods.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace and regulatory requirements for machine-cutting reinforcement materials under applicable Commonwealth, state or territory work health and safety (WHS) legislation and codes of practice:
 - job safety and environmental analyses (JSEAs)
 - safe work method statements (SWMSs)
 - safety data sheets (SDSs)
 - safety manuals and instructions for plant, tools and equipment
 - signage and barricades
 - personal protective equipment (PPE)
 - working at heights requirements
 - environmental and worksite safety plans
 - reporting problems
- reinforcement materials:
 - cutting consumables
 - deformed bars

- mesh sheets of deformed bars
- mesh sheets of plain bars
- plain rods
- types, characteristics and limitations of tools and equipment for machine-cutting reinforcement materials:
 - guillotine shear/cropper
 - angle grinders
 - bolt cutters
 - general hand and power tools
 - measuring tapes and rules
 - tie wire reels
 - wire nippers
- requirements for using tools and equipment for machine-cutting reinforcement materials:
 - safe operating procedures
 - operational, maintenance and intermediate diagnostic procedures
 - workplace and equipment safety requirements
- requirements for cleaning up work area, maintaining and storing plant, tools, equipment and materials, and for environmentally friendly waste management.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- industry-standard equipment required to perform the tasks specified in the Performance Evidence
- appropriate workplace information and records, including policies, procedures and legislative requirements.

CPCCSF2007 Splice and anchor using mechanical methods

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCSF2007A Splice and anchor using mechanical methods. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to mechanically splice and anchor reinforcement in concrete. It includes planning and preparing for the work, splicing and anchoring, and cleaning up.

It applies to those who work under the direction of more experienced workers to employ mechanical methods to splice and anchor materials in a steelfixing project.

Completion of the general construction induction training program, specified in the Safe work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Steelfixing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare to splice and anchor

1.1 Read work order and associated documentation and clarify work tasks with relevant persons.

- using mechanical methods.
- 1.2 Plan all work to comply with relevant legislation, regulations, standards, codes, work health and safety (WHS), environmental and workplace requirements.
 - 1.3 Identify hazards and determine risk controls.
 - 1.4 Select plant, tools and equipment, check for serviceability and rectify or report faults.
 - 1.5 Calculate material requirements to meet task specifications.
 - 1.6 Obtain, prepare and safely handle materials for the task, and situate them ready for use.
- 2 2. Splice and anchor using mechanical methods.
- 2.1 Erect required safety signage and barricades and fit personal protective equipment (PPE).
 - 2.2 Thread reinforcement bars as detailed in task specifications.
 - 2.3 Configure detail of splicing arrangement in accordance with task specifications.
 - 2.4 Fit and secure splicing couplers to reinforcing bar in accordance with manufacturer handling instructions and task specifications.
 - 2.5 Secure reinforcement in accordance with prescribed tolerances.
 - 2.6 Free coupler connections and reinforcing bars of mill scale and residual debris that may foul connections.
 - 2.7 Locate and anchor reinforcement as prescribed in task specifications and relevant standards.
- 3 Check reinforcement before use.
- 3.1 Check location and position of reinforcement and fixing ties to reinforcement for accuracy.
 - 3.2 Check depth of coverage, clearance, spacing and overlap of reinforcement material conforms with task specifications and relevant standards.

- 4 Clean up.
 - 4.1 Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
 - 4.2 Clean, check, maintain and store plant, tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCSF2007A Splice and anchor using mechanical methods.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCSF2007 Splice and anchor using mechanical methods

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCSF2007A Splice and anchor using mechanical methods. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by splicing and anchoring, using mechanical methods to complete the full mechanical splicing and anchoring cycle on a minimum of three occasions that include:

- foundations
- a slab
- one other structure.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace and regulatory requirements for splicing and anchoring using mechanical methods under applicable Commonwealth, state or territory work health and safety (WHS) legislation and codes of practice:
 - job safety and environmental analyses (JSEAs)
 - safe work method statements (SWMSs)
 - safety manuals and instructions for plant, tools and equipment
 - signage and barricades
 - personal protective equipment (PPE) requirements
 - working at heights requirements
 - environmental and worksite safety plans
 - reporting problems
- types, characteristics and limitations of tools and equipment used for splicing and anchoring using mechanical methods:
 - bolt cutters
 - couplers
 - mechanical cutting equipment

- nippers
- tool belts
- measuring tapes
- requirements for using steelfixing tools and equipment:
 - safe operating procedures
 - operational, maintenance and intermediate diagnostic procedures
 - workplace and equipment safety requirements
- requirements for cleaning up work area, maintaining and storing tools, plant, equipment and materials, and for environmentally friendly waste management.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- industry-standard equipment required to perform the tasks specified in the Performance Evidence
- appropriate workplace information and records, including policies, procedures and legislative requirements.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCSF3002 Carry out monostrand post-tensioning

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCSF3002A Carry out monostrand post-tensioning. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to carry out monostrand post-tensioning in accordance with specifications. It includes planning and preparing for the work, laying and fixing anchorages and cables, defining the work area, stressing tendons, finishing the tensioning and cleaning up.

It applies to workers carrying out monostrand post-tensioning for a construction project, and who would be expected to take responsibility for organising and completing these tasks with a high degree of self direction.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Steelfixing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare to 1.1 Interpret work order and associated documentation and

- carry out monostrand post-tensioning.
- 1.2 Plan all work to comply with relevant legislation, regulations, standards, codes, work health and safety (WHS), environmental and workplace requirements.
 - 1.3 Select tools and equipment required for work tasks, check for serviceability and rectify or report identified faults.
 - 1.4 Calculate materials quantities and curing requirements.
 - 1.5 Obtain, prepare and safely handle materials for the task, and situate them ready for use.
 - 1.6 Erect required safety signage and barricades and fit personal protective equipment (PPE).
- 2 Lay and fix anchorages and cables.
- 2.1 Lay ducting profile, push through specified number of strands and verify in accordance with job drawings.
 - 2.2 Position profile anchorages to task specifications.
 - 2.3 Position form head and anchorages in accordance with task specifications.
 - 2.4 Inspect installed cables in accordance with specifications and relevant standards.
 - 2.5 Fix grout tubes in accordance with manufacturer requirements and engineering specifications.
 - 2.6 Monitor grout tubes during concrete pour.
- 3 Define the work area for monostrand post-tensioning.
- 3.1 After suitable curing time, define safe working area in accordance with WHS and regulatory requirements.
 - 3.2 Erect barricades and signage as required to isolate safe work areas.
- 4 Stress tendons.
- 4.1 Remove recess formers.
 - 4.2 Set up anchor blocks and wedges in accordance with manufacturer design.

- 4.3 Carry out stressing operations to nominated loads in accordance with engineering standards using authorised calibrated stressing equipment.
- 4.4 Measure extensions and record on standard forms for approval by engineer.
- 5 Finish the tensioning.
 - 5.1 Cut and seal protruding strands in accordance with manufacturer requirements.
 - 5.2 Mix cement grout and pump in accordance with specifications and relevant standards.
- 6 Clean up.
 - 6.1 Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
 - 6.2 Clean, check, maintain and store tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCSF3002A Carry out monostrand post-tensioning.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCSF3002 Carry out monostrand post-tensioning

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCSF3002A Carry out monostrand post-tensioning. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by carrying out a full monostrand post-tensioning cycle to specification that includes using:

- a five-strand tendon
- a minimum of 30 m in length
- standard tensioning.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace and regulatory requirements for carrying out monostrand post-tensioning under applicable Commonwealth, state or territory work health and safety (WHS) legislation and codes of practice:
 - job safety and environmental analyses (JSEAs)
 - safe work method statements (SWMSs)
 - safety data sheets (SDSs)
 - safety manuals and instructions for tools and equipment
 - signage and barricades
 - personal protective equipment (PPE)
 - working at heights requirements
 - environmental and worksite safety plans
 - reporting problems
- use of monostrand post-tensioning to replace standard reinforcement materials with cables and, through tensioning, provide required strength in a reduced thickness of concrete
- interpretation of post-tensioning plans, including position of cables, height of chairs, cable specifications, number of strands per cable and stressing loads
- types, characteristics and limitations of tools and equipment used for carrying out monostrand post-tensioning:

- angle grinders
- grouting equipment
- hacksaws
- hammers
- hydraulic power packs
- measuring tapes and rules
- monostrand jacks
- nips
- spanners
- staple guns
- steelfixing reels
- specialist material-handling gloves
- requirements for using monostrand post-tensioning tools and equipment:
 - safe operating procedures
 - operational, maintenance and intermediate diagnostic procedures
 - workplace and equipment safety requirements
- requirements for cleaning up work area, maintaining and storing tools, equipment and materials, and for environmentally friendly waste management.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- industry-standard equipment required to perform the tasks specified in the Performance Evidence
- appropriate workplace information and records, including policies, procedures and legislative requirements.

CPCCSF3003 Carry out multistrand post-tensioning

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCSF3003A Carry out multistrand post-tensioning. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to carry out multistrand post-tensioning in accordance with specifications. It includes planning and preparing for the work, laying and fixing anchorages and cables, defining the work area, stressing tendons, finishing tensioning and cleaning up.

It applies to workers carrying out multistrand post-tensioning for a construction project, and who would be expected to take responsibility for organising and completing these tasks with a high degree of self direction.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Steelfixing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare to 1.1 Interpret work order and associated documentation and

- carry out multistrand post-tensioning.
- 1.2 Plan all work to comply with relevant legislation, regulations, standards, codes, work health and safety (WHS), environmental and workplace requirements.
 - 1.3 Select tools and equipment required for work tasks, check for serviceability and rectify or report identified faults.
 - 1.4 Calculate materials quantities and curing requirements.
 - 1.5 Obtain, prepare and safely handle materials for the task, and situate them ready for use.
 - 1.6 Erect required safety signage and barricades and fit personal protective equipment (PPE).
- 2 Lay and fix anchorages and cables.
- 2.1 Fix tendons and recess formers in location in accordance with job drawings.
 - 2.2 Lay ducting profile, push through specified number of strands and verify in accordance with job drawings.
 - 2.3 Position profile anchorages in accordance with specifications.
 - 2.4 Position form head and anchorages in accordance with specifications.
 - 2.5 Inspect installed cables in accordance with specifications and relevant standards.
 - 2.6 Fix grout tubes in accordance with manufacturer requirements and engineering specifications.
 - 2.7 Monitor grout tubes during concrete pour.
- 3 Define work area for multistrand post-tensioning.
- 3.1 After suitable curing time, define safe working area in accordance with WHS and regulatory requirements.
 - 3.2 Erect barricades and signage as required to isolate safe work areas.

- | | | | |
|---|--------------------|-----|---|
| 4 | Stress tendons. | 4.1 | Remove recess formers. |
| | | 4.2 | Set up anchor blocks and wedges in accordance with manufacturer design. |
| | | 4.3 | Carry out stressing operations to nominated loads in accordance with engineering standards using authorised calibrated stressing equipment. |
| | | 4.4 | Measure extensions and record on standard forms for approval by engineer. |
| | | | |
| 5 | Finish tensioning. | 5.1 | Cut and seal protruding strands in accordance with manufacturer requirements. |
| | | 5.2 | Mix cement grout and pump in accordance with specifications and relevant standards. |
| | | | |
| 6 | Clean up. | 6.1 | Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements. |
| | | 6.2 | Clean, check, maintain and store tools and equipment in accordance with manufacturer and workplace requirements. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCSF3003A Carry out multistrand post-tensioning.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCSF3003 Carry out multistrand post-tensioning

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCSF3003A Carry out multistrand post-tensioning. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by carrying out a full multistrand post-tensioning cycle to specification that includes using:

- a multistrand cable of at least 15 strands
- a minimum of 30 m in length
- standard tensioning.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace and regulatory requirements for carrying out multistrand post-tensioning under applicable Commonwealth, state or territory work health and safety (WHS) legislation and codes of practice:
 - job safety and environmental analyses (JSEAs)
 - safe work method statements (SWMSs)
 - safety data sheets (SDSs)
 - safety manuals and instructions for tools and equipment
 - signage and barricades
 - personal protective equipment (PPE)
 - working at heights requirements
 - environmental and worksite safety plans
 - reporting problems
- use of multistrand post-tensioning to replace standard reinforcement materials with cables and, through tensioning, provide required strength in a reduced thickness of concrete
- interpretation of post-tensioning plans, including position of cables, height of chairs, cable specifications, number of strands per cable and stressing loads
- types, characteristics and limitations of tools and equipment used to carry out multistrand post-tensioning:

- angle grinders
- grouting equipment
- hacksaws
- hammers
- hydraulic power packs
- measuring tapes and rules
- multistrand jacks
- nips
- spanners
- staple guns
- steelfixing reels
- specialist material-handling gloves
- requirements for using multistrand post-tensioning tools and equipment:
 - safe operating procedures
 - operational, maintenance and intermediate diagnostic procedures
 - workplace and equipment safety requirements
- requirements for cleaning up work area, maintaining and storing tools, equipment and materials, and for environmentally friendly waste management.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- industry-standard equipment required to perform the tasks specified in the Performance Evidence
- appropriate workplace information and records, including policies, procedures and legislative requirements.

CPCCSF3004 Carry out stressbar post-tensioning

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCSF3004A Carry out stressbar post-tensioning. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to carry out stressbar post-tensioning in accordance with specifications. It includes planning and preparing for the work; placing and inspecting bars, components and ducts; defining the work area; stressing bars; finishing the tensioning; and cleaning up.

It applies to workers carrying out stressbar post-tensioning for a construction project, and who would be expected to take responsibility for organising and completing these tasks with a high degree of self direction.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Steelfixing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare to 1.1 Interpret work order and associated documentation and

- carry out stressbar post-tensioning.
- 1.2 Plan all work to comply with relevant legislation, regulations, standards, codes, work health and safety (WHS), environmental and workplace requirements.
 - 1.3 Select tools and equipment required for work tasks, check for serviceability and rectify or report identified faults.
 - 1.4 Calculate materials quantities and curing requirements.
 - 1.5 Obtain, prepare and safely handle materials for the task, and situate them ready for use.
 - 1.6 Erect required safety signage and barricades and fit personal protective equipment (PPE).
- 2 Place and inspect bar, fit components and seal ducts.
- 2.1 Place bar and fit components in accordance with manufacturer requirements and task specifications.
 - 2.2 Inspect bar layout for compliance with task specifications and relevant standards.
 - 2.3 Seal ducts in accordance with manufacturer requirements.
- 3 Define work area for stressbar post-tensioning.
- 3.1 After suitable curing time, define safe working area in accordance with WHS and regulatory requirements.
 - 3.2 Erect barricades and signage as required to isolate safe work areas.
- 4 Stress bars.
- 4.1 Place stressing jack and accessories and carry out stressing in accordance with manufacturer requirements and engineering specifications.
 - 4.2 Tighten and lock off nuts during stressing procedure in accordance with normal stressing safety standards.
 - 4.3 Measure extensions and record on standard quality assurance forms for approval by engineer.

- 5 Finish tensioning.
 - 5.1 Seal anchorages to prevent grout loss.
 - 5.2 Mix cement grout and pump in accordance with specifications and relevant standards.

- 6 Clean up.
 - 6.1 Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
 - 6.2 Clean, check, maintain and store tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCSF3004A Carry out stressbar post-tensioning.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCSF3004 Carry out stressbar post-tensioning

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCSF3004A Carry out stressbar post-tensioning. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by carrying out a full stressbar post-tensioning cycle to specification that includes using:

- two different bar sizes
- a minimum of 30 m in length
- standard tensioning.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace and regulatory requirements for carrying out stressbar post-tensioning under applicable Commonwealth, state or territory work health and safety (WHS) legislation and codes of practice:
 - job safety and environmental analyses (JSEAs)
 - safe work method statements (SWMSs)
 - safety data sheets (SDSs)
 - safety manuals and instructions for tools and equipment
 - signage and barricades
 - personal protective equipment (PPE)
 - working at heights requirements
 - environmental and worksite safety plans
 - reporting problems
- use of stressbar post-tensioning to replace standard reinforcement materials with metal bars and, through tensioning, provide required strength in a reduced thickness of concrete
- interpretation of post-tensioning plans, including position of bars, height of chairs, bar specifications, coupling arrangements for bars and stressing loads
- types, characteristics and limitations of tools and equipment used for carrying out stressbar post-tensioning:

- angle grinders
- bar jacks
- couplers
- grouting equipment
- hacksaws
- hammers
- hydraulic power packs
- measuring tapes and rules
- nips
- spanners
- staple guns
- steelfixing reels
- specialist material-handling gloves
- requirements for using stressbar post-tensioning tools and equipment:
 - safe operating procedures
 - operational, maintenance and intermediate diagnostic procedures
 - workplace and equipment safety requirements
- requirements for cleaning up work area and tools, for plant and materials storage, and for environmentally friendly waste management.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- industry-standard equipment required to perform the tasks specified in the Performance Evidence
- appropriate workplace information and records, including policies, procedures and legislative requirements.

CPCSSH2003 Apply and install sealant and sealant devices

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCSSH2003A Apply and install sealant and sealant devices. Updated to meet the Standards for Training Packages.

Application

This unit of competency specifies the skills and knowledge required to apply sealants and sealant devices to structures.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Shopfitting

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|---------------------|-----|--|
| 1 Plan and prepare. | 1.1 | Review work instructions to apply and install sealant and sealant devices. |
| | 1.2 | Plan all work to comply with laws and regulations, national construction codes, Australian Standards, work |

- health and safety (WHS) and environmental requirements, manufacturers' specifications and safety data sheets (SDS), workplace requirements, drawings and specifications.
- 1.3 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.4 Select tools and equipment, check for serviceability and report any faults.
 - 1.5 Calculate sealant material quantities to meet work instructions.
 - 1.6 Identify, obtain and prepare required materials and safely locate them ready for use.
- 2 Prepare surface to receive sealants.
 - 2.1 Clean surface free of contaminants in accordance with manufacturer instructions.
 - 2.2 Prepare surface by sanding or cleaning in accordance with manufacturer specifications.
- 3 Apply sealant.
 - 3.1 Apply sealant materials in accordance with manufacturer specifications.
 - 3.2 Check to ensure no air has been trapped within applied sealant and rectify as required.
 - 3.3 Align surfaces and install fixings in accordance with manufacturer specifications.
- 4 Install sealant devices.
 - 4.1 Fit sealant devices securely to specified positions.
 - 4.2 Secure installation of fixture and check to ensure level and plumb to line.
- 5 Clean up.
 - 5.1 Remove excess sealant from joints and surrounding surfaces and securely seal cartridge nozzle or container.
 - 5.2 Promptly remove sealants from tools and equipment.

- 5.3 Clean up work site, meeting all legislative and workplace requirements for safety, waste disposal and materials handling.
- 5.4 Check, maintain and store tools and equipment and report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCSH2003A Apply and install sealant and sealant devices.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCSH2003 Apply and install sealant and sealant devices

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCSH2003A Apply and install sealant and sealant devices. Updated to meet the Standards for Training Packages.

Performance Evidence

To demonstrate competency, a candidate must satisfy all the elements, performance criteria and foundation skills of this unit by applying and installing sealants and sealant devices on at least one occasion involving:

- applying the following sealant materials:
 - bitumen
 - mastic
 - putty
 - silicone
 - waterproof paint
- installing the following sealant devices:
 - cover plates to aluminium framework
 - cover straps or beading to sheet jointing
 - flashings to window and door frames
 - impregnated material for masonry expansion joints
 - strip or sheet membrane.

All work must be performed to the standard required in the workplace and must comply with work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- behaviour of sealant materials used in structures
- mathematical processes required to measure and calculate surface area
- requirements of Commonwealth and state or territory work health and safety (WHS) legislation relevant to applying and installing sealant and sealant devices
- types and performance of sealants used in buildings

- workplace quality policies and standards for applying and installing sealant and sealant devices
- safety requirements for applying and installing sealant and sealant devices including safety data sheets
- types and uses of personal protection equipment and hand tools and equipment relevant to sealant application and installation work:
 - brooms
 - brushes
 - cartridge applicators
 - putty knives and paring knives
 - rollers
 - sanders
 - spray equipment

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed while undertaking workplace tasks:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCSP2001 Handle solid plastering materials

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCSP2001A Handle solid plastering materials. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to safely and effectively handle, sort, prepare, position and remove solid plastering materials.

The unit is suitable for people with basic skills and knowledge who undertake routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plastering

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|--|-----|---|
| 1 | Plan and prepare to handle solid plastering materials. | 1.1 | Read and interpret work instructions and plan sequence of work. |
| | | 1.2 | Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and |

- environmental requirements, manufacturers' specifications, and workplace requirements.
- 1.3 Select and use personal protective equipment (PPE) for each stage of the task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades, and identify hazardous materials for separate handling by authorised personnel.
 - 1.5 Select tools and equipment, check for serviceability and report any faults.
- 2 Handle, sort and store solid plaster materials.
- 2.1 Check materials for compliance to plans and specifications.
 - 2.2 Determine handling requirements for materials from manufacturers' specifications and select and use safe manual and mechanical handling techniques.
 - 2.3 Sort materials for type and size, distribute to job locations, both manually and using mechanical devices, and stack for ease of access, task sequence and clear of traffic ways.
 - 2.4 Protect materials against physical and water damage.
- 3 Remove materials and clean up.
- 3.1 Determine handling requirements for unused materials and select and use safe handling techniques following safety data sheets.
 - 3.2 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 3.3 Identify hazardous materials for separate handling by authorised personnel.
 - 3.4 Use dust suppression procedures to minimise health risk to self and others.
 - 3.5 Store reusable materials and protect against physical and water damage.
 - 3.6 Clean tools and equipment, check for serviceability,

report any damage or faults and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCS2001A Handle solid plastering materials.

Links

Assessment Requirements for CPCSP2001 Handle solid plastering materials

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCSP2001A Handle solid plastering materials.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by safely manually and mechanically handling and preparing a minimum of five solid plastering materials, including hazardous materials, for two separate solid plastering projects, and cleaning up after each project.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of Australian Standards and work health and safety legislation for handling solid plastering materials, including *HB161 Guide to plastering*
- workplace quality policies and standards for handling solid plastering materials
- safety requirements for handling solid plastering materials, including:
 - job safety analyses and/or safe work method statements in accordance with *Safe Work Australia Code of Practice for Construction Work* or state and/or territory equivalent
 - personal protective equipment (PPE)
- handling requirements for materials for solid plastering, including:
 - loose materials
 - bagged materials
 - bucketed materials
 - pre-mixed materials
 - corner beads
 - casing beads
 - timber or expanded metal lathing (EML)

- plaster compounds and finishing coats
- additives, such as plasticisers, colour and waterproofing agents
- types and uses of tools and equipment for handling solid plastering materials
- types and uses of plans and specifications for handling solid plastering materials
- processes for identifying and handling hazardous materials
- environmental and sustainability requirements for handling and disposing of solid plastering materials.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCSP2002 Use solid plastering tools and equipment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCSP2002A Use solid plastering tools and equipment. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to safely select, check, use and store tools and equipment for solid plastering.

The unit is suitable for people with basic skills and knowledge who undertake routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plastering

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|---|
| 1 Plan and prepare to use solid plastering tools and equipment. | 1.1 Read and interpret work instructions and plan sequence of work. |
| | 1.2 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and |

- environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
- 1.3 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.4 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.
- 2 Select and check tools and equipment.
 - 2.1 Select tools and equipment for the task based on their functions and limitations, check for serviceability and report any faults.
 - 2.2 Check power tools and electrical leads are tested and tagged.
 - 2.3 Conduct pre-operational checks on tools and equipment to manufacturers' specifications.
 - 2.4 Examine power tools and equipment to ensure guards are fitted and working, blades and attachments are secured, and switches are operational.
 - 3 Use tools and equipment.
 - 3.1 Follow start-up and shut-down procedures.
 - 3.2 Use tools and equipment, applying safe work practices to perform solid plastering task.
 - 4 Clean up.
 - 4.1 Clear work area, dispose of materials, and reuse or recycle in compliance with legislation, regulations and codes of practice.
 - 4.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCS2002A Use solid plastering tools and equipment.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCSP2002 Use solid plastering tools and equipment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCSP2002A Use solid plastering tools and equipment. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by using all of the following solid plastering tools and equipment on a minimum of three different solid plastering tasks:

- a power grinder
- a cement mixer
- a power saw
- an air compressor
- a level
- a float
- a sponge float
- a screed
- a shovel
- a wheel barrow
- mud board and stand
- tin snips
- water brush
- a paint brush
- a handboard/hawk
- a screw gun
- a hammer
- a comb
- a sprayline
- a small tool
- a tape measure.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of Australian Standards for using solid plastering tools and equipment
- manufacturers' specifications for solid plastering tools and equipment
- workplace quality policies and standards for using solid plastering tools and equipment
- safety requirements for using solid plastering tools and equipment, including:
 - job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
 - safety data sheets (SDS)
 - personal protective equipment (PPE)
- environmental requirements for using solid plastering tools and equipment
- functional and operational features of tools and equipment, including:
 - a power grinder
 - a cement mixer
 - a power saw
 - an air compressor
 - a level
 - a float
 - a sponge float
 - a screed
 - a shovel
 - a wheel barrow
 - mud board and stand
 - tin snips
 - water brush
 - a paint brush
 - a handboard/hawk
 - a screw gun
 - a hammer
 - a comb
 - a sprayline
 - a small tool
 - a tape measure.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCSP2003 Prepare surfaces for plastering

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCSP2003A Prepare surfaces for plastering. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to prepare substrates for solid plastering. It includes patching or filling holes in floors, sheet or masonry walls and ceiling surfaces.

The unit is suitable for people with basic skills and knowledge who undertake routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plastering

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Plan and prepare to prepare surfaces for plastering. | 1.1 Read and interpret work instructions and plan sequence of work. |
| | 1.2 Plan all work to comply with laws and regulations, the |

- National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.
- 1.3 Select and use personal protective equipment (PPE) for each stage of the task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Patch holes and depressions.
- 2.1 Determine patching methods and materials from type of material surface, size of hole/depression, compatibility of materials and planned finish.
 - 2.2 Apply materials using appropriate application methods.
- 3 Prepare surface.
- 3.1 Determine method of preparation of surface to suit the type of finish.
 - 3.2 Remove protruding and loose materials and prepare surface for solid plastering.
 - 3.3 Apply sealing or primer coat to prepared surface.
- 4 Clean up.
- 4.1 Clear work area, dispose of materials, and reuse or recycle in compliance with legislation, regulations and codes of practice.
 - 4.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCS2003A Prepare surfaces for plastering.

Assessment Requirements for CPCSP2003 Prepare surfaces for plastering

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCSP2003A Prepare surfaces for plastering.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by preparing surfaces with various product faults and damage, including chipped corners, holes and depressions on each of:

- a minimum of 2 square metres of masonry wall
- an engaged or attached pier with a minimum width of 250 mm and height of 1.0 m
- a minimum 2 square metres of sheet wall
- a minimum 2 square metres of ceiling.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the NCC and Australian Standards for preparing surfaces for plastering
- workplace quality policies and standards for preparing surfaces for plastering
- safety requirements for preparing surfaces for plastering, including:
 - job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
 - safety data sheets (SDS)
 - personal protective equipment (PPE)
- environmental requirements for preparing surfaces for plastering
- characteristics, application and limitations of materials for preparing surfaces for plastering, including:
 - primers and sealants

- plaster compounds and finishing coats
- additives, such as plasticisers, colour and waterproofing agents
- processes, procedures and techniques for:
 - preparing various surfaces for plastering
 - calculating material requirements
- types and uses of tools and equipment for preparing surfaces for plastering
- types and uses of plans, drawings and specifications for preparing surfaces for plastering.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCSP3001 Apply float and render to straight and curved surfaces

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.

Correction to prerequisite unit code from *CPPWHS2001 Apply WHS requirements, policies and procedures in the construction industry* to *CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry*.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCSP3001A Apply float and render to straight and curved surfaces. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to float, render and finish flat and curved solid plastering work.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them, without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plastering

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|--|
| 1 Plan and prepare to apply float and render to straight and curved surfaces. | 1.1 Read and interpret work instructions and plan sequence of work. |
| | 1.2 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements. |
| | 1.3 Select and use personal protective equipment (PPE) for each stage of the task. |
| | 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades. |
| | 1.5 Select tools and equipment, check for serviceability and report any faults. |
| | 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use. |
| | 1.7 Select and use profiles, pins or hooks to prepare columns and piers. |
| 2 Prepare templates for curved work and circular columns. | 2.1 Select template material for curved work and circular columns. |
| | 2.2 Establish shapes and radiuses for curves and columns, and fabricate and form templates. |
| 3 Prepare background surface. | 3.1 Prepare background surface by brooming, wire brushing, scarifying and cleaning. |
| | 3.2 Mix dash coat and apply to wetted surface. |
| | 3.3 Apply bonding coat. |
| | 3.4 Select and fix proprietary/metal beads for external or squint arises and check for accuracy. |

- | | | |
|--|-----|---|
| 4 Apply floating and rendering to flat and curved surfaces. | 4.1 | Establish screeding lines or guides to Australian Standard HB161 Standards and tolerances guide to solid plastering. |
| | 4.2 | Apply floating coat and rule off to screed. |
| | 4.3 | Finish, plumb and level surface to alignment tolerance. |
| | 4.4 | Finish heads, reveals and sills square off to wall ace and back into opening. |
| | 4.5 | Cut internal angles, ceilings and floor lines. |
| 5 Apply floating and rendering coats to piers. | 5.1 | Apply floating coat using floating profiles, rules and Dutch pins or hooks so that face of pier is plumb and ruled-off. |
| | 5.2 | Square-off surface to form returns and reveals, and remove rules leaving arises square or radiused. |
| 6 Apply floating coat within metal beading. | 6.1 | Fix proprietary/metal beading to base surface to form a panel with expansion joint so that panel is plumb and square to specified position. |
| | 6.2 | Finish panels to true, flat surfaces suitable for applying plaster and lime setting and/or proprietary texture finishes. |
| 7 Finish rendering coats on flat walls, piers and curved work. | 7.1 | Hand-float walls to fill slacks and voids to finish surfaces. |
| | 7.2 | Scour and fine walls using water and hand float systems. |
| 8 Clean up. | 8.1 | Clear work area, dispose of materials, and reuse or recycle in compliance with legislation, regulations and codes of practice. |
| | 8.2 | Clean, check, maintain and store tools and equipment in accordance with manufacturers' recommendations. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCSF3001A Apply float and render to straight and curved surfaces.

Links

Assessment Requirements for CPCCSP3001 Apply float and render to straight and curved surfaces

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.

Correction to prerequisite unit code from CPPWHS2001 Apply WHS requirements, policies and procedures in the construction industry to CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCSP3001A Apply float and render to straight and curved surfaces. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by preparing the surfaces, fixing casing and corner beads and applying float and render coats to:

- a minimum 2.1m high straight masonry surface with an internal corner and an opening containing a head, reveals and a sill
- a minimum 1.5m high x 1.8m wide curved surface
- a minimum 1.5m high x 300mm diameter column
- a minimum 1.5m high square or rectangular pier.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of Australian Standards, including HB161, for applying float and render to straight and curved surfaces
- workplace quality policies and standards for applying float and render to straight and curved surfaces

- safety requirements for applying float and render to straight and curved surfaces, including:
 - job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
 - safety data sheets (SDS)
 - personal protective equipment (PPE)
- environmental requirements for applying float and render to straight and curved surfaces
- uses of materials and components for solid plastering, including:
 - corner beads
 - casing beads
 - timber or expanded metal lathing (EML)
 - sand, lime and lime putty
 - plaster compounds and finishing coats
 - additives, such as plasticisers, colour and waterproofing agents
- processes and techniques of applying float and render to straight and curved surfaces
- types and uses of tools and equipment for applying float and render to straight and curved surfaces
- types and uses of plans, drawings and specifications for applying float and render to straight and curved surfaces.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCSP3002 Apply set coats

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCSP3002A Apply set coats. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to mix and apply set coats to flat and curved solid plaster backgrounds.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them, without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plastering

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Plan and prepare to apply set coats. | 1.1 Read and interpret work instructions and plan sequence of work. |
| | 1.2 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and |

- environmental requirements, manufacturers' specifications, and workplace requirements.
- 1.3 Select and use personal protective equipment (PPE) for each stage of the task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Prepare backgrounds for set coat application.
- 2.1 Select surface preparation process to suit the specified setting coat.
 - 2.2 Check surface for level of suction appropriate for the coat setting.
 - 2.3 Clean surface and wet down to provide an even suction for the setting rate of the setting coat.
 - 2.4 Check adequacy of suction rate.
- 3 Mix and apply plaster and lime setting.
- 3.1 Select suitable mix ratios of plaster and lime for background substrates.
 - 3.2 Mix plaster and lime setting and check that ratios are adequate.
 - 3.3 Apply set coats.
 - 3.4 Trowel surface to required hardness, smoothness and finish.
- 4 Clean up.
- 4.1 Clear work area, dispose of materials, and reuse or recycle in compliance with legislation, regulations and codes of practice.
 - 4.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCS3002A Apply set coats.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCSP3002 Apply set coats

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCSP3002A Apply set coats. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by applying set coats and trowelling surfaces to achieve a level of finish within specified tolerances to:

- a minimum 4 square metres of vertical surface, including an opening with a head, sill and reveals
- a minimum 4 square metres of horizontal surface
- a minimum 4 square metres of curved surface.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of Australian Standards for applying set coats
- workplace quality policies and standards for applying set coats
- safety requirements for applying set coats, including:
 - job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
 - safety data sheets (SDS)
 - personal protective equipment (PPE)
- environmental requirements for applying set coats
- characteristics of substrates for set coats, including:
 - masonry
 - sheeting
- uses of approved materials and components for solid plastering:
 - corner beads

- casing beads
- timber or expanded metal lathing (ELP)
- sand, lime and lime putty
- plaster compounds and finishing coats
- additives, such as plasticisers, colour and waterproofing agents
- processes and techniques for mixing and applying set coats
- types and uses of tools and equipment for mixing and applying set coats
- types and uses of plans, drawings and specifications for applying set coats.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Unit Sector

Plastering

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare to apply trowelled texture coat finishes.
 - 1.1 Read and interpret work instructions and plan sequence of work.
 - 1.2 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.
 - 1.3 Select and use personal protective equipment (PPE) for each stage of the task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Prepare surface and mix and apply texture coat.
 - 2.1 Prepare substrate for the specified trowelled texture coat finish.
 - 2.2 Mix texture coating materials to designed proportion and consistency.
 - 2.3 Apply texture coat with trowel to a uniform finish to Australian Standards. with specified thickness.
- 3 Finish and cure texture coat
 - 3.1 Finish texture coat plumb and level.
 - 3.2 Cure texture coat to weather and/or temperature conditions.
- 4 Clean up.
 - 4.1 Clear work area, dispose of materials, and reuse or recycle in compliance with legislation, regulations and codes of practice.
 - 4.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by:

- applying a trowelled texture coat finish to a minimum of 4 square metres of curved wall
- applying a different trowelled texture coat finish to a minimum of 4 square metres of masonry wall containing an internal and external corner and an opening with a head, reveals and a sill.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of Australian Standards for applying trowelled texture finishes
- quality policies and standards for applying trowelled texture finishes
- safety requirements for applying trowelled texture finishes, including:
 - job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
 - safety data sheets (SDS)
 - personal protective equipment (PPE)
- environmental requirements for applying trowelled texture finishes
- techniques for applying trowelled texture finishes
- types and uses of decorative finishes, including:

- Stucco Venezia
- Travertine
- types and uses of materials and components for solid plastering, including:
 - acrylic or styrene/acrylate coatings
 - proprietary texture coat finishes products
- types and uses of tools and equipment for applying trowelled texture finishes
- types and uses of plans, drawings and specifications for applying trowelled texture finishes.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCSP3004 Restore and renovate solid plasterwork

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Performance Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCSP3004A Restore and renovate solid plasterwork. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to apply processes and techniques to repair damage in lime mortar cement render and solid plaster surfaces.

It includes restoration and renovation of plasterwork and lettering.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them, without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plastering

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

essential outcomes.	demonstrate achievement of the element.
1 Plan and prepare to restore and renovate solid plaster work.	<p>1.1 Read and interpret work instructions and plan sequence of work.</p> <p>1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.</p> <p>1.3 Select and use personal protective equipment (PPE) for each stage of the task.</p> <p>1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.</p> <p>1.5 Select tools and equipment, check for serviceability and report any faults.</p> <p>1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.</p>
2 Select restoration or renovation method.	<p>2.1 Determine extent and type of restoration or renovation by site examination and from plans and specifications.</p> <p>2.2 Prepare drawing and template of damaged area to profile/moulding shape of existing work.</p>
3 Restore plasterwork.	<p>3.1 Remove flaky, damaged and loose plasterwork.</p> <p>3.2 Clean and prepare substrate.</p> <p>3.3 Mix materials to ratios suitable for task.</p> <p>3.4 Apply and finish solid render to match existing render finish, details and alignment.</p> <p>3.5 Restore surrounding plasterwork.</p>
4 Renovate lettering and monograms.	<p>4.1 Prepare surface for renovation to specification.</p> <p>4.2 Construct monograms and lettering panels in sand and cement mortar to match detail for restorations.</p>

- 4.3 Mix materials to ratios suitable for task.
 - 4.4 Apply materials to fine finish with sharp arises, square returns and plumb/level to requirements.
- 5 Clean up.
- 5.1 Clear work area, dispose of materials, and reuse or recycle in compliance with legislation, regulations and codes of practice.
 - 5.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

CPCSP3005 Install pre-cast decorative mouldings

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCSP3005A Install pre-cast decorative mouldings. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install pre-cast decorative mouldings to masonry, plasterboard and cement sheets.

It includes measuring, cutting and fixing of cast plaster and finishing junctions for painting.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them, without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plastering

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Plan and prepare to install pre-cast | 1.1 Read and interpret work instructions and plan sequence of work. |
|--|---|

- decorative mouldings.
- 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.
 - 1.3 Select and use personal protective equipment (PPE) for each stage of the task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Install pre-cast moulded archway.
- 2.1 Check substrate and set out and cut archway profile to specifications.
 - 2.2 Cut, position and fix timber arch soffit templates.
 - 2.3 Fix infill moulding to arch soffit and reveals of opening.
 - 2.4 Stop arch to specifications and level of finish.
- 3 Fix plaster panelled ceiling.
- 3.1 Set out, position, fix and space ceiling battens for cornice margins and flush mounted panels.
 - 3.2 Locate, level and line-up, and fix panels on ceiling.
 - 3.3 Finish jointing to meet ceiling plastering requirements.
 - 3.4 Sand and clean surface in preparation for painting.
- 4 Fix ornamental mouldings.
- 4.1 Measure and cut ornamental mouldings to specification.
 - 4.2 Select fastening method for moulding.
 - 4.3 Set out and mark position of ornamental moulding.
 - 4.4 Position and fix moulding straight and level.

- 4.5 Finish mouldings, including straight stoppings and mitres to specification.
- 5 Clean up.
 - 5.1 Clear work area, dispose of materials, and reuse or recycle in compliance with legislation, regulations and codes of practice.
 - 5.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCS3005A Install pre-cast decorative mouldings.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCSP3005 Install pre-cast decorative mouldings

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCSP3005A Install pre-cast decorative mouldings. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by installing and finishing three different pre-cast mouldings, including:

- one on a ceiling
- one to an external window
- a decorative cover strap, dado or a skirting on an internal wall
- a moulded archway.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the NCC and Australian Standards for installing pre-cast decorative mouldings
- workplace quality policies and standards for installing pre-cast decorative mouldings
- safety requirements for installing pre-cast decorative mouldings, including:
 - job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
 - safety data sheets (SDS)
 - personal protective equipment (PPE)
- processes, procedures and techniques for:
 - measuring, cutting, fixing, stopping, installing and finishing pre-cast decorative moulding
 - storing materials and components
 - calculating materials using measurements and formulas

- types and uses of pre-cast decorative moulding installation materials
- types and uses of tools and equipment for installing pre-cast decorative mouldings
- types and uses of plans, drawings and specifications for installing pre-cast decorative mouldings
- environmental and sustainability requirements for installing pre-cast decorative mouldings.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCSP3006 Install cast plaster blockwork and wall sheet panels

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCSP3006A Install cast plaster brickwork.
Change to title. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to set out and construct a wall by laying cast plaster blocks.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them, without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plastering

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare to install plaster blockwork and wall sheet panels.	1.1	Read and interpret work instructions and plan sequence of work.
	1.2	Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian

- Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.
- 1.3 Select and use personal protective equipment (PPE) for each stage of the task.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Set out and prepare base for blockwork and wall sheet panels.
- 2.1 Clean base in preparation for first course.
 - 2.2 Set out blockwork and panels to position, and prepare surface to be dry, horizontal and flat.
 - 2.3 Set out position, gauge and bond of blockwork and panels to batten at specified fixing points.
- 3 Lay plaster blockwork and wall sheet panels.
- 3.1 Prepare adhesives to required consistency and quantity to manufacturers' specifications.
 - 3.2 Lay base course to set out line.
 - 3.3 Install blockwork/wall sheet panels and vertical abutments level, plumb and straight.
 - 3.4 Maintain bond and gauge to the set out height and width.
 - 3.5 Remove surplus adhesive and clean blocks.
 - 3.6 Apply solid plaster and finish to requirements.
- 4 Clean up.
- 4.1 Clear work area, dispose of materials, and reuse or recycle in compliance with legislation, regulations and codes of practice.
 - 4.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCPCSP3006 Install cast plaster blockwork and wall sheet panels

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and equivalent to CPCPCSP3006A Install cast plaster brickwork.
Change to title. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by installing a minimum:

- 3.6m long X 1.8m high pre-cast plaster blockwork
- three sheet panelled wall.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, the National Construction Code (NCC), Australian Standards work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the NCC and Australian Standards for installing cast plaster blockwork and wall sheet panels
- workplace quality policies and standards for installing cast plaster blockwork and wall sheet panels
- safety requirements installing cast plaster blockwork and wall sheet panels, including:
 - job safety analyses and/or safe work method statements in accordance with *Safe Work Australia Code of Practice for Construction Work* or state and/or territory equivalent
 - safety data sheets (SDS)
 - personal protective equipment (PPE)
- environmental requirements for installing cast plaster blockwork and wall sheet panels
- processes, procedures and techniques for:
 - checking substrates for suitability
 - cutting for openings
 - plaster blockwork
 - installing, fixing wall sheet panelling

- beading
- solid plastering and finishing
- calculating material requirements
- types and uses of tools and equipment for installing cast plaster blockwork and wall sheet panels
- types and uses of plans, drawings and specifications for installing cast plaster blockwork and wall sheet panels.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCSP3007 Apply plaster by projection machine

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.

Correction to prerequisite unit code from CPPWHS2001 Apply WHS requirements, policies and procedures in the construction industry to CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCSP3007A Apply plaster by projection machine. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to apply pre-blended plasters, cement render and acrylic texture materials on various background surfaces using a projection plastering system.

It includes application to walls, ceilings, inclined surfaces, sills and arches.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them, without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plastering

CPCCSP3008 Carry out conite construction and wall sheet panelling

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Application

This unit specifies the skills and knowledge required to carry out conite construction and wall sheet panelling.

It includes preparing the surface by fixing building paper and securing lathing to wall framing.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them, without close supervision.

Licensing, legislative or certification requirements may apply to this unit.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plastering

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare to carry out conite

1.1 Read and interpret work instructions and plan sequence of work.

- | | | |
|--|--------------------|--|
| construction and wall sheet panelling. | 1.2 | Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements. |
| | 1.3 | Select and use personal protective equipment (PPE) for each stage of the task. |
| | 1.4 | Inspect work site, assess hazards and apply risk controls, including required signage and barricades. |
| | 1.5 | Select tools and equipment, check for serviceability and report any faults. |
| | 1.6 | Select materials required for task, calculate quantities, handle safely and prepare and position ready for use. |
| | 1.7 | Erect and brace scaffolding to required height in accordance with licensing requirements. |
| | 2 Prepare surface. | 2.1 |
| | 2.2 | Fix building paper taut to face of frame in compliance with NCC. |
| | 2.3 | Fit and fix expanded metal lathing (ELP). |
| | 2.4 | Fix wall sheet panel to framing in compliance with NCC. |
| 3 Apply concrete finish. | 3.1 | Apply sand, cement and lime scratch coat. |
| | 3.2 | Apply floating coat. |
| | 3.3 | Screed and trowel to specified finish. |
| 4 Clean up. | 4.1 | Clear work area, dispose of materials, and reuse or recycle in compliance with legislation, regulations and codes of practice. |
| | 4.2 | Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for CPCSP3008 Carry out conite construction and wall sheet panelling

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by applying conite construction, including wall sheet panels, to a minimum of 4 square metres of timber or metal frame wall, including applying a three coat finish system.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the NCC and Australian Standards for carrying out conite construction and wall sheet panelling
- workplace quality policies and standards for conite construction/wall sheet panels
- safety requirements for carrying out conite construction and wall sheet panelling, including:
 - job safety analyses and/or safe work method statements in accordance with *Safe Work Australia Code of Practice for Construction Work* or state and/or territory equivalent
 - safety data sheets (SDS)
 - personal protective equipment (PPE)
- environmental requirements for carrying out conite construction and wall sheet panelling
- processes, procedures and techniques for carrying out conite construction and wall sheet panelling
- types and uses of tools and equipment for carrying out conite construction and wall sheet panelling
- types and uses of plans, drawings and specifications for carrying out conite construction and wall sheet panelling.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCS2001 Prepare for stonemasonry construction process

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCS2001A Prepare for the stonemasonry construction process. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to undertake the preparation processes required to support the laying or placement of stone. It includes assisting in stonemasonry work by preparing materials and using a range of tools and equipment.

The unit is suitable for people with basic skills and knowledge who undertake routine stonemasonry work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan the work.

1.1 Read, interpret and apply stonemasonry construction requirements from current plans, specifications, standards and codes and confirm information with

- relevant person.
- 1.2 Source information and communicate with others using digital technology.
 - 1.3 Follow requirements in workplace safety and environmental documentation and workplace procedures.
 - 1.4 Clarify job priorities and sequence job tasks in consultation with others on site.
 - 1.5 Identify potential hazards and determine and implement control measures.
 - 1.6 Use measurements and apply formulas to calculate material quantities.
- 2 Prepare the work.
- 2.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 2.2 Check conformity of materials against the job requirements.
 - 2.3 Select and blend stone colours as instructed and position materials ready for use.
 - 2.4 Select and check condition of equipment and tools required for the job and report damage or faults to supervisor.
 - 2.5 Prepare equipment and materials for mixing of mortar or adhesives.
 - 2.6 Set up cement mixer, locate mortar boards and clear pathways for supply of mortar.
- 3 Assist with stonemasonry work.
- 3.1 Maintain a supply of mortar to boards and stone to stacks.
 - 3.2 Use hand and power tools to clean, cut and prepare stone for laying.
 - 3.3 Assist in the set out, erection and stabilising of the scaffold.
 - 3.4 Clean finished stonework prior to mortar drying.

- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 4.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 4.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCST2001A Prepare for stonemasonry construction process

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCST2001 Prepare for stonemasonry construction process

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST2001A Prepare for the stonemasonry construction process. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by assisting with two stone masonry laying project on two different sites.

In doing this, the candidate must:

- clear the work area, position masonry materials ready for laying
- mix mortar or adhesive to job specifications and maintain sufficient quantities on mortar boards
- maintain a clean and safe workplace.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of specified materials for stonemasonry construction
- igneous, metamorphic and sedimentary rocks and the appropriate tools to work on these type of rocks
- construction terminology relating to stonemasonry construction
- mortar and adhesive ingredients and consistency
- functional and operational features of equipment and hand and power tools:
 - angle grinders
 - masonry saws
 - hand tools
 - wheelbarrows
- types and safe use of stone lifting equipment
- workplace practices relating to stonemasonry
- workplace safety:
 - job safety and environmental analysis (JSEA)

- exposure to silica dust
- exposure to loud noise
- hazardous manual tasks
- processes and techniques for:
 - material protection and storage
 - stonemasonry construction work
 - locating and loading mortar boards
 - work area preparation
 - laying stone
- environmental requirements for workplace processes and waste disposal.
- key features of plans and specifications
- stonemasonry regulations, standards and codes.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCST2003 Finish stone

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST2003A Finish stone. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to cut and finish both hard and soft stone. It includes determining stone hardness prior to cutting and finishing stone.

The unit is suitable for people with basic skills and knowledge who undertake routine stonemasonry work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|---|
| 1 Plan and prepare. | 1.1 Read, interpret and apply finish stone requirements from current plans, specifications, standards and codes and confirm information with relevant person. |
|---------------------|---|

- 1.2 Follow requirements in workplace safety and environmental documentation and workplace procedures.
 - 1.3 Clarify job priorities and sequence job tasks in consultation with other workers.
 - 1.4 Identify potential hazards and implement control measures.
 - 1.5 Select and check condition of plant, equipment and tools and report damage or faults to relevant person.
 - 1.6 Check conformity of materials against the job requirements and place stone ready for the work.
 - 1.7 Identify stone hardness using Mohs scale of mineral hardness.
- 2 Cut stone.
- 2.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 2.2 Mark stone and position onto cutting table to obtain maximum efficiency in cutting.
 - 2.3 Align stone to cutting blade and secure in position to ensure stability.
 - 2.4 Adjust machinery to maximum depth of cut for size of stone.
 - 2.5 Apply coolant as required for stone and job requirements.
 - 2.6 Use primary and secondary cutting machines appropriate to their cutting capacity.
- 3 Polish stone.
- 3.1 Prepare stone with adhesives or fillers.
 - 3.2 Set up and operate polishing heads.
 - 3.3 Polish stone using various hand-operated and static polishing machines.
 - 3.4 Apply adhesives, tinting for fillers and reinforcing materials to job requirements.

- 3.5 Clean stone face surfaces and apply finishes.
- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 4.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 4.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCST2003A Finish stone

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCST2003 Finish stone

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST2003A Finish stone. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by cutting and polishing one hard stone and one soft stone with a minimum size of 190 mm x 190 mm x 190 mm.

In doing this, the candidate must:

- use two types of cutting equipment
- use two types of polishing equipment
- use two types of abrasives and polishing compounds.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of specified materials and products for cutting and finishing stone:
 - soft and hard stone
 - coolants used in the polishing process
 - range and grades of polishing compounds
 - adhesives and fillers
- processes and techniques for:
 - material protection and storage
 - cutting stone
- primary and secondary cutting machines
- correct sequencing of various polishing heads
- functional and operational features of equipment and hand and power tools:
 - angle grinders
 - buffs
 - circular saws
 - drills
 - edge polishers

- frame saws
- hole saws
- Jenny Lind type polishers
- line polishers
- milling machines
- rise and fall saws
- rotating or transverse tables
- stationary slab polishers
- twin tables
- wire saws
- workplace processes and procedures for stonemasonry
- workplace safety:
 - job safety and environment analysis (JSEA)
 - exposure to silica dust
 - exposure to loud noise
 - hazardous manual tasks
 - hazardous goods
 - vibration
 - chemical handling and storing
- key features of plans and specifications
- stonemasonry regulations, standards and codes
- Mohs scale of mineral hardness
- environmental requirements for workplace processes and waste disposal.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCST2004 Lay stone

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST2004A Lay stone. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to use a variety of stones to construct stone structures, such as freestanding and garden walls, load bearing structural walls and veneer facing.

The unit is suitable for people with basic skills and knowledge who undertake routine stonemasonry work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan the work.

1.1 Read and interpret lay stone requirements from current plans, specifications, standards and codes and confirm information with relevant person.

- 1.2 Source and follow relevant information from workplace safety and environmental documentation and workplace procedures.
 - 1.3 Calculate material quantities for the task using measurements and formulas.
 - 1.4 Clarify job priorities and sequence job tasks in consultation with others on site.
 - 1.5 Identify potential hazards and implement control measures.
 - 1.6 Select and check condition of plant, equipment and tools and report damage or malfunction to relevant personnel.
 - 1.7 Check conformity of materials against the specifications.
- 2 Prepare for work.
- 2.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 2.2 Identify structural, construction and finish details of wall.
 - 2.3 Set out and mark position, length and height of wall.
 - 2.4 Sort and blend stone and place in preparation to commence work.
 - 2.5 Mix mortar to colour and consistency and place on mortar board ready for use.
- 3 Lay stone.
- 3.1 Lay base stone and fix ties and reinforcing and install drainage, flashing and ties.
 - 3.2 Lay stone to a sequence and maintain face to a set line.
 - 3.3 Lay stone to height maintaining shape, consistent joint size, level and plumb.
 - 3.4 Lay wall capping and clean face of stone wall.
- 4 Fix stone slabs.
- 4.1 Prepare existing wall for stone application.
 - 4.2 Mix and apply adhesives, mortar or plaster to job

- requirements.
- 4.3 Secure stone with ties or dowels.
 - 4.4 Fix stone level, plumb with even joints.
 - 4.5 Remove excessive mortar or adhesive.
 - 4.6 Clean face of stonework.
- 5 Clean up.
- 5.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 5.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 5.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCST2004A Lay stone

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCST2004 Lay stone

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST2004A Lay stone. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by constructing one 1.5 m long x 1.0 m high stone wall in either hard, soft or manufactured stone.

In doing this, the candidate must:

- prepare and fix slab stone on a mortar bed
- place reinforcing, ties and fixtures
- use packers, wedges, propping, shoring and forming to maintain correct joint size, plumb, level and shape
- finish stone surfaces and rake joints.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- stonemasonry regulations, standards and codes
- characteristics, applications and limitations of specified materials and products for laying stone:
 - adhesives, compounds and grout products
- types of stone:
 - basalt
 - granite
 - marble
 - sandstone
 - manufactured stone
- processes and techniques for:
 - selecting and preparing stone
 - bed stone into mortar construction
 - dry bed stone and grout construction
 - dry stone construction

- installing manufactured stone
- material protection and storage
- construction terminology relating to laying stone
- functional and operational features of plant, equipment and hand and power tools
- workplace procedures and workplace safety:
 - job safety and environmental analysis (JSEA)
 - exposure to silica dust
 - exposure to excessive noise
 - hazardous manual tasks
 - hazardous materials
- key features of working drawings and specifications
- environmental requirements for workplace processes and waste disposal
- digital technology to source information and communicate with others.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCST2005 Carry out load slinging of off-site materials

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST2005A Carry out load slinging of off-site materials. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to sling and move materials under supervision. It includes selecting and securing slings and safely moving loads.

Shifting equipment refers to equipment excluding that requiring a certificate of competency for operation as specified by state and territory licensing requirements.

This unit is suitable for people with basic skills and knowledge who undertake routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Plan and prepare.
 - 1.1 Obtain and follow work instructions and workplace safety requirements.
 - 1.2 Identify potential hazards and implement control measures.
 - 1.3 Erect signage and barricades to create an exclusion zone.
 - 1.4 Select tools for the task and check tool for serviceability and faults.
 - 1.5 Calculate material weight to comply with safe working limits of slings and lifting equipment.
 - 1.6 Identify and apply environmental requirements.
 - 1.7 Select and check communication equipment suitable for the task.

 - 2 Move, locate and secure load
 - 2.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 2.2 Prepare materials for work application for load slinging.
 - 2.3 Identify and locate shifting/anchorage points and select slings, tackles and associated shifting gear appropriate for the weight and shape of the load.
 - 2.4 Inspect slings, tackles and lifting gear for wear and tear and damage and report faults to supervisor.
 - 2.5 Position and securely attach strongbacks/stiffeners.
 - 2.6 Secure packaging to protect load and connect load to lifting gear.
 - 2.7 Prepare location to receive load.
 - 2.8 Stand load vertically, if necessary, move to required location and secure in position.
 - 2.9 Remove slings from load and lifting equipment and remove packaging from material.

- 3 Clean up.
 - 3.1 Clean slinging equipment and check for and report damage.
 - 3.2 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 3.3 Complete necessary documentation.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCST2005A Carry out load slinging of off-site materials

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPC CST2005 Carry out load slinging of off-site materials

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPC CST2005A Carry out load slinging of off-site materials. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by slinging and moving three loads of different weight, size and shape under supervision.

In doing this, the candidate must:

- select correct slinging equipment for the load
- connect slinging and lifting equipment securely and safely to load
- apply safe and effective techniques to carry out movement and placement of materials
- use appropriate communication techniques to assist with moving a load.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- terminology relating to slinging and moving materials
- techniques for:
 - storing and stacking materials safely and securely
 - measuring slings and moving and placing materials
 - using basic hand signals
- types and characteristics of materials used in stonemasonry work:
 - crates of fittings
 - packs of metal sections
 - packs of pipe lengths
 - packs of sheet material

- packs of timber
- pallets of bagged material
- pre-cast concrete
- steel sections
- stone sections
- tools and equipment:
 - chain slings and hook
 - lifting beams
 - lifting clutches
 - mobile pendant operated cranes
 - nylon ropes
 - packing
 - ropes
 - shackles and eye bolts
 - spanners
 - strongbacks
- workplace safety:
 - hazardous manual tasks
 - job safety and environmental analysis (JSEA)
 - exposure to silica dust
 - exposure to loud noise
 - hazard identification
 - overhead hazards
 - equipment safety
 - vibration
- environmental requirements for workplace processes and waste disposal
- stonemasonry regulations, standards and codes
- workplace procedures
- digital tools and devices to source information and communicate with others.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCST2006 Identify and use stone products

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST2006A Identify and use stone products. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to identify, select and cut suitable natural stone for both off-site and in situ installation.

This unit is suitable for people with basic skills and knowledge who undertake routine stonemasonry work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|--|
| 1 Plan and prepare. | 1.1 Read and interpret relevant information to identify and use stone products from specifications, standards and codes. |
|---------------------|--|

- 1.2 Interpret and follow relevant information from workplace safety and environmental documentation and workplace procedures.
 - 1.3 Clarify job priorities and sequence job tasks in consultation with others on site.
 - 1.4 Identify potential hazards and implement control measures.
 - 1.5 Select and check condition of plant, equipment and tools and report damage or faults to relevant person.
 - 1.6 Check conformity of materials against the job requirements.
- 2 Identify types and characteristics of stone.
- 2.1 Identify and match architectural styles, natural and manufactured stone and functions of stone products to job specifications.
 - 2.2 Identify sources of stone and manufacturing and quarrying techniques for production of natural and manufactured stone.
 - 2.3 Identify key features and patterns in stone.
 - 2.4 Identify defects in stone and the effect on their functions.
 - 2.5 Identify methods, processes and plant and tools used to manufacture stone products.
- 3 Saw stone
- 3.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 3.2 Apply manual handling techniques when positioning stone on cutting machine.
 - 3.3 Secure stone, align cuts and operate equipment and tools to saw stone.
 - 3.4 Cut stone to size and design and take measures to minimise silica dust.
- 4 Clean up.
- 4.1 Clear the work area, and dispose of, reuse or recycle

materials following workplace and environment requirements.

- 4.2 Clean tools and equipment, check for serviceability and report damage or faults.
- 4.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCSST2006A Identify and use stone products

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCST2006 Identify and use stone products

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST2006A Identify and use stone products. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by cutting three types of stone to different sizes and shapes.

In doing this, the candidate must:

- use three different methods to cut:
 - one igneous stone
 - one metamorphic stone
 - one sedimentary stone.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- stonemasonry regulations, standards and codes
- characteristics, applications and limitations of natural stone and products:
 - igneous stone
 - metamorphic stone
 - sedimentary stone
 - mortar ingredients and consistency
 - adhesives, compounds and grout products
- stone products:
 - basalt
 - granite
 - marble
 - pre-cast concrete
 - sandstone
 - manufactured stone
- processing and manufacture:

- crushed to aggregate size
- crushed to fine particle (dust) size
- cut and polish to tile size
- cut or finished to pavement section size
- natural stone products cut to size
- construction terminology relating to stone
- architectural styles used in stonemasonry work
- Moh scale for mineral hardness
- measuring techniques
- functional and operational features of plant, equipment and hand and power tools
- workplace procedures
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - exposure to silica dust
 - exposure to loud noise
 - hazardous manual tasks
- processes and techniques for using stone products
- environmental requirements for workplace processes and waste disposal
- features of plans and specifications.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCS2007 Use stonemasonry tools, plant and equipment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Application

This unit specifies the skills and knowledge required to safely and effectively use stonemasonry tools, plant and equipment when assisting with stonemasonry work. It includes the introduction to and the operational and functional features of stonemasonry hand and power assisted tools, plant and equipment.

The unit is suitable for people with basic skills and knowledge who undertake routine stonemasonry work under the direction of more experienced workers on a new or existing structure on a commercial or domestic site.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan the work.

1.1 Read, interpret apply hand and power tool and equipment requirements from manufacturer's operational instructions, workplace procedures and workplace safety

- requirements.
- 1.2 Identify stonemasonry project requirements from plans and work instructions.
 - 1.3 Identify potential hazards and determine and implement control measures.
 - 1.4 Select and check condition of plant, equipment and tools and report damage or faults.
 - 1.5 Clarify job priorities and sequence with others on site.
- 2 Prepare for work.
- 2.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 2.2 Identify and select plant, equipment and hand and power tools appropriate for the task.
 - 2.3 Identify any operation or function limitations of plant, equipment and tools.
 - 2.4 Check equipment and tools to ensure guards, guides, controls and switches are fitted and functioning.
 - 2.5 Examine hoses for damage and check electrical leads and power tools are tagged.
 - 2.6 Inspect equipment, used for holding, clamping and supporting materials prior to and during operation, for faults.
 - 2.7 Remove from service and report any damage to equipment and tools.
- 3 Use plant, equipment and tools.
- 3.1 Connect power assisted tools to a residual current device (RCD) and conduct a pre-operational check prior to use.
 - 3.2 Use plant, equipment and tools safely and effectively and only for intended purpose.
 - 3.3 Disconnect electrical and pneumatic equipment from source and place in a safe location when not in use.

- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 4.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 4.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit

Assessment Requirements for CPCST2007 Use stonemasonry tools, plant and equipment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by using stonemasonry tools, plant and equipment during assisting on a minimum of one stonemasonry project.

In doing this, the candidate must safely set up and use:

- a cement mixer
- a static wet cut circular saw
- a portable wet cut circular saw
- an angle grinder
- an air compressor
- a laser level
- an impact power drill
- battery operated tools
- hand tools:
 - wheel barrow, hammers, mallets, chisels, pointers, spirit and water level, straight edge, trowels, shovels, line blocks, chalk line.
 -

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- functional and operational features of plant, equipment and hand and power tools:
 - battery operated tools
 - manufacturer's instructions for use
 - terminology
 - applications and limitations of use
 - parts and components
 - electrical safety, use of residual current device (RCD) and tag and test
 - maintenance, cleaning and storing

- terminology relating to stonemasonry tools and equipment
- characteristics, application and limitation of approved stonemasonry materials when used in conjunction with plant, equipment and tools
- processes and techniques for using plant, equipment and tools
- battery operated tools
- workplace procedures and workplace safety:
 - job safety and environmental analysis (JSEA)
 - exposure to silica
 - exposures to excessive noise
 - working at heights
 - electrical hazards
- environmental requirements for workplace processes and waste disposal
- using digital tools and devices to source information and communicate with others.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCST3001 Dress and mould stone

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3001A Dress and mould stone.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to dress and mould soft and hard stone.

This unit applies to stonemasons who work independently, in a team or under supervision and operate machinery relating to stone work in a workshop setting, on a new or existing structure.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|--|
| 1 Plan and prepare. | 1.1 Read and interpret dress and mould stone requirements from plans, specifications, standards and codes. |
| | 1.2 Follow requirements in workplace safety and |

- environmental documentation and workplace procedures.
- 1.3 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.4 Identify potential hazards and determine and implement control measures.
 - 1.5 Select and check condition of plant, equipment and tools and report damage or faults to relevant personnel.
 - 1.6 Check conformity of materials against job requirement.
- 2 Mark details on stone.
- 2.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 2.2 Check stone for defects, natural inclusions and dimensions.
 - 2.3 Apply templates square and in wind to face of stone and mark adjacent ends.
 - 2.4 Scribe or mark pattern so that lines remain indelible for duration of job.
- 3 Dress and finish stone.
- 3.1 Check bedding plane for correct orientation and profile.
 - 3.2 Sequence profile stages for dressing fillets and chamfers.
 - 3.3 Check each stage of dressing to maintain accuracy and consistency.
 - 3.4 Use hand tools to maintain uniformity of profile.
 - 3.5 Clean and finish surface using abrasives.
- 4 Clean up.
- 4.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 4.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 4.3 Store and secure tools and equipment following

workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCST3001A Dress and mould stone

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCST3001 Dress and mould stone

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3001A Dress and mould stone.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by dressing and moulding one solid hard stone and one solid soft stone.

In doing this, the candidate must:

- apply different moulding to each stone
- accurately set out templates for each mould
- finish moulded stone surface using chisels and other hand tools.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- stonemasonry regulations, codes and standards
- characteristics, applications and limitations of specified materials for dressing and moulding stone
- types of natural and manufactured stone
- processes and techniques for dressing and moulding stone:
 - calculating material quantities
- construction terminology relating to dressing and moulding stone
- functional and operational features of plant, equipment and hand and power tools:
 - pneumatic chisels
 - portable cutters and grinders
 - power grinders
- workplace processes and procedures
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - exposure to silica dust
 - exposure to loud noise
 - hazardous manual tasks

- environmental requirements for workplace processes and waste disposal
- Mohs scale of mineral hardness
- digital technology to operate devices and applications to source information and communicate with others.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCST3002 Shape solid stone

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3002A Dress and mould stone.
Updated to meet the Standards for Training Packages.

Application

This unit specifies the skills and knowledge required to shape solid hard and soft stone. It includes using a range of shaping methods to meet required specifications.

This unit applies to stonemasons who work independently, in a team or under supervision and operate machinery relating to stone work in a workshop setting, on a new site or an existing structure.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|---|-----|--|
| 1 | 1.1 | Read, interpret and apply requirements for shaping solid stone from specifications, standards and codes. |
|---|-----|--|

- 1.2 Follow requirements in workplace safety and environmental documentation and workplace procedures.
 - 1.3 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.4 Identify potential hazards and determine and implement control measures.
 - 1.5 Select and check condition of plant, equipment and tools and report damage or malfunction to relevant personnel.
 - 1.6 Check conformity of materials against the job requirements.
- 2
- 2.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 2.2 Determine required stone dimensions and shape.
 - 2.3 Dress stone using each tool for correct application and sequence.
 - 2.4 Cut soft stone accurately to squared sizes.
 - 2.5 Shape stone using a range of hand tools when processing at different stages.
 - 2.6 Cut stone to size and shape.
 - 2.7 Dress stone surfaces using abrasive machines.
 - 2.8 Adjust machinery to stone applications and operate using jigs and guides for repetitive and fine tolerance work.
- 3
- 3.1 Conduct a pre-operation check on equipment.
 - 3.2 Operate circular diamond saw to cut square blocks and operate with rise and fall functions for cutting profiles.
 - 3.3 Shape stones on lathe both between centres and face work.
 - 3.4 Operate a core drilling machine.
 - 3.5 Shape moulded section on planer machine.

- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 4.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 4.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCST3002A Shape solid stone

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCST3002 Shape solid stone

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3002A Dress and mould stone.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by shaping one solid soft stone and one solid hard stone to specified dimensions.

In doing this, the candidate must:

- cut one stone using hand tools and power assisted hand tools
- cut one stone using a circular diamond saw.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- stonemasonry regulations, standards and codes
- characteristics, applications and limitations of specified materials for shaping solid stone
- processes and techniques for:
 - shaping solid stone
 - calculating material quantities
- terminology relating to shaping solid stone
- functional and operational features of plant, equipment and hand and power tools:
 - rotary, chain and oscillating saws
 - water-jet cutting
 - planer machine
 - computer numerical control (CNC) machine
- workplace procedures and workplace safety:
 - hierarchy of control
 - exposure to silica dust
 - hazardous manual tasks
 - exposure to loud noise
- environmental requirements for workplace processes and waste disposal
- reading and interpreting plans and sketches

- Mohs scale of mineral hardness.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCST3003 Spilt stone manually

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3003A Split stone manually. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to manually split stone using various methods.

This unit applies to stonemasons who work independently, in a team or under supervision and use hand tools relating to splitting stone in a workshop setting.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|---|
| 1 Plan and prepare. | 1.1 Read, interpret and apply requirements for splitting stone manually from specifications, job requirements, standards and codes. |
|---------------------|---|

- 1.2 Follow requirements in workplace safety and environmental documentation and workplace procedures.
 - 1.3 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.4 Identify potential hazards and determine and implement control measures.
 - 1.5 Select and check condition of equipment and report damage or faults to appropriate person.
 - 1.6 Check conformity of materials against job requirements.
- 2 Split stone.
- 2.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 2.2 Identify natural features and grain of stone.
 - 2.3 Identify alternative methods for drilling and splitting stone.
 - 2.4 Drill holes and use plugs and feathers to split stone.
 - 2.5 Set out and drill holes to depth for type and size of stone.
 - 2.6 Apply guillotine principles used for splitting various thickness of slabbed stone.
 - 2.7 Split stone using natural lines of cleavage.
 - 2.8 Finish stone surfaces as required by job specification.
- 3 Clean up.
- 3.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirement.
 - 3.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 3.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCST3003A Spilt stone manually

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCST3003 Split stone manually

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3003A Split stone manually. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by manually splitting soft and hard stone.

In doing this, the candidate must:

- split a 400 mm soft stone in half
- split a 300 mm hard stone into 150 mm slabs using a plug and feather system
- split a stone into 150mm thickness using v-cut and wedging.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- types of natural and manufactured stone
 - basalt (blue stone)
 - granite
 - limestone
 - locally available stone
 - porphyry
 - sandstone
 - slate
- processes and techniques for splitting stone manually:
 - expanding grout
 - freezing
 - hydra splitting
 - plugs and feathers
 - v-cut and wedging
- terminology relating to splitting stone
- functional and operational features of plant, equipment and hand and power tools:
 - axes

- bush hammers
- chisels
- masonry drills
- patent axes poky
- sledge hammers
- splitting wedges
- workplace processes and procedures
- stonemasonry regulations, standards and codes
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - exposure to silica dust
 - hazardous manual tasks
 - exposure to loud noise
- environmental requirements for workplace processes and waste disposal
- reading and interpreting plans and sketches
- Mohs scale of mineral hardness.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCST3004 Dress stone manually

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3004A Dress stone manually. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to dress hard and soft stone manually.

This unit applies to stonemasons who work independently, in a team or under supervision and operate machinery relating to stone work in a workshop setting, on a new or existing structure.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|--|
| 1 Plan and prepare. | 1.1 Read, interpret and apply requirements to dress stone manually from job requirements, specifications, standards and codes. |
|---------------------|--|

- 1.2 Follow requirements in workplace safety and environmental documentation and workplace.
 - 1.3 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.4 Identify potential hazards and determine and implement control measures.
 - 1.5 Select and check condition of equipment and report damage or faults to appropriate person.
 - 1.6 Check conformity of materials against the job requirements.
- 2 Select stone.
- 2.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 2.2 Check stone type, colour, natural inclusions and defects.
 - 2.3 Select stone size and mark measurements to produce final design.
- 3 Dress stone.
- 3.1 Mark out stone in a manner appropriate to specified size and at each stage of dressing.
 - 3.2 Dress rough blocks to establish an oversized stone appropriate to job specification.
 - 3.3 Dress sphere and cylindrical surfaces to job specifications.
 - 3.4 Finish, clean and brush stone surfaces using non-corrosive methods.
- 4 Clean up.
- 4.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 4.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 4.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCST3004A Dress stone manually

Assessment Requirements for CPCST3004 Dress stone manually

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3004A Dress stone manually. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by square dressing the face of one 300 mm soft stone and one 300 mm hard stone using manual techniques/processes.

In doing this, the candidate must produce two different finishes selected from the following:

- chisel
- sparrow peck
- convict punch
- rock face
- boasted

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- measuring and marking techniques related to dressing stone
- types of natural and manufactured stone and their characteristics:
 - basalt (blue stone)
 - granite
 - limestone
 - locally available stone
 - porphyry
 - sandstone
 - slate
- processes and techniques for manually dressing stone:
 - axing
 - chiselling
 - drilling
 - hand sawing
 - pitching

- punching
- splitting
- terminology relating to dressing stone
- functional and operational features of plant, equipment and hand and power tools
- workplace procedures and workplace safety requirements:
 - job safety and environmental analysis (JSEA)
 - exposure to silica dust
 - hazardous manual tasks
 - exposure to loud noise
- stonemasonry regulations, standards and codes
- Mohs scale of mineral hardness
- environmental requirements for workplace processes and waste disposal.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCST3006 Machine stone

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3006A Machine stone. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to machine stone. It includes operating static machines to carry out machining of stone.

This unit applies to stonemasons who work independently, in a team or under supervision and operate machinery relating to stone work in a workshop setting, on a new site or an existing structure.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|------------------|---|
| 1 Plan the work. | 1.1 Source and read machine stone requirements from specification, standards and codes. |
|------------------|---|

- 1.2 Follow requirements in workplace safety and environmental documentation and workplace procedures relevant to work activity.
 - 1.3 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.4 Identify potential hazards and determine and implement control measures.
 - 1.5 Select and check condition of plant, equipment and tools and report damage or malfunction to relevant personnel.
 - 1.6 Check conformity of materials against the job requirements.
- 2 Prepare machinery for use.
- 2.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 2.2 Check guards, guides, clamps and sliding tables are fitted correctly and are operational.
 - 2.3 Check electrical leads are tagged, and hoses and cables are not damaged
 - 2.4 Conduct a pre-operation check and test emergency shut down switch is working.
 - 2.5 Clean work area and remove any hazards.
- 3 Operate static diamond saw.
- 3.1 Locate, secure and stabilise stone on sliding table and align to blade for cutting.
 - 3.2 Adjust depth of cut to suit stone hardness and blade cutting capacity.
 - 3.3 Start saw and turn on water.
 - 3.4 Slide stone through blade at an efficient rate avoiding strain on the machine and maintaining design.
 - 3.5 Repeat process until depth of cut is achieved.
- 4 Operate a travelling
- 4.1 Locate, align and secure stone on sliding table.

- beam saw.
- 4.2 Enter setting into digital panel for width and depth of stone and limits of blade.
 - 4.3 Switch on and operate automatic machine.
- 5 Operate multi-function cutter, grinder and polisher.
- 5.1 Select, fix and secure head/plate to operating spindle.
 - 5.2 Locate and secure stone on cutting table.
 - 5.3 Set template into position for profile work, cutting, and moulding operations.
 - 5.4 Set cutting heads for initial cut and align with template as part of the operating process.
 - 5.5 Carry out machine operations to complete the process of machining stone.
- 6 Carry out grinding and polishing.
- 6.1 Select and fit grinding plate appropriate to stone surface to be cut and polished.
 - 6.2 Set up and operate machine for grinding and polishing process changing grit abrasive pads for type of stone and finish.
 - 6.3 Monitor and maintain water flow to the polishing application.
- 7 Shut down machine operations.
- 7.1 Shut down machine and remove stone.
 - 7.2 Remove, clean, check for wear and store clamps, wedges and supporting materials.
 - 7.3 Clean machine, check for wear and tear or damage.
 - 7.4 Report any malfunctions or damage to appropriate person.
- 8 Clean up.
- 8.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.

- 8.2 Clean tools and equipment, check for serviceability and report damage or faults.
- 8.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCST3006A Machine stone

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCST3006 Machine stone

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3006A Machine stone. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by machining one soft stone and one hard stone to a size of 190 mm x 190 mm x 190 mm.

In doing this, the candidate must:

- use a static diamond saw to cut one stone, and
- use a travelling beam saw to cut the other stone
- cut, grind and polish two sides and a face of one hard stone shape using a multi-function machine.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- types of natural and manufactured stone:
 - basalt (blue stone)
 - granite
 - limestone
 - marble
 - sandstone
 - carborundum
 - diamond
- terminology relating to machining stone
- functional and operational features of plant, equipment and hand and power tools:
 - static diamond saws
 - travelling beam saws
 - multi-function cutting, grinding and polishing machines
 - battery operated tools
- workplace safety:
 - job safety and environmental analysis (JSEA)

- exposure to silica dust
- hazardous manual tasks
- exposure to loud noise
- electrical safety
- workplace processes and procedures
- stonemasonry regulations, standards and codes
- Mohs scale of mineral hardness
- environmental requirements for workplace processes and waste disposal
- key features of sketches, plans and specifications.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCST3007 Turn stone

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3007A Turn stone. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to turn stone. It includes setting up and using machinery, turning stone and finishing surfaces.

This unit applies to stonemasons who work independently, in a team or under supervision and operate machinery relating to stone work in a workshop setting, on a new or existing structure.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|--|
| 1 Plan and prepare. | 1.1 Read and interpret turn stone requirements from specifications, standards, codes and job requirements. |
|---------------------|--|

- 1.2 Follow requirements in workplace safety and environmental documentation and workplace procedures.
 - 1.3 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.4 Identify potential hazards and determine and implement control measures.
 - 1.5 Select and check condition of plant, equipment, tools and personal protective equipment (PPE), and report damage or faults to relevant person.
 - 1.6 Check conformity of materials against job requirements.
- 2 Construct templates.
- 2.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 2.2 Select template material appropriate for the task.
 - 2.3 Set out, mark design and cut to shape.
 - 2.4 Apply template throughout the roughing out and finishing process.
- 3 Operate lathe and turn stone.
- 3.1 Identify specific features and application of the lathe relevant to task requirements.
 - 3.2 Calculate machine speeds and feed rates and conduct a pre-operation check.
 - 3.3 Read job sheet and select, prepare and fit specified lathe cutting tools.
 - 3.4 Align work stock accurately ready for operation.
 - 3.5 Calculate and set roughing and finishing areas.
 - 3.6 Secure stone and check holding devices are applied during a dry run check.
 - 3.7 Perform lathe operation systematically checking contour matches template.

- 4 Finish and seal stone.
 - 4.1 Check conformity against template, turn stone and finish surface.
 - 4.2 Remove work from lathe, clean and prepare for sealant.
 - 4.3 Apply sealant and compounds to finished stone.
 - 4.4 Store chemical products safely in lock up cabinet.

- 5 Clean up.
 - 5.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 5.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 5.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCST3007A Turn stone

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCST3007 Turn stone

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3007A Turn stone. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by producing two different turned stone products using one hard stone and one soft stone.

In doing this, the candidate must:

- produce one parallel pattern
- produce one tapering pattern.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- types and characteristics of natural and manufactured stone:
 - granite
 - limestone
 - marble
 - sandstone
- processes and techniques for turning stone:
 - boring
 - cutting
 - shaping to parallel
 - shaping to taper
 - shaping to template
- terminology relating to turning stone
- functional and operational features of plant, equipment and hand and power tools:
 - lathe
 - abrasive heads
 - abrasive sheets
 - grinders

- range of cutting chisels
- battery operated tools
- template materials:
 - aluminium sheet
 - cardboard
 - plastic sheets
 - plywood
 - zinalume sheet
- workplace processes and procedures
- workplace safety:
 - hierarchy of control
 - exposure to silica dust
 - hazardous manual tasks
- stonemasonry regulations, codes and standards
- environmental requirements for workplace processes and waste disposal
- Mohs scale of mineral hardness.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCST3009 Use computer-controlled static machinery to produce stone components

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3009A Use computer-controlled static machinery to produce stone components. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to produce hard and soft stone components using computer-controlled machines. It includes curved and straight moulds, levels and cuts.

This unit applies to stonemasons who work independently, in a team or under supervision and operate machinery relating to stonemasonry work in a workshop setting, on a new or existing structure.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Plan and prepare.
 - 1.1 Read, interpret and apply static machinery requirements from work instructions, job requirements and machine operator instructions.
 - 1.2 Follow relevant information from workplace procedures, workplace safety and environmental documentation.
 - 1.3 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.4 Identify potential hazards and implement control measures.
 - 1.5 Select and check condition of plant, equipment and tools and report damage or faults to relevant person.
 - 1.6 Check conformity of materials against job requirements.
 - 2 Carry out data input.
 - 2.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 2.2 Determine and state programming terms, methods, limits and data storage capacity consistent with job requirements.
 - 2.3 Write, enter and edit program to produce straight and circular movements, compensating for tool profiles.
 - 3 Transfer program to machine control.
 - 3.1 Identify and record methods of transferring program into machine memory.
 - 3.2 Load program into machine memory using appropriate techniques to meet machine and job requirements.
 - 4 Operate loaded program to control machine.
 - 4.1 Conduct a program dry run in simulation mode to test alarm setting and edit using control station.
 - 4.2 Take precautions to ensure production of silica dust is minimised.
 - 4.3 Produce specific work pieces using automatic mode.

- 5 Clean up.
 - 5.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 5.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 5.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCST3009A Use computer-controlled static machinery to produce stone components

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CCCCST3009 Use computer-controlled static machinery to produce stone components

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CCCCST3009A Use computer-controlled static machinery to produce stone components. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by producing two separate stone components using a computer numerically-controlled (CNC) equipment.

In doing this, the candidate must:

- produce a curved contour in hard stone
- produce a splayed shape in soft stone
- comply with manufacturer's instruction and workplace procedures.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of specified materials to produce stone components
- types of natural and manufactured stone
- processes and techniques for producing stone components on static machinery
- terminology relating static machinery
- functional and operational features of plant, equipment and hand and power tools
 - CNC equipment
 - battery operated tools
- workplace policies and procedures and work instructions
- stonemasonry regulations, standards and codes
- Mohs scale of mineral hardness
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - exposure to silica dust

- hazardous manual tasks
- exposure to loud noise
- environmental requirements for workplace processes and waste disposal
- using digital tools and devices to source information and communicate with others.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCST3010 Set out and cut letters in stone

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3010A Set out and cut letters in stone. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to set out and cut letters in stone. It includes accurately transferring and cutting types of lettering onto various stone faces.

This unit applies to stonemasons who work independently, in a team or under supervision and cut letters into hard and soft stone in a workshop setting, on a new or existing structure.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare.

1.1 Read, interpret and apply requirements for setting out and cutting letters in stone from job requirements,

- specifications, standards and codes.
- 1.2 Follow relevant information from workplace procedures, workplace safety and environmental documentation.
 - 1.3 Determine job priorities and sequence job tasks in consultation with others.
 - 1.4 Identify potential hazards and determine and implement control measures.
 - 1.5 Select and check condition of plant, equipment and tools and report damage or faults to relevant person.
 - 1.6 Check conformity of materials against job requirements.
- 2 Select stone.
 - 2.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 2.2 Select stone to ensure quality, grain, colouring and size to suit job specifications.
 - 2.3 Prepare stone surface for lettering adaptable with the type of stone.
- 3 Set out for lettering.
 - 3.1 Select fonts appropriate for cemetery monument, architectural settings and a variety of commercial settings.
 - 3.2 Use drafting skills to set out full size lettering and transfer to template or stencil.
 - 3.3 Transfer lettering to stone face using appropriate method.
- 4 Cut and form traditional and contemporary letters in stone.
 - 4.1 Cut and form raised and flush letters to set out design.
 - 4.2 Cut and form V-shaped letters to set out design.
 - 4.3 Cut and form decorative ornamental work in letters following set out design shapes.
- 5 Cut and form
 - 5.1 Develop, draft and set out innovative design and apply

innovative forms of lettering in stone.		techniques for working letters into stone.
	5.2	Transfer drafted design to stone face using appropriate method.
	5.3	Cut and form designed letter style and shape in stone.
	5.4	Clean stone finish to job requirements.
6 Clean up.	6.1	Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
	6.2	Clean tools and equipment, check for serviceability and report damage or faults.
	6.3	Store and secure tools and equipment following workplace procedures.

Foundation Skills

Candidates require:

- technology skills to:
 - use digital tools and devices to source job information and communicate effectively with others.

Unit Mapping Information

Supersedes and is equivalent to CPCST3010A Set out and cut letters in stone

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCST3010 Set out and cut letters in stone

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3010A Set out and cut letters in stone.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by designing and producing a range of traditional, contemporary and innovative letters and numbers with a minimum height of 60 mm and cut them in stone.

In doing this, the candidate must:

- design, set out and transfer to a template a minimum of five contemporary and five innovative letters and numbers and cut into hard stone
- design, set out and transfer to a different type of template ten architectural letters and numbers and cut into soft stone.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- drawing and sketching techniques
- interpreting drawings and specifications
- stone surfaces for lettering:
 - dressing
 - milling or cutting
 - painting surfaces for setting out
 - polishing
 - sandblasting
- traditional, contemporary and architectural font styles used in stonemasonry
- types of materials used for templates and stencils:
 - aluminium sheet
 - cardboard
 - plastic sheet
 - plywood
 - zincaluminum sheet

- design transfer:
 - computer aided design (CAD)
 - direct drafting
 - stencils
 - templates
 - tracings
- types of natural and manufactured stone and their characteristics:
 - granite
 - marble
 - slate
 - manufactured stone
- terminology relating to setting out and cutting letters in stone
- adhesives, compounds and abrasive products
- functional and operational features of plant, equipment and hand and power tools
 - battery operated tools
- workplace policies and procedures and work instructions
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - exposure to silica dust
 - hazardous manual tasks
 - exposure to loud noise
- environmental requirements for workplace processes and waste disposal
- digital technology to design, set out and transfer letters and numbers using tools, devices and programs.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCST3011 Plan monument construction

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3011A Plan monument construction. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to prepare plans and specifications for the construction phase of monuments in cemeteries. It includes identifying and meeting customer needs and state and local legislative requirements.

This unit applies to stonemasons who work independently, in a team or under supervision to plan monument construction relating to stonemasonry work in a workshop setting, on a new or existing structure.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Identify design and legislative requirements. | 1.1 Read, interpret and apply relevant information, government legislation, standards and codes appropriate to monument construction in cemeteries. |
| | 1.2 Follow relevant information from workplace procedures, workplace safety and environmental documentation. |
| | 1.3 Determine monument design and materials with customer. |
| | 1.4 Check selected materials conform to proposed design. |
| | 1.5 Select and check drawing equipment is sufficient for job design. |
| 2 Prepare plans. | 2.1 Determine job priorities, time frames and sequence job tasks in consultation with others. |
| | 2.2 Design foundation details according to soil type and monument size. |
| | 2.3 Design monument to meet the client's requirements. |
| | 2.4 Check design with client for approval. |
| 3 Finalise design and specifications for submission. | 3.1 Complete drawings applying drafting conventions and detailing joining, supporting and reinforcing requirements. |
| | 3.2 Compile specifications ensuring direct relationship with drawings and regulations. |
| | 3.3 Check drawing and specifications and edit for consistency. |
| | 3.4 Print drawings and specifications in preparation for distribution. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCST3011A Plan monument construction

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCST3011 Plan monument construction

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3011A Plan monument construction.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by designing two different stone monuments.

In doing this, the candidate must:

- collate client information to inform design
- plan structural and decorative components
- address site regulations, caveats and construction methods
- present design plan for client approval.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitation of monument materials
- types of natural and manufactured stone:
 - basalt
 - granite
 - marble
 - pre-cast concrete sections
 - reconstituted stone
- processes and techniques for monument construction:
 - headstone
 - cover stone
 - monument
 - front, side and back stone
 - foundation material
 - assembling and joining components
- features of working drawings and specifications

- terminology relating to monument construction
- masonry expansion and growth, control and articulation joints
- workplace procedures and workplace safety
- policies, procedures, work schedules relating to monument construction
- government legislation, standards and codes relating to headstone and cemetery monuments
- environmental requirements for workplace processes and waste disposal
- using digital tools and devices to source information and communicate with others.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCST3012 Build stone veneer walls

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3012A Build stone veneer walls.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to build single leaf stone block face walls to a metal or timber wall frame construction.

This unit applies to stonemasons who work independently, in a team or under supervision to build stone veneer walls relating to stonemasonry work on a new or existing structure.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Prepare for work.

1.1 Read, interpret and apply stone veneer construction requirements from current plans, specifications,

- standards and codes.
- 1.2 Follow relevant information from workplace procedures, workplace safety and environmental documentation.
 - 1.3 Use measurements and formulas to calculate material quantities.
 - 1.4 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.5 Identify potential hazards and implement control measures.
 - 1.6 Select and check condition of plant, equipment and tools and report damage or faults to relevant person.
 - 1.7 Check conformity of materials against the job requirements.
- 2 Set out stone veneer work.
- 2.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 2.2 Identify structural details of stone veneer construction from plans and specifications.
 - 2.3 Establish overall height and levels from datum.
 - 2.4 Set out stonework dimensions and bond and mark on footing.
 - 2.5 Set out door and window openings, stone gauge and damp proof course (DPC).
- 3 Construct base.
- 3.1 Select, blend and place materials in preparation for the work.
 - 3.2 Mix mortar for consistency and job requirements and place on mortar boards ready for use.
 - 3.3 Lay base stonework level and plumb to set out marks.
- 4 Construct stone veneer walls
- 4.1 Check structural frame for plumb, straight and no protrusions to maintain consistent cavity size.

- 4.2 Install reflective foil to meet building code and Australian standards.
 - 4.3 Lay stone masonry work installing DPC and flashings, ventilation, weep holes and fix wall ties to framework.
 - 4.4 Construct opening and install flashings maintaining clean cavity from mortar dropping and bridging.
 - 4.5 Set out, erect, stabilise and brace work platform to workplace safety requirements.
 - 4.6 Install lintels and head flashings to openings.
 - 4.7 Finish stone veneer walls level, plumb and parallel to eaves height.
 - 4.8 Locate and form control joints and stone work reinforcing as specified.
 - 4.9 Cut and lay sill bricks to a line as specified.
- 5 Rake and rule joints.
- 5.1 Remove excess mortar from stonework.
 - 5.2 Rake or rule joints to specified profile and depth.
 - 5.3 Clean face of stonework prior to mortar drying.
- 6 Clean up
- 6.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 6.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 6.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCST3012A Build stone veneer walls

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCST3012 Build stone veneer walls

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3012A Build stone veneer walls.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by building a minimum 2.1 m long x 2.0 m high section of stone veneer wall with one external corner on a slab construction.

In doing this, the candidate must:

- build in damp proof course and ventilation
- build a door and window opening with lintel and flashings.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of specified materials for stone veneer construction
- processes and techniques for stone veneer construction:
 - vermin control and anti-termite measures
 - damp proofing, flashing and ventilation
 - floor, wall and roof members
 - frame tying components
 - lintels and load bearing components
 - timber and steel door frames
 - gable and eaves construction
- construction terminology relating to stone veneer construction
- stone expansion and growth, control and articulation joints
- mortar ingredients and consistency
- stone bond patterns and gauge
- functional and operational features of plant, equipment and hand and power tools
- workplace processes and procedures
- workplace safety:

- job safety and environmental analysis (JSEA)
- exposure to silica dust
- exposure to loud noise
- hazardous manual tasks
- work at heights
- safe use of scaffold
- types and safe use of lifting equipment
- features of working drawing and specifications
- Australian Standards and codes
- requirements of National Construction Code (NCC) relating to veneer construction
- environmental requirements for workplace processes and waste disposal
- digital technology to source information and communicate with others.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCST3013 Carry out cemetery monument fixing

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3013A Carry out cemetery monument fixing. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to construct and fit cemetery monuments. It includes the use of granite, marble, basalt, pre-cast concrete sections and manufactured stone.

This unit applies to stonemasons who work independently, in a team or under supervision to carry out stonemasonry work relating to cemetery monument fixing in a workshop setting, on a new or existing structure.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan the work.
 - 1.1 Read, interpret and apply monument fixing requirements from current job instructions, specifications and codes.
 - 1.2 Follow relevant information from workplace procedures, workplace safety and environmental documentation.
 - 1.3 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.4 Identify potential hazards and determine and implement control measures.
 - 1.5 Use measurements and apply formulas to calculate material quantities.
 - 1.6 Select and check condition of plant, equipment and tools and report damage or malfunction to relevant personnel.
 - 1.7 Check conformity of materials against the job requirements and report inconsistencies to relevant person.
- 2 Construct footings and prepare monument stones.
 - 2.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 2.2 Set out and excavate trench to specified dimensions.
 - 2.3 Place reinforcement, fix formwork and pour concrete footings.
 - 2.4 Set out and install monument on footing.
- 3 Position side stones.
 - 3.1 Position side stones, plumb and pack to provide a slight fall towards front stone.
 - 3.2 Check side stones are aligned, level, parallel and square.
 - 3.3 Measure, mark, cut and insert abutting dowels.
- 4 Stand front and back stones.
 - 4.1 Mix mortar, insert into side stone holes and insert dowel joints to full depth.
 - 4.2 Position back stone on timber packing in preparation to lift into place and protect side stones to prevent chipping.

- 4.3 Place mortar and lift back stone into position and pack level.
 - 4.4 Locate, raise and position front stone and pack to ensure level and plumb.
 - 4.5 Mix grout and pack joints between base and kerb stones.
 - 4.6 Remove excess grout and clean and wash kerb stones.
- 5 Fix headstone to back stone.
 - 5.1 Measure and cut dowels for joints, apply mortar or adhesive and insert dowels.
 - 5.2 Raise and lower headstone into position and finish plumb and level.
- 6 Fill centre and finish with chip top.
 - 6.1 Fill and compact centre area base to specified height.
 - 6.2 Place brick supports in each corner, cut and fix reinforcement and pour a minimum 50 mm concrete slab.
 - 6.3 Mix and spread stone screening to required finished height.
- 7 Fit cover stone and finish monument.
 - 7.1 Measure and cut dowels for joints, prepare and fill centre area and fill dowel holes with mortar and fully insert dowels into position.
 - 7.2 Shift cover stone into place on timber packing, and lower into place using wedges to finish in position.
 - 7.3 Prepare and apply pointing/grouting material to finish joints.
 - 7.4 Remove excess mortar, and clean and polish cover stone.
- 8 Clean up.
 - 8.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 8.2 Clean tools and equipment, check for serviceability and report damage or faults.

- 8.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCST3013A Carry out cemetery monument fixing

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCST3013 Carry out cemetery monument fixing

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3013A Carry out cemetery monument fixing. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by installing two different styles of cemetery monuments.

In doing this, the candidate must:

- install two different types of stone
- test and use lifting equipment
- comply with cemetery monument standards and codes.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- types and performance of adhesives and sealants used in stonemasonry work
- properties and performance of concrete footings
- types of natural and manufactured stone:
 - basalt
 - granite
 - marble
 - pre-cast concrete sections
 - reconstituted stone
- processes and techniques for fixing various types of cemetery monuments
- construction terminology relating to monument fixing
- types and safe use of lifting equipment
- functional and operational features of plant, equipment and hand and power tools:
 - air compressor and hoses
 - concrete mixers
 - generators
 - impact drills

- power grinders
- gin poles
- hydraulic or mechanical jacks
- shear legs
- power operated tools
- workplace processes and procedures
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - exposure to silica
 - exposure to excessive noise
 - hazardous manual tasks
 - hazardous substances
- features of working drawings and specifications
- digital technology and use of devices to source information and communicate with others
- environmental requirements for workplace processes and waste disposal
- relevant cemetery monument standards, codes and regulations.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCST3014 Set and anchor stone facades

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3014A Set and anchor stone facades. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to shift, set and anchor a variety of stone facades for construction projects.

This unit applies to stonemasons who work independently or in a team to set and anchor stone facades relating to stonemasonry work on a new or existing structure.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan the work.

1.1 Read, interpret and apply fixing stone facade requirements from current plans, specifications,

- standards and codes.
- 1.2 Follow relevant information from workplace procedures, workplace safety and environmental documentation.
 - 1.3 Use measurements and apply formulas to calculate material quantities for the task.
 - 1.4 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.5 Identify potential hazards and determine and implement control measures.
 - 1.6 Select and check condition of plant, equipment and tools and report damage or malfunction to relevant person.
- 2 Prepare for work.
- 2.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 2.2 Check conformity of materials against the specifications.
 - 2.3 Set out stone facade dimensions, line and level from datum and establish base course.
 - 2.4 Prepare area of construction to receive stone components.
 - 2.5 Prepare surface and install base dowels to provide key for base course.
 - 2.6 Check stone for faults; stone components are prepared, lifting locations are undamaged, and lifting gear is attached.
- 3 Shift, erect and fix stone.
- 3.1 Erect scaffolding as required in accordance with workplace safety requirements.
 - 3.2 Select slings, clutches and lifting equipment for their correct function and inspect for wear and tear or damage.
 - 3.3 Shift and transfer stone components to fixing location at structure.
 - 3.4 Prepare base components by drilling holes for dowels and placing wedges or packers for adjustment.

- 3.5 Place and fix base course components; align and tie to stone components, and adjust and secure.
 - 3.6 Install, join and fix stone facades and corners using appropriate fixing methods.
 - 3.7 Flash, seal and caulk stone facade using recommended products.
 - 3.8 Clean joins and stone face.
- 4 Clean up.
- 4.1 Clear the work area, and dispose of, reuse or recycle following workplace and environmental requirements.
 - 4.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 4.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCST3014A Set and anchor stone facades

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCST3014 Set and anchor stone facades

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3014A Set and anchor stone facades. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by setting and anchoring stone facades to a steel frame or concrete construction with minimum height of 1.5 m.

In doing this, the candidate must:

- prepare the base tie down system and set and anchor stone facades to specifications
- set stone facades around an opening
- fix stone facades into an internal or external corner.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of specified materials and components used in anchoring stone facades
- processes and techniques for fixing facade stone onto:
 - brick/concrete masonry walls
 - in situ, reinforced concrete
 - pre-cast reinforced concrete
 - structural steel framing
- methods of fixing stone facades:
 - S hook
 - back clamp
 - corbel plate bracket
 - dog cramp
 - fish tailed cramp
 - pin bracket
 - slotted bracket
 - turned end cramp

- construction terminology relating to anchor stone facades
- masonry expansion and growth, control and articulation joints
- types and safe use of lifting equipment
- functional and operational features of plant, equipment and hand and power tools:
 - lifting gear and equipment
 - air compressor and hoses
 - power grinders
 - impact drills
 - battery operated tools
- workplace processes and procedures
- workplace safety:
 - exposure to silica
 - job safety and environmental analysis (JSEA)
 - hazardous manual tasks
 - working at heights
 - exposure to excessive noise
 - hazardous substances
- features of working drawings and specifications
- environmental requirements for workplace processes and waste disposal
- digital technology to source information and communicate with others
- fire control and separation requirements
- key requirements of National Construction Code (NCC) relevant to stone facades.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCST3015 Apply gilding to stone

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3015A Apply gilding to stone.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to apply gilding to letters, monograms and insignias carved into stone surfaces.

This unit applies to stonemasons who work independently or in a team to apply gilding to stonework in a workshop setting, on a new or existing structure.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare.

1.1 Read, interpret and apply gilding to stone requirements from job instructions, standards and codes.

- 1.2 Follow relevant information from workplace procedures, workplace safety and environmental documentation.
 - 1.3 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.4 Identify potential hazards and determine and implement control measures.
 - 1.5 Select and check condition of equipment and tools and report damage or faults to relevant person.
 - 1.6 Check conformity of materials against the job requirements.
- 2 Apply gilding.
- 2.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 2.2 Prepare stone surface and pre-cut lettering and shapes to job specifications.
 - 2.3 Mix and apply specific colour to stone surface ensuring size is contained within the lettering or shape.
 - 2.4 Determine potential shrinkage of gilding material and cut gilding accordingly.
 - 2.5 Check sized surface for stickiness and apply gilding material.
 - 2.6 Trim and remove excess gilding at edges of lettering or shape.
 - 2.7 Burnish gilding material and ensure loose particles are removed.
 - 2.8 Select and apply cleaning products and cleaning procedure to surrounding area.
- 3 Clean up
- 3.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 3.2 Clean tools and equipment, check for serviceability and report damage or faults.

- 3.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCST3015A Apply gilding to stone

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCST3015 Apply gilding to stone

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3015A Apply gilding to stone.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by applying gilding to stone.

In doing this, the candidate must:

- provide appropriate protection to surrounding areas of stone
- apply gilding to two detailed insignias, minimum size of 150 mm x 150 mm
- apply gilding to two emblems, minimum size of 150 mm x 150 mm
- apply gilding to five letters, minimum size of 60 mm
- use a minimum of two of the following products:
 - aluminium
 - gold
 - silver.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of specified gilding materials:
 - gold
 - silver
 - aluminium
 - Dutch metal
 - copper
 - variegated leaf
 - water-based size
- finishing techniques for gilding and gilding surfaces
- methods of applying gilding
- types of natural and manufactured stone

- processes and techniques for gilding using various products
- functional and operational features of equipment and tools
 - battery operated tools
- workplace procedures and workplace safety:
 - exposure to silica
 - job safety and environmental analysis (JSEA)
 - hazardous manual tasks
 - hazardous substances
 - exposure to excessive noise
- drawing conventions and construction terminology used in plans and specifications
- environmental requirements for workplace processes and waste disposal
- digital technology to source information and communicate with others.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCT3016 Build solid stonemasonry walls

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCT3016A Build solid stonemasonry walls. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to build stonemasonry solid walls. It includes installing damp proofing and flashing.

This unit applies to stonemasons who work independently or in a team to build solid stonemasonry walls on a new or existing structure.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare.

1.1 Read, interpret and apply solid stonemasonry wall construction requirements from current plans,

- specifications, standards and codes.
- 1.2 Follow relevant information from workplace procedures, workplace safety and environmental documentation.
 - 1.3 Use measurements and formulas to calculate material quantities.
 - 1.4 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.5 Identify potential hazards and determine and implement control measures.
 - 1.6 Select and check condition of plant, equipment and tools and report damage or malfunction to relevant person.
 - 1.7 Check conformity of materials against the specifications and place materials in proximity of the work.
- 2 Set out stonework.
- 2.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 2.2 Identify structural details, loadbearing stonework and piers for stonework construction.
 - 2.3 Establish finish heights and levels from datum and set out and mark base stonework.
 - 2.4 Set out stonework gauge and bond.
 - 2.5 Set out and mark load bearing stonework, damp proof course (DPC), flashing, ventilation, vermin proofing and ant capping.
 - 2.6 Set out door and window positions to suit gauge and bond.
- 3 Construct solid masonry walls.
- 3.1 Mix mortar to colour and consistency of job requirements.
 - 3.2 Lay base stones and construct to set out position and to level and bond.
 - 3.3 Construct sold stonemasonry walls straight, level and plumb to allowable tolerances and with required wall

- ties.
- 3.4 Install DPC, flashings, weep holes and ventilation to comply with standards and codes.
 - 3.5 Set out, erect, stabilise and brace work platform to workplace safety requirements.
 - 3.6 Construct window and door openings and install flashings.
 - 3.7 Install lintels and head flashings.
 - 3.8 Install roof tie down to meet specifications and standards.
 - 3.9 Set out, cut and lay sill bricks with specified slope and clearances.
- 4 Finish stonework.
- 4.1 Remove excess mortar prior to drying.
 - 4.2 Rake or rule joints to specified profile and depth.
 - 4.3 Bruch down and clean face stonework.
- 5 Clean up.
- 5.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 5.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 5.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCST3016A Build solid stonemasonry walls

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCST3016 Build solid stonemasonry walls

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3016A Build solid stonemasonry walls. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by building a minimum 2.1 m long and 2.0 m high solid masonry wall with a minimum of one external or internal corner.

In doing this, the candidate must:

- set out gauge and bond, window and door opening, flashing, weepholes and ventilation
- lay stones level, straight and plumb at corners
- install lintels for opening maintaining gauge and bond.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of materials for building solid masonry walls
- types of natural and manufactured stone used in wall construction:
 - limestone
 - sandstone
 - artificial stone
 - autoclaved aerated concrete (AAC)
- processes and techniques for building stonemasonry walls:
 - subfloor, wall and roof construction
 - damp proofing, flashing and ventilation
 - tying components
 - lintels and load bearing components
 - gable and eaves construction
- construction terminology relating to laying stone
- mortar ingredients and consistency
- stone bond patterns
- types and safe use of lifting equipment

- functional and operational features of plant, equipment and hand and power tools:
 - cement mixer
 - elevated work platforms (EWP)
 - power drills
 - air compressor and hoses
 - battery operated tools
- workplace processes and procedures
- workplace safety:
 - exposure to silica
 - job safety and environmental analysis (JSEA)
 - hazardous manual tasks
 - working at heights
 - exposure to loud noise
- working drawings and specifications
- material protection and storage
- environmental requirements for workplace processes and waste disposal
- sustainability principles
- construction standards, codes and regulations
- key requirements of the National Construction Code (NCC) relevant to solid masonry walls
- digital technology to source information and communicate with others.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCST3017 Construct stone arches

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3017A Construct stone arches.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to build different types of stonemasonry arches using regular and irregular stone.

This unit applies to stonemasons who work independently or in a team to construct arches on a new or existing structure.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare.

1.1 Read, interpret and apply stone arch construction requirements from current plans, specifications,

- standards and codes.
- 1.2 Follow relevant information from workplace procedures, workplace safety and environmental documentation.
 - 1.3 Calculate material quantities required for the task.
 - 1.4 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.5 Identify potential hazards and determine and implement control measures.
 - 1.6 Select and check condition of plant, equipment and tools and report damage or faults to relevant person.
 - 1.7 Check conformity of materials against the specifications and place materials in preparation for the work.
- 2 Set out arch.
- 2.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 2.2 Measure width and height of arch and transfer dimensions to arch support material.
 - 2.3 Mark striking point and create arch.
 - 2.4 Cut and assemble arch support allowing for ease of release on completion without jarring stonework.
 - 2.5 Mark central keystone and voussoirs onto arch support.
 - 2.6 Set out base, bond and gauge of stone arch.
- 3 Construct arch with regularly cut stone.
- 3.1 Mix mortar to colour and consistency to meet job requirements.
 - 3.2 Construct arch columns level and plumb and maintain gauge to springing line of arch.
 - 3.3 Raise arch support and brace level across springing line and crown.
 - 3.4 Cut keystone and voussoirs to pattern with even joints.
 - 3.5 Lay stones with even joints maintaining bond and

- alignment with stone face.
- 3.6 Rake joints to specified style and depth.
- 4 Construct arch with irregular stones.
- 4.1 Set out and mark keystone to crown of arch.
- 4.2 Construct arch using random rubble or random squared ashlar to match curved extrados.
- 4.3 Match stones to abutting stones and lay selected stones using mortar joints maintaining alignment and plumb.
- 4.4 Remove excess mortar, finish joints to specified profile and depth.
- 4.5 Clean and brush stone face work.
- 5 Construct an arch with irregular voussoirs forming stepped extrados.
- 5.1 Check delivered pre-cut voussoirs/wedges for conformity to design and order.
- 5.2 Position keystone of archway centrally and lay voussoirs around centre to form arch.
- 5.3 Lay regular stones where voussoirs are designed to correspond with courses.
- 5.4 Lay random regular stones where voussoirs are not designed to correspond with courses.
- 6 Clean up.
- 6.1 Clear the work area, and dispose of, reuse or recycle following workplace and environmental requirements.
- 6.2 Clean tools and equipment, check for serviceability and report damage or faults.
- 6.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Candidates require:

- numeracy skills to:
 - use measurements and geometry to accurately set curves of arches
 - use measurements and formulas to calculate material quantities.

Unit Mapping Information

Supersedes and is equivalent to CPCST3017A Construct stone arches

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCST3017 Construct stone arches

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3017A Construct stone arches.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by building two different types of stone arches using regular stone for one and irregular stone for the other.

In doing this, the candidate must:

- set out and assemble arch support
- cut regular keystone and voussoirs with even joints
- remove arch support without damage to stonework.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, application and limitations of specified materials used for building stone arches
- methods and techniques for constructing stonemasonry arches
- arch design:
 - regular gauge
 - random regular
 - random rubble
- types of natural and manufactured stone
- processes and techniques for building various types of stone arches
- construction terminology relating to stone arches
- mortar ingredients and consistency
- types and safe use of lifting equipment
- functional and operational features of plant, equipment and tools:
 - wet cut saws
 - angle grinders
 - cement mixers

- power saws
- battery operated tools
- workplace processes and procedures
- workplace safety:
 - exposure to silica
 - exposure to excessive noise
 - working at heights
 - hazardous manual tasks
 - job safety and environmental analysis (JSEA)
- features of working drawings and specifications
- environmental requirements for workplace processes and waste disposal
- Australian Standards and codes
- key requirements of National Construction Code (NCC) relating to stone arch construction
- digital technology and use of devices to source information and communicate with others.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCST3018 Inlay lead to stone

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3018A Inlay lead to stone. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to inlay lead to letters or shapes carved into stone.

This unit applies to stonemasons who work independently or in a team to inlay lead relating to stonemasonry work in a workshop setting, on a new or existing structure.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare.	1.1 Read, interpret and apply lead inlaying requirements from work instructions, job requirements, standards and
---------------------	--

- codes.
- 1.2 Follow relevant information from workplace procedures, workplace safety and environmental documentation.
 - 1.3 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.4 Identify potential hazards and determine and implement control measures.
 - 1.5 Select and check condition of equipment and tools and report damage or faults to relevant person.
- 2 Perform lead inlay to lettering
- 2.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 2.2 Prepare base of lettering to key lead.
 - 2.3 Handle and prepare lead safely and work in a well-ventilated area.
 - 2.4 Cut lead strips to suit incised letters or shapes and press into position.
 - 2.5 Beat lead strips into carved letters or shapes without damage to stone face.
 - 2.6 Rasp and rub lead to an even flat or raised finish with clean edges.
 - 2.7 Finish and polish lead inlay using fine abrasive products.
- 3 Clean up.
- 3.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 3.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 3.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCST3018A Inlay lead to stone

Links

Assessment Requirements for CPCST3018 Inlay lead to stone

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3018A Inlay lead to stone. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by inlaying lead into stone.

In doing this, the candidate must inlay lead into:

- one logo or insignia with a minimum size of 150 mm x 150 mm
- a minimum of five letters or numbers with a minimum size of 60 mm.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of materials for inlaying lead to stone
- types of natural and manufactured stone
- processes and techniques for inlaying lead
- functional and operational features of equipment and tools used for inlaying lead:
 - gelatine
 - masonry drills
 - pneumatic lettering chisels
 - power grinders
 - battery operated tools
- workplace policies and procedures
- workplace safety:
 - effects of lead on humans
 - exposure to lead products
 - safety data sheet (SDS)
 - respiratory protective devices
 - job safety and environmental analysis (JSEA)
 - exposure to silica
 - hazardous substances

- exposure to excessive noise
- environmental requirements for workplace processes and waste disposal
- Australian Standards and codes for stonemasonry and handling lead
- digital technologies to source information and communicate with others.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCST3019 Lay stonemasonry stairs

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3019A Lay stonemasonry stairs.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to lay internal or external masonry stairs. It includes calculating total rise and going of flight and riser and tread sizes.

This unit applies to stonemasons who work independently or in a team to lay stonemasonry stairs on a new or existing structure.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare.

1.1 Read, interpret and apply stonemasonry stair construction requirements from current plans,

- specifications and codes.
- 1.2 Follow relevant information from workplace procedures, workplace safety and environmental documentation.
 - 1.3 Use measurements and formulas to calculate material quantities.
 - 1.4 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.5 Identify potential hazards and determine and implement control measures.
 - 1.6 Select and check condition of plant, equipment and tools and report damage or malfunction to relevant person.
- 2 Set out stairs.
- 2.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 2.2 Set out location of stairs on a prepared footing to comply with plans and specifications.
 - 2.3 Calculate and set out the total rise and going of the flight of stairs.
 - 2.4 Calculate and set out minimum tread width and maximum riser height.
 - 2.5 Select and check colour, shape and conformity of stone against the specifications and place materials in preparation for the work.
- 3 Lay stonemasonry stairs.
- 3.1 Mix mortar to colour, texture and consistency for job requirements and place on mortar board ready for use.
 - 3.2 Determine starting point and lay base stones level, square and aligned to set out marks.
 - 3.3 Lay risers and treads maintaining level consistent joints.
 - 3.4 Form steps ensuring they are square, level, plumb and true.
 - 3.5 Finish joints to specified profile.

- 3.6 Remove excess mortar and brush down face of stairs prior to mortar drying.
- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 4.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 4.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCST3019A Lay stonemasonry stairs

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCST3019 Lay stonemasonry stairs

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3019A Lay stonemasonry stairs.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by constructing a single flight of stonemasonry stairs.

In doing this, the candidate must:

- build in three treads with a fall to run off water
- build in one wing wall maintaining gauge and bond
- lay stonemasonry stairs within tolerances stated in relevant standards and codes.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- construction terminology relating to stonemasonry stairs:
 - geometry of stairs
 - open flight
 - straight flight
 - quarter and half space landings
 - solid treads
 - veneer face
- standards and codes for masonry stair construction
- key requirements of the National Construction Code (NCC) relevant to stonemasonry stairs
- mortar ingredients and consistency
- rising damp
- types and characteristics of stone:
 - granite
 - marble
 - slate
 - locally available stone

- functional and operational features of plant, equipment and tools
 - battery operated tools
- workplace processes and procedures
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - exposure to silica
 - hazardous manual tasks
 - exposure to excessive noise
- features of working drawings and specifications
- environmental requirements for workplace processes and waste disposal.
- using digital tools and devices to source information and communicate with others.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCST3020 Produce reconstituted stone

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3020A Produce reconstituted stone. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to produce reconstituted stone. It includes creating and using moulds, mixing and pouring selected materials and finishing selected surfaces.

This unit applies to stonemasons who work independently or in a team to produce reconstituted stone relating to stonemasonry work in a workshop setting, on a new or existing structure.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare.
 - 1.1 Read, interpret and apply reconstituted stone requirements from current job specifications, standards and codes.
 - 1.2 Follow relevant information from workplace procedures, workplace safety and environmental documentation.
 - 1.3 Use formulas to calculate material quantities for job requirements.
 - 1.4 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.5 Identify potential hazards and determine and implement control measures.
 - 1.6 Select and check condition of plant, equipment and tools and report damage or faults to relevant person.
 - 1.7 Check conformity of materials against the specifications.

- 2 Produce reconstituted stone
 - 2.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 2.2 Prepare forms and existing moulds ready for placement of aggregate mix according to job requirements.
 - 2.3 Place forms flat and in wind, and place reinforcement as specified.
 - 2.4 Measure and mix aggregates and ingredients to the required consistency.
 - 2.5 Fill forms with mixed aggregate and consolidate mix using light vibration.
 - 2.6 Screed mix flat in line with top of forms, compact and allow to cure.
 - 2.7 Remove reconstituted stone from form manually or by mechanical means and position for grinding.
 - 2.8 Grind face of stone thoroughly to expose aggregate.
 - 2.9 Fill voids or imperfections evenly matching stone and aggregate colour.
 - 2.10 Polish surface to produce a flat and freeform blemish

finish.

- 3 Clean up
 - 3.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 3.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 3.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCST3020A Produce reconstituted stone

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCST3020 Produce reconstituted stone

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3020A Produce reconstituted stone.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by producing a minimum of a 600 mm x 600 mm reconstituted stone.

In doing this, the candidate must:

- set out forms parallel, square and in wind
- mix and apply ingredients and compact to job specifications
- remove stone without damage and polish one surface to produce a flat and freeform blemish finish

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of specified materials for producing reconstituted stone:
 - sand, cement and aggregate
 - adhesives, compounds and abrasive products
- processes and techniques for producing reconstituted stone:
 - placing, levelling and compacting materials
 - polishing and grinding
 - safe handling of materials
- types of forms and moulds used for producing reconstituted stone
- functional and operational features of plant, equipment and tools:
 - mixing and compacting equipment
 - grinding and polishing tools
 - battery operated tools
- workplace processes and procedures
- workplace safety:
 - exposure to silica

- job safety and environmental analysis (JSEA)
- hazardous manual tasks
- exposure to excessive noise
- hazardous materials
- environmental requirements for workplace processes and waste disposal
- standards and codes relating to producing reconstituted stone
- digital technology and use of devices to source information and communicate with others.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCSST3021 Restore stone work

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCSST3021A Renovate and restore stone work. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to restore stonework. It includes preparing and positioning new stone and reproducing decorative stone.

This unit applies to stonemasons who work independently or in a team to restore stone relating to stonemasonry work in a workshop setting, on a new or existing structure.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare.

1.1 Read, interpret and apply stone work renovation and restoration requirements from work instructions, current

- plans, specifications, standards and codes.
- 1.2 Follow relevant information from workplace procedures and workplace safety and environmental documentation.
 - 1.3 Calculate material and product quantities required for the task.
 - 1.4 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.5 Identify potential hazards and determine and implement control measures.
 - 1.6 Select and check condition of plant, equipment and tools and report damage or faults to relevant personnel.
 - 1.7 Check conformity of materials against the job requirements.
- 2 Access and remove damaged stonework.
- 2.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 2.2 Identify location and dimension of damaged stonework from job drawings.
 - 2.3 Determine the extent of damage and scale of repair required.
 - 2.4 Cut out damaged section accurately without damage or collapse to surrounding stone.
 - 2.5 Remove and dispose of waste materials.
- 3 Prepare replacement stone.
- 3.1 Match colour and type of existing stone, seek advice if sourced stone is not compliant.
 - 3.2 Measure profile dimensions of damaged stone and make templates.
 - 3.3 Prepare replacement stone to accurately match dimensions and profile of removed stone.
- 4 Fix replacement stone.
- 4.1 Prepare stone for fixing using a slotted, doveled or

- bracket method.
- 4.2 Handle and raise stone into position for placement.
 - 4.3 Place and fix stone into exact position and bed stone using adhesive or mortar.
 - 4.4 Fill bed and perpendicular joints with mortar or sealant.
 - 4.5 Clean stonework using dry, liquid or chemical method.
- 5 Reproduce decorative carving work.
- 5.1 Make templates to match damaged decorative stone carving.
 - 5.2 Select stone to match colour and grain of existing stone.
 - 5.3 Apply and mark carving templates to stone to show bulk areas to be removed.
 - 5.4 Remove bulk areas of stone to allow for pattern marking.
 - 5.5 Reapply carving template, mark details and use appropriate methods to complete stone carving.
 - 5.6 Place, fix and bed decorative carved stone and inspect for quality of finish.
- 6 Clean up.
- 6.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 6.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 6.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCST3021A Renovate and restore stone work

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCST3021 Restore stone work

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3021A Renovate and restore stone work. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by restoring stone work.

In doing this, the candidate must:

- remove and replace a minimum of two damaged stones varying in shape with a minimum size 300 mm x 300 mm x 200 mm
- reproduce one flora and one fauna decorative carving on the face of a minimum of 250 mm x 300 mm stone.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of materials used for restoring stone work
- processes and techniques for restoring stone work:
 - effective removal of damaged stone with no effect on surrounding work
 - reproducing stone face and decorative stone
 - preparing, mixing and using mortars and compounds
 - finishing and cleaning stonework
- construction terminology relating to restoring stone
- functional and operational features of plant, equipment and tools used in restoring stonework:
 - cranes
 - elevated work platforms (EWP)
 - fork lifts
 - load slinging
 - gin poles
 - compressors
 - materials hoist
 - power drills

- power grinders
- battery operated tools
- scaffolding
- workplace processes and procedures
- workplace safety:
 - exposure to silica
 - job safety and environmental analysis (JSEA)
 - hazardous manual tasks
 - exposure to excessive noise
 - work at heights
 - operating lifting and lowering equipment
- features of working drawings and specifications
- environmental requirements for workplace processes and waste disposal
- relevant regulations, standards and codes relating to restoring stone:
 - Heritage Act
 - Heritage Building Classifications
 - The Burra Charter
- digital technology to source information and communicate with others.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCST3022 Carry out profile work

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3022A Carry out profile work.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to carry out profile work on the edges of soft and hard stone using profiling machinery, equipment and tools. It includes producing templates in various materials and transferring patterns onto stone.

This unit applies to stonemasons who work independently or in a team and operate machinery relating to stonemasonry profile work in a workshop setting, on a new or existing structure.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare. 1.1 Read, interpret and apply profile work requirements from

- job and work instructions, standards and codes.
- 1.2 Follow relevant information from workplace procedures, workplace safety and environmental documentation.
 - 1.3 Select tools and equipment and check for damage and faults.
 - 1.4 Check materials comply with job requirements and place in position ready for the work.
- 2 Develop patterns.
- 2.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 2.2 Transfer dimension from drawing and mark on stone using established datum points for profile set out.
 - 2.3 Choose most appropriate dressing method for type of stone.
 - 2.4 Carry out calculation to develop true shape for profile mould.
 - 2.5 Set out patterns accurately for profile mould, reverse mould and bed mould to dimensions and specified shapes.
 - 2.6 Determine allowances for fabrication processes, working off template, and transfer to bed mould.
- 3 Shape and profile stone.
- 3.1 Adjust and use power cutting tools to cut patterns for templates.
 - 3.2 Cut template material to size minimising waste and trim to specifications.
 - 3.3 Set up and adjust equipment and position and secure stone into place on cutting machine table ready for operation.
 - 3.4 Set cutters and carry out initial cutting process.
 - 3.5 Change cutters during operation to align with the profiling process.
 - 3.6 Locate and align bed template with stone and machine

- operation.
- 3.7 Set up equipment allowing for thickness of template and gauges.
 - 3.8 Operate equipment and accurately shape and profile stone.
- 4 Clean up.
- 4.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 4.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 4.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCST3022A Carry out profile work

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCST3022 Carry out profile work

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCST3022A Carry out profile work.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by carrying out three different profile works and which include hard and soft stone.

In doing this, the candidate must:

- produce three different profiles using three different template materials
- transfer dimensions and reference points to stone
- operate machines and equipment safely to produce profile work to specifications.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- terminology relating to stone profile work
- processes and techniques for:
 - applying profile work too hard and soft stone
 - setting out profiles on various types of template materials:
 - aluminium sheet
 - cardboard
 - plastic sheet
 - plywood
 - zincalume sheet
- characteristics, applications and limitations of specified stone for profiling
- functional and operational features of plant, equipment and hand and power tools:
 - power grinders
 - portable machines
 - diamond cutters
 - travelling arm saws
 - battery operated tools

- workplace processes and procedures
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - exposure to silica
 - hazardous manual tasks
 - electrical hazards
 - vibration
 - exposure to excessive noise
- environmental requirements for workplace processes and waste disposal
- standards and codes relating to stonemasonry
- digital technology to source information and communicate with others.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCST3023 Apply drawing principles to stonemasonry

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Application

This unit specifies the skills and knowledge required to use manual drafting techniques to produce stonemasonry sketches and drawings from standards, specifications and project briefs. It includes freehand sketching to depict and communicate ideas and information using technical drawing techniques.

This unit applies to stonemasonry workers who use drawings to transfer information to assist in off-site production, onsite set out, cutting and shaping and installation of elaborate masonry elements.

It is suitable for people operating with some autonomy. A person working at this level would be expected to take responsibility for organising and completing stonemasonry drawing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Prepare for drawing.
 - 1.1 Identify project objectives and design from plans, specifications, standards and codes.
 - 1.2 Establish stonemasonry component shape, dimensions and key features.
 - 1.3 Determine appropriate drawing medium to suit job requirements.
 - 1.4 Select drawing equipment, instruments and materials to produce appropriate drawing.

- 2 Draft initial drawing.
 - 2.1 Hand sketch an isometric prototype to assist with designing the drawing.
 - 2.2 Apply notations to sketch.
 - 2.3 Check sketch against project objectives and specifications.
 - 2.4 Identify, rectify and clarify any non-conformities with appropriate person.

- 3 Create a technical drawing using hand drawing techniques.
 - 3.1 Select paper size according to project objectives.
 - 3.2 Set out the title block and location of plan, section, elevation and detail views.
 - 3.3 Produce a scaled orthographic drawing including measurements, symbols and abbreviations.
 - 3.4 Develop basic specifications from compiled information and drawings.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit

Links

Assessment Requirements for CPCST3023 Apply drawing principles to stonemasonry

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by creating a freehand sketch of a standard heritage boss stone and producing a technical drawing for a 6.0 m long x 1.5 m high stone wall construction.

In doing this, the candidate must:

- apply primary and secondary lines and shade and light in creating the freehand sketch
- apply standard drawing conventions to the technical drawing and include the following:
 - scale, title block
 - plan, section and elevation views
 - dimensions lines to indicate footing size and position of wall on footing, height and length of wall and stone and joint sizes
 - ground line

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- principles and application of geometry
- drawing methods:
 - hand sketching
 - using drawing instruments
 - computer aided
- types of technical drawings:
 - orthographic
 - isometric
 - pictorial
- drafting and drawing protocols/conventions:
 - elevations or projections
 - sections

- details
- abbreviations
- commonly used symbols
- legends / keys
- lettering standards
- scale
- paper size
- International System of Units (SI)
- stonemasonry and heritage terminology:
 - pediments, volutes, entablatures
 - crockets, finials, boss stones
 - return corners
 - ornamental stone components
- characteristics, applications and limitations of stonemasonry materials
- workplace processes and procedures
- workplace safety
- heritage principles relating to the Burra Charter
- digital technology to operate devices and applications to source information and communicate with others.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCST3024 Apply conservation principles and practices to heritage stonework

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Application

This unit specifies the skills and knowledge required to undertake conservation work to historic stone buildings and structures, as well as cemetery and other monuments.

This unit applies to stonemasons who work independently or in a team during conservation work relating to heritage stonemasonry work.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan the work.

1.1 Read, interpret and apply heritage stonemasonry work requirements from work instructions, plans,

- specifications, standards and codes.
- 1.2 Clarify and confirm specific conservation work details in consultation with architects, supervisors and other relevant persons.
 - 1.3 Follow relevant information from workplace procedures, workplace safety and environmental documentation.
 - 1.4 Calculate material quantities for the task.
 - 1.5 Determine job priorities and sequence job tasks in consultation with others on site.
- 2 Prepare for work.
- 2.1 Identify specified conservation procedures and their application to different parts of the building.
 - 2.2 Evaluate the physical condition and heritage significance of masonry materials and identify the required treatment for same masonry materials in different parts of the building.
 - 2.3 Select and check condition of appropriate plant, equipment and tools and report damage or faults to relevant person.
 - 2.4 Check conformity of materials against job requirements.
 - 2.5 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
- 3 Carry out conservation work to heritage stone.
- 3.1 Set out section of building for conservation work following work instructions and job requirements.
 - 3.2 Protect surrounding stonework from damage.
 - 3.3 Prepare and record samples of work for approval.
 - 3.4 Clean stone surface, apply surface treatment and repair stone using mortar.
- 4 Carry out re-pointing.
- 4.1 Sieve and blend recommended aggregates and sands to produce acceptable material.

- 4.2 Check materials, binders and mixing methods appropriate for conservation work.
 - 4.3 Prepare samples for approval by supervisor.
 - 4.4 Rake out and prepare joints as specified.
 - 4.5 Mix mortar using approved materials and mixing method.
 - 4.6 Protect existing and new work from mortar stains and pre-wet masonry to control suction.
 - 4.7 Place and pack mortar into joints and finish joint to specified profile and depth.
 - 4.8 Apply curing method appropriate for the work.
- 5 Clean up.
- 5.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 5.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 5.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCST3024 Apply conservation principles and practices to heritage stonework

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by applying conservation methods to heritage stonework.

In doing this, the candidate must:

- clean a minimum of min 500 mm x 500 mm stone area
- apply a minimum of two surface treatments to the stone area
- carry out mortar repair to a minimum area of 100 mm x 200 mm on ashlar stone
- carry out mortar repair to a minimum area of 100 mm x 200 mm on to a moulded profile
- repoint a minimum of 1.5 m straight joints and a minimum 300 mm of moulded joints.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- heritage significance as stated in:
 - The Burra Charter
 - Heritage Act
 - Heritage Building Classifications
- fundamentals and importance of conservation:
 - role of independent testing authorities relating to materials and treatments
 - importance and purpose of working under the supervision of heritage experts
 - difference between traditional stone restoration and the preservation of existing materials
 - the effects of conservation materials and procedures on surrounding materials
 - assessment and remedial work applied on a case to case basis
- characteristics, application and limitations of stone conservation materials and components:
 - mortar constituents, binders, aggregates, pigments, additives
 - mortar consistency

- surface cleaners and treatments
- materials used in crack repair
- stone consolidants
- processes and techniques for heritage work
- principles of stone conservation:
 - maintenance
 - restoration
 - reconstruction
 - repair
 - adaption
 - preservation
 - cleaning
- physics of materials in conservation work
- functional and operational features of plant, equipment and hand and power tools;
 - micro-abrasive cleaning
 - laser cleaning
 - steam cleaning
 - battery operated tools
- workplace processes and procedures
- workplace safety:
 - exposure to silica
 - job safety and environmental analysis (JSEA)
 - hazardous manual tasks
 - working at heights
 - dust and dust suppression
 - exposure to excessive noise
- features of working drawings and specifications
- environmental requirements for workplace processes and waste disposal
- sustainability principles
- digital technology to source information and communicate with others
- key requirements of the National Construction Code (NCC) relevant to heritage stonework
- Australian standards and codes.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCST3025 Carry out basic stonemasonry demolition

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Application

This unit specifies the skills and knowledge required to demolish or dismantle sections of existing stonework in structures for renovations, additions or extensions. It includes removal of stone and components in the monumental and heritage sectors of stonemasonry.

This unit applies to stonemasons who work independently or in a team to carry out basic demolition relating to stonemasonry work.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan the work.

1.1 Read, interpret and apply basic stonemasonry demolition requirements from demolition plans, work instructions,

- standards and codes.
- 1.2 Follow relevant information from workplace procedures and workplace safety and environmental documentation.
 - 1.3 Identify construction type and internal and external load bearing structures.
 - 1.4 Identify connected and disconnected services and confirm with appropriate person.
 - 1.5 Identify potential hazards, including hazardous materials, and determine and implement control measures.
 - 1.6 Determine job priorities and sequence job tasks in consultation with others on site.
- 2 Prepare for work.
- 2.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 2.2 Determine method of demolition or dismantling.
 - 2.3 Select and check condition of plant, equipment and tools and report damage or faults to relevant person.
 - 2.4 Erect exclusion zones and signage.
 - 2.5 Erect and stabilise work platform following workplace procedures and workplace safety.
- 3 Remove components.
- 3.1 Set out section for demolition or mark components for individual removal following work instructions.
 - 3.2 Remove components sequentially and maintain structural stability.
 - 3.3 Demolish set out section without damage to surrounding components.
- 4 Clean up.
- 4.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 4.2 Clean tools and equipment, check for serviceability and

report damage or faults.

- 4.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit

Assessment Requirements for CPCST3025 Carry out basic stonemasonry demolition

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by demolishing a stone wall with the intent to reuse the wall materials.

In doing this, the candidate must:

- dismantle a stone wall, minimum of 1.5 m long x 1.0 m high.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- types of natural and manufactured stone used in stone construction
- construction terminology relating to stonemasonry demolition
- processes and techniques for:
 - dismantling and demolishing load bearing and non-loadbearing stone construction
 - removing fixtures and fittings
 - demolishing a ceiling
 - manual and mechanical demolition
 - dismantling a headstone, socket and kerbing from a monument
- structural integrity and load bearing forces
- functional and operational features of plant and equipment, and hand and power tools
- workplace processes and procedures
- environmental and waste management requirements
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - exposure to silica
 - hazardous manual tasks
 - working at heights
 - dust and dust suppression
 - exclusion zones

- exposure to loud noise
- relevant government demolition regulations
- standards and codes relating to demolition
- features of working drawings and specifications
- environmental requirements for workplace processes and waste disposal
- principles and procedures to conserve Australian heritage places according to the Burra Charter
- digital technology and use of devices to source information and communicate with others
- key requirements of the National Construction Code (NCC) relevant to load bearing structures during demolition.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCST4001 Prepare to undertake the heritage restoration process

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCBC4036A Prepare to undertake the heritage restoration process. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to undertake the preparation of heritage restoration projects by skilled and experienced tradespersons. It includes sourcing heritage information and recording job outcomes.

It applies to heritage workers who may be required to work under the supervision of a heritage professional to prepare for the heritage restoration process.

A person working at this level would be expected to take responsibility for preparing for the heritage restoration work.

It is not the intent of this unit to replicate the technical processes associated with the performance of the trade skills necessary to complete the work. The unit applies to the processes associated with the application of existing high-level trade skills in the specialist heritage restoration environment.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Identify conservation and workplace requirements.	1.1 Read, interpret and follow heritage restoration requirements from plans, specifications, work instructions and workplace safety documentation.
	1.2 Identify relevant heritage conservation legislation and adhere to restoration requirements from regulations, guidelines, standards and codes.
	1.3 Apply organisational policies and procedures associated with the preservation of historically significant buildings.
2 Obtain historical data.	2.1 Establish period and style of construction of the building or structure from historical data.
	2.2 Analyse and confirm construction information relating to scope of works with architects, engineers or other heritage professionals.
	2.3 Identify and record materials used for previous restoration work from historical data and verify appropriateness and availability from suppliers.
3 Prepare work area and resources.	3.1 Calculate material quantities using measurements and formulas.
	3.2 Procure materials and schedule delivery times.
	3.3 Check materials for conformity with specifications and confirm they are free of defects or damage.
	3.4 Select appropriate plant, equipment and tools for the project and check for serviceability.
	3.5 Erect, stabilise and brace work platforms, designate exclusion zones and fix signage following workplace safety requirements.
	3.6 Protect surfaces around the work area from exposure to damage during planned restoration work.
	3.7 Identify faults and problems and take necessary action to

rectify.

- | | | | |
|---|---|-----|--|
| 4 | Establish and maintain restoration records. | 4.1 | Document extent of restoration work, materials used and construction methods relating to work activities. |
| | | 4.2 | File before, during and after photographs of original structures, construction work and finishes and colour matches. |
| | | 4.3 | Organise and save documents and files following organisational procedures. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- problem solving skills to:
 - analyse non-conforming restoration methods, define key problem and produce appropriate solution
 - seek clarification of appropriate solution to meet restoration compliance
- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access and extract information and develop and save relevant documentation.
-

Unit Mapping Information

Supersedes and equivalent to CPCBC4036A Prepare to undertake the heritage restoration process.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCST4001 Prepare to undertake the heritage restoration process

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4036A Prepare to undertake the heritage restoration process. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by preparing for a minimum of two heritage restoration projects.

In doing this, the candidate must:

- determine job priorities and resources, and sequence job tasks in consultation with others on site
- consult with heritage professionals to determine and document processes desired for restoration applications and finishes.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- government legislation relating to heritage restoration
- heritage significance as stated in:
 - The Burra Charter
 - Heritage Act
 - Heritage Building Classifications
- construction regulations, standards and codes
- key requirements of the National Construction Code (NCC) relevant to heritage restoration
- processes and techniques of:
 - providing appropriate cover protection
 - heritage restoration work
 - gathering, documenting and filing relevant heritage information
- characteristics, applications and limitations of materials used for restoration work:
 - mortar constituents, binders, aggregates, pigments, additives
 - mortar consistency

- surface cleaners and treatments
- fixings and fasteners of the period era
- paints
- plaster mixes
- specialist materials of the relevant period e
- tiles
- functional and operational features of plant, equipment and hand and power tools
 - battery operated tools
- workplace processes and practices
- workplace safety:
 - working at heights
 - exposure to silica
 - exposure to excessive noise
 - hazardous manual tasks
- preserving the fabric of a building or structure and retarding deterioration
- digital devices, applications and software to achieve tasks outcome
- key features of plans and specifications
- relevant knowledge of characteristics and features of period architecture and period plastering associated with historic buildings
- sources of accurate historical information:
 - building trusts
 - elderly and local residents
 - historical societies
 - municipal building records
 - National Trust
 - restoration contractors

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or in a simulated workplace environment.

Candidates must be provided with:

- relevant government heritage legislation:
 - The Burra Charter
 - Heritage Act
 - Heritage Building Classifications
- current building and construction codes and standards
- National Construction Code
- construction and heritage drawings and specifications

- organisational policies and procedures and other quality documentation required to undertake the performance criteria and assessment requirements
- digital devices, applications and software to transmit and receive information electronically.

CPCST4002 Undertake the heritage restoration process

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4039A Undertake the heritage restoration process. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required by skilled and experienced tradespersons to undertake heritage restoration work.

The unit of competency applies to a range of tradespersons across disciplines who are involved in heritage restoration and conservation projects and may be required to work under the supervision of a heritage professional.

It is not the intent of this unit to replicate the technical processes associated with the performance of the trade skills necessary to complete the work. The unit applies to the processes associated with the application of existing high-level trade skills in the specialist heritage restoration environment.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Identify heritage restoration requirements.
 - 1.1 Identify and adhere to relevant heritage restoration legislation, regulations, guidelines, standards and codes.
 - 1.2 Read, interpret and follow heritage restoration requirements from plans, specifications, work instructions and workplace safety documentation.
 - 1.3 Apply organisational policies and procedures associated with the restoration of historically significant buildings.
 - 1.4 Read contract and identify conditions and obligations for heritage restoration work.
 - 1.5 Develop a work plan detailing tasks and timeframes.

- 2 Undertake restoration work.
 - 2.1 Initiate and apply the consultative processes to confirm restoration applications and finishes.
 - 2.2 Maintain ongoing consultations with heritage professionals to ensure contractual requirements are compliant and fulfilled.
 - 2.3 Implement workplace safety requirement for public and on-site worker protection.
 - 2.4 Use approved methods to protect existing surrounding surfaces from damage or deterioration during the restoration work.
 - 2.5 Perform the technical restoration work in accordance with the highest trade standards and codes.
 - 2.6 Identify problems that emerge during the heritage restoration and address and rectify issues in consultation with the project team, ensuring compliance with heritage restoration requirements.

- 3 Monitor progress of restoration work.
 - 3.1 Monitor conformance of restoration work activities against the work plan.
 - 3.2 Notify relevant person regarding problems, delays and disruptions and adjust the work plan.
 - 3.3 Record and document work undertaken, materials used and recognised technical problems, their impact on the

- works and rectification undertaken.
- 3.4 Complete heritage restoration work to meet contractual obligations and heritage standards and codes.
 - 3.5 Save work and reporting documentation and finalise contractual requirements.
- 4 Clean up.
- 4.1 Remove materials used for existing surface protection avoiding damage to surfaces
 - 4.2 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 4.3 Clean tools and equipment, check for serviceability and report damage or faults.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- oral skills to:
 - use questioning techniques to confirm and clarify information during the consultative process
- writing skills to:
 - integrate heritage information using correct terminology into records and documents for reporting
- problem solving skills to:
 - identify unfamiliar heritage restoration problems
 - redefine the problem area and produce appropriate solutions
- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access and extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and equivalent to CPCBC4039A Undertake the heritage restoration process.

Assessment Requirements for CPCST4002 Undertake the heritage restoration process

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4039A Undertake the heritage restoration process. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by undertaking and completing a minimum of one heritage building or structure restoration project.

In doing this, the candidate must:

- determine restoration application and finishes in consultation with heritage professionals
- prepare a work schedule and determine work priorities with others on site
- select appropriate equipment and tools and check for serviceability and select, fit and use personal protective equipment
- preserve the fabric of the heritage building or structure
- maintain a record of heritage restoration work carried out and materials used.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- government legislation relating to heritage restoration
- heritage significance as stated in:
 - The Burra Charter
 - Heritage Act
 - Heritage Building Classifications
- construction regulations, standards and codes
- relevant knowledge of characteristics and features of period architecture and period plastering associated with historic buildings
- processes and techniques of:
 - providing appropriate cover protection
 - heritage restoration work
 - gathering, documenting and filing relevant heritage information

- characteristics, applications and limitations of materials used for restoration work
- functional and operational features of plant, equipment and hand and power tools
 - battery operated tools
- workplace processes and practices
- workplace safety:
 - working at heights
 - erection of work platforms
 - exposure to silica
 - exposure to excessive noise
 - hazardous manual tasks
 - working with hazardous substances
 - hazardous manual tasks
 - erections of exclusion zones and signage
- preserving the fabric of a building or structure and retarding deterioration
- digital devices, applications and software to achieve tasks outcome
- key features of plans, specifications and drafting techniques
- compliance requirements for relevant trade skills:
 - carpentry
 - gilding
 - painting
 - plastering
 - plumbing
 - stonemasonry
 - tiling

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or in a simulated workplace environment.

Candidates must be provided with:

- relevant government heritage legislation:
 - The Burra Charter
 - Heritage Act
 - Heritage Building Classifications

CPCST4003 Undertake preparations for refractory work

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCBC4041A Undertake preparations for refractory work. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to prepare for the commencement of work using refractory bricks and materials. It includes preparing for the construction or repair of various fire resistant structures, including boilers, kilns and industry furnaces.

It applies to specialist and advanced tradespeople working in refractory bricklaying using quality materials as specified by engineers.

This unit is suitable for people operating with autonomy. A person working at this level would be expected to take responsibility for the preparation of refractory work.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan the work.

1.1 Read, interpret and apply refractory construction

- requirements from current plans, specifications, standards and codes.
- 1.2 Obtain, interpret and follow relevant information from work health and safety (WHS), workplace procedures and environmental documentation.
 - 1.3 Use measurements and apply formulas to calculate material quantities from plans and specifications.
 - 1.4 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.5 Identify potential hazards and determine and implement control measures.
- 2 Prepare for refractory work.
- 2.1 Check quantity of delivered materials against the delivery docket and order list.
 - 2.2 Examine materials for conformity with specification, repudiate non-conforming or damaged materials and report to relevant person.
 - 2.3 Select and check serviceability of equipment and tools and set aside and report any faulty or damaged equipment.
 - 2.4 Select, fit and use personal protective equipment.
- 3 Prepare site for commencement of work.
- 3.1 Establish position of project for refractory work from plans.
 - 3.2 Load refractory materials in preparation for job commencement ensuring materials are blended from each pallet.
 - 3.3 Mix refractory mortar consistently to design requirements.
 - 3.4 Load mortar onto boards and maintain sufficient volume and flow of materials during construction.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- technology skills to:
 - use communication tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access and extract information and develop relevant project schedules and documentation.

Unit Mapping Information

Supersedes and equivalent to CPCBC4041A Undertake preparations for refractory work.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCST4003 Undertake preparations for refractory work

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4041A Undertake preparations for refractory work. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by preparing for a minimum of one refractory work construction project and one refractory repair project.

In doing this, the candidate must:

- ensure that all refractory materials comply with refractory standards and codes
- ensure evidence of suitability, as stated in the National Construction Code (NCC), is issued by suppliers or manufacturer.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- government building and construction legislation relating to refractory work
- building and construction regulation, standards and codes
- relevant sections of National Construction Code (NCC):
 - requirements of evidence of suitability
 - fire resistance
 - fire places, chimneys and flues
- characteristics, applications and limitations of refractory materials:
 - castables
 - different types of insulation materials, including insulation boards and bricks
 - fire bricks
 - fire clay
 - stainless steel joints
 - insulation
- processes, techniques and methods of refractory brickwork
- workplace policies and procedures:
 - acquisition of materials

- key features of refractory plans and specifications:
 - signs, symbols and abbreviations
 - dimensions and scales
 - views, sections and details
- allowable tolerances for brickwork stated in standards
- workplace safety:
 - exposure to silica
 - exposure to excessive noise
 - working at height
 - hazardous manual tasks
 - working with hazardous materials
 - working platforms and scaffolding
- functional and operational features of plant, equipment and hand and power tools
- workplace procedures and environmental requirements relating to waste management
- digital devices, applications and software to achieve tasks outcome.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be undertaken in the workplace or in a simulated workplace environment.

Candidates must be provided with:

- relevant government legislation
- current refractory codes and standards
- relevant construction drawings, site plans and specifications
- organisational policies, procedures and other quality documentation to undertake the performance criteria and evidence requirements
- digital devices, applications and software to create project schedules and documentation.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCST4004 Initiate the heritage works process

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Typographical error corrected in Assessment Conditions.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCBC4035A Initiate the heritage works process. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to undertake the essential processes prior to the conduct of heritage works, such as conservation, restoration, duplication and preservation of a building or structure of historical significance. The unit recognises the complexity of the heritage restoration process and the importance of establishing effective work relationships and communications between the range of professionals, tradespersons and stakeholders involved in the project. Establishing common understanding of the nature of the site to be restored and the tasks to be performed are critical to the effective and efficient completion of the project.

The unit of competency supports the range of technical specialists, builders, project managers and related construction industry professionals responsible for heritage restorations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Identify project, location and surrounds.
 - 1.1 Identify and record location and nature of the restoration work to be undertaken following consultations with the architect and site inspections.
 - 1.2 Note and record site access and egress for work location.
 - 1.3 Determine area to be disturbed and note surrounding areas for possible work application effects and cover protection requirements.
 - 1.4 Assess and note nature of the work for possible use of heavy or bulky equipment.
 - 1.5 Assess and record effect on public access to ensure protection of the public and the environment is undertaken.

- 2 Consult with technical specialists.
 - 2.1 Conduct consultations with the conservator, engineer or supervisor to discuss and clarify specific job requirements.
 - 2.2 Identify specific risks and areas of concern arising due to the nature of the heritage and conservation aspects of the work.
 - 2.3 Establish agreed processes and timeframes to ensure effective communications between project team members.
 - 2.4 Discuss, understand and agree on role responsibilities and requirements with project team members.

- 3 Consult with clients and stakeholders.
 - 3.1 Hold consultations with the client and other stakeholders, as appropriate, to clarify expectations regarding access to the site, performance of the work and timeframes.
 - 3.2 Consult clients and stakeholders to ensure common understanding of the historical and/or cultural significance of the heritage building under restoration.
 - 3.3 Discuss and agree on appropriate communication channels and reporting processes, as appropriate, with the client and other relevant stakeholders.

- | | | |
|---|-----|---|
| 4 Clarify the impact of contractual requirements. | 4.1 | Identify and clarify relevant contractual requirements affecting the performance of the restoration work. |
| | 4.2 | Identify relevant dispute resolution processes that are to be used if required. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- analytical skills to:
 - analyse operations and develop procedures
- communication skills to:
 - communicate with team
 - consult with technical specialists, client and other stakeholders
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - facilitate discussions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
- written skills to:
 - record relevant information
- organisational skills to:
 - plan for and set out work
- time management skills and prioritisation skills to:
 - enable work to be completed within agreed timeframes.

Unit Mapping Information

Supersedes and equivalent to CPCBC4035A Initiate the heritage works process.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCST4004 Initiate the heritage works process

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Typographical error corrected in Assessment Conditions.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCBC4035A Initiate the heritage works process. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by completing relevant processes and activities essential prior to the commencement of a heritage restoration project.

In doing this, the candidate must:

- conduct consultative processes associated with preservation of historic structures
- demonstrate understanding of preservation of fabric
- comply with Work Health and Safety (WHS) regulations applicable to workplace operations
- apply organisational quality procedures and processes within the context of initiating the heritage restoration process
- identify job-specific requirements and inherent risks associated with heritage restoration
- select and use appropriate processes to analyse and identify particular needs for projects
- communicate and agree on expectations and timeframes for the work to be undertaken
- apply appropriate techniques to cross-reference interlocking or overlapping operations
- demonstrate techniques to check and ensure relevant information and stages of preparation are fully covered
- carry out interactive communication with others to ensure all factual information is gathered and shared with relevant stakeholders.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- Australian standards relevant to the work

- conservation processes, including good conservation practice arising from principles of Burra Charter
- contractual requirements:
 - materials to be used
 - performance standards
 - timeframes
- dispute resolution processes
- methods and processes relating to historic building construction, including the range and use of building materials, structure of buildings and drafting techniques:
 - heavy and bulky equipment:
 - compressors
 - cranes
 - excavators
 - mobile scaffold or working platforms
 - protection requirements:
 - environmental protection
 - protection for the public
 - site access:
 - access to structures and storage facilities or space, which may be limited
- relevant architectural knowledge, including orders of architecture and the characteristics and features of period architecture
- trade-specific techniques used in restoration work
- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment.

Assessors are responsible for ensuring that the person demonstrating competency has access to:

- a restoration project that is appropriate to be able to undertake the performance requirements of the units
- appropriate documentation and data related to project.

CPCST4005 Prepare drawings for heritage works

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Unit Sector changed. Element 2.4 added to Performance Criteria. Foundation Skills formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and equivalent to CPCBC4037A Prepare drawings for heritage works. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to prepare drawings for heritage works associated with historic buildings and structures of cultural significance. To successfully prepare drawings requires a comprehensive understanding of architectural forms, specifically period architecture, and appropriate drafting techniques. The unit requires the ability to interpret specifications for drawings, measure and calculate dimensions accurately, and work to scale.

The unit of competency supports builders, project managers and related construction industry professionals responsible for heritage works during residential and commercial projects.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare for drawing requirements.
 - 1.1 Identify specifications for drawing from request or conservation authority requirements.
 - 1.2 Determine dimensions of the historical or significant building in accordance with appropriate methods, taking into account the type of structure, access to details and previous drawings available, if applicable.
 - 1.3 Determine method of recording feature details in accordance with nature of the feature, location and accessibility.
 - 1.4 Determine and apply method and system of recording identification, location and dimensional information in accordance with requested drawing requirements.
 - 1.5 Identify, list and use equipment and instruments in accordance with recording task requirements.
- 2 Organise information for drawing preparation.
 - 2.1 Gather information to identify and group all recorded details associated with each area or section of the building or structure.
 - 2.2 Determine size of the drawing and scale to be used in accordance with dimensions of building, structure or section.
 - 2.3 Identify and locate sketches, tracings or photographs of recorded features with other recorded information related to feature work.
 - 2.4 Identify and locate sketches, tracings or photographs of recorded features with other recorded information related to feature work.
- 3 Draw or develop orthographic description.
 - 3.1 Draw or develop block layout of views and designed spacings, where applicable, to planned layout and scale accurately to recorded or calculated dimensions.
 - 3.2 Detail orthographic description views to show visible lines of structure and elements as seen with each view to correct scale representation of recorded dimensions.
 - 3.3 Show architectural drawing conventions, symbols and hatching, on drawings in accordance with relevant

- Australian standards.
- 3.4 Produce plans of large buildings by use of grids, where applicable, to provide cross-referencing and dimensioning by coordinates.
 - 3.5 Locate dimensions and reference notations relevantly on drawings to provide full detailed descriptions as required with each view.
 - 3.6 Provide appendices and reference details of drawing with drawing in accordance with overall request.
- 4 Draw or develop sectional detailed drawings.
- 4.1 Draw or develop sectional detailed drawings to scale to show detailed structural description of relationship between elements in accordance with recorded dimensions.
 - 4.2 Show architectural hatching on drawings to represent materials, in accordance with relevant Australian standards.
 - 4.3 Locate dimensions and reference notation on drawings to provide full details of sectional description.
- 5 Develop detailed drawings of feature work.
- 5.1 Enlarge photographic recording of feature work shape and design by photocopying to provide more realistic size for analysis and reproduction.
 - 5.2 Determine gridlines in accordance with actual dimensions of the feature work shape and reproduce to enlarged photocopy.
 - 5.3 Examine enlarged photocopy closely for distortion from the photographing process and make necessary adjustments to the design.
 - 5.4 Examine tracing recordings in accordance with the whole feature or part thereof and link with other tracings or sketches to ascertain the feature shape to be reproduced.
 - 5.5 Develop design shape drawings to produce accurate design to scale with grid lines where applicable.
 - 5.6 Produce cross-sectional details accurately to scale, to provide three-dimensional information.

- 5.7 Produce dimensions, reference notation, specific location and appendices for drawings in accordance with client request or design aims.
- 6 Complete work.
- 6.1 Check drawings for accuracy, clarity of line, completeness of drawing and associated dimensions and details.
- 6.2 Make copies in accordance with original request.
- 6.3 Record production details and coded reference information.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
- written skills to:
 - record relevant information
- numeracy skills to:
 - ability to use instruments and equipment for measuring
 - calculate measurements
- organisational skills to:
 - set out work
 - work to scale.

Unit Mapping Information

Supersedes and equivalent to CPCBC4037A Prepare drawings for heritage works.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCST4005 Prepare drawings for heritage works

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Unit Sector changed. Element 2.4 added to Performance Criteria. Foundation Skills formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCBC4037A Prepare drawings for heritage works. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by carrying out the necessary preparatory processes and developing at least two examples of each form of drawing specified, using sample or case study heritage projects for any of the buildings listed below:

- built or sculptured artefacts
- cathedrals and churches
- civic buildings
- commercial and retail buildings
- government buildings
- houses
- mansions
- out buildings
- wharves

In doing this, the candidate must:

- demonstrate application of conservation principles and consultative processes associated with preservation of historic structures
- comply with Work Health and Safety (WHS) regulations applicable to workplace operations
- apply organisational quality procedures and processes within the context of preparing drawings to conservation requirements
- apply recording and identification system for measurements, locations and details
- select and use appropriate processes, instruments and equipment to measure and record information

- use appropriate and safe techniques to obtain measurements and details
- apply accurate techniques in preparing information for related drawings
- select and use appropriate techniques to ascertain accurate analysis of featured design shapes
- apply techniques to ensure all relevant information is included in orthographic description
- select and use appropriate techniques to produce accurate, sharp and complete drawings.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- Australian standards - AS1100.101 and AS1100.301
- conservation processes, including good conservation practice arising from principles of Burra Charter
- finishing trade applications to materials
- methods and processes relating to historic building construction, including the range and use of building materials, structure of buildings and drafting techniques:
 - drawings:
 - development:
 - computer aided drafting
 - drafting techniques
 - drawings developed in accordance with National Trust guidelines or AS1100.101 - 1992 Technical Drawing - General Principles, and AS1100.301 - 1985 Architectural Drawing.
 - orthographic descriptions:
 - front, rear and side elevations
 - plans
 - sectional elevations
 - sectional plans
 - sectioned detail drawings:
 - ceiling and roof framing construction
 - ceiling construction
 - chimney construction
 - cladding details
 - external wall construction
 - fence construction
 - footings and foundation
 - internal wall construction
 - roofing details
 - sub-floor construction
 - methods to determine dimensions:
 - accurately trace shapes or features

- calculate height by use of levelling equipment and/or trigonometry
- physically tape and measure all internal and external measurement
- scale proportion of roof, chimney and spire heights from photograph where wall height is determined
- methods of measuring
- relevant architectural knowledge, including orders of architecture and the characteristics and features of period architecture:
 - feature work:
 - decorative tiling
 - mosaic tiling
 - ornamental mouldings
 - ornamental plasterwork
 - ornamental stonework
 - types of historical or significant buildings:
 - built or sculptured artefacts
 - cathedrals and churches
 - civic buildings
 - commercial and retail buildings
 - doors
 - external features
 - fences
 - government buildings
 - houses
 - mansions
 - out buildings
 - walls
 - wharves
 - windows
- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment. Tasks are to be performed to the level of proficiency and within the time limits expected in a workplace.

Assessors are responsible for ensuring that the person demonstrating competency has access to:

- historic locations appropriate to competency range

- drafting and computer equipment
- equipment relevant to measuring processes.

CPCST4006 Prepare report for heritage restoration work

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCBC4040A Prepare report for heritage restoration work. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to prepare and present written reports detailing conditions associated with buildings and structures of historic significance requiring restoration or preservation attention. Reports are completed for specific areas of work in accordance with individual building trade applications.

The unit of competency supports builders, project managers and related construction industry professionals responsible for heritage restorations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|--|-----|---|
| 1 | Gather information to be included in the | 1.1 | Identify details of the area of the structure and information regarding areas of fault. |
|---|--|-----|---|

- report.
- 1.2 Identify general description of the building or structure and its period of construction.
 - 1.3 Identify surrounding area and faults for inspection and investigation.
 - 1.4 Conduct assessment of unsafe conditions and identify for investigation.
- 2 Assess and outline possible means of restoring the areas of the structure.
- 2.1 Conduct and record assessment of conditions and degree of deterioration and disturbance using appropriate technical language.
 - 2.2 Assess and record possible causes for deterioration of condition and stability as guidelines for investigatory enquiries and restoration considerations.
 - 2.3 Identify and record sound construction or finish applications surrounding or adjacent to the faulted area to inform restoration processes.
 - 2.4 Identify and record relevant information regarding unsafe conditions at or around the structure.
 - 2.5 Identify and document advice regarding restoration techniques and work required based on assessment of the structure.
- 3 Document and present the report.
- 3.1 Determine method of presenting the report in a logical and sequential manner with key stakeholders and implement.
 - 3.2 Write report to provide all investigated and determined information in accordance with request and agreed format.
 - 3.3 Write report in a manner that will be readily understood by relevant stakeholders.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- numeracy skills to:
 - apply measurements and calculations
 - prepare drawings and work to scale
 - use instruments and equipment for measuring
- organisational skills to:
 - set out work
- teamwork skills and the ability to work with others to:
 - ensure coordination and cooperation between self and others in the heritage restoration.

Unit Mapping Information

Supersedes and equivalent to CPCBC4040A Prepare report for heritage restoration work.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCST4006 Prepare report for heritage restoration work

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCBC4040A Prepare report for heritage restoration work. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by determining all relevant information and preparing a written report on at least three separate categories of structure areas listed within the range of variables.

In doing this, the candidate must:

- apply conservation considerations and consultative processes associated with preservation of historic structures
- demonstrate understanding of preservation of fabric
- comply with Work Health and Safety (WHS) regulations applicable to workplace operations
- apply organisational quality procedures and processes within the context of preparing reports
- apply sound identification and recording system of investigation findings
- use appropriate processes, tools and equipment to carry out investigation examinations
- apply sound and accurate techniques to prepare information for report
- select and use appropriate terminology relevant to applicable trade
- use sound techniques to ensure report is well written and accurate
- communicate interactively with others to ensure safe and effective work site operations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- Building Code of Australia (BCA) and other Australian standards relevant to the nature of work and materials being used

- conservation processes, including good conservation practice arising from principles of Burra Charter
- methods and processes relating to historic building construction, including range and use of building materials, structure of buildings and drafting techniques:
 - causes of deterioration:
 - fire damage
 - storm impact from vehicles or trees and other objects
 - water damage
 - general description of building or structure:
 - building description:
 - address of the structure
 - description of the area surrounding structure where influential to the fault
 - references to north and south identified and recorded in relationship to the sides of the structure
 - type and condition of materials used in structure, including details of any missing materials
 - type of structural construction building types:
 - cathedrals and churches
 - civic buildings
 - commercial and retail buildings
 - fences
 - government buildings
 - houses
 - mansions
 - out buildings
 - walls
 - wharves
 - identification of areas of fault:
 - location of fault, internal or external to the building or structure
 - nature and extent of the fault or deterioration, identified in technical terms relevant to the respective trade work required
 - number of separate faults
 - inspection and investigation equipment:
 - boots
 - gloves
 - hand tools
 - hard hat
 - inspection investigations ladders
 - jacket
 - masks and respirators
 - safety glasses

- spirit levels
 - straight edges
 - torches
 - trestles and planks
- relevant architectural knowledge, including orders of architecture and characteristics and features of period architecture
 - workplace and equipment safety requirements, including relevant statutory regulations, codes and standards.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment. Tasks are to be performed to the level of proficiency and within the time limits expected in a workplace.

Assessors are responsible for ensuring that the person demonstrating competency has access to:

- historic work locations appropriate to area of work
- appropriate documentation and data related to investigations
- ladder and/or scaffolding equipment
- plant, tools and equipment relevant to investigation processes.

CPCST4007 Construct a fire brick wall and arch using refractory materials

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Elements and Performance Criteria 1.1 rewritten for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCBC4042A Construct a fire brick wall and arch using refractory materials. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to construct a brick wall and arch using refractory materials, including castables, bricks and insulation. It covers the application of the unique skills and knowledge relevant to refractory work.

The unit of competency supports specialist and advanced tradespersons working in refractory bricklaying. It may be applied in the construction or repair of various fire resistant structures, including boilers, kilns and industrial furnaces.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Stonemasonry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Set out and prepare the 1.1 Set out location of the brickwork to position in

- | | | |
|---|-----|--|
| base location of work. | | accordance with job specifications and drawings. |
| | 1.2 | Prepare base location so that the surface is dry, horizontal, clean and flat, and in accordance with job specifications. |
| 2 Lay brickwork. | 2.1 | Apply fire clay to bricks to maintain joints at the specified thickness. |
| | 2.2 | Ensure bricks are in the required bond and set out, method and line, level and plumb in accordance with job specifications and drawings. |
| | 2.3 | Cut bricks to the correct length to maintain the required bond in accordance with manufacturer recommendations and job specifications. |
| | 2.4 | Complete brickwork and remove surplus fire clay to specification requirements. |
| 3 Form a segmental arch. | 3.1 | Identify span and rise of the arch and locate in accordance with job plans and specifications. |
| | 3.2 | Place adjustable props appropriately to support the timber arch centre and adjust as necessary. |
| | 3.3 | Establish and mark position of the central key brick for easy identification. |
| 4 Cut and lay bricks to position around the arch. | 4.1 | Cut and lay bricks on the centre to form an arch to specifications. |
| | 4.2 | Maintain same sized wedge shape brick throughout the construction of the arch. |
| | 4.3 | Monitor and adjust measurements and placement of bricks accordingly to ensure accurate application of job requirements. |
| 5 Complete and review finished work. | 5.1 | Remove props and other support materials. |
| | 5.2 | Finish and clean construction to meet job requirements |

and professional expectations.

- 5.3 Clean intrados of the arch and repoint with mortar as necessary.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - communicate technical issues
 - communicate with the team
 - consult with architect and stakeholder
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- numeracy skills to:
 - apply measurements and calculations
- organisational skills to:
 - plan for and set out work
- teamwork skills and the ability to work with others to:
 - ensure coordination and cooperation between self and others

Unit Mapping Information

Supersedes and equivalent to CPCBC4042A Construct a fire brick wall and arch using refractory materials.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCST4007 Construct a fire brick wall and arch using refractory materials

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Elements and Performance Criteria 1.1 rewritten for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCBC4042A Construct a fire brick wall and arch using refractory materials. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by constructing a fire brick wall and arch. This work may include a 230mm fire brick wall to incorporate an opening (600mm x 600mm) with a segmental arch above, a minimum of 1.5m long and 1.2m high to the top of the arch.

In doing this, the candidate must:

- demonstrate understanding of the purpose and application of refractory bricklaying
- comply with Work Health and Safety (WHS) regulations applicable to workplace operations
- use safe and effective procedures to handle hazardous materials
- read and interpret two-dimensional refractory plans and specifications
- select and use processes, tools and equipment appropriate to the job requirements
- prepare materials and samples in accordance with job requirements
- identify typical faults and problems with materials and equipment that occur and take necessary action to rectify
- communicate effectively with others to ensure safe work site operations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- Building Code of Australia (BCA) and other Australian standards relevant to the nature of work and materials being used
- characteristics and applications of different materials used in refractory brick work:
 - required bond:

- header bond
- stretch bond
- adjustable props:
 - metal props
 - packers
 - timber toms
 - timber wedges
- wedge shape bricks include the following common sizes:
 - 51mm
 - 63mm
 - 69mm
- methods and processes relating to the use of refractory bricks and insulation materials for the construction of fire resistant structures:
 - measurements and placements:
 - accurate positioning and maintenance of the centreline of the key brick is through the vertical centre line of the arch ensuring:
 - all bricks are cut and laid to maintain even joints
 - even joint thickness around the extrados
- organisational procedures for the acquisition and storage of materials
- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment. Tasks are to be performed to the level of proficiency and within the time limits expected in a workplace.

Assessors are responsible for ensuring that the person demonstrating competency has access to:

- materials appropriate to refractory brickwork
- plant, tools and equipment relevant to refractory brickwork.

CPCCSV5009 Assess the impact of fire on building materials

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to the Application.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCSV5009A Assess the impact of fire on building materials.

Application

This unit of competency specifies the outcomes required to assess the impact of fire on building materials.

It includes the research, analysis and reporting of testing conducted on a range of building materials and structures in differing circumstances to determine combustion, flammability, heat transfer, burning conditions, building material behaviour, fire loads of buildings and fire resistance.

The unit of competency supports the attainment of the understanding and skills to assess the impact of fire on building materials within the context of relevant legislation, the National Construction Code of Australia (NCC) and Australian standards.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|--|-----|--|
| 1 Research combustion process as it relates to different materials. | 1.1 | Identify and record processes and flame characteristics of combustion of solids, liquids and gases from a research and analysis process. |
| | 1.2 | Identify and record factors contributing to combustion. |
| | 1.3 | Research and record endothermic and exothermic processes. |
| | 1.4 | Calculate heat of combustion fuels without error. |
| | 1.5 | Analyse and record factors contributing to propagating flame front. |
| 2 Analyse flammability of matter in different states. | 2.1 | Analyse and record flammability in terms of fire triangle and fire tetrahedron theories. |
| | 2.2 | Examine and record flammability of matter in physical states. |
| | 2.3 | Identify and record flammability in terms of upper and lower flammability limits. |
| | 2.4 | Identify and record factors contributing to the explosiveness of dusts. |
| 3 Identify conditions of burning at the fire point. | 3.1 | Interpret limiting adiabatic flame temperature (LAFT) values accurately. |
| | 3.2 | Analyse and record process of extinguishment related to the combustion process. |
| 4 Record mechanisms of heat transfer during fire growth, development and spread. | 4.1 | Identify and record heat transfer factors in fire situations. |
| | 4.2 | Analyse and record processes of self-induced heating. |
| | 4.3 | Observe and record behaviour of fires in partially and fully enclosed compartments. |
| | 4.4 | Calculate amount of smoke produced from a fire. |
| 5 Record the behaviour | 5.1 | Evaluate building materials for fire safety and fire |

of building materials subjected to extreme levels of heat.		resistance levels and record findings.
	5.2	Identify and record effect of fire on structural and non-structural elements.
	5.3	Identify and record effect of fire on plastic and textile materials.
6 Devise the fire load of a building and describe the effect on the BCA classification and compartmentation.	6.1	Calculate effect of building occupancy on potential fire load.
	6.2	Research and record factors that may increase the severity of a fire.
	6.3	Research and record fire load, fire severity and general burning behaviour of materials.
7 Report the requirements of fire resistance of building elements and forms of construction.	7.1	Research and record fire resistance levels of building elements and forms of construction.
	7.2	Apply early fire hazard indices to the BCA requirements.
	7.3	Research and record Australian standards relating to fire testing of building materials and forms of construction.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCSV5009A Assess the impact of fire on building materials.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCSV5009 Assess the impact of fire on building materials

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to the Application.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCSV5009A Assess the impact of fire on building materials.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- performing fire research, analysis, identification and reporting of findings for at least one fire assessment or equivalent, including at least three different materials
- assessing applicable fire safe suitable building materials for at least one building project
- providing reports to appropriate body/individual as determined by the project brief.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- characteristics of endothermic and exothermic processes
- effects of fire on structural and non-structural elements:
 - behaviour of building materials subject to extreme heat
 - combustion of materials
 - fire loads of buildings
 - fire resistance of materials
 - flammability circumstances
 - heat transfer characteristics
 - point of fire burning conditions
- extinguishment principles
- limiting adiabatic flame temperature (LAFT) values
- materials:
 - timber
 - plastic

- fabric
- other types of fire load forming building materials
- principles of combustion and flammability
- processes for the preparation of documentation
- relevant federal, state or territory legislation and local government policy and procedures
- research methods:
 - definitions and test outcomes
 - material safety data sheets (MSDS)
 - reports
 - written records and historical data.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCVE1002 Undertake a basic computer design project

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCVE1002B Undertake a basic computer design project. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to use a computer drawing program to prepare drawings for a basic construction project from a design brief.

The unit includes production of the drawings in plan and elevation format.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|---|-----|---|
| 1 | Review and prepare for computer design. | 1.1 | Review design brief for a basic construction project. |
| | | 1.2 | Access computer and drawing program. |

- | | |
|-------------------------------|--|
| 2 Prepare first draft design. | 2.1 Progressively enter design parameters and other information for the proposed structure into the computer software. |
| | 2.2 Modify design information in the system as anomalies and errors become apparent. |
| | 2.3 Complete first draft design. |
| 3 Finalise design. | 3.1 Review first draft design for accuracy and compliance with brief. |
| | 3.2 Finalise drawings in both plan and elevation form. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCV1002B Undertake a basic computer design project

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CCCCVE1002 Undertake a basic computer design project

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CCCCVE1002B Undertake a basic computer design project. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all the elements, performance criteria and foundation skills of this unit by using a computer drawing program to prepare drawings from a design brief for a basic construction project, such as a simple piece of furniture.

All work must be performed to the standard required in the workplace and meet the design brief.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace quality policies and standards for basic computer design projects
- processes for using hardware and software systems for basic computer design projects
- features of plans and elevations
- techniques for reading and interpreting briefs for simple structures.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed while undertaking workplace tasks:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCVE1011 Undertake a basic construction project

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCVE1011A Undertake a basic construction project. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to undertake a basic construction project using basic tools, equipment and materials.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|---|-----|---|
| 1 | Review and prepare to undertake basic construction project. | 1.1 | Review plans and specifications to undertake a basic construction project. |
| | | 1.2 | Prepare all work to comply with laws and regulations, national construction codes, Australian Standards, work |

- health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
- 1.3 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.4 Select tools and equipment, check for serviceability and report any faults.
 - 1.5 Determine project components from plans and specifications, prepare component list and calculate quantities of materials.
- 2 Manufacture components for basic construction project.
 - 2.1 Select processes to manufacture components.
 - 2.2 Manufacture components and check for accuracy, quality and suitability.
- 3 Assemble project components.
 - 3.1 Select assembly process.
 - 3.2 Set out, level and erect/install project in line, level and plumb.
 - 3.3 Assemble components to specification and quality, and check for conformity to plans and specifications.
- 4 Clean up.
 - 4.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling.
 - 4.2 Check, maintain, store and secure tools and equipment and report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCV1011A Undertake a basic construction project.

Links

Assessment Requirements for CPCCE1011 Undertake a basic construction project

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCE1011A Undertake a basic construction project. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all the elements, performance criteria and foundation skills of this unit by undertaking a basic construction project, following plans and specifications, for a simple structure such as a deck, pergola or shed.

All work must be performed to the standard required in the workplace and must comply with work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, plans and specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards relevant to basic construction projects
- workplace quality policies and standards for basic construction projects
- safety requirements for basic construction projects, including job safety analyses/safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state/territory equivalent, and personal protective equipment (PPE)
- types and uses of tools and equipment used for basic construction projects
- plans and specifications for basic construction projects
- processes for:
 - preparing a component list for a basic construction project
 - calculating material requirements for basic construction projects
 - manufacturing components for basic construction projects
 - assembling components for basic construction project
- plumb, line and level for basic construction projects.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed while undertaking workplace tasks:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCWC2001 Complete penetrations and flashings

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWC2001A Complete penetrations and flashings. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to complete the penetrations and flashings associated with wall and ceiling lining, meeting all relevant requirements of Australian Standards, work health and safety (WHS) requirements, and Commonwealth and state or territory legislation. It does not cover the technical aspects of passive fire systems.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Wall and ceiling

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|---|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions and plan sequence of work. |
|---------------------|---|

- 1.2 Select and use personal protective equipment (PPE) as required for each stage of the task.
 - 1.3 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.4 Follow requirements of job safety analyses and safety data sheets.
 - 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Select tools and equipment, check for serviceability and report any faults.
- 2 Confirm penetration and flashing requirements.
- 2.1 Select type of penetration and flashing to match host materials and meet work instructions.
 - 2.2 Identify, set out and check penetration location in accordance with workplace requirements.
- 3 Complete penetration and flashing.
- 3.1 Create penetration safely and with minimal modification or damage to host materials.
 - 3.2 Install flashing safely and with minimal modification or damage to host materials.
 - 3.3 Install and connect casings, housings or other terminating points in accordance with workplace and regulatory requirements.
 - 3.4 Apply sealant or caulking compound to restore integrity of wall or ceiling system in accordance with manufacturers' recommendations.
 - 3.5 Prepare surfaces for finishing.
- 4 Clean up.
- 4.1 Clear work area, dispose of materials, and reuse or recycle in compliance with legislation, regulations and

codes of practice.

- 4.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' recommendations.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCWC2001A Complete penetrations and flashings.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCWC2001 Complete penetrations and flashings

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWC2001A Complete penetrations and flashings. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by completing three penetration and flashing tasks including:

- one for electrical services
- one for communication services.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- requirements of Australian Standards for completing penetrations and flashings associated with wall and ceiling lining
- safety requirements for completing penetrations and flashings associated with wall and ceiling lining, including:
 - job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
 - safety data sheets (SDS)
 - personal protective equipment (PPE)
- characteristics and applications of wall and ceiling lining materials:
 - beads
 - cement render
 - fibre cement sheets
 - finishing materials
 - plaster compounds
 - plasterboard
 - plastersglass sheets

- water resistant plasterboard
- penetration and flashing techniques
- processes for calculating material requirements and measuring penetration locations
- quality requirements for completing penetrations and flashings
- techniques for locating services
- types and uses of plans, drawings and specifications for penetrations and flashings
- types and uses of tools and equipment used when completing penetrations and flashings
- types of services and purposes for which penetrations and flashings are required.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCWC3001 Install and finish plasterboard and fibre cement sheeting to curved wall and ceiling substrates

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.

Correction to prerequisite unit code from CPPWHS2001 Apply WHS requirements, policies and procedures in the construction industry to CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWC3001A Install and finish plasterboard and fibre cement sheeting to curved walls and ceilings. Change to title. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to fix and finish plasterboard and fibre cement sheeting to steel and timber framed curved walls and curved ceilings.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Wall and ceiling

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|--|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions and plan sequence of work. |
| | 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements. |
| | 1.3 Select and use personal protective equipment (PPE) for each stage of the task. |
| | 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades. |
| | 1.5 Collect evidence that the carpenter has completed the substrate to be plaster ready. |
| | 1.6 Select tools and equipment, check for serviceability and report any faults that may affect the safe operation of the equipment, tag equipment and set aside. |
| | 1.7 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use. |
| 2 Prepare work area for installation. | 2.1 Prepare work area and substrate for application of sheeting. |
| | 2.2 Prepare and check timber/steel wall and ceiling framing for consistency of curve and rectify or report any faults. |
| 3 Fix and finish plasterboard and fibre cement products to walls and ceilings. | 3.1 Measure and mark materials to meet task requirements and minimise wastage. |
| | 3.2 Cut wall and ceiling sheets to fit with required clearances. |
| | 3.3 Fix wall and ceiling sheets with mechanical fastenings or combined adhesive and fasteners. |
| | 3.4 Prepare compounds for backblocking and jointing. |

- 3.5 Apply backblocks.
- 3.6 Joint and finish plasterboard and fibre cement sheeting
- 4 Clean up.
 - 4.1 Clear work area and dispose of, reuse or recycle materials.
 - 4.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCCWC3001 Install and finish plasterboard and fibre cement sheeting to curved wall and ceiling substrates

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.

Correction to prerequisite unit code from CPPWHS2001 Apply WHS requirements, policies and procedures in the construction industry to CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWC3001A Install and finish plasterboard and fibre cement sheeting to curved walls and ceilings. Change to title. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by installing and finishing 15 square metres of plasterboard or fibre cement sheeting to a curved substrate, using either mechanical or adhesive fixing systems.

All work must be performed to the standard required in the workplace and must comply with National Construction Code (NCC), Commonwealth and state/territory laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards for installing and finishing plasterboard and fibre cement sheeting to curved wall and ceiling substrates
- quality policies and standards for installing and finishing plasterboard and fibre cement sheeting to curved wall and ceiling substrates
- safety requirements for installing and finishing plasterboard and fibre cement sheeting to curved walls and ceilings, including personal protective equipment (PPE), job safety analyses, safe work method statements and safety data sheets

- environmental requirements for installing and finishing plasterboard and fibre cement sheeting
- plans, drawings and specifications for installing and finishing plasterboard and fibre cement sheeting to curved wall and ceiling substrates
- processes for the calculation of material requirements for installing and finishing plasterboard and fibre cement sheeting to curved wall and ceiling substrates
- techniques for fixing materials to steel and timber frames
- types, uses and limitations of materials used for installing and finishing plasterboard and fibre cement sheeting to curved wall and ceiling substrates
- wall and ceiling terminology for curved walls and ceilings, including:
 - cambered
 - elliptical
 - pitched
 - undulating
- types of tools and equipment for installing and finishing plasterboard and fibre cement sheeting to curved wall and ceiling substrates.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCWC3002 Install and finish plasterboard and fibre cement sheeting to arch substrate

Modification History

- Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.
- Correction to prerequisite unit code from CPPWHS2001 Apply WHS requirements, policies and procedures in the construction industry to CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
- Formatting correction to Elements and Performance Criteria.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and equivalent to CPCCWC3002A Install and finish plasterboard and fibre cement sheeting to arches. Change to title. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to fix and finish plasterboard and fibre cement sheeting to arch substrate.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Wall and ceiling

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|--|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions and plan sequence of work. |
| | 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements. |
| | 1.3 Select and use personal protective equipment (PPE) for each stage of the task. |
| | 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades. |
| | 1.5 Select tools and equipment, check for serviceability and report any faults that may affect the safe operation of the equipment, tag equipment and set aside. |
| | 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use. |
| 2 Prepare work area for installation. | 2.1 Prepare work area and arch substrate for application of sheeting. |
| | 2.2 Check timber/steel wall framing for straightness and plumb and rectify or report any faults. |
| 3 Fix plasterboard and fibre cement products to arch substrate. | 3.1 Measure and mark materials to work requirements and for minimal wastage. |
| | 3.2 Cut sheets to fit with clearances. |
| | 3.3 Fix sheets with mechanical fastenings or combined adhesive/ fasteners. |

- | | | |
|-------------------------------|-----|--|
| 4 Joint and finish materials. | 4.1 | Apply additional design details and features. |
| | 4.2 | Install beading to design requirements. |
| | 4.3 | Complete jointing and finishing of plasterboard and fibre cement sheeting. |
| 5 Clean up. | 5.1 | Clear work area and dispose of, reuse or recycle materials. |
| | 5.2 | Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Assessment Requirements for CPCCWC3002 Install and finish plasterboard and fibre cement sheeting to arch substrate

Modification History

Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.

Correction to prerequisite unit code from CPPWHS2001 Apply WHS requirements, policies and procedures in the construction industry to CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Formatting correction to Elements and Performance Criteria.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWC3002A Install and finish plasterboard and fibre cement sheeting to arches. Change to title. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by:

- installing and finishing to specification, one plasterboard arch with:
 - a minimum of two sheets
 - wall and corner junctions
 - application or arch beads
 - mechanical or adhesive fixing systems
- setting out to specification one each of segmental, gothic, elliptical, Tudor and ogee arches.

All work must be performed to the standard required in the workplace and must comply with the National Construction Code (NCC), Commonwealth and state/territory laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards for installing and finishing plasterboard and fibre cement sheeting to arch substrates
- quality policies and standards for installing and finishing plasterboard and fibre cement sheeting to arch substrates
- safety requirements for installing and finishing plasterboard and fibre cement sheeting to arches, including personal protective equipment (PPE), job safety analyses, safe work method statements and safety data sheets
- environmental requirements for installing and finishing plasterboard and fibre cement sheeting to arch substrates
- plans, drawings and specifications for installing and finishing plasterboard and fibre cement sheeting to arch substrates
- processes for the calculation of material requirements for installing and finishing plasterboard and fibre cement sheeting to arch substrates
- techniques for fixing materials to steel and timber frames for installing and finishing plasterboard and fibre cement sheeting to arch substrates
- types, uses and limitations of materials used for installing and finishing plasterboard and fibre cement sheeting to arch substrates
- arch types, options, uses and limitations, including:
 - elliptical
 - gothic
 - may include
 - ogees
 - segmental
 - semi-circular
 - three-centred
- types of tools and equipment for installing and finishing plasterboard and fibre cement sheeting to arch substrates.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCWC3003 Install dry wall passive fire-rated systems

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.

Correction to prerequisite unit code from CPPWHS2001 Apply WHS requirements, policies and procedures in the construction industry to CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWC3003A Install passive fire-wall rated systems Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the outcomes required to select and install dry wall fire-rated systems to walls and ceilings.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Wall and ceiling

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|--|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions and plan sequence of work. |
| | 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements. |
| | 1.3 Plan all work strictly within the manufacturer's fire-rating design, so that fire-rating criteria are always met. |
| | 1.4 Select and use personal protective equipment (PPE) for each stage of the task. |
| | 1.5 Inspect work site, assess hazards and apply risk controls, including required signage and barricades. |
| | 1.6 Select tools and equipment, check for serviceability and report any faults that may affect the safe operation of the equipment, tag equipment and set aside. |
| | 1.7 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use. |
| 2 Line timber stud wall using fire-rated system. | 2.1 Determine whether structure of the timber wall is for load or non-load bearing. |
| | 2.2 Select manufacturer's fire-rating design for the timber stud wall. |
| | 2.3 Set out materials and space fixings to manufacturer's fire-rating design. |
| | 2.4 Fix material and complete penetrations. |
| | 2.5 Finish joints to exposed face sheet layers using fire-rated materials and procedures to manufacturer's fire-rating design. |

- | | | |
|--|-----|--|
| 3 Construct steel stud fire-rated partition system. | 3.1 | Select manufacturer's fire-rating design for the steel stud wall. |
| | 3.2 | Determine the fixing requirements for the steel stud wall, as designed to meet fire test criteria. |
| | 3.3 | Secure deflection heads and apply sealant. |
| | 3.4 | Setout material, meeting the manufacturer's fire-rating design. |
| | 3.5 | Space fixings, fix materials and complete penetrations. |
| | 3.6 | Finish joints to exposed face sheet layers using fire-rated materials and procedures to manufacturer's fire-rating design. |
| 4 Construct fire-rated shaft wall system. | 4.1 | Select materials to manufacturer's fire-rating design and fix components to precise clearances. |
| | 4.2 | Set out materials and complete penetrations. |
| | 4.3 | Finish joints to exposed face sheet layers using fire-rated materials and procedures to manufacturer's fire-rating design. |
| 5 Line timber joist ceiling using fire-rated system. | 5.1 | Check ceiling substrate and line to manufacturer's fire-rating design. |
| | 5.2 | Select fixings and apply lining. |
| | 5.3 | Space fixings at correct intervals. |
| | 5.4 | Complete penetrations. |
| | 5.5 | Finish joints to exposed face sheet layers using fire-rated materials and procedures to manufacturer's fire-rating design. |
| 6 Construct suspended ceiling with a fire-rating system. | 6.1 | Select materials and choose fixings for manufacturer's fire-rating design for fire-rated ceiling. |
| | 6.2 | Construct ceiling flat, true, level and structurally sound. |

- 6.3 Complete penetrations.
 - 6.4 Finish joints to exposed face sheet layers using fire-rated materials and procedures to manufacturer's fire-rating design.
- 7 Clean up.
- 7.1 Clear work area and dispose of, reuse or recycle materials.
 - 7.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCWC3003A Install passive fire-wall rated systems

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCWC3003 Install dry wall passive fire-rated systems

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.

Correction to prerequisite unit code from CPPWHS2001 Apply WHS requirements, policies and procedures in the construction industry to CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWC3003A Install passive fire-wall rated systems Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by installing to specification a minimum of three dry wall passive fire-rated systems:

- one to a steel stud wall
- one covering columns and beams
- one comprising a multiple layer system.

All work must be performed to the standard required in the workplace and must comply with the National Construction Code (NCC), Commonwealth and state/territory laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards for installing dry wall passive fire-rated systems
- regulations and building codes related to dry wall passive fire-rated systems, including:
 - types and specifications for dry wall passive fire-rated systems related to steel stud and timber stud walls, shaft walls, timber joists and suspended ceilings
- quality policies and standards for installing dry wall passive fire-rated systems

- safety requirements for installing dry wall passive fire-rated systems, including personal protective equipment (PPE), job safety analyses, safe work method statements and safety data sheets
- environmental requirements for installing dry wall passive fire-rated systems
- basic combustion theory relating to dry wall passive fire-rated systems
- manufacturer's design installation techniques and processes
- plans, drawings and specifications for installing dry wall passive fire-rated systems
- processes for the calculation of material requirements for installing dry wall passive fire-rated systems
- range of materials commonly used in the installation of dry wall passive fire-rated systems:
 - base compound coats
 - finishing coats
 - fire grade metal studs and track
 - fire grade plasterboard sheeting
 - fire sealants
 - perforated paper tapes
 - vermiculite or equivalent product
 - fasteners
- tools and equipment used in the installation of dry wall passive fire-rated systems.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCWF2001 Handle wall and floor tiling materials

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWF2001A Handle wall and floor tiling materials. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to safely handle and store wall and floor tiling products and materials.

It includes the preparation, handling, sorting and stacking, distribution and disposal of wall and floor tiling products and materials.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative or certification requirements apply to this unit in some states and territories and users are advised to check with the relevant regulatory authority.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Wall and floor tiling

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare to handle wall and floor

1.1 Read and interpret task work instructions and plan sequence of work.

- tiling materials.
- 1.2 Select and use personal protective equipment (PPE) as required for each stage of the task.
 - 1.3 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults.
- 2 Receive, sort and distribute wall and floor tiling materials.
- 2.1 Check tiling products and materials conform to task quality and quantity.
 - 2.2 Handle tiling material in accordance with safe work method statements.
 - 2.3 Handle, proportion, mix and store tiling materials.
 - 2.4 Sort tiling products and materials by type and size, and stack for ease of identification and task sequence.
 - 2.5 Distribute tiling products and materials to job location.
- 3 Handle and remove surplus material and clean up.
- 3.1 Handle surplus materials safely and effectively in accordance with safety data sheets.
 - 3.2 Identify hazardous material for separate handling by authorised personnel.
 - 3.3 Handle, recover and transfer tiling products and material from job location and store in accordance with safety data sheets and workplace requirements.
 - 3.4 Clean, check, maintain and store tools and equipment in accordance with manufacturers' recommendations.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCWF2001A Handle wall and floor tiling materials.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCWF2001 Handle wall and floor tiling materials

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWF2001A Handle wall and floor tiling materials. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by handling, sorting, distributing, stacking and storing wall and floor tiling products and materials required for the tiling of a minimum 10 square metres of the walls and floor of a bathroom.

All work must be performed to the standard required in the workplace and comply with Commonwealth and state/territory laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace quality policies and standards for handling wall and floor tiling materials
- safety requirements relevant to handling wall and floor tiling materials, including:
 - job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
 - personal protective equipment (PPE)
- techniques for safely handling, sorting, distributing, stacking and storing wall and floor tiling materials
- environmental requirements for handling wall and floor tiling materials
- techniques for handling, sorting, distributing, stacking and storing large format tiles
- processes to handle, proportion, mix and store materials
- types and uses of materials storage and environmentally friendly waste management relevant to handling wall and floor tiling materials
- types and uses of plans, drawings and specifications for handling wall and floor tiling materials
- types and uses of tools and equipment for handling wall and floor tiling materials
- wall and floor tiling processes and sequences.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCWF2002 Use wall and floor tiling tools and equipment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWF2002A Use wall and floor tiling tools and equipment. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to safely and effectively use wall and floor tiling tools and equipment.

It includes selection and use of tools and equipment for specific applications.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative or certification requirements apply to this unit in some states and territories and users are advised to check with the relevant regulatory authority.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Wall and floor tiling

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|--|
| 1 Plan and prepare to use wall and floor | 1.1 Read and interpret task instructions to use tools and equipment. |
|--|--|

- | | | |
|--|-----|--|
| tiling tools and equipment. | 1.2 | Select and use personal protective equipment (PPE) as required for each stage of the task. |
| | 1.3 | Plan all work to comply with laws and regulations, work health and safety (WHS) and environmental requirements, manufacturers' recommendations, workplace requirements, drawings and specifications. |
| | 1.4 | Inspect work site, assess hazards and apply risk controls, including required signage and barricades. |
| 2 Select hand and power tools and equipment. | 2.1 | Select tools and equipment consistent with hazard minimisation and requirements of the task. |
| | 2.2 | Review manufacturers' recommendations for operating and using tools and equipment. |
| | 2.3 | Check tools and equipment for correct function and report any faults. |
| | 2.4 | Check power leads for current tags, safety and serviceability and report any faults. |
| | 2.5 | Check and maintain power tool guards following manufacturers' recommendations. |
| | 2.6 | Follow WHS requirements for using tools and equipment. |
| | 2.7 | Select devices to safely hold or support material during operation. |
| | 2.8 | Complete pre-operational checks, including checking lubricants and water. |
| 3 Use tools and equipment and clean up. | 3.1 | Connect safe power supply to work area. |
| | 3.2 | Undertake start-up and shut-down processes following manufacturers' recommendations. |
| | 3.3 | Use tools and equipment safely and effectively in accordance with manufacturers' recommendations and workplace requirements. |
| | 3.4 | Switch off tools and equipment and locate safely when |

not in immediate use.

- 3.5 Clean, check, maintain and store plant, tools and equipment in accordance with manufacturers' recommendations.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCFWF2002A Use wall and floor tiling tools and equipment.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCF2002 Use wall and floor tiling tools and equipment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCF2002A Use wall and floor tiling tools and equipment. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by completing wall and floor tiling tasks using a range of tools and equipment, including as a minimum:

- buckets
- caulking guns
- levelling equipment:
 - straight edges
 - string lines
 - spirit levels
 - laser levels
- hammers
- measuring tapes and rules
- nippers
- scrapers
- shovels
- spacers and wedges
- sponges
- squares
- squeegees
- straight edges
- tile cutters and scribes
- trowels
- wet and dry diamond saws
- floats
- adhesive mixers
- diamond hole saws
- power drills

- angle grinders
- power leads.

All work using the above tools and equipment must be performed to the standard required in the workplace and comply with Commonwealth and state/territory laws and regulations, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace quality policies and standards for using wall and floor tiling tools and equipment
- safety requirements for using wall and floor tiling tools and equipment, including:
 - job safety analyses and/or or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and and/or or territory equivalent
 - personal protective equipment (PPE)
- environmental requirements for using wall and floor tiling equipment
- characteristics, applications and safe use of wall and floor tiling tools and equipment:
 - lippage reduction systems
 - buckets
 - caulking guns
 - levelling equipment:
 - straight edges
 - stringlines
 - spirit levels
 - laser levels
 - hammers
 - measuring tapes and rules
 - nippers
 - scrapers
 - shovels
 - spacers and wedges
 - sponges
 - squares
 - squeegees
 - straight edges
 - tile cutters and scribes
 - trowels
 - wet and dry diamond saws
 - floats

- adhesive mixers
- diamond hole saws
- power drills
- angle grinders
- power leads
- manufacturers' recommendations for tools and equipment.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCWF3001 Prepare surfaces for tiling application

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWF3001A Prepare surfaces for tiling application. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to repair and prepare different substrates for wall and floor tiling applications.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative or certification requirements apply to this unit in some states and territories and users are advised to check with the relevant regulatory authority.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Wall and floor tiling

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|--|-----|--|
| 1 Plan and prepare to prepare surfaces for tiling application. | 1.1 | Read and interpret task work instructions and plan sequence of work. |
| | 1.2 | Select and use personal protective equipment (PPE) as |

- required for each stage of the task.
- 1.3 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Prepare materials for preparing substrate.
- 2.1 Check tiling materials for product suitability to task, ensuring compatibility with surface material.
 - 2.2 Determine activities for material preparation.
 - 2.3 Carry out material preparation to satisfy the requirements of the application process.
- 3 Prepare framed substrates.
- 3.1 Prepare and install underlay for tiling application.
 - 3.2 Finish substrate surface to approved surface standards with joints flush.
 - 3.3 Clean surfaces to remove all contaminants and loose material.
- 4 Prepare cementitious and masonry substrate surface.
- 4.1 Determine substrate structure and clean surfaces to remove all contaminants and loose material.
 - 4.2 Control suction with the use of water and apply slurry and bonding agent if required.
 - 4.3 Measure and mix materials for screeding and/or rendering, ensuring that mortar is bonded to the substrate.
 - 4.4 Screed and/or render and finish mortar to float finish

applying specified fall.

4.5 Protect the screeded and/or rendered area with signs and barricades to allow to dry and/or cure.

5 Clean up.

5.1 Clear work area and dispose of, reuse or recycle materials.

5.2 Clean, check, maintain and store plant, tools and equipment in accordance with manufacturers' recommendations.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCWF3001A Prepare surfaces for tiling application.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCF3001 Prepare surfaces for tiling application

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCF3001A Prepare surfaces for tiling application. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by preparing for tiling:

- 9 square metres of a framed bathroom wall and floor
- 9 square metres of a masonry bathroom wall and floor.

All work must be performed to the standard required in the workplace and comply with Commonwealth and state/territory laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of Australian Standards for preparing surfaces for tiling
- workplace quality policies and standards for preparing surfaces for tiling
- safety requirements for preparing surfaces for tiling, including:
 - job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
 - personal protective equipment (PPE)
- environmental requirements for preparing surfaces for tiling
- types and uses of materials storage and environmentally friendly waste management
- types and uses of tools and equipment for preparing surfaces for tiling
- processes for selection of compatible materials for preparing surfaces for tiling
- processes for the calculation of material requirements for preparing surfaces for tiling
- surface preparation materials and techniques for:
 - underlay material
 - substrate preparation
 - substrate surface materials.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCWF3002 Install floor tiles

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWF3002A Fix floor tiles. Change to title. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to install floor tiles to different substrates.

It includes the preparation, cutting, installing and grouting of tiles for floors, including steps and and/or or stairs and thresholds.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative or certification requirements apply to this unit in some states and territories and users are advised to check with the relevant regulatory authority.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Wall and floor tiling

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare to install floor tiles.

1.1 Read and interpret task work instructions and plan sequence of work.

- 1.2 Select and use personal protective equipment (PPE) as required for each stage of the task.
 - 1.3 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Set out floor tiling.
- 2.1 Clear area to be tiled.
 - 2.2 Check that tiles are fit for purpose and conform to task size, patterns, colours and characteristics.
 - 2.3 Check waterproof membrane for integrity and conformance to regulatory requirements.
 - 2.4 Set out tile work to be symmetrical and balanced, including allowance for movement joints, and to produce minimal waste.
- 3 Cut floor tiles.
- 3.1 Cut tiles without damage to tile edges, surfaces or finish.
 - 3.2 Cut holes for penetrations to shape, size and specified tolerance.
- 4 Prepare substrate and install floor tiles.
- 4.1 Prepare and apply screed to specified consistency and surface finish.
 - 4.2 Prepare substrate surface, free from contaminants and residues to receive adhesive.
 - 4.3 Match adhesive with tile and substrate material and mix according to manufacturers' instructions.

- | | | |
|---|--|--|
| | 4.4 | Install tiles, maintaining alignment of joints that are uniform in size and with the specified finished surface. |
| | 4.5 | Insert movement joints. |
| 5 | Tile treads, risers, steps and thresholds. | |
| | 5.1 | Determine step rises and goings from steps and and/or or stairs. |
| | 5.2 | Set out steps for uniform rise to comply with building code and make even cut on both sides of steps. |
| | 5.3 | Install tiles, maintaining alignment of joints that are uniform in size and with the specified finished surface. |
| 6 | Grout tiles. | |
| | 6.1 | Clean and prepare joints to receive grout. |
| | 6.2 | Mix and apply grout. |
| | 6.3 | Clean and polish tiles. |
| | 6.4 | Protect tiles from damage during remaining construction. |
| 7 | Clean up. | |
| | 7.1 | Clear work area and dispose of, reuse or recycle materials. |
| | 7.2 | Clean, check, maintain and store plant, tools and equipment in accordance with manufacturers' recommendations. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCWF3002A Fix floor tiles.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCCF3002 Install floor tiles

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCF3002A Fix floor tiles. Change to title. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by:

- tiling a minimum of:
 - four square metres of wet area floor laid with fall and waterproofing
 - four square metres of floor with movement joints and large format tiles (greater than or equal to 600 millimetres x 300 millimetres) with rectified edges
 - four square metres set out and laid on the diagonal with a half-tile border
 - three steps at least 900 millimetres wide with minimum 115 millimetre risers, including treads
- cutting tiles around a circular floor grate.

All work must be performed to the standard required in the workplace and must comply with Commonwealth and state/territory laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of Australian Standards for installing floor tiles
- workplace quality policies and standards for installing floor tiles
- safety requirements for installing floor tiles, including:
 - job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
 - personal protective equipment (PPE)
- environmental requirements for installing floor tiles
- placement and design of movement joints
- types and uses of materials storage and environmentally friendly waste management
- types and uses of tools and equipment for installing floor tiles

- processes for the calculation of material requirements for installing floor tiles
- techniques for:
 - installing tiles to floors and step and and/or or stairs
 - matching floor joints between adjoining areas
 - installing tiles over different substrates in common use, waterproofing membranes, acoustic underlays and de-coupling systems
 - cutting and installing of tiles in common use:
 - large format tiles
 - natural and reconstituted stone tiles
- tiling material qualities, characteristics, preparation requirements, techniques, applications and limitations:
 - adhesive types and classifications
 - grout types, including epoxy grout.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCWF3003 Install wall tiles

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWF3003A Fix wall tiles. Change to title. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to use adhesive to install wall tiles to differing substrates.

It includes the preparation, cutting, installation and grouting of tiles for walls, including internal and external wall junctions and junctions between walls and floors.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative or certification requirements apply to this unit in some states and territories and users are advised to check with the relevant regulatory authority.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Wall and floor tiling

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|--|
| 1 Plan and prepare to install wall tiles. | 1.1 Read and interpret task work instructions and plan sequence of work. |
|---|--|

- 1.2 Select and use personal protective equipment (PPE) as required for each stage of the task.
 - 1.3 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Set out wall tiling.
- 2.1 Prepare substrate and area to be tiled, including checking waterproof membrane for integrity and conformance to regulatory requirements.
 - 2.2 Check tiles conform to size, pattern, colour and characteristic requirements of the task and are fit for purpose.
 - 2.3 Check internal and external corner substrates for square and plumb.
 - 2.4 Determine and set out tile work grid patterns to be symmetrical and balanced with movement joints, and to produce minimal waste.
- 3 Cut wall tiles.
- 3.1 Cut tiles without damage to tile edges, surfaces or finish.
 - 3.2 Cut holes for penetrations to shape, size and specified tolerance.
- 4 Prepare substrate and install wall tiles
- 4.1 Prepare and apply adhesive to substrate and/or tile surface.
 - 4.2 Prepare and install tiles set to level and plumb.

- 4.3 Check horizontal joint for straightness, and check tile edges and surface alignment.
 - 4.4 Install tiles to alignment, maintaining designed pattern.
 - 4.5 Install tiles with required coverage, maintaining joint and face alignment.
 - 4.6 Show even margins around openings, frames and fittings.
 - 4.7 Maintain joints straight and uniform in width with due allowance for tolerance of tile sizes.
 - 4.8 Insert specified movement joints.
- 5 Tile internal and external corners.
 - 5.1 Check setting out for plumb, level and square and to be within specified tolerance.
 - 5.2 Cut and install bottom course to create raked corner.
 - 5.3 Make joints for abutting tiles in accordance with designed margin for grouting and movement joints.
 - 5.4 Install cove and/or coved tiles to internal corners.
 - 5.5 Install trim or mitre to external corners.
- 6 Grout tiles.
 - 6.1 Clean and prepare joints to receive grout.
 - 6.2 Mix and apply grout.
 - 6.3 Clean and polish tiles.
 - 6.4 Protect tiles from damage during remaining construction.
- 7 Clean up.
 - 7.1 Clear work area and dispose of, reuse or recycle materials.
 - 7.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' recommendations.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCFWF3003A Fix wall tiles.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCCF3003 Install wall tiles

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCF3003A Fix wall tiles. Change to title. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by preparing the substrate and tiling a minimum of:

- the front and surrounds of a bath, at least 1500 millimetres long
- four square metres of wall that includes a door opening and a niche
- one lineal metre mitred hob
- one lineal metre trim installed to an external corner.

All work must be performed to the standard required in the workplace and must comply with Commonwealth and state/territory laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of Australian Standards for installing wall tiles
- workplace quality policies and standards for installing wall tiles
- safety requirements for installing wall tiles, including:
 - job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
 - personal protective equipment (PPE)
- environmental requirements for installing wall tiles
- placement and design of movement joints
- types and uses of materials storage and environmentally friendly waste management
- plans, drawings and specifications for installing wall tiles
- types and uses of tools and equipment for installing wall tiles
- processes for calculation of material requirements for installing wall tiles
- techniques in installing tiles to walls and corners:
 - preparation of structures and substrates

- types of substrates
- types and uses of waterproofing systems
- cutting and installing types of tiles in common use:
 - large format tiles
- tiling material qualities, characteristics, preparation requirements, techniques, applications and limitations:
 - adhesive types and classifications
 - grout types, including epoxy grout.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCWF3004 Repair wall and floor tiling

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWF3004A Repair wall and floor tiles.
Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to repair tiling by replacing wall and floor tiles.

It includes preparing, removing and replacing wall and floor tiles and repairing and/or replacing waterproofing.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative or certification requirements apply to this unit in some states and territories and users are advised to check with the relevant regulatory authority.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Wall and floor tiling

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare to repair wall and floor

1.1 Read and interpret task work instructions and plan sequence of work.

- tiling.
- 1.2 Select and use personal protective equipment (PPE) as required for each task stage.
 - 1.3 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Repair damaged tiles
- 2.1 Remove damaged or defective tiles avoiding damage to surrounding tiles.
 - 2.2 Clean and clear old bedding to allow installation of replacement tile.
 - 2.3 Repair or replace existing waterproofing.
 - 2.4 Select and cut replacement tiles to match surrounding tiles.
 - 2.5 Install tiles to maintain alignment with joints.
 - 2.6 Carry out grouting and clean tiles.
- 3 Clean up.
- 3.1 Clear work area and dispose of, reuse or recycle materials.
 - 3.2 Clean, check, maintain and store plant, tools and equipment in accordance with manufacturers' recommendations.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCWF3004A Repair wall and floor tiles.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCF3004 Repair wall and floor tiling

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCF3004A Repair wall and floor tiles.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by removing and replacing a minimum of three damaged wall tiles and three damaged floor tiles, combined minimum area one square metre, which are installed with adhesive.

In performing the above tasks, at least one tile must be installed to waterproofing which requires repair.

All work must be performed to the standard required in the workplace and must comply with Commonwealth and state/territory laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of Australian Standards for repairing tiles
- safety requirements for repairing tiles, including:
 - job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and and/or territory equivalent
 - personal protective equipment (PPE)
- environmental requirements for repairing tiles
- types and uses of materials storage and environmentally friendly waste management
- types and uses of tools and equipment types for repairing tiles
- processes for the calculation of material requirements
- techniques for removing and replacing tiles to walls and floors
- tiling material qualities, characteristics, preparation requirements, techniques, applications and limitations:
 - adhesive types and classifications

- grout types, including epoxy grout.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCWF3005 Install decorative tiling

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWF3005A Carry out decorative tiling.
Change to title. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to locate and set out dimensions and plans for decorative tiling projects to form specific patterns.

It includes advanced setting out and installation of decorative and heritage tiles.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative or certification requirements apply to this unit in some states and territories and users are advised to check with the relevant regulatory authority.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Wall and floor tiling

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Plan and prepare to install decorative tiling.
 - 1.1 Read and interpret task work instructions and plan sequence of work.
 - 1.2 Select and use personal protective equipment (PPE) as required for each stage of the task.
 - 1.3 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
 - 2 Form decorative design.
 - 2.1 Inspect tiles to ensure conformance with the elements of the design, including colour, shape and geometry of the project.
 - 2.2 Set out and lay out tiles to required shape and size for decorative design.
 - 2.3 Cut tiles to complete the design set out.
 - 2.4 Align tile joints, plumb and square, and position tiles.
 - 3 Install tiles.
 - 3.1 Prepare substrate surfaces.
 - 3.2 Match and mix adhesive with tile and substrate material according to usage and climatic conditions.
 - 3.3 Install tiles to designed set out.
 - 3.4 Install and adjust border and/or decorative tiles to set out.
 - 4 Grout tiles.
 - 4.1 Clean and prepare joints to receive grout.

- 4.2 Mix and apply grout.
 - 4.3 Clean and polish tiles.
 - 4.4 Protect tiles from damage during remaining construction.
- 5 Clean up.
- 5.1 Clear work area and dispose of, reuse or recycle materials.
 - 5.2 Clean, check, maintain and store plant, tools and equipment in accordance with manufacturers' recommendations.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCFWF3005A Carry out decorative tiling.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCWF3005 Install decorative tiling

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWF3005A Carry out decorative tiling.
Change to title. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by selecting, setting out and installing:

- a minimum two square metres of decorative wall tiles and strips to a wall, finished to differing heights
- a minimum of 1.5 square metres of tessellated floor tiles, including a least two different sizes, and a surrounding decorative border to floor.

All work must be performed to the standard required in the workplace and must comply with Commonwealth and state/territory laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- elements of design reflecting architectural and historical periods
- types of decorative tiles and designs, including:
 - heritage/Federation
 - tessellated
 - encaustic
- compliance requirements of Australian Standards, and Heritage requirements for decorative tiling
- quality policies and standards for decorative tiling
- safety requirements for decorative tiling, including:

- job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state/territory equivalent
- personal protective equipment (PPE)
- environmental requirements for decorative tiling
- types and uses of decorative tiling materials:
 - tiles and patterns
 - adhesives
 - grouting
 - substrates
- tiling material qualities:
 - characteristics
 - preparation requirements
 - techniques
 - applications
 - limitations
- design reproduction and application methods for decorative tiling
- types and uses of materials storage and environmentally friendly waste management for decorative tiling
- types and uses of plans, drawings and specifications for decorative tiling
- types and uses of tools and equipment for decorative tiling
- processes for the calculation of material requirements for decorative tiling
- tiling material qualities, characteristics, preparation requirements, techniques, applications and limitations:
 - adhesive types and classifications
 - grout types, including epoxy grout.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCWF3006 Install mosaic tiling

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Correction to Elements and Performance Criteria 1 through 3.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWF3006A Carry out mosaic tiling. Change to title. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to install mosaic tiles to wall and floors.

It includes the cutting and laying out of a pattern or template and the application of the tiles to the required area.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative or certification requirements apply to this unit in some states and territories and users are advised to check with the relevant regulatory authority.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Wall and floor tiling

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

essential outcomes.	demonstrate achievement of the element.
1 Plan and prepare to install mosaic tiling.	<p>1.1 Read and interpret task work instructions and plan sequence of work.</p> <p>1.2 Select and use personal protective equipment (PPE) as required for each stage of the task.</p> <p>1.3 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.</p> <p>1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.</p> <p>1.5 Select tools and equipment, check for serviceability and report any faults.</p> <p>1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.</p>
2 Prepare materials.	<p>2.1 Prepare work area for mosaic tiling.</p> <p>2.2 Check mosaic tiles conform to the task size, pattern, colour and characteristics.</p> <p>2.3 Set out mosaic work to be symmetrical, balanced and to produce minimal waste.</p>
3 Prepare substrate.	<p>3.1 Prepare substrate surfaces.</p> <p>3.2 Clean surface free of loose material and contaminants ready for tile installation.</p>
4 Install mosaic tiles to flat surfaces.	<p>4.1 Mark prepared mosaic tiles.</p> <p>4.2 Select adhesive to ensure light-coloured tiles are not darkened and mix according to usage and climatic conditions.</p> <p>4.3 Apply adhesive to substrate and install mosaic tiles maintaining alignment to the set-out lines and face</p>

- surface of the tiles.
- 4.4 Position mosaic tiles prior to final set and adjust to ensure joints are consistent.
 - 4.5 Finish surface flat with tile face flush.
- 5 Grout tiles.
- 5.1 Clean and prepare joints to receive grout.
 - 5.2 Mix and apply grout.
 - 5.3 Clean and polish tiles.
 - 5.4 Protect tiles from damage during remaining construction.
- 6 Clean up.
- 6.1 Clear work area and dispose of, reuse or recycle materials.
 - 6.2 Clean, check, maintain and store plant, tools and equipment in accordance with manufacturers' recommendations.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCFWF3006A Carry out mosaic tiling.

Assessment Requirements for CPCCWF3006 Install mosaic tiling

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Correction to Elements and Performance Criteria 1 through 3.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWF3006A Carry out mosaic tiling. Change to title. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by preparing and installing mosaic tiles to a minimum:

- of two square metres of wall, including a niche
- of two lineal metres of hob and return
- of one square metre of shower floor with fall, including a drain.

All work must be performed to the standard required in the workplace and must comply with Commonwealth and state/territory laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of Australian Standards for mosaic tiling
- workplace quality policies and standards for mosaic tiling
- safety requirements for mosaic tiling, including:
 - job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
 - personal protective equipment (PPE)
- environmental requirements for mosaic tiling
- types and uses of materials storage and environmentally friendly waste management for mosaic tiling
- characteristics, preparation requirements, limitations and compatibility of mosaic tiling substrates and materials:
 - mosaic tiles:

- ceramic
- stone
- glass
- metal
- adhesives
- grouting materials
- tile trim (external and internal corners)
- types of substrates
- mosaic tiling methods and set out procedures
- types and uses of plans, drawings and specifications for mosaic tiling
- types and uses of mosaic tiling tools and equipment
- processes for the calculation of material requirements for mosaic tiling
- tiling material qualities, characteristics, preparation requirements, techniques, applications and limitations:
 - adhesive types and classifications
 - grout types, including epoxy grout.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCWF3007 Tile curved surfaces

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWF3007A Tile curved surfaces. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to tile curved surfaces. It includes the preparation for and tiling of columns and arches.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative or certification requirements apply to this unit in some states and territories and users are advised to check with the relevant regulatory authority.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Wall and floor tiling

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|---|-----|--|
| 1 Plan and prepare to tile curved surfaces. | 1.1 | Read and interpret task work instructions and plan sequence of work. |
| | 1.2 | Select and use personal protective equipment (PPE) as |

required for each task stage.

- 1.3 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Prepare and tile circular columns.
- 2.1 Calculate and establish extent of curve.
 - 2.2 Use levelling equipment for intermediate marking to level line set out around the surface.
 - 2.3 Make template/s to form an accurate curve line for tiled surface.
 - 2.4 Calculate a balanced design and cut tiles to size.
 - 2.5 Prepare substrate and compatible adhesive.
 - 2.6 Install tiles to level set out, template curve and specifications.
 - 2.7 Minimise voids in adhesive tile beds.
- 3 Prepare and tile arches.
- 3.1 Calculate and establish extent of arch and size of voussoirs at the intrados and the extrados.
 - 3.2 Use levelling equipment and calculate springing line.
 - 3.3 Cut tiles to size using template/s.
 - 3.4 Prepare substrate and compatible adhesive.
 - 3.5 Install voussoirs and returns to set-out.
 - 3.6 Minimise voids in adhesive tile beds.

- 4 Grout tiles.
 - 4.1 Clean and prepare joints to receive grout.
 - 4.2 Mix and apply grout.
 - 4.3 Clean and polish tiles.
 - 4.4 Protect tiles from damage during remaining construction.

- 5 Clean up.
 - 5.1 Clear work area and dispose of, reuse or recycle materials.
 - 5.2 Clean, check, maintain and store plant, tools and equipment in accordance with manufacturers' recommendations.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCWF3007A Tile curved surfaces.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCF3007 Tile curved surfaces

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCF3007A Tile curved surfaces. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by tiling:

- the surface of a circular column that is at minimum 360 millimetres in diameter and one metre high
- an archway with minimum dimensions:
 - span one metre
 - rise 200 millimetres
 - 100 millimetre returns.

All work must be performed to the standard required in the workplace and comply with Commonwealth and state/territory laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of Australian Standards for installing wall tiles
- workplace quality policies and standards for tiling
- safety requirements for installing wall tiles to curved surfaces, including:
 - job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
 - personal protective equipment (PPE)
- environmental requirements for installing tiles
- placement and design of movement joints when installing wall tiles to curved surfaces
- types and uses of materials storage and environmentally friendly waste management
- types and uses of plans, drawings and specifications for installing tiles to curved surfaces
- types and uses of tools and equipment for installing tiles to curved surfaces
- processes for the calculation of material requirements for installing tiles to curved surfaces

- techniques in installing tiles to curved surfaces:
 - preparation of structures and substrates
- types of substrates
- cutting and installing of types of tiles in common use on curved surfaces
- tiling material qualities, characteristics, preparation requirements, techniques, applications and limitations
- processes for the calculation of material requirements for tiling curved surfaces
- tiling material qualities, characteristics, preparation requirements, techniques, applications and limitations:
 - adhesive types and classifications
 - grout types, including epoxy grout.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCWF3008 Tile pools and spas

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWF3008A Tile domestic pools and spas. Change to title. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to tile a pool or spa.

It includes setting out, tiling and finishing straight, curved and tapered pool or spa wall and floor surfaces.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative or certification requirements apply to this unit in some states and territories and users are advised to check with the relevant regulatory authority.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Wall and floor tiling

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

essential outcomes.	demonstrate achievement of the element.
1 Plan and prepare to tile pools and spas.	<p>1.1 Read and interpret task work instructions and plan sequence of work.</p> <p>1.2 Select and use personal protective equipment (PPE) as required for each stage of the task.</p> <p>1.3 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.</p> <p>1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.</p> <p>1.5 Select tools and equipment, check for serviceability and report any faults.</p> <p>1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.</p>
2 Prepare substrate and pool or spa.	<p>2.1 Prepare substrate for application of render and waterproofing system.</p> <p>2.2 Apply render and or/screed to achieve smooth surface and enable specified set out.</p> <p>2.3 Apply waterproofing system to manufacturer's instructions.</p>
3 Set out and prepare for tiling.	<p>3.1 Determine levels of pool or spa and set out to exact specifications.</p> <p>3.2 Calculate pool or spa surface area and divide into sectional shapes involving whole tiles and cut tiles, considering sheet sizes of tiles and maintaining straight lines where possible.</p> <p>3.3 Mark out cross-centre lines on pool or spa surface.</p> <p>3.4 Set out curved surface to form regular shapes running down and through base.</p>

- 3.5 Determine tile sizes and shapes and set out tapered sections in highly curved and concave areas, and cut tiles.
- 3.6 Prepare specified adhesive to manufacturer's specifications.
- 4 Install tiles.
 - 4.1 Apply adhesive and lay tiles maintaining alignment to set out lines and surface of tiles.
 - 4.2 Install tiles in straight sections working with full tiles from the coping down, maintaining parallel to cross-centre lines and regular face alignment.
 - 4.3 Install tiles to pool surface, maintaining levels and curvature.
 - 4.4 Install tiles to tapered areas.
- 5 Grout tiles.
 - 5.1 Clean and prepare joints to receive grout.
 - 5.2 Mix and apply grout.
 - 5.3 Clean and polish tiles.
 - 5.4 Protect tiles from damage during remaining construction.
- 6 Clean up.
 - 6.1 Clear work area and dispose of, reuse or recycle materials.
 - 6.2 Clean, check, maintain and store plant, tools and equipment in accordance with manufacturers' recommendations.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCWF3008A Tile domestic pools and spas.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCCWF3008 Tile pools and spas

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWF3008A Tile domestic pools and spas.
Change to title. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by tiling a minimum of a coved corner of a pool or spa with coping, extending a minimum 1 metre deep and 1 metre wide in all directions with the floor falling a minimum 1:60.

All work must be performed to the standard required in the workplace and comply with Commonwealth and state/territory laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the National Construction Code (NCC) and Australian Standards requirements for tiling pools and spas
- workplace quality policies and standards for tiling pools and spas
- safety requirements for tiling pools and spas, including:
 - job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
 - safety data sheets (SDS)
 - personal protective equipment (PPE)
- environmental requirements relevant to tiling pools and spas
- types and uses of materials storage and environmentally friendly waste management
- types and uses of plans, drawings and specifications for tiling pools and spas
- types and uses of tools and equipment for tiling pools and spas
- types and uses of pool and spa tiling materials

- processes for the calculation of material requirements and set outs for tiling pools and spas
- techniques for tiling pools and spas
- processes for tiling curved and tapered surfaces
- compatible render/screed, waterproofing, adhesive and grout systems for tiling pools and spas.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCWF3009 Apply waterproofing for wall and floor tiling

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Application

This unit specifies the skills and knowledge required to apply waterproofing to internal and external wet areas ready for tiling.

It includes identification of the appropriate waterproofing system to be used, its preparation and application.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Wall and floor tiling

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare to apply waterproofing

1.1 Read and interpret task work instructions and plan sequence of work.

- for wall and floor tiling.
- 1.2 Select and use personal protective equipment (PPE) as required for each stage of the task.
 - 1.3 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Prepare for internal and external waterproofing installation.
- 2.1 Check wet area outlets and fixtures are set out to drawings and specifications.
 - 2.2 Select waterproofing systems suitable for internal and external wet area applications.
 - 2.3 Check waterproof system for compatibility with substrate material and tiling system.
 - 2.4 Check that substrates have smooth and uniform finishes with specified fall ratio to drainage points.
 - 2.5 Check substrate moisture content to comply with manufacturers' membrane recommendations.
- 3 Apply waterproofing.
- 3.1 Prepare and prime substrates for waterproofing.
 - 3.2 Install bond breakers/fillets, water stops and drainage flanges.
 - 3.3 Apply waterproofing membrane to primed surface at correct thickness and allow to cure to manufacturers' specification.
 - 3.4 Perform final inspection and completion activities.
 - 3.5 Protect waterproofing membrane.

- 4 Clean up.
 - 4.1 Clear work area and dispose of, reuse or recycle materials.
 - 4.2 Clean, check, maintain and store plant, tools and equipment in accordance with manufacturers' recommendations.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCWF3009 Apply waterproofing for wall and floor tiling

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by waterproofing an internal wet area and an external wet area ready for tiling, including:

- one shower area 1800 millimetres high, 900 millimetres x 900 millimetres wide, incorporating:
 - a niche
 - tap penetrations
 - draining connection
 - water stop/hob
- surrounds for an inserted bath with periphery barrier or water stop
 - a minimum of four square metres of balcony/deck:
 - where the structural floor levels have a step down of no less than 40 millimetres from internal to external
 - the balcony/deck has fall to the drainage point
 - detailing is provided through threshold cross-section, indicating how waterproofing would terminate at balustrade posts.

All work must be performed to the standard required in the workplace and must comply with Commonwealth and state/territory laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- requirements of Australian Standards for setting out and applying waterproofing systems for wall and floor tiling to internal and external wet areas
- types and uses of tools and equipment for applying waterproofing for wall and floor tiling

- safety requirements Standards for setting out and applying waterproofing systems for wall and floor tiling to internal and external wet areas, including:
 - job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
 - personal protective equipment (PPE)
- techniques and methods for waterproofing for wall and floor tiling
- assessment and appreciation of moisture content in substrate materials
- manufacturers' specifications for compatible substrates, waterproofing systems, tiles and tile adhesives
- characteristics and applications of:
 - adhesives
 - liquid applied:
 - water-based
 - cementitious
 - moisture-cured
 - sheet membranes:
 - butynol
 - ethylene propylene diene monomer rubber (EPDM)
 - ethylene vinyl acetate (EVA)
 - expanded polystyrene (XPS)
 - primer:
 - water based
 - epoxy
 - bond breaker/fillet materials
- construction systems and waterproofing considerations
- penetrations and outlets, and termination and flashing principles
- types and uses of materials storage and environmentally friendly waste management
- types and uses of plans, drawings and specifications for waterproofing internal and external wet areas
- requirements for different types of internal and external wet areas:
 - showers
 - laundries
 - toilets
 - bathrooms
 - balconies
- principles and considerations of water exclusion and processes for inspection and completion activities
- processes for the calculation of material requirements for applying waterproofing for wall and floor tiling
- compatible substrate and materials for waterproofing wet areas.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCWP2001 Handle waterproofing materials and components

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Change to Unit Sector.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWP2001A Handle waterproofing materials.
Change to title. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to safely handle and store waterproofing materials and components manually and mechanically, meeting all relevant requirements of Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

It includes the preparation, handling, sorting, stacking and disposal of waterproofing products, materials and components in the application of waterproofing systems.

The unit is suitable for those with basic skills and knowledge undertaking routine waterproofing tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Construction waterproofing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Plan and prepare to handle waterproofing materials and components.	1.1 Read and interpret task work instructions and plan sequence of work. 1.2 Select and use personal protective equipment (PPE) as required for each stage of the task. 1.3 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications. 1.4 Follow handling requirements of job safety analyses and safety data sheets. 1.5 Inspect work site, assess hazards and apply risk controls, including required signage and barricades. 1.6 Select tools and equipment, check for serviceability and report any faults. 1.7 Select materials required for the task.
2 Manually handle waterproofing materials.	2.1 Check materials and components for conformity to material schedule, plans and specifications. 2.2 Determine handling characteristics of waterproofing materials and components and apply safe and effective handling techniques. 2.3 Sort, store and position, and stack waterproofing materials and components. 2.4 Protect materials and components against physical damage and environmental impacts and store clear of traffic ways.
3 Prepare for mechanical handling of materials and components.	3.1 Prepare and position waterproofing materials and components for mechanical handling for the type of material/component and for the requirements of the equipment to be used.

- 3.2 Load, unload, move, locate and/or install materials and/or components safely with the assistance of mechanical lifting devices/hoists.
- 4 Handle and remove waste materials and clean up.
 - 4.1 Handle waste waterproofing materials and components in accordance with safety data sheets and regulatory requirements.
 - 4.2 Identify and locate hazardous material for separate handling.
 - 4.3 Clear work area, dispose of materials, and reuse or recycle in compliance with legislation, regulations and codes of practice.
 - 4.4 Use dust suppression procedures to minimise health risk to others.
 - 4.5 Clean, check, maintain and store tools and equipment in accordance with manufacturers' recommendations and WHS requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCWP2001A Handle waterproofing materials.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCWP2001 Handle waterproofing materials and components

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Change to Unit Sector.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWP2001A Handle waterproofing materials. Change to title. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by handling all waterproofing materials and components for three different waterproofing tasks, using both manual and mechanical handling methods.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- Australian Standards for handling waterproofing materials and components
- plans, drawings and specifications for handling waterproofing materials and components
- workplace quality requirements for handling waterproofing materials
- techniques for safely handling, moving, stacking and storing waterproofing materials and components
- safety requirements for handling waterproofing materials and components:
 - job safety analyses
 - safety data sheets for waterproofing materials
 - personal protection equipment (PPE) for handling waterproofing materials
 - use of tools and equipment for handling waterproofing materials and components:
 - manual handling equipment
 - mechanical handling equipment
 - hazard identification and risk controls associated with handling waterproofing materials and components.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCWP2002 Use waterproofing tools and equipment

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Change to Unit Sector.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWP2002A Use waterproofing tools and equipment. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to safely and effectively use tools and equipment in waterproofing, meeting all relevant requirements of Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

The unit is suitable for those with basic skills and knowledge undertaking routine waterproofing tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Construction waterproofing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare to use waterproofing tools and equipment.
 - 1.1 Read and interpret task instructions to use tools and equipment.
 - 1.2 Select and use personal protective equipment (PPE) as required for each stage of the task.
 - 1.3 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.4 Follow requirements of job safety analyses and safety data sheets.
 - 1.5 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.

- 2 Select hand and power tools and equipment.
 - 2.1 Select tools and equipment consistent with hazard minimisation and the requirements of the task.
 - 2.2 Review manufacturers' recommendations for operating and using tools and equipment.
 - 2.3 Check tools and equipment for correct function and report any faults.
 - 2.4 Check power leads for current tags and for safety and serviceability, and report any faults.
 - 2.5 Check and maintain power tool guards following manufacturers' recommendations.
 - 2.6 Follow WHS requirements for using tools and equipment.
 - 2.7 Complete pre-operational checks, including checking lubricants and water.

- 3 Use tools and equipment and clean up.
 - 3.1 Connect safe power supply to work area.
 - 3.2 Undertake start-up and shut-down processes following manufacturers' recommendations.
 - 3.3 Use tools and equipment safely and effectively in accordance with manufacturers' recommendations and

workplace requirements.

- 3.4 Switch off tools and equipment and locate safely when not in immediate use.
- 3.5 Clean, check, maintain and store tools and equipment in accordance with manufacturers' recommendations and standard work practices.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCWP2002A Use waterproofing tools and equipment.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCWP2002 Use waterproofing tools and equipment

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Change to Unit Sector.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWP2002A Use waterproofing tools and equipment. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by safely and effectively selecting and using tools and equipment for the preparation of the substrate and application of waterproofing for:

- an internal wet area
- an external wet area
- a below ground level wet area
- a remedial waterproofing project.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- requirements of Australian Standards for using waterproofing tools and equipment
- applications, limitations and methods of operation and maintenance of hand and power tools, and equipment for waterproofing tasks
- safety requirements for waterproofing tasks, including:
 - job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
 - safety data sheets (SDS)
 - personal protective equipment (PPE)
- types and uses of tools and equipment:

- angle grinders
- paint brushes and rollers
- caulking/cartridge guns
- chisels, including cold chisels
- cutting blades
- spirit, dumpy, laser and water levels
- electric drills and screwdrivers
- manual/electric hammers
- extension leads
- gas burners and torches
- measuring tapes and rules
- mixers and mixing apparatus
- moisture meters
- wet and dry film thickness gauge
- high pressure water equipment
- excavating equipment
- pumps
- heat welders
- impact drills
- injection equipment
- pumps
- compressors
- vacuum pumps
- pressure rollers
- scissors
- seam probes
- solvent applicators
- straight edges
- trowels and floats
- personal protective equipment (PPE).

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCWP2004 Prepare surfaces for waterproofing application

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Addition of points 1.6 and 1.7 to the Performance Criteria. Change to Unit Sector.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and equivalent to CPCCWP2004A Prepare surfaces for waterproofing application. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to repair and prepare different surfaces for the application of waterproofing, meeting all relevant requirements of Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

The unit is suitable for those with basic skills and knowledge undertaking routine waterproofing tasks.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Construction waterproofing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|---|
| 1 Plan and prepare to prepare surfaces for waterproofing application. | 1.1 Read and interpret work instructions and plan sequence of work. |
| | 1.2 Select and use personal protective equipment (PPE) as required for each stage of the task. |
| | 1.3 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications. |
| | 1.4 Follow requirements of job safety analyses and safety data sheets. |
| | 1.5 Inspect work site, assess hazards and apply risk controls, including required signage and barricades. |
| | 1.6 Select tools and equipment, check for serviceability and report any faults. |
| | 1.7 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use. |
| 2 Prepare work area. | 2.1 Identify area to be waterproofed from plans and specifications. |
| | 2.2 Inspect and test surface to determine appropriateness of the installation and for any contaminants, moisture or incompatible materials. |
| | 2.3 Provide ventilation in accordance with safety data sheets. |
| | 2.4 Provide run-off and environmental controls to regulatory and workplace requirements. |
| | 2.5 Clean and prepare work area for the waterproofing processes to manufacturers' specifications and site requirements. |
| 3 Prepare substrate. | 3.1 Assess surface for defects and report areas of concern. |

- 3.2 Select tools to repair/prepare the surface.
 - 3.3 Determine method of repairing surface defects, consistent with type of material surface, size of defect, compatibility of materials and specified finish.
 - 3.4 Select, prepare and apply repair materials to manufacturers' specifications.
 - 3.5 Prepare substrate for water proofing system.
 - 3.6 Clean surface area of unwanted materials to provide a uniform surface.
 - 3.7 Protect surface until the application of the waterproof membrane.
- 4 Clean up.
 - 4.1 Clear work area, dispose of materials, and reuse or recycle in compliance with legislation, regulations and codes of practice.
 - 4.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' recommendations.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCWP2004A Prepare surfaces for waterproofing application.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCWP2004 Prepare surfaces for waterproofing application

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Addition of points 1.6 and 1.7 to the Performance Criteria. Change to Unit Sector.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and equivalent to CPCWP2004A Prepare surfaces for waterproofing application. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by preparing the wall and floor surfaces for each of:

- a minimum of four square metres of internal wet area
- a minimum of four square metres of external wet area
- a minimum four square metres of below ground level wet area
- a remedial waterproofing project.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- requirements of Australian Standards for preparing surfaces for waterproofing application
- construction systems and waterproofing considerations and requirements
- safety requirements for preparing surfaces for waterproofing application, including:
 - job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
 - safety data sheets (SDS)
 - personal protective equipment (PPE)
- types and uses of plans, drawings and specifications for waterproofing application

- types and uses of tools and equipment for preparing for waterproofing application
- surfaces suitable for waterproofing application techniques
- contaminants in waterproofing processes
- levels and falls for waterproofing applications
- characteristics, compatibility and applications of waterproofing materials and adhesives
- characteristics of waterproofing preparation materials:
 - durability
 - compatibility
 - applications
 - protection requirements
- types and preparation requirements of different porous and non-porous substrates:
 - timber
 - concrete
 - masonry
 - composite boards
 - fibre cement
 - packed earth
 - metals
 - plastics.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCWP3001 Apply waterproofing system to below ground level wet areas

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Knowledge Evidence formatted for clarity. Change to Unit Sector.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and equivalent to CPCCWP3001A Apply waterproofing process to below ground level wet areas. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to apply waterproofing system to wet areas below ground level, meeting all relevant requirements of Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

It includes identification of the appropriate waterproofing system to be used, its preparation and its application.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Construction waterproofing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Plan and prepare to apply waterproofing system to below ground level wet areas.	1.1 Read and interpret work instructions and plan sequence of work.
	1.2 Select and use personal protective equipment (PPE) as required for each stage of the task.
	1.3 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
	1.4 Follow requirements of job safety analyses and safety data sheets.
	1.5 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
	1.6 Check for and report substrate and/or surface defects.
	1.7 Select tools and equipment, check for serviceability and report any faults.
	1.8 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
2 Select waterproofing system.	2.1 Identify below-ground structure to be waterproofed from drawings and specifications.
	2.2 Select compatible waterproofing systems suitable for site conditions and substrate.
3 Prepare for waterproofing installation.	3.1 Confirm site access for safety and adequacy for installation.
	3.2 Set out below-ground wet area site, and check alignment and finished levels for conformity with drawings and specifications.
	3.3 Test moisture content in substrate for compatibility with system and report defects.

- 3.4 Prepare detailing and terminations and make ready for installation of system.
 - 3.5 Check that substrate has uniform finish.
 - 3.6 Clean and prepare substrate ready for waterproofing.
- 4 Apply waterproofing.
 - 4.1 Apply waterproofing system to prepared surface to manufacturers' specifications.
 - 4.2 Detail and terminate waterproofing membrane in accordance with system requirements.
 - 4.3 Check completed below-ground waterproofing installation for conformity to manufacturers' specifications.
 - 4.4 Document movement joints for subsequent trades.
 - 4.5 Perform final inspection and completion activities.
 - 4.6 Protect waterproofing membrane.
- 5 Apply sealants to construction joints.
 - 5.1 Select sealant for compatibility with application, substrate and finishes.
 - 5.2 Install backing rods and/or release agents to prevent three-sided adhesion.
 - 5.3 Apply sealant manufacturers' specifications, tool to required finish and allow to cure.
 - 5.4 Perform final inspection and completion activities.
 - 5.5 Protect sealant, in accordance with manufacturers' specifications
- 6 Clean up.
 - 6.1 Clear work area, dispose of materials, and reuse or recycle in compliance with legislation, regulations and codes of practice.
 - 6.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' recommendations.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCWP3001A Apply waterproofing process to below ground level wet areas.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCWP3001 Apply waterproofing system to below ground level wet areas

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity. Change to Unit Sector.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWP3001A Apply waterproofing process to below ground level wet areas. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by applying waterproofing to below-ground wet areas, including:

- a liquid system to waterproof:
 - covering a minimum of two square metres of a masonry wall
 - with a strip or toe footing, including terminations
 - including at least one penetration and a wall-to-wall junction
- a sheet system to waterproof:
 - covering a minimum of two square metres of a masonry wall
 - with a strip or toe footing, including terminations
 - including at least one penetration and a wall-to-wall junction.

In doing this, the candidate must apply protection of the waterproofing.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- requirements of Australian Standards for waterproofing below-ground wet areas
- safety requirements for waterproofing below-ground wet areas, including:

- job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
- safety data sheets (SDS)
- personal protective equipment (PPE)
- manufacturers' specifications for waterproofing systems and materials
- below-ground waterproofing materials, processes and techniques:
 - external and internal vertical walls constructed below ground level
 - under slab waterproofing barriers
 - foundation work
 - lift pits
 - retaining walls
- underground residential and commercial spaces:
 - basements
 - car parks
 - storage areas
- characteristics and applications of waterproofing materials:
 - liquid:
 - bituminous
 - cementitious-based
 - injection
 - polyurethane
 - sheet:
 - bentonite composites
 - butyl
 - modified bitumen sheet
 - ethylene propylene diene monomer rubber (EPDM)
 - polyvinyl chloride (PVC)
 - waterproofing materials:
 - geotech fabric
 - protection board
 - substrate primer
 - water stops
- waterproofing considerations in construction systems:
 - compatibility of systems
 - UV stability at above ground transition
 - causes of water penetration:
 - leakage through wall and floor finishes
 - penetration at joints and junctions
 - movement from shrinkage
 - accumulated drainage

- failure of or damage to waterproofing system
- corners and terminations
- curing times of compounds and their applications
- damp-proof courses and flashings
- hydrostatic pressure
- impact of environmental conditions
- joining
- perimeter treatment:
 - pressure seals cross cavity and over flashing
 - thermal shrinkage (expansion and contraction)
- shelf life of waterproofing products
- surface applications and protection requirements
- use of bond-breakers
- use of sealants
- waste allowances
- materials storage and environmentally friendly waste management
- types and uses of plans, drawings and specifications for waterproofing below-ground wet areas
- types and uses of tools and equipment for waterproofing below-ground wet areas
- drainage and protection systems
- types and uses of materials used for below ground application
- principles and considerations of water exclusion:
 - positive
 - negative
 - blind-side membrane
- quality requirements for waterproofing below-ground wet areas
- termination and detailing for waterproofing below-ground wet areas.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCWP3002 Apply waterproofing process to internal wet areas

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Changes to Performance Evidence and Unit Sector.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCWP3002A Apply waterproofing process to internal wet areas. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to apply waterproofing to internal wet areas, meeting all relevant requirements of Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

It includes identification of the appropriate waterproofing system to be used, its preparation and its application.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Construction waterproofing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Plan and prepare to apply waterproofing process to internal wet areas.	1.1 Read and interpret work instructions and plan sequence of work. 1.2 Select and use personal protective equipment (PPE) as required for each stage of the task. 1.3 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications. 1.4 Follow requirements of job safety analyses and safety data sheets. 1.5 Inspect work site, assess hazards and apply risk controls, including required signage and barricades. 1.6 Select tools and equipment, check for serviceability and report any faults. 1.7 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
2 Select waterproofing system.	2.1 Locate internal structure to be waterproofed from drawings and specifications. 2.2 Check area for soundness and surface defects. 2.3 Select waterproofing systems suitable for and compatible with site conditions and substrate.
3 Prepare for waterproofing installation.	3.1 Set out internal wet area and check alignment, fixtures and finished levels for conformity with drawings and specifications, and report defects. 3.2 Test moisture content in substrate for compatibility with system and report defects. 3.3 Check adequacy of drainage and report defects.

- 3.4 Prepare flashings and termination seals and make ready for installation to manufacturers' specifications.
 - 3.5 Check that substrate has a uniform finish to manufacturers' instructions.
 - 3.6 Clean and prepare substrate ready for waterproofing.
 - 3.7 Prime substrate ready for waterproofing.
- 4 Apply waterproofing.
 - 4.1 Apply waterproofing system to prepared surface to manufacturers' specifications.
 - 4.2 Detail and terminate waterproofing membrane in accordance with system requirements.
 - 4.3 Check completed waterproofing installation for conformity to manufacturers' specifications.
 - 4.4 Document movement joints for subsequent trades.
 - 4.5 Perform final inspection and completion activities.
 - 4.6 Protect waterproofing membrane.
- 5 Apply sealants to construction joints.
 - 5.1 Select sealant for compatibility with application, substrate and finishes.
 - 5.2 Install backing rods and/or release agents to prevent three-sided adhesion.
 - 5.3 Apply sealant manufacturers' specifications, tool to required finish and allow to cure.
 - 5.4 Perform final inspection and completion activities.
 - 5.5 Protect sealant, in accordance with manufacturers' specifications.
- 6 Clean up.
 - 6.1 Clear work area, dispose of materials, and reuse or recycle in compliance with legislation, regulations and codes of practice.
 - 6.2 Clean, check, maintain and store tools and equipment in

accordance with manufacturers' recommendations.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCW3002A Apply waterproofing process to internal wet areas.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCWP3002 Apply waterproofing process to internal wet areas

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Performance Evidence and Unit Sector.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and equivalent to CPCCWP3002A Apply waterproofing process to internal wet areas. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by waterproofing an internal wet area, including:

- one shower area, a minimum 1800 millimetres high, 900 millimetres x 900 millimetres wide, incorporating:
 - a niche
 - tap penetrations
 - draining connection
 - water stop/hob
- surrounds for an inserted bath with periphery barrier or water stop.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- requirements of Australian Standards for waterproofing internal wet areas
- safety requirements for waterproofing internal wet areas, including:
 - job safety analyses and/or safe work method statements in accordance with Safe Work Australia Code of Practice for Construction Work or state and/or territory equivalent
 - safety data sheets (SDS)
 - personal protective equipment (PPE)
- manufacturers' specifications for waterproofing systems and materials

- assessment and appreciation of moisture content in substrate materials for waterproofing internal wet areas
- waterproofing around fixtures:
 - vanities
 - toilets
 - shower screens
 - taps
 - penetrations
- waterproofing materials, processes and systems for internal wet areas:
 - waterproofing systems/materials:
 - cementitious
 - water-based
 - moisture-cured
 - sealants
 - sprayed material membranes
 - sheet:
 - butyl
 - ethylene propylene diene monomer rubber (EPDM)
 - polyvinyl chloride (PVC)
 - decoupling
 - ancillary materials:
 - adhesives
 - sealants
 - drainage flanges
 - penetration flashings
 - water stops
- internal waterproofing materials, processes and techniques
- types and uses of materials storage and environmentally friendly waste management
- types and uses of plans, drawings and specifications for waterproofing internal wet areas
- types and uses of tools and equipment for waterproofing internal wet areas
- principles and considerations of water exclusion
- processes for the calculation of material requirements for waterproofing internal wet areas
- quality requirements for waterproofing internal wet areas
- termination and flashing principles.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Assessment Requirements for CPCCWP3003 Apply waterproofing process to external above-ground wet areas

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Change to Unit Sector.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and equivalent to CPCCWP3003A Apply waterproofing process to external wet areas. Change to title. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by:

- waterproofing:
 - a minimum four square metres of a balcony/deck:
 - where the structural floor levels have a step down of no less than 40 millimetres from internal to external
 - the balcony/deck has fall to the drainage point
 - detailing is provided through threshold cross-section, indicating how waterproofing would terminate at balustrade posts
 - a minimum 600 millimetres x 600 millimetres x 300 millimetres high planter box
- installing sealant to a minimum 900 millimetres long x 25 millimetres wide external above-ground construction joint for waterproofing.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- requirements of Australian Standards for waterproofing above-ground external wet areas
- safety requirements for waterproofing above-ground external wet areas, including:
 - job safety analyses and/or safe work method statements in accordance with Safe Work Australia Code of Practice for Construction Work or state and/or territory equivalent

- safety data sheets (SDS)
- personal protective equipment (PPE)
- manufacturers' specifications for waterproofing systems and materials
- waterproofing around fixtures:
 - balustrades
 - posts
 - service penetrations
 - drainage angles and drip moulds
 - skylights
- assessment and appreciation of moisture content in substrate materials for waterproofing above-ground external wet areas
- waterproofing materials, processes and systems for external wet areas:
 - waterproofing systems/materials:
 - water-based
 - cementitious
 - moisture-cured
 - sprayed material membranes
 - sheet:
 - butyl
 - ethylene propylene diene monomer rubber (EPDM)
 - polyvinyl chloride (PVC)
 - decoupling
 - ancillary materials:
 - adhesives
 - drainage cell
 - geotech fabric
 - protection board
 - sealants
 - drainage flanges
 - penetration flashings
 - water stops
- application of sealants:
 - silicons
 - polyurethanes
 - modified silanes
 - SPUR
- methods for avoiding three-sided adhesion:
 - backing rods
 - release tapes

- characteristics and applications of waterproofing materials and adhesives for above-ground external wet areas
- construction systems and waterproofing considerations for external above-ground wet areas:
 - compatibility of systems
 - design principles
 - drainage requirements
 - hydrostatic pressures
 - structural movement
 - substrate type and condition
 - environmental factors:
 - substrate
 - materials
 - ambient temperatures
 - allowing water flow
 - slope, fall and grade of surfaces
 - water run-off and impact on adjoining property
 - waterproofing protection
- types and uses of materials storage and environmentally friendly waste management
- types and uses of plans, drawings and specifications for waterproofing above-ground external wet areas
- types and uses of tools and equipment for waterproofing external above-ground wet areas
- principles and considerations of water exclusion
- processes for the calculation of material requirements for waterproofing external above-ground wet areas
- quality requirements for waterproofing external above-ground wet areas
- termination, cross cavity and overflashing requirements
- testing procedures for waterproof membrane systems.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCWP3004 Apply waterproofing remedial processes

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Change to Unit Sector.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and equivalent to CPCCWP3004A Apply waterproofing remedial processes. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to apply remedial waterproofing processes to wet areas, meeting all relevant requirements of Australian Standards, work health and safety (WHS) requirements, and Commonwealth and state or territory legislation.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Construction waterproofing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare to apply waterproofing remedial processes.
 - 1.1 Read and interpret work instructions and plan sequence of work.
 - 1.2 Select and use personal protective equipment (PPE) as required for each stage of the task.
 - 1.3 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and report any faults.

- 2 Select waterproofing remedial process and techniques.
 - 2.1 Inspect and analyse defect that requires application of waterproofing remedial processes.
 - 2.2 Select techniques and materials for the waterproofing remedial process in accordance with manufacturers' specifications.

- 3 Apply waterproofing remedial process and techniques.
 - 3.1 Prepare materials for remedial process to manufacturers' recommendations.
 - 3.2 Prepare and set up application equipment.
 - 3.3 Prepare substrate for application.
 - 3.4 Apply remedial waterproofing process to manufacturers' recommendations.
 - 3.5 Perform tests to confirm effectiveness of repair.

- 4 Clean up.
 - 4.1 Clear work area, dispose of materials, and reuse or recycle in compliance with legislation, regulations and codes of practice.
 - 4.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' recommendations.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCWP3004A Apply waterproofing remedial processes.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCCWP3004 Apply waterproofing remedial processes

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Change to Unit Sector.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and equivalent to CPCCWP3004A Apply waterproofing remedial processes. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by:

- analysing defects that require application of waterproofing remedial systems in each of the following:
 - a crack in concrete or masonry of a minimum 900 millimetres
 - a cracked concrete or masonry floor/wall junction of a minimum 900 millimetres
 - rising damp in a minimum 900 millimetre length of concrete/masonry wall
 - a live leak in concrete or masonry
 - a damaged waterproofing membrane
- selecting waterproofing remedial techniques for each of the above waterproofing remedial processes
- repairing a minimum of two of the above defects using at least three different remedial waterproofing techniques.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- requirements of Australian Standards for applying waterproofing remedial processes
- safety requirements for applying waterproofing remedial processes, including:

- job safety analyses and/or safe work method statements in accordance with Safe Work Australia Code of Practice for Construction Work or state and/or territory equivalent
- safety data sheets (SDS)
- personal protective equipment (PPE)
- tests of effectiveness of remedial waterproofing:
 - water test
 - flood test
 - moisture readings
 - thermal survey
 - visual inspection
- manufacturers' specifications for waterproofing systems and materials
- remedial waterproofing techniques:
 - remedial injection epoxies or urethanes
 - hydraulic plug or seals
 - cement crystallisation or hydrostatic coating methods
 - concrete repair systems
 - damp-proof course injections
 - application of densifiers
 - remediation to damaged membrane systems
- characteristics and applications of remedial waterproofing materials:
 - cementitious products
 - epoxies
 - expanding polyurethane foam
 - polyurethane resin systems
 - silicon, silane and siloxane products
 - single and dual component resins
- construction systems and waterproofing considerations:
 - barriers to stop rising damp
 - concrete crystallisation/injection
 - concrete repair injection hydrostatic barrier coatings
 - membranes
 - saturants on an external wall (in case of flood)
- types and uses of materials storage and environmentally friendly waste management
- technical specifications for applying waterproofing remediation
- types and uses of tools and equipment
- principles and considerations of water exclusion
- quality requirements for waterproofing remediation.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCWP3005 Assess construction waterproofing processes

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Change to Unit Sector.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCWP2003A Prepare for construction waterproofing process. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to assess waterproofing to differing types of wet areas in varying building situations, meeting all relevant requirements of Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Construction waterproofing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|--|-----|---|
| 1 | Plan and prepare to assess construction waterproofing process. | 1.1 | Read and interpret work instructions. |
| | | 1.2 | Select and use personal protective equipment (PPE). |
| | | 1.3 | Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications. |
| | | 1.4 | Follow requirements of job safety analyses and safety data sheets. |
| 2 | Assess waterproofing processes and materials. | 2.1 | Assess selected waterproofing system for installation technique, product suitability, compatibility with substrate and required finishes, and conformity to codes and specifications. |
| | | 2.2 | Assess potential for water penetration, consequences of water penetration, and methods of water exclusion. |
| | | 2.3 | Determine method for installation of waterproofing. |
| | | 2.4 | Determine potential faults, contingencies and mitigation activities. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCWP2003A Prepare for construction waterproofing process

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCWP3005 Assess construction waterproofing processes

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Change to Unit Sector.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCWP2003A Prepare for construction waterproofing process. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by assessing construction waterproofing processes for each of the following:

- an internal wet area
- an external wet area
- a below ground level wet area
- a remedial waterproofing project.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- requirements of Australian Standards for assessing and preparing for construction waterproofing process
- safety requirements relevant to handling wall and floor tiling materials, including:
 - job safety analyses and/or safe work method statements in accordance with Safe Work Australia *Code of Practice for Construction Work* or state and/or territory equivalent
 - safety data sheets (SDS)
 - personal protective equipment (PPE)
 - handling of hazardous materials
- characteristics and applications of waterproofing materials and adhesives

- construction systems and waterproofing considerations and requirements
- types and uses of materials storage and environmentally-friendly waste management
- types and uses of plans, drawings and specifications for construction waterproofing
- types and uses of tools and equipment for construction waterproofing
- preparation for waterproofing processes and waterproofing techniques
- principles and considerations of water exclusion
- quality requirements for construction waterproofing
- waterproofing process materials:
 - durability
 - compatibility
 - applications
 - protection requirements.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCMCM8001 Plan and manage complex projects

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 1.

Replaces superseded equivalent CPCMCM7001A Plan and manage complex projects.

Application

This unit of competency specifies the outcomes required to identify, plan, control and finalise complex projects.

The unit addresses the management of projects of significant scope and duration, for example developing and implementing a major new program or service, or constructing or designing a significant new piece of infrastructure.

The environment in which the project is managed is also complex and involves managing a project team which typically includes staff with diverse skill sets. Managing complex projects also involves significant reporting requirements.

This unit supports the attainment of skills and knowledge required for competent workplace performance in organisations of all sizes. It will support senior managers in all sectors of the construction industry who must exercise the skills needed to ensure projects are planned and managed effectively in order to deliver the required outcomes on time and within budget.

The unit may be contextualised to suit the strategic context in which the unit is applied, which may be across all sectors in the construction industry provided the essential outcomes of the unit are not changed.

No licensing, legislative, accreditation, regulatory or certification requirements apply to this unit at the time of endorsement.

| 1. Identify strategic and operational needs of the project during planning phase. | <ul style="list-style-type: none"> 1.1. Project's strategic context and operational requirements are identified and analysed. 1.2. Organisation's strategic and business plans and their output requirements are identified and analysed. 1.3. Client requirements and impact of <i>legislation and industry codes and standards</i> are identified and fully explored. 1.4. <i>Risk management analysis</i> is conducted and risk management plan is developed and documented. |
| 2. Prepare project plan. | <ul style="list-style-type: none"> 2.1. Precise <i>specifications and terms of reference</i> for the project are defined and documented. 2.2. Project budget is developed, specified to a level that can be used for managing sub-tasks, and documented. 2.3. Skills needed for successful completion of project are defined. 2.4. Physical and other resources required to support project are defined and documented and processes to secure them are commenced. 2.5. Timelines, schedules and critical path for the project are developed and documented, taking into consideration contingencies and time slippages. |

- 2.6. Reporting and communication strategy or process is defined and documented.
3. Assemble project team and commence work.
 - 3.1. Appropriate project team members are secured and briefed regarding the project, their roles, levels of delegated responsibility, and outcomes to be achieved.
 - 3.2. Communication processes are put in place to coordinate work and inform team members of progress.
 - 3.3. Clear reporting processes for team members are communicated.
4. Manage project.
 - 4.1. Project progress is monitored according to project plan requirements, using appropriate *project management tools* and methodologies.
 - 4.2. Team members are supported and their output is managed against key performance indicators identified in project plan.
 - 4.3. Corrections, changes and additions are made to project plan in light of changing circumstances to ensure project aims and outcomes are met.
 - 4.4. Resourcing to support project is monitored and corrections are made to reflect changing circumstances.
 - 4.5. Reporting of overall project progress is made to senior management or client as required and in line with project plan.
5. Finalise project.
 - 5.1. Required handover to staff members responsible for ongoing implementation or maintenance of project products or services is conducted efficiently, effectively and in line with organisational procedures.
 - 5.2. Project team members and relevant stakeholders are debriefed about conduct of project and outcomes achieved.
 - 5.3. Report is prepared analysing strengths and weaknesses of project plan and conduct of project.

6. Use project to improve future processes.
- 6.1. Learning outcomes are identified and analysed to inform future complex projects.
- 6.2. Strategic impact of project is considered and fed into the organisation's ongoing strategic planning processes.

Foundation Skills

This section describes core skills that are essential to performance and not explicit in the performance criteria. Employment skills essential to performance are explicit in the performance criteria of this unit of competency.

Skill	Performance feature
Learning skills to:	<ul style="list-style-type: none">engage in processes designed to research and update own knowledge of products, software systems and technology used in managing complex projectsreflect on and critically analyse experiences of planning and managing complex projects to determine training and development required to improve future performance of self, others and the organisation.
Numeracy skills to:	<ul style="list-style-type: none">represent and monitor projected resource costs in the form of budgets over the life of a complex projectestimate, monitor and manage the allocation of own time on project tasks and supervise the use of others' time to allocated project tasks.
Oral communication skills to:	<ul style="list-style-type: none">liaise with clients and other stakeholders on project progress using appropriate vocabulary and technical terminology.
Reading skills to:	<ul style="list-style-type: none">interpret and engage in analysis of documentation, including legislation, drawings, plans and specifications.
Writing skills to:	<ul style="list-style-type: none">organise and present data in reports and strategy documents that respond to complex project requirements and include project plans and communication strategies involving analysis and recommendations.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Legislation and industry codes and standards must include:

- Australian and international standards applicable to the project
- building Acts and regulations
- infrastructure supply regulations
- National Construction Code.

Risk management analysis must include:

- analysing potential for workers' compensation claims
- assessing public liability requirements
- establishing or confirming business continuity plans
- considering changing government policy or funding arrangements
- identifying environmental obligations
- identifying and mitigating work health and safety risks
- identifying property development and maintenance requirements.

Specifications and terms of reference must include:

- defining project aims
- describing outcomes to be achieved using clear metrics
- describing all stakeholders
- describing project parameters and scope of operations.

Project management tools must include:

- critical path analysis
- Gantt or PERT charts or other industry-accepted project management tools
- in-house or proprietary software
- scheduling and reporting templates.

Unit Mapping Information

CPCMCM7001A Plan and manage complex projects

Assessment Requirements for CPCMCM8001 Plan and manage complex projects

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 1.

Replaces superseded equivalent CPCMCM7001A Plan and manage complex projects.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. The person must successfully design, implement, manage and finalise two complex projects.

For each project, the person must produce a detailed project plan outlining a process and methodology for the planning, scheduling and sourcing of human and other resources. Each plan must also:

- specify how the project team members will be resourced, assembled and briefed on roles, responsibilities and deliverables
- outline processes for managing and communicating with a team of diverse skills and roles, including:
 - architects
 - lead contractors
 - mechanical engineers
 - hydraulic engineers
 - electrical engineers
- specify a process for project reporting that details frequency and format of reports
- ensure the project aligns to and supports organisational strategies and requirements.

For each project, the person must identify:

- at least one key learning outcome from the project
- where this learning could refine and improve future complex project management processes.

Knowledge Evidence

A person demonstrating competency in this unit must be able to demonstrate knowledge of:

- processes and practices involved in developing budgets
- principles of team leadership and human resource management relating to managing others working on a complex project
- processes involved in risk management, risk analysis and planning
- legislation, codes and standards relevant to the specific project:
 - Australian standards
 - building Acts and regulations
 - infrastructure supply regulations
 - international standards
 - the National Construction Code
- reporting mechanisms relevant to updating and informing clients and other stakeholders of project progress
- roles and responsibilities of relevant building project personnel
- sustainability requirements relevant to the project:
 - energy conservation
 - water conservation
- tools and models of project management used in managing complex construction projects.

Assessment Conditions

Assessment must be conducted in the workplace or a close simulation of the workplace.

Suitable assessment of performance would require:

- equipment:
 - computer with internet and email access
 - proprietary software with spreadsheet and word processing functionality and project management capabilities
- materials:
 - current legislation, codes and standards relevant to the specific project and the jurisdiction in which the project work is taking place, including:
 - building Acts and regulations
 - infrastructure supply regulations
 - Australian standards
 - international standards
 - project documentation, including design or project briefs, drawings, specifications, construction schedules and other supporting documents
 - research resources, including product information and data.

Assessor requirements

Assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

CPCMCM8002 Manage the quality of projects and processes

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 1.

Replaces superseded equivalent CPCMCM7002A Manage the quality of projects and processes.

Application

This unit of competency specifies the outcomes required to establish performance measures of projects and processes, and review and improve their management and accountability.

The unit covers the need for quality control and responsibility for providing service outcomes to customers. Managing organisational change is a major focus of the unit.

This unit supports the attainment of skills and knowledge required for competent workplace performance in organisations of all sizes. It will support senior managers with responsibility in all sectors.

The unit may be contextualised to the specific needs and knowledge and skill requirements of all industries, provided the essential outcomes of the unit are not changed.

No licensing, legislative, accreditation, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-requisite Unit

Nil

Competency Field

Management

Unit Sector

Common

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.

- | | | |
|----|--|---|
| 1. | Establish parameters for delivery of a quality project or process. | <p>1.1. <i>Concepts, principles and tools of quality management and continuous improvement</i> are researched and analysed.</p> <p>1.2. Extensive research is undertaken to determine current and future service requirements of customers.</p> <p>1.3. Recommended or anticipated changes to services and their processes are communicated to senior management for review and negotiated with stakeholders.</p> |
| 2. | Establish and implement performance measurement strategies. | <p>2.1. Financial and <i>non-financial performance indicators</i> and evaluation criteria for specific project are established and agreed upon with relevant stakeholders and communicated to relevant staff and service providers.</p> <p>2.2. Appropriate financial and non-financial benchmarks are determined and agreed to with relevant stakeholders.</p> <p>2.3. Project and services are monitored to ensure they meet identified needs and service expectations.</p> <p>2.4. Feedback from customers is communicated to relevant areas in the organisation and incorporated into performance reviews.</p> <p>2.5. Trends in <i>customer or stakeholder satisfaction</i> and service use are monitored to identify opportunities for improvements to services or processes.</p> <p>2.6. Issues of responsiveness and accessibility are reviewed and reported.</p> |
| 3. | Facilitate | <p>3.1. Project management systems, <i>reporting mechanisms</i></p> |

- accountability for project and service outcomes.
- and processes are established and communicated to staff and service providers.
- 3.2. Results of service reviews against desired targets are reported according to standard organisational procedures.
- 3.3. Tenders and contracted works are regularly monitored and adverse variations in established performance targets are immediately addressed.
- 3.4. Quality and efficiency of operational processes are measured and documented.
- 3.5. Service shortfalls are analysed and resolved in line with organisational policies and procedures, including customer service standards.
4. Develop and implement change management processes.
- 4.1. Need for change in organisational processes and work culture to support project or service delivery is identified.
- 4.2. Change process to address the need is identified, developed and implemented.
- 4.3. Staff members are informed of implemented changes and provided with training, coaching and other assistance as required.
- 4.4. Appropriate methods are employed to gain commitment for change.
- 4.5. Effectiveness and benefits of implemented changes are monitored and reported.
- 4.6. Outcomes of improvements are reviewed and shared across the organisation to support further learning and continuous improvement.

Foundation Skills

This section describes core skills that are essential to performance and not explicit in the performance criteria. Employment skills essential to performance are explicit in the performance criteria of this unit of competency.

Skill	Performance feature
Learning skills to:	<ul style="list-style-type: none"> • attempt complex tasks requiring sophisticated conceptualisation and analysis and employ lateral thinking and problem solving strategies • use formal approaches to critically reflect, gain insights and learn from project outcomes, refine and improve future processes, and consider and respond to performance feedback from stakeholders.
Numeracy skills to:	<ul style="list-style-type: none"> • extract, interpret and comprehend a range of mathematical information to calculate benchmarks, analyse financial reports, and monitor the performance of the project or process.
Oral communication skills to:	<ul style="list-style-type: none"> • liaise with management and other stakeholders on project progress using appropriate vocabulary.
Reading skills to:	<ul style="list-style-type: none"> • synthesise and critically evaluate information from a range of sometimes complex sources, including organisational systems, processes and activities to support the implementation of a quality project or process.
Writing skills to:	<ul style="list-style-type: none"> • collate and organise data to produce reports on customer service review and implementation success.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<p><i>Concepts, principles and tools of quality management and continuous improvement</i> must include at least one of the following:</p>	<ul style="list-style-type: none"> • benchmarking • continuous improvement methodologies • failure mode and effects analysis • ISO 9000 Quality Management Systems and processes for certification • lean transformation processes • total quality management.
<p><i>Non-financial</i></p>	<ul style="list-style-type: none"> • completion times for projects measured against project plans

performance indicators must include at least two of the following:

- customer satisfaction ratings
- demonstrated compliance of work with codes and standards
- industry awards received
- number of business referrals
- performance in industry benchmarking studies
- volume of repeat business.

Methods of measuring **customer or stakeholder satisfaction** must include:

- gap analysis approach
- customer satisfaction monitoring approach, such as:
 - questionnaires
 - face-to-face interviews
- customer-focused key performance indicators.

Reporting mechanisms must include:

- financial and non-financial system reports, including budgets
- informal reporting methods, including:
 - regular team meetings
 - departmental meetings.

Assessment Requirements for CPCMC8002 Manage the quality of projects and processes

Modification History

Release 1.

This version first released with CPC Construction, Plumbing and Services Training Package Version 1.

Replaces superseded equivalent CPCMC7002A Manage the quality of projects and processes.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. The person must manage the development and delivery of two projects:

- one project requiring the person to review a proposed new process in an organisation or department
- one project requiring the person to oversee the development and delivery of quality outcomes.

For each project, the person must:

- provide a detailed overview of the project and identify a set of performance measures and evaluation criteria for the project
- select or develop appropriate reporting mechanisms which will assist in identifying project progress against agreed quality and service levels
- develop strategies to communicate the change to stakeholders
- monitor project progress against agreed performance measures and evaluation criteria
- outline key learning outcomes from the project that will enhance or contribute to the implementation of future projects.

For each project the person must also develop a change management process that identifies:

- changes to be introduced
- key stakeholders who will be affected by the change
- a communication strategy for informing all stakeholders throughout the implementation phases of the project
- strategies for training or mentoring stakeholders during the implementation phases of the project.

Knowledge Evidence

A person demonstrating competency in this unit must be able to demonstrate knowledge of:

- principles of change management processes and their application
- principles of quality management and continuous improvement processes
- organisational policies and procedures:
 - customer service standards
 - procedures for reporting on review of services
- functions and limitations of relevant project management software.

Assessment Conditions

Assessment must be conducted in the workplace or a close simulation of the workplace.

Suitable assessment of performance would require:

- equipment:
 - computer with internet and email access
 - software that enables the development of spreadsheets and word processing
- materials:
 - project documentation, including project briefs, drawings, specifications, construction schedules and other relevant supporting documentation.

Assessor requirements

Assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

CPCPCM2039 Carry out interactive workplace communication

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPCM2039A Carry out interactive workplace communication. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to carry out effective communication techniques underpinning work in the plumbing and services industry.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan workplace communication.	1.1 Identify information and/or instructions to be communicated and received.
	1.2 Identify workplace context and personnel with whom to communicate.
	1.3 Identify and select suitable forms of communication and method(s) for workplace context.
2 Apply oral	2.1 Communicate clearly and orally using language and

- communication. method consistent with workplace context and procedures.
- 2.2 Adjust oral communication delivery where intent of communication was not received correctly.
- 2.3 Confirm communication is received by recipient as intended.
- 3 Apply non-verbal communication.
- 3.1 Communicate non-verbally using body language and gestures consistent with workplace context and procedures.
- 3.2 Adjust non-verbal communication delivery where intent of communication was not received correctly.
- 3.3 Use visual communication that follows accepted industry practice or social convention in accordance with workplace context and procedures.
- 3.4 Confirm communications are received by recipient as intended.
- 4 Use written communication.
- 4.1 Identify workplace activities requiring written communication to be applied.
- 4.2 Read and interpret workplace information or requirements from relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
- 4.3 Identify and apply regulatory and work activity signage in accordance with workplace procedures.
- 4.4 Complete regulatory authorities' and workplace documentation in accordance with workplace procedures.
- 4.5 Record and report work activities in accordance with workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPCM2039A Carry out interactive workplace communication.

Links

Assessment Requirements for CPCPCM2039 Carry out interactive workplace communication

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPCM2039A Carry out interactive workplace communication. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- communicating with others orally and non-verbally in a clear and accurate manner
- reading and interpreting workplace procedures, job instructions, job processes and equipment and operator instructions
- applying work activity signage in accordance with regulatory and workplace requirements
- completing regulatory and workplace documentation.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- types of communication
- non-verbal communication
- standardised signage
- visual signalling procedures
- types of workplace documentation
- how instructions are conveyed in the workplace
- how work schedules, charts, bulletins and memos are used
- industry-relevant technology to support oral communication
- industry terminology
- job safety analyses (JSAs) and safe work method statements (SWMSs).

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPCM2040 Read plans, calculate quantities and mark out materials

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is not equivalent to CPCPCM2040A Read plans and calculate plumbing quantities, and CPCPCM2050A Mark out materials. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to read and interpret construction and plumbing plans and specifications and obtain dimensions to calculate material quantities and mark out materials.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

CPCPCM3024 Prepare simple drawings

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|-------------------------------|--|
| 1 Establish job requirements. | 1.1 Access, read and determine requirements from plumbing plans and specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements. |
|-------------------------------|--|

- 1.2 Obtain, interpret and follow organisational work health and safety (WHS) and environmental requirements.
 - 1.3 Identify amendments to ensure plans and specifications are the most current version.
 - 1.4 Confirm drawing conventions used and their application.
 - 1.5 Select appropriate tools and equipment.
 - 1.6 Determine type of materials.
 - 1.7 Calculate dimensions and material quantities.
 - 1.8 Document materials list to workplace requirements.
- 2 Mark out job.
- 2.1 Read and determine job dimensions from relevant plans and specifications.
 - 2.2 Mark out materials using appropriate marking tools.
 - 2.3 Check markings for accuracy and compliance with planned dimensions.
- 3 Clean up.
- 3.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state/territory legislation and workplace policies and procedures.
 - 3.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is not equivalent to CPCPCM2040A Read plans and calculate plumbing quantities, and CPCPCM2050A Mark out materials.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPCM2040 Read plans, calculate quantities and mark out materials

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is not equivalent to CPCPCM2040A Read plans and calculate plumbing quantities, and CPCPCM2050A Mark out materials.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by referring to plans and specifications for at least three different plumbing or plumbing services tasks to:

- develop a full materials and specifications list, including lengths, diameters and quantities
- transfer requirements from the plans to accurately mark out materials.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- types of plans and their purpose
- parts of a plan and their function
- conventions and scales used in plans and specifications
- calculation principles used in the plumbing sector:
 - converting millimetres to metres
 - converting metres to millimetres
 - length
 - perimeter
 - circumference
 - area
 - volume
 - pressure
 - addition, subtraction, multiplication and division
 - ratio
 - percentage
- how to access relevant information, including codes and standards

- tools, materials and equipment used to read plans, calculate quantities and mark out materials
- work health and safety (WHS) requirements for reading plans, calculating quantities and marking out materials.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

CPCPCM2041 Work effectively in the plumbing services sector

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPCM2041A Work effectively in the plumbing services sector. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to comply with effective workplace performance within the plumbing and services sector.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Comply with work requirements.	1.1 Identify plumbing and services sector employment conditions, responsibilities and obligations.
	1.2 Access the requirements of relevant plumbing legislation, regulations, standards and codes of practice through a variety of mediums.
	1.3 Participate in identifying and pursuing own development needs and processes.
	1.4 Follow and apply the specific work health and safety (WHS) requirements of the plumbing industry when

- preparing for and undertaking work activities.
- 1.5 Follow and apply workplace quality assurance and sustainability principles and concept requirements.
- 2 Work in a team.
- 2.1 Identify workplace goals and contributions to be made by teams.
- 2.2 Identify and agree on individual contributions to teamwork activities.
- 2.3 Organise and accept responsibility for own workload.
- 2.4 Complete work activities to the standard expected in the workplace.
- 2.5 Report safety risks in the work area based on identified hazards to designated personnel.
- 2.6 Review team activities periodically with the team according to workplace procedures.
- 2.7 Implement team activity review findings to facilitate effective work practices.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPCM2041A Work effectively in the plumbing services sector.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPCM2041 Work effectively in the plumbing services sector

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPCM2041A Work effectively in the plumbing services sector. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- complying with relevant work health and safety (WHS) requirements
- identifying relevant standards and industry codes of practice in the plumbing services sector
- applying the relevant regulatory requirements within the plumbing services industry
- working collaboratively as part of the plumbing services workplace processes
- identifying actions to manage workplace and personal conflict situations.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- basic job and skill analysis techniques
- workplace meeting procedures
- plumbing and services streams and career structure and requirements, including business opportunities and requirements
- regulatory and legislative standards and codes of conduct pertaining to the plumbing services sector
- relevant industrial awards and agreements
- relevant legislative provisions covering discrimination and equal employment opportunity
- site and teamwork structure and methods
- important contribution of the plumbing and services sector to public health and safety
- employment awards and conditions and their source
- types of workplace codes of conduct
- safe work practices in a normal working environment.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPCM2043 Carry out WHS requirements

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Knowledge Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPCM2043A Carry out WHS requirements. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to carry out work health and safety (WHS) requirements in a plumbing and services work environment.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Participate in workplace induction procedures. | 1.1 Familiarise self on workplace induction procedures. |
| | 1.2 Identify location of emergency equipment, designated personnel and current workplace emergency and evacuation procedures. |

- 2 Plan and prepare for safe work practices.
 - 2.1 Identify and apply safe work practices when preparing for and undertaking work process.
 - 2.2 Select personal protective equipment (PPE) and ensure it is correctly fitted and used according to the requirements of the job.
 - 2.3 Select tools and equipment consistent with safe work requirements and check for serviceability, reporting any faults.
 - 2.4 Determine and erect required barricades, hoardings and signage at job location where required.
 - 2.5 Identify and apply relevant safety data sheets (SDSs), job safety analyses (JSAs), safe work method statements (SWMSs) and standard operating procedures (SOPs).

- 3 Identify and assess risks.
 - 3.1 Identify, assess and report hazards in the work area to designated personnel.
 - 3.2 Report safety risks in the work area based on identified hazards to designated personnel.
 - 3.3 Follow safe work practices, duty of care requirements and safe work instructions for controlling risks.
 - 3.4 Contribute to WHS, hazard, accident or incident reports in accordance with workplace procedures, Australian government and state/territory WHS legislation, and relevant information.

- 4 Identify hazardous materials and other hazards on work sites.
 - 4.1 Identify and apply appropriate procedures to handle and use hazardous materials on a work site in accordance with legislative requirements and workplace policies and procedures.
 - 4.2 Apply measures for controlling risks and construction hazards effectively and immediately.
 - 4.3 Use appropriate signs and symbols to secure hazardous materials that have safety implications for self and other workers immediately after they are identified.

- 5 Apply safe work practices.
- 5.1 Carry out tasks in a manner that is safe for operators, other personnel and the general community, in accordance with legislative requirements and workplace policies and procedures.
 - 5.2 Use fit-for-purpose tools, plant and equipment in accordance with manufacturers' specifications, work site regulations and Australian Standards.
 - 5.3 Follow procedures and report any hazards, incidents and injuries to designated personnel.
 - 5.4 Identify and follow requirements of work site safety signs and symbols.
 - 5.5 Clear and maintain work site area to prevent and protect self and others from incidents and accidents and to meet environmental requirements.
 - 5.6 Follow workplace emergency procedures where required.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPCM2043A Carry out WHS requirements.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPCM2043 Carry out WHS requirements

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Knowledge Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPCM2043A Carry out WHS requirements. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- applying work health and safety (WHS) requirements, policies and procedures on three separate and different occasions in the plumbing and services work environment.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- procedures and policies for identifying and reporting hazards, safety risks and hazardous materials, including asbestos and silica in the workplace
- job safety analyses (JSAs) and safe work method statements (SWMSs)
- safe manual handling techniques
- purpose and application of safety data sheets (SDSs) when working with different materials
- relevant legislation, regulations and workplace requirements relating to WHS, including hazard reduction and personal safety
- the requirements for working in confined spaces
- the requirements for working at heights, including on roofs
- electrical safety requirements, including but not limited to:
 - tag and test
 - residual current devices
 - equipotential (electrical) bonding
 - electrical earthing
- risk assessment processes
- safe work practices in a normal working environment:

- handling of materials
- hand tools
- power tools
- hazard control procedures and procedures for handling hazardous materials and substances
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- selection and use of firefighting equipment
- first aid procedures
- workplace induction requirements
- workplace response to emergencies.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPCM2045 Handle and store plumbing materials

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Correction to the Application.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPCM2045A Handle and store plumbing materials. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to safely handle and store plumbing materials and identify and address environmental concerns and associated hazards, including the disposal of waste.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|--|
| 1 Prepare for work. | 1.1 Obtain, interpret and apply workplace, work health and safety (WHS), environmental and waste management requirements. |
| | 1.2 Select tools and equipment for handling and storing materials, goods and non-hazardous waste and liquids consistent with safe work requirements. |

- 1.3 Check serviceability of selected tools and equipment and report any faults.
 - 1.4 Select personal protective equipment (PPE) and ensure it is correctly fitted and used according to the requirements of the job.
- 2 Manage storage of materials.
 - 2.1 Identify and store materials clear of traffic ways, for ease of identification and retrieval and prevention of damage and cross-contamination according to legislative, manufacturer's specifications and workplace requirements.
 - 2.2 Erect signage and barricades to isolate stored materials from workplace traffic or access.
- 3 Store and transport materials.
 - 3.1 Store and transport materials safely according to safety data sheets (SDS) and statutory and regulatory authorities' requirements.
 - 3.2 Identify hazardous material for separate storage and transport including appropriate signage, markings and safety precautions.
- 4 Clean up.
 - 4.1 Clear the work area and dispose of spilt liquids and waste material and reuse or recycle materials in accordance with environmental and workplace requirements.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.
 - 4.3 Record and report relevant safety information in accordance with workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPCM2045A Handle and store plumbing materials.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPCM2045 Handle and store plumbing materials

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Correction to the Application.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPCM2045A Handle and store plumbing materials. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- applying workplace procedures for the storing and stacking of materials, components, non-hazardous liquids, and flammable liquids and materials in a workshop or worksite
- arranging vehicle for the carriage of plumbing materials.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- categories of materials and their safe handling, storage and transport requirements
- air and water contamination
- job safety analyses (JSAs) and safe work method statements (SWMSs)
- purpose and application of safety data sheets (SDSs) when working with different materials
- work health and safety (WHS) and environmental requirements
- workplace hazard reporting and hazard handling procedures
- workplace response to emergencies.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPCM2046 Use plumbing hand and power tools

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is not equivalent to CPCPCM2046A Use plumbing hand and power tools. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to use commonly used hand and power tools in plumbing work applications.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|--|-----|---|
| 1 Prepare to use hand and power tools. | 1.1 | Identify, obtain and interpret organisational work health and safety (WHS) and environmental requirements. |
| | 1.2 | Identify power sources and access to power supply. |
| | 1.3 | Select appropriate personal protective equipment (PPE) and ensure it is correctly fitted and used according to the requirements of the job. |
| | 1.4 | Identify electrical safety requirements. |

- 2 Use hand tools for work.
 - 2.1 Check hand tools for serviceability and safety and report any faults to supervisor according to workplace requirements.
 - 2.2 Select hand tools consistent with the needs of the job.
 - 2.3 Select relevant equipment to secure, position or support material for hand tool application.
 - 2.4 Use hand tools safely and effectively for the application according to manufacturer's specifications and workplace procedures.
 - 2.5 Position and secure relevant material for hand tool application.
- 3 Use power tools for work.
 - 3.1 Select power tools consistent with the needs of the job according to workplace procedures.
 - 3.2 Check power tools for tags, serviceability and safety according to WHS requirements and report any faults to supervisor according to workplace procedures.
 - 3.3 Select relevant equipment to secure, position or support material for power tool application.
 - 3.4 Use power tools safely and effectively for application according to manufacturer's specifications and workplace procedures.
 - 3.5 Store power tools safely when not in use according to workplace procedures.
- 4 Clean up.
 - 4.1 Clear the work area and dispose of waste material, reuse or recycle materials in accordance with environmental and workplace requirements.
 - 4.2 Clean tools and equipment, check for serviceability reporting any damage and store and secure according to manufacturer recommendations and workplace procedures.
 - 4.3 Record and report relevant safety information in accordance with workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is non-equivalent to CPCPCM2046A Use plumbing hand and power tools.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPCM2046 Use plumbing hand and power tools

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is not equivalent to CPCPCM2046A Use plumbing hand and power tools. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- using four different hand tools safely on three separate projects and operating one different power tool on each project.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- types, function and purpose of hand and power tools used in plumbing applications
- how to access relevant information
- work health and safety (WHS) requirements relevant to use of plumbing hand and power tools.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPCM2047 Carry out levelling

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPCM2047A Carry out levelling.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to plan and use levelling equipment.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify levelling requirements.	1.1 Access, read and determine levelling requirements from relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
	1.2 Identify and apply workplace, work health and safety (WHS) and environmental requirements.
2 Prepare for work.	2.1 Select and check serviceability of appropriate tools, equipment and personal protective equipment (PPE).
	2.2 Check levelling equipment for current calibration in

accordance with state and territory legislation and workplace policies and procedures.

- 3 Perform levelling.
 - 3.1 Identify levels to be transferred from relevant job plans and specifications.
 - 3.2 Set up and operate levelling equipment according to manufacturer's specifications, workplace procedures and standards.
 - 3.3 Record and mark levels according to job requirements and workplace procedures, ensuring the required tolerance and specifications.

- 4 Clean up.
 - 4.1 Clear the work area and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPCM2047A Carry out levelling.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPCM2047 Carry out levelling

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPCM2047A Carry out levelling.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- using either a pipe laser, rotary laser or automatic level
- grading a pipe or gutter for a minimum of 5 metres to a tolerance of + or - 5 mm.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- different types of levelling tools and equipment and their application and method of operation:
 - laser level
 - automatic level
 - spirit level
 - water level
 - string line
 - staff
- safe work procedures relating to the use, handling and storage of levelling equipment
- process of establishing, recording and checking levels and alignment
- basic calculations relating to carrying out levelling
- how to access relevant information, including relevant job plans and specifications, codes and standards manufacturer's specifications and jurisdictional requirements
- tools, materials and equipment used to carry out levelling operations
- work health and safety (WHS) requirements for carrying out levelling operations.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPCM2048 Cut and join sheet metal

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPCM2048A Cut and join sheet metal. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to cut and join sheet metal in the plumbing and services industry.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|--|-----|---|
| 1 | Identify cutting and joining requirements. | 1.1 | Access, read and determine sheet metal cutting and joining requirements from relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements. |
| | | 1.2 | Identify and apply organisational work health and safety (WHS) and environmental requirements. |
| 2 | Prepare for work. | 2.1 | Determine material quantities. |

- 2.2 Create a materials list and collect materials.
 - 2.3 Select appropriate tools and equipment including personal protective equipment (PPE).
- 3 Cut and join sheet metal.
 - 3.1 Mark out sheet metal in accordance with relevant job plan and specifications.
 - 3.2 Check measurements and cut sheet metal.
 - 3.3 Clean and prepare surfaces for joining.
 - 3.4 Align, fasten and join sheet metal using an appropriate sealing method.
- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability reporting any damage, store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPCM2048A Cut and join sheet metal.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPCM2048 Cut and join sheet metal

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPCM2048A Cut and join sheet metal. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- constructing two different sheet metal products, using two of the following joining techniques:
 - grooved seam
 - knock up joint
 - peened joint
 - simple lap
 - Pittsburgh lock
- and two of the following fastening techniques:
 - spot weld
 - riveted
 - screwed
 - bolted
- including the application of one approved sealing method.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the characteristics of different sheet metal materials
- electrolysis and the problems associated with using incompatible products
- preparation of material for sealing
- approved sheet metal sealants
- how to access relevant information, including codes and standards
- tools, materials and equipment used to cut and join sheet metal
- work health and safety (WHS) requirements for cutting and joining sheet metal.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPCM2049 Cut using oxy-acetylene equipment

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Minor title change. Changes to Elements and Performance Criteria 2.3 and 3.1.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPCM2049A Cut using oxy-LPG-acetylene equipment. Amended title. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to use oxy-acetylene equipment to carry out basic cutting of mild steel.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|----------------------------------|---|
| 1 Identify cutting requirements. | 1.1 Access, read and determine cutting requirements from relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements. |
| | 1.2 Identify and apply workplace, work health and safety |

(WHS) and environmental requirements.

- 2 Prepare for work.
 - 2.1 Create a materials list and collect materials.
 - 2.2 Select appropriate tools and equipment, including personal protective equipment (PPE).
 - 2.3 Prepare work area to support efficient cutting with oxy-acetylene equipment.

- 3 Perform cuts and inspect.
 - 3.1 Set up oxy-acetylene cutting equipment according to relevant codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
 - 3.2 Select tip size appropriate for the materials to be cut.
 - 3.3 Adjust cutting pressures to manufacturer recommendations for the materials to be cut.
 - 3.4 Prepare materials for cutting according to relevant job plans and specification, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
 - 3.5 Mark out materials prior to cutting.
 - 3.6 Set flame and perform cuts according to the specified cutting procedures to affect a clean cut.
 - 3.7 Visually inspect completed cuts for compliance with relevant job plans and specifications.

- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPCM2049A Cut using oxy-LPG-acetylene equipment.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPCM2049 Cut using oxy-acetylene equipment

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
- Minor title change. Changes to Elements and Performance Criteria 2.3 and 3.1.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPCM2049A Cut using oxy-LPG-acetylene equipment. Amended title. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- marking out and cutting the following materials from relevant job plans and specifications, using hand-held oxy-acetylene cutting equipment:
 - cut 150 mm x 150 mm mild steel plate (up to 8 mm thick) into three equal pieces
 - cut (up to 8 mm thick) mild steel disc to fit a DN40 to DN100 diameter mild steel pipe
 - cut three holes to fit up to DN50 branch pipes into a length of up to DN100 diameter mild steel pipe.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the safe and operating principles of oxy-acetylene equipment
- the potential fumes and health and safety risks from high temperatures on materials
- the properties of materials and the effect of heat on the properties of metal
- hot work permit
- types of gases used for cutting mild steel
- how to access relevant information from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements
- tools, materials and equipment to cut mild steel using oxy-acetylene equipment
- work health and safety (WHS) requirements for cutting mild steel using oxy-acetylene equipment.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPCM2052 Weld mild steel using oxy-acetylene equipment

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPCM2052A Weld using oxy-acetylene equipment. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to weld metals associated with the fabrication, installation and repair of plumbing components and systems using oxy-acetylene equipment.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|----------------------------------|---|
| 1 Identify welding requirements. | 1.1 Access, read and determine welding requirements from relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements. |
| | 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements. |

- 2 Prepare for work.
 - 2.1 Create a materials list and collect materials.
 - 2.2 Select and check the serviceability of appropriate tools and equipment including personal protective equipment (PPE).

- 3 Prepare materials and welding equipment.
 - 3.1 Clean and prepare material using appropriate tools and techniques according to workplace procedures.
 - 3.2 Prepare work area to support efficient welding with oxy-acetylene equipment.
 - 3.3 Assemble and set up welding equipment, including cylinders and regulators, according to workplace procedures.
 - 3.4 Select welding tips, settings and consumables to meet job requirements and welding procedures according to workplace procedures.

- 4 Perform welding.
 - 4.1 Weld materials to job requirements using safe welding practices.
 - 4.2 Take appropriate action to report or remedy defects in materials or welding equipment, including adjustments to settings and welding technique.
 - 4.3 Clean welds according to workplace requirements.
 - 4.4 Access information and complete documentation according to workplace requirements.

- 5 Clean up.
 - 5.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 5.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPCM2052A Weld using oxy-acetylene equipment.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPCM2052 Weld mild steel using oxy-acetylene equipment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPCM2052A Weld using oxy-acetylene equipment. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- using oxy-acetylene welding equipment to weld the following:
 - a flat butt weld up to 6 mm mild steel plate, 150 mm long
 - a vertical butt weld up to 6 mm mild steel plate, 150 mm long
 - a rotated butt weld around up to DN100 mild steel pipe located in a horizontal position and rotated during welding.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the dangers associated with oxy-acetylene welding in the fabrication and installation of plumbing systems
- the properties of materials and the effect of heat on properties of metal
- the set-up and operating principles of oxy-acetylene welding equipment
- types of gases used for welding mild steel
- hot work permit
- uses and characteristics of mild steel in the plumbing and services industry
- how to access relevant information, including codes and standards
- tools, materials and equipment used to weld mild steel using oxy-acetylene equipment
- work health and safety (WHS) requirements for welding mild steel using oxy-acetylene equipment.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPCM2053 Weld using metal arc welding equipment

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Performance Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent CPCPCM2053A Weld using manual metal arc welding equipment. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to weld metals associated with the fabrication and installation of plumbing components, using manual metal arc welding equipment.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|----------------------------------|---|
| 1 Identify welding requirements. | 1.1 Access, read and determine welding requirements from relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements. |
| | 1.2 Identify and apply workplace work health and safety |

- (WHS) and environmental requirements associated with manual metal arc welding tasks.
- 1.3 Select materials to be welded according to workplace procedures.
- 2 Prepare for work.
 - 2.1 Create a materials list and collect materials.
 - 2.2 Select and check the serviceability of appropriate tools and equipment, including personal protective equipment (PPE).
 - 2.3 Prepare work area to support efficient performance of metal arc welding.
- 3 Prepare materials and equipment for welding.
 - 3.1 Clean and prepare materials for welding.
 - 3.2 Identify tools and techniques appropriate to the preparation of the materials to be welded.
 - 3.3 Set up welding equipment and select correct electrodes according to workplace procedures and job specifications.
- 4 Weld items.
 - 4.1 Perform weld of materials according to relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements using safe welding practices.
 - 4.2 Clean material and prepare for welding in accordance with workplace procedures.
 - 4.3 Visually inspect weld to ensure weld is fit for purpose.
- 5 Clean up.
 - 5.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 5.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent CPCPCM2053A Weld using manual metal arc welding equipment.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPCM2053 Weld using metal arc welding equipment

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Performance Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent CPCPCM2053A Weld using manual metal arc welding equipment. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- using manual metal arc welding equipment to:
 - weld butt joint in mild steel plate up to 8 mm, 150 mm long
 - fillet weld mild steel plate up to 8 mm, 150 mm long
 - pad weld mild steel plate up to 8 mm, 150 mm long.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- dangers associated with manual metal arc welding plumbing components
- the properties of materials and the effect of heat on properties of metal operating principles of manual metal arc welding equipment
- defects associated with manual metal arc welding
- hot work permit
- use and characteristics of materials:
 - electrodes
 - mild steel plates
- how to access relevant information, including codes and standards
- tools, materials and equipment used to weld using metal arc welding equipment
- work health and safety (WHS) requirements for welding using metal arc welding equipment.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPCM2054 Carry out simple concreting and rendering

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPCM2054A Carry out simple concreting and rendering. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to undertake minor concreting and rendering tasks.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|--|
| 1 Identify concreting and rendering requirements. | 1.1 Access, read and determine concreting and rendering requirements from relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements. |
| | 1.2 Identify and apply workplace work health and safety (WHS) and environmental requirements. |
| 2 Prepare for work. | 2.1 Create a materials list and collect materials. |

- 2.2 Select and check the serviceability of appropriate tools and equipment, including personal protective equipment (PPE).
- 3 Place concrete or cement render.
 - 3.1 Prepare site prior to placement of concrete or cement render.
 - 3.2 Prepare concrete or cement render mixture to meet job and manufacturer's requirements.
 - 3.3 Transport concrete or cement render safely using appropriate methods.
 - 3.4 Apply concrete in formwork or render to restore damaged surface.
 - 3.5 Screed concrete surface to project datum or screed cement render to ensure level or plumb finish.
 - 3.6 Finish surface of concrete or cement render according to relevant job plans and specifications.
- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPCM2054A Carry out simple concreting and rendering.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPCM2054 Carry out simple concreting and rendering

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPCM2054A Carry out simple concreting and rendering. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- carrying out one of the following:
 - bench an access chamber a minimum of 600 mm square or diameter
 - install two thrust blocks
 - cement render pipe penetration through a floor or wall
 - pour a concrete slab to minimum of 600 mm square
 - repair a concrete slab to minimum of 600 mm square
 - repair pipe chases in a brick wall a minimum of 600 mm long.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- basic levelling techniques
- categories of materials and their safe handling, storage and transport requirements
- concrete and rendering materials
- plans, drawings and specifications
- simple formwork and reinforcing
- different types of concreting tools and equipment
- how to access relevant information, including codes and standards
- tools, materials and equipment used to carry out simple concrete and rendering
- work health and safety (WHS) requirements for carrying out simple concrete and rendering.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPCM2055 Work safely on roofs

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Performance Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPCM2055A Work safely on roofs.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to work safely on roofing structures.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify work requirements.

1.1 Access, read and determine working safely on roofs requirements from relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.

1.2 Obtain, interpret and follow organisational work health and safety (WHS) and environmental requirements.

1.3 Inspect fall prevention and fall arrest equipment for

serviceability, ensuring

- | | | | |
|---|---|-----|---|
| 2 | Prepare for work. | 2.1 | Create a materials list and collect materials. |
| | | 2.2 | Select and check serviceability of appropriate tools and equipment, including personal protective equipment (PPE). |
| | | 2.3 | Select and erect appropriate signage and barricades. |
| 3 | Install and use fall prevention system. | 3.1 | Install fall prevention and use fall arrest equipment according to manufacturer's, workplace and regulatory requirements. |
| | | 3.2 | Check fall prevention and fall arrest safety systems periodically for compliance with manufacturer's requirements, regulations and report any |
| 4 | Clean up. | 4.1 | Dismantle fall prevention and fall arrest safety system according to sequence |
| | | 4.2 | Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures. |
| | | 4.3 | Clean tools and equipment, check for serviceability and report any damage, and store and secure. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPCM2055A Work safely on roofs.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPCM2055 Work safely on roofs

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Performance Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPCM2055A Work safely on roofs.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- identifying correct and safe access and egress to and from roof area
- working safely on roofs above two meters on a minimum of two occasions, using different fall protection equipment/devices on each occasion.

One of the above occasions must include a restraint technique (anchor point) system with a minimum of two anchor points. The candidate must access the work area, traverse between anchor points, and exit from the work area.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- statutory jurisdictional regulations and workplace safety requirements relevant to working safely on roofs, including but not limited to:
 - limited freefall
 - anchor points
 - lanyards and energy absorbers
 - rescue plan and suspension trauma
 - scaffolds and guardrails
 - safety mesh
 - ladders
 - hazardous and fragile materials
 - manual handling
 - electrical hazards, including overhead cables

- falling objects
- how to access relevant information, including relevant codes and Australian standards
- tools, materials and equipment used to work safely on roofing structures
- work health and safety (WHS) requirements for working safely on roofing structures.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPCM3021 Flash penetrations through roofs and walls

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPCM3021A Flash penetrations through roofs and walls. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to set out, cut and flash roof and wall penetrations.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------------|--|
| 1 Identify installation requirements. | 1.1 Access, read and determine flashing penetration requirements from relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements. |
| | 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements. |

- 2 Prepare for work.
 - 2.1 Create a materials list and collect materials.
 - 2.2 Select appropriate tools and equipment, including personal protective equipment (PPE).

- 3 Flash penetrations.
 - 3.1 Identify location of wall and roof penetrations, allowing for existing and future services.
 - 3.2 Set out and cut penetrations.
 - 3.3 Install supports as required and fit the penetrating product.
 - 3.4 Fit and fix purpose-made or proprietary flashing as per relevant job plans and specifications, codes, Australian standards manufacturer's specifications and jurisdictional requirements.
 - 3.5 Apply fire resistant requirements to penetrations to meet standards and codes where required.

- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPCM3021A Flash penetrations through roofs and walls.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPCM3021 Flash penetrations through roofs and walls

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPCM3021A Flash penetrations through roofs and walls. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- flashing the following penetrations:
 - a square/rectangular penetration with sides greater than 300 mm through wall cladding
 - a square/rectangular penetration with sides greater than 300 mm through roof sheeting
 - a circular penetration greater than 200 mm diameter through roof sheeting.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- terminology relating to flashing penetrations
- electrolysis and the problems associated with using incompatible products
- compatibility of various roofing and wall cladding materials with different joining methods
- processes, procedures and techniques for:
 - flashing penetrations on various roof coverings
 - flashing penetrations on various wall claddings
 - fabricating and installing flashings to prevent leaking
- principles of:
 - capillary actions
 - thermal expansion
 - corrosion and preventative treatments
 - electrolysis and impact of using dissimilar metals and products
- how to access relevant information, including job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements
- tools, materials and equipment used to set out, cut and flash roof and wall penetrations

- work health and safety (WHS) requirements for setting out, cutting and flashing roof and wall penetrations.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPCM3022 Weld polymer pipes using fusion method

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Pre-requisite unit.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPCM3022A Weld polyethylene and polypropylene pipes using fusion method. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to fusion weld polymer pipes.

In some jurisdictions, this unit of competency may form part of accreditation, licencing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|--|
| 1 Prepare for work. | 1.1 Access, read and determine welding requirements for polymer pipes and installation methods from relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements. |
| | 1.2 Determine job priorities and sequence job tasks in consultation with others on the worksite. |

- 1.3 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
 - 1.4 Select and check the serviceability of the appropriate tools, equipment and personal protective equipment (PPE).
- 2 Identify welding requirements.
 - 2.1 Create a materials list and collect materials.
 - 2.2 Check welding equipment for correct operation according to manufacturer instructions.
- 3 Weld and inspect pipe joints.
 - 3.1 Prepare joints using tools and techniques according to manufacturer specifications and relevant standards.
 - 3.2 Conduct test welds and verify according to job specifications.
 - 3.3 Carry out fusion welds according to relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
 - 3.4 Visually inspect fusion welds for compliance with relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPCM3022A Weld polyethylene and polypropylene pipes using fusion method.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPCM3022 Weld polymer pipes using fusion method

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Pre-requisite unit.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPCM3022A Weld polyethylene and polypropylene pipes using fusion method. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- butt welding three joints up to DN110 (OD) for a non-pressure application
- electro-fusion welding one socket joint up to DN110 (OD) for a pressure application.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safe operation procedures for fusion welding of polymer pipe
- effect of heat and other products on the properties of polymer pipe
- operating principles of fusion welding equipment
- characteristics and limitations of materials
- surface preparation in the welding process
- identification of welding requirements
- how to access relevant information, including codes and standards
- tools, materials and equipment used to fusion weld polymer pipes
- work health and safety (WHS) requirements for fusion welding polymer pipes.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website -

CPCPCM3023 Fabricate and install non-ferrous pressure piping

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Changes to Element and Performance Criteria 2.2 and 3.5.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPCM3023A Fabricate and install non-ferrous pressure piping. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to fabricate and install non-ferrous pressure piping.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, and regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify installation requirements.

1.1 Access, read and determine requirements to fabricate and install non-ferrous pressure piping from relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.

1.2 Identify and apply workplace policies and procedures,

work health and safety (WHS) and environmental requirements.

- 2 Prepare for work.
 - 2.1 Create a materials list and collect materials.
 - 2.2 Set up silver brazing equipment according to workplace and WHS procedures.
 - 2.3 Select and check serviceability of appropriate tools and equipment including personal protective equipment (PPE).

- 3 Fabricate, install and test pipe system.
 - 3.1 Set out pipelines and connection points according to drawings and specifications or job instructions.
 - 3.2 Use oxy-acetylene equipment according to workplace and WHS procedures.
 - 3.3 Install pipework in accordance with relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
 - 3.4 Test installed pipework according to s relevant codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
 - 3.5 Shut down and dismantle silver brazing equipment according to workplace and WHS procedures.

- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability reporting any damage, store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPCM3023A Fabricate and install non-ferrous pressure piping.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPCM3023 Fabricate and install non-ferrous pressure piping

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Changes to Element and Performance Criteria 2.2 and 3.5.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPCM3023A Fabricate and install non-ferrous pressure piping. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- fabricating, installing and testing a DN20 copper line from a supply point to three fixed outlets, supported and clipped according to relevant job plans and specification, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements with a minimum:
 - one 15 mm mechanical bend
 - one 20 mm mechanical bend
 - one 15 mm spring bend
 - one 20 mm spring bend
 - one 15 mm capillary elbow
 - one 20 mm capillary elbow
 - one expanded silver brazed joint
 - one silver brazed copper to brass joint
 - two branch formed silver brazed joints
 - one mechanical flared joint
 - branches connecting at least two other non-ferrous materials, ensuring branches and bends are square.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- fabrication, installation and testing process for non-ferrous pressure pipe systems

- relevant statutory authorities' requirements and standards related to fabricating, installing and testing non-ferrous pressure pipe systems
- effect of heat and other products on the properties of polymer pipe
- types of non-ferrous materials, including joining techniques
- hot works permit
- how to access relevant information, including codes and standards
- tools, materials and brazing equipment used to fabricate and install non-ferrous pressure piping
- work health and safety (WHS) requirements to fabricate and install non-ferrous pressure piping.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPCM3024 Prepare simple drawings

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPCM4014A Prepare simple sketches and drawings. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to produce onsite drawings for plumbing services work.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Create simple sketches and drawings. | 1.1 Identify key features required through consultation with associated persons and reference to plans. |
| | 1.2 Identify and apply workplace, work health and safety (WHS) and environmental requirements. |
| | 1.3 Select suitable views to create simple sketches and drawings. |

- | | | | |
|---|------------------------------|--|---|
| | 1.4 | Use standard drawing conventions, incorporating relevant codes and standards to create simple sketches and drawings. | |
| 2 | Notate and process drawings. | 2.1 | Record essential information on the drawing with symbols and abbreviations according to standard drawing conventions. |
| | | 2.2 | Store drawings according to organisational administration and quality procedures. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPCM4014A Prepare simple sketches and drawings.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPCM3024 Prepare simple drawings

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPCM4014A Prepare simple sketches and drawings. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- producing three drawings for plumbing services work from any of the following:
 - a sanitary plumbing installation
 - a sanitary drainage installation
 - a mechanical services installation
 - a gas installation
 - a roofing installation
 - a fire services installation
 - a water services installation.

The drawings must:

- include 2D plan, schematic or isometric, and sectional drawings
- be presented clearly with appropriate notations and labelling.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- drawing conventions and features, including direction, scale, key, contours, symbols and abbreviations
- drawing techniques
- types of drawings required:
 - floor plans
 - land boundaries and footprint of building

- schematic drawings of pipework
- sectional
- isometric
- how to access relevant information, including codes and standards
- tools, materials and equipment used for creating drawings
- work health and safety (WHS) requirements where measurements are to be taken and recorded.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPCM3025 Install trench support

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Typographical errors corrected in Element 1.3 and 3.1.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Application

This unit specifies the skills and knowledge required to install trench support.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|--|
| 1 Prepare for work. | 1.1 Access, read and determine installation requirements from relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements. |
| | 1.2 Identify and apply workplace, work health and safety (WHS) and environmental requirements. |
| | 1.3 Plan and sequence tasks in conjunction with others involved in or affected by the work. |

- 1.4 Select and check tools and equipment, including personal protective equipment (PPE), for serviceability.
 - 1.5 Identify the location of underground services.
 - 1.6 Prepare work area to support efficient installation of trench support systems.
- 2 Identify installation requirements.
 - 2.1 Source equipment required for the excavation.
 - 2.2 Identify potential hazards and determine and implement control measures.
 - 2.3 Set out trench support installation according to relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
 - 2.4 Consider the location of existing services and any traffic control requirements during installation.
- 3 Install trench support.
 - 3.1 Determine and transfer installation requirements for installing trench support.
 - 3.2 Install trench support according to relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements and without damage to surrounding environment, existing structures or other services.
 - 3.3 Check installation for compliance with relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
- 4 Clean up.
 - 4.1 Remove trench support equipment, backfilling trench and return support equipment to storage area in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability reporting any damage, store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPCM3025 Install trench support

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Typographical errors corrected in Element 1.3 and 3.1.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing and removing as a minimum, two trench support systems using an approved shoring method and equipment to a minimum depth of 1.5 metres.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- types of trench support systems including:
 - aluminium shoring shields
 - close timber shoring
 - drag boxes
 - fixed and/or adjustable trench boxes
 - hydraulic vertical shoring
 - lite box aluminium panels
 - powerbrace
 - slide rails
 - raking shoring
- hazards associated with excavation including:
 - soil types and the likelihood of sudden changes in soil
 - presence of ground water and water entering cracks in soil adjacent to the excavation
 - effects on ground material by exposure to the air after excavation
 - vibration due to machinery, plant, motor vehicles and machinery
 - excavation depth and shape

- presence or proximity of other underground services
- presence of excavation, backfill material or equipment placed near an excavation
- excavation within public property requirements
- excavation close to footings and buildings
- work health and safety (WHS) requirements associated with the installation of trench support systems
- how to access relevant information, including job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements
- tools, materials and equipment used for the installing trench support.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPCM4011 Carry out work-based risk control processes

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Unit Sector added to unit.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPCM4011A Carry out work-based risk control processes. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to carry out work-based risk control processes.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify risks.

1.1 Obtain information and data to determine the nature and scope of workplace risks and risk controls.

1.2 Inspect site conditions and functions for potential hazards.

1.3 Document potential hazards.

- 1.4 Access relevant information to determine situations covered by existing procedures.
 - 1.5 Classify type and scope of hazards not covered by existing procedures.
- 2 Assess risk.
 - 2.1 Consider and determine the likelihood of an event happening.
 - 2.2 Evaluate and determine consequences of the potential event.
 - 2.3 Consider and determine risk level by combining likelihood and consequence evaluations.
 - 2.4 Refer unacceptable risk to the appropriate person or action according to own authority and capacity.
- 3 Apply a course of action for acceptable risks.
 - 3.1 Conduct a detailed analysis of options.
 - 3.2 Identify resource requirements to manage risks.
 - 3.3 Select the most appropriate action to manage or resolve the risk.
- 4 Complete records and reports.
 - 4.1 Document actions resulting from the risk assessment activity according to workplace procedures and regulatory authorities' requirements.
 - 4.2 Document safety information and procedures.
- 5 Review effectiveness of risk control measures.
 - 5.1 Establish a systematic review process of risk control measures.
 - 5.2 Identify appropriate communication methods to inform associated persons of the control measures to safe operating procedures.
 - 5.3 Develop a risk control policy and procedure based on the findings of the risk control review process.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPCM4011A Carry out work-based risk control processes.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPCM4011 Carry out work-based risk control processes

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Unit Sector added to unit.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPCM4011A Carry out work-based risk control processes. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- conducting a plumbing and services work-based risk assessment
- documenting and evaluating a risk management process
- locating, interpreting and applying relevant information
- complying with work health and safety (WHS) regulations and Commonwealth, state and territory legislation applicable to workplace operations
- identifying WHS duty holders and their duties
- developing a risk control policy and procedure.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- risk management theory and risk assessment terminology, including the hierarchy of controls
- reporting and recording procedures
- quality assurance systems and standards
- regulatory requirements related to obligations and risk management
- personal risk assessment and control processes
- how to access relevant information, including codes and standards
- tools, materials and equipment used for carrying out work-based risk control processes
- WHS requirements for carrying out work-based risk control processes.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPCM4012 Estimate and cost work

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Elements and Performance Criteria 2.6.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPCM4012A Estimate and cost work.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to estimate materials, labour and time requirements and to establish costs for provision of quotations to provide services to a Class 1 building.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|---------------------|-----|--|
| 1 | Gather information. | 1.1 | Determine customer requirements. |
| | | 1.2 | Access plans and specifications to determine work requirements. |
| | | 1.3 | Consider sustainability principles and concepts applicable to proposed work. |

- 1.4 Determine source of products and services to be provided.
 - 1.5 Determine delivery point and methods of transportation.
- 2 Estimate materials, labour and time.
 - 2.1 Plan and sequence work, including preparatory tasks.
 - 2.2 Calculate types and quantities of materials required.
 - 2.3 Determine plant and equipment requirements to perform work.
 - 2.4 Assess labour requirements to perform work.
 - 2.5 Determine time requirements to perform work.
 - 2.6 Calculate sundry costs to perform work.
- 3 Calculate costs.
 - 3.1 Estimate total cost of materials, plant, equipment, sundry costs and labour according to workplace procedures.
 - 3.2 Apply overheads and mark-up percentages to calculate total work cost.
 - 3.3 Produce final cost for work.
- 4 Document and verify details.
 - 4.1 Record details of services, costs and charges according to workplace procedures.
 - 4.2 Apply terms, inclusions and exclusions according to workplace procedures.
 - 4.3 Present quotation according to workplace procedures.
 - 4.4 Store quotations and documentation for future reference according to workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPCM4012A Estimate and cost work.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCPCM4012 Estimate and cost work

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Changes to Elements and Performance Criteria 2.6.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPCM4012A Estimate and cost work.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- providing detailed quotations from a set of plans for three varied jobs for a Class 1 building to customer requirements.

The quotes and tenders must include two of the following:

- sanitary/drainage installation
- mechanical services installation
- a gas installation
- a roofing installation
- a fire services installation
- a water services installation

The quotes and tenders must:

- include accurate and industry realistic estimates and costs for labour, materials, overheads and timing
- be reflective of the clients' needs
- be presented in according to workplace procedures.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- how to read plans and specifications to determine requirements
- process for estimating, managing and costing work
- calculating material requirements
- relevant statutory requirements related to estimating and costing work

- tendering and quotations
- contracting processes
- factors for estimating and costing:
 - labour
 - awards and workplace agreements
 - materials
 - plant and equipment
 - overheads
- costing programs
- how to access relevant information, including codes and standards
- tools, materials and equipment used for estimating and costing work
- work health and safety (WHS) requirements for estimating and costing work.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPCM4013 Produce 2-D architectural drawings using design software

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Knowledge Evidence.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPCM4013A Produce 2-D architectural drawings using CAD software. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to produce two-dimensional (2-D) architectural drawings using computer-aided design (CAD) software. It includes preparing drawings from project briefs, sketches, drawings and plans for residential and commercial projects.

This unit applies to those who work are responsible for preparing architectural drawings.

This unit is suitable for people operating with some autonomy. A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Create a drawing template file.
 - 1.1 Confirm and clarify drawing requirements with relevant personnel.
 - 1.2 Access and refer to current building and plumbing standards and regulations.
 - 1.3 Set up a basic drawing environment.
 - 1.4 Create a layering strategy for drawing, viewing and editing.
 - 1.5 Create an architectural library.
 - 1.6 Create suitable styles for title block, hatch patterns, dimension lines and thicknesses and text.
 - 2 Produce architectural drawings.
 - 2.1 Produce drawings using appropriate layers.
 - 2.2 Add relevant notations to the drawing as required.
 - 2.3 Add dimensions, using appropriate scales, to the drawing.
 - 2.4 Use editing commands to modify drawing elements and existing text.
 - 2.5 Delete elements that are not required from the existing drawing.
 - 3 Print CAD drawings.
 - 3.1 Set printing requirements to suit page layout for drawings.
 - 3.2 Set print parameters for printer.
 - 3.3 Print drawings on the correct media.
 - 3.4 Observe sustainability principles and concepts when preparing for and undertaking work process.
 - 4 Save and back up files.
 - 4.1 Create suitable directories for the drawing project.
 - 4.2 Save and back up drawing files into specific drives or

directories.

4.3 Retrieve, rename and edit saved files as required.

5 Import files.

5.1 Insert drawing files into other software applications.

5.2 Import text files from other software application into CAD.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPCM4013A Produce 2-D architectural drawings using CAD software.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPCM4013 Produce 2-D architectural drawings using design software

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Knowledge Evidence.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPCM4013A Produce 2-D architectural drawings using CAD software. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- producing one 2-D architectural drawing of a plumbing and services layout for a single dwelling (Class 1a) building, including:
 - the use of a computer-aided design (CAD) architectural program
 - compliance with current standards and codes
 - develop accompanying specifications.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- types and application of drawings, including:
 - elevations or projections
 - floor plans
 - site plans
 - sections
 - details
- drafting and drawing protocols/conventions, including:
 - abbreviations
 - commonly used symbols
 - legends / keys
 - lettering standards
 - scale

- SI units of measurement
- paper size
- current building and plumbing codes, standards and regulations
- construction terminology
- structural systems and construction technology
- characteristics and application of building and plumbing materials
- sustainability principles and concepts which cover:
 - social, economic and environmental use of resources to meet current and future needs
 - energy efficiency
 - disposing of waste material to ensure minimum environment impact
 - relevant work health and safety (WHS) principles and responsibilities.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPCM4015 Access and interpret regulatory requirements for the plumbing and services industry

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Application

This unit specifies the skills and knowledge required to identify and apply the plumbing regulatory requirements to design and planned work activities for the plumbing and services industry, including the National Construction Code (NCC).

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|---|-----|--|
| 1 Access and identify the National Construction Code (NCC). | 1.1 | Identify the hierarchical relationship of legislation, Acts, regulations, codes and standards in the plumbing and services industry. |
| | 1.2 | Determine building classification and type in accordance with the National Construction Code (NCC). |
| | 1.3 | Identify plumbing and services covered by the National Construction Code (NCC). |

- | | |
|---|--|
| 2 Interpret the National Construction Code (NCC). | 2.1 Identify and interpret the requirements of jurisdictional variations and additions in the (NCC). |
| | 2.2 Identify the difference between Performance Solutions and Deemed to Satisfy (DTS) installations. |
| | 2.3 Identify jurisdictional documentation requirements for Performance Solutions and Deemed to Satisfy (DTS) for plumbing installations. |
| | 2.4 Determine relevant certification requirements for use of materials and products. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPCM4015 Access and interpret regulatory requirements for the plumbing and services industry

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- Locating, downloading and identifying the different volumes of the National Construction Code (NCC)
- Identifying ten (10) different Australian Standards referenced in the National Construction Code volume 3 "Plumbing Code of Australia" (PCA) and the area of plumbing they cover, including jurisdictional variations and additions
- Identifying the official location where to obtain five (5) current versions of Australian Standards referenced in the PCA
- Determining classes and type of buildings referenced in the National Construction Code (NCC)
- Identifying the cross-volume considerations in the PCA, locating their location within NCC volumes 1 or 2.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the different sections, parts and their purpose contained in each volume of the National Construction Code (NCC)
- the difference between Performance Solutions and Deemed to Satisfy (DTS) installations
- the hierarchy of legislation and relationship between Acts, regulations, codes and standards
- jurisdictional requirements and application process for a performance solution
- jurisdictional requirements and process to lawfully carry out plumbing and services work
- WaterMark certification scheme and its relevance to installation and design of plumbing systems, or
- a metal cladding system on a building to meet compliance for three of the following provisions:
 - structural
 - sound transmission

- energy efficiency
- bushfire
- condensation management
- weatherproofing
- fire resistance.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPCM5010 Design complex sanitary plumbing and drainage systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Elements and Performance Criteria 3.1 and 3.5.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPCM5010A Design complex sanitary plumbing and drainage systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to undertake the hydraulic engineering design of complex sanitary plumbing and drainage installation and to prepare specifications for a range of wide-span and high-rise building applications up to 25 metres, including basement for residential, commercial and industrial buildings.

The unit requires application of technical skills and knowledge to prepare plans, specifications and operating and maintenance manuals.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|-------------------|---|
| 1 Evaluate design | 1.1 Establish scope of work for complex sanitary plumbing |
|-------------------|---|

- parameters.
- and drainage systems for wide-span and high-rise building projects.
- 1.2 Determine design requirements from relevant Australian Standards, codes, plans, specifications and client brief.
 - 1.3 Interpret statutory and regulatory requirements for the design of complex sanitary plumbing and drainage systems.
 - 1.4 Analyse and apply Australian Standards and codes for the design of complex sanitary plumbing and drainage systems.
 - 1.5 Interpret manufacturer requirements and trade and technical manuals.
 - 1.6 Conduct additional research, including a desktop study to outline design parameters.
 - 1.7 Conduct a cost–benefit analysis comparing a range of pipe materials and system designs.
- 2 Plan and detail system components.
- 2.1 Plan layout of pipework systems, type and location of fittings and valves.
 - 2.2 Assess existing utilities services capacity and sizes.
 - 2.3 Calculate pipe sizes, pipe grades and trapping and ventilation requirements for a range of applications.
 - 2.4 Plan pipe support for a range of applications.
 - 2.5 Size and detail pump well, pump and pump control requirements.
 - 2.6 Specify approved materials, jointing methods and installation requirements for complex sanitary plumbing and drainage systems.
 - 2.7 Plan and detail acoustic performance of the sanitary plumbing and drainage system within the system design.
- 3 Design and size systems.
- 3.1 Design complex sanitary plumbing and drainage systems for a range of wide-span and high-rise building applications.

- 3.2 Design rising main systems.
 - 3.3 Design and size a fully vented or fully vented modified system.
 - 3.4 Design and size a reduced velocity aerator stack system.
 - 3.5 Design and size complex sanitary plumbing and drainage systems using computer-aided design and drafting packages.
- 4 Prepare documentation.
 - 4.1 Prepare client brief of the preferred design.
 - 4.2 Prepare plans and specifications for a range of complex sanitary plumbing and drainage systems.
 - 4.3 Prepare testing and commissioning schedule.
 - 4.4 Produce operation and maintenance manual.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPCM5010A Design complex sanitary plumbing and drainage systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPCM5010 Design complex sanitary plumbing and drainage systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Elements and Performance Criteria 3.1 and 3.5.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPCM5010A Design complex sanitary plumbing and drainage systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout details of complex sanitary systems for a 25-metre high-rise mixed development building inclusive of a basement, using two approved sanitary plumbing systems, including:
 - fixtures on each level
 - specification and plans which include:
 - inspection openings and drainage cleaning provisions
 - overflow relief provisions
 - proprietary air admittance and relief systems
 - proprietary velocity reduction fittings
 - sewerage pumping stations (wet wells)
 - piping systems
 - venting systems.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- common terminology and definitions used in design of complex sanitary plumbing and drainage systems for all classes of building
- National Construction Code (NCC)
- other relevant Australian standards, codes or standard operating procedures (SOPs)
- principles of technology in the design of hydraulic systems

- procedures for maintaining air balance within the systems
- workplace safety requirements, including relevant statutory regulations, codes and standards
- scope of work:
 - interpretation of plans and specifications
 - sizing and documenting layout of complex sanitary plumbing and drainage systems for applications, including residential, commercial and industrial
- design requirements:
 - architectural plans
 - building specifications
 - fire rating of penetrations
 - owner requirements
 - pipework identification
 - soil quality
 - specialist waste applications
 - unstable or water-charged ground
- cost–benefit analysis considerations
- Australian Standards, codes, statutory and regulatory requirements:
 - NCC
 - relevant Australian Standards and codes, including AS/NZS 3500 Plumbing and drainage set
 - AS 2200 Design charts for water supply and sewerage
 - local government and health department requirements
 - state/territory government requirements
 - preparation of documentation for authorities’ approval
- requirements from manufacturers:
 - material specifications
 - pump tables
 - sizing tables
 - recommended specific fixings for pipework
 - technical and trade manuals
- information gathered through desktop study:
 - architectural and building plans
 - developer plans
 - manufacturers’ data
 - applications
 - brochures
 - forms
 - policies
 - other reports as available

- performance requirements, which must include flow, velocity, pressure and discharge requirements established using relevant Australian standards, codes and local authority plans
- layout of pipework systems based on principles of economy, serviceability, durability and fitness for use:
 - drainage
 - elevated pipework
 - low pressure pump
 - vacuum
 - vented stack systems
- types of fittings and valves
- access chamber details:
 - benching requirements
 - flow
 - gradient requirements
 - inlet and outlet connections
 - ladder access
 - lids
- cost–benefit analysis considerations
- gullies covering details such as size, location, bedding and concrete support:
 - boundary traps
 - disconnector gullies (DG)
 - floor waste (FW)
 - overflow relief gullies (ORG)
- types of calculations for complex sanitary plumbing and drainage systems:
 - determination of flow and fixture loadings
 - gradient calculations
 - interpretation of design charts and tables
 - pipe sizing calculations
 - reduced level calculations
 - self-cleaning velocities
- design elements of anchor blocks:
 - flow forces to be resisted
 - keying and anchorage points
 - sizes
 - soil characteristics
- types of pipe support:
 - anchors
 - bedding
 - bracket spacing

- concrete support
- corrosion protection
- cover
- hanging brackets
- manufacturer-recommended specific fixings
- material requirements
- provision for expansion
- saddles
- wall and ceiling brackets.
- pump well, pump and pump control requirements:
 - access covers
 - automatic controls
 - capacity
 - chains
 - corrosion-resistant materials
 - detailing
 - emergency storage
 - high- and low-level water controls and alarms
 - impeller sizing
 - inlet and outlet design requirements
 - installation and mounting requirements
 - ladder access
 - macerator requirements
 - odour control
 - pump selection
 - pump sizing
 - pump well sizing
 - space requirements
 - step irons
 - valve requirements
 - ventilation
 - warning system
- sanitary and plumbing drainage system materials:
 - cast iron (Fe)
 - concrete
 - copper (CU)
 - vitrified clay pipe (VCP)
 - high density polyethylene (HDPE)
 - unplasticised polyvinyl chloride (uPVC)
 - other approved material

- fittings and fixtures
- measures to prevent the spread of fire
- sound attenuation requirements.
- jointing methods:
 - brazing and threading
 - electrofusion welding
 - mechanical joints
 - rubber ring
 - solvent cement welding
- installation requirements:
 - bedding
 - clipping
 - concrete support
 - fire rating of penetrations
 - installation details
 - jointing requirements
 - level of workmanship
- elements of rising main systems:
 - approved pressure pipe and fittings
 - calculated rise and pump delivery requirements
 - pipe velocities
 - pump sizing to meet calculated flow conditions
- ways to apply sustainability principles and concepts:
 - selecting appropriate material to ensure minimal environmental impact
 - efficient use of material
 - efficient energy usage/capital outlay comparison
 - effect on the environment due to overflow or leakage
 - water efficiency
 - consideration of the Green Building Council of Australia rating scheme
 - local environment consideration regarding overflow, disposal and reuse
- types of plans (computer-generated or hand-drawn):
 - axonometrics
 - cross-sections
 - details
 - elevations
 - isometrics
 - schematics
 - sections
- specification information:
 - bedding

- commissioning
- concrete support and detailing specialised components
- jointing
- access chambers (manholes)
- manufacturer requirements
- materials
- pumps
- work health and safety (WHS)
- support
- testing
- workmanship
- testing:
 - air pressure
 - drainage inspection
 - hydrostatic
 - performance
 - quality assurance (QA) audit
- commissioning inclusions:
 - charging traps
 - checking leaks
 - checking for foreign material
 - checking for system defects
 - checking that system functions as per design
 - checking trap water seal retention
 - cleaning grates
 - system certification
- operation and maintenance manual inclusions:
 - construction drawings
 - results of commissioning test
 - certification documentation
 - maintenance schedules
 - manufacturer brochures and technical information
 - manufacturer warranties.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPCM5011 Design complex cold water systems

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Change to Elements and Performance Criteria 3.6.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPCM5011A Design complex cold water systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design complex cold water distribution systems in commercial and high-rise mixed development building to a minimum of 29 floors inclusive of a basement. The unit requires application of technical skills and knowledge to design and size systems and prepare operational and compliance documentation.

The role may involve interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

This unit requirements are typically carried out by a consultant or design engineer.

Application of the unit is relevant to multi-storey residential, commercial and industrial buildings with or without connection to reticulated water supply.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Evaluate design parameters.
 - 1.1 Identify and establish scope of work from preliminary information and in consultation with associated persons.
 - 1.2 Determine design parameters from relevant Australian Standards, codes, plans, specifications, statutory and regulatory requirements and client brief.
 - 1.3 Apply sustainability principles and concepts as part of the design process.
 - 1.4 Establish performance requirements, considering safety of system users or building occupants.
 - 1.5 Determine available pressure and flow rates at site location.
 - 1.6 Conduct research, including a desktop study to outline design parameters.
 - 1.7 Interpret manufacturer requirements and trade and technical manuals.
 - 1.8 Conduct a cost-benefit analysis to compare a range of materials and system designs.
 - 2 Plan and detail system components.
 - 2.1 Plan layout of pipework systems, including the type and location of fittings and valves and acoustic performance of the system.
 - 2.2 Detail type, location and requirements for backflow prevention devices.
 - 2.3 Specify flush valve system types and operation.
 - 2.4 Calculate pipe sizes, velocities, flows and residual pressures for a range of applications.
 - 2.5 Detail or design cold water system components.
 - 2.6 Size and detail pump, pump controls and pump room requirements.
 - 2.7 Specify approved materials, jointing methods and installation requirements.

- | | |
|----------------------------|---|
| 3 Design and size systems. | 3.1 Design systems for a range of wide-span and high-rise building applications. |
| | 3.2 Design flush valve distribution systems for sanitary ablutions. |
| | 3.3 Design a range of delivery systems. |
| | 3.4 Design and size complex cold water distribution systems using computer software packages. |
| | 3.5 Design water storage and break tanks. |
| | 3.6 Design cold water pressure systems and incorporate into building supply system. |
| | 3.7 Design backflow penetration systems associated with cold water systems. |
| | 3.8 Calculate pipe sizes, velocities and pressures. |
| | 3.9 Calculate system pressures, pressure losses and pressure reduction measures. |
| 4 Prepare documentation. | 4.1 Prepare client brief for the preferred design. |
| | 4.2 Prepare plans and specifications for designing complex cold water systems. |
| | 4.3 Prepare testing and commissioning schedule. |
| | 4.4 Produce operation and maintenance manual for maintaining cold water systems. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPCM5011A Design complex cold water systems.

Assessment Requirements for CPCPCM5011 Design complex cold water systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Change to Elements and Performance Criteria 3.6.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPCM5011A Design complex cold water systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout details of two methods of providing a cold water supply for a high-rise mixed development building to a minimum of 29 floors inclusive of a basement, including:
 - fixtures on each level
 - a non-drinking supply system
 - a flush valve system
- planning system detail components, including:
 - authorities' connection
 - backflow prevention requirements
 - fixtures and fitments
 - flush valves
 - meter assemblies
 - storage tanks
 - piping systems
 - pumps
- applying sustainability principles and concepts throughout to achieve a star rating under the Green Building Council of Australia rating scheme
- evaluating health risks associated with drinking and non-drinking water supplies and actioning as required within the system design.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- AS/NZS 3500 Plumbing and drainage set
- AS 2200 Design charts for water supply and sewerage
- common terminology and definitions used in design of cold water reticulation systems
- National Construction Code (NCC)
- local and state government requirements
- preparation of documentation for authorities' approval
- nature of materials used and the effects of performance under various conditions
- other relevant Australian Standards, codes or standard operating procedures
- principles of technology used in design of cold water reticulation and hydrant and hose reel systems for all classes of building
- requirements of state regulatory authorities and manufacturer specifications, including hazards identified in relation to devices and systems used
- water quality requirements
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
- methods to apply sustainability principles and concepts:
 - selecting appropriate material to ensure minimal environmental impact
 - efficient use of material
 - efficient energy usage/capital outlay comparison
 - effect on the environment due to overflow or leakage
 - water efficiency
 - consideration of the Green Building Council of Australia rating scheme
- information on design requirements:
 - architectural plans
 - building specifications
 - effect of water quality on pipework, plant and equipment
 - owner requirements
 - pipework and valve identification
 - soil quality
 - specialist water use applications
 - unstable or water-charged ground
- specifications for:
 - bedding
 - flow requirements
 - jointing
 - manufacturer requirements
 - materials
 - residual pressures

- WHS
- specialised components
- support
- testing
- valve selection
- water treatment
- workmanship
- locating information on systems and components from a variety of sources such as:
 - manufacturer's websites
 - trade meetings and exhibitions
 - brochures
 - trade outlets
 - other design projects
- cost-benefit analysis considerations for the selection of materials and system:
 - enabling cost effective choices without compromising the integrity of the project
 - expected design life
 - associated labour costs
 - material costs
 - safety factors
 - speed of installation
 - suitability of materials
 - range of system choices
- manufacturer's requirements:
 - flow and pressure requirements for fixtures and appliances
 - material specifications
 - pump tables
 - sizing tables
 - recommended specific fixings for pipework
 - technical and trade manuals
- types of plans produced using computer software and drawing equipment:
 - axonometrics
 - cross-sections
 - details
 - elevations
 - isometrics
 - schematics
 - sections
- flow, velocity, pressure and discharge requirements, established using relevant Australian Standards, codes, and state, territory and local government authorities' plans
- layout of pipework systems:

- principles of economy, serviceability, durability and fitness for use
- dual feed
- gravity feed
- main pressure
- pumped system
- ring main
- types of fittings:
 - bends
 - elbows
 - tees
 - unions
- types of valves:
 - backflow prevention
 - excess pressure
 - isolating
 - pressure limiting
 - pressure reduction
 - strainers
- backflow prevention devices:
 - registered break tank (RBT)
 - registered air gap (RAG)
 - double-check valve assembly (DCV)
 - dual-check valve with intermediate vent (DuCV)
 - reduced pressure detector assembly (RPDA)
 - reduced pressure zone device (RPZD)
 - other approved devices
- types of flush valve systems:
 - backflow prevention requirements
 - gravity
 - mains pressure
 - pipe sizing requirements
 - storage requirements
- cold water system meter assemblies:
 - direct and indirect
 - electronic
 - inferential
 - magnetic
- thrust blocks and their design elements:
 - design details for tees, elbows and valves
 - keying and anchorage points

- sizes
- soil characteristics
- velocity and flow forces to be resisted
- range of pipe supports:
 - anchors
 - bedding
 - bracket spacing
 - corrosion protection
 - cover
 - hanging brackets
 - manufacturer-recommended specific fixings
 - material requirements
 - provision for expansion
 - saddles
 - wall and ceiling brackets
- considerations for water storage systems:
 - air gap
 - automatic controls
 - drain down provision
 - inlet valve design and sizing
 - outlet sizing
 - overflow requirements
 - provision to maintain service while cleaning
 - provision to maintain service while servicing
 - safe tray requirements
 - tank access
 - tank maintenance
 - tank sizes
- water treatment:
 - filtration
 - reverse osmosis (RO)
 - softening
- pump, pump controls and pump room requirements:
 - acoustic performance
 - automatic changeover
 - automatic controls
 - drain down provision
 - dual pump provision
 - impeller sizing
 - inlet and outlet design requirements

- installation and mounting requirements
- pressure gauges
- pump selection
- pump sizing
- space requirements
- valve requirements
- variable speed control
- materials:
 - acrylonitrile butadiene styrene (ABS)
 - composite pipework
 - copper (Cu)
 - cross-linked polyethylene (PE-X)
 - polypropylene (PP)
 - polybutylene (PB)
 - ductile iron cement lined (DICT)
 - other approved materials
 - fittings and fixtures
 - protective coatings
- jointing methods:
 - brazing
 - compression
 - electrofusion welding
 - flaring
 - mechanical joints
 - rubber ring joints
 - screwing
 - soldering
 - solvent cement welding
 - other approved jointing methods
- installation requirements:
 - bedding
 - fire rating of penetrations
 - clipping
 - installation details
 - jointing requirements
 - level of workmanship
 - manufacturer-recommended specific fixings
 - pipe support
- delivery systems:
 - constant flow variable speed pumps

- gravity feed
- hydropneumatic
- mains pressure system
- testing:
 - air pressure
 - defect inspection
 - hydrostatic
 - mains pressure
 - performance
 - quality assurance (QA) audit
- commissioning schedule inclusions:
 - disinfection
 - flow test
 - leak check
 - pressure test
 - system certification
 - system defects
 - system functions as per design
 - system purge
 - valve operation
- operation and maintenance manual inclusions:
 - as installed drawings
 - certification documentation
 - maintenance schedules
 - manufacturer brochures and technical information
 - results of commissioning test
 - valve function.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPCM5012 Design complex stormwater and roof drainage systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Application and Elements and Performance Criteria 4.4.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPCM5012A Design complex stormwater and roof drainage systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design complex stormwater and roof drainage systems for commercial, industrial and residential properties.

The role may involve interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

This unit requirements are typically carried out by experienced people such as hydraulic design consultants or persons in a supervisory capacity in relation to plumbing services.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Identify design parameters.
 - 1.1 Determine design scope from plans, specifications and client brief.
 - 1.2 Identify applicable regulatory and legislative requirements for the design of complex stormwater and roof drainage systems.
 - 1.3 Apply sustainability principles and concepts as part of the design process.
 - 1.4 Account for the safety of system users or building occupants.
 - 1.5 Determine and estimate rainfall intensity and volume using measurements of different catchment areas.
 - 1.6 Analyse overland flood path affecting the property and buildings.
 - 1.7 Research and evaluate other information likely to impact the stormwater and roof drainage system design.
- 2 Plan system components.
 - 2.1 Plan and evaluate strategies for harvesting and re-using rainwater.
 - 2.2 Plan and evaluate methods of collection and disposal of roof surface run-off water.
 - 2.3 Plan and evaluate stormwater detention and retention systems and first-flush stormwater systems.
 - 2.4 Determine and specify the most suitable methods of preventing backflow of sub-soil and stormwater into buildings.
 - 2.5 Plan and evaluate treatment and disposal options for stormwater discharge.
 - 2.6 Plan layout of system components according to design parameters and site limitations and coordinate with other services.
- 3 Design and size systems.
 - 3.1 Apply regulatory requirements, Australian Standards and codes to all aspects of the stormwater and roof drainage system design.

- 3.2 Calculate and specify storage volume, pump capacity and discharge pipe size required for stormwater pumping systems as necessary.
 - 3.3 Design stormwater systems requiring pumping.
 - 3.4 Design, select, size and detail system components using appropriate calculations, software applications and approved materials.
 - 3.5 Specify correct installation, laying and jointing procedures for approved materials and components.
- 4 Prepare documentation.
 - 4.1 Prepare client brief of the preferred design.
 - 4.2 Prepare plans and specifications.
 - 4.3 Prepare testing and commissioning schedule.
 - 4.4 Produce operation and maintenance manual, including information on how to properly and safely maintain the system.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPCM5012A Design complex stormwater and roof drainage systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPCM5012 Design complex stormwater and roof drainage systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Application and Elements and Performance Criteria 4.4.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPCM5012A Design complex stormwater and roof drainage systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout details of a complex stormwater and roof drainage system for a site incorporating a high-rise mixed development building within a wide-span multiple building project (such as a school), including:
 - specification
 - access chambers
 - grade of drains
 - holding pits
 - collection sumps
 - detention, retention and harvesting systems
 - disposal methods for stormwater catchments to council or utility provider's drainage network or disposal on-site
 - other system components
- using appropriate design software to produce detailed drawings and layout plans, including long sections and cross-sections of the designed system
- applying sustainability principles and concepts throughout to achieve a star rating under the Green Building Council of Australia rating scheme
- evaluating health risks associated with stormwater and roof drainage systems and action as required within the system design.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- relevant codes, Australian standards and specifications:
 - Australian rainfall and run-off (ARR) guidelines
 - AS/NZS 3500 Plumbing and drainage set
 - manufacturer specifications
 - National Construction Code (NCC)
 - building codes
 - work health and safety (WHS) and environmental requirements
 - plumbing regulations
- terminology and definitions used in hydraulic design
- computer-aided design (CAD) software
- installation methods used in hydraulic systems
- hazards associated with devices and systems used in the hydraulic sector
- environmental requirements:
 - clean-up protection
 - stormwater protection
 - waste management
 - water quality management
- quality assurance requirements:
 - Environmental Protection Agency (EPA)
 - internal company quality assurance policy and risk management strategies
 - International Standards Organisation (ISO)
 - site safety plan
 - workplace operations and procedures
- safe work procedures relating to planning, sizing and documenting layout of pipework and fixtures
- local government requirements:
 - Integrated Planning Act (IPA)
 - standard drawings and details
 - town planning requirements
- treatment requirements such as:
 - screens
 - silt traps
 - solid removal systems
- plans and documentation relevant to the design:
 - site plans
 - cross-sections
 - details
 - elevations
 - sections
 - civil drawings

- contour levels
- existing services
- reduced levels
- manufacturer requirements and specifications
- catchment area analysis
- stormwater design
- surveys
- system components:
 - access chambers (manholes)
 - channels
 - culverts
 - downpipes
 - fire rating of penetrations
 - grated pits
 - gullies
 - guttering
 - inspection chambers
 - inspection openings
 - kerbs
 - piping
 - pits
- treatment options for stormwater discharge:
 - grass and rock swales
 - lagoons
 - momentum diffusers
 - ponds
 - screens
 - silt traps
 - traps
 - other removal systems as determined
- disposal options for stormwater discharge:
 - connection to stormwater mains
 - creeks
 - harbour
 - kerb and street channels
 - lakes
 - on-site harvesting and reuse
 - rainwater collection systems, including tanks and dams
 - rivers
 - streams

- determining rainfall intensities by:
 - average rainfall intervals
 - roof, surface and subsurface calculations
 - site location
 - time and concentration
- catchment areas:
 - land surface catchment areas, including a variety of surface conditions such as grassed and paved areas
 - roof catchment areas
- stormwater drainage systems:
 - access chambers (manholes)
 - collection sumps
 - detention and retention
 - grade of drains
 - harvesting
 - holding pits
 - pump discharge
- approved piping materials:
 - concrete
 - earthenware or vitrified clay pipe (VCP)
 - fibre cement (FRC)
 - polyvinyl chloride (PVC)
 - other approved materials
- approved fittings:
 - bends
 - grates
 - gullies
 - junctions
 - non-return valves
- stormwater systems requiring pumping:
 - holding tanks
 - overflow provisions
 - pump and controls
 - rising main
- methods of applying sustainability principles and concepts:
 - selecting appropriate material to ensure minimal environmental impact
 - harvesting and reuse
 - efficient use of material
 - efficient energy usage/capital outlay comparison
 - effect on the environment due to overflow or leakage

- consideration of the Green Building Council of Australia rating scheme
- specification and user manuals which include information on:
 - commissioning
 - bedding
 - support
 - concrete support and detailing specialised components
 - jointing
 - access chambers (manholes)
 - manufacturer requirements
 - materials
 - pumps
 - WHS
 - testing
 - workmanship.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPCM5013 Design complex (non-solar) heated water systems

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Changes to Elements and Performance Criteria 1.8.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPCM5013A Design complex (non-solar) heated water systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design complex (non-solar) heated water supply and distribution systems for buildings with 29 floors, inclusive of basement and fixtures on each level for residential, commercial and industrial applications. The unit includes circulating systems, fuel and energy loads and system selection.

The role may involve interaction with architects, builders, suppliers, clients and relevant planning authorities and requires sound understanding of applicable legislation, standards and codes.

This unit's requirements are typically carried out by experienced tradespeople such as hydraulic design consultants or persons in a supervisory capacity in relation to plumbing services.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Evaluate design parameters.
 - 1.1 Establish scope of work for heated water supply and distribution systems from relevant Australian Standards, codes, plans, specifications and client brief.
 - 1.2 Analyse and apply statutory and regulatory requirements for the design of complex (non-solar) heated water supply and distribution systems.
 - 1.3 Apply sustainability principles and concepts as part of the design process.
 - 1.4 Establish performance requirements considering the safety of system users and building occupants, including the control of Legionella bacteria.
 - 1.5 Conduct research, including a desktop study to outline design parameters.
 - 1.6 Interpret manufacturer requirements and trade and technical manuals for the design of heated water systems.
 - 1.7 Conduct a cost-benefit analysis to compare a range of materials and system designs.
 - 2 Plan and detail system components.
 - 2.1 Plan layout of pipework systems and type and location of fittings and valves.
 - 2.2 Detail thermostatic mixing, tempering and control valves for a range of applications using appropriate symbols.
 - 2.3 Plan and detail circulating heated water supply systems.
 - 2.4 Plan and detail warm water systems, including disinfection and biocontrol measures.
 - 2.5 Conduct calculations to determine water heating sizing and detail methods for the control of expansion.
 - 2.6 Calculate pipe sizes and design pipe supports for a range of applications.
 - 2.7 Detail manifolded heated water units for a range of water heaters and specify safe trays and overflows.
 - 2.8 Specify approved materials and jointing methods and insulation materials and installation requirements for a

- range of water heaters and heated water systems.
- 2.9 Provide allowance for expansion and contraction.
 - 2.10 Include acoustic performance of the system in plans.
- 3 Design and size systems.
- 3.1 Design complex (non-solar) heated water supply and distribution systems using plans and details of system components and established design parameters.
 - 3.2 Design suitable system approaches.
 - 3.3 Design and size system using manufacturer's design information and calculations.
 - 3.4 Calculate pipe sizes, velocities and pressures according to manufacturer's piping design requirements.
- 4 Prepare documentation
- 4.1 Prepare client brief of the preferred design.
 - 4.2 Prepare plans and specifications.
 - 4.3 Prepare testing and commissioning schedule.
 - 4.4 Produce operation and maintenance manual.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCPCM5013 Design complex (non-solar) heated water systems

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Changes to Elements and Performance Criteria 1.8.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPCM5013A Design complex (non-solar) heated water systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and planning the layout details for complex (non-solar) heated water systems for a high-rise mixed development building to a minimum of 29 floors inclusive of a basement, including fixtures on each level and using two methods of providing heated water:
 - one system to be gas only
 - one system incorporating an alternative energy efficient heat source, for example, a commercial heat pump with boosted system
- preparing documentation, including:
 - heat source
 - flue arrangements
 - flow and return systems
 - insulation requirements
 - manifold systems
 - provision for expansion
 - temperature control device
- applying sustainability principles and concepts throughout to achieve a star rating under the Green Building Council of Australia rating scheme
- evaluating health risks associated with heated water supplies and actioning as required within the system design.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- common terminology and definitions used in design of complex (non-solar) heated water systems
- application of National Construction Code (NCC), relevant Australian Standards, codes and manufacturer specifications, including:
 - Acts and regulations
 - AS/NZS 3500 Plumbing and drainage set
 - local government and health department requirements
- installation methods and hazards identified in relation to devices and systems used according to relevant Australian Standards, codes and standard operating procedures
- nature of materials used and effects of performance under various conditions
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
- cost–benefit analysis considerations for the selection of materials and systems:
 - enabling cost effective choices without compromising the integrity of the project
 - expected design life
 - design style
 - associated labour costs
 - material costs
 - safety factors
 - speed of installation
 - suitability of materials
 - range of system choices
- requirements from manufacturer:
 - material specifications
 - heater maintenance and servicing
 - provision for heater pressure and temperature discharge
 - pump tables
 - sizing tables
 - recommended specific fixings for pipework
 - technical and trade manuals
- sources of information to support the design process:
 - architectural and building plans
 - developer plans
 - building applications
 - brochures
 - forms
 - policies
 - other reports as available

- layout of pipework systems:
 - dead leg
 - pressurised
 - thermo convection
 - circulating
- types of fittings:
 - bends
 - tees
 - unions
- types of valves:
 - backflow prevention
 - cold water expansion
 - isolating
 - non-return, including high pressure non-return
 - pressure limiting
 - pressure relief
 - strainers
 - temperature control
- types of thermostatic mixing and tempering valves:
 - bimetallic types
 - wax capsule
- circulating heated water supply system details:
 - circulating pump specification
 - dead leg minimisation
 - flow and return pipework
 - circulation
 - pipe insulation
 - thermal convection circulating
- heat trace systems:
 - installation requirements
 - running costs
 - serviceability
- calculations for sizing water heaters:
 - coefficient of expansion
 - daily flows
 - energy consumption
 - heat losses
 - mixed temperatures
 - peak demand
 - recovery times

- size and quantity of heated water required
- standby versus continual flow
- tariffs
- water expansion
- methods for the control of expansion:
 - U-bends
 - coiled loop
 - lyre bend
 - offset bends
 - proprietary expansion control devices
- pipe supports:
 - anchors
 - bracket spacing
 - corrosion protection
 - hanging brackets
 - material requirements
 - provision for expansion
 - saddles
 - wall and ceiling brackets
- manifolding heated water units:
 - balanced flow conditions and valves
 - pressure relief requirements
- water heater inclusions:
 - continuous flow
 - heat transfer
 - pressure storage systems
 - open vented storage systems
- sources of generated heat:
 - electricity
 - gas
 - heat pump
 - solar
 - solid fuel
 - waste heat
- safe trays and overflows:
 - design
 - discharge
 - materials
 - sizes
- materials:

- pipe materials as specified:
 - copper
 - composite
 - polymer
 - other approved materials
- flue materials including stainless steel
- ancillary material:
 - air relief valve
 - heaters
 - fittings and fixtures
 - insulation
 - pumps
 - valves
- jointing methods:
 - brazing
 - compression
 - electrofusion welding
 - flaring
 - mechanical joints
 - threading
- insulation materials:
 - fibre glass
 - foam
 - metal sheathing
 - rock wool
 - other approved materials
- installation requirements:
 - fire rating of penetrations
 - level of workmanship
 - manufacturer-recommended specific fixings
 - pipe support
 - provision for expansion
 - serviceability and access
- circulating systems:
 - approved pressure pipes and fittings
 - balancing valves
 - circulating pump and controls
 - isolating valves
 - thermo cycle
 - temperature gauge

- pump sizing to meet calculated flow conditions
- methods of applying sustainability principles and concepts:
 - selecting appropriate material to ensure minimal environmental impact
 - efficient use of material
 - efficient energy usage/capital outlay comparison
 - selection of energy efficient water heater
 - water efficiency
 - consideration of the Green Building Council of Australia rating scheme
- types of plans produced using computer software and drawing equipment:
 - axonometrics
 - cross-sections
 - details
 - elevations
 - isometrics
 - schematics
 - sections
- specification:
 - support
 - jointing
 - flow requirements
 - manufacturer requirements
 - materials
 - residual pressures and temperature
 - WHS
 - specialised components
 - testing
 - valve selection
 - water treatment
 - workmanship
- testing for:
 - air pressure
 - defect inspection
 - flue operation
 - hydrostatic
 - mains pressure
 - performance
 - quality assurance (QA) audit
- commissioning schedule information:
 - balancing the system
 - checking and flushing the system

- disinfection
- flow test
- flue operation
- leak check
- pressure test
- system certification
- system defects
- system functions as per design
- system purge
- temperature setting
- valve operation
- operation and maintenance manual information:
 - as installed drawings
 - results of commissioning test
 - certification documentation
 - heater details, settings and operations
 - maintenance schedules
 - manufacturer brochures and technical information
 - valve function.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPCM5014 Design sewer infrastructure systems

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Changes to Elements and Performance Criteria 5.4.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPCM5014A Design sewer infrastructure systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design and document sewer infrastructure systems for residential development of 50 properties. This includes specifying responsibilities, procedures and safety standards for sewerage equipment, construction, soil classification, pipe laying techniques and trench construction. The unit also covers analysing factors relating to pumping and tunnelling and supervising the installation of a sewer infrastructure system.

This unit covers requirements for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and hydraulics.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Prepare and implement 1.1 Identify and apply main utility sewer design and sizing

- sewer contracts.
- procedures.
- 1.2 Document required qualifications, roles and responsibilities of local authority personnel and contracted parties qualified to install sewers.
- 2 Plan and detail system components.
- 2.1 Analyse soil classification, characteristics and types from test results.
- 2.2 Detail trenching safety procedures, specifying backfilling and compaction methods.
- 2.3 Plan layout of pipework systems, including the type and location of fittings, valves and controls.
- 2.4 Specify pipe laying, dewatering and testing procedures for installation of pipework of varying sizes.
- 2.5 Calculate self-cleaning velocities, pipe size and grade, and ventilation requirements for a range of systems.
- 2.6 Detail sewer connections, access chambers, bedding material and support systems.
- 2.7 Determine size and detail requirements for pump station, pumps, controls and equipment.
- 2.8 Specify approved materials, jointing methods and installation requirements for sewer infrastructure systems.
- 2.9 Identify maintenance procedures of the system.
- 3 Evaluate design parameters.
- 3.1 Establish scope of work for sewer infrastructure systems.
- 3.2 Determine design requirements from relevant Australian standards, codes, plans, specifications and client brief.
- 3.3 Conduct cost–benefit analysis comparing a range of pipe materials and system design.
- 3.4 Analyse and apply statutory and regulatory requirements and relevant Australian Standards and codes for the design of sewer infrastructure systems.
- 3.5 Obtain trade and technical manuals and interpret

- manufacturer requirements.
- 3.6 Conduct additional research, including a desktop study to outline design parameters.
 - 3.7 Determine factors that contribute to quality, safety and time efficiency.
 - 3.8 Determine point of connection to the authority's system.
 - 3.9 Specify safety procedures and regulations for trench safety and for pumping stations and establish performance requirements.
 - 3.10 Assess pipe sizes using equivalent population (EP) density.
- 4 Design and size systems.
- 4.1 Identify easements and location for sewer infrastructure systems, including pumping rising mains.
 - 4.2 Design sewer infrastructure systems for a range of applications.
 - 4.3 Design and detail sewer long sections.
 - 4.4 Design pump rising main systems.
 - 4.5 Design pumping stations.
 - 4.6 Apply computer software packages to design and size sewer infrastructure system.
 - 4.7 Determine and design ventilation requirements.
 - 4.8 Apply sustainability principles and concepts throughout the design process.
- 5 Prepare documentation.
- 5.1 Prepare client brief of the desired design.
 - 5.2 Prepare plans and specification for a range of sewer infrastructure systems.
 - 5.3 Prepare testing and commissioning schedule.
 - 5.4 Produce operation and maintenance manual, including information on how to properly and safely maintain the

system.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPCM5014A Design sewer infrastructure systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPCM5014 Design sewer infrastructure systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Elements and Performance Criteria 5.4.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPCM5014A Design sewer infrastructure systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the installation and layout details for a sewer infrastructure system for a residential development of 50 properties, incorporating a gravity system and pumping station, to include:
 - sewer reticulation mains
 - pump station
 - pump rising main
 - ventilation
 - odour control
- evaluating and documenting design parameters to relevant Australian standards and codes, and regulatory, client and manufacturer requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- common terminology and definitions used in the design of sewer infrastructure systems
- application of statutory and regulatory requirements and relevant Australian standards and codes:
 - Acts, regulations and Commonwealth, state or territory and local government policies
 - AS/NZS 3500 National plumbing and drainage
 - AS 2200 Design charts for water supply and sewerage
 - Environmental Protection Authority (EPA)
 - National Construction Code (NCC)

- Sewerage Code of Australia
- other relevant Australian standards and codes
- utility provider's design standards -e.g. Water Corporation (WA), Urban Utilities (QLD)
- scope of work requirements:
 - interpreting plans and specifications
 - sizing and documenting layout sewer infrastructure system
- design requirements:
 - architectural plans
 - builder specifications
 - fire safety requirements
 - owner requirements
 - pipework identification
 - flow requirements and sizing of pipework
 - ventilation requirements
- cost–benefit analysis comparing the range of suitable materials and system choices available to enable cost-effective choices without compromising the integrity of the project
- nature of materials used and effects of performance under various conditions:
 - cast iron
 - concrete
 - vitrified clay pipes (VCP)
 - polyethylene (PE)
 - polypropylene (PP)
 - unplasticised polyvinyl chloride (uPVC)
 - other approved materials
- manufacturer requirements:
 - material specifications
 - collection and storage systems
 - design and installation
 - equipment installation
 - pump installation
 - technical manuals
- trench safety procedures:
 - conditions affecting trench stability
 - condition of soils disturbed by previous excavations
 - effect of water on excavations
 - effects of moisture content on excavated trenches
 - traffic and vibrations
 - confined space safety requirements e.g. for exhaust emissions

- prevention of trench collapse
- trench collapse procedures
- trench collapse inspection procedures
- trench excavation methods used for different:
 - backfilling methods
 - bedding methods
 - depth
 - slope
 - support systems
 - types
- safety procedures with reference to:
 - advisory standards
 - compliance standards
 - industry standards
 - Work Health and Safety Act
 - other acts, codes or regulations relating to trenching
 - working in confined spaces
- layout of pipework systems:
 - gravity
 - pumped and rising mains
 - vacuum
 - identification of easements and location for sewer infrastructure systems, including pumping rising mains
 - layout requirements to:
 - not unduly affect building integrity and aesthetic appeal
 - apply principles of economy, serviceability, durability and fitness for use
- characteristics and application of different fittings, valves and controls:
 - fittings
 - bends
 - flanges
 - junctions
 - inspection openings
 - unions
 - valves non-return and isolation
 - controls
 - level
 - alarms
 - management communication systems
- pipelaying procedures:
 - cutting, handling and storage procedures

- fittings used for sewerage work
- jointing methods and procedures
- laying procedures for pipework
- methods of dewatering trenches
- methods of grading and maintaining pipe direction and reduced levels
- methods of placing bedding materials, encasing pipes, backfilling and compacting
- methods of testing sewer drains
- methods of pressure testing pump rising mains
- processes for calculating pipe size, pipe grade and ventilation requirement:
 - determination of flow and loadings
 - gradient calculations
 - equivalent population (EP) density
 - interpretation of design charts and tables
 - pipe sizing calculations
 - projected flows
 - pumping flow rates
 - reduced level calculations
 - self-cleaning pipe velocities
 - stormwater infiltration
 - system ventilation
- access chamber details:
 - access
 - benching
 - connections
 - covers
 - flow and gradient
 - open and closed channel
 - sizing
- pump station, pumps, controls and equipment requirements:
 - access covers
 - access ladders
 - automatic controls
 - capacity
 - corrosion-resistant materials
 - emergency storage and power supply
 - impeller sizing and selection
 - inlet and outlet design
 - installation and mounting
 - odour control
 - macerator requirements

- management communication system
- provision for servicing
- pump selection
- pump well sizing
- space requirements
- valves
- ventilation
- warning system
- characteristics and application of different jointing methods
- installation requirements:
 - bedding
 - pipe protection
 - cover
 - corrosion
 - impact
 - level of workmanship
 - manufacturer-recommended specific fixings
 - pipe support
 - provision for pipe movement
 - serviceability and access
- rising main systems:
 - approved pressure pipe and fittings
 - calculated rise and pump delivery requirements
 - environmental protection
 - pump sizing to meet calculated flow conditions
 - self-cleaning pipe velocities
 - odour control
- the use and limitations of computer software packages including manufacture and proprietary design software
- plans and specifications requirements:
 - axonometric
 - cross-sections
 - details
 - elevations
 - isometrics
 - schematics
 - site
 - sections
 - specifications
 - bedding

- commissioning
- excavation requirements
- support
- concrete support and detailing specialised components
- jointing
- access chambers (manholes)
- manufacturer requirements
- materials
- piping
- pumps
- pumping stations
- WHS
- testing
- workmanship
- testing methods:
 - air pressure
 - drainage inspection
 - hydrostatic
 - performance
 - compliance with authorities' discharge requirements
 - quality assurance (QA) audit
- commissioning schedule requirements:
 - system certification
 - check for foreign material
 - containment
 - leak check
 - operational
 - pumping
 - system defects
 - system functions as per design
 - ventilation
 - odour control
 - WHS compliance
- operation and maintenance manual requirements:
 - as installed drawings
 - certification documentation
 - emergency procedures
 - results of commissioning test
 - maintenance schedules
 - manufacturer brochures and technical information

- odour control
- WHS requirements
- ventilation
- sustainability principles and concepts:
 - selecting appropriate material to ensure minimal environmental impact
 - efficient use of material
 - efficient energy usage/capital outlay comparison
 - consideration of the Green Building Council of Australia rating scheme
- principles of technology in the design of sewer infrastructure systems.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPDR2021 Locate and clear blockages

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Change to Elements and Performance Criteria 1.2 and 3.1.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPDR2021A Locate and clear blockages.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to locate and clear blockages in sanitary plumbing and drainage systems, using a range of equipment, including closed-circuit television (CCTV).

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|--|
| 1 Prepare for work. | 1.1 Determine location of blockage and clearing requirements. |
| | 1.2 Identify and apply workplace, work health and safety (WHS) and environmental requirements. |
| | 1.3 Select appropriate tools and equipment, including |

personal protective equipment (PPE).

- 2 Locate and clear blockage.
 - 2.1 Identify pipe section containing blockage using closed-circuit television (CCTV), as appropriate.
 - 2.2 Select and use appropriate blockage clearing equipment according to the job requirements and manufacturer's requirements.
 - 2.3 Remove blockage without causing damage to pipework and fittings.
 - 2.4 Flush and test system to ensure adequate operation.
- 3 Clean up.
 - 3.1 Clear the work area and dispose of materials in accordance with state and territory legislation and workplace policies and procedures.
 - 3.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPDR2021A Locate and clear blockages.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPDR2021 Locate and clear blockages

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Change to Elements and Performance Criteria 1.2 and 3.1.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPDR2021A Locate and clear blockages.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- using a closed-circuit television (CCTV) camera to locate the cause of the blockage in drainage pipework
- using a mechanical method to clear blockage in drainage pipework.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- characteristics of different pipes and fittings.
- different types of tools and equipment, their application and method of operation:
 - manually operated drain cleaning, including plungers and rods
 - mechanically operated drain clearing machines and attachments
 - CCTV
 - pipe locating equipment
 - chemical applications for cleaning
- processes for clearing blockages
- how to access relevant drainage layout information for the job
- work health and safety (WHS) requirements for locating and clearing blockages.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPDR2025 Install stormwater and sub-soil drainage systems and drain work site

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Changes to Elements and Performance Criteria 4.1.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is not equivalent to CPCPDR2024A Install stormwater and sub-soil drainage systems, and CPCPDR2025A Drain work site. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install stormwater and sub-soil drainage systems to an approved point of discharge.

It includes the operation of pumps to temporarily or permanently drain a work site of unscreened roof water, sub-soil water and surface water.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan the work.

1.1 Access, read and determine stormwater and drainage requirements from relevant job plans and specifications, codes, Australian standards, manufacturer's

- specifications and jurisdictional requirements.
- 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
- 2 Prepare for work.
 - 2.1 Create a materials list and collect materials.
 - 2.2 Select and check serviceability of appropriate tools and equipment, including personal protective equipment (PPE).
- 3 Install storm water and sub-soil drainage.
 - 3.1 Locate and set out position of stormwater and drainage and determine levels and gradients from set points.
 - 3.2 Excavate trench to specified depth and width and grade using manual or mechanical means.
 - 3.3 Measure, cut and install pipework to align with connection points.
 - 3.4 Conduct a pressure test on the stormwater installation.
 - 3.5 Fit covers and inspection openings.
- 4 Drain worksite.
 - 4.1 Position and construct sediment controls to meet environmental requirements.
 - 4.2 Install submersible pump in a sump or well with inlet and discharge point to the specified location and levels.
- 5 Clean up.
 - 5.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 5.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is not equivalent to CPCPDR2024A Install stormwater and sub-soil drainage systems, and CPCPDR2025A Drain work site.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPDR2025 Install stormwater and sub-soil drainage systems and drain work site

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Changes to Elements and Performance Criteria 4.1.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is not equivalent to CPCPDR2024A Install stormwater and sub-soil drainage systems, and CPCPDR2025A Drain work site. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing a stormwater and a sub-soil drainage system, including:
 - connecting stormwater from two downpipes to an approved point of discharge with a minimum length of 5 metres
 - connecting sub-soil drainage to a stormwater pit with a minimum length of 5 metres
- draining a work site, including:
 - using a submersible pump to drain water with a depth of at least 500 mm from a pit, trench or excavation to an approved point of discharge.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- terminology relating to the installation of stormwater and subsoil drainage systems and to draining a work site
- processes, procedures and techniques for installing stormwater drainage systems
- approved points of discharge
- retention and detention systems and charged systems
- excavation techniques and shoring methods and systems
- site isolation and traffic control responsibilities and authorities
- stormwater pits
- how to locate underground services
- functional and operational features of plant, equipment, and submersible pumps

- how to access relevant information, relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements
- tools, materials and equipment used for the installation of stormwater and drainage systems
- work health and safety (WHS) requirements for the installation of stormwater and drainage systems.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPDR2026 Install prefabricated inspection openings and inspection chambers

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Elements and Performance Criteria 3.2.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPDR2026A Install prefabricated inspection openings and enclosures. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install prefabricated inspection openings and inspection chambers in new or existing domestic or commercial contexts.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------------|---|
| 1 Identify installation requirements. | 1.1 Access, read and determine prefabricated inspection openings and chamber installation methods from relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements. |
|---------------------------------------|---|

- 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
- 2 Prepare for work.
 - 2.1 Create a materials list and collect materials.
 - 2.2 Select appropriate tools and equipment, including personal protective equipment (PPE).
- 3 Install prefabricated inspection openings and enclosures.
 - 3.1 Mark out and excavate site and prepare for installation according to relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
 - 3.2 Install prefabricated concrete or polymer inspection opening and chamber, including the connection of inlet and outlet pipes according to relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPDR2026A Install prefabricated inspection openings and enclosures.

Assessment Requirements for CPCPDR2026 Install prefabricated inspection openings and inspection chambers

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Elements and Performance Criteria 3.2.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPDR2026A Install prefabricated inspection openings and enclosures. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing an approved prefabricated concrete or polymer inspection opening or chamber of a minimum depth of 500 mm, including the connection of the inlet and outlet pipes below ground on a minimum of one stormwater and one sanitary drainage application.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- characteristics and application of pipe fittings and jointing techniques
- processes for installing prefabricated inspection openings and chambers
- characteristics, uses and limitations of concrete or polymer prefabricated inspection openings and chambers and other approved materials
- how to access relevant information, including relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements
- tools, materials and equipment used for installing prefabricated inspection openings and inspection chambers
- work health and safety (WHS) requirements for installing prefabricated inspection openings and inspection chambers.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPDR3021 Plan layout and install below ground sanitary drainage systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Pre-requisite unit and Elements and Performance Criteria 1.3.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is not equivalent to CPCPDR3021A Plan layout of a residential sanitary drainage system, and CPCPDR3022A Install below ground sanitary drainage systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to plan the layout of and install below ground sanitary drainage systems for sewage and waste discharge from sanitary fixtures to approved points of connection in new or existing domestic and commercial structures.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

CPCPCM3024 Prepare simple drawings

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|-------------------------|---|
| 1 Identify installation | 1.1 Access, read and determine installation requirements from job plans and specifications, relevant Australian |
|-------------------------|---|

- requirements. Standards, codes, manufacturer's specifications and jurisdictional requirements.
- 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
 - 1.3 Plan and draw the layout of a sanitary drainage system.
- 2 Prepare for work.
- 2.1 Create a materials list and collect materials.
 - 2.2 Select appropriate tools and equipment including personal protective equipment (PPE).
- 3 Install sanitary drainage.
- 3.1 Establish and set out fixture locations, levels and heights to align with existing or new connection points.
 - 3.2 Excavate trench to specified depth and grade using manual tools and equipment or mechanical means.
 - 3.3 Fabricate and install sanitary drainage pipework, connecting to a new or existing system and test installation.
 - 3.4 Prepare an as constructed drawing.
- 4 Clean up.
- 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is not equivalent to CPCPDR3021A Plan layout of a residential sanitary drainage system, and CPCPDR3022A Install below ground sanitary drainage systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPDR3021 Plan layout and install below ground sanitary drainage systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
- Changes to Pre-requisite unit and Elements and Performance Criteria 1.3.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is not equivalent to CPCPDR3021A Plan layout of a residential sanitary drainage system, and CPCPDR3022A Install below ground sanitary drainage systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- planning the layout and install a vented below-ground sanitary drainage system with a minimum length of 10 metres to connect a:
 - bathroom group including floor waste gully with fixtures connected
 - WC
 - laundry trough
 - kitchen sink
 - soil or waste stack to a minimum of two floor levels

The system must include inspection openings and shafts and connection to an approved point of discharge, provision for an overflow relief gully or reflux valve as required, and provision for articulation in drainage for soil movement.

- testing a sanitary drainage system
- cutting in a branch to an existing drain to connect a new WC or another fixture.
-

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- terminology relating to the installation of below-ground sanitary drainage systems
- principles of drainage design and working drawings conventions, symbols and abbreviations
- trench support

- how to obtain, transfer and record levels and heights
- sewerage inspection chambers
- approved materials and their characteristics and application for the installation of below-ground sanitary drainage systems
- processes, procedures and techniques for the installation of below-ground sanitary drainage systems, including testing
- how to access relevant information, including codes and Australian standards
- work health and safety (WHS) requirements for planning the layout and for installation of below-ground sanitary drainage systems.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPDR3023 Install on-site domestic wastewater treatment plants and disposal systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is not equivalent to CPCPDR2022A Install domestic treatment plants, and CPCPDR3023A Install on-site disposal systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install an approved prefabricated wastewater treatment plant and on-site effluent disposal.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|--|
| 1 Prepare the work. | 1.1 Access, read and determine treatment plant and disposal system type installation requirements from relevant job plans and specifications, codes Australian standards, manufacturer's specifications and jurisdictional requirements. |
| | 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements. |

- 1.3 Create a materials list and collect materials.
 - 1.4 Select and check serviceability of appropriate tools and equipment including personal protective equipment (PPE).
- 2 Install treatment plant and disposal system.
 - 2.1 Set out and excavate site to required depth.
 - 2.2 Prepare the excavated base for installation.
 - 2.3 Install a treatment plant and on-site disposal system.
- 3 Clean up.
 - 3.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 3.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is not equivalent to CPCPDR2022A Install domestic treatment plants, and CPCPDR3023A Install on-site disposal systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPDR3023 Install on-site domestic wastewater treatment plants and disposal systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is not equivalent to CPCPDR2022A Install domestic treatment plants, and CPCPDR3023A Install on-site disposal systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing an approved domestic wastewater treatment plant
- installing an on-site disposal system with connection to the outlet of the treatment plant, including an irrigation system or a transpiration or absorption trench with a minimum length of 3.0 metres.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- effluent treatment and disposal
- types of domestic treatment plants
- types of onsite effluent disposal systems
- treated-water irrigation systems in accordance to relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements
- approval requirements for onsite treatment plants
- system operations and characteristics of sewage treatment
- how to access relevant information, including codes and standards
- tools, materials and equipment used to install an on-site domestic wastewater treatment plant and disposal system
- work health and safety (WHS) requirements for installing an on-site domestic wastewater treatment plant and disposal system.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPDR3024 Maintain and service domestic treatment plants and onsite sewerage facilities

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Application

This unit specifies the skills and knowledge required to maintain and service domestic treatment plants and onsite sewerage facilities.

The unit covers maintaining system components, conducting and analysing effluent quality tests and maintaining systems on new or existing domestic or commercial structures.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPDR4013 Design and size domestic treatment plant disposal systems

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|--|
| 1 Prepare for work. | 1.1 Identify and arrange work health and safety (WHS) and environmental requirements necessary to undertake the work. |
| | 1.2 Complete a site risk assessment, including hazards associated with exposure to wastewater and wastewater treatment facilities. |
| | 1.3 Develop procedures to minimise risk associated with identified hazards. |

- 2 Maintain components.
 - 2.1 Check operation of pumps and aerators to identify maintenance requirements.
 - 2.2 Perform maintenance of pump systems and components and aerators and replace as required.
 - 2.3 Clean membranes, filters, UV light tubes and ozone-producing equipment where appropriate.
 - 2.4 Measure sludge and scum levels in septic tanks and treatment plants.
 - 2.5 Analyse and maintain land application areas and piping systems.
 - 2.6 Determine appropriate procedures for loss of power and equipment failure.
 - 2.7 Perform maintenance of relevant components and replace system devices where required.

- 3 Conduct and analyse effluent quality tests.
 - 3.1 Calibrate and use commercial testing equipment to conduct water quality tests and record results in accordance with legislative requirements.
 - 3.2 Collect, prepare and send water samples to an accredited laboratory for effluent quality tests where appropriate.
 - 3.3 Identify rectification work required from effluent quality test results.
 - 3.4 Perform rectification work as required.

- 4 Maintain systems.
 - 4.1 Analyse and determine the correct treatment processes for a range of small decentralised treatment facilities.
 - 4.2 Maintain a range of wastewater treatment facilities in compliance with legislation.
 - 4.3 Maintain black and/or grey water systems to comply with end user, water and regulatory quality parameters.

- | | |
|---|---|
| 5 Complete documentation and report outcomes. | 5.1 Complete service reports and correspondence outlining maintenance issues. |
| | 5.2 Provide advice to end user. |
| | 5.3 Produce an operation and maintenance schedule for end user. |
| | 5.4 Document and report outcomes to local authorities and property owners. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPDR3024 Maintain and service domestic treatment plants and onsite sewerage facilities

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- applying an operation and maintenance procedure for three of the following systems, ensuring a primary, secondary and tertiary system is selected:
 - primary treatment conventional septic tank
 - primary biological filter
 - secondary treatment aerated wastewater treatment plant
 - secondary treatment sand filter
 - tertiary ultraviolet (UV) disinfection and ozone oxidation
 - tertiary chlorine.

For each procedure the person must identify and report faults to appropriate person.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- disinfection technologies and land application systems
- system processes to reduce nutrients
- interpreting and applying test results for:
 - dissolved oxygen readings
 - clarity readings of wastewater
 - various air pressures on aerator
 - rectification of incorrect residual chlorine readings
 - calculation of pump duty
 - rectification of incorrect pH readings
- microbiology of wastewater constituents
- SI system of measures
- work health and safety procedures
- dissolved oxygen

- pH parameters
- air pressure from the aerator
- residual chlorine parameter
- pump operation
- pump duty
- infectious diseases
- types of wastewater treatment processes
- risks with working with wastewater
- types of land application areas
- maintenance procedures
- legislation and regulations relating to wastewater
- wastewater quality parameters
- areas of consideration for health and safety:
 - protective clothing and equipment
 - use of tools and equipment
 - workplace environment and safety
 - handling of materials
 - hazardous materials
 - handling of materials
 - hazard control
 - electrical
 - lifting safety
 - first aid requirements for injuries
 - personal hygiene
- areas of potential risk:
 - hygiene
 - biological
 - health
 - chemical
 - electrical
- types of hazards:
 - chlorine
 - influent
 - effluent
 - electrical
 - UV
 - ozone
 - pH correction chemicals
- correct operation of filters and pumps
- types of land application:

- absorption trenches and beds
- evapotranspiration beds
- mounds
- shallow sub-surface irrigation systems
- covered surface drip irrigation
- low pressure effluent drip irrigation systems
- above-ground irrigation
- constructed wetlands:
 - reed beds
 - lagoons
- devices used in effluent systems:
 - sludge recycling device
 - disinfecting device
 - dosing device
 - pumps
 - aerators
 - valves
- tests for effluent quality:
 - biochemical oxygen demand (BOD)
 - sludge
 - suspended solids
 - clarity
 - pH
 - dissolved oxygen
 - bacterial content (pathogenic organisms)
 - free chlorine
 - total nitrogen
 - total phosphorous
- rectification solutions:
 - recommended use of household products
 - adjustments to system
 - improvements to system
- result information inclusions:
 - summary of own investigations
 - local authority reports
 - reports by other testing agencies or authorities
- end users such as:
 - landowners
 - tenants
- how to access relevant information, including codes and standards

- tools, materials and equipment used to maintain and service domestic treatment plants and onsite sewerage facilities
- work health and safety (WHS) requirements for maintaining and servicing domestic treatment plants and onsite sewerage facilities.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPDR3025 Plan layout and install vacuum drainage systems

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Application

This unit specifies the skills and knowledge required to prepare for the layout and installation of sewage and waste discharge from fixtures to the point of connection in new or existing, domestic and commercial structures.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------------|--|
| 1 Identify installation requirements. | 1.1 Access, read and determine installation requirements from job specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements. |
| | 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements. |
| | 1.3 Plan and record layout of vacuum drainage system. |

- | | | | |
|---|--------------------------|-----|---|
| 2 | Prepare for work. | 2.1 | Establish fixtures and materials and calculate quantities. |
| | | 2.2 | Create a materials list and collect materials. |
| | | 2.3 | Select appropriate tools and equipment including personal protective equipment (PPE). |
| 3 | Install vacuum drainage. | 3.1 | Establish and set out levels and heights to align with existing or new connection points. |
| | | 3.2 | Perform installation of above ground vacuum drainage pipes in accordance with AS/NZS 3500.2 Plumbing and drainage – Sanitary plumbing and drainage. |
| | | 3.3 | Excavate trench to specified depth and grade using manual tools and equipment or mechanical means. |
| | | 3.4 | Compact and fill trench base to determined height. |
| | | 3.5 | Measure, cut and install vacuum drainage pipework. |
| | | 3.6 | Connect to new or existing system. |
| | | 3.7 | Check and test installation. |
| | | 3.8 | Prepare an as constructed drawing. |
| 4 | Clean up. | 4.1 | Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures. |
| | | 4.2 | Clean tools and equipment, check for serviceability reporting any damage, store and secure. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Links

Assessment Requirements for CPCPDR3025 Plan layout and install vacuum drainage systems

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- New unit.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- preparing an as constructed drawing to jurisdictional requirements
- planning and installing a vacuum drainage system with a minimum drain length of 3 metres vertical and 5 metres horizontal to connect a:
 - vacuum water closet (VWC) pan
 - buffer, both gravity drainage inlet and vacuum waste outlet
 - vacuum automatic interface unit (VAIU)
 - vacuum main pipeline to a vacuum station
- cutting in a branch to an existing drain connecting a new VWC pan and another buffer
- joining two branches together
- fabricating a vacuum reforming pocket both open and closed.

All installations must comply with and support fixings of pipe works.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- terminology relating to the installation of below- and above-ground vacuum drainage systems
- principles of vacuum drainage design, working drawings conventions, symbols and abbreviations
- trench support where applicable
- inspection openings
- approved materials, their characteristics and application for the installation of below- and above-ground vacuum drainage systems
- processes, procedures and techniques for the installation of below- and above-ground vacuum drainage systems, including testing
- how to access relevant information, including codes and standards

- tools, materials and equipment used to plan the layout and installation of below- and above-ground vacuum drainage systems
- work health and safety (WHS) requirements for planning the layout and installation of below- and above-ground vacuum drainage systems.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPDR4011 Design and size sanitary drainage systems

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Performance Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPDR4011B Design and size sanitary drainage systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design, size and document the layout of sanitary drainage systems for residential and commercial unit developments.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify system requirements.

1.1 Access, read and determine design requirements from plans, specifications, relevant manufacturer's requirements, Australian standards and jurisdictional requirements.

1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental

- requirements.
- 1.3 Determine fixtures, quantity, location and legal points of discharge.
- 2 Design and size system layout.
 - 2.1 Develop and size system layout in accordance with relevant manufacturer's requirements, Australian standards and jurisdictional requirements.
 - 2.2 Use the proposed design to identify and specify optimal materials required.
 - 2.3 Produce final system layout plans to relevant drawing design standards.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPDR4011B Design and size sanitary drainage systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPDR4011 Design and size sanitary drainage systems

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Performance Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPDR4011B Design and size sanitary drainage systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout details of a sanitary drainage system to an approved point of connection for:
 - a residential design that comprises at least eight dwellings (Class 1a), incorporating at least the following in each:
 - bath
 - two showers
 - three WCs
 - three basins
 - floor waste gullies
 - kitchen sink
 - laundry tub
 - clothes washing machine
 - a commercial design that comprises at least one water/oil separator
 - one commercial kitchen connecting to an approved trade waste facility and incorporating at least:
 - one commercial dishwasher
 - one commercial pot wash facility
 - one commercial glasswasher
 - bucket trap floor waste gullies
 - basin
 - a disabled bathroom incorporating a WC and basin

- three WCs across separate male and female toilet areas
- four basins across separate male and female toilet areas
- urinal
- completing design, sizing and documentation to meet regulatory requirements and client specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- processes to apply for trade waste installations
- characteristics and application of different pipe systems, including their fittings
- drawing instruments and sketching techniques, including the use of conventional symbols
- use of computers for documentation
- computer-aided design (CAD) software
- impact of venting on design
- contour, reduced and invert levels
- process of treating trade waste to acceptable levels for discharge
- non-gravitational sewage systems
- properties and characteristics of trade waste applications:
 - grease arrestors
 - acid neutralisers
 - dry basket arrestors
 - oily water separators
- how to access relevant information, including codes and standards
- tools, materials and equipment used to design, size and document the layout of sanitary drainage systems
- work health and safety (WHS) requirements for designing, sizing and documenting the layout of sanitary drainage systems.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPDR4012 Design and size stormwater drainage systems

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Element 2 title corrected. Performance Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPDR4012B Design and size stormwater drainage systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design, size and document the layout of surface and sub-soil stormwater drainage systems up to legal points of discharge to a residential dwelling (Class 1a), a commercial Class 6 building, and a unit complex comprising at least eight (Class 1a) dwellings.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify system requirements.

1.1 Access, read and determine design requirements from plans, specifications, relevant manufacturers requirements, Australian Standards and jurisdictional requirements.

- 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
 - 1.3 Identify stormwater catchment and flow requirements.
 - 1.4 Select stormwater pipe size to conform to regulatory authorities and main or street kerb, including discharge flow and levels to verify grades and cover.
 - 1.5 Determine stormwater requirements for retention pit, silt and flotation arrestor pit, rainwater tank and stormwater overflow discharge locations to suit job requirements.
- 2 Design system layout.
- 2.1 Develop and size system layout in accordance with manufacturer's requirements, Australian standards and jurisdictional requirements.
 - 2.2 Use the proposed design to identify and specify optimal materials required.
 - 2.3 Produce final system layout plans to relevant drawing design standards.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPDR4012B Design and size stormwater drainage systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPDR4012 Design and size stormwater drainage systems

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Element 2 title corrected. Performance Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPDR4012B Design and size stormwater drainage systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout details of a surface and sub-soil stormwater drainage system for:
 - a residential design that comprises a dwelling (Class 1a), and
 - a commercial Class 6 building, or
 - a unit complex comprising at least eight (Class 1a) dwellings.

The candidate must:

- include drainage to the legal point of discharge to the external stormwater drainage network
- complete the work according to development plans, specifications, Australian standards, workplace procedures and client specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the process of planning, sizing and documenting the layout of stormwater and sub-soil drainage systems
- catchment, rainfall intensity and run-off calculations
- characteristics and application of different pipe systems, including their fittings
- non-gravitational stormwater systems
- onsite stormwater management
- design concepts and performance measures for stormwater and sub-soil drainage systems

- principles of water flow and stormwater and sub-soil drainage
- contour, reduced and invert levels
- drawing instruments and sketching techniques, including the use of conventional symbols
- use of computers for documentation
- computer-aided design (CAD) software
- how to access relevant information, including codes and standards
- tools, materials and equipment used to design, size and document the layout of surface and sub-soil stormwater drainage systems up to legal points of discharge
- work health and safety (WHS) requirements to design, size and document the layout of surface and sub-soil stormwater drainage systems up to legal points of discharge.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPDR4013 Design and size domestic treatment plant disposal systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPDR4013B Design and size domestic treatment plant disposal systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design, size and document the layout of domestic treatment plant disposal systems for a residential design that comprises a dwelling (Class 1a).

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify system requirements.

1.1 Access, read and determine design requirements from plans, specifications, relevant manufacturer's requirements, Australian Standards and jurisdictional requirements.

1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.

- 1.3 Obtain and confirm information for a suitable location for the land application area, reserve area and onsite land application of effluent.
- 2 Design system layout.
 - 2.1 Develop and size system layout in accordance with relevant manufacturer's requirements, Australian standards and jurisdictional requirements.
 - 2.2 Use the proposed design to identify and specify optimal materials required.
 - 2.3 Produce final system layout plans to relevant drawing design standards.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPDR4013B Design and size domestic treatment plant disposal systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPDR4013 Design and size domestic treatment plant disposal systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPDR4013B Design and size domestic treatment plant disposal systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout of a treatment plant disposal system for a residential design that comprises a dwelling (Class 1a), including details of:
 - treatment plant
 - disposal field
 - relationship of the above to any buildings, property boundaries, easements and other structures.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- design concepts and performance measures for domestic treatment plant disposal systems
- principles of the assessment of land capability for application of effluent
- principles, techniques and characteristics of effluent treatment and disposal, including the purpose of anaerobic bacteria
- properties and characteristics of landscape application areas
- site characteristics that may influence planning:
 - contour, reduced and invert levels
 - type of system chosen
 - soil category
 - design loading rates (DLR)
 - long term acceptance rate (LTAR)
 - number of people the system is to cater for
- identifying scope of work by waste processing method:
 - absorption by absorption trenches or transpiration beds
 - disposal by absorption, spray or recycling

- anaerobic or aerobic action
- drawing instruments and sketching techniques, including the use of conventional symbols
- use of computers for documentation
- computer-aided design (CAD) software
- how to access relevant information, including codes and standards
- tools, materials and equipment used to design, size and document the layout of domestic treatment plant disposal systems
- work health and safety (WHS) requirements for designing, sizing and documenting the layout of domestic treatment plant disposal systems.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPFS2021 Connect static storage tanks for fixed fire protection systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Duplicate Element and Performance Criteria 1.3 deleted.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPFS2021A Connect static storage tanks for fixed fire protection systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to connect storage tanks to fixed fire protection systems.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------------|---|
| 1 Identify installation requirements. | 1.1 Determine storage tank for fixed fire protection systems requirements from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements. |
| | 1.2 Identify and apply workplace policies and procedures, |

work health and safety (WHS) and environmental requirements.

- 2 Prepare for work.
 - 2.1 Create a materials list and collect materials.
 - 2.2 Select and check the serviceability of appropriate tools and equipment including personal protective equipment (PPE).

- 3 Install and test storage tank.
 - 3.1 Connect storage tank and associated pipework.
 - 3.2 Apply pipe supports and fixings.
 - 3.3 Connect tank piping, associated valves and materials to the suction side of the fire pumpset.
 - 3.4 Connect make up and quick fill pipework, associated valving and supports according to job specifications, relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
 - 3.5 Check jointing systems to ensure compliance with relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
 - 3.6 Conduct pressure testing on installed system.
 - 3.7 Test and confirm correct operation of quick fill and make up lines and valving.
 - 3.8 Record test data in required format.
 - 3.9 Complete documentation according to relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.

- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability and

report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPFS2021A Connect static storage tanks for fixed fire protection systems.

Assessment Requirements for CPCPFS2021 Connect static storage tanks for fixed fire protection systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Duplicate Element and Performance Criteria 1.3 deleted.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPFS2021A Connect static storage tanks for fixed fire protection systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- connecting and testing an approved static storage tank to a fire protection pumpset in accordance with the relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements of a fire protection system
- connecting static storage tank downstream from backflow protection
- applying safety requirements throughout the work sequence, including electrical safety requirements
- communicating and working effectively and safely with others
- installing, setting and confirming operation of quick fill and make up lines and associated valving.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, application and limitations of different pipe fittings and fixture supports:
 - sectional tanks
 - steel or polymer storage tanks
 - tank linings
- processes, procedures and techniques of:
 - construction of fire protection tanks
 - fixing and joining
 - levelling and alignment
 - using measurements and formulas for calculating materials

- pressure test systems
- connecting static storage tanks
- function and operation of a range of valves, including backflow, associated with quick fill and make up lines and pump installations
- functional and operational factors of tools and equipment:
 - cutting
 - hand and power tools
 - lifting and load shifting equipment
 - testing equipment
- operation and components of fire sprinkler system pumpsets
- access relevant information, including job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
- work health and safety (WHS) requirements for connecting static storage tanks for fixed fire protection systems
- installation requirements for connecting static storage tanks for fixed fire protection systems, above and below ground pipework.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPFS2022 Install portable fire equipment

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Typographical error corrected in Element 2.1.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPFS2022A Install portable fire equipment. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install and commission (excluding internal components inspections) of portable fire extinguishers, fire blankets and signage on new or existing, domestic or commercial structures.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|------------------|---|
| 1 Plan the work. | 1.1 Access, read and determine portable fire equipment requirements from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements. |
| | 1.2 Identify and apply workplace, work health and safety (WHS) and environmental requirements. |

- 1.3 Identify extinguishing agents, weight and materials.
 - 1.4 Calculate and order materials and portable fire equipment.
 - 1.5 Determine priorities and plan and sequence tasks with others on site.
- 2 Prepare for work.
- 2.1 Create a materials list and collect materials.
 - 2.2 Check portable fire equipment against relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements, delivery docket and order form and report faults, as appropriate.
 - 2.3 Select and check the serviceability of appropriate tools, equipment and personal protective equipment (PPE).
 - 2.4 Prepare work area to support efficient installation of portable fire equipment.
- 3 Install portable fire equipment.
- 3.1 Set out installation location ensuring it is free of obstruction.
 - 3.2 Perform installation of supports, fixings and signage.
 - 3.3 Perform installation and verify working order of portable fire equipment.
 - 3.4 Commission installation according to yearly requirement of AS 1851 Routine service of fire protection systems and equipment.
 - 3.5 Complete installation or service report and submit within specified timeframes.
- 4 Clean up.
- 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPFS2022A Install portable fire equipment.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPFS2022 Install portable fire equipment

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Typographical error corrected in Element 2.1.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPFS2022A Install portable fire equipment. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- preparing for, installing and verifying the working order of the following fire equipment for an office complex (class 5 building):
 - portable water fire extinguisher
 - portable carbon dioxide (CO₂) fire extinguisher
 - portable powder fire extinguisher
 - fire blankets
 - signage.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- processes, procedures and techniques of:
 - installing and commissioning portable fire extinguishers according to regulatory requirements
- characteristic, application and limitation of approved materials and components
- statutory and authorities' requirements related to installing and commissioning portable fire equipment:
- SI system of measurement
- structural systems, building materials and building services related to the installation of fire extinguishers in accordance with AS 2444 Portable fire extinguishers and fire blankets
- extinguishing agents for portable fire extinguishers:
 - water

- CO2 gases
- dry chemical and chemical reaction suppression systems
- wet chemical
- foam
- how to access relevant information, including relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements for the installation and commissioning of portable fire equipment
- tools, materials and equipment used for the installation and commissioning of portable fire equipment
- work health and safety (WHS) requirements for the installation and commissioning of portable fire equipment.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPFS3030 Design fire sprinkler systems using pre-calculated charts and tables

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Performance Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPFS3030A Design pre-calculated fire sprinkler systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to design fire sprinkler systems using pre-calculated tables and charts.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|---|
| 1 Prepare for work. | 1.1 Obtain scope of work requirements from information and quality requirements, including relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements. |
|---------------------|---|

- 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
 - 1.3 Set up work area to enable sprinkler system to be designed efficiently.
- 2 Identify design requirements.
- 2.1 Obtain data from relevant job specifications required to prepare design.
 - 2.2 Identify building classification and hazard ratings that apply to the fire sprinkler system being designed.
 - 2.3 Identify ceiling type and constructions material.
 - 2.4 Identify all features of that building that might obstruct the spray pattern of the sprinkler, i.e. bulkheads, beams, columns, etc.
 - 2.5 Identify sprinkler head type from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
 - 2.6 Identify the requirement for concealed space sprinklers.
- 3 Design sprinkler system.
- 3.1 Identify and locate the control valves.
 - 3.2 Lay out sprinkler locations according to AS 2118.1 Automatic fire sprinkler systems – General systems and manufacturer data sheets.
 - 3.3 Lay out the range and distribution pipework in an economical manner.
 - 3.4 Determine the most remote last range type.
 - 3.5 Locate the design points.
 - 3.6 Size all range pipes in the installation using the pre-calculated tables.
 - 3.7 Size the distribution pipework up to the design point using the pre-calculated tables.
 - 3.8 Size the distribution pipework from the design point to

- the control valve using hydraulic calculations.
- 3.9 Prepare fabrication design sheets and material lists.
- 4 Finalise work.
- 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
- 4.2 Apply workplace recording and reporting procedures where required.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPFS3030A Design pre-calculated fire sprinkler systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPFS3030 Design fire sprinkler systems using pre-calculated charts and tables

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Performance Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPFS3030A Design pre-calculated fire sprinkler systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing a fire sprinkler system using plans and specifications provided for an ordinary III hazard classification building, including:
 - at least 25 sprinkler heads and two branches
 - spacing and location of sprinkler heads
 - specifications for the size and layout of all pipework
 - layout drawings, fabrication sheets and materials lists.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- legal responsibilities of people related to designing fire sprinkler systems
- legislation, regulations, standards and codes relating to designing a fire sprinkler system
- general fire protection systems and design terminology and symbols
- structural systems, building materials and building services of buildings and structures that require fire sprinkler systems.
- characteristics, application and limitations of approved materials and components of fire sprinkler systems
- identifying and explaining the difference between deemed to satisfy installations and performance-based solutions
- functional and operational features of tools and equipment used to design fire sprinkler systems
- processes, procedures and techniques of:

- applying pre-calculated charts and tables in the design of fire sprinkler systems
- hydraulic calculations associated with pre-calculated design.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPFS3031 Fabricate and install fire hydrant and hose reel systems

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1
- Supersedes and is equivalent to CPCPFS3031A Fabricate and install fire hydrant and hose reel systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to fabricate and install fire hydrant and hose reel systems on new or existing structures.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

CPCPCM3023 Fabricate and install non-ferrous pressure piping

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------------|--|
| 1 Identify installation requirements. | 1.1 Access, read and apply fire hydrant and hose reel requirements from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements. |
| | 1.2 Identify and apply workplace policies and procedures, |

work health and safety (WHS) and environmental requirements.

- | | | | |
|---|-------------------------------------|-----|--|
| 2 | Prepare for work. | 2.1 | Create a materials list and collect materials. |
| | | 2.2 | Select and check the serviceability of appropriate tools and equipment, including personal protective equipment (PPE). |
| 3 | Fabricate, install and test system. | 3.1 | Set out system to relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements. |
| | | 3.2 | Connect fire brigade suction and booster arrangement. |
| | | 3.3 | Fit all pipework and pipe supports. |
| | | 3.4 | Connect fire hydrant valves, hose reels and ancillary equipment. |
| | | 3.5 | Perform hydrostatic test on installation. |
| | | 3.6 | Complete documentation according to relevant regulatory requirements. |
| 4 | Clean up. | 4.1 | Clear the work area and dispose of any materials in accordance with state and territory legislation and workplace procedures. |
| | | 4.2 | Clean, check for serviceability and store and secure plant, equipment and tools reporting any damage to designated personnel. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPFS3031A Fabricate and install fire hydrant and hose reel systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPFS3031 Fabricate and install fire hydrant and hose reel systems

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
- Supersedes and is equivalent to CPCPFS3031A Fabricate and install fire hydrant and hose reel systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing and performing hydrostatic testing of a fire hydrant and a hose reel system to the relevant codes, Australian Standards, manufacturer's specifications and jurisdictional requirements from an existing branch in a water supply using approved materials that contains:
 - a fire brigade booster and suction arrangement
 - a fire hydrant landing valve
 - a fire hose reel in copper
 - a fire hose reel in galvanised mild steel.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- processes, procedures and techniques of:
 - fabricating and installing fire hydrant and hose reel systems
 - pressure testing systems
 - pipe thread sealing methods
 - pipe jointing, involving:
 - threading
 - roll grooving
 - silver soldering
 - compression unions
 - press fit and flanges
- characteristics, application and limitations of approved materials and components used in fire hydrant and hose reel systems, above and below ground

- functional and operational features of tools and equipment used to install fire hydrant and hose reel systems
- fire brigade suction and booster arrangements
- feed and attack hydrants
- backflow prevention associated with fire hydrant and hose reels
- statutory and regulatory authorities:
 - Commonwealth, state or territory governments, local authorities
 - Codes and Australian Standards for location and installation of fire hydrants and hose reels
- how to access relevant information, including job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements
- tools, materials and equipment used for the installation and testing fire hydrants and hose reel systems
- work health and safety (WHS) requirements for installing and testing fire hydrants and hose reel systems
- installation requirements for fire hydrants and hose reel systems, above and below ground.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPFS3034 Install control valve assemblies, actuating devices and local alarms

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Elements and Performance Criteria 1.1.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPFS3034A Install control valve assemblies, actuating devices and local alarms. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to install control valve assemblies, actuating devices and local alarms for fire protection systems in commercial, industrial and residential settings, including new or existing structures.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|-------------------------------------|-----|---|
| 1 | Identify installation requirements. | 1.1 | Obtain, read and apply control valve devices and alarm requirements from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements. |
|---|-------------------------------------|-----|---|

- 1.2 Identify and apply workplace policies and procedure, work health and safety (WHS) and environmental requirements.
- 2 Prepare for work.
 - 2.1 Create a materials list and collect materials.
 - 2.2 Select and check the serviceability of appropriate tools and equipment, including personal protective equipment (PPE).
 - 2.3 Prepare work area to support efficient installation.
- 3 Install and test system components.
 - 3.1 Set out and install pipe supports and fixings.
 - 3.2 Connect control valve assemblies, components, devices, alarms, piping and materials.
 - 3.3 Apply jointing systems.
 - 3.4 Pressure test installed system.
 - 3.5 Set and confirm operation of all components, including alarm generation.
 - 3.6 Complete documentation according to relevant regulatory requirements.
- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability reporting any damage, store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPFS3034A Install control valve assemblies, actuating devices and local alarms.

Links

Assessment Requirements for CPCPFS3034 Install control valve assemblies, actuating devices and local alarms

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Elements and Performance Criteria 1.1.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPFS3034A Install control valve assemblies, actuating devices and local alarms. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing and testing a:
 - wet control valve assembly with water motor alarm and automatic jacking pump
 - deluge control valve assembly
 - double interlock pre-action control valve assembly
 - combined riser control valve assembly including flow switch and solenoid test loop.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- relevant control valve assemblies, actuating devices and local alarms in fire sprinkler systems
- legislation, relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements
- processes, procedures and techniques of:
 - installing control valve, actuating and alarm components in sprinkler systems
 - pressure testing systems
 - pipe jointing including threading and roll grooving
- functions and operations of the following valves and their components:
 - wet alarm valves and systems
 - deluge alarm valves and systems
 - dry alarm valves and systems

- pre-action and double interlock pre-action alarm valves and systems
- solenoid test loops
- water motor alarms
- jacking pumps
- pressure switches
- flow switches
- pressure gauges
- butterfly valves
- OS&Y valves
- ball valves
- check valves
- strainers
- inspection tees
- how to access relevant information, including relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements
- tools, materials and equipment used for connecting control valve assemblies, actuating devices and local alarms
- work health and safety (WHS) requirements for connecting control valve assemblies, actuating devices and local alarms
- installation requirements for connecting control valve assemblies, actuating devices and alarms.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPFS3036 Install special hazard systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Change to Elements and Performance Criteria 2.3.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPFS3036A Install special hazard systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install special hazard extinguishing systems, including decommissioning gaseous agent containers and actuation devices.

All technicians performing work described in this unit that involves the handling of prescribed ozone depleting substances (ODS) and synthetic greenhouse gases (SGG) extinguishing agents must hold an appropriate extinguishing agent handling licence (EAHL).

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------------|--|
| 1 Identify installation requirements. | 1.1 Obtain, read and apply special hazard systems requirements from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements. |
|---------------------------------------|--|

- 1.2 Identify and apply workplace policies and procedures, organisational work health and safety (WHS) and environmental requirements.
- 2 Prepare for work.
 - 2.1 Create a materials list and collect components.
 - 2.2 Select and check the serviceability of appropriate tools and equipment including personal protective equipment (PPE).
 - 2.3 Prepare work area to support efficient installation of special hazard extinguishing systems.
- 3 Decommission gaseous agent containers and actuation devices.
 - 3.1 Confirm and isolate all interface systems and put in place appropriate signage, lock-off and documentation.
 - 3.2 Physically disconnect manual, electrical and mechanical actuation devices.
 - 3.3 Identify and disconnect pneumatic actuation devices and pilot and slave tubes and fittings.
 - 3.4 Connect transport caps on all outlets, plugs and locking devices, according to manufacturer's specifications.
 - 3.5 Disconnect container bank manifold connection components.
 - 3.6 Install transport caps on valve outlets.
 - 3.7 Organise removal and transportation of gaseous agent containers to storage or reclaim facility.
 - 3.8 Complete documentation and decommissioning sign-off requirements and confirm with relevant persons.
- 4 Install and test special hazard systems.
 - 4.1 Set out system and install fixings.
 - 4.2 Check pipe supports and install pipes, fittings, nozzles and components.
 - 4.3 Perform piping system pressure testing.
 - 4.4 Connect cylinder manifold and cylinder hoses.

- 4.5 Connect cylinder supports and cylinders and secure in brackets.
 - 4.6 Remove transport caps and connect cylinder hoses.
 - 4.7 Connect actuators.
 - 4.8 Complete documentation according to relevant regulatory requirements.
- 5 Clean up.
- 5.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 5.2 Clean tools and equipment, check for serviceability, and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPFS3036A Install special hazard systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPFS3036 Install special hazard systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Change to Elements and Performance Criteria 2.3.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPFS3036A Install special hazard systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing a special hazards fire suppression system (not prescribed ozone depleting substances (ODS) or synthetic greenhouse gases (SGG) extinguishing agent), incorporating a storage cylinder connected by piping to a simple distribution system incorporating two nozzles and one actuating device
- complying with ODS or SGG legislation, codes and regulations
- decommissioning a gaseous system comprising of at least three cylinders and prepare the cylinders for transport
- correctly selecting and using tools and equipment used for installation of gaseous agent containers and actuation devices.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- ODS and SGG legislative and industry requirements for special hazard fire suppression systems installation activities
- characteristics, application and limitations of approved materials and components used in special hazardous systems actuating devices:
 - prescribed ODS and SGG materials
 - extinguishing agents, including or other approved materials
 - pipes
 - sprinkler and delivery systems
- hazard categories, classes of fire hazard and extinguishing agents
 - workplace and safety including dangerous goods

- transportation of dangerous goods
- processes, procedures and techniques of:
 - installing and testing special hazard systems
 - pressure test systems
 - cylinder anchorage
 - purging
- relevant statutory and authorities' requirements related to installing special hazard systems:
 - requirements for room ventilation and integrity
 - structural systems, building materials and building services
- functional and operational features of tools and equipment used to install special hazard systems:
 - cutting and threading equipment
 - roll grooving equipment
 - hand and power tools
 - ladders
 - testing equipment
- types of special hazard extinguishing systems:
 - carbon dioxide - high and low pressure
 - naturally occurring blended gasses (Proinert, Argonite, Inergen)
 - chemical reaction and explosion suppression systems
 - dry chemical
 - foam
 - prescribed ODS and SGG extinguishing agents
 - deluge
 - water mist
- types of operation of actuation devices (also known as actuators):
 - electrical
 - manual
 - mechanical
 - pneumatic
- special hazard system components, including:
 - directional valves
 - lock off valves
 - pyrotech actuators
 - nozzles
 - manifolds
 - hoses
 - cylinders
 - cylinder manifold brackets

- pressure relief vents
- dirt traps
- bracketing and pipe supports
- foam generators
- foam monitors
- foam proportioning equipment
- foam indicators
- aspirating foam nozzles
- foam storage vessels, including bladder tanks
- relevant documentation required when installing special hazard systems
- how to access relevant information, including relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements for installation of special hazard systems
- tools, materials and equipment used for installation of special hazard systems
- work health and safety (WHS) requirements for installation of special hazard systems
- installation requirements for installation of special hazard systems.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPFS3037 Install residential life safety sprinkler systems

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPFS3037A Install domestic and residential life safety sprinkler systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to install residential life safety fire sprinkler systems.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Identify installation requirements.	1.1 Obtain, read and apply residential sprinkler systems requirements from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements. 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
2 Prepare for work.	2.1 Create a materials list and collect materials.

- 2.2 Select and check the serviceability of appropriate tools and equipment including personal protective equipment (PPE).
 - 2.3 Prepare work area.
- 3 Install and test system components.
 - 3.1 Set out system and apply fixings.
 - 3.2 Connect assemblies, devices, alarms, piping and materials.
 - 3.3 Apply jointing systems to components
 - 3.4 Install relevant fire sprinkler heads according to plans and specifications.
 - 3.5 Undertake a hydrostatic pressure-test to ensure integrity of pipework.
 - 3.6 Record test data in required format.
 - 3.7 Complete documentation according to relevant regulatory requirements.
- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability, report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPFS3037A Install domestic and residential life safety sprinkler systems.

Assessment Requirements for CPCPFS3037 Install residential life safety sprinkler systems

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPFS3037A Install domestic and residential life safety sprinkler systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- given the floor plan of a residential building of at least five (5) rooms correctly locating the sprinkler heads according to relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements
- installing and testing a residential life safety sprinkler system in Class 2 and 3 buildings not more than 25 metres in effective height with a rise in storeys of 4 or more, using plans and specifications, incorporating fit off to:
 - one sprinkler head in steel pipe
 - one sprinkler head in chlorinated polyvinyl chloride (CPVC) piping
 - one sprinkler head in copper pipe
- These must include:
 - water supply
 - piping and pipe supports
 - control valves assembly
 - actuating devices
 - alarms
 - three sprinkler heads
 - remote test point.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- legislation, regulations, codes and standards relating to installing fire sprinkler system
- workplace and safety requirements
- sustainability concepts and principles and environmental requirements relating to water and resource usage

- processes, procedure and techniques of:
 - installation and testing of residential fire sprinkler systems
 - applying fire ratings
 - hydraulic testing
 - pipe jointing including hems, Teflon tape and CPVC solvent
 - roll grooving
 - brazing
 - press fits (copper)
- functional and operational features of tools and equipment used to install life safety fire sprinkler systems
- structural systems, building materials and building services of buildings and structures that require life safety fire sprinkler systems
- operation and function of the following components:
 - residential sprinkler heads
 - flow switches
 - check valves
 - remote test points
 - concealed space sprinkler heads
 - waste, test and drain valves
 - pipe supports
- characteristics, application and limitations of materials, including:
 - steel and CPVC pipe used in residential sprinkler systems
 - manufacturers' specifications and their purpose in fire sprinkler system installation
 - how to access relevant information, including job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
 - tools, materials and equipment used for installing residential life safety sprinkler systems
 - work health and safety (WHS) requirements for installing residential life safety sprinkler systems
 - installation requirements for residential life safety sprinkler systems.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPFS3038 Test and maintain fire hydrant and hose reel installations

Modification History

- Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.
- PC2.1 Identify and calculate materials required to complete the task.
 - PC2.2 Identify potential hazards and determine and implement control measures and personal protective equipment (PPE) requirements.
 - PC2.3 Determine job priorities and sequence job tasks in consultation with others on site.
- The PCs have been repositioned to be consistent with the related CPCPFS sector units of competency.
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
- Knowledge Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPFS3038A Test and maintain fire hydrant and hose reel installations. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to conduct routine service, maintain and repair fire hydrant and hose reel installations, in accordance with AS 1851 Routine inspection of fire protection systems and equipment. It excludes fire pump performance and booster connection flow testing. It applies to people who work on new or existing structures in commercial and residential settings.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|---|
| 1 Plan the work. | 1.1 Access, read and apply fire hydrant and hose reel requirements relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements. |
| | 1.2 Identify and apply organisational work health and safety (WHS), including sign in, environmental requirements. |
| 2 Prepare for work. | 2.1 Identify and calculate materials required to complete the task. |
| | 2.2 Identify potential hazards and determine and implement control measures and personal protective equipment (PPE) requirements. |
| | 2.3 Determine job priorities and sequence job tasks in consultation with others on site. |
| | 2.4 Select and check serviceability of appropriate tools, equipment and PPE. |
| | 2.5 Receive and check materials against the docket and order form for correct product, compliance with standards and acceptable condition and action discrepancies. |
| | 2.6 Apply AS 1851 Routine service of fire protection systems and equipment (Section 1) and routine service requirements for fire hydrant and hose reel installation. |
| | 2.7 Confirm correct location of fire protection systems and equipment in accordance with AS 2419 Fire hydrant installations system design, installation and commissioning. |
| 3 Test, repair and | 3.1 Isolate system interfaces. |

- replace faulty components and perform systems checks.
- 3.2 Carry out routine service up to five yearly frequency and maintenance tasks as detailed in AS 1851 Routine service of fire protection systems and equipment.
 - 3.3 Identify faulty items or components and choose appropriate service procedure.
 - 3.4 Remove faulty items or components, using appropriate tools and equipment and rectify.
 - 3.5 Complete documentation according to workplace procedures and submit within specified timeframes.
- 4 Clean up.
- 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCPFS3038 Test and maintain fire hydrant and hose reel installations

Modification History

Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.

- PC2.1 Identify and calculate materials required to complete the task.
- PC2.2 Identify potential hazards and determine and implement control measures and personal protective equipment (PPE) requirements.
- PC2.3 Determine job priorities and sequence job tasks in consultation with others on site.

The PCs have been repositioned to be consistent with the related CPCPFS sector units of competency.

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPFS3038A Test and maintain fire hydrant and hose reel installations. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- conducting routine testing and maintenance up to five yearly frequency, excluding fire pump performance and booster connection flow testing on two different fire hydrants and hose reel installations
- diagnosing a critical defect and non-conformance and:
 - report as per AS 1851 Routine service of fire protection systems and equipment requirement
 - repair each defect and non-conformance
 - conduct testing to ensure rectification is effective
 - reinstate installations and complete a service report
- replacing all serviceable components as per preventative maintenance requirements of AS 1851 Routine service of fire protection systems and equipment on:
 - three hydrant valves

- two hose reels
- replacing one faulty hose reel drum
- setting a pressure reducing valve according to relevant specifications
- performing system interfaces isolation of fire detection control and indicating equipment (FDCIE) and fire pumpsets
- confirming correct location of hydrants, attack and feed hydrant and hose reels in accordance with AS 2419 Fire hydrant installations system design, installation and commissioning from a site or plan of 2000 square metres.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- responsibilities relating to quality requirements for testing and maintaining fire hydrants and hose reel installations:
 - documentation and information systems and processes
 - policies and guidelines relating to work roles and responsibilities
 - workplace reporting
- operational knowledge of hydrant and hose reel systems
- purpose, function and maintenance requirements of the following components in hydrant and hose reel systems:
 - hydrant valves
 - hose reels
 - check valves
 - booster assemblies
 - gate valves
 - gauges
 - pipework
 - hydrant cabinets
 - booster cabinets
 - hose reel cabinets
 - hydrant and hose reel signage
 - isolation valves
 - pipe supports
 - anti-tamper switches
 - pump start initiating devices
 - block plans
- processes, procedures and techniques of:
 - testing and maintaining fire hydrant and hose reel installations
 - system interfaces with hydrants and hose reels
 - water flow testing of hydrants and hose reels

- how to access relevant information, including job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements to test and maintain fire hydrant and hose reel installations
- tools, materials and equipment used to test and maintain fire hydrant and hose reel installations
- work health and safety (WHS) requirements for performing tests and conducting fire hydrant and hose reel installations.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPFS3040 Conduct basic functional testing of water-based fire-suppression systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Elements and Performance Criteria 1.1, 2.1, 3.5 and 3.8.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPFS3040A Conduct basic functional testing of water-based fire suppression systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to complete monthly and six-monthly routine service procedures on water-based fire suppression systems according to AS 1851 Routine service of fire protection systems and equipment in new or existing residential or commercial structures.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|--|
| 1 Plan and apply compliance requirements to | 1.1 Determine current legislative and industry requirements against organisational service operations and adjust as required to ensure compliance. |
|---|--|

- service operations.
 - 1.2 Interpret and follow the requirements of section one of AS 1851 Routine service of fire protection systems and equipment.
 - 1.3 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
 - 1.4 Prepare for functional testing of water-based fire-suppression systems according to identified requirements.

- 2 Conduct monthly and six-monthly routine service inspections and record results.
 - 2.1 Notify appropriate site contact of entry and follow site procedures for notifying occupants and/or staff of planned fire sprinkler system test.
 - 2.2 Apply appropriate workplace procedures and risk control measures when inspecting water-based fire-suppression systems.
 - 2.3 Identify plant and other system interfaces that must be isolated to allow for inspection activities.
 - 2.4 Identify key control valves and determine their functions with reference to manufacturer instructions to allow for routine inspection activities.
 - 2.5 Perform and record visual inspections and results according to AS 1851 Routine service of fire protection systems and equipment.

- 3 Conduct monthly and six-monthly testing and record results.
 - 3.1 Implement test methods for monthly and six-monthly testing.
 - 3.2 Perform routine testing procedures according to the required frequency schedule determined by AS 1851 Routine service of fire protection systems and equipment to verify the system functions as intended.
 - 3.3 Compare test results with manufacturer, legislative and industry requirements.
 - 3.4 Document results in accordance with AS 1851 Routine service of fire protection systems and equipment.

- 3.5 Identify, record and report any defects or non-conformances in accordance with AS 1851 Routine service of fire protection systems and equipment.
 - 3.6 Prepare and forward reports to relevant persons for action.
 - 3.7 Reinstate system according to organisational and manufacturer requirements.
 - 3.8 Notify site contact of completion of test and follow site procedures for notifying occupants and staff.
- 4 Clean up.
- 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure according to workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPFS3040A Conduct basic functional testing of water-based fire suppression systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPFS3040 Conduct basic functional testing of water-based fire-suppression systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
- Changes to Elements and Performance Criteria 1.1, 2.1, 3.5 and 3.8.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPFS3040A Conduct basic functional testing of water-based fire suppression systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit and must:

- conduct inspections and perform routine services for three scheduled monthly activities and two scheduled six-monthly activities on:
 - two different wet systems
 - two different pre-action systems
 - two different deluge systems
- perform six monthly tests to include:
 - main drain test and floor zone flow switch test, one manually operated and one solenoid operated on wet set
 - two different pre-action systems, including full trip test
- include all of the following water-based fire-suppression systems:
 - deluge
 - wet or general system
 - residential system
 - combined sprinkler and hydrant system
 - double interlock pre-action
- ensure all systems are interfaced to a fire indicator panel (FIP) and connected to alarm signalling equipment
- comply with all relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
- complete reports and work according to customer and organisational expectations within accepted timeframes.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- the basic principles of operation and purpose of components of water-based fire suppression systems:
 - accelerators and exhausters
 - alarm ‘dry’ (i.e. deluge) control valve assembly components
 - alarm ‘wet’ control valve assembly components
 - batteries
 - circulation and system pressure relief valves
 - isolation and control valves
 - pressure and flow switches
 - pressure gauges
 - pump controllers and ancillary equipment for control and indication
 - pumpsets
 - retard chambers
 - solenoid valves
 - sprinkler heads
 - system block plans
 - system pressure gauge schedules
 - water motor alarm gong
 - water supply tanks: atmospheric and suction with priming tanks
- the general operation of water-based systems
- the general operation of a gauge
- the key features of legislation, regulations and codes applicable to inspecting and testing water-based fire-suppression systems
- metric and imperial pressure gauge readings
- systems and components of water-based fire-suppression systems:
 - air compressors fitted to systems
 - circulation and system pressure relief valves
- controls on the pumpset controller panel:
 - fuel gauges
 - indicators
 - main isolating switch
 - flow switches and associated testing equipment
 - isolating valves associated with water-based fire-suppression system
 - main water supply underground key-operated valve location
 - pressure gauges
 - pumpsets associated with water-based fire-suppression system

- pump starting switches
- suction inlet strainers or screen on a static water supply for the water-based fire-suppression system
- system block plan requirements for design details of systems installed since 1972
- system main alarm bell and/or alarm strobe indicating building entry point for emergency personnel
- system pressure gauge schedules, where required
- system pressure maintenance or jacking pumps
- water-based fire-suppression system control and alarm valves and ancillary equipment for control and alarm operation indication/interface
- water supply tanks, water level indicators and automatic inflow valves
- key control valves which may include those specified in AS 2118 Automatic fire sprinkler systems installed in:
 - associated control valve trim
 - activation small bore pipework to the alarm and control valve assembly
- terminology used in relation to water-based fire-suppression systems
- types of water supply tanks:
 - atmospheric
 - suction with priming
- applications of water-based systems
- water-based fire-suppression systems:
 - alternate wet or dry systems
 - combined sprinkler or hydrant systems
 - deluge systems
 - dry systems
 - pre-action and double interlock pre-action systems
 - residential and domestic systems
 - tail-end systems
 - wet and general systems
- legislative and industry requirements:
 - dangerous goods regulations
 - licensing arrangements
 - environmental regulations
 - work health and safety (WHS) legislation, regulations and codes
 - relevant Commonwealth and state or territory building acts, regulations and codes, such as National Construction Code (NCC)
 - AS 1851 Routine service of fire protection systems and equipment
- other relevant legislation relating to fire suppression equipment
- organisational requirements:
 - client-specific contractual requirements
 - documentation and information systems and processes

- legal and organisational policies and guidelines, including personnel practices and guidelines outlining work roles, responsibilities and delegations
- use of electronic job scheduling and communication devices
- system interfaces:
 - flow switches
 - pressure switches
 - tamper switches
 - valve positioning switches
 - control and indicating equipment (CIE)
 - plant shutdowns
- devices that operate signals between the water-based fire-suppression system and other services:
 - building heating, ventilation and air conditioning (HVAC) services
 - fire brigade monitoring providers
 - CIE
- other life safety systems:
 - warning systems
 - fire indicator panel (FIP)
- methods to apply sustainability principles and concepts
- testing procedures for:
 - checking desiccant condition (air dryer or crystals, water separator bowl) and cleaning or replacing as required
 - checking oil level and visually assessing condition of oil on air compressor
- routine service frequency schedules including reference to AS 1851 Routine service of fire protection systems and equipment schedules of work conducted at regular frequencies that relate to the work scope for weekly, monthly, and six-monthly inspection and testing schedules
- how to access relevant information, including codes and standards
- tools, materials and equipment used for testing and maintaining water-based fire-suppression systems
- WHS requirements for testing and maintaining water-based fire-suppression systems
- installation requirements for water-based fire-suppression systems.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Assessment Requirements for CPCPFS3041 Inspect and test fire pumpsets

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
- Changes to Elements and Performance Criteria 2.1, 2.3 and 3.8.
Performance Evidence is formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPFS3041A Inspect and test fire pumpsets. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit a candidate must meet the performance criteria for this unit by:

- conducting four routine services on a fire pumpset, including:
 - three scheduled monthly, and
 - one scheduled six-monthly activities

and include:

- compression ignition pumpsets used as a booster pumpset on a sprinkler/hydrant system
- an electrical pumpset used as a:
 - booster pumpset on a sprinkler/hydrant system fed from a town mains supply or a static water supply
- conducting all routine service in compliance with current Australian standards, regulations, codes and organisational requirements
- completing work according to customer and organisational expectations within accepted timeframes.
- .

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- application of fire pumpsets as defined in AS 2941 Fixed fire protection installations – Pumpset systems and AS 2118 Automatic fire sprinkler systems
- terminology used in relation to pumpsets
- basic principles of hydraulics:

- basic head or pressure calculation for height per metre
- metric and imperial pressure scales
- basic principles of operation and purpose of components:
 - accumulators
 - batteries
 - circulation and system pressure relief valves
 - compression ignition pumpset drivers
 - electrical pumpset drivers
 - engine starting and control or monitor batteries
 - header tanks
 - impellers
 - isolating valves associated with pumpsets
 - jacking or jockey pumps
 - multi-stage pumps
 - pressure gauges
 - pump controllers and ancillary equipment for control and indications
 - pump drivers
 - pump glands and seals
 - pump performance curves
 - pump starting devices
 - pumpset couplings
 - safety guards
 - system pressure gauge schedules
- water supply tanks:
 - atmospheric
 - suction with priming tanks
- general operation of pumpsets:
 - cooling systems
 - design speed requirements
 - exhaust systems
 - fuel systems
 - full load operation
 - normal running operation
 - pre-start and post-start checks
 - pumpset controllers
 - starting and stopping methods
 - suction and discharge connections and pressure readings
- pumpset types which may include those used in fire protection systems that comply with Australian standards such as:
 - AS 1851 Routine service of fire protection systems and equipment

- AS 2118 Automatic fire sprinkler systems
- AS 2419 Fire hydrant installations
- AS 2941 Fixed fire protection installations - Pumpset systems
- AS CA16-1962 Automatic sprinkler installations
- NFPA 20 Standard for the installation of stationary fire pumps for fire protection (US)
- system interfaces:
 - flow switches
 - pressure switches
 - tamper switches
 - valve positioning switches
 - control and indicating equipment (CIE)
- devices that operate signals between pumpset and other services such as building monitoring services
- other life safety systems:
 - warning systems
 - fire indicator panel (FIP)
 - security monitoring services
- legislative and industry requirements:
 - dangerous goods regulations
 - licensing arrangements
 - environmental regulations
 - work health and safety (WHS) legislation, regulations and codes associated with fire pump rooms such as: working in isolation, lighting, fumes, trip hazards
 - relevant Commonwealth and state or territory building acts, regulations and codes, such as National Construction Code (NCC)
 - AS 1851 Routine service of fire protection systems and equipment
- organisational requirements:
 - client-specific contractual requirements
 - documentation and information systems and processes
 - legal and organisational policies and guidelines, including personnel practices and guidelines outlining work roles, responsibilities and delegations
 - use of electronic job scheduling and communication devices
- documentation to review and verify that installed systems comply with legislative and industry requirements such as:
 - building's essential services or fire safety measures listing
 - relevant commonwealth and state or territory building acts, regulations and codes
 - relevant Australian standards listed on essential service listing
 - environmental regulations
- methods of applying sustainability principles and concepts
- testing procedures and activities that comply with requirements of AS 1851 Routine service of fire protection systems and equipment to verify the following pump functions:

- pump starts at correct pressure
- pump supplies correct kPa at no flow condition requirements
- routine service frequency schedules:
 - reference to AS 1851 Routine service of fire protection systems and equipment schedules of work conducted at regular frequencies that relate to the work scope for monthly and six-monthly routine service schedules
- how to access relevant information, including codes and standards
- tools, materials and equipment used for inspecting and testing test fire pumpsets
- WHS requirements for inspecting and testing test fire pumpsets.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPFS3042 Conduct annual routine service of complex water-based fire-suppression systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Elements and Performance Criteria 1.3, 2.1, and 2.2.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPFS3042A Conduct annual functional testing of complex water-based fire-suppression systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to conduct annual routine service procedures to verify that complex water-based fire-suppression system equipment functions as designed for a Class 2-9 building greater than 5000 square metres.

It includes isolating systems to visually inspect and identify non-compliance defects and resetting systems.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|------------------|---|
| 1 Plan the work. | 1.1 Determine and apply annual routine service operations requirements from AS 1851 Routine service of fire |
|------------------|---|

- protection systems and equipment (section 1) and appropriate legislative and industry codes.
- 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
 - 1.3 Arrange and confirm appropriate time for conducting the annual routine service with the site contact.
 - 1.4 Select and check tools, equipment and personal protective equipment (PPE) for serviceability and report any faults.
- 2 Conduct inspections and record results.
- 2.1 Confirm attendance on site with site contact and follow workplace and organisational procedures for signing in.
 - 2.2 Follow site procedures for notifying occupants and/or staff of annual routine service.
 - 2.3 Isolate control and indicating equipment (CIE), system interfaces and other plant according to site requirements.
 - 2.4 Apply appropriate workplace procedures and risk control measures when inspecting water-based fire-suppression systems.
 - 2.5 Identify key control valves and determine their functions regarding installation drawings to conduct routine inspection and tests.
 - 2.6 Identify all defects and non-conformances and report according to AS 1851 Routine service of fire protection systems and equipment requirements.
 - 2.7 Perform and record visual inspections on complex components.
 - 2.8 Perform visual installation and design survey inspections.
 - 2.9 Prepare installation and design survey report.
- 3 Conduct full function test on water-based components only.
- 3.1 Confirm appropriate time to conduct full function test with client and discuss the process and shutdowns likely to occur during test.

- 3.2 Confirm coordination of other trades and technicians required to conduct full function test.
 - 3.3 Determine from system interface diagram the interfaced system required to operate.
 - 3.4 Isolate alarm signalling equipment.
 - 3.5 Perform annual testing according to AS 1851 Routine service of fire protection systems and equipment requirements.
 - 3.6 Conduct test and confirm operation of all required water-based fire protection system according to the system interface diagram.
 - 3.7 Reinstate systems.
 - 3.8 Identify and document all defects and non-conformances and report according to AS 1851 Routine service of fire protection systems and equipment requirements.
 - 3.9 Prepare and forward to persons for action.
- 4 Clean up.
- 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability reporting any damage, store and secure according to workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPFS3042A Conduct annual functional testing of complex water-based fire-suppression systems.

Assessment Requirements for CPCPFS3042 Conduct annual routine service of complex water-based fire-suppression systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Elements and Performance Criteria 1.3, 2.1, and 2.2.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPFS3042A Conduct annual functional testing of complex water-based fire-suppression systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- conducting relevant an annual routine service (other than water flow testing) on water-based fire suppression systems with complex components for all the following systems:
 - a general sprinkler system with pumpset system
 - a combined sprinkler and hydrant systems
 - a deluge system
 - a pre-action system
 - a pressure reducing valve
 - a pressure relief valve
- performing two installation and design surveys, one physical and one desktop survey (e.g. plans, specifications, photographic evidence, case studies) on a Class 2-9 building greater than 5000 square metres to produce an inspection report on the following elements:
 - pipework external condition
 - sprinkler head condition
 - sprinkler head obstructions
 - sprinkler head location and spacing
 - sprinkler head compatibility and ambient conditions (response time index (RTI) and sprinkler head and spray pattern)
 - external sprinkler requirements
 - design standard suitable for current building occupation requirements, such as classification and storage height.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- definitions of basic principles of operation and purpose of components of complex water-based fire protection systems
- general operation of a gauge
- general operation of complex water-based fire-suppression systems
- metric and imperial pressure gauge readings
- system components:
 - air compressors fitted to systems
 - circulation and system pressure relief valves
 - flow switches and associated testing equipment
 - isolating valves associated with water-based fire-suppression system
 - pressure gauges
 - pressure reducing equipment
 - pumpsets associated with water-based fire-suppression system
 - pump starting switches
 - purpose and key requirements of system block plan for installations installed since 1972
 - suction inlet strainers and screens on a static water supply for water-based fire-suppression system
 - system main alarm bell and/or alarm strobe indicating building entry point for emergency personnel
 - system pressure gauge schedules, where required
 - water-based fire-suppression system control and alarm valves and ancillary equipment for control and alarm operation indication/interface
 - water supply tanks, water level indicators and automatic inflow valves
 - water supply underground key-operated valve location
- controls on the pumpset controller panel:
 - fuel gauges
 - indicators
 - main isolating switch
- terminology used in relation to water-based fire-suppression systems
- water-based fire-suppression system applications as defined in AS 2118 Automatic fire sprinkler systems or AS 2419 Fire hydrant installations \-- System design, installation and commissioning
- legislative and industry requirements:
 - dangerous goods regulations
 - licensing arrangements
 - environmental regulations
 - work health and safety (WHS) legislation, regulations and codes

- relevant Commonwealth and state or territory building acts, regulations and codes, such as National Construction Code (NCC)
- AS 1851 Routine service of fire protection systems and equipment
- organisational requirements, including:
 - client-specific contractual requirements
 - documentation and information systems and processes
 - legal and organisational policies and guidelines, including personnel practices and guidelines outlining work roles, responsibilities and delegations
 - use of electronic job scheduling and communication devices
- system interfaces, including:
 - flow switches
 - pressure switches
 - tamper switches
 - valve positioning switches
- devices that operate signals between the water-based fire-suppression system and other services such as:
 - building heating, ventilation and air conditioning (HVAC) services
 - fire brigade monitoring providers
- other life safety systems, including:
 - warning systems
 - fire indicator panel (FIP)
- applying inspections, tests and survey requirements to equipment and systems, according to relevant Australian standards, to determine that they are:
 - capable of operating as intended when originally installed
 - still suitable for the fire hazard or risk being protected, as no change in occupancy or use of the area protected has occurred since the equipment or system was installed or last modified
 - providing the coverage and protection needed to meet original design and performance requirements
- reviewing documentation to verify that installed systems comply with legislative and industry requirements such as:
 - building's essential services or fire safety measures listing
- annual routine service, inspection, testing and surveying as referred to in AS 1851 Routine service of fire protection systems and equipment, including:
 - annual frequency inspection, testing and surveying activities, except water flow proving testing
 - operating pressure reducing valves to verify operation is at required pressures
 - operating pressure relief valves to verify operation is at required pressures
 - operating accelerator/exhauster and double interlock valves to verify operation is at required pressures and delivery time on dry pipe or pre-action systems
- complex components of a water-based fire-suppression systems, including:
 - double interlock systems

- pressure reducing systems
- accelerator/exhauster systems
- key control valves which may include those specified in AS 2118 Automatic fire sprinkler systems installed in:
 - associated control valve trim
 - activation small bore pipework to the alarm and control valve assembly
- water-based fire-suppression systems, including:
 - alternate wet or dry systems
 - combined sprinkler or hydrant systems
 - deluge systems
 - dry systems
 - pre-action or recycle systems
 - residential and domestic systems
 - tail-end systems
- installation and design survey information which may include the annual survey required by AS 1851 Routine service of fire protection systems and equipment, to determine that water-based fire-suppression systems design and installation are not impaired by changes to:
 - building structure
 - occupant use
 - environment
- installation and design surveys conducted from floor level to identify design standard suitable for current building occupation requirements:
 - building classification
 - storage heights
 - external sprinkler requirements
 - pipework corrosion or damage
- installation and design surveys conducted from floor level to identify design standard suitable for current building occupation:
 - sprinkler head requirements
 - compatibility and ambient conditions
 - head condition
 - head location and spacing
 - head obstructions
 - spray pattern
 - temperature rating and RTI
- methods of applying sustainability principles and concepts
- testing procedures for:
 - checking desiccant condition (air dryer or crystals, water separator bowl) and cleaning or replacing as required
 - checking oil level and visually assessing condition of oil on air compressor

- routine service frequency schedules:
 - reference to AS 1851 Routine service of fire protection systems and equipment schedules of work conducted at regular frequencies that relate to the work scope for weekly, monthly, and six-monthly inspection and testing activities
- how to access relevant information, including codes and standards
- tools, materials and equipment used for conducting routine services of complex water-based fire-suppression systems
- WHS requirements for conducting routine services of complex water-based fire-suppression systems.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPFS3043 Conduct functional water flow testing

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Typographical error corrected in Element 1.6.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPFS3043A Conduct functional water flow testing. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to complete functional water flow proving and load tests on water-based fire-suppression systems.

It includes identifying compliance requirements, isolating relevant plant and system interfaces, conducting functional water flow testing, resetting the system and completing mandatory reporting requirements.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|------------------|---|
| 1 Plan the work. | 1.1 Identify, confirm and apply water flow testing requirements from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements. |
|------------------|---|

- 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
 - 1.3 Check location and equipment against legislative and industry requirements and take action according to organisational requirements to ensure compliance.
 - 1.4 Select and check serviceability of tools, equipment and personal protective equipment (PPE).
 - 1.5 Identify and isolate relevant plant and system interfaces.
 - 1.6 Confirm that wastewater from flow test will not cause any damage or issues to site or surrounding area.
 - 1.7 Identify appropriate test points and required water flow test equipment.
 - 1.8 Locate and identify types of water supply isolating valves.
- 2 Prepare for work.
- 2.1 Apply appropriate workplace procedures and risk control measures.
 - 2.2 Depressurise flow test point pipework.
 - 2.3 Attach water flow test equipment according to manufacturer instructions and organisational requirements.
 - 2.4 Install gauges of known accuracy.
 - 2.5 Determine system water pressure and flow requirements from block plan.
 - 2.6 Select and chart at least four points to take readings when flow testing according to manufacturer's charts for the flow test equipment.
 - 2.7 Operate valves to isolate water supplies.
 - 2.8 Document all information from site block plan.
- 3 Conduct functional water flow proving
- 3.1 Perform tests on each water supply to verify that systems function as intended, stopping at a minimum of four

- and load test, and record results.
- points and recording installation, town's main and/or pump suction and discharge pressures.
- 3.2 Record pump driver RPM at the drive shaft, temperature of driver and oil pressure.
 - 3.3 Monitor cooling system closely while conducting flow test.
 - 3.4 Record temperature of pump room when conducting test.
 - 3.5 Compare test results with legislative and industry requirements.
 - 3.6 Identify all defects and nonconformances and report according to AS 1851 Routine service of fire protection systems and equipment.
 - 3.7 Document and graph results and forward report to relevant persons for action.
 - 3.8 Reinstate system according to organisational requirements.
- 4 Clean up.
- 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure according to workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPFS3043A Conduct functional water flow testing.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCPFS3043 Conduct functional water flow testing

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Typographical error corrected in Element 1.6.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPFS3043A Conduct functional water flow testing. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- conducting a load test on a wet and general electrical pumpset according to AS 1851 Routine service of fire protection systems and equipment
- conducting a load test on a wet and general diesel pumpset according to AS 1851 Routine service of fire protection systems and equipment
- conducting a functional water-flow test on a hydrant system incorporating a pumpset
- conducting two functional water-flow tests on a hydrant system:
 - one with a portable flow meter
 - one connected by a length of fire hose.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- basic principles of hydraulics
- basic principles of operation and purpose of components of a water-based fire protection system:
 - deluge control valve assembly components
 - alarm wet control valve assembly components
 - booster valve assembly
 - circulation and system pressure relief valves
 - compression ignition engine governing controls
 - differential pressure gauges
 - hand tachometers

- hydrant landing valve assembly
- isolation and control valves
- manometers
- orifice plates
- pitot tube water flow test instrument
- pressure and flow switches
- pressure gauges
- pump controllers and ancillary equipment for control and indication
- pumpsets
- solenoid valves
- system block plans
- system pressure gauge schedules
- throttling valves
- ultrasonic flow measuring equipment
- ultrasonic thickness gauges
- venturi devices
- water supply tanks (atmospheric, pressure and suction with priming tanks)
- general operation of a pumpset:
 - compression ignition engine governing control devices
 - cooling systems
 - design speed requirements
 - exhaust systems
 - fuel systems
 - full load operation
 - normal running operation
 - pre-start and post-start checks
 - pumpset performance curve
 - pumpset controllers
 - starting and stopping methods
 - suction and discharge connections and pressures readings
- general operation of water-based fire-suppression systems
- terminology used in relation to water-based fire-suppression systems
- water-based fire-suppression system components:
 - air compressors fitted to control valves
 - circulation and system pressure relief valves
 - electric motor specification plate
 - flow switches and associated testing equipment
 - isolating valves associated with water-based fire-suppression system
 - mains water supply underground key-operated valve location

- most hydraulically disadvantaged testing point on a system hose reel and hydrant system
- pressure gauges
- pumpsets associated with water-based fire-suppression systems
- pump starting switches
- suction inlet strainers or screen on a static water supply for water-based fire-suppression system
- system block plans
- system main alarm bell or alarm strobe indicating building entry point for emergency personnel
- system pressure gauge schedules
- water supply tanks, water level indicators and automatic inflow valves
- water-based fire-suppression system control and alarm valves and ancillary equipment for control and alarm operation indication or interface
- controls on the pumpset controller panel:
 - fuel gauges
 - indicators
 - main isolating switch
- water-based fire-suppression system applications as defined in AS 2118 Automatic fire sprinkler systems
- legislative and industry requirements:
 - relevant Commonwealth and state or territory building acts, regulations and codes, such as the National Construction Code (NCC)
 - AS 1851 Routine service of fire protection systems and equipment
- relevant legislation relating to testing of fire protection equipment
- organisational requirements:
 - client-specific contractual requirements
 - documentation and information systems and processes
 - legal and organisational policies and guidelines, including personnel practices and guidelines outlining work roles, responsibilities and delegations
 - using electronic job scheduling and communication devices
- commissioning tests detailed in relevant Australian standards and manufacturers documentation to verify performance of an installed, repaired or altered piece of equipment or system
- checking for compliance including applying inspections, tests and survey requirements to equipment and systems according to relevant Australian standards to determine that they are:
 - capable of operating as intended when originally installed
 - still suitable for the fire hazard or risk being protected as no change in occupancy or use of the area protected has occurred since the equipment or system was installed or last modified

- providing the coverage and protection needed to meet original design and performance requirements
- checking for compliance, including reviewing documentation to verify that installed systems comply with legislative and industry requirements such as:
 - buildings essential services or fire safety measures listing
 - relevant Commonwealth and state or territory building acts, regulations and codes
 - relevant Australian standards listed on essential service listing
 - environmental regulations
- water-based fire-suppression systems as defined in AS 2118 Automatic fire sprinkler systems and AS 2419 Fire hydrant installations:
 - combined sprinkler and hydrant systems
 - deluge systems
 - dry systems
 - hydrant systems
 - pre-action or recycle systems
 - residential and domestic systems
 - tail-end systems
- specific locations where test equipment can be attached to measure and record water flow and pressure to meet legislative and industry requirements
- water flow test equipment:
 - differential pressure gauges
 - hand tachometers
 - manometers
 - orifice plates
 - pitot tube water flow test instrument
 - ultrasonic flow measuring equipment
 - ultrasonic thickness gauges
 - venturi devices
- system interface components such as flow, pressure, tamper and valve positioning switches that operate signals between the water-based fire-suppression system and other services such as:
 - building heating, ventilation and air conditioning (HVAC) services
 - fire brigade monitoring providers
- other life safety systems:
 - warning systems
 - fire indicator panel (FIP)
- methods of applying sustainability principles and concepts
- routine service frequency schedules:
 - reference to AS 1851 Routine service of fire protection systems and equipment schedules of work conducted at regular frequencies that relate to the work scope for weekly, monthly, and six-monthly inspection and testing activities

- how to access relevant information, including codes and standards
- tools, materials and equipment used for conducting functional water flow testing
- work health and safety (WHS) requirements for conducting functional water flow testing.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPFS3044 Install distribution and range pipes

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPFS3044A Install distribution and range pipes. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to install distribution and range pipes to carry all commonly used fire extinguishing agents, above and below ground. The installation may involve a new system or an alteration (extension or modification) to an existing system.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Identify installation requirements.	1.1 Obtain, read and determine distribution and range pipes requirements from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements. 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.

- 2 Prepare for work.
 - 2.1 Create a materials list and collect materials.
 - 2.2 Select and check the serviceability of appropriate tools and equipment, including personal protective equipment (PPE).
 - 2.3 Prepare work area to support efficient installation of distribution and range pipes.
- 3 Install piping system.
 - 3.1 Set out pipework and install pipe supports and fixings.
 - 3.2 Apply piping and materials.
 - 3.3 Attach mechanical jointing systems.
 - 3.4 Isolate and drain down system prior to installing pipework to avoid water damage when altering existing systems.
 - 3.5 Reinstate after completing works for water tightness.
 - 3.6 Complete documentation and submit within required timeframes.
- 4 Clean up.
 - 4.1 Clear the work area and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPFS3044A Install distribution and range pipes.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPFS3044 Install distribution and range pipes

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPFS3044A Install distribution and range pipes. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing distribution and range pipes in both:
 - a new automated fire sprinkler system
 - an existing automated fire sprinkler system, incorporating two rolled grooves, three threaded joins, one mechanical Tee and one barrel union
- providing a free-flowing and leak-free water supply to at least three branches of new and an existing system
- installing a range to feed two sprinkler heads using a mechanical Tee and support all pipework according to AS 2118 Automatic fire sprinkler systems
- relocating two sprinklers in an existing system, including draining down the system.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- legislation, regulations, standards and codes
- processes, procedures and techniques of:
 - installing distribution and range pipes
 - fixing and joining of pipes
 - levelling and alignment
 - roll grooving
- applications of sustainability concepts and principles relating to plumbing, encompassing water and resource usage
- materials storage and environmentally responsible waste disposal relating to distribution and range pipe installation
- general fire protection systems terminology
- functional and operational features of tools and equipment used to install distribution and range pipes:

- threading machines
- roll grooving machines
- roll grooving measuring devices
- ladders
- pipe wrenches
- steel pipe
- roll grooved and threaded fittings and valves
- elevated work platform (EWP)
- sockets
- impact drills
- threaded rod cutters
- hammers and punches
- identification of incorrect roll grooving
- characteristics, application and limitation of approved materials and components:
 - pipe fittings and fixture supports
 - above and below ground pipework
- how to access relevant information including job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements
- tools, materials and equipment used for installing distribution and range pipes
- work health and safety (WHS) requirements for installing distribution and range pipes
- installation requirements for installing distribution, pipework above and below ground and range pipes.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

CPCPFS3045 Fit off sprinkler heads, controls and ancillary equipment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPFS3045A Fit off sprinkler heads, controls and ancillary equipment. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to install sprinkler heads, system controls and ancillary equipment for sprinkler fire protection systems. The installation involves work on a new and existing structure.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify installation requirements.

1.1 Obtain, read and apply sprinkler head and control requirements from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.

1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.

- 1.3 Identify class of sprinkler system and associated design data from system design specifications.
- 2 Prepare for work.
 - 2.1 Create a materials list and collect materials.
 - 2.2 Select and check the serviceability of appropriate tools, equipment and personal protective equipment (PPE).
 - 2.3 Select components and prepare work area to support efficient installation of sprinkler heads, system controls and ancillary equipment.
- 3 Install sprinkler heads and ancillary equipment.
 - 3.1 Set out system following plans, specifications and job instructions.
 - 3.2 Attach fixings and pipe supports.
 - 3.3 Install sprinkler heads, system components and ancillary equipment.
 - 3.4 Isolate system and drain it down to allow connection without causing water damage, then recharge when altering existing systems.
 - 3.5 Complete documentation following quality and work requirements.
- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPFS3045A Fit off sprinkler heads, controls and ancillary equipment.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPFS3045 Fit off sprinkler heads, controls and ancillary equipment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPFS3045A Fit off sprinkler heads, controls and ancillary equipment. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing two different automated fire sprinkler systems in both a new and an existing system:
 - three different sprinkler heads with three different escutcheon assemblies: two hard piped drop; one flexible tube assembly, installed and branched according to manufacturer's specifications
 - a mechanical flow switch, incorporating a test arrangement
 - two pressure switch, one pressure switch used for rising pressure alarm and one used for a fall in pressure loop
- producing a plan containing four sprinkler heads spaced according to Ordinary Hazard III
- rectifying a tenancy floor plan that includes:
 - two new sprinkler heads
 - two relocated sprinkler heads
 - two deleted sprinkler heads.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- legislation, regulations, standards and codes relating to fitting off sprinkler heads, controls and ancillary equipment:
- processes, procedures and techniques of:
 - fitting off sprinkler heads, controls and ancillary equipment
 - levelling and alignment for installing underground pipework
- general fire protection systems terminology
- characteristics, application and limitations of different approved materials and components

- design requirements, functions and limitations of the following components:
 - sprinkler heads of at least 6 different types
 - escutcheon plates
 - flexible tube assemblies and their mounting brackets
 - pressure switches
 - flow switches
 - pipe supports and anchors
 - pipe jointing techniques including threading and roll grooving
- functional and operational features of tools and equipment used to fit off sprinkler heads, controls and ancillary equipment
- materials storage and environmentally responsible waste disposal relating to distribution and range pipe installation activities
- how to access relevant information including, job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
- tools, materials and equipment used for installing sprinkler heads, system controls and ancillary equipment for sprinkler fire protection systems
- work health and safety (WHS) requirements for installing sprinkler heads, system controls and ancillary equipment for sprinkler fire protection systems
- installation requirements for installing sprinkler heads, system controls and ancillary equipment for sprinkler fire protection systems.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPFS3046 Test the integrity of water-based fire protection systems using pressure

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Performance Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPFS3046A Test the integrity of water-based fire protection systems using pressure. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to test the integrity of water-based fire protection systems using pressure.

It includes performing water pressure testing on fire safety sprinkler and hydrant systems to establish the integrity of the water-based system or to identify and rectify leaks.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|------------------|--|
| 1 Plan the work. | 1.1 Obtain, read and apply water-based fire protection systems requirements from relevant job plans and specifications, codes, Australian Standards, |
|------------------|--|

- manufacturer's specifications and jurisdictional requirements.
- 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
 - 1.3 Identify materials and components and calculate quantities.
- 2 Prepare for work.
- 2.1 Check material and components for conformity and action any discrepancies.
 - 2.2 Select and check serviceability of tools, equipment and personal protective equipment (PPE) and rectify or report any faults.
 - 2.3 Prepare work area to efficiently test fire protection system.
 - 2.4 Determine the type of test to be performed and prepare appropriate testing equipment.
- 3 Test fire protection systems.
- 3.1 Connect air test equipment to system using pressure test not exceeding 50KPa.
 - 3.2 Connect water test equipment and conduct hydrostatic test according to relevant codes and Australian Standard.
 - 3.3 Record readings from each pressure gauge in format determined by job specifications and quality assurance requirements.
 - 3.4 Isolate water supply and open all water outlets to drain down system.
 - 3.5 Recharge and restore system to operational condition.
 - 3.6 Complete documentation and submit within required timeframe.
- 4 Clean up.
- 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.

- 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPFS3046A Test the integrity of water-based fire protection systems using pressure.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPFS3046 Test the integrity of water-based fire protection systems using pressure

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Performance Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPFS3046A Test the integrity of water-based fire protection systems using pressure. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- testing the integrity of water-based fire protection systems:
 - one water pressure test on a fire sprinkler system
 - one water pressure test on a fire hydrant system.

Note: Tests may be conducted during installation or maintenance of jobs.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- legislation, regulations, standards and codes relating to pressure testing water-based fire protection systems:
- policies, procedures and environmental requirements and sustainability principles relating to pressure testing water-based fire protection systems
- functional and operational features of tools and equipment used in pressure testing water-based fire protection systems
- safety requirements when using compressed air
- processes, procedures and techniques of:
 - testing water-based fire protection systems
- characteristics, application and limitations of approve materials and components:
 - sprinkler heads
 - roll groove and threaded joints
 - steel pipe

- chlorinated polyvinyl chloride (CPVC) pipe
- non-ferrous pipe
- alarm valves
- ball valves
- gate valves
- butterfly valves
- waste and test valves
- flexible droppers
- fire hydrant valves
- booster and suction arrangements
- check valves
- materials storage and environmentally responsible waste disposal relating to pressure testing water-based fire protection systems
- how to access relevant information including, job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
- tools, materials and equipment used for testing the integrity of water-based fire protection systems
- work health and safety (WHS) requirements for testing the integrity of water-based fire protection systems.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPFS3047 Test and maintain automatic fire sprinklers

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPFS3047A Test and maintain automatic fire sprinklers. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to conduct up to, and including five yearly routine service preventative maintenance, fault identification and repair of automatic fire sprinkler installations in new or existing, domestic or commercial structures.

It includes performing maintenance tasks following specifications detailed in maintenance schedules, removing faulty items or components and replacing equipment or components to meet specifications.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

CPCPFS3034 Install control valve assemblies, actuating devices and local alarms

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|------------------|--|
| 1 Plan for work. | 1.1 Access, read and apply automatic fire sprinkler maintenance requirements from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional |
|------------------|--|

- requirements.
- 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
- 2 Prepare for work.
 - 2.1 Select and check the serviceability of appropriate tools, equipment and personal protective equipment (PPE).
 - 2.2 Identify materials and components and calculate quantities.
 - 2.3 Check materials and components for conformity with delivery docket and report any inconsistencies.
 - 2.4 Carry out preparation of work area to support efficient service maintenance of automatic fire sprinklers.
- 3 Perform routine maintenance tasks.
 - 3.1 Isolate system interfaces.
 - 3.2 Apply maintenance tasks, following specifications detailed in maintenance schedule and AS 1851 Routine service of fire protection systems and equipment.
 - 3.3 Check mechanical equipment and system components using appropriate instruments.
 - 3.4 Identify faulty items or components and select appropriate service procedure.
- 4 Repair or replace faulty components and test job.
 - 4.1 Isolate system and drain down, as required, to complete tasks without causing water damage.
 - 4.2 Remove faulty items or components without damage to other components.
 - 4.3 Select replacement items or components to meet manufacturer's specifications.
 - 4.4 Adjust equipment or components as required.
 - 4.5 Recharge system with water.
 - 4.6 Carry out operational system check to ensure job

- specifications and quality requirements are met.
- 4.7 Prepare maintenance report in appropriate format.
- 5 Clean up.
- 5.1 Clear the work area, and dispose of or recycle materials as applicable, following quality and work requirements and job specifications.
- 5.2 Clean, check, maintain and store tools and equipment following manufacturer's and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPFS3047A Test and maintain automatic fire sprinklers.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPFS3047 Test and maintain automatic fire sprinklers

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPFS3047A Test and maintain automatic fire sprinklers. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- conducting routine service and maintenance up to five-year frequency of the following sprinkler systems:
 - wet system
 - deluge system
 - pre-action system, and applying the following tasks to all three systems:
 - replacing the seating rubber/diaphragm
 - replacing the face gasket/rubber
 - replacing any serviceable gaskets or rubbers on the drain and test valves
 - repacking an O, S & Y valve to manufacturer's specification
 - replacing all serviceable components on a gate valve
- performing the following on two different systems:
 - diagnose and repair faults
 - service relevant components as required
 - replace components as required
- performing system interfaces isolation of fire detection control indicating equipment (FDCIE) and fire pumpsets.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- documentation and reporting of defects and repairs in accordance with AS 1851 Routine service of fire protection systems and equipment
- characteristics, applications and limitations of approved materials and components, including:
 - alarm valves, wet, dry, deluge and pre-action
 - isolation valves, gate, butterfly and O, S & Y

- drain and test valves
- sluice valves
- water motor alarms
- pressure gauges
- air compressors
- air dryers
- pressure switches
- flow switches
- jacking pumps
- fire Sprinkler heads
- AS 1851 Routine service of fire protection systems and equipment preventative maintenance requirements of sprinkler systems:
 - valve overhauls
 - sprinkler samples
 - kitchen hood sprinklers
 - duct sprinklers
 - spray booth sprinklers
- how to access relevant information, including relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements for conducting routine service maintenance of automatic fire sprinklers
- tools, materials and equipment used for conducting routine service maintenance of automatic fire sprinklers
- work health and safety (WHS) requirements for conducting routine service maintenance of automatic fire sprinklers.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPFS3048 Install fixed fire pumpsets

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPFS3048A Install fixed fire pumpsets. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to install fixed fire pumpsets, including the pump base, power sources, pumps, pipework and associated components in new or existing, domestic or commercial structures.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Plan the work.	1.1 Access, read and apply fixed fire pumpsets installation requirements relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements. 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
2 Prepare for work.	2.1 Create a materials list and collect materials

- 2.2 Identify materials and components and calculate quantities.
 - 2.3 Check conformity of materials and components with delivery docket.
 - 2.4 Sequence tasks.
 - 2.5 Inspect site and determine location for fixed fire pumpset.
 - 2.6 Carry out preparation of work area to ensure efficient installation.
 - 2.7 Identify pump base requirements from drawings and specifications.
 - 2.8 Select and check the serviceability of appropriate tools, equipment and personal protective equipment (PPE).
- 3 Install fixed fire pumpsets.
 - 3.1 Set out and install pump base.
 - 3.2 Perform the installation of pumpset, pipework and associated valves.
 - 3.3 Check pipework, connections and pumpset valves to ensure they are watertight and operating correctly.
 - 3.4 Pressure test piping system and record results.
 - 3.5 Test pumpset and record test data in required format.
 - 3.6 Complete documentation as required.
- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPFS3048A Install fixed fire pumpsets.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPFS3048 Install fixed fire pumpsets

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPFS3048A Install fixed fire pumpsets. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by installing fixed fire pumpsets to *AS 2419 Fire hydrant installations system design, installation and commissioning*, including:

- installing pump base and pump
- installing pipework and associated valves and components
- installing pressure relief valve and line
- pressure testing piping system and pumpset
- pressure maintenance pump (jockey pump)
- pump start arrangement (pressure switch loop).

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- procedures and techniques for:
 - installation of fixed fire pumpset
 - pressure testing equipment
 - aligning pump and driver
- structural systems, building materials and services that support or surround fixed fire pumpsets
- characteristics, applications and limitations of approved materials and components of fixed fire pumpsets, above and below ground
- types and operation of pumps used in fire protection:
 - end suction
 - multistage multi outlet centrifugal
 - split case
 - turbine
 - screw

- jacking pumps
- jockey pumps
- types, requirements and operation of pump control panels
- pump room requirements
 - ventilation requirements
- vibration dampening
- flexible tube vibration isolation
- diesel driver exhaust sizing requirements
- materials storage and environmentally responsible waste disposal relating to installing fixed fire pumpsets
- how to access relevant information, including relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements to install fixed fire pumpsets
- tools, materials and equipment used to install fixed fire pumpsets
- work health and safety (WHS) requirements to install fixed fire pumpsets.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

CPCPFS3049 Conduct preventive maintenance on fixed fire pumpsets

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Typographical errors corrected in Pre-requisite unit and Element and Performance Criteria 1.3.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPFS3049A Conduct preventive maintenance on fixed fire pumpsets. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to conduct preventive maintenance on circulatory systems, packed glands and special valves associated with fixed fire pumpsets.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

CPCPFS3041 Inspect and test fire pumpsets

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Prepare for work.
 - 1.1 Access, read and apply preventative maintenance on fixed pumpset requirements from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
 - 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
 - 1.3 Sequence tasks specified in relevant maintenance schedules.
 - 1.4 Identify materials and components and calculate quantities.
 - 1.5 Select and check serviceability of tools, equipment and personal protective equipment (PPE).
 - 1.6 Carry out preparation of work area for efficient preventive maintenance of fixed fire pumpsets.
 - 1.7 Check materials and components for conformity with delivery docket.
- 2 Perform preventive maintenance tasks on pump circulatory system.
 - 2.1 Isolate pump following workplace requirements before conducting maintenance tasks.
 - 2.2 Disassemble cooling line strainer, remove and inspect screen, and identify and report faulty materials.
 - 2.3 Clean screen and reassemble strainer following workplace procedures.
 - 2.4 Check operation of circulatory valve and replace valve if required.
 - 2.5 De-isolate pump, conduct start test, and check water flow at tundish or sight glass.
- 3 Perform preventive maintenance tasks on packing glands.
 - 3.1 Disassemble pump packing gland housing and remove gland plate.
 - 3.2 Remove and dispose of packing using appropriate packing extractors and following quality and

- environmental requirements.
- 3.3 Repack gland following manufacturer's instructions.
 - 3.4 Reinstall gland plate and adjust as required.
 - 3.5 De-isolate, operate and check pump to ensure packing gland leak rate meets manufacturer's instructions and quality requirements.
- 4 Perform preventive maintenance tasks on special pump valves.
- 4.1 Drain down pump pipework and check to ensure there is no residual water pressure.
 - 4.2 Disassemble special valves and inspect housing.
 - 4.3 Inspect internal components of special valves and install replacements.
 - 4.4 Reassemble special valves, de-isolate pump and check system to ensure it is operating correctly.
- 5 Report anomalies and complete documentation.
- 5.1 Record inspection and testing results and report anomalies following quality requirements.
 - 5.2 Complete preventive maintenance documentation and forward to relevant persons for action.
- 6 Clean up.
- 6.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 6.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPFS3049A Conduct preventive maintenance on fixed fire pumpsets.

Assessment Requirements for CPCPFS3049 Conduct preventive maintenance on fixed fire pumpsets

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Typographical errors corrected in Pre-requisite unit and Element and Performance Criteria 1.3.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPFS3049A Conduct preventive maintenance on fixed fire pumpsets. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- performing preventive maintenance on a diesel-driven, packed gland fixed fire pumpset in accordance with AS 2941 Fixed fire protection installations across two different jobs and include:
 - a circulatory system
 - a packing gland
 - a pressure relief valve, and
 - a pressure reducing valve
- performing system interfaces isolation of fire detection control indicating equipment (FDCIE) and fire pumpsets.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- processes, procedures and techniques of:
 - conducting preventive maintenance on fixed fire pumpsets
 - isolating and draining down pump pipework
- characteristics, applications and limitations of approved materials and components:
 - end suction pumps
 - multistage multioutlet pumps
 - screw pumps

- turbine pumps
- split case pumps
- pressure relief valves
- pressure reducing valves
- circulatory system
- how to access relevant information, including relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements. to conduct preventive maintenance on fixed fire pumpsets
- tools, materials and equipment used to conduct preventive maintenance on fixed fire pumpsets
- work health and safety (WHS) requirements to conduct preventive maintenance on fixed fire pumpsets.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPFS4021 Commission domestic and residential fire suppression sprinkler systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPFS4021A Commission domestic and residential fire suppression sprinkler systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to test and commission domestic and residential fire suppression sprinkler systems in buildings up to four storeys in height containing communal catering and residential quarters.

It covers preparation for the work, identification and confirmation of system specifications and requirements, physical testing and commissioning of the systems, and work finalisation processes including records and documentation.

The role may involve interaction with architects, builders, suppliers and relevant planning authorities and requires a sound understanding of applicable legislation including work health and safety (WHS).

Site locations for work application are domestic and residential and may be a new work site or an existing structure, including minimum of a communal catering and living area and multiple residential quarters (or equivalent), and a fire suppression sprinkler system for a domestic residence containing a minimum of two rooms.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Prepare for work.
 - 1.1 Obtain current approved plans and specifications.
 - 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
 - 1.3 Apply quality assurance requirements to comply with internal and external policies, procedures, standards and authorities.
 - 1.4 Consult with associated persons to plan and sequence tasks.
 - 1.5 Select and check the serviceability of appropriate tools, equipment and personal protective equipment (PPE).
 - 1.6 Prepare work area to support effective commissioning process.

 - 2 Identify system requirements.
 - 2.1 Identify and confirm system design requirements using job specifications, authorities' requirements and standards.
 - 2.2 Identify commissioning requirements using job specifications, authorities' requirements and standards.

 - 3 Test and commission system.
 - 3.1 Check sprinkler systems to ensure type and installation conform to standards, job specifications, manufacturer recommendations and authorities' requirements.
 - 3.2 Test system operation and adjust as required to meet all requirements and specifications.
 - 3.3 Commission and maintain system to ensure correct operation according to standards, and manufacturer and job specifications.

 - 4 Clean up work area.
 - 4.1 Clear the work area of materials and dispose of, reuse or recycle materials according to legislation, regulations, environmental codes of practice and job specifications.
 - 4.2 Clean tools and equipment check for damage and malfunction and store according to manufacturer

recommendations and workplace procedures.

- 4.3 Access information to complete documentation according to workplace requirements and submit within specified timeframes, including all required information.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPFS4021A Commission domestic and residential fire suppression sprinkler systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPFS4021 Commission domestic and residential fire suppression sprinkler systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPFS4021A Commission domestic and residential fire suppression sprinkler systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To determine competency in this unit a candidate must meet the performance criteria for this unit by:

- commissioning and testing a fire suppression sprinkler system for a domestic and residential fire suppression sprinkler systems in buildings up to four storeys in height containing communal catering and residential quarters and a fire suppression sprinkler system for a domestic residence containing a minimum of two rooms
- correctly interpreting plans and specifications to complete work to the specified standard within accepted timeframes
- complying with appropriate legislation, organisational processes and regulatory requirements.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- components and materials of fire suppression sprinkler systems including:
 - actuating devices
 - alarms
 - control valve assemblies
 - piping
 - sprinkler heads
 - unplasticised polyvinyl chloride (uPVC), steel or copper pipes and other approved materials
- job safety analysis (JSA) and safe work method statements (SWMS)
- National Fire Protection Association (NFPA) and Factory Mutual performance-based codes of practice
- pressure test systems and procedures

- process of installing, testing and commissioning domestic and residential fire suppression sprinkler systems
- processes for accessing information and for calculating material requirements
- properties of water, including pressure and flow rates
- SI system of measurements
- safe work practices relating to testing and commissioning domestic and residential fire suppression sprinkler systems including:
 - hazard control
 - personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
 - handling of materials
 - personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- environmental requirements including:
 - water quality management
 - clean-up protection
 - stormwater protection
 - waste management
- quality assurance information including:
 - Australian standards
 - Environment Protection Authority (EPA)
 - internal company quality assurance policy and risk management strategy
 - International Standards Organisation (ISO)
 - site safety plan
 - workplace operations and procedures
- tools and equipment including:
 - hand and power tools
 - test equipment
- sustainability principles and concepts including efficient:
 - water usage
 - harvesting
 - disposal
- planning and site information including:
 - charts and hand drawings
 - instructions issued by authorised organisational or external personnel
 - job drawings and specifications
 - manufacturer specifications and instructions
 - safety data sheets (SDS)
 - organisation work specifications and requirements
 - work schedules, plans and specifications
 - spoken, written and graphical instructions

- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - work health and safety (WHS) and environmental requirements
 - plumbing regulations
 - relevant Australian standards, including AS 2118.1 Automatic fire sprinkler systems
 - signage
 - local authorities' requirements.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPFS4022 Commission and maintain special hazard fire suppression systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Foundation Skills. Typographical error corrected in Elements and Performance Criteria 4.2.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPFS4022A Commission and maintain special hazard fire suppression systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to test, commission and maintain special hazard fire suppression systems.

It covers preparation for the work, identification and confirmation of system specifications and requirements, physical testing and commissioning of the systems, and conduct of systems maintenance and work finalisation processes, including records and documentation.

Site location for work application may be either domestic or residential and may be a new work site or an existing structure being renovated, extended, restored or maintained.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

All technicians performing work described in this unit that involves the handling of prescribed ozone depleting substances (ODS) and synthetic greenhouse gases (SGG) extinguishing agents must hold an appropriate extinguishing agent handling licence (EAHL).

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------|---|
| 1 Prepare for work | 1.1 Obtain plans and specifications. |
| | 1.2 Apply workplace policies and procedures, work health and safety (WHS) and environmental requirements. |
| | 1.3 Identify and adhere to quality assurance requirements to according to workplace requirements. |
| | 1.4 Commission, inspect, test and maintain ozone depleting substances (ODS) and synthetic greenhouse gases (SGG) legislative and industry requirements to activities for special hazard fire suppression systems. |
| | 1.5 Plan and sequence tasks in conjunction with others involved in or affected by the work. |
| | 1.6 Select and check tools, equipment and materials for serviceability prior to commissioning and maintaining special hazard fire suppression systems, including personal protective equipment. |
| | 1.7 Prepare work area to support efficient commissioning process. |
| 2 Identify system requirements. | 2.1 Identify and confirm service design requirements from job specifications and are according to standards. |
| | 2.2 Identify testing and commissioning requirements of special hazard fire suppression systems according to standards, authorities' requirements and job specifications. |
| 3 Test and commission system. | 3.1 Check special hazard fire suppression systems to ensure type and installation conform to standards, job specifications, manufacturer recommendations and authorities' requirements. |
| | 3.2 Test operation of system according to job specifications, manufacturer recommendations and authorities' requirements, including ODS and SGG legislative requirements, and is adjusted as required. |

- | | | |
|---|---------------------|--|
| | 3.3 | Commission system to ensure correct operation according to standards, and manufacturer and job specifications. |
| 4 | Maintain system. | |
| | 4.1 | Identify service and maintenance requirements from manufacturer specifications or authorities' requirements. |
| | 4.2 | Check and fit replacement components periodically and as required according to specifications. |
| | 4.3 | Conduct maintenance and repair of system observing maintenance schedule described in current Australian standard, and manufacturer and/or authorities' requirements, including ODS and SGG legislative requirements. |
| | 4.4 | Observe sustainability principles and concepts when preparing for and undertaking work process. |
| 5 | Clean up work area. | |
| | 5.1 | Clear work area and dispose of reused or recycled materials, according to legislation, regulations, codes of practice and job specification. |
| | 5.2 | Clean, check, maintain and store tools and equipment according to manufacturer recommendations and workplace procedures. |
| | 5.3 | Access information and complete documentation according to workplace requirements. |

Foundation Skills

A person demonstrating competency in this unit must have the following language, literacy, numeracy and employment skills:

- technical skills to test, commission and maintain a special hazard protection system consisting of an extinguishing agent, piping, actuating devices and sprinkler delivery
- technology skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Unit Mapping Information

Supersedes and is equivalent to CPCPFS4022A Commission and maintain special hazard fire suppression systems.

Assessment Requirements for CPCPFS4022 Commission and maintain special hazard fire suppression systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
- Changes to Foundation Skills. Typographical error corrected in Elements and Performance Criteria 4.2.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPFS4022A Commission and maintain special hazard fire suppression systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- locating, interpreting and applying relevant information, standards and specifications to testing and commissioning special hazard fire suppression systems
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- testing and commissioning one special hazard fire suppression system (not prescribed ODS or SGG extinguishing agent), being a gaseous, chemical or fluid-based system; and inspect, test and maintain one prescribed ODS or SGG system, ensuring:
 - application of sustainability principles and concepts
 - correct identification of location, design specification and details of proposed service
 - correct selection and use of appropriate processes, tools and equipment
 - completion of all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- work health and safety are to be according to commonwealth, state and territory legislation and regulations:
 - handling of materials

- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - electricity
 - hazardous materials and substances
 - other machines
 - surrounding structures and facilities
 - trip hazards
 - underground services
 - use of tools and equipment
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety
- environmental requirements cover water quality management:
 - clean-up protection
 - complying with ODS and SGG legislation, codes and regulations, e.g. Ozone Protection and Synthetic Greenhouse Gas Management Act 1989
 - preventing emissions of prescribed ODS and SGG extinguishing agents
 - stormwater protection
 - waste management
- materials:
 - actuating devices
 - alarms
 - control valve assemblies
 - unplasticised polyvinyl chloride (PVC-U), steel or copper pipes or other approved materials
 - special hazard fire suppression agents, including prescribed ODS and SGG materials
 - sprinkler heads
- special hazard fire suppression systems:
 - carbon dioxide and other gases (such as inergen and argonite)
 - chemical reaction and explosion suppression systems
 - dry chemical
 - foam
 - prescribed ODS and SGG extinguishing agents (such as halon and NAF S-III)

- water
- water mist
- information:
 - charts and hand drawings
 - instructions issued by authorised organisational or external personnel
 - job drawings
 - manufacturer specifications and instructions
 - material safety data sheets (MSDS)
 - memos
 - organisation work specifications and requirements
 - plans and sketches
 - regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - WHS and environmental requirements, including ODS and SGG legislation, codes and regulations
 - plumbing regulations
 - relevant Australian standards, including AS2118 Automatic fire sprinkler systems and AS1851 Maintenance of fire protection systems and equipment
 - safe work procedures relating to testing and commissioning special hazard fire suppression systems
 - signage
 - verbal, written and graphical instructions
 - work bulletins
 - work schedules, plans and specifications.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPFS4023 Commission fire system pumpsets

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPFS4023A Commission fire system pumpsets. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to test and commission a fire system pumpset.

It covers preparation for the work, identification and confirmation of system specifications and requirements, physical testing and commissioning of systems, and finalisation of work processes, including the completion of records and documentation.

The role may involve interaction with architects, builders, suppliers and relevant planning authorities and requires a sound understanding of applicable standards and legislation including work health and safety (WHS).

This unit's requirements may be carried out by experienced tradespersons such as hydraulic design consultants, plumbers or plumbing contractors who employ a team of plumbers.

Site location for work application may be either domestic or residential and may be a new work site or an existing structure.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Prepare for work.
 - 1.1 Obtain current approved plans and specifications.
 - 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental instructions.
 - 1.3 Apply quality assurance requirements to comply with internal and external policies, procedures, standards and authorities.
 - 1.4 Consult with others to plan and sequence tasks.
 - 1.5 Select and check the serviceability of appropriate tools, equipment and personal protective equipment (PPE).
 - 1.6 Prepare work area to support effective commissioning process.

- 2 Identify system requirements.
 - 2.1 Identify and confirm system design requirements from job specifications according to standards.
 - 2.2 Identify testing and commissioning requirements of fire system pumpset according to standards, authorities' requirements and job specifications.

- 3 Test and commission system.
 - 3.1 Check fire system pumpset and pump controls to ensure type and installation conform to standards, job specifications, manufacturer recommendations and authorities' requirements.
 - 3.2 Test operation of pumpset according to job specifications, manufacturer recommendations and authorities' requirements and adjust as required.
 - 3.3 Commission pumpset to ensure correct operation according to standards and manufacturer and job specifications.

- 4 Clean up work area.
 - 4.1 Clear the work area of materials and dispose of, reuse or recycle materials according to legislation, regulations, environmental codes of practice and job specifications.
 - 4.2 Clean tools and equipment, check for damage and malfunction and store according to manufacturer

recommendations and workplace procedures.

- 4.3 Access information to complete documentation according to workplace requirements and submit within specified timeframes.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPFS4023A Commission fire system pumpsets.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPFS4023 Commission fire system pumpsets

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPFS4023A Commission fire system pumpsets. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- testing and commissioning one fire system pumpset, and
 - interpreting plans and specifications correctly to complete work to the specified standard within accepted timeframes
 - complying with appropriate legislation, organisational processes and regulatory requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- job safety analysis (JSA) and safe work method statements (SWMS)
- National Fire Protection Association (NFPA) and Factory Mutual performance-based codes of practice
- performance measures for fire system pumpsets
- process to install, test and commission fire system pumpsets
- processes for accessing information and for calculating material requirements
- types of fire system pumpsets including:
 - centrifugal
 - close coupled, long coupled with mechanical joints or belt driven by an electric or petrol and diesel motor
 - multi-stage turbine
 - positive displacement
 - submersible and electric and compression ignition driven pumps
- pump controls including:
 - automatic, including float, level, flow or pressure switches
 - manual
- properties of water including:

- pressure
- flow rates
- atmospheric pressure
- test systems, equipment and procedures
- SI system of measurements
- work health and safety practices relating to testing and commissioning fire system pumpsets including:
 - handling of materials
 - hazard control
 - personal protective clothing and equipment
 - working with electricity
 - hazardous materials and substances
 - use of first aid equipment
 - workplace environment and safety
- environmental requirements including:
 - water quality management
 - clean-up protection
 - stormwater protection
 - waste management
- sustainability principles and concept including:
 - efficient energy use
 - disposing of waste material to ensure minimal environmental impact
 - selecting appropriate components to ensure minimal environmental impact
- quality assurance requirements including:
 - Environment Protection Authority (EPA)
 - internal company quality assurance policy and risk management strategy and workplace operations and procedures
 - International Standards Organisation (ISO)
- tools and equipment including:
 - hand and power tools
 - test equipment
- planning and site information including:
 - Australian building and plumbing codes specifically performance requirements for fire system pumpsets
 - standards applicable to installing and commissioning fire system pumpsets including AS2941 Fixed fire protection installations - Pumpset systems and AS2118 .1 Automatic fire sprinkler systems
 - charts, hand drawings, plans and sketches
 - instructions issued by authorised organisational or external personnel
 - manufacturer specifications and instructions
 - safety data sheets (SDS)

- organisation work specifications and requirements
- WHS and environmental requirements
- plumbing regulations
- signage
- work schedules, plans and specifications.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPFS4024 Design residential fire sprinkler systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Pre-requisite unit.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPFS4024A Design residential and domestic fire sprinkler systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design domestic and residential fire sprinkler systems using hydraulic calculations.

It includes determination of system requirements, detailed design and recording of system plans.

In some jurisdictions this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPFS3037 Install residential life safety sprinkler systems

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|-------------------------------|--|
| 1 Prepare for design process. | 1.1 Identify and confirm the nature and scope of design task from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements. |
|-------------------------------|--|

- 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
 - 1.3 Consult with stakeholders as required.
 - 1.4 Select and check the serviceability of appropriate tools, equipment and personal protective equipment (PPE).
 - 1.5 Prepare the work area in which the design process is to be conducted.
- 2 Determine system requirements.
- 2.1 Obtain and confirm information specifications for the required work.
 - 2.2 Specify regulations and standards relevant to the work.
 - 2.3 Identify and extract relevant data from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
 - 2.4 Identify and establish building classification and hazard ratings according to standards and other relevant regulations.
- 3 Design sprinkler system.
- 3.1 Establish water supply needs and draw graphs for the automatic fire sprinkler system.
 - 3.2 Size pipework to manufacturer specifications and standards using hydraulic calculations.
 - 3.3 Design sprinkler system to meet plan specifications, standards, manufacturer's recommendations and water supply data.
 - 3.4 Select sprinkler heads of appropriate size, spray pattern, temperature and finish.
 - 3.5 Plot sprinkler spacing according to manufacturer's specifications, standards and relevant statutory and regulatory authority regulations.
 - 3.6 Create pipe layout drawings according to standards and workplace requirements.

- 4 Finalise work.
 - 4.1 Document calculations and other supporting evidence to support design.
 - 4.2 Optimise material specifications according to standards from the proposed design.
 - 4.3 Prepare fabrication sheets and material lists.
 - 4.4 Record plans according to regulatory authorities' and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPFS4024A Design residential and domestic fire sprinkler systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPFS4024 Design residential fire sprinkler systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Pre-requisite unit.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPFS4024A Design residential and domestic fire sprinkler systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- using hydraulic calculations to design a fire sprinkler system for a residential complex containing a minimum of a communal catering and living area and multiple residential quarters (or equivalent) and also a fire sprinkler system for a domestic residence containing a minimum of two rooms.

In doing so the person must:

- correctly interpret plans and specifications to complete work to the specified standard within accepted timeframes
- comply with appropriate legislation, organisational processes and regulatory requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- calculating and measuring techniques and their application:
 - SI system of measurements
 - calculating material requirements
- components and materials of fire suppression sprinkler systems and their operating characteristics:
 - actuating devices
 - alarms
 - control valve assemblies
 - piping

- sprinkler heads
- process and design techniques, materials and technology:
 - calculators
 - design data
 - design tables
 - drawing and drafting equipment
 - reference materials
 - computers running appropriate computer-aided design (CAD) software
 - drafting materials
 - plans
- job safety analysis (JSA) and safe work method statements (SWMSs)
- accessing and using information:
 - charts and hand drawings
 - instructions issued by authorised organisational or external personnel
 - job drawings
 - manufacturer specifications and instructions
 - organisation work specifications and requirements
 - plans and sketches signage
 - verbal, written and graphical instructions
 - work bulletins
 - work schedules, plans and specifications
- regulatory and legislative requirements
- properties of water including pressure and flow rates
- work health and safety (WHS) related to designing residential and domestic fire sprinkler systems
- environmental requirements and sustainability principles
- quality assurance requirements.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPFS4025 Commission fire alarm and detection system interface devices

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Performance Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPFS4025A Commission fire alarm and detection system interface devices. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to commission fire alarm and detection interface systems.

It covers preparation for the work, identification and confirmation of system specifications and requirements, physical testing and commissioning of the system interface devices, and work finalisation processes, including records and documentation.

The role may involve interaction with architects, builders, suppliers and relevant planning authorities and requires a sound understanding of applicable legislation including work health and safety (WHS).

This units' requirements may be carried out by experienced tradespeople such as hydraulic design consultants, plumbers or plumbing contractors who employ a team of plumbers.

Site location for work application may be a new work site or an existing structure.

The skills and knowledge described in this unit require a licence to practice in a workplace where plant and equipment interface devices operate at voltages above extra low voltage (above 50 V AC or 120 V DC).

Other regulations related to electrical and plumbing work may apply in some jurisdictions.

Practice in the workplace and during training is also subject to work health and safety regulations and contractual training obligations, such as those required under apprenticeship agreements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------|--|
| 1 Prepare for work. | 1.1 Obtain current approved plans and specifications. |
| | 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and sustainability principles. |
| | 1.3 Apply quality assurance requirements to comply with internal and external policies, procedures, standards and authorities. |
| | 1.4 Consult with all associated persons to plan and sequence tasks. |
| | 1.5 Select and check the serviceability of appropriate tools, equipment and personal protective equipment (PPE). |
| | 1.6 Prepare work area to support effective commissioning process. |
| 2 Identify system requirements. | 2.1 Identify and confirm system design requirements from job specifications according to standards. |
| | 2.2 Identify and determine system commissioning requirements using relevant Australian standards, statutory and regulatory authorities' requirements and job specifications. |
| 3 Test and commission system. | 3.1 Check fire alarm and detection system interface devices to ensure type and installation conform to relevant Australian standard, job specifications, manufacturer recommendations and authorities' requirements. |
| | 3.2 Test operation of system interface devices and adjust as required according to Australian standard, job specifications, manufacturer recommendations and authorities' requirements. |

- 3.3 Commission and maintain system interface devices to ensure correct operation according to relevant standards, and manufacturer and job specifications.
- 4 Clean up work area.
 - 4.1 Clear the work area of materials and dispose of, reuse or recycle materials according to legislation, regulations, environmental codes of practice and job specifications.
 - 4.2 Clean tools and equipment, check for damage and malfunction and store according to manufacturer recommendations and workplace procedures.
 - 4.3 Access information to complete documentation according to workplace requirements and submit within specified timeframes.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPFS4025A Commission fire alarm and detection system interface devices.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPFS4025 Commission fire alarm and detection system interface devices

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Performance Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPFS4025A Commission fire alarm and detection system interface devices. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- commissioning a fire alarm and detection system interface device, including a pressure switch and a flow switch, plus an actuator and a control and indicating panel and in doing so:
 - correctly interpret plans and specifications to complete work to the specified standard within accepted timeframes
 - comply with appropriate legislation, organisational processes and regulatory requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- components and materials of fire alarm and detection system interface devices including:
 - pressure switches
 - flow switches
 - actuators
 - solenoids
 - valve monitoring devices
- verifying interface device operations, including:
 - alarm volume
 - annunciators
 - audible, visible and combination alarms

- controls
- coordination of alarm signals with other services
- dispatching systems
- public reporting systems
- signal transmission
- tactile alarm appliances for people with disabilities
- zone alarms
- correct location and setting of interface devices to meet system design standards
- difference between extra low voltage and low voltage system interface wiring connection
- job safety analysis (JSA) and safe work method statements (SWMS)
- process of installing, testing and commissioning fire alarm and detection system interface devices
- systems operations and procedures
- properties of water including pressure and flow rates
- relevant statutory requirements related to commissioning fire alarm and detection system interface devices including:
 - automatic smoke and heat venting systems
 - air handling systems
 - emergency warning and intercommunication systems
- statutory and regulatory authorities including:
 - Commonwealth government
 - state or territory governments
 - local authorities
- sources of information and processes for calculating suitable replacement of interface devices
- SI system of units
- standards applicable to the service including:
 - AS 1670.1 Fire detection, warning, control and intercom systems – System design, installation and commissioning – Part 1 Fire
 - AS2118.1 Automatic fire sprinkler systems Part 1: General systems
 - AS1851 Routine service of fire protection systems and equipment
- safe work practices associated with commissioning fire alarm and detection interface systems including:
 - working with electricity
 - handling of materials
 - hazard control
 - PPE
 - use of first aid equipment
- environmental requirements and sustainability principles including:
 - clean-up protection
 - stormwater protection

- waste management
- efficient energy use
- efficient use and recycling of material
- selecting appropriate components to ensure minimal environmental impact
- quality assurance requirements including:
 - Australian standards
 - Environment Protection Authority (EPA)
 - internal company quality assurance policy and risk management strategy
 - International Standards Organisation
 - site safety plan
 - workplace operations and procedures.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website -

CPCPFS4026 Commission firefighting appliances

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPFS4026A Commission firefighting appliances. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to commission firefighting appliances.

It covers preparation for the work, identification and confirmation of system specifications and requirements, physical testing and commissioning of appliances, and work finalisation of work processes, including completing records and documentation.

The role may involve interaction with architects, builders, suppliers and relevant planning authorities and requires a sound understanding of applicable legislation including work health and safety (WHS).

The unit requirements may be carried out by experienced tradespeople such as hydraulic design consultants, fire services supervisors, plumbers or plumbing contractors who employ a team of plumbers.

Minimum site requirements for work application is a residential building of four storeys on a new work site and an existing structure.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Prepare for work.
 - 1.1 Obtain current approved plans and specifications.
 - 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and sustainability principles.
 - 1.3 Apply quality assurance requirements to comply with internal and external policies, procedures, standards and authorities.
 - 1.4 Consult with all associated persons to plan and sequence tasks.
 - 1.5 Select and check the serviceability of appropriate tools, equipment and personal protective equipment (PPE).
 - 1.6 Prepare work area to support effective commissioning process.
- 2 Identify system requirements.
 - 2.1 Identify and confirm system design requirements from job specifications according to standards.
 - 2.2 Identify and determine requirements of firefighting appliance commissioning using relevant Australian standards, statutory and regulatory authorities' requirements and job specifications.
- 3 Test and commission system.
 - 3.1 Check firefighting appliances to ensure type and installation conform to standards, job specifications, manufacturer recommendations and authorities' requirements.
 - 3.2 Test operation of appliances and adjust as required according to standards, job specifications, manufacturer's recommendations and authorities' requirements.
 - 3.3 Commission and maintain appliances to ensure correct operation according to standards, manufacturer and job specifications.
- 4 Clean up work area.
 - 4.1 Clear the work area of materials and dispose of, reuse or recycle materials according to legislation, regulations,

- environmental codes of practice and job specifications.
- 4.2 Clean tools and equipment check for damage and malfunction and store according to manufacturer recommendations and workplace procedures.
 - 4.3 Access information to complete documentation according to workplace requirements and submit within specified timeframes.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPFS4026A Commission firefighting appliances.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPFS4026 Commission firefighting appliances

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPFS4026A Commission firefighting appliances. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- commissioning firefighting appliances, including portable fire appliances, wheeled fire extinguishers, delivery lay flat hose and fire hose reel systems for a residential building of a minimum four storeys on a new or existing structure.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- current Australian standards applicable to relevant appliances including:
 - AS/NZS 1841.1 Portable fire extinguishers General requirements
 - AS/NZS 1850 Portable fire extinguishers - Classification, rating and performance testing
 - AS 1851-2012 Routine service of fire protection systems and equipment
 - AS2441 Installation of fire hose reels
 - AS2444 Portable fire extinguishers and blankets -selection and location
 - AS/NZS3504 Fire blankets
 - AS3565 Meters for water supply
 - AS4077 Fire protection fire extinguishing media: halogenated hydrocarbons Specifications for halon 1211 and halon 1301
 - AS4077 Fire protection fire extinguishing media: Code of practice for safe handling and transfer procedures of halon 1211 and halon 1301
 - AS4078 Fire protection fire extinguishing media: carbon dioxide
 - AS4265 Wheeled fire extinguishers
 - AS/NZS4353 Portable fire extinguishers - aerosol type
- components and materials of firefighting equipment and appliances including:
 - delivery lay flat fire hose
 - fire blankets

- fire hose reel systems
- portable fire appliances
- wheeled fire extinguishers
- job safety analysis (JSA) and safe work method statements (SWMS)
- pressure requirements of hose reel systems
- process of installing, testing and commissioning firefighting equipment and appliances
- relevant statutory requirements and authorities related to commissioning firefighting equipment and appliances including:
 - Commonwealth government
 - state governments
 - territories
 - local authorities
 - codes of practice
 - acts and regulations
 - Environment Protection Authority (EPA)
- quality assurance requirements including:
 - internal company quality assurance policy and risk management strategy
 - International Standards Organisation (ISO)
 - site safety plan
 - workplace operations and procedures
- sources of information and processes for the calculation of requirements including:
 - SI system of units
- safe work practices associated with commissioning firefighting appliances including:
 - handling of materials
 - hazard control
 - personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
 - working with electricity
 - use of first aid equipment
- environmental requirements and sustainability principles including:
 - clean-up protection
 - stormwater protection
 - waste management
 - efficient energy use
 - efficient use and recycling of material.
 -

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPFS4027 Commission fire sprinkler systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Knowledge Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPFS4027A Commission fire sprinkler systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to commission fire sprinkler systems.

It covers preparing for the work, identifying and confirming system specifications and requirements, physically testing and commissioning systems, and finalising work processes, including completing records and documentation.

The role may involve interaction with architects, builders, suppliers and relevant planning authorities and requires a sound understanding of applicable legislation including work health and safety (WHS).

This unit's requirements may be carried out by experienced tradespeople such as hydraulic design consultants, fire services supervisors, plumbers or plumbing contractors who employ a team of plumbers.

Work may be undertaken on commercial or industrial buildings, which may be new work sites or existing structures.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|--|
| 1 Prepare for work | 1.1 Consult with approving authority to determine commissioning inspections and tests required to validate fire sprinkler system performance meet design requirements. |
| | 1.2 Obtain and review documentation required for commissioning. |
| | 1.3 Consult with all associated persons to plan and sequence tasks. |
| | 1.4 Select and check the serviceability of appropriate tools, equipment and personal protective equipment (PPE). |
| | 1.5 Prepare work area to support efficient commissioning process. |
| 2 Confirm that installation of system components correspond to design requirements. | 2.1 Identify fire sprinkler system components and locations on drawings and specifications. |
| | 2.2 Inspect building to confirm that locations of system components correspond to design requirements and report any variances. |
| | 2.3 Confirm types of sprinkler heads are compatible and report if determined as incompatible. |
| | 2.4 Confirm spaces between sprinkler heads are correct and report any variances. |
| | 2.5 Inspect and confirm that pipework is functional and report any jointing and supporting defects. |
| | 2.6 Inspect valves for different commissioning tests to confirm correct type, labelling, and position. |
| | 2.7 Confirm pressure gauge schedule, block plan and interface diagram correspond to design requirements. |
| | 2.8 Check and verify water supply components, including any installed pumpsets against design requirements. |
| | 2.9 Identify changes to the building or existing conditions |

that could affect component performance.

- | | | | |
|---|---|-----|---|
| 3 | Conduct pressure tests and restore system to normal pressure. | 3.1 | Conduct static air-pressure test to confirm integrity of the system, record results according to relevant standards and workplace requirements. |
| | | 3.2 | Conduct high pressure hydraulic test to confirm integrity of the system, record results according to relevant standards and workplace requirements. |
| | | 3.3 | Identify and report leaks. |
| | | 3.4 | Drain system and re-charge at normal pressure according to relevant standards and workplace requirements. |
| 4 | Conduct functional tests. | 4.1 | Conduct water supply functional proving test and record results according to relevant standards. |
| | | 4.2 | Conduct functional tests of system components and interfaces, record results according to relevant standards and design requirements. |
| | | 4.3 | Conduct tests according to environmental and sustainability requirements. |
| 5 | Finalise commissioning process. | 5.1 | Confirm system functionality and compliance with design specifications. |
| | | 5.2 | Confirm componentry is set to operational function and pipework is charged with water according to specifications. |
| | | 5.3 | Clean tools and equipment, check for damage and malfunction and store according to manufacturer recommendations and workplace procedures. |
| | | 5.4 | Access information to complete documentation according to workplace requirements and submit within specified timeframes. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPFS4027A Commission fire sprinkler systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPFS4027 Commission fire sprinkler systems

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPFS4027A Commission fire sprinkler systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To determine competency in this unit, a person must demonstrate they can commission one wet system connected to fixed pumpsets, one wet system connected to town main supply and one pre-action fire sprinkler system, and in doing so:

- correctly interpret plans and specifications to complete work to the specified standard within accepted timeframes
- comply with appropriate legislation, organisational processes and regulatory requirements.

In doing this, the person must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- design and installation performance requirements of relevant installation standards including:
 - National Fire Protection Association (NFPA)
 - Factory Mutual performance-based codes of practice
 - AS 2118.1 Automatic fire sprinkler systems - General systems
- industry and regulatory requirements for commissioning fire sprinkler systems including:
 - codes and standards
 - environmental and sustainability
 - licensing
 - quality assurance
 - work health and safety (WHS)

- job safety analyses (JSA), safety data sheets (SDS) and safe work method statements (SWMS)
- performance measures for fire sprinkler systems as referenced in design drawings and specifications
- properties of water, including pressure, flow rates and atmospheric pressure
- SI system of measurements
- workplace and equipment safety requirements, including personal protective equipment (PPE) requirements relevant to the job
- fire sprinkler systems including:
 - deluge
 - dry pipe
 - pre-action
 - storage sprinklers
 - wall wetting
 - water mist
 - wet pipe
- approving authorities including:
 - client representative
 - council representative
 - fire brigade official
 - fire protection consultant engineer
 - insurance company representative
 - system designer
- documentation including:
 - as-installed drawings
 - design calculations
 - logbooks
 - operator manuals
- tools and equipment including:
 - digital tachometers
 - flow testing equipment
 - hand tools
 - laser levels
 - measuring devices
 - PPE
 - pressure gauges
- fire sprinkler system components including:
 - air compressors
 - alarm valves
 - ball valves

- brackets
- discharge nozzles
- flow switches
- pipework
- pressure gauges
- pressure reducing valves
- pressure relief valves
- pressure switches
- pumpsets
- solenoids
- sprinkler heads
- water supply valves
- functional tests to check effective operation of:
 - brigade booster connections
 - control and actuator mechanisms including:
 - pressure switches
 - flow switches
 - control valves, including:
 - pressure reducing
 - pressure relief
 - tank inflow
 - interfaces to other systems, including:
 - booster pumps
 - building services
 - control indicating equipment (CIE)
 - control of booster pumpsets
 - fire detection
 - heating, ventilation and air conditioning (HVAC)
 - occupant warning systems
 - valve monitoring controls
 - remote water proving points
 - water supply components, such as tank infill and suction lines.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website -

CPCPFS5010 Design fire-compliant hydraulic services

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPFS5010A Design fire-compliant hydraulic services. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to design fire protection systems for hydraulic services in wide span and high-rise buildings. The fire protection systems ensure that hydraulic services maintain integrity, insulation and structural adequacy in case of fire.

It involves interpretation of plans and specifications and the design, detailing and documentation of fire-compliant hydraulic services for applications including residential, commercial and industrial and may be for new projects or an existing structure being renovated, extended, restored or maintained.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Evaluate design

1.1 Evaluate fire and non-fire-rated compartments of buildings and specify the application of evaluation to

- parameters.
- hydraulic services.
- 1.2 Determine design requirements from plans, specifications and client brief.
 - 1.3 Conduct cost-benefit analysis, comparing a range of pipe materials, system designs and penetration protection systems.
 - 1.4 Interpret and apply statutory, regulatory, Australian and New Zealand standards and relevant building code requirements for the design of fire-compliant hydraulic services.
 - 1.5 Interpret and apply manufacturer requirements and trade and technical manuals.
 - 1.6 Conduct additional research, including a desktop study, and establish performance requirements.
- 2 Plan and detail system components.
- 2.1 Plan layout of pipework systems and type and location of fire check materials.
 - 2.2 Specific approved fire-rated materials, penetration techniques, insulation and filler materials to appropriate fire-resistance level.
 - 2.3 Design pipe fixings for a range of applications.
 - 2.4 Design pipework for sprinklered and non-sprinklered areas for a range of applications.
 - 2.5 Specify installation requirements.
 - 2.6 Conduct compliance inspection in accordance with workplace procedures.
- 3 Design and size systems.
- 3.1 Design fire-compliant hydraulic services for a range of wide span and high-rise building applications.
 - 3.2 Design a range of fire-compliant duct systems using fire-rated building materials.
 - 3.3 Design hydraulic services using non fire-rated materials to comply with building fire ratings.

- 3.4 Design and size fire-compliant hydraulic distribution systems using computer software packages.
 - 3.5 Apply sustainability principles and concepts when preparing for and undertaking work process.
- 4 Prepare documentation.
- 4.1 Prepare and detail plans for a range of fire-compliant hydraulic services.
 - 4.2 Prepare specifications for fire-compliant hydraulic services.
 - 4.3 Prepare compliance report in accordance with workplace procedures.
 - 4.4 Produce operation and maintenance manual in accordance with workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPFS5010A Design fire-compliant hydraulic services.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPFS5010 Design fire-compliant hydraulic services

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPFS5010A Design fire-compliant hydraulic services. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- evaluating and documenting design parameters, including client, regulatory, manufacturer, NCC and Australian and New Zealand standard requirements for a range of fire-compliant hydraulic services
- planning and detailing system components, including:
 - applying sustainability principles and concepts
 - conducting a compliance inspection
 - designing fire-compliant hydraulic systems
 - designing fire-compliant systems for fire-rated materials
 - designing fire-compliant systems for non-fire-rated materials
 - ducts
 - fire check collars
 - insulation and filler materials
 - penetrations
 - preparing a compliance report
 - preparing a specification for fire-compliant hydraulic services
 - preparing an operation and maintenance manual.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- sustainability principles and concepts covering the current and future social, economic and environmental use of resources:
 - selecting appropriate material to ensure minimal environmental impact
 - efficient use of material
 - efficient energy usage

- efficient use and recycling of material
- disposing of waste material to ensure minimal environmental impact
- efficient water usage, harvesting and/or disposal
- lifecycle cost-benefit analysis
- consideration of the Green Building Council of Australia rating scheme.
- design requirements:
 - architectural specifications
 - builder specifications
 - design of fire-compliant hydraulic services should ensure that hydraulic services maintain the integrity, insulation and structural adequacy of a building in case of fire
 - owner requirements
 - specialist design applications
- statutory, regulatory, Australian and New Zealand standards and relevant building code requirements:
 - AS/NZS3500 National plumbing and drainage
 - manual of authorisation procedures for plumbing and drainage products (MP52)
 - material and authorisation standards specified by:
 - statutory plumbing authority
 - local authority
 - National Construction Code (NCC)
 - relevant Acts, regulations and local and state government policies
 - relevant fire standards
- manufacturer requirements:
 - material specifications
 - technical and trade manuals
- layout of pipework systems:
 - car park systems
 - concealed pipework
 - duct systems
 - exposed pipework
 - fire-rated pipework
 - non fire-rated pipework
 - sprinklered and non-sprinklered areas
 - should have principles of economy, serviceability, durability and fit for use applied
- fire check materials:
 - fire pillows
 - fire-rated sealants
 - smoke seals
 - range of intumescent collars
- fire-rated materials:

- fittings
- pipework
- valves
- penetration techniques:
 - concrete floors
 - fire and smoke doors
 - fire dampers
 - galvanised decking systems
 - ply formwork systems
 - post and pre-tensioned concrete flooring systems
 - pre-cast flooring systems
- insulation and fill materials:
 - caulking compounds
 - fibreglass
 - fire pillows
 - foams
 - proprietary fill materials
 - rock wool
- fire-resistance level:
 - insulation
 - integrity
 - structural adequacy
- pipe fixings may include fire and load-rated:
 - bedding and thrust blocks
 - corrosion protection
 - cover
 - masonry fixing
 - material requirements
 - pipe supports spacings and locations
 - vertical support fixing
- installation requirements may include:
 - corrosion and element protection
 - installation details
 - jointing requirements
 - supports
 - workmanship and quality control
- compliance inspection:
 - approved materials appropriate to fire-rated compartments and required fire-resistance level are used
 - clipping and insulation comply with regulatory requirements

- fire compartments are not compromised by hydraulic services
- installation is appropriate for the fire-resistance level
- fire-compliant duct systems:
 - brick
 - concrete
 - masonry
 - plasterboard
- fire-rated building materials:
 - brick
 - concrete
 - masonry
 - plasterboard
 - other building materials as applicable.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPFS5011 Design fire sprinkler systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPFS5011A Design fire sprinkler systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design and size fire sprinkler systems and prepare operational and compliance documentation.

The role may involve interaction with architects, builders, suppliers and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

This unit's requirements are typically carried out by experienced hydraulic design consultants or fire systems designers on a new or existing domestic or residential structure.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|-------------------------------|---|
| 1 Evaluate design parameters. | 1.1 Establish scope of work for design of fire sprinkler systems for wide span and high-rise building projects. |
| | 1.2 Determine design requirements from plans, specifications and client brief. |
| | 1.3 Interpret and apply fire department, statutory, regulatory, Australian and New Zealand standards and relevant |

- building code requirements.
- 1.4 Interpret trade and technical manuals and manufacturer requirements and apply to design.
 - 1.5 Apply sustainability principles and concepts as part of the design process.
 - 1.6 Establish flow and pressure requirements.
 - 1.7 Conduct flow and pressure tests and establish council main flows and pressures.
 - 1.8 Conduct research including a desktop study and establish performance requirements.
 - 1.9 Conduct a cost-benefit analysis to compare a range of pipe materials and system designs.
- 2 Plan and detail system components.
- 2.1 Plan layout of pipework systems including type and location of fittings and valves.
 - 2.2 Detail type, location and requirements for backflow prevention devices and alarm and valve assemblies.
 - 2.3 Calculate pipe sizes, velocities, flows and pressures for a range of applications.
 - 2.4 Specify approved materials, jointing methods and sprinkler heads for fire sprinkler systems.
 - 2.5 Plan and detail smoke alarm systems, booster assemblies, booster relay and jacking pumps.
 - 2.6 Plan pipe fixings for a range of applications.
 - 2.7 Plan and size water storage systems and pump, pump controls and pump room requirements.
 - 2.8 Plan and size test points and associated drainage systems.
 - 2.9 Specify installation requirements.
- 3 Design and size systems.
- 3.1 Design fire sprinkler systems for a range of wide span and high-rise building applications.

- 3.2 Design combined water supply, fire hydrant and hose reel and sprinkler systems for a range of wide span and high-rise building applications.
 - 3.3 Design sprinkler systems for water supplies Grades 1, 2 and 3.
 - 3.4 Design a range of sprinkler system configurations.
 - 3.5 Design and size fire sprinkler systems using computer software packages.
- 4 Prepare documentation.
- 4.1 Prepare and detail plans for a range of fire sprinkler systems.
 - 4.2 Prepare specification for a fire sprinkler system.
 - 4.3 Prepare testing and commissioning schedule.
 - 4.4 Produce operation and maintenance manual.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPFS5011A Design fire sprinkler systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPFS5011 Design fire sprinkler systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPFS5011A Design fire sprinkler systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- sizing and designing two different categories of fire sprinkler systems for high-rise buildings, including:
 - plan and detail all system component
 - meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- requirements of state regulatory authorities, Australian standards and manufacturer specifications:
 - AS/NZS 2118.1 Automatic fire sprinkler systems - General systems
 - AS/NZS 3500 Plumbing and drainage set
 - AS 2200 Design charts for water supply and sewerage
 - AS 2419 Fire hydrant installations - system design, installation and commissioning
 - material and authorisation standards specified by:
 - National Construction Code (NCC)
 - statutory authorities
 - environmental requirements
 - hazards associated with devices and systems used in the hydraulic sector
 - installation methods used in hydraulic systems
 - other standards, codes or standard operating procedures
- terminology and definitions used in hydraulic design
- quality assurance requirements:
 - Environment Protection Authority (EPA)
 - internal company quality assurance policy and risk management strategy

- International Standards Organisation (ISO)
- nature of materials used and effects of performance under various conditions
- site safety plan
- workplace operations and procedures
- variety of applications of technology principles in design of fire sprinkler, hydrant and hose reel systems for all classes of building
- workplace safety requirements, including relevant statutory regulations, codes and standards
- scope of work:
 - interpretation of plans and specifications
 - sizing and documenting layout of fire sprinkler systems for applications, including residential, commercial and industrial
- design requirements:
 - architectural specifications
 - builder specifications
 - owner requirements
 - relevant statutory authorities
 - specialist design applications
- cost-benefit analysis including comparison of range of suitable materials and system choices available to enable cost-effective choices to be made without compromising project integrity
- manufacturer requirements:
 - material specifications and standards
 - pump tables
 - sizing tables
 - sprinkler heads and components
 - technical and trade manuals
- flow and pressure tests such as:
 - results of flow and pressure tests conducted by a contractor
 - on-site measurement of flow (l/s) and pressure (kPa)
- desktop study to collect and interpret existing data for design purposes from:
 - architectural and building plans
 - council requirements
 - developer requirements
 - regulatory requirements
 - environmental, social and economic considerations
 - other documents and reports as appropriate
- performance requirements including flow, velocity, pressure and discharge requirements, established using Australian and New Zealand standards and local statutory authorities' plans
- layout of pipework systems:

- appropriate water supply
- grid systems
- ring main
- tree system
- should have principles of economy, serviceability, durability and fit for use applied
- types of fittings:
 - mechanical fittings
 - bends
 - elbows
 - tees
 - unions
- types of valves:
 - backflow prevention
 - pressure relief
 - isolating
 - pressure limiting
 - pressure reduction
 - strainers
 - water-saving devices
- backflow prevention devices, which may be testable or non-testable devices and installed as:
 - individual protection
 - zone protection
 - containment protection
- types of alarm and valve assemblies:
 - wet
 - dry
 - deluge
 - pre-action
 - mechanical and electrical alarms
 - ancillaries and trims
- calculations used to identify:
 - hazard classification
 - hydraulic
 - pressure and flow
 - density of discharge
 - velocity
 - volume
 - friction
 - area of operation (including shapes)

- materials used:
 - chlorinated polyvinyl chloride (CPVC)
 - copper
 - steel
 - fittings and fixtures
 - other approved materials
- jointing methods:
 - silver braze
 - welded
 - solvent welded
 - flanged
 - mechanical joints
 - threaded
 - other approved methods of jointing
- booster assemblies:
 - cabinet and block plans
 - non-return and isolating valves
 - fire appliance (hard stand) access
 - pressure gauges
 - appropriate booster assembly
- fire and load rated pipe fixings:
 - masonry fixing
 - vertical support fixing
 - pipe supports spacings and locations
 - bedding and thrust blocks
 - corrosion protection
 - cover
 - material requirements
- water storage systems considerations:
 - automatic controls
 - inlet valve design and sizing
 - outlet valve design and sizing
 - overflow requirements
 - safe tray requirements
 - tank sizes
 - vortex plates
 - tank siting
- pump, pump controls and pump room requirements:
 - manual and/or automatic controls
 - inlet and outlet design requirements

- installation and mounting requirements
- pump selection
- space requirements
- electrical supply requirements
- valve requirements
- ventilation requirements
- heating
- exhaust extraction
- test points and associated drainage systems:
 - design and sizing of collection points and tundishes to prevent spillage, overflow and damage to building finishes
 - design and sizing of drainage systems to cater for maximum flow conditions
 - specification of materials for systems, including copper, polyvinyl chloride (PVC) and galvanised piping
 - other approved materials
- installation requirements:
 - corrosion and elements protection
 - installation details
 - jointing requirements
 - supports
 - workmanship and quality control
- sprinkler system configurations:
 - deluge
 - drencher
 - dry
 - pre-action
 - special hazard
 - wet
- methods to apply sustainability principles and concepts:
 - selecting appropriate material to ensure minimal environmental impact
 - efficient use of material
 - efficient energy usage
 - efficient use and recycling of material
 - disposing of waste material to ensure minimal environmental impact
 - efficient water usage, harvesting and/or disposal
 - life cycle cost-benefit analysis
 - consideration of the Green Building Council of Australia rating scheme
- plan inclusions:
 - axonometrics
 - cross-sections

- details
- elevations
- isometrics
- sections
- submission for client approval
- pipework fabrication sheets and stores lists
- service coordination
- schematics produced using:
 - computer generation
 - drawing equipment
- specification inclusions:
 - support and specialised components
 - jointing
 - manufacturer
 - materials
 - valve selection
 - quality control/workmanship
- types of testing:
 - air pressure test
 - hydrostatic test
 - flush system
 - quality assurance (QA) audit
- commissioning schedule inclusions:
 - direct inspection
 - flow test
 - system operation
- operation and maintenance manual inclusions:
 - hydraulic calculations and water supply details
 - as installed drawings
 - relevant standards of maintenance of all maintainable equipment
 - manufacturer data
 - system description and operating instructions
 - certificate reference.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPFS5012 Design fire hydrant and hose reel systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
- Changes to Foundation Skills. Typographical errors corrected in Elements and Performance Criteria 2.1, 2.2, and 2.7.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPFS5012A Design fire hydrant and hose reel systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design fire hydrant, hose reel and storage systems to Australian and New Zealand standards, the National Construction Code (NCC) and other relevant legislative requirements in order to meet fire protection standards for a range of wide span and high-rise building applications.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

The design of fire hydrants, hose reels and storage systems must comply with Australian and New Zealand standards, the National Construction Code (NCC) and other relevant legislative requirements in order to meet fire protection standards.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--------------------------------------|---|
| 1 Evaluate design parameters. | 1.1 Establish scope of work for fire hydrants, hose reels and distribution systems for wide span and high-rise building projects. |
| | 1.2 Determine design requirements from plans, specifications and client brief. |
| | 1.3 Conduct cost-benefit analysis comparing a range of pipe materials and system designs. |
| | 1.4 Interpret manufacturer requirements and trade, technical and sizing manuals for the design parameters. |
| | 1.5 Conduct research to outline design parameters. |
| | 1.6 Conduct flow and pressure tests. |
| | 1.7 Establish performance requirements. |
| 2 Plan and detail system components. | 2.1 Plan layout of pipework and type and location of fittings and valves. |
| | 2.2 Detail type, location and requirements for backflow prevention devices. |
| | 2.3 Calculate pipe sizes, velocities, flows and pressures for a range of applications. |
| | 2.4 Specify approved materials, jointing methods and installation requirements. |
| | 2.5 Detail hydrant booster, standpipe and hose reel assemblies. |
| | 2.6 Design thrust blocks and pipe fixings for a range of applications. |
| | 2.7 Size and detail pump, pump controls and pump room requirements. |
| | 2.8 Design and detailed water storage systems. |

- | | | | |
|---|--------------------------|-----|---|
| 3 | Design and size systems. | 3.1 | Design fire hydrant and hose reel systems for a range of wide span and high-rise building applications. |
| | | 3.2 | Design combined water supply, fire hydrant, hose reel and sprinkler systems for a range of wide span and high-rise building applications. |
| | | 3.3 | Design a range of delivery systems. |
| | | 3.4 | Design and size Fire hydrant and hose reel systems using computer software packages. |
| | | 3.5 | Apply sustainability principles and concepts when preparing for and undertaking work process. |
| 4 | Prepare documentation. | 4.1 | Prepare plans for a range of fire hydrant and hose reel systems. |
| | | 4.2 | Prepare block plan booster cabinet according to Australian and New Zealand standards. |
| | | 4.3 | Prepare specification for a fire hydrant and hose reel system. |
| | | 4.4 | Prepare testing and commissioning schedule. |
| | | 4.5 | Produce operation and maintenance manual. |

Foundation Skills

A person demonstrating competency in this unit must have the following language, literacy, numeracy and employment skills:

- problem-solving skills to:
 - analyse requirements
 - carry out tests
 - consider options
 - design an appropriate system
 - identify typical faults and action required to rectify problems
- technology skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Unit Mapping Information

Supersedes and is equivalent to CPCPFS5012A Design fire hydrant and hose reel systems.

Assessment Requirements for CPCPFS5012 Design fire hydrant and hose reel systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
- Changes to Foundation Skills. Typographical errors corrected in Elements and Performance Criteria 2.1, 2.2, and 2.7.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPFS5012A Design fire hydrant and hose reel systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- establishing and evaluating design parameters for a range of fire hydrant and hose reel systems
- planning system components for a range of fire hydrant and hose reel systems:
 - application of sustainability principles and concepts
 - booster assemblies
 - hose reels
 - hydrants
 - storage tanks
 - thrust blocks
- complying with WHS regulations applicable to workplace operations
- applying organisational quality procedures and processes within context of restoring plastered surfaces to conservation requirements
- designing and sizing a range of fire hydrant and hose reel systems
- developing a checklist with all information and formulas required to carry out flow and pressure tests
- preparing plans for a range of fire hydrant and hose reel systems
- preparing a specification for a fire hydrant and hose reel system
- preparing a testing and commissioning schedule
- producing an operation and maintenance manual
- communicating with others to ensure safe and effective work site operations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- Australian and New Zealand standards:
 - AS/NZS3500 National plumbing and drainage: Part 1
 - AS2419 Fire hydrant installations system design, installation and commission
 - AS2441 Installation of fire hose reels
 - AS/NZS2118 Automatic fire sprinkler systems general requirements
 - NCC
- fire department, statutory and regulatory requirements and Australian and New Zealand standards for the design of fire hydrants, hose reels and distribution systems
- flow and pressure:
 - results of flow and pressure tests
 - on-site measurement of flow (l/s), velocity (m/s) and pressure (kPa)
- performance requirements:
 - flow, velocity, pressure and discharge requirements, established using Australian and New Zealand standards and local statutory authority's plans
- layout of pipework:
 - dual feed
 - ring main
 - single pipe
- fittings and valves:
 - fittings:
 - mechanical fittings
 - bends
 - elbows
 - tees
 - unions
 - valves:
 - backflow prevention
 - pressure relief
 - isolating
 - pressure limiting
 - pressure reduction
 - materials:
 - copper
 - galvanised steel
 - fittings and fixtures
 - other approved materials
- jointing methods:

- flanged
- mechanical joints
- silver braze
- threaded
- welded
- other approved methods of jointing
- installation requirements:
 - corrosion and elements protection
 - installation details
 - jointing requirements
 - supports
 - workmanship and quality control
- booster and standpipe assemblies:
 - cabinet and block plans
 - non-return and isolating valves
 - fire appliance (hard stand) access
 - pressure gauges
 - suction and delivery outlets
 - testing points
 - signage
- hose reel assemblies:
 - Australian standards' requirements for clearances and requirements
 - non-return and backflow prevention valves
 - pipe sizes
- design elements of thrust blocks:
 - designed and installed to AS/NZS3500
 - design details for tees, elbows and valves
 - keying and anchorage points
 - sizes
 - soil characteristics
 - velocity and flow forces to be resisted
- pipe fixings:
 - bedding and thrust blocks
 - corrosion protection
 - covers
 - masonry fixing
 - material requirements
 - pipe supports spacings and locations
 - vertical support fixing
- pump, pump controls and pump room requirements:

- electrical supply requirements
- heating
- inlet and outlet design requirements
- installation and mounting requirements
- manual and automatic controls
- pump selection
- space requirements
- valve requirements
- ventilation requirements
- water storage systems:
 - inlet valve design and sizing
 - outlet valve design and sizing
 - overflow requirements
 - safe tray requirements
 - tank sizes
 - vortex plates
- delivery systems:
 - gravity feed
 - mains pressure
 - pump supply
- sustainability principles and concepts:
 - cover the current and future social, economic and environmental use of resources:
 - selecting appropriate material to ensure minimal environmental impact
 - efficient use of material
 - efficient energy usage
 - efficient use and recycling of material
 - disposing of waste material to ensure minimal environmental impact
 - efficient water usage, harvesting and/or disposal
 - life cycle cost-benefit analysis
 - consideration of the Green Building Council of Australia rating scheme.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website -

CPCPGS3046 Install LPG systems in caravans, mobile homes and mobile workplaces

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPGS3046A Install LPG systems in caravans, mobile homes and mobile workplaces. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install and commission liquefied petroleum gas (LPG) systems in caravans, mobile homes and mobile workplaces.

It includes identifying LPG system requirements, installing of LPG system including flue and ventilation, and testing and commissioning LPG systems.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|-------------------------------------|---|
| 1 Identify LPG system requirements. | 1.1 Access, read and determine LPG system installation requirements from relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements. |
| | 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental |

requirements.

- | | | | |
|---|--|-----|--|
| 2 | Prepare for work. | 2.1 | Create a materials list and collect materials. |
| | | 2.2 | Select appropriate tools and equipment including personal protective equipment (PPE). |
| | | 2.3 | Calculate pipe sizing and ventilation requirements. |
| 3 | Install, test and commission LPG system, including flue and ventilation. | 3.1 | Perform installation of cylinders, regulators, associated pipework, appliances and ventilation, complying relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements. |
| | | 3.2 | Select appropriate equipment to conduct testing. |
| | | 3.3 | Perform test and commission system according to relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements. |
| | | 3.4 | Affix compliance plates and signage according relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements. |
| | | 3.5 | Complete documentation according to regulatory requirements and/or workplace procedures. |
| 4 | Clean up. | 4.1 | Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures. |
| | | 4.2 | Clean tools and equipment, check for serviceability and report any damage, and store and secure. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPGS3046A Install LPG systems in caravans, mobile homes and mobile workplaces.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCPGS3046 Install LPG systems in caravans, mobile homes and mobile workplaces

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPGS3046A Install LPG systems in caravans, mobile homes and mobile workplaces. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing, testing and commissioning a liquefied petroleum gas (LPG) system, including two type A gas appliances, in either a caravan, mobile home or mobile workplace.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- pipe sizing and ventilation requirements
- installation requirements for ventilation, appliances, LPG cylinder, regulators, piping materials and jointing techniques
- how to access relevant information, including job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
- tools and equipment used for the installation and commissioning of LPG systems in caravans, mobile homes and mobile workplaces
- work health and safety (WHS) requirements for the installation and commissioning of LPG systems in caravans, mobile homes and mobile workplaces
- properties of gas, gas safety, combustion principles, pressure and flow rates.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPGS3047 Install LPG systems in marine craft

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPGS3047A Install LPG systems in marine craft. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install and commission gas detection systems and liquefied petroleum gas (LPG) systems with an operating pressure not exceeding 3.0 kPa in marine craft.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|---|
| 1 Identify LPG installation requirements in a marine craft. | 1.1 Access, read and determine LPG system installation requirements from relevant Job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements. |
| | 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements. |
| 2 Prepare for work. | 2.1 Create a materials list and collect materials. |

- | | | |
|---|---|--|
| | 2.2 | Select appropriate tools and equipment, including personal protective equipment (PPE). |
| | 2.3 | Calculate pipe size and ventilation requirements. |
| 3 | Install LPG system, including flue and ventilation. | |
| | 3.1 | Perform installation of cylinders, regulators, associated pipework, appliances and fixings. |
| | 3.2 | Perform installation of a gas detection system according to relevant Job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements. |
| 4 | Test and commission LPG and detection systems. | |
| | 4.1 | Select appropriate equipment to conduct testing. |
| | 4.2 | Perform test and commissioning of system according to relevant Job plans and specifications codes, Australian standards, manufacturer's specifications and jurisdictional requirements. |
| | 4.3 | Affix compliance plates and signage according to relevant codes, Australian standards, manufacturer's specifications and jurisdictional requirements. |
| | 4.4 | Complete documentation according to regulatory requirements and/or workplace procedures. |
| 5 | Clean up. | |
| | 5.1 | Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures. |
| | 5.2 | Clean tools and equipment, check for serviceability and report any damage, and store and secure. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPGS3047A Install LPG systems in marine craft.

Links

Assessment Requirements for CPCPGS3047 Install LPG systems in marine craft

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPGS3047A Install LPG systems in marine craft. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing, testing and commissioning liquefied petroleum gas (LPG) and gas-detection systems including installing pipework, connecting a type A gas appliance in a marine craft, including determining the gas load, storage capacity and ventilation requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- pipe size and ventilation requirements
- installation requirements for ventilation, appliances, LPG cylinder, regulators and piping
- how to access relevant information, including relevant Job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements
- properties of gas, gas safety, combustion principles, gas pressures and detection systems
- tools, materials and equipment used for the installation and commissioning of gas detection systems and LPG systems in marine craft
- work health and safety (WHS) requirements for the installation and commissioning of gas detection systems and LPG systems in marine craft.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPGS3048 Install gas pressure control equipment

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0
- Supersedes and is equivalent to CPCPGS3048A Install gas pressure control equipment. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install and commission gas control and regulating equipment for consumer piping carrying natural gas (NG) or liquefied petroleum gas (LPG) up to 200 kPa.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Identify installation requirements.	1.1 Access, read and determine gas pressure control equipment installation requirements from job specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements. 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.

- | | | | |
|---|-----------------------------------|-----|---|
| 2 | Prepare for work. | 2.1 | Identify potential hazards and determine and implement control measures. |
| | | 2.2 | Create a materials list and collect materials. |
| | | 2.3 | Select appropriate tools and equipment including personal protective equipment (PPE). |
| 3 | Install and commission equipment. | 3.1 | Perform installation of pipework, fittings and gas pressure control equipment. |
| | | 3.2 | Test, purge and commission system. |
| | | 3.3 | Adjust gas pressure. |
| | | 3.4 | Complete documentation according to regulatory requirements. |
| 4 | Clean up. | 4.1 | Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures. |
| | | 4.2 | Clean tools and equipment, check for serviceability and report any damage, and store and secure. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPGS3048A Install gas pressure control equipment.

Links

Assessment Requirements for CPCPGS3048 Install gas pressure control equipment

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0
- Supersedes and is equivalent to CPCPGS3048A Install gas pressure control equipment. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing one single and one two-stage system connecting to an appliance that includes an internal relief and over-pressure shut off valve.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- how to access relevant information, including codes and standards
- tools, materials and equipment used for the installation and commissioning of gas control and regulating equipment
- work health and safety (WHS) requirements for the installation and commissioning of gas control and regulating equipment
- properties of gas, gas safety, combustion principles, pressure and flow rates.
- processes, procedures and techniques for installing, testing and commissioning gas pressure control equipment
- installation and ventilation requirements of over-pressure regulators, including internal relief and over-pressure shut off (OPSO) valves.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPGS3049 Install gas appliance flues

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Performance Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPGS3049A Install Type A gas appliance flues. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install and test flues for gas appliances in accordance with relevant regulatory authority and jurisdictional requirements.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

CPCPCM3021 Flash penetrations through roofs and walls

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|-------------------------------------|-----|---|
| 1 | Identify installation requirements. | 1.1 | Access, read and determine flue installation requirements from job specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional |
|---|-------------------------------------|-----|---|

- requirements.
- 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
- 2 Prepare for work.
 - 2.1 Create a materials list and collect materials.
 - 2.2 Select appropriate tools and equipment, including personal protective equipment (PPE).
- 3 Install and test flue.
 - 3.1 Set out and install flue, supports, components and weatherproofing according to job specifications and complying with relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements.
 - 3.2 Test flue for operation and adjust as required.
 - 3.3 Complete documentation according to regulatory requirements and workplace procedures.
- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPGS3049A Install Type A gas appliance flues.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPGS3049 Install gas appliance flues

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Performance Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPGS3049A Install Type A gas appliance flues. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by

- installing, testing and flashing as required:
 - a fan-assisted flue
 - a natural draft flue
 - a mild steel flue from a boiler flue spigot to terminate above the roofline.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- properties of gas, gas safety, combustion principles, pressure and flow rates
- types of approved flues for appliances, including:
 - balanced
 - individual appliance
 - multiple flues
 - natural draft
 - twin wall flues
- how to access relevant information, including codes and standards
- tools, materials and equipment used for the installation and testing of gas appliance flues
- work health and safety (WHS) requirements for the installation and testing of gas appliance flues.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPGS3051 Purge consumer piping

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPGS3051A Purge consumer piping.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to purge consumer gas piping systems greater than 0.03 cubic metres (30 L in volume).

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--------------------------------|--|
| 1 Identify purge requirements. | 1.1 Access, read and determine requirements for consumer piping requirements from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements. |
| | 1.2 Identify and apply organisational work health and safety (WHS) and environmental requirements. |
| 2 Prepare for work. | 2.1 Identify potential hazards and determine and implement control measures including electrical safety. |

- 2.2 Calculate and record volume of the piping system.
 - 2.3 Select medium and method for purging a consumer piping system.
 - 2.4 Select appropriate tools and equipment including personal protective equipment (PPE).
- 3 Carry out and test purge operation.
 - 3.1 Perform purge in accordance with relevant codes, Australian standards and jurisdictional requirements.
 - 3.2 Complete documentation according to regulatory requirements and/or workplace procedure.
- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPGS3051A Purge consumer piping.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPGS3051 Purge consumer piping

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPGS3051A Purge consumer piping.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- undertaking purge operations for a consumer gas piping system of greater than 0.03 cubic metres (30 L in volume) which includes a subsidiary meter including:
 - one fuel gas purge
 - one inert gas purge.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- characteristics of gases used in the purging process, including:
 - inert gas
 - fuel gas
- electrical safety and required precautions
- procedures for purging gas piping systems, including isolation processes and procedures
- properties of gas, gas safety, combustion and ignition principles, purge pressure and flow rates
- tools, materials and equipment used to purge consumer piping:
 - purge stack
 - gas detector
 - purge bucket
- safe work practices associated with purging consumer piping systems
- how to access relevant information, including Job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements
- work health and safety (WHS) requirements for purging consumer gas piping systems.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPGS3052 Maintain Type A gas appliances

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Elements and Performance Criteria 3.4.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPGS3052A Maintain Type A gas appliances. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to perform maintenance on certified Type A appliances. It includes appliances operating on natural gas (NG) or liquefied petroleum gas (LPG).

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

CPCPGS3054 Calculate and install natural ventilation for Type A gas appliances

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|----------------------------|--|
| 1 Identify LPG maintenance | 1.1 Access, read and determine Type A gas appliance maintenance requirements from job specifications, relevant Australian Standards, codes, manufacturer's |
|----------------------------|--|

- requirements. specifications and jurisdictional requirements.
- 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
- 2 Prepare for work.
 - 2.1 Create a materials list and collect materials.
 - 2.2 Select appropriate tools and equipment, including personal protective equipment (PPE).
- 3 Conduct maintenance.
 - 3.1 Isolate appliance from services and carry out maintenance tasks.
 - 3.2 Test service connections to appliance.
 - 3.3 Commission appliance back into service.
 - 3.4 Identify and report faults or malfunctions unable to be rectified through basic maintenance.
- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPGS3052A Maintain Type A gas appliances.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPGS3052 Maintain Type A gas appliances

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
- Changes to Elements and Performance Criteria 3.4.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPGS3052A Maintain Type A gas appliances. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- maintaining two different certified Type A gas appliances, including:
 - cleaning and routine basic adjustment
 - checking gas supply pressures
 - inspecting flue for operation and condition
- conducting at least one carbon monoxide test
- correctly and safely applying the maintenance process.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- scope of work relating to certified Type A gas appliance maintenance
- processes, procedures and techniques for:
 - maintaining certified Type A appliances, including:
 - checking for adequate gas pressure
 - cleaning and adjusting gas components such as:
 - burners
 - pilots
 - regulators
 - fans
 - temperature and pressure relief (TPR) valves
- properties of gas, gas safety, combustion principles and pressure and flow rates including carbon monoxide testing

- electrical safety and requisite precautions
- how to access relevant information, including codes and standards
- tools, materials and equipment used for the maintenance on Type A appliances
- work health and safety (WHS) requirements for the maintenance on Type A appliances.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPGS3053 Disconnect and reconnect Type A gas appliances

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.
Removed reference to ‘power supply’ in Knowledge Evidence, duplicates ‘electrical supply including direct wired appliances’ already noted in Knowledge Evidence.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPGS3053A Disconnect and reconnect Type A gas appliances. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to disconnect and reconnect Type A gas appliances operating on natural gas (NG) or liquefied petroleum gas (LPG). The work is confined to disconnecting and reconnecting the appliance.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|--|
| 1 Identify disconnect and reconnect requirements. | 1.1 Access, read and determine disconnect and reconnect requirements from relevant Job plans and specifications, codes, Australian standards, manufacturer’s specifications and jurisdictional requirements. |
|---|--|

- 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
- 2 Prepare for the work.
 - 2.1 Select appropriate tools and equipment, including personal protective equipment (PPE).
 - 2.2 Locate isolation point(s).
- 3 Disconnect and reconnect appliance.
 - 3.1 Isolate services.
 - 3.2 Carry out an electrical safety check and apply electrical safety procedures.
 - 3.3 Disconnect and remove appliance.
 - 3.4 Reconnect appliance to existing services.
 - 3.5 Check for leaks and commission appliance.
 - 3.6 Complete documentation according to regulatory requirements and/or workplace procedures.
- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPGS3053A Disconnect and reconnect Type A gas appliances.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCPGS3053 Disconnect and reconnect Type A gas appliances

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.
- Removed reference to 'power supply' in Knowledge Evidence, duplicates 'electrical supply including direct wired appliances' already noted in Knowledge Evidence.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPGS3053A Disconnect and reconnect Type A gas appliances. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- isolating, disconnecting and reconnecting two different Type A gas appliances.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- processes, procedures and techniques for:
 - isolation, disconnection and reconnection of Type A appliances
 - electrical safety requirements
 - electrical supply including direct wired appliances
 - gas supply
 - disconnection and reconnection requirements of water supply, flues, and ductwork
- how to access relevant information, including Job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements tools, materials and equipment used for the disconnection, reconnection and commissioning of Type A gas appliances
- work health and safety (WHS) requirements for the disconnection, reconnection and commissioning of Type A gas appliances
- properties of gas, gas safety, combustion principles, pressure and flow rates
- documentation relevant to Type A gas appliances disconnection and reconnection.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPGS3054 Calculate and install natural ventilation for Type A gas appliances

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPGS3054A Calculate and install natural ventilation for Type A gas appliances. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to calculate and install natural ventilation for certified Type A gas appliances.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|--|
| 1 Identify natural ventilation requirements. | 1.1 Access, read and determine ventilation installation requirements from job specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements. |
| | 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements. |
| | 1.3 Identify potential hazards and determine and implement |

control measures.

- | | | | |
|---|---|-----|---|
| 2 | Prepare for work. | 2.1 | Create a materials list and collect materials. |
| | | 2.2 | Select appropriate tools and equipment including personal protective equipment (PPE). |
| | | 2.3 | Determine gas load and determine path of air supply. |
| | | 2.4 | Calculate free ventilation area and ventilation openings. |
| 3 | Install ventilation and test appliance. | 3.1 | Install ventilation without damage to the building structure, surrounding environment or other services. |
| | | 3.2 | Test ventilation operations according to job specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements. |
| 4 | Clean up. | 4.1 | Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures. |
| | | 4.2 | Clean tools and equipment, check for serviceability and report any damage, and store and secure. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPGS3054A Calculate and install natural ventilation for Type A gas appliances.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPGS3054 Calculate and install natural ventilation for Type A gas appliances

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPGS3054A Calculate and install natural ventilation for Type A gas appliances. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- calculating natural ventilation for a minimum of three different installations including one pre-standard adoption and one post-standard adoption
- calculating natural ventilation for one flue-less installation where jurisdictional requirements allow
- installing one natural ventilation system for a Type A appliance.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- terminology relating to natural ventilation for gas appliances
- processes, procedures and techniques for:
 - calculating and installing natural ventilation to a variety of gas appliances
 - using measurements and formulas to calculate free ventilation and ventilation openings
- organisational policies and procedures on how to access relevant information, including codes and standards
- tools, materials and equipment used to install natural ventilation for Type A gas appliances
- work health and safety (WHS) requirements to install natural ventilation for Type A gas appliances
- properties of gas, gas safety, combustion principles, pressure and flow rates
- consumer safety requirements.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPGS3055 Install gas sub-meters

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPGS3055A Install gas sub-meters.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install gas sub-meters for gas consumer piping systems.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify installation requirements.	1.1	Access, read and determine gas sub-meters installation requirements from job specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements.
	1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
	1.3	Determine gas load requirements, size and select gas meter.

- 1.4 Identify gas sub-meter location requirements.
- 2 Prepare for work.
 - 2.1 Create a materials list and collect materials.
 - 2.2 Select appropriate tools and equipment including personal protective equipment (PPE).
- 3 Install gas sub-meter.
 - 3.1 Install and connect sub-meter.
 - 3.2 Test and purge installation.
- 4 Clean up.
 - 4.1 Clear the work area and dispose of any materials in accordance with state and territory legislation and workplace procedures.
 - 4.2 Clean, check for serviceability and store and secure plant, equipment and tools, reporting any damage to appropriate personnel.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPGS3055A Install gas sub-meters.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPGS3055 Install gas sub-meters

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPGS3055A Install gas sub-meters.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing, connecting and commissioning a gas sub-meter.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- how to access relevant information, including codes and standards
- tools, materials and equipment used to install gas sub-meters
- work health and safety (WHS) requirements
- properties of gas, gas safety, combustion principles, pressure and flow rates.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPGS3056 Size and install consumer gas piping systems

Modification History

- Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.
Included PC 2.3, 'Select appropriate tools and equipment including personal protective equipment (PPE)'.
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Application.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is not equivalent to CPCPGS3056A Install gas piping systems, and CPCPGS3057A Size consumer gas piping systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to size and install consumer gas piping.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------------|---|
| 1 Identify installation requirements. | 1.1 Access, read and determine consumer gas service installation requirements from job specifications, relevant Australian Standards, codes, manufacturer's |
|---------------------------------------|---|

- specifications and jurisdictional requirements.
- 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
- 2 Prepare for work.
 - 2.1 Estimate material quantities.
 - 2.2 Create a materials list and collect materials.
 - 2.3 Select appropriate tools and equipment including personal protective equipment (PPE).
- 3 Size and Install gas piping system.
 - 3.1 Perform sizing of gas piping system.
 - 3.2 Set out and install consumer gas piping system.
 - 3.3 Test gas piping system using appropriate testing equipment.
 - 3.4 Repair any identified leaks and retest.
 - 3.5 Purge gas piping system.
 - 3.6 Complete documentation according to regulatory requirements and workplace procedures.
- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability reporting any damage, store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is not equivalent to CPCPGS3056A Install gas piping systems, and CPCPGS3057A Size consumer gas piping systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPGS3056 Size and install consumer gas piping systems

Modification History

- Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.
Included PC 2.3, 'Select appropriate tools and equipment including personal protective equipment (PPE)'.
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Application.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is not equivalent to CPCPGS3056A Install gas piping systems, and CPCPGS3057A Size consumer gas piping systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- sizing and installing, in accordance with manufacturers specifications, Australian standards and jurisdictional requirements:
 - one natural gas (NG) consumer piping systems supplying three certified Type A appliances using two different piping systems, one of which must be a composite material
 - one single stage liquid petroleum gas (LPG) consumer piping systems supplying three certified Type A appliances using two different piping systems, one of which must be a composite material.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- pipe sizing including:
 - appliance pressure and gas consumption requirements
 - properties of gas
 - length of run
 - allowable pressure drop

- available pressure
- approved materials, their limitations and application for installing gas piping systems, including:
 - testing for gas-tightness
 - using current testing equipment
- electrical safety and required precautions
- how to access relevant information, including codes and standards
- tools, materials and equipment used to size and install consumer gas piping
- work health and safety (WHS) requirements to size and install consumer gas piping
- properties of gas, gas safety, combustion principles, pressure and flow rates.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

CPCPGS3059 Install LPG storage of aggregate storage capacity up to 500 litres

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPGS3059A Install LPG storage of aggregate storage capacity up to 500 litres. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to select, install and test liquefied petroleum gas (LPG) storage facilities with a capacity up to 500 litres.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------------|---|
| 1 Identify installation requirements. | 1.1 Access, read and determine LPG storage requirements from relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements. |
| | 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements. |

- 2 Prepare for work.
 - 2.1 Create a materials list and collect materials.
 - 2.2 Select appropriate tools and equipment, including personal protective equipment (PPE).
 - 2.3 Select the location of LPG cylinders from relevant job plans and specifications, codes, relevant Australian standards, manufacturer's specifications and jurisdictional requirements.

- 3 Install LPG storage system.
 - 3.1 Install cylinders, pipework and appliance(s) to the requirements of relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
 - 3.2 Test and purge installation.
 - 3.3 Commission installation.
 - 3.4 Affix compliance plates and signage according to job plans and specifications, codes, relevant Australian standards, manufacturer's specifications and jurisdictional requirements.

- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPGS3059A Install LPG storage of aggregate storage capacity up to 500 litres.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPGS3059 Install LPG storage of aggregate storage capacity up to 500 litres

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPGS3059A Install LPG storage of aggregate storage capacity up to 500 litres. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing a liquid petroleum gas (LPG) cylinder installation up to 500 litres capacity including:
 - a minimum of two 108 litre (45 kg) capacity LPG cylinders
 - a Type A gas appliance.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- terminology relating to installing LPG storage installations
- characteristics, application and limitations of approved materials and components
- sizing cylinder requirements, including total megajoule (MJ) load and cylinder vaporisation rates
- installation requirements for ventilation, venting, LPG cylinders, regulators and piping
- commissioning LPG regulators, including lockup and flowing pressures
- how to access relevant information, including relevant Job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements
- tools, materials and equipment used to select, install and test LPG storage facilities
- work health and safety (WHS) requirements for selecting, installing and testing LPG storage facilities
- properties of gas, gas safety, combustion principles, pressure and flow rates.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPGS3060 Install LPG storage of aggregate storage capacity exceeding 500 litres and less than 8 kl

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Change to Pre-requisite unit.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPGS3060A Install LPG storage of aggregate storage capacity exceeding 500 litres and less than 8 KL.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to select, locate and install liquefied petroleum gas (LPG) storage of 500 to 8000 litres aggregate capacity.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|------------------|---|
| 1 Plan the work. | 1.1 Access, read and determine LPG system installation requirements from relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements. |
| | 1.2 Identify and apply workplace policies and procedure and |

- work health and safety (WHS) and environmental requirements.
- 1.3 Determine gas load and design requirements.
 - 1.4 Check storage capacity for compliance with relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
 - 1.5 Determine appropriate regulators to meet capacity and load of the system.
 - 1.6 Select the location of LPG cylinders or tank according to relevant job plans and specifications, codes, relevant Australian standards, manufacturer's specifications and jurisdictional requirements.
- 2 Prepare for work.
- 2.1 Create a materials list and collect materials.
 - 2.2 Select appropriate tools and equipment, including personal protective equipment (PPE).
 - 2.3 Select appropriate testing equipment.
 - 2.4 Prepare work area and materials to support installation.
- 3 Install and test LPG storage system.
- 3.1 Install LPG storage container/s, piping, fittings and components in compliance with relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
 - 3.2 Install regulators and associated pipework, in compliance with relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
 - 3.3 Test and purge installation.
 - 3.4 Commission installation, including checking regulator working and lockup pressure.
 - 3.5 Complete documentation according to installation requirements and/or workplace procedures.

- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPGS3060A Install LPG storage of aggregate storage capacity exceeding 500 litres and less than 8 KL.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPGS3060 Install LPG storage of aggregate storage capacity exceeding 500 litres and less than 8 kl

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Change to Pre-requisite unit.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPGS3060A Install LPG storage of aggregate storage capacity exceeding 500 litres and less than 8 KL.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing a liquefied petroleum gas (LPG) storage facility of capacity greater than 500 litres (but less than 8 kl) to a consumer point of connection, including:
 - a tank or a manifold installation connecting a minimum of three cylinders with a storage capacity greater than 500 litres (but less than 8 kl)
 - installation of a first and second stage regulator
 - testing first and second stage piping installation.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- LPG storage requirements
- characteristics, application and limitations of approved materials and components including:
 - vaporisation rates
 - manifold
 - tank/cylinder support(s) and bases
 - approved piping materials
 - approved fitting and fixing materials
 - gas storage containers (500 l – 8 kl)
 - gas regulators

- non-metallic hose assemblies
- processes, procedures and techniques for:
 - installing and connecting LPG supply
 - determining and calculating material quantities
- how to access relevant information, including job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements
- tools, materials and equipment used to install LPG storage
- work health and safety requirements for installing LPG storage
- properties of gas, gas safety, combustion principles, pressure and flow rates.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPGS3061 Install and commission Type A gas appliances

Modification History

- Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.
Amended Element 1 as follows: Identify installation requirements for Type A gas appliances.
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Elements and Performance Criteria 1 and 4.1.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPGS3061A Install and commission Type A gas appliances. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install and commission certified Type A gas appliances.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

CPCPGS3054 Calculate and install natural ventilation for Type A gas appliances.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

essential outcomes.	demonstrate achievement of the element.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPGS3061 Install and commission Type A gas appliances

Modification History

- Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.
Amended Element 1 as follows: Identify installation requirements for Type A gas appliances.
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Elements and Performance Criteria 1 and 4.1.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPGS3061A Install and commission Type A gas appliances. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing and commissioning three certified Type A gas appliances:
 - one must be a fan assisted flued appliance
 - one must be installed in a domestic setting
 - one must be installed in a commercial setting
- calculating natural ventilation for at least one Type A gas appliance
- conducting a carbon monoxide test.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- types of approved flues for Type A appliances, including:
 - balanced
 - individual appliance
 - multiple flues
 - natural draft
 - twin wall flues

- working drawings conventions, symbols and abbreviations
- results of carbon monoxide poisoning and how it can occur
- reasons for testing for carbon monoxide
- consequences of carbon monoxide poisoning:
 - ill health
 - death
- processes, procedures and techniques for:
 - installing and commissioning Type A appliances and ventilation
 - using carbon monoxide testing equipment to check appliance for spillage
- how to access relevant information, including codes and standards
- tools, materials and equipment used for the installation and commissioning of Type A gas appliances
- work health and safety (WHS) requirements for the installation and commissioning of Type A gas appliances
- properties of gas, gas safety, combustion principles, pressure and flow rates.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPGS4011 Design and size consumer gas installations

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPGS4011C Design and size consumer gas installation. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design and size consumer gas installation and includes consumer piping, flueing and ventilation.

It covers preparation for the work, determination of gas installation requirements, detailed planning of the layout and completing work.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------|--|
| 1 Identify system requirements. | 1.1 Access, read and determine design requirements from plans, specifications, relevant manufacturer's requirements, Australian standards and jurisdictional requirements. |
| | 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements. |

- 1.3 Select appropriate tools and equipment including personal protective equipment (PPE).
- 2 Design and size system layout.
 - 2.1 Determine quantity, location and type of take-off points and appliances from plans and specifications.
 - 2.2 Produce and size consumer gas installations in accordance with relevant manufacturer's requirements, Australian Standards and jurisdictional requirements.
 - 2.3 Use the proposed design to identify and specify optimal materials required.
 - 2.4 Produce final system layout plans to relevant drawing design standards.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPGS4011C Design and size consumer gas installation.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPGS4011 Design and size consumer gas installations

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPGS4011C Design and size consumer gas installation. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout of four gas installations for:
- a caravan installation
- a marine installation, including the installation of an LPG leak detection system
- a commercial installation, including:
 - a gas hot-water plant incorporating a common flue design
 - a gas range
 - deep fryer
 - salamander grill
- a domestic installation with a minimum of two dwellings with at least three or more Type A gas appliances in each and incorporating subsidiary gas meters

Each installation must include:

- pipe sizing and pressures up to 200 kPa
- at least one natural gas installation
- at least one liquefied petroleum gas (LPG) installation
- a two-stage system
- an over-pressure protection device
- a minimum of two piping materials
- certified Type A gas appliances.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- drawing instruments and sketching techniques, including the use of conventional symbols
- use of computers for documentation
- computer-aided design (CAD) software

- impact of ventilation on design
- types, characteristics, uses and limitations of gas pipe work and consumer piping materials, including joining techniques and systems
- how to access relevant information, including codes and standards
- tools, materials and equipment used to design and size consumer gas installations
- work health and safety (WHS) requirements for designing and sizing consumer gas installations
- properties of gas, gas safety, combustion principles, pressure and megajoule rates.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPGS4022 Service Type A gas appliances

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPGS4022A Service Type A gas appliances. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to diagnose and repair faults on certified Type A gas appliances.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

CPCPGS3053 Disconnect and reconnect Type A gas appliances

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify service requirements.

1.1 Access, read and determine service requirements for Type A gas appliances from job specifications, relevant Australian Standards, codes, manufacturers' specifications and jurisdictional requirements.

1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.

- 1.3 Prepare work area and materials to service the Type A gas appliance.
 - 1.4 Locate gas and electrical isolation points.
 - 1.5 Complete electrical and gas safety checks before commencing servicing work.
- 2 Determine faults associated with gas appliances and recommission.
 - 2.1 Identify potential electrical fault pathways and confirm assembly and disassembly techniques and sequences.
 - 2.2 Complete diagnosis on electrical faults on electrical systems that do not exceed 50 volt (V) alternating current (AC) or 120 V direct current (DC).
 - 2.3 Complete gas diagnosis and select most appropriate corrective action as required.
 - 2.4 Repair, replace and/or make adjustments as required.
 - 2.5 Commission and return to service.
 - 2.6 Analyse flue gases and check ventilation requirements according to Australian Standards and jurisdictional requirements.
 - 2.7 Complete and submit documentation according to installation requirements and workplace procedures.
- 3 Clean up.
 - 3.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 3.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPGS4022A Service Type A gas appliances

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPGS4022 Service Type A gas appliances

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPGS4022A Service Type A gas appliances. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- diagnosing and rectifying faults in, and testing and recommissioning, four different faulty Type A appliances, including two electrical faults and two gas faults and with the following components:
 - burners and rail cocks
 - combination controls
 - pilots
 - thermostats and components
 - solenoid valve regulators not exceeding 50 volt (V) alternating current (AC) or 120 V direct current (DC) (ripple free)
 - solenoid valves
 - thermocouples
- conducting evaluative tests on electrical and electronic components not exceeding 50 V AC or 120 V DC (ripple free) to diagnose and remedy faults and malfunctions, including:
 - central processing units
 - printed circuit boards and associated parts
- converting a Type A gas appliance to operate on another gas type.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- basic electrical theory:
 - electrical safety checks
 - characteristics of fuses, circuit breakers, residual current devices and earthing systems
 - ignition systems
 - insulation resistance test
 - isolation procedures

- solenoids
- thermocouples
- thermopiles
- appliance operations
- burners and burner adjustment
- characteristics of conversion from one gas type to another
- ignition systems (pilot, ignition and re-ignition, flame safeguard systems, hot surface ignition)
- gas appliance regulators
- gas appliance thermostats
- gas safety:
 - combustion characteristics and effects
 - isolation procedures
 - operation of flame failure systems used in Type A gas appliances
- correct operation of the flue, including carbon monoxide testing
- how to access relevant information, including codes and standards
- tools, materials and equipment used to service Type A gas appliances
- work health and safety (WHS) requirements for servicing Type A gas appliances
- properties of gas, gas safety, combustion principles, pressure and megajoule rates.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPGS4023 Install, commission and service Type B gas appliances

Modification History

- Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.
- Updated imported prerequisite unit UEENEEP012A Disconnect/reconnect composite appliances connected to low voltage installation wiring to UEERL0004 Disconnect-reconnect electrical equipment connected to low voltage (LV) installation wiring.
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
- Typographical error corrected in Element and Performance Criteria 6.2.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is not equivalent to CPCPGS4023B Install, commission and service Type B gas appliances. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install, commission and service Type B gas appliances, from the gas isolation valve and electrical isolation switch to the flue spigot on the appliance.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

- CPCPCM2043 Carry out WHS requirements
- UEERL0004 Disconnect-reconnect electrical equipment connected to low voltage (LV) installation wiring.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Obtain authority to undertake work on Type B gas appliances	1.1 Conduct a detailed site inspection to assess, analyse, interpret and confirm design specification.
	1.2 Liaise with designer and gas authorities to clarify and resolve identified design specification matters.
	1.3 Obtain formal authority to proceed with installation and commissioning before commencing work.
2 Prepare for work.	2.1 Access, read and determine installation, commissioning and service requirements from job specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements.
	2.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
	2.3 Conduct gas system and electrical safety checks and isolation procedures and record to manufacturer and other authorities' requirements before commencing work.
	2.4 Select appropriate tools and equipment, including personal protective equipment (PPE).
3 Obtain materials and install Type B gas appliances.	3.1 Identify and obtain gas system components, electrical or electronic components and controls and other required installation materials from the job specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements.
	3.2 Obtain component specifications and manufacturers' installation and servicing manuals.
	3.3 Perform installation of appliance components, including

- valve trains, burners and associated pipework and flue systems.
- 3.4 Calculate and identify ventilation systems.
- 3.5 Check suitability of electrical components, including terminations and electrical wiring and wiring enclosures.
- 3.6 Visually inspect installations at each stage of work to ensure compliance with specifications and absence of damaged or faulty equipment and materials.
- 4 Commission and test Type B gas appliances.
- 4.1 Select testing and servicing equipment appropriate to the requirement and check and prepare for use.
- 4.2 Conduct gas and electrical safety checks and isolation procedures, including purging, and record as required before testing and commissioning is commenced.
- 4.3 Perform test operational parameters of individual components and adjust to conform to specifications.
- 4.4 Perform test appliance operations with and without fuel and adjust as necessary and record results.
- 4.5 Set air flow rate and gas rate in accordance with relevant standards.
- 4.6 Analyse flue gases according to recognised industry practice.
- 4.7 Perform test operations of critical safety interlocks to ensure they are operational and set points are as per relevant standards.
- 5 Service Type B gas appliances.
- 5.1 Analyse defect reports or operational records to identify the nature and possible cause of faults or out-of-specification performance.
- 5.2 Conduct electrical and gas safety checks and isolation procedures and record before servicing work is commenced.
- 5.3 Read and correctly interpret plans and diagrams to identify potential gas system and electrical fault pathways and locations.

- 5.4 Select and apply appropriate testing techniques, procedures and equipment to diagnose system faults or discrepancies.
 - 5.5 Identify and confirm cause of fault or out-of-specification performance.
 - 5.6 Analyse options for correction and select the most appropriate corrective action.
 - 5.7 Conduct repair, replacement or adjustment according to manufacturer specifications or service manuals.
 - 5.8 Test to ensure critical safety interlocks are operational and set points are as per relevant standard.
 - 5.9 Assess appliance to ensure compliance with relevant standards and manufacturer specifications prior to recommissioning and returning to service.
- 6 Finalise work.
- 6.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 6.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.
 - 6.3 Complete documentation according to workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is not equivalent to CPCPGS4023B Install, commission and service Type B gas appliances.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPGS4023 Install, commission and service Type B gas appliances

Modification History

- Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.
- Updated imported prerequisite unit UEENEEP012A Disconnect/reconnect composite appliances connected to low voltage installation wiring to UEERL0004 Disconnect-reconnect electrical equipment connected to low voltage (LV) installation wiring.
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
- Typographical error corrected in Element and Performance Criteria 6.2.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is not equivalent to CPCPGS4023B Install, commission and service Type B gas appliances. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- planning, installing, commissioning and maintaining one Type B gas appliance.

In doing so the person must:

- complete all work according to approved design specifications, workplace procedures, standards, codes and regulatory and manufacturer requirements within agreed timeframes
- apply safety requirements throughout the work sequence.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- relevant standards:
 - AS 3814 Industrial and commercial gas-fired appliances
 - AS/NZS 5601 Gas installations set
 - AS1375 Industrial fuel fired appliances
 - AS 2593 Boilers - Safety management and supervision systems

- AS/NZS 3000 Electrical installations (known as the Australian/New Zealand Wiring Rules)
- AS/NZS 4836 Safe working on low-voltage electrical installations
- flue gas analysis techniques and processes
- gas terminology and conventional symbols
- gas safety and isolation procedures
- combustion characteristics and effects
- purging requirements, techniques and critical calculation processes
- types, characteristics, uses and limitations of Type B gas appliance components
- ventilation techniques and calculation processes
- workplace and equipment safety requirements
- design specification:
 - air controls
 - combustion air blowers
 - flame safeguards
 - gas pressure regulation
 - gas valve trains
 - manual shut-off valves
 - markings and instructions
 - materials
 - over-pressure protection systems
 - process controls
 - safety shut-off valve systems
- Type B gas appliances:
 - those above 10 megajoules (MJ) for which a certification scheme does not exist
 - gas types:
 - combination fuels
 - liquefied petroleum gas (LPG)
 - natural gas (NG)
 - tempered LPG
 - bio-gas
 - special requirements for design and operation:
 - after burners - process
 - air gas mixing machines and mixing blowers
 - atmosphere generators and special atmospheres
 - direct gas fired air heaters
 - high input gas fired appliances
 - incinerators and generators
 - multi-fuel firing systems
 - ovens - direct fired

- smoke ovens - direct fired
- stationary gas engines and turbines
- steam and heated water boilers
- water heaters
- Type B appliance operation specifications:
 - flame establishment periods
 - interlocks
 - operation of gas appliance and burners
 - operational sequences
 - pre-purging
 - start gas rates
- determination of site suitability for installation
- commissioning procedure for a Type B appliance in accordance with relevant standard
- types of valve trains
- types of burners:
 - atmospheric
 - nozzle mix
 - package
 - pre-mix
- testing and servicing of Type B gas appliances requirements
- how to access relevant information, including codes and standards
- tools, materials and equipment used to install, commission and service Type B gas appliances
- work health and safety (WHS) requirements for installing, commissioning and servicing Type B gas appliances
- properties of gas, gas safety, combustion principles, pressure and flow rates.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPIG2021 Design domestic urban irrigation systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Application and Elements and Performance Criteria 1.6.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPIG2021A Design domestic urban irrigation systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to prepare basic designs and irrigation drawings for domestic irrigation systems.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|--|
| 1 Prepare for work. | 1.1 Conduct site survey of proposed irrigation area according to client requirements. |
| | 1.2 Adhere to work health and safety (WHS) and environmental requirements associated with design of domestic irrigation systems throughout the work. |

- 1.3 Identify and adhere to quality assurance requirements according to workplace requirements.
 - 1.4 Plan and sequence tasks in conjunction with others involved in or affected by the work and statutory and regulatory authorities' requirements.
 - 1.5 Select and check tools and equipment for preparing basic irrigation designs and drawings for serviceability.
 - 1.6 Prepare work area to support efficient design of domestic irrigation systems.
- 2 Identify drawing requirements.
 - 2.1 Identify areas requiring irrigation and system design components.
 - 2.2 Obtain information on the soil type, ground slope, contours and prevailing wind.
 - 2.3 Locate and note underground services, buildings, paths and other permanent structures.
 - 2.4 Determine and locate water supply and its influence on design requirements.
 - 2.5 Select appropriate emitters to suit function and design requirements.
- 3 Design irrigation system.
 - 3.1 Draw site plan to include structures, paths and property boundaries.
 - 3.2 Sketch garden areas to include locations of lawns, garden beds, trees, vegetable patches or ferneries.
 - 3.3 Sketch pipe runs and water emitters to design requirements.
 - 3.4 Calculate sizes of pipes using standard data and record information in required format.
 - 3.5 Compile list of materials to include number and type of water emitters, control valves, quantities of pipes, fittings and components.
 - 3.6 Apply sustainability principles and concepts throughout the design process.

- 3.7 Submit drawing and design for approval.
- 4 Clean up.
 - 4.1 Clear work area and dispose of reused or recycled materials according to legislation, regulations, codes of practice and job specification.
 - 4.2 Clean, check, maintain and store tools and equipment according to manufacturer recommendations and workplace procedures.
 - 4.3 Complete documentation according to workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPIG2021A Design domestic urban irrigation systems

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPIG2021 Design domestic urban irrigation systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
- Changes to Application and Elements and Performance Criteria 1.6.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPIG2021A Design domestic urban irrigation systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing and preparing a drawing of the system, incorporating automatic timers and controls, varying sprinkler heads and zones, and indicating the materials required (by number and type), to comply with a site plan and specifications for the irrigation of a 200 square metre garden of lawn, shrubs, trees and flowers.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- processes for accessing information and for calculating material requirements
- properties of water, including pressure and flow rates
- relevant statutory and authority requirements related to drawing and installing irrigation systems
- SI system of measurement
- specifications of the range of irrigation products available
- standards applicable to the installation
- technologies for irrigation measurement and drawings
- various types of irrigation systems, including types of materials and components used
- workplace and equipment safety requirements.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPIG3021 Set out, install and commission irrigation systems

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPIG3021A Set out, install and commission irrigation systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to set out, install and commission irrigation systems.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|---|
| 1 Prepare for work. | 1.1 Obtain plans and specifications. |
| | 1.2 Adhere to work health and safety (WHS) and environmental requirements associated with setting out, installing and commissioning irrigation systems throughout work. |
| | 1.3 Identify and adhere to quality assurance requirements according to workplace requirements. |
| | 1.4 Plan and sequence tasks in conjunction with others involved in or affected by the work and statutory and |

- regulatory authorities' requirements.
- 1.5 Select and check tools and equipment, including personal protective equipment (PPE), for setting out, installing and commissioning irrigation systems for serviceability.
 - 1.6 Prepare work area to support efficient setting out, installation and commissioning of irrigation systems.
- 2 Identify installation requirements.
- 2.1 Identify irrigation system requirements from plans, specifications and relevant information.
 - 2.2 Locate and identify underground services.
 - 2.3 Check flow rate and water pressure for compliance with plans and specifications.
 - 2.4 Select piping and system components to comply with standards, plans and specifications.
 - 2.5 Identify, order and collect materials and equipment according to workplace procedures.
 - 2.6 Check materials and equipment for compliance with standards, docket and order form, and for acceptable condition.
- 3 Install and commission irrigation system.
- 3.1 Set out irrigation pipes according to plans, specifications and site requirements.
 - 3.2 Excavate pipe trenches according to plans and specifications.
 - 3.3 Install pipe system according to plans, specifications, site requirements, manufacturer recommendations and standards, and sustainability principles and concepts.
 - 3.4 Flush pipelines of air and foreign matter to installation standard.
 - 3.5 Install backflow prevention device according to standards.
 - 3.6 Install and adjust water emitters to produce required spray pattern.

- 3.7 Install, operate and adjust control valves to achieve specified flow rate.
 - 3.8 Test and adjust installation to comply with standards and authorities' requirements.
 - 3.9 Backfill trenches according to plans and specifications and reinstate ground surface.
- 4 Clean up.
- 4.1 Clear work area and dispose of reused or recycled materials according to legislation, regulations, codes of practice and job specification.
 - 4.2 Clean, check, maintain and store tools and equipment according to manufacturer recommendations and workplace procedures.
 - 4.3 Complete documentation according to workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPIG3021A Set out, install and commission irrigation systems

Assessment Requirements for CPCPIG3021 Set out, install and commission irrigation systems

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPIG3021A Set out, install and commission irrigation systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- determining the system requirements, setting out, installing and commissioning an irrigation system sourced from an isolating valve to supply four water emitters of varying type and requiring a solenoid valve to comply with given plans and specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- characteristics and application of different pipes and fittings, including fixing and joining techniques and methods
- job safety analysis (JSA) and safe work method statements (SWMS)
- process of setting out, installing and commissioning irrigation systems
- processes for accessing information and for calculating material requirements
- properties of water, including pressure and flow rates
- protection of drinking water supplies
- relevant statutory and authority requirements related to installing and commissioning irrigation systems
- SI system of measurement
- standards applicable to the installation
- various types of irrigation systems, including types of materials and components used
- workplace and equipment safety requirements.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPIG3022 Install and commission domestic irrigation pumps

Modification History

- Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.3.
Changes to Knowledge Evidence.
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Knowledge Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPIG3022A Install and commission domestic irrigation pumps. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install and commission domestic irrigation pumps.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|--|
| 1 Prepare for work. | 1.1 Obtain irrigation plans and specifications and inspect site. |
|---------------------|--|

- 1.2 Adhere to work health and safety (WHS) and environmental requirements associated with installing and commissioning domestic irrigation pumps throughout work.
 - 1.3 Identify and adhere to quality assurance requirements according to workplace requirements.
 - 1.4 Plan and sequence tasks in conjunction with others involved in or affected by the work and statutory and regulatory authorities' requirements.
 - 1.5 Select and check tools and equipment, including personal protective equipment (PPE), for installing and commissioning domestic irrigation pumps for serviceability.
 - 1.6 Prepare work area to support efficient installation and commissioning of domestic irrigation pumps.
- 2 Identify installation requirements.
- 2.1 Identify irrigation system requirements from plans, specifications and relevant information.
 - 2.2 Select pump and installation materials according to type, installation, range of flow rates, operating head and delivery distance.
 - 2.3 Identify, order and collect pump, according to workplace procedures.
 - 2.4 Check pump for compliance with standards, docket and order form, and for acceptable condition.
- 3 Install and commission pump.
- 3.1 Set out pump position to comply with irrigation plans and manufacturer recommendations.
 - 3.2 Install pump base according to plans and specifications and sustainability principles and concepts.
 - 3.3 Position and fix pump onto base.
 - 3.4 Connect suction and discharge lines to pump according to manufacturer specifications.
 - 3.5 Pressure test piping according to job specifications.

- 3.6 Test and adjust operation of pump to achieve effective operation according to job and manufacturer specifications.
 - 3.7 Record and document test data in format required by quality assurance procedures.
- 4 Clean up.
- 4.1 Clear work area and dispose of reused or recycled materials according to legislation, regulations, codes of practice and job specification.
 - 4.2 Clean, check, maintain and store tools and equipment according to manufacturer recommendations and workplace procedures.
 - 4.3 Complete documentation according to workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPIG3022A Install and commission domestic irrigation pumps

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPIG3022 Install and commission domestic irrigation pumps

Modification History

- Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.3.
Changes to Knowledge Evidence.
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Knowledge Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPIG3022A Install and commission domestic irrigation pumps. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing and commissioning for operation, a centrifugal pump (25 mm suction and 25 mm delivery) to comply with given plans and specifications for a domestic irrigation system.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- characteristics and application of different pipes and fittings, including:
 - fixing and joining techniques and methods
 - flow rates
- various types of domestic irrigation pumps
- properties of water, including pressure and flow rates
- relevant statutory and authority requirements related to installing and commissioning domestic irrigation pumps
- SI system of measurement
- mechanical, hydraulic and electrical principles
- standards applicable to the installation
- levelling and alignment processes

- process of installing and commissioning domestic irrigation pumps
- workplace and equipment safety requirements.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPMS2021 Assemble mechanical services components

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPMS2021A Assemble mechanical services components. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to assemble mechanical services components for heating and cooling systems prior to their installation.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------------|--|
| 1 Identify installation requirements. | 1.1 Access, read and determine assemble mechanical services components installation requirements from relevant Job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements. |
| | 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements. |

- 2 Prepare for work.
 - 2.1 Create a materials list and collect materials.
 - 2.2 Select appropriate tools and equipment including personal protective equipment (PPE).

- 3 Assemble components.
 - 3.1 Determine and transfer dimensions for fabrication and assembly.
 - 3.2 Interpret relevant standards, codes and symbols.
 - 3.3 Perform calculations to determine job requirements.
 - 3.4 Mark out material in conformance with determined measurements.
 - 3.5 Check dimensions for accuracy and compliance with plans and specifications.
 - 3.6 Identify and apply selected development method to task according to workplace procedures and sustainability principles and concepts.

- 4 Clean up.
 - 4.1 Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPMS2021A Assemble mechanical services components.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPMS2021 Assemble mechanical services components

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPMS2021A Assemble mechanical services components. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- assembling and connecting a heating coil to a boiler and a fan and duct work for a warm air heating system given the plans and specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- characteristics of materials used in the required assembly
- classification of assembly types and identification of assembly components
- levelling and alignment processes
- mechanical and hydraulic principles
- operation requirements of equipment used for fabricating and assembling components
- types of fasteners, fixings and sealants
- work health and safety (WHS) regulations relevant to assembly of mechanical services components
- workplace operating procedures, including required standards for assembly
- how to access relevant information, including codes and standards
- tools, materials and equipment used to assemble mechanical services components
- WHS requirements to assemble mechanical services components.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPMS3031 Fabricate and install steel pressure piping

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPMS3031A Fabricate and install steel pressure piping. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to determine installation requirements and to fabricate up to DN50, install and test steel pressure piping.

It applies to pipe systems with operating pressures not exceeding 1750 kPa and 200°C.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify installation requirements.

1.1 Access, read and determine steel pressure pipe installation requirements from job specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements.

1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.

- | | | |
|--|-----|---|
| 2 Prepare for work. | 2.1 | Create a materials list and collect materials. |
| | 2.2 | Select and check serviceability of appropriate tools, equipment and personal protective equipment (PPE). |
| 3 Fabricate, install and test pipe system. | 3.1 | Set out pipework configuration. |
| | 3.2 | Perform installation of fixings and supports to manufacturer requirements, job plans, specifications and workplace requirements. |
| | 3.3 | Fabricate and joint pipe system according to job plans, specifications and manufacturer requirements for mechanical type joints. |
| | 3.4 | Perform installation of pipe system in specified location without damage or distortion to pipework or surrounding environment or other services. |
| | 3.5 | Perform testing of pipe system. |
| | 3.6 | Complete documentation according to relevant regulatory requirements and or workplace requirements. |
| 4 Clean up. | 4.1 | Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures. |
| | 4.2 | Clean tools and equipment, check for serviceability and report any damage, and store and secure according to workplace procedures. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPMS3031A Fabricate and install steel pressure piping.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPMS3031 Fabricate and install steel pressure piping

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPMS3031A Fabricate and install steel pressure piping. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- applying pipe cutting and welding skills by using oxy-acetylene and arc welding equipment for piping up to DN50 and must include:
 - butt welding a pipe joint in DN40 piping in the fixed horizontal position
 - welding DN40 and 50 mild steel branch joints
 - constructing a DN80 header with DN20, 40 and 50 branch joints using the oxy-acetylene method
 - welding 50 mm and 80 mm flanges to mild steel pipe
 - welding blank ends into DN80 mild steel pipe
- fabricating, installing and testing a DN40 steel pipeline from a supply point to an outlet, incorporating two changes of direction with one position butt welded with oxy welding, plus an arc welded flange incorporating a branch for testing purposes
- testing completed task to ensure required pressure and the soundness of all joints within the system.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the characteristics and the application of approved materials and components for the fabrication and installation of pressure piping
- processes, procedures and techniques of:
 - installation of steel pressure piping
 - calculating material quantities
- pressure, flow rates, temperature requirements and properties of conveyed materials including:
 - cutting and welding gases
 - mechanical joint systems and fittings with variable diameters up to DN100

- steel pipes
- threaded pipe fittings
- weldable pipe fittings
- how to access relevant information, including codes and standards
- tools, materials and equipment used to fabricate and install steel pressure piping
- work health and safety (WHS) requirements to fabricate and install steel pressure piping.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPMS3032 Select and fit insulation and sheathing

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Application and Typographical errors corrected in Elements and Performance Criteria 3.3.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPMS3032A Select and fit insulation and sheathing. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install insulating sheathing on hot and cold piping, fittings and vessels. It includes the selection of insulation materials.

Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|--|
| 1 Prepare for work. | 1.1 Access and read job plans and specifications. |
| | 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements and sustainability associated with the |

- installation of insulating sheathing.
- 1.3 Apply quality assurance requirements in accordance with workplace requirements.
 - 1.4 Plan and sequence tasks in conjunction with others involved in or affected by the work and statutory and regulatory authorities' requirements.
 - 1.5 Prepare work area to support efficient installation of insulating sheathing.
 - 1.6 Select appropriate tools and equipment including personal protective equipment (PPE) and check for serviceability.
 - 1.7 Identify materials and equipment required to complete the task.
- 2 Identify insulation requirements.
- 2.1 Create a materials list and collect materials.
 - 2.2 Determine fabrication requirements from job plans, specifications and relevant information.
 - 2.3 Calculate quantity and type of materials and components.
- 3 Install insulation.
- 3.1 Clean and prepare surfaces of dirt, rust, scale and grease.
 - 3.2 Install insulating materials, including sheathing, according to plans and specifications.
 - 3.3 Select and install appropriate thermal insulation sheathing to sections of both hot and cold piping, fittings and vessels associated with refrigeration and cooling and heating systems.
 - 3.4 Apply vapour barriers to suit job requirements.
 - 3.5 Apply sustainability principles and concepts throughout the installation.
- 4 Clean up.
- 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.

- 4.2 Clean tools and equipment check for serviceability reporting any damage, store and secure.
- 4.3 Complete documentation according to workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPMS3032A Select and fit insulation and sheathing.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPMS3032 Select and fit insulation and sheathing

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
- Changes to Application and Typographical errors corrected in Elements and Performance Criteria 3.3.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPMS3032A Select and fit insulation and sheathing. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- locating, interpreting and applying relevant information, standards and specifications to selecting, installing, insulating sheathing to piping, fittings and vessels
- given the plans and specifications, insulating two metres of small-bore heating line with at least one change in direction
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective equipment (PPE)
- two metres of refrigeration line with metal sheath and at least one change in direction.
-

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- processes of selecting and insulating pipes, fittings and vessels
- techniques for cutting, fabricating and assembling metal sheathing
- techniques for fixing insulating materials to piping
- understanding of fire rating
- processes of installing, insulating and testing ducting
- system types and identification of system components
- how to access relevant information, including codes and standards
- tools, materials and equipment used to select and fit insulation and sheathing
- work health and safety (WHS) requirements to select and fit insulation and sheathing.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPMS3033 Install small bore heating systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.
Correction to prerequisite unit code from *CPCPCM2043A Carry out WHS requirements* to *CPCPCM2043 Carry out WHS requirements*.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPMS3033A Install small bore heating systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install small bore hydronic heated water heating systems.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------|---|
| 1 Identify system requirements. | 1.1 Access, read and determine small bore heating installation requirements from job specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements. |
| | 1.2 Identify and apply workplace policies and procedures, |

work health and safety (WHS) and environmental requirements.

- 2 Prepare for work.
 - 2.1 Create a materials list and collect materials.
 - 2.2 Select and check the serviceability of appropriate tools and equipment including personal protective equipment (PPE).
 - 2.3 Prepare work area to support the efficient installation of small bore heating systems.
- 3 Install small bore heating systems.
 - 3.1 Set out system to comply with plans and specifications.
 - 3.2 Perform installation of fixings and support components.
 - 3.3 Perform installation of joint pipe and heating system.
 - 3.4 Test heating system and record details in the required format.
 - 3.5 Adjust heating system for correct operation and balance, including the setting of nominated temperature and adding appropriate inhibitor.
 - 3.6 Complete documentation according to relevant regulatory requirements and or workplace requirements.
- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPMS3033A Install small bore heating systems.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPMS3033 Install small bore heating systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.
- Correction to prerequisite unit code from CPCPCM2043A Carry out WHS requirements to CPCPCM2043 Carry out WHS requirements.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPMS3033A Install small bore heating systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing a two-pipe heating system to two panel radiators, skirting convector or a unit heater, including:
 - using a combination of copper tube and non-metallic piping
 - a minimum of DN20 flow and return with DN15 branches connected to a heating source.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, application and limitations of approved materials and components
- processes, procedures and techniques of:
 - effective isolation heating electrical systems
 - installing and commissioning small bore heating systems:
 - panel radiators
 - skirting convectors
 - boilers and heat exchanges
 - under floor heating systems
- functional and operational features of hand and power tools and equipment including:
 - hand and power tools
 - heating and bending equipment
 - lifting and load shifting equipment

- measuring equipment
- silver brazing equipment
- welding equipment
- how to access relevant information, including codes and standards
- tools, materials and equipment used to install small bore heating systems
- work health and safety (WHS) requirements to install small bore heating systems.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

CPCPMS3034 Install and test medical gas pipeline systems

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Changes to Application and Elements and Performance Criteria 1, 2, 3.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPMS3034A Install medical gas pipeline systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install and test medical gas pipeline systems.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify installation requirements.

1.1 Access, read and determine medical gas pipeline systems installation requirements from relevant plans, job specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements.

1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental

- requirements.
- 1.3 Determine job priorities and sequence job tasks in consultation with others on site.
- 2 Prepare for work
 - 2.1 Create a materials list and collect materials.
 - 2.2 Select and check serviceability of appropriate tools and equipment including personal protective equipment (PPE).
- 3 Fabricate, install, purge and test pipeline system.
 - 3.1 Set out pipelines and connection points according to drawings and specifications or job instructions.
 - 3.2 Perform installation and testing of pipework in accordance with relevant codes.
 - 3.3 Perform testing of installed pipework according to standards and manufacturer's specifications.
 - 3.4 Perform purging of pipeline system according to standards and authorities' requirements.
 - 3.5 Access information to complete documentation according to workplace procedures and submit within specified timeframes.
- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools, plant and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPMS3034A Install medical gas pipeline systems.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPMS3034 Install and test medical gas pipeline systems

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Changes to Application and Elements and Performance Criteria 1, 2, 3.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPMS3034A Install medical gas pipeline systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing and testing three medical gas pipeline systems (each with a different medical gas) from a manifold system to terminal units and fittings ensuring:
 - the inclusion of purged silver brazed joint(s)
 - a minimum of 1.5 metres of approved copper tube per medical gas pipeline incorporating a minimum of two changes of direction using a mechanical bender
 - test and document results are recorded
 - cleanliness and sterility of finished system
 - correct identification of requirements and details of proposed installation
 - correct selection and use of appropriate processes, tools and equipment
 - completion of all work to specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- pressure testing procedures and equipment
- processes and requirements of installing, testing and purging medical gas pipeline systems
- types of information on medical gas pipelines systems
- materials for installing medical gas pipeline systems
- types of medical gas and pipelines:
 - medical breathing air
 - medical suction
 - standard oxygen

- components of medical gas pipeline systems:
 - fixtures and labels
 - medical gas pipeline materials and supports
 - terminal units and fittings
- how to access relevant information, including codes, standards and manufacturer's specifications
- tools, materials and equipment used to install and test medical gas pipeline systems
- work health and safety (WHS) requirements to install and test medical gas pipeline systems
- properties of gas, gas safety, combustion principles, pressure and flow rates.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPMS3035 Install and test ducting systems

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Typographical error corrected in Element and Performance Criteria 3.4.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPMS3035A Install and test ducting systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install and test ducting systems used for ventilation systems, heating and/or cooling systems, and exhaust systems.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify installation requirements.	1.1	Access, read and determine install and test ducting systems installation requirements from job specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements.
	1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.

- 2 Prepare for work.
 - 2.1 Create a materials list and collect materials.
 - 2.2 Select and check serviceability of appropriate tools, equipment and personal protective equipment (PPE).
- 3 Install and insulate duct system.
 - 3.1 Set out system to comply with plans and specifications.
 - 3.2 Position duct supports and fixings to comply with plans, job requirements and manufacturer's specifications.
 - 3.3 Install duct work in accordance with plans and specifications.
 - 3.4 Assemble and seal joints in accordance with plans and manufacturer's specifications.
 - 3.5 Install duct system in specified location without damage or distortion to surrounding environment or other services and in accordance with relevant standards.
 - 3.6 Install insulation materials in specified location without damage or distortion to surrounding environment or other services and in accordance with relevant standards.
 - 3.7 Install diffusers and terminal devices in accordance with plans and specifications and job requirements.
- 4 Test duct work.
 - 4.1 Determine test requirements from plans and specifications.
 - 4.2 Select and test duct work under pressure in accordance with instructions and workplace procedures.
 - 4.3 Identify and repair leaks using specified procedures and materials to ensure correct flow operation.
 - 4.4 Complete documentation according to relevant regulatory requirements and or workplace requirements.
- 5 Clean up.
 - 5.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.

- 5.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure according to workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPMS3035A Install and test ducting systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPMS3035 Install and test ducting systems

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Typographical error corrected in Element and Performance Criteria 3.4.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPMS3035A Install and test ducting systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- locating, interpreting and applying relevant information, standards and specifications to install and test small ducting systems
- installing, insulating, testing and balancing ductwork from a fan coiled unit to three outlet grilles given the plans and specifications.

The installation must incorporate hard and flexible duct work, including one transition piece and air control dampers.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- application of flow rates, pressure and volume principles to testing procedures
- characteristics of materials used in the system being tested
- processes of installing, insulating and testing ducting
- system types and identification of system components
- techniques for setting out, assembling, fixing and jointing duct work systems and components, including insulation and acoustic materials
- types of repairs for detected leaks in the duct work system
- how to access relevant information, including codes and standards
- tools, materials and equipment used to install and test ducting systems
- work health and safety (WHS) requirements to install and test ducting systems.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPMS3036 Install air handling units

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Knowledge Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPMS3036A Install air handling units.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install and test air heating, cooling and ventilation plenums or enclosures.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------------|--|
| 1 Identify installation requirements. | 1.1 Access, read and determine install air handling unit installation requirements from job specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements. |
| | 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements. |

- | | | | |
|---|--|-----|---|
| 2 | Prepare for work. | 2.1 | Create a materials list and collect materials. |
| | | 2.2 | Select and check serviceability of appropriate tools, equipment and personal protective equipment (PPE). |
| 3 | Set out, assemble and test air handling units. | 3.1 | Set out air handling unit in compliance with plans and specifications. |
| | | 3.2 | Position components and equipment according to plans and specifications. |
| | | 3.3 | Install equipment according to job and manufacturer specifications. |
| | | 3.4 | Check assembly for compliance with plans and specifications. |
| | | 3.5 | Test air handling unit for correct operation. |
| | | 3.6 | Complete documentation according to relevant regulatory requirements and/or workplace requirements. |
| 4 | Clean up. | 4.1 | Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures. |
| | | 4.2 | Clean tools and equipment, check for serviceability and report any damage, and store and secure according to workplace procedures. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPMS3036A Install air handling units.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCPMS3036 Install air handling units

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPMS3036A Install air handling units. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- locating, interpreting and applying relevant information, standards and specifications to installing air handling units
- installing a plenum chamber that includes a fan, coil, filter and dampers, including supports and brackets and any fixing requirements, allowing for anti-vibration.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- effects of machinery vibrations on structures, ducts and fittings
- processes of installing and testing air handling unit
- techniques for setting out, assembly and fixing and jointing requirements for duct work systems
- equipment installation techniques that limit the transfer of vibrations from plant and equipment to other component
- testing, balancing and commissioning of air handling units
- how to access relevant information, including codes and standards
- tools, materials and equipment used to install air handling units
- work health and safety (WHS) requirements to install air handling units.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPMS3037 Install and commission a single head split system air conditioning

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Elements and Performance Criteria 3.9 and 3.10 is deleted.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPMS3037A Install and test split system air conditioning. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install and commission a single head split system air conditioning.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------------|--|
| 1 Identify installation requirements. | 1.1 Access, read and determine a single head split system air conditioning installation and commissioning requirements from relevant plans, job specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements. |
|---------------------------------------|--|

- 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
- 2 Prepare for work.
 - 2.1 Create a materials list and collect materials.
 - 2.2 Select and check serviceability of appropriate tools, equipment and personal protective equipment (PPE).
- 3 Install and test system.
 - 3.1 Set out and install indoor and outdoor unit according to drawings and job and manufacturer's specifications.
 - 3.2 Set out pipework and connection points according to drawings and job and manufacturer's specifications.
 - 3.3 Perform testing of installed pipework.
 - 3.4 Remove moisture from pipework.
 - 3.5 Charge pipework.
 - 3.6 Perform installation of condensate drain.
 - 3.7 Perform installation of insulation and casing.
 - 3.8 Perform testing of operation of unit according to relevant standards and manufacturer's specifications.
- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPMS3037A Install and test split system air conditioning.

Assessment Requirements for CPCPMS3037 Install and commission a single head split system air conditioning

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Elements and Performance Criteria 3.9 and 3.10 is deleted.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPMS3037A Install and test split system air conditioning. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing, testing and commissioning a single-head split system air conditioner.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- electrical safety requirements
- operating principles of air conditioning and refrigeration systems
- processes of installing, testing and commissioning split air conditioning systems
- types of information on split system air conditioning systems, including types of refrigerant gases and their characteristics
- how to access relevant information, including codes and standards
- tools, materials and equipment used to install and commission a single head split system air conditioning
- work health and safety (WHS) requirements to install and commission a single head split system air conditioning.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPMS3038 Install air conditioning control equipment

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Typographical error corrected in Element 2.1.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPMS3038A Install air conditioning control equipment. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install air conditioning control equipment for the control of pressure, temperature, flow rate, humidity and density.

Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Prepare for work.

1.1 Access and read job plans and specifications.

1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental

- requirements.
- 1.3 Apply quality assurance requirements in accordance with workplace requirements.
 - 1.4 Plan and sequence tasks in conjunction with others.
 - 1.5 Prepare work area to support efficient installation of air conditioning control equipment.
 - 1.6 Select appropriate tools and equipment including personal protective equipment (PPE) and check for serviceability.
 - 1.7 Identify materials and equipment required to complete the task.
- 2 Identify system requirements.
- 2.1 Create a materials list and collect materials.
 - 2.2 Identify fabrication requirements from job plans, specifications and relevant information.
 - 2.3 Calculate quantity and type of materials and components.
- 3 Install control equipment.
- 3.1 Shut down and isolate air conditioning system according to appropriate codes of practice and WHS requirements.
 - 3.2 Install control equipment to job specification or manufacturer's instructions and report faults, as required.
 - 3.3 Position control equipment in specified location without damage or distortion to surrounding environment or other services.
 - 3.4 Calibrate control equipment according to manufacturer recommendations and job specifications.
 - 3.5 Check correct operation of system control equipment against operational specification.
- 4 Clean up.
- 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.

- 4.2 Clean tools and equipment, check for serviceability reporting any damage, store and secure.
- 4.3 Complete documentation according to workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPMS3038A Install air conditioning control equipment.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPMS3038 Install air conditioning control equipment

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Typographical error corrected in Element 2.1.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPMS3038A Install air conditioning control equipment. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- locating, interpreting and applying relevant information, standards and specifications to install conditioning control equipment
- given the plans and specifications, installing a control valve, a thermostat and flow, pressure and limit switches for an air conditioning system.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- effective electrical isolation processes and procedures
- operating principles of air conditioning and refrigeration systems
- power and maintenance access requirements for control units
- process of installing and testing air conditioning control equipment
- how to access relevant information, including codes and standards
- tools, materials and equipment used to install air conditioning control equipment
- work health and safety (WHS) requirements to install air conditioning control equipment.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPMS3039 Maintain mechanical services equipment

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Typographical error corrected in Application and Element 2.1.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPMS3039A Maintain mechanical services equipment. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to perform general maintenance of heating, ventilating and air conditioning (HVAC) systems and associated mechanical equipment (air distribution systems, hydronic systems and control systems).

Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|--|
| 1 Prepare for work. | 1.1 Access and read job plans and specifications. |
| | 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental |

- requirements.
- 1.3 Apply quality assurance requirements in accordance with workplace requirements.
 - 1.4 Plan and sequence tasks in conjunction with others involved in or affected by the work and statutory and regulatory authorities' requirements.
 - 1.5 Prepare work area to support efficient maintenance of mechanical services equipment.
 - 1.6 Select appropriate tools and equipment including personal protective equipment (PPE) and check for serviceability.
 - 1.7 Identify materials and equipment required to complete the task.
- 2 Identify system requirements.
- 2.1 Create a materials list and collect materials.
 - 2.2 Identify fabrication requirements from job plans, specifications and relevant information.
 - 2.3 Calculate quantity and type of materials and components.
- 3 Repair and replace faulty components and test job.
- 3.1 Isolate equipment safely according to regulations and WHS requirements.
 - 3.2 Remove faulty items or components using appropriate tools, equipment and procedures.
 - 3.3 Select replaceable items from manufacturers' catalogue or serviceable items according to manufacturer or site specifications.
 - 3.4 Perform system adjustments to equipment or components to comply with specifications.
 - 3.5 Carry out operational checks on system to ensure its compliance with job specification.
 - 3.6 Document maintenance report in format required by the maintenance specification.

- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability reporting any damage, store and secure.
 - 4.3 Complete documentation according to workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPMS3039A Maintain mechanical services equipment.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPMS3039 Maintain mechanical services equipment

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Typographical error corrected in Application and Element 2.1.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPMS3039A Maintain mechanical services equipment. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- maintaining one air distribution systems, including:
 - replacing, realigning and tensioning pulleys and belts as required
 - checking the integrity of mounting and check for excessive vibration and noise
 - checking flexible connections
 - lubricating bearings
 - cleaning filters, coils and blades
 - checking system for leaks
- maintaining one hydronic system, including:
 - replacing gland valves and O rings where required on system
 - replacing and adjusting pump glands
 - checking functionality of and cleaning drain
 - adjusting operating control valves and settings
 - replacing chemical dosing systems when required and checking water system for leaks.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- air conditioning and refrigeration principles
- effect of bacteria in water, and potential impact on health
- operating principles of system components used in mechanical services equipment

- mechanical and hydraulic principles
- processes of maintaining mechanical and hydraulic services equipment
- how to access relevant information, including codes and standards
- tools, materials and equipment used to maintain mechanical services equipment
- work health and safety (WHS) requirements to maintain mechanical services equipment.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPMS3040 Install and commission evaporative air cooling systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPMS3040A Install and maintain evaporative air cooling systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install and maintain evaporative air cooling systems.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

CPCPCM2055 Work safely on roofs

CPCPCM3021 Flash penetrations through roofs and walls

CPCPWT3029 Install water pipe systems

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan the work.

1.1 Identify evaporative air cooling system requirements from current approved plans, specifications, standards

- and codes.
- 1.2 Apply quality assurance requirements, work health and safety (WHS) and environmental requirements and sustainability principles for installing evaporative air cooling systems.
 - 1.3 Plan and sequence tasks with others involved in the work.
 - 1.4 Calculate material quantities.
- 2 Prepare the work.
- 2.1 Identify work area preparation requirements.
 - 2.2 Select and check the serviceability of appropriate tools, equipment and personal protective equipment (PPE).
 - 2.3 Receive and check materials for conformity and report any faults or damage.
- 3 Install and commission unit.
- 3.1 Set out for installation and locate existing services and adjust installation process accordingly to avoid any disturbance.
 - 3.2 Carry out preparatory work including installation of piping and isolating valve, roof penetration and flashing without unnecessary damage to surrounding structures or environment.
 - 3.3 Install structural supports, ducting and control panels.
 - 3.4 Test installation and adjust accordingly.
- 4 Clean up.
- 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 4.2 Clean tools and equipment, check for serviceability reporting any damage, store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPMS3040A Install and maintain evaporative air cooling systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPMS3040 Install and commission evaporative air cooling systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPMS3040A Install and maintain evaporative air cooling systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing and commissioning an evaporative air cooling system on a roof including:
 - flashing the roof penetration
 - installing a plenum box and duct work to three diffusers with at least one diffuser positioned three metres from the plenum box, including appropriate duct work support
 - connecting cold water to an isolation valve within one metre of the appliance
 - install drain to approved point of discharge
 - connecting and completing installation testing and commissioning the systems operation.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- characteristics and application of approved materials and components
- terminology relating to evaporative air cooling systems
- effect of bacteria in water, and health implications
- processes, procedures and techniques of:
 - effective isolation
 - installing and testing evaporative air cooling systems
 - roof penetration and flashing
 - system of measurement and calculations
- types of evaporative air cooling system materials:
 - control panels
 - diffusers
 - ducting materials
 - evaporative air cooling systems

- grilles
- insulation
- considerations for work site preparation:
 - ensuring structural integrity of roof
 - installing piping and isolating valve
 - installing piping and isolating valve in roof cavity
 - installing plinths
 - installing structural supports
- other services connections to units:
 - electrical connections
 - water supply.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPMS3041 Install domestic solid fuel burning appliances

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is not equivalent to CPCPMS3041A Install domestic solid fuel burning appliances. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install domestic solid fuel burning appliances.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

CPCPCM2055 Work safely on roofs

CPCCWC2001 Complete penetrations and flashings

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Prepare for installation.

1.1 Access, read and determine domestic solid fuel burning appliances requirements from job specifications, relevant Australian Standards, codes, manufacturer`s specifications and jurisdictional requirements.

- 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
 - 1.3 Inspect installation sites and confirm appliance installation locations as suitable or negotiate alternative locations with clients.
 - 1.4 Confirm heat sensitivities of building materials at appliance installation locations and confirm heat protection strategies with clients.
 - 1.5 Select and check the serviceability of the appropriate tools, equipment and personal protective equipment (PPE).
- 2 Install appliance.
- 2.1 Measure and mark appliance location according to compliance requirements.
 - 2.2 Measure, cut or make up floor and wall protection materials and install according to compliance requirements.
 - 2.3 Position appliance and check clearance distances to confirm compliance.
 - 2.4 Install appliance according to compliance and organisational requirements.
- 3 Install flue.
- 3.1 Check flue dimensions and components and obtain additional sections or components as required to meet compliance requirements.
 - 3.2 Calculate, measure, mark and check locations and dimensions of ceiling and roof penetrations according to compliance and organisational requirements.
 - 3.3 Make penetrations to host materials with minimal damage and according to specifications and organisational requirements.
 - 3.4 Install structural supports according to plans and specifications.
 - 3.5 Prepare opening in compliance with specifications,

- manufacturer recommendations and regulations.
- 3.6 Install flue and associated components according to compliance and organisational requirements.
 - 3.7 Apply flashings and sealants to restore integrity of ceilings and roofs according to compliance and organisational requirements.
 - 3.8 Performance test penetration to ensure correct fit of completed installation, and take remedial action as required.
- 4 Finalise installation and clean up.
- 4.1 Install appliance and associated components and check for complete and correct installation and operation according to compliance and organisational requirements.
 - 4.2 Demonstrate operation of appliance to clients and explain factors that affect optimum performance.
 - 4.3 Restore installation site and clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is not equivalent to CPCPMS3041A Install domestic solid fuel burning appliances.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPMS3041 Install domestic solid fuel burning appliances

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is not equivalent to CPCPMS3041A Install domestic solid fuel burning appliances. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing at least two different domestic solid fuel burning appliances according to client, compliance, workplace and manufacturer requirements. Appliances may be for:
 - central heating
 - cooking
 - space heating
 - water heating
- a combination of applications, which includes:
 - fireplace inserts
 - free-standing
 - in-built
 - non-tested
- installing flue and associated flashings through a tiled and metal roof system.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- factors affecting selection of installation locations for appliances
- factors affecting compliance and non-compliance of domestic solid fuel burning appliances
- factors affecting optimum performance:
 - general cleaning and maintenance requirements
 - type and condition of fuel used in appliances
- heat damage protection requirements for appliances:
 - compliant floor protection
 - compliant clearance distances

- additional shielding
- reduced compliant clearance distances
- legislation, regulations and standards that apply to the installation and emissions of domestic solid fuel burning appliances
- heat-response categories of construction materials:
 - heat sensitive
 - heat tolerant
 - heat resistant
- installation requirements for different types of domestic fuel burning appliances:
 - appliances for:
 - central heating
 - cooking
 - space heating
 - water heating
 - combinations of applications
 - fireplace inserts
 - free-standing
 - in-built
 - non-tested
 - tested
- principles and products of combustion
- requirements and methods for maintaining structural integrity of buildings, roof structures and existing roof coverings
- structure and function of flue elements and principles of flue draw, and effects of:
 - bends and horizontal sections
 - climatic conditions
 - surrounding buildings and trees
- types of domestic solid fuel burning appliances and methods for safe operation
- types and condition of wood used as fuel and impacts on:
 - efficiency of appliances
 - emissions
- compliance requirements:
 - clearance distances to heat sensitive materials:
 - ceilings
 - curtains
 - furniture
 - timbers
 - walls
 - emissions compliance certification plate
 - manufacturer specifications

- types and dimensions of floor protection.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPMS4011 Design, size and lay out heating and cooling systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPMS4011B Design, size and lay out heating and cooling systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design, size and document the layout of heating and cooling systems for multi-floor structures.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify system requirements.

1.1 Access, read and determine heating and cooling installation requirements from job specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements.

1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.

1.3 Determine quantity, location, fixtures and legal points of

discharge.

- | | |
|----------------------------------|---|
| 2 Design and size system layout. | 2.1 Review building drawings plans and specifications to determine heating and cooling requirements. |
| | 2.2 Perform sizing of air conditioning or small-bore heating system to provide for required heating and cooling load and to determine required piping and ducting. |
| | 2.3 Produce final system layout plans according to job specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPMS4011B Design, size and lay out heating and cooling systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPMS4011 Design, size and lay out heating and cooling systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPMS4011B Design, size and lay out heating and cooling systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout details of a domestic heating and cooling system requiring a minimum heat load of 150 megajoules (MJ) per hour
- designing, sizing and documenting the layout details of a commercial heating and cooling system for a structure with at least four floors.

The performance applies to:

- ducting systems for air conditioning, heating or ventilation purposes in buildings Class 1 or 2 with a maximum static pressure of 0.75 kPa and a maximum velocity of 12.5 metres per second
- piping systems conveying heating and chilled water operating at a maximum pressure of 700 kPa or a maximum temperature of 100°C
- systems having a maximum output of 50 kW and total air quantities not exceeding 950 litres per second.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- principles, operation and characteristics of heating and cooling systems
- characteristics and application of different fixing and joining techniques and methods
- characteristics and application of pipe and ducting systems, including their fittings and fixture supports and fixing and joining techniques
- design concepts and performance measures for heating and cooling systems
- effective isolation processes and procedures
- electrical and electronic principles and safety requirements
- process of designing, sizing and documenting the layout of heating and cooling systems
- properties of water and air, including pressure and flow rates
- air conditioning systems:

- evaporative cooling system
- hydronic heating system
- hydronic cooling system
- warm air system
- refrigerated air conditioning system
- small-bore heating systems:
 - boilers
 - piping
 - radiators
- design materials:
 - use of computers and relevant computer-aided design (CAD) software
 - drafting materials and equipment
 - relevant structure plans and specifications
- how to access relevant information, including codes and standards
- tools, materials and equipment used to design, size and document the layout of heating and cooling systems
 - work health and safety (WHS) requirements for designing, sizing and documenting the layout of heating and cooling systems.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPMS4022 Commission air and water systems

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPMS4022A Commission air and water systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to test and commission air and water heating and cooling systems.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|--|
| 1 Prepare for work. | 1.1 Obtain current authorised information, plans and specifications. |
| | 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements and sustainability principles. |
| | 1.3 Select and check the serviceability of appropriate tools, |

- equipment and personal protective equipment (PPE).
- 1.4 Prepare work area to support an efficient testing and commissioning process.
- 2 Determine testing requirements.
 - 2.1 Check equipment performance data against plans, specification requirements and other relevant information.
 - 2.2 Select suitable instruments and associated equipment to measure quantities.
 - 3 Prepare system for balancing.
 - 3.1 Set dampers in the open or specified position and conduct an operational check of system-related fans and ducting according to workplace procedures.
 - 3.2 Energise automatic control devices to provide maximum demand for airflow.
 - 3.3 Check piping system for flow direction and leaks and conduct an operational check of system and related pumps.
 - 3.4 Set all manual and automatic valves in the specified position.
 - 4 Balance, test and commission system.
 - 4.1 Adjust valves or throttling devices to achieve specified water flow ratings.
 - 4.2 Measure air volumes moved by system fans.
 - 4.3 Adjust dampers and terminal devices to achieve specified airflow ratings.
 - 4.4 Set automatic controls and devices to specified settings.
 - 4.5 Test and balance system according to job specification, manufacturer recommendations and sustainability principles and concepts.
 - 4.6 Test and monitor results and document in the format required by job or manufacturer's specification.
 - 4.7 Complete documentation according to workplace

requirements and submit within specified timeframes.

- 5 Restore work area.
 - 5.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
 - 5.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPMS4022A Commission air and water systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPMS4022 Commission air and water systems

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPMS4022A Commission air and water systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by balancing and commissioning:

- an air conditioning system (up to 150 megajoules) for a domestic installation
- a commercial air conditioning system for a structure of at least four floors
- a hydronic water heating system for a structure of at least four floors.

The performance applies to:

- ducting systems for air conditioning, heating or ventilation purposes in buildings Class 1 or 2 with a maximum static pressure of 0.75 kPa and a maximum velocity of 12.5 metres per second
- piping systems conveying heating and chilled water operating at a maximum pressure of 700 kPa or a maximum temperature of 100°C
- systems having a maximum output of 50 kW and total air quantities not exceeding 950 litres per second.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- application of mechanical, hydraulic, electric and electronic principles and safety requirements
- design concepts, tests and performance standards for measuring various water and air systems
- SI system of measurements
- effect of bacteria in water and potential impact on health
- waste management

- operating principles and characteristics of system components used in water and air systems
- performance standards for balancing systems
- processes of commissioning air and water systems
- relevant statutory authorities:
 - Commonwealth government
 - state and territory governments
 - local authorities
- how to access relevant information, including codes and standards
- tools, materials and equipment used to commission air and water heating and cooling systems
- work health and safety (WHS) requirements for commissioning air and water heating and cooling.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPMS4023 Design compressed air systems

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0
- Supersedes and is equivalent to CPCPMS4023A Design compressed air systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design and size compressed air distribution systems and prepare system plans, specifications, testing and commissioning schedules and operation and maintenance manuals.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|--|
| 1 Identify compressed air system requirements. | 1.1 Access and read plans, job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements to determine design and size of compressed air systems. |
| | 1.2 Identify and apply workplace, work health and safety (WHS) and environmental requirements. |
| | 1.3 Determine quantity, location, fixtures and legal points of discharge. |

- | | |
|----------------------------------|--|
| 2 Design and size system layout. | 2.1 Design and size system layout in accordance with relevant manufacturers' instructions, Australian Standards and jurisdictional requirements. |
| | 2.2 Use the proposed design to identify and specify optimal material requirements. |
| | 2.3 Prepare testing and commissioning schedule. |
| | 2.4 Produce operation and maintenance manual. |
| | 2.5 Identify and analyse noise reduction methods and specify suitable methods. |
| | 2.6 Produce final system layout plans according to relevant drawing design standards. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPMS4023A Design compressed air systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPMS4023 Design compressed air systems

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0
- Supersedes and is equivalent to CPCPMS4023A Design compressed air systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- evaluating and documenting design parameters including client, Australian Standards, codes, manufacturers' instructions and jurisdictional requirements for at least two (2) compressed air systems.

The design must include evidence of the application of sustainability principles and concepts, manufacturer and regulatory requirements and identification of electrical hazards.

Design, sizing layouts and plans must include:

- industry standard layouts for compressed air systems
- pipe sizes according to regulations and manufacturers' requirements
- specifications for compressed air systems
- testing and commissioning schedules
- operation and maintenance manuals.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- architectural specifications
- builders' specifications
- owner requirements
- specialist use applications
- cost-benefit analysis which compares the range of suitable treatment and disposal options, materials, system choices, disinfection options, water savings and environmental benefits compared to initial and ongoing maintenance costs
- design and performance requirements for compressed air systems
- relevant manufacturers' requirements, Australian Standards and jurisdictional requirements
- job specifications

- system testing
- commissioning schedule requirements
- operation and maintenance manual information
- tools, materials and equipment used to design, size and document the layout of compressed air systems
- work health and safety (WHS) requirements for designing, sizing and documenting the layout of compressed air systems.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPMS5010 Design steam generation and distribution systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0

Supersedes and is equivalent to CPCPMS5010A Design steam generation and distribution systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design steam generation and distribution systems, including pipe and valve sizing, material selection, and the preparation and specification of documentation for steam distribution systems for a multi-level building with a minimum of 100 beds, such as a hospital, that incorporates a commercial steam-fed laundry.

The role involves interaction with architects, builders, suppliers, clients and relevant planning authorities and requires sound understanding of applicable legislation, standards and codes.

This unit is suitable for experienced tradespeople such as hydraulic design consultants or persons in a supervisory capacity in relation to plumbing services.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Evaluate design parameters.

1.1 Establish scope of work for steam generation and distribution systems.

- 1.2 Determine design requirements from relevant Australian Standards, codes, plans, specifications, manufacturer requirements and client brief.
 - 1.3 Analyse and apply statutory and regulatory requirements and relevant Australian Standards and codes required for the design.
 - 1.4 Apply sustainability principles and concepts throughout the design process.
 - 1.5 Establish performance requirements, considering safety of system users or building occupants.
 - 1.6 Conduct research to outline design parameters.
 - 1.7 Determine factors that contribute to quality, safety and time efficiency.
 - 1.8 Conduct a cost-benefit analysis comparing a range of pipe materials and system designs.
- 2 Plan, size and detail system components.
- 2.1 Plan layout of pipework systems and type and location of fittings and valves.
 - 2.2 Perform pipe size calculations.
 - 2.3 Design and size steam distribution system using calculations and computer software packages.
 - 2.4 Specify steam appliances, calculate steam consumption and size and specify boilers required.
 - 2.5 Detail steam circuits and specify distribution pressures.
 - 2.6 Specify and detail steam trap types and their operation.
 - 2.7 Specify steam injection systems.
 - 2.8 Specify insulation requirements.
 - 2.9 Plan pipe supports and expansion systems.
 - 2.10 Specify approved materials, jointing methods and installation requirements for steam generation and distribution systems.

- 3 Prepare documentation.
 - 3.1 Prepare plans for steam generation and distribution system.
 - 3.2 Prepare specification for steam generation and distribution system.
 - 3.3 Prepare testing and commissioning schedule.
 - 3.4 Produce operation and maintenance manual.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPMS5010A Design steam generation and distribution systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPMS5010 Design steam generation and distribution systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0

Supersedes and is equivalent to CPCPMS5010A Design steam generation and distribution systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting an approved layout for a multi-level building with a minimum of 100 beds, such as a hospital, that incorporates a commercial steam-fed laundry.

The design must:

- meet all regulatory, manufacturer and Australian and New Zealand Standard requirements for steam generation and distribution systems
- incorporate a specification covering all works
- incorporate sustainability principles and concepts.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- common terminology and definitions used in design of steam generation and distribution systems for all classes of building
- manufacturer specifications, including hazards identified in relation to devices and systems used
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
- principles of technology in the design of steam generation and distribution systems
- terms, including relevant Australian Standard and code definitions, manufacturer terms and naming conventions
- statutory and regulatory requirements and relevant Australian Standards and codes
- plans and specifications, and sizing and documenting layout of steam generation and distribution systems for residential, commercial and industrial applications
- principles and properties of steam systems
- types of steam and steam quality

- sustainability principles and concepts
- cost–benefit analysis of steam designs
- performance requirements, including steam generation and consumption and steam and pressure quality established using relevant Australian Standards, codes and manufacturer information.
- use of steam appliances
- types of steam circuits
- steam trap types and their operation
- types of insulation protection and applications.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPMS5011 Design air conditioning and ventilation systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPMS5011A Design air conditioning and ventilation systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit applies to individuals responsible for the evaluation and design of air conditioning and ventilation systems.

The unit requires application of technical skills and knowledge to design, size and document details for complex air conditioning and ventilation systems for residential and commercial applications.

The role may involve interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

The unit requirements are typically carried out by a consultant or person in a supervisory capacity in relation to plumbing services and hydraulics.

It applies to those who design air conditioning on a new project or an existing structure.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, and regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Evaluate design parameters.
 - 1.1 Clarify and establish scope of work for the design of air conditioning and ventilation systems.
 - 1.2 Determine design requirements using relevant Australian standards, codes, plans, specifications, manufacturer instructions and client briefs, including factors that contribute to quality, safety and time efficiency.
 - 1.3 Apply sustainability principles and concepts throughout the design.
 - 1.4 Evaluate user comfort and specific use conditions to calculate psychrometric evaluation and heat loads.
 - 1.5 Evaluate building heat losses.
 - 1.6 Specify distribution requirements for air conditioning and ventilation system applications.
 - 1.7 Evaluate air conditioning and ventilation systems according to given applications.
 - 1.8 Evaluate and interpret mechanical services drawings.
 - 1.9 Evaluate health risks that may arise due to poor maintenance of air conditioning and ventilation systems.
 - 1.10 Specify minimum performance requirements for several different air conditioning and ventilation systems.
 - 1.11 Evaluate the suitability of manufacturer specifications and technical manuals for a range of design applications.
 - 1.12 Carry out research including a desktop study to outline design parameters.
 - 1.13 Consider the safety of system users or building occupants.
- 2 Plan system components.
 - 2.1 Plan appropriate zoning of air conditioning and ventilation systems to comply with performance objectives.
 - 2.2 Specify air conditioning units for optimum performance.
 - 2.3 Specify fan types for a range of applications.
 - 2.4 Plan air diversion systems, including registers, to ensure

- a balanced system.
- 2.5 Plan ventilation and duct work components and specify locations.
 - 2.6 Specify approved materials for planned design.
 - 2.7 Complete plans and drawings using relevant Australian standards, codes, manufacturer installation requirements and drawing symbols.
- 3 Design and size systems.
- 3.1 Calculate volume of air changes per hour from given floor plans and details.
 - 3.2 Specify methods for eliminating health risks from existing or proposed systems, with reference to relevant authority.
 - 3.3 Design and size air conditioning and ventilation systems for the required applications.
- 4 Prepare documentation.
- 4.1 Prepare client brief for the selected design.
 - 4.2 Prepare plans and specifications for of air conditioning and ventilation systems.
 - 4.3 Develop an appropriate checklist, including the formulas required to carry out an air balance to a given specification.
 - 4.4 Prepare a testing and commissioning schedule.
- 5 Test systems.
- 5.1 Evaluate test procedures for air conditioning and ventilation.
 - 5.2 Conduct tests using appropriate testing equipment, ensuring tests are conducted for air pressure, air velocity, air volume, humidity, pitot tubes, sound power levels and temperature.
 - 5.3 Record test results and prepare a report.
 - 5.4 Design, plan and specify adjustments as required.

5.5 Produce an operation and maintenance manual.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPMS5011A Design air conditioning and ventilation systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPMS5011 Design air conditioning and ventilation systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPMS5011A Design air conditioning and ventilation systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout details for an air conditioning and ventilation system for a 10-storey residential building with ground floor commercial premises and basement car park and include:
 - air conditioning units
 - ducting systems
 - controls
 - fans
 - zones.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- methods of determining scope of work by:
 - interpreting plans and specifications
 - reviewing sizing and documenting layout for air conditioning and ventilation systems, including residential and commercial systems
 - analysing new projects or an existing structure being renovated, extended, restored or maintained
- design requirements:
 - architectural plans
 - building specifications
 - fire safety
 - the National Construction Code (NCC)
 - owners
 - tenants

- air-flow requirements and sizing of duct work
- specific use conditions:
 - age and activity of occupants
 - computer requirements
 - food preparation
 - smoke exhaust
 - wet-bulb and dry-bulb temperature and humidity
- psychrometric evaluation:
 - absolute, specific and relative humidity
 - air composition
 - air properties:
 - density
 - expansion coefficient
 - kinematic viscosity
 - Prandtl number
 - specific heat
 - temperature
 - thermal conductivity
- altitude, density and volume
- determination of the air condition using a psychrometric or Mollier chart, showing:
 - dewpoint temperature
 - dry-bulb temperature
 - enthalpy
 - humidity ratio
 - relative humidity
 - specific volume
 - wet-bulb temperature
- assessment of factors affecting heat load:
 - building materials
 - insulation
 - number of personnel
 - number of windows
 - room dimensions
 - usage
 - weather effects
 - using:
 - calculations and computer software systems
 - heat load calculation methods and formulas
- building heat losses:
 - construction materials

- insulation materials
- maintaining plenum
- occupancy
- room sizes
- legislation, standards and other relevant documentation according to Commonwealth, state and territory legislation and regulations relating to:
 - growth and distribution of Legionella pneumophila bacteria and other water and airborne infectious bacterial agents
 - handling of materials, including hazardous materials and substances
 - hazard control
 - organic and inorganic contaminants
- quality assurance requirements, including:
 - AS 1100 Technical drawing materials
 - AS/NZS 1668 The use of ventilation and air-conditioning in buildings Set
 - AS/NZS ISO 817:2016 Refrigerants – Designation and safety classification
 - AS/NZS 5149 Refrigerating systems and heat pumps – Safety and environmental requirements - Parts 1 to 4
 - AS/NZS 3666 Air-handling and water systems of buildings microbial control - Parts 1 to 4
 - Environment Protection Authority (EPA)
 - internal company quality assurance policy and risk management strategy
 - International Standards Organisation (ISO)
 - site safety plan
 - workplace operations and procedures
- specification and operational manual information:
 - commissioning and testing
 - components installation
 - fittings
 - manufacturer specifications, literature and data
 - materials
 - pumps
 - systems
 - valves
- specification:
 - air-flow requirements
 - equipment selection
 - fire safety
 - jointing
 - manufacturer requirements
 - materials

- work health and safety (WHS)
- specialised components
- support
- testing
- workmanship
- plans:
 - axonometric
 - cross-sections
 - details
 - elevations
 - isometrics
 - schematics
 - sections
- plans produced by:
 - computer generation
 - drawing equipment
- design and sizing detail:
 - cost
 - materials and quality of work
 - milestones
 - nominated subcontractors
 - provision of on-site facilities and site access
 - quality assurance
 - space allowances
 - standard procedures
 - work schedules
- design parameters:
 - client requirements
 - legislative requirements
 - WHS requirements
 - user requirements in relation to zoning
 - reference to calculations, tables, regulations and manufacturer specifications
- methods of applying sustainability principles and concepts:
 - selecting appropriate material to ensure minimal environmental impact
 - efficient use of material
 - efficient energy usage
- tests and testing equipment for:
 - air pressure
 - air velocity
 - air volume

- humidity
- pitot tubes
- sound power levels
- temperature
- air flow
- climate control
- defect inspection
- performance quality assurance (QA) audit
- commissioning schedule information:
 - acoustic performance
 - balancing
 - system certification
 - check for foreign material
 - leak check
 - system defects
 - system functions as per design
- operation and maintenance manual information:
 - as installed drawing
 - certification documentation
 - results of commissioning test
 - maintenance schedules
 - manufacturer brochures and technical information
 - regular water quality testing
 - system operation.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPMS5012 Design sound attenuated hydraulic services

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Knowledge Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPMS5012A Design sound attenuated hydraulic services. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design sound attenuated hydraulic services, determine relevant installation details and prepare specifications for a range of residential, commercial and industrial buildings 29 floors in height or greater.

The unit requires application of technical skills and knowledge to evaluate design requirements, plan and detail system components, design and size systems and prepare operational and compliance documentation.

The role involves interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

This unit is suitable for experienced tradespeople such as hydraulic design consultants or persons in a supervisory capacity in relation to plumbing services who work on new or existing sites.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--------------------------------------|---|
| 1 Evaluate design parameters. | 1.1 Establish scope of work for sound attenuated hydraulic services for wide span and high-rise building projects. |
| | 1.2 Determine design requirements from relevant Australian standards, codes, plans, specifications and the client brief. |
| | 1.3 Identify sound transmission categories and levels from relevant acts, codes and standards and evaluate for the relevant premises. |
| | 1.4 Evaluate sound transmission values of building and structural elements and materials. |
| | 1.5 Analyse and apply the National Construction Code (NCC), statutory and regulatory requirements and Australian standards for the design of sound attenuated hydraulic services. |
| | 1.6 Apply sustainability principles and concepts throughout the design process. |
| | 1.7 Establish performance requirements considering safety of system users or building occupants. |
| | 1.8 Interpret manufacturer requirements and trade and technical manuals to comply with design parameters. |
| | 1.9 Conduct research to outline design parameters. |
| | 1.10 Determine factors that contribute to quality, safety and time efficiency. |
| | 1.11 Conduct cost-benefit analysis comparing a range of pipe materials and system designs. |
| 2 Plan and detail system components. | 2.1 Identify and analyse causes of noise generation in hydraulic services. |
| | 2.2 Plan layout of sound-attenuated pipework systems. |
| | 2.3 Perform system calculations for a range of sound attenuated hydraulic services. |

- 2.4 Attenuate sound for pumped hydraulic systems.
 - 2.5 Plan pipe supports for a range of applications.
 - 2.6 Specify approved materials and installation requirements for sound attenuated hydraulic services.
- 3 Design and size systems.
- 3.1 Design and size sound attenuated hydraulic services for a range of applications.
 - 3.2 Identify and document material combinations to achieve sound attenuation requirements.
 - 3.3 Attenuate sound for pump installations.
 - 3.4 Design and evaluate sound attenuated hydraulic services using calculations and computer software packages.
- 4 Prepare documentation.
- 4.1 Prepare a client brief for the preferred design.
 - 4.2 Prepare plans and specifications for a range of sound attenuated hydraulic services.
 - 4.3 Prepare reports on sound attenuated hydraulic services for a range of applications.
 - 4.4 Prepare testing and commissioning schedule.
 - 4.5 Produce operation and maintenance manual.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPMS5012A Design sound attenuated hydraulic services.

Assessment Requirements for CPCPMS5012 Design sound attenuated hydraulic services

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Knowledge Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPMS5012A Design sound attenuated hydraulic services. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing an approved sound attenuated system for an approved sanitary plumbing system and a domestic drinking water system installation incorporating a pumping system to a building 29 floors in height or greater.

The design must include:

- clipping details
- pipe enclosures details
- insulation of pipework details
- vibration elimination method details
- documenting a hydraulic works specification for the above design including:
 - clipping procedures and products to be used
 - pipe enclosure and duct work requirements relating to sound attenuation
 - pumping details including sound attenuation methods, vibration methods and products
 - pipe insulation details and products to be used
 - sound attenuated hydraulic services calculations for the design.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- application of relevant Australian standards and codes, the National Construction Code (NCC), manufacturer specifications, and other relevant standard operating procedures (SOPs) relevant to the sector

- industry terminology and definitions used in the design of sound attenuated hydraulic services for all classes of building
- drafting principles
- design principles and concepts
- relevant quality assurance requirements
- relevant Environment Protection Authority (EPA) requirements
- sustainability principles and concepts
- nature of materials used and effects of performance under various conditions
- principles of technology in the design of sound attenuated hydraulic services
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
- cost-benefit analysis considerations
- noise rating of habitable areas, including compliance requirements
- types of noise generation:
 - applications of system calculations:
 - sound criteria for habitable rooms
 - noise insulation characteristics of materials
 - sound transmission values of plumbing pipework and building materials
- types of pumped hydraulic systems
- pipe supports cover fixings that do not impinge on sound attenuation of the hydraulic service:
 - materials for sound attenuated hydraulic services:
 - commissioning schedule information
- operation and maintenance manuals.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPMS5013 Design hydronic heating and cooling systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Performance Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPMS5013A Design hydronic heating and cooling systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design hydronic heating and cooling systems, determine relevant installation details and prepare system specifications for residential and commercial buildings with at least three split levels and incorporating a roof top plant room and under croft level.

The role involves interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

This unit is suitable for experienced tradespeople such as hydraulic design consultants or persons in a supervisory capacity in relation to plumbing services on a new or existing site.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Evaluate design parameters.
 - 1.1 Establish scope of work for hydronic heating and cooling systems using codes, plans, specifications manufacturer requirements and client brief.
 - 1.2 Determine design requirements from relevant Australian standards, codes, plans and specifications.
 - 1.3 Analyse and apply statutory and regulatory requirements and relevant Australian standards and codes for the design of hydronic heating and cooling systems.
 - 1.4 Apply sustainability principles and concepts throughout the design process.
 - 1.5 Establish performance requirements considering safety of system users or building occupants.
 - 1.6 Conduct research to outline design parameters.
 - 1.7 Determine factors that contribute to quality, safety and time efficiency.
 - 1.8 Conduct cost-benefit analysis to compare a range of pipe materials and system designs.

- 2 Plan and detail system components.
 - 2.1 Plan layout of pipework systems including type and location of fittings and valves.
 - 2.2 Perform pipe size requirement calculations for a range of applications according to regulations and manufacturer requirements.
 - 2.3 Specify system components and circuits.
 - 2.4 Detail pump and compressor systems.
 - 2.5 Specify distribution flows, velocities and pressures for a range of applications.
 - 2.6 Specify insulation for the application.
 - 2.7 Plan pipe supports for a range of applications.
 - 2.8 Specify approved materials, jointing methods and installation requirements for hydronic heating and cooling systems.
 - 2.9 Provide allowance for expansion and contraction.

- | | | | |
|---|--------------------------|-----|---|
| 3 | Design and size systems. | 3.1 | Design hydronic systems and circuits for a range of applications. |
| | | 3.2 | Design and size hydronic systems using calculations and computer software packages. |
| | | 3.3 | Design and size manifold distribution systems for hydronic systems. |
| | | 3.4 | Design and size pumps associated with hydronic systems. |
| 4 | Prepare documentation. | 4.1 | Prepare a client brief for the preferred design. |
| | | 4.2 | Prepare plans and specifications for a range of hydronic heating and cooling systems. |
| | | 4.3 | Prepare testing and commissioning schedule. |
| | | 4.4 | Produce an operation and maintenance manual. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

CPCPPS5000 Design gas bulk storage systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Element and Performance Criteria 2.9 rewritten for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPPS5000B Design gas bulk storage systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design gas bulk storage systems for residential, commercial and industrial buildings.

The unit covers determining installation requirements, preparing plans and system specifications, producing testing and commissioning schedules and creating maintenance and operation manuals.

The role may involve interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

This unit applies to experienced people such as hydraulic design consultants, plumbers or persons in a supervisory capacity who work in plumbing services on a new or existing site.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Evaluate design parameters.
 - 1.1 Establish scope of work for gas bulk storage systems.
 - 1.2 Establish system performance requirements.
 - 1.3 Determine design requirements from plans, specifications and client brief.
 - 1.4 Review and analyse statutory and regulatory requirements and Australian and New Zealand Standards for the design of gas bulk storage systems.
 - 1.5 Conduct research, including a desktop study to identify a range of system options.
 - 1.6 Interpret manufacturer requirements and trade and technical manuals for installing gas bulk storage systems.
 - 1.7 Conduct a cost-benefit analysis to compare a range materials and system designs.

 - 2 Plan and detail system components.
 - 2.1 Determine layout of a liquefied petroleum gas (LPG) bulk storage installation according to regulatory authorities.
 - 2.2 Prepare site plans for bulk installations, including layout of pipework systems.
 - 2.3 Specify fire protection systems according to Australian and New Zealand standards and provide detail of deluge systems.
 - 2.4 Plan and detail control valves and fittings.
 - 2.5 Analyse and locate content gauges according to code requirements and specify meters and regulators.
 - 2.6 Evaluate and specify vaporisers and calculate vaporisation rates.
 - 2.7 Perform system calculations for a range of applications according to regulations and manufacturer requirements.
 - 2.8 Determine pipe fixings for a range of applications.
 - 2.9 Specify approved materials, jointing methods and installation requirements for gas bulk storage systems.

- | | |
|----------------------------|---|
| 3 Design and size systems. | 3.1 Design complex gas bulk storage systems using plans and details of system components and established design parameters. |
| | 3.2 Design a range of suitable system approaches. |
| | 3.3 Design and size systems using computer software packages. |
| 4 Prepare documentation. | 4.1 Prepare system plans. |
| | 4.2 Prepare system specifications. |
| | 4.3 Prepare system testing and commissioning schedule. |
| | 4.4 Produce operation and maintenance manual. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPPS5000B Design gas bulk storage systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPPS5000 Design gas bulk storage systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Element and Performance Criteria 2.9 rewritten for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPPS5000B Design gas bulk storage systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- evaluating and documenting design parameters for a range of gas bulk storage systems
- planning and detailing system components, including:
 - meters
 - pipes
 - regulators
 - valves
 - vaporisers
- designing a deluge system
- designing and sizing gas bulk storage systems using appropriate software.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- common terminology and definitions used in design of gas bulk storage systems for all classes of building
- drafting principles
- nature of materials used and effects of performance under various conditions such as:
 - minimum safe operating temperature
 - minimum safe operating pressure
 - maximum safe operating pressure
 - maximum permissible loading on supports
- principles of technology in the design of gas bulk storage systems

- requirements of state regulatory authorities, Australian Standards and manufacturer specifications, including hazards identified in relation to devices and systems used
- workplace safety requirements, including relevant statutory regulations, codes and standards
- scope of work:
 - interpretation of plans and specifications
 - principles of operation of various types of LPG components and fault conditions in LPG components
 - sizing and documenting layout of gas bulk storage installations including fire protection systems such as:
 - chemical injection
 - extinguishers
 - hose reels
 - hydrants
 - monitors
 - portable and fixed types of firefighting equipment
 - spray systems
- design requirements:
 - architectural specifications
 - builder specifications
 - owner requirements
 - specialist gas use applications
- cost-benefit analysis
- statutory and regulatory requirements and Australian and New Zealand Standards:
 - Acts, regulations and local and state government policies, including group and strata titling
 - AS/NZS1596 The storage and handling of LP gas
 - AS/NZS 2430.3 Classification of hazardous areas Examples of area classification - Flammable gases
 - AS/NZS 5601.1 Gas installations - General installations
 - National Construction Code (NCC)
- manufacturer information:
 - pump tables
 - sizing tables
 - specifications
 - technical and trade manuals
- operational and safety requirements established using Australian and New Zealand Standards and local and state authority plans
- layout of pipework system considerations:
 - not unduly affecting building integrity and aesthetic appeal
 - applying principles of economy, serviceability, durability and fit for purpose

- control valves:
 - applications of valves and code requirements for installation
 - emergency shutdown valves
 - excess flow valves
 - hydrostatic relief valves
 - individual valve types
 - over pressure shut off devices
- types of fittings:
 - bends
 - inspection openings
 - junctions
 - meters
 - reflux valves
 - staged regulators
 - traps
 - vaporisers
- pumps and compressors
- meters:
 - mass flow
 - positive displacement
 - turbine
- system calculations:
 - determination of flow and appliance loadings
 - interpretation of design charts and tables
 - pipe sizing calculations
- pipe fixings:
 - anchors
 - bedding
 - bracket spacing
 - concrete support
 - corrosion protection
 - cover
 - hanging brackets
 - material requirements
 - saddles
 - wall and ceiling brackets
- materials:
 - concrete
 - copper
 - fittings and valves

- high density polyethylene (HDPE)
- measures to prevent the spread of fire
- jointing methods:
 - brazing
 - mechanical joints
 - solvent cement welding
 - threading
- installation requirements:
 - bedding
 - clipping
 - concrete support
 - installation details
 - jointing requirements
 - level of workmanship
- types of plans:
 - axonometrics
 - cross-sections
 - details
 - elevations
 - isometrics
 - sections
 - schematics produced using:
 - computer generation
 - drawing equipment
- specification:
 - clipping
 - details of specialised components
 - jointing
 - manufacturer requirements
 - materials
 - valves
 - workmanship
- testing for:
 - flow testing
 - leak check
 - vaporisation rate check
- commissioning schedule requirements:
 - flow testing
 - leak check
 - vaporisation rate check

- inclusions required in operation and maintenance manuals.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPPS5001 Design industrial gas systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPPS5001B Design industrial gas systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design industrial gas fuel systems including the design of valve trains, interlocks, pipework and equipment in compliance with regulatory requirements.

The unit covers determining installation requirements, preparing plans and system specifications, producing testing and commissioning schedules and creating operation and maintenance manuals.

The role may involve interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation including work health and safety (WHS).

This unit is suitable for experienced tradespeople such as hydraulic design consultants or persons in a supervisory capacity in relation to gas and plumbing services.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Evaluate design

1.1 Establish scope of work for industrial gas systems.

- parameters.
- 1.2 Establish system performance requirements.
 - 1.3 Determine design requirements from plans, specifications and client brief.
 - 1.4 Review and analyse statutory and regulatory requirements and Australian and New Zealand Standards for the design of industrial gas systems.
 - 1.5 Conduct research including a desktop study to identify a range of system options.
 - 1.6 Interpret manufacturer requirements and trade and technical manuals for industrial gas systems.
 - 1.7 Determine factors that contribute to quality, safety and time efficiency.
 - 1.8 Conduct a cost-benefit analysis to compare a range materials and system designs.
- 2 Plan and design system components.
- 2.1 Plan layout of pipework systems including type and location of fittings and valves.
 - 2.2 Plan and specify valve trains for a range of industrial gas installations.
 - 2.3 Plan and detail interlocks and accessories and analyse, select and locate components.
 - 2.4 Select methods of protection from combustion air systems, harsh environments, heat and vibration.
 - 2.5 Specify and design air systems, burner systems and controls, appliances and closed loop systems.
 - 2.6 Detail remote filling systems and pipework and design.
 - 2.7 Perform system calculations for a range of industrial gas installations.
 - 2.8 Specify approved materials, jointing methods, pipe fixings and installation requirements.
 - 2.9 Design and size industrial gas systems for a range of applications.

- 3 Prepare documentation.
 - 3.1 Prepare system plans.
 - 3.2 Prepare system specifications.
 - 3.3 Prepare system testing and commissioning schedule.
 - 3.4 Produce operation and maintenance manual including information on how to correctly and safely maintain the system.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPPS5001B Design industrial gas systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPPS5001 Design industrial gas systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPPS5001B Design industrial gas systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- planning, detailing, designing and sizing three of the following industrial gas systems:
- drying and treatment of solvents
- specialist atmospheres
- heat exchanger transfers
- air heating

and include the following components in each system design:

- burners
- controls
- regulators
- gas piping systems operating at greater than 200 KPa
- gas tightness testing for piping volumes greater than 30 litres
- appliances that include solvent or dust atmospheres
- dual fuel appliances
- flue and exhaust requirements for forced draught burners
- ensuring the systems:
 - meet all regulatory, manufacturer and Australian and New Zealand Standard requirements
 - are completed to client specifications
 - are presented in a professional manner using computer aided design and word-processing programs.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- Australian Standards, codes, statutory and regulatory requirements:
 - AS/NZS 5601.1 Gas installations - General installations

- AS/NZS1596 The storage and handling of LP gas
- AS 3814 Industrial gas-fired appliances
- AS 1375 Industrial fuel fired appliances
- AS 61508 Functional safety
- AS 31000 – Risk management
- National Gas Law (NGL)
- National Construction Code (NCC)
- Acts, regulations and local and state government policies, including group and strata titling
- manufacturer specifications, including hazards identified in relation to devices and systems used
- other codes or standard operating procedures
- common terminology, symbols and definitions used in the design of industrial gas systems
- principles of technology in the design of industrial gas systems
- workplace safety requirements, including relevant statutory regulations, codes and standards
- cost-benefit analysis
- inclusions for establishing scope of work:
 - interpreting plans and specifications
 - sizing and documenting layout of industrial gas systems:
 - characteristics
 - compatibility
 - dimensions
 - location
 - patterns
 - quantities
 - sizes
 - surfaces
 - types of product and service
- design requirements:
 - architectural specifications
 - builder specifications
 - owner requirements
 - specialist use applications
- manufacturer requirements:
 - material specifications
 - pump tables
 - sizing tables
 - technical and trade manuals
- types information collected during desktop study for design purposes:
 - council plans

- developer plans
- applications
- architectural and building plans
- other reports as available
- performance requirements including pipe grades, cover, flow conditions and discharge requirements, established using Australian and New Zealand Standards and local authority plans
- layout of pipework systems:
 - principles of economy, serviceability and durability
 - not unduly affecting building integrity and aesthetic appeal
- fittings and valves:
 - meters
 - regulators
 - relief valves
- valve trains:
 - analysing the operation of valve components
 - sizing and selecting components using manufacturer data
- system calculations to determine:
 - explosion relief
 - purge times
 - flow and consumption
 - information in design charts and tables
 - pipe sizing
 - operating pressures greater than 200 KPa
 - expansion and anchorage provisions for pipework
 - overpressure protection systems
- materials:
 - copper (Cu)
 - fittings and appliances including measures to prevent the spread of fire
 - high density polyethylene (HDPE)
- jointing methods:
 - brazing
 - gluing
 - mechanical joints
 - solvent cement welding
 - threading
- pipe fixings:
 - anchors
 - bracket spacing
 - corrosion protection

- hanging brackets
- material requirements
- saddles
- wall and ceiling brackets
- installation requirements:
 - clipping
 - installation details
 - jointing requirements
 - level of workmanship.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPPS5002 Design gas reticulation systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPPS5002B Design gas reticulation systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design and size gas reticulation systems, including determining material, placement and ventilation requirements.

The unit also covers the analysis and interpretation of relevant gas codes and standards, the preparation of documentation for testing and commissioning and creating associated operation and maintenance manuals.

The role involves interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

This unit applies to experienced people such as hydraulic design consultants and plumbers or persons in a supervisory capacity who work in plumbing services on new or existing sites.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Evaluate design parameters.

1.1 Establish scope of work for gas reticulation systems.

1.2 Establish system performance requirements.

- 1.3 Determine design requirements from plans, specifications and client brief.
 - 1.4 Review and analyse statutory and regulatory requirements and Australian and New Zealand Standards for the design of gas reticulation systems.
 - 1.5 Conduct research, including a desktop study to identify a range of system options.
 - 1.6 Interpret manufacturer requirements and trade and technical manuals for gas reticulation systems.
 - 1.7 Conduct a cost-benefit analysis to compare materials and system designs.
- 2 Plan and detail system components.
- 2.1 Plan layout of pipework systems including the type and location of fittings and valves.
 - 2.2 Calculate pipe sizes for a range of applications.
 - 2.3 Specify ventilation and flue requirements of applications.
 - 2.4 Conduct gas metering and measurement of gas consumption.
 - 2.5 Detail distribution pressures and specifications of regulators and appliances for applications.
 - 2.6 Design and detail cylinder and tank systems.
 - 2.7 Specify safety, ignition, thermostat and gas control devices in compliance with relevant standards and codes.
 - 2.8 Plan pipe fixings for applications.
 - 2.9 Specify approved materials, jointing methods and installation requirements for gas reticulation systems.
- 3 Design and size systems.
- 3.1 Design and size range of gas reticulation systems.
 - 3.2 Design and size pressure loss through pipework, valves and meters.
 - 3.3 Design and size ventilation systems for gas systems and appliances.

- 3.4 Design and layout plantroom containing liquefied petroleum gas (LPG) appliances.
- 4 Prepare documentation.
 - 4.1 Prepare plans for gas reticulation systems.
 - 4.2 Prepare specification for gas reticulation systems.
 - 4.3 Prepare testing and commissioning schedule.
 - 4.4 Produce operation and maintenance manual.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPPS5002B Design gas reticulation systems.

Assessment Requirements for CPCPPS5002 Design gas reticulation systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPPS5002B Design gas reticulation systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- evaluating and documenting design parameters for at least two gas reticulation systems, including:
 - preparing and producing a plan for layout of gas reticulation systems using appropriate software.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- common terminology and definitions used in design of gas reticulation systems for all classes of building
- principles of technology used in design of gas reticulation systems
- requirements of state regulatory authorities, Australian Standards and manufacturer specifications, including hazards identified in relation to devices and systems
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
- scope of work:
 - interpretation of plans and specifications
 - sizing and documenting layout of gas reticulation systems for applications, including residential, commercial and industrial
 - new projects or existing structures being renovated, extended, restored or maintained
- design requirements:
 - architectural specifications
 - builder specifications
 - owner requirements
 - specialist use applications
- cost-benefit analysis

- statutory and regulatory requirements and Australian and New Zealand Standards:
 - Acts, regulations and local and state government policies, including group and strata titling
 - AS/NZS 1596 The storage and handling of LP gas
 - AS/NZS 5601.1 Gas installations - General installations
 - National Construction Code (NCC)
 - gas utility and supplier information and requirements
 - industry standards
- requirements from manufacturers:
 - material specifications
 - pump tables
 - sizing tables
 - technical and trade manuals
- desktop study including collection and interpretation of existing data for design purposes:
 - architectural and building plans
 - council plans
 - developer plans
 - applications
 - reports as available
- layout of pipework systems:
 - have principles of economy, serviceability, durability and fit for use applied
 - not unduly affect building integrity and aesthetic appeal
- fittings and valves:
 - bends
 - couplings
 - regulators
 - tees
 - unions
- calculations for:
 - energy
 - gas volume
 - pressure
 - sizing
 - storage
- ventilation and flue requirements which must include appliance flue design and ventilation requirements according to standards, regulations and gas authorities' requirements
- specifications of regulators:
 - adjustment procedures of regulators
 - excessive pressure protection types of regulators
 - gas regulation method

- identification, analysis and documentation of regulator faults
- principles of operation
- selection and installation requirements
- sizing of regulators
- types of gas regulators
- specifications of appliances:
 - commercial appliances
 - components
 - construction of the appliance
 - domestic appliance design
 - electronic controls
 - industrial appliances
- design of cylinder and tank systems based on:
 - anticipated use
 - appropriate time period between refilling
 - gas storage requirements calculations
- pipe fixings:
 - anchors
 - bracket spacing
 - corrosion protection
 - cover
 - hanging brackets
 - material requirements
 - saddles
 - wall and ceiling brackets
- materials:
 - copper (Cu)
 - fittings and fixtures
 - galvanised steel
 - polyethylene (PE)
 - unplasticised polyvinyl chloride (uPVC)
- jointing methods:
 - brazing and threading
 - gluing
 - mechanical joints
 - rubber ring
 - solvent cement welding
- installation requirements:
 - clipping, bedding and installation detail

- installation requirements for mobile, marine installation and portable appliances (high and low-pressure)
- jointing requirements
- level of workmanship
- plans:
 - axonometrics
 - cross-sections
 - details
 - elevations
 - sections
 - isometrics
- schematics which may be produced using:
 - computer generation
 - drawing equipment
- specification:
 - appliances
 - bedding
 - clipping
 - details of specialised components
 - jointing
 - manufacturer requirements
 - materials
 - valves
 - workmanship
- testing for:
 - bubble leak
 - electronic gas leak detection
 - flow
 - inspection checklist
 - pressure
 - quality assurance (QA) audit
- commissioning schedule information:
 - checking for burrs and obstructions
 - commissioning appliances
 - confirming fit for purpose
 - purging system
 - removing contaminants
- information for operation and maintenance manuals:
 - check for blockages
 - leak detection

- regular inspection
- regular maintenance requirements.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPPS5014 Locate and maintain piping systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Performance Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPPS5014A Locate and maintain piping systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to locate and maintain piping systems.

The unit includes a range of applications including pipe freezing equipment and procedures, sewer and drain camera equipment and procedures, under-road boring equipment and procedures, robotic sewer repair, chemical grout systems and procedures and high-pressure drain cleaning equipment and procedures.

The unit applies to consultants or supervisors in plumbing services and hydraulics on new or existing sites.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|-------------------------------|--|
| 1 Evaluate design parameters. | 1.1 Establish scope of work for locating and maintaining hydraulic and plumbing systems. |
|-------------------------------|--|

- 1.2 Determine relevant design requirements from relevant Australian standards, codes, plans, specifications and in accordance with work health and safety (WHS) and environmental requirements.
 - 1.3 Identify and plan tasks in conjunction with others involved in or affected by the work and statutory and regulatory authorities' requirements.
 - 1.4 Evaluate impact of works on buildings and structural elements and underground services.
 - 1.5 Analyse and apply the National Construction Code (NCC), statutory and regulatory requirements and Australian standards for the scope of works.
 - 1.6 Apply sustainability principles and concepts throughout the design process.
 - 1.7 Establish performance requirements considering safety of system users or building occupants.
 - 1.8 Interpret manufacturer requirements, trade and technical manuals to comply with design parameters.
 - 1.9 Conduct cost-benefit analysis comparing a range of pipe materials and system designs.
- 2 Plan and assess systems.
- 2.1 Identify and analyse applications of maintaining hydraulic and plumbing systems.
 - 2.2 Specify approved materials, methods and installation requirements for maintaining hydraulic services.
- 3 Prepare documentation.
- 3.1 Prepare a client brief for the preferred system of maintaining hydraulic and plumbing systems.
 - 3.2 Prepare plans and specifications for a range of scenarios relating to maintaining hydraulic and plumbing systems.
 - 3.3 Prepare testing and commissioning schedule.
 - 3.4 Produce operation and maintenance manual.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPPS5014A Locate and maintain piping systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPPS5014 Locate and maintain piping systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Performance Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPPS5014A Locate and maintain piping systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- preparing a client brief, plans and specifications, testing and commissioning schedule and producing an operation and maintenance manual for each of the following:
 - pipe-freezing of an existing 100 mm copper water mains requiring a new 100 mm tee connection
 - a sewer line inspection using closed-circuit television (CCTV) drain camera equipment through a sewer inspection point and a sewer manhole and the removal of a blockage with high-pressure drain cleaning equipment
 - use of under-road boring equipment to install a 150 mm sewer line across a local council road containing a minimum of two lanes in width
 - an approved trenchless robotic and chemical repair system to incorporate a straight-line section of 100 mm sewer pipe and a 100 mm sewer junction repair.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- common terminology and definitions used in the specification of piping system maintenance procedures
- nature of materials used and effects of performance under various conditions
- requirements of state and territory regulatory authorities, Australian Standards and manufacturer specifications, including hazards identified in relation to devices and systems used
- applications for pipe and servicing locating equipment
- uses and limitations of pipe-freezing equipment

- uses and limitations of sewer and drain cameras
- uses and limitations of under-road boring equipment
- uses and limitations of trenchless, robotic sewer repair and chemical grout systems including re-lining
- uses and limitations of high-pressure drain cleaning equipment
- safety procedures relating to maintaining hydraulic and plumbing systems.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPPS5015 Inspect plumbing and drainage systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPPS5015B Inspect plumbing and drainage systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to conduct inspections of hydraulic systems for a range of residential, commercial and industrial buildings to ensure compliance with Australian and New Zealand Standards and local authority and operational performance requirements.

This unit covers requirements for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and hydraulics on a new or existing site.

Inspections of hydraulic systems must comply with Australian and New Zealand Standards and local authority and operational performance requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Specify local authority inspection requirements. | 1.1 Specify local authority inspection requirements for hydraulic systems according to legislation and standards. |
| | 1.2 Identify and specify approved materials for different applications. |
| | 1.3 Specify installation requirements complying with |

manufacturer manuals and regulatory requirements.

- | | | | |
|---|--------------------------------|-----|---|
| 2 | Develop inspection procedures. | 2.1 | Develop and document administrative procedures for inspection projects. |
| | | 2.2 | Develop inspection checklists. |
| 3 | Conduct inspections. | 3.1 | Establish effective communication channels with relevant site personnel and stakeholders. |
| | | 3.2 | Plan and detail inspection routes and schedules. |
| | | 3.3 | Identify and apply work health and safety (WHS) guidelines and sustainability principles to inspections and wear appropriate personal protective equipment (PPE). |
| | | 3.4 | Conduct inspection to assess compliance with regulatory requirements and professional workmanship standards. |
| | | 3.5 | Hand sketch onsite as-constructed plans and take measurements. |
| | | 3.6 | Use dispute resolution techniques as required when non-compliance is identified. |
| | | 3.7 | Implement testing procedures. |
| | | 3.8 | Accurately record inspection and testing results. |
| 4 | Prepare reports. | 4.1 | Prepare inspection reports using onsite records, including as-constructed plans. |
| | | 4.2 | Report and detail identified recommendations. |
| | | 4.3 | Produce rectification schedules. |
| 5 | Enforce compliance. | 5.1 | Detail breaches of relevant regulation or standards. |
| | | 5.2 | Issue infringement notices and implement relevant follow-up procedures. |
| | | 5.3 | Implement enforcement action issuing infringement notices in cases of non-compliance. |

- 6 Maintain records.
 - 6.1 Maintain inspection diary.
 - 6.2 Process inspection records according to established administrative procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPPS5015B Inspect plumbing and drainage systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPPS5015 Inspect plumbing and drainage systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPPS5015B Inspect plumbing and drainage systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a person must meet the performance criteria for this unit by:

- conducting a compliance inspection on four different hydraulic systems and prepare a report on each instance to ensure compliance.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- common terminology and definitions used in the design of plumbing and drainage systems
- use of approved materials identified from Australian and New Zealand Standards and effects of performance under various conditions:
 - fixtures
 - fittings
 - pipes
- principles of technology used in the design of hydraulic systems:
 - fire services
 - gas services
 - mechanical services
 - sanitary plumbing and drainage
 - stormwater drainage
 - trade waste
 - water supply
- administrative procedures required for the inspection of hydraulic systems:
 - file management
 - inspection allocation
 - inspection records

- logging inspections
- inspection checklists requirements:
 - approved installation methods
 - authorised materials
 - project section
 - compliance with:
 - Australian and New Zealand Standards
 - distances
 - limitations
 - National Construction Code (NCC)
 - other regulatory requirements
- Inspection reports requirements:
 - defect
 - inspection
 - performance
 - quality assurance
- as-constructed plans including layout of:
 - fire services pipework
 - gas pipework
 - mechanical services pipework
 - sanitary plumbing and drainage pipework
 - stormwater pipework
 - trade waste drainage systems
 - water supply pipework
- effective dispute resolution techniques when non-compliance is identified:
 - active listening techniques
 - non-threatening body language
 - power neutral relationships
 - other recognised dispute avoidance and resolution techniques
- testing procedures:
 - air pressure tests
 - compliance checklist
 - gas leak detection
 - hydrostatic tests
 - mirror tests
 - quality assurance (QA) audit
 - sound testing
- enforcement action implemented in the case of non-compliances:
 - fines
 - legal action

- notification to plumbing licensing body
- penalties
- sustainability principles and concepts:
 - selecting appropriate components and materials
 - choosing efficient products
 - using material efficiently
 - storing and disposing of hazardous material to ensure minimal environmental impact.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPPS5023 Design solar water heating systems

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPPS5023A Design solar water heating systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design efficient cost-effective solar water heating systems for residential, commercial and industrial applications for buildings with a minimum of 29 floors and a wide span, multi-building project, using proprietary components and manufacturer design information.

The role involves interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

This unit applies to people such as hydraulic design consultants, plumbers or persons in a supervisory capacity in plumbing services working on new or existing sites.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|-------------------------------|--|
| 1 Evaluate design parameters. | 1.1 Establish scope of work for solar water heating system design using codes, plans, specifications manufacturer requirements and client brief. |
| | 1.2 Assess locations of solar collectors and evaluate effect of |

- each location on efficiency.
- 1.3 Analyse and identify statutory and regulatory requirements and relevant Australian Standards and codes for the design of solar water heating systems.
 - 1.4 Establish performance requirements considering safety of system users or building occupants.
 - 1.5 Evaluate environmental and community benefits of solar water heating systems.
 - 1.6 Apply sustainability principles and concepts as part of the design process.
 - 1.7 Conduct research including a desktop study to outline design parameters.
 - 1.8 Determine factors that contribute to quality, safety and time efficiency.
 - 1.9 Conduct cost-benefit analysis to compare a range of materials and system designs.
- 2 Plan and detail system components.
- 2.1 Plan layout of pipework systems including type and location of fittings and valves.
 - 2.2 Select and evaluate the configuration and application of a range of proprietary solar heated water systems, materials and valves.
 - 2.3 Perform calculations for solar water heating systems.
 - 2.4 Plan and detail typical configuration of a hydraulic circuit (flow and return) and its components for a pumped-storage solar water heating system.
 - 2.5 Specify water quality and water pre-treatment methods.
 - 2.6 Specify suitable types and levels of insulation for system components and detail a range of methods to protect from freezing and over performance.
 - 2.7 Calculate pipe size, velocity, flow and pressure for a range of applications.
 - 2.8 Plan pipe supports for a range of applications.

- 2.9 Specify approved materials, jointing methods and installation requirements.
 - 2.10 Provide allowance for expansion and contraction.
- 3 Design and size systems.
 - 3.1 Select solar collectors to meet identified installation requirements.
 - 3.2 Design and size solar water heating, solar pre-heat and solar pool and spa heating systems to meet requirements.
 - 3.3 Consider legionella bacteria mitigation design principles in the design of solar water heating systems.
- 4 Prepare documentation.
 - 4.1 Prepare client brief for the preferred design.
 - 4.2 Prepare plans and specifications for solar water heating systems.
 - 4.3 Prepare testing and commissioning schedule.
 - 4.4 Produce operation and maintenance manual.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPPS5023A Design solar water heating systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPPS5023 Design solar water heating systems

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPPS5023A Design solar water heating systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting an approved layout using two methods of solar heated water systems with:
 - one gas-boosted commercial solar system
 - one heat pump-boosted system
- for:
 - a high-rise unit development building to a minimum of 29 floors including sanitary fixtures on each floor level
 - a wide span, multi-building project such as a school, nursing home or university incorporating a solar pre-heat systems and heating systems.

Each project is to include a specification and maintenance manual.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- application of the National Construction Code (NCC) and relevant Australian standards and codes, manufacturer specifications and operating procedures relevant to the sector
- common terminology and definitions used in design of solar water systems
- work health and safety (WHS) requirements, relevant statutory regulations, codes and standards
- cost-benefit analysis
- inclusions for establishing scope of work:
 - interpreting plans and specifications
 - sizing and documenting layout solar water heating systems:
 - characteristics
 - compatibility
 - dimensions

- location
- patterns
- quantities
- sizes
- surfaces
- types of product and service
- design requirements:
 - architectural specifications
 - builder specifications
 - owner requirements
 - specialist use applications
- manufacturer requirements:
 - material specifications
 - pump tables
 - sizing tables
 - technical and trade manuals
- types of information collected during desktop study for design purposes:
 - council plans
 - developer plans
 - applications
 - architectural and building plans
 - other reports as available
- principles of technology used in design of solar water heating systems:
 - solar radiation calculations
 - solar efficiencies
 - sustainability principles and concepts
- installation requirements
- health risks and hazards associated with solar water heating systems
- testing and commissioning schedule
- operation and maintenance manuals.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website -

CPCPPS5024 Conduct a water audit and identify water-saving initiatives

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPPS5024A Conduct a water audit and identify water-saving initiatives. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to conduct water audits in residential buildings with a minimum of 50 units; commercial buildings with a minimum of 20 floors, including a commercial laundry for hospital or nursing home.

This unit also specifies the skills and knowledge required to propose types of water-saving devices that are appropriate where water use reductions are possible.

The role involves interaction with builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

This unit applies to experienced people such as hydraulic design consultants or persons in a supervisory capacity in relation to plumbing services on a new or existing site.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Calculate water use. 1.1 Establish scope of work for conducting water audits.

- 1.2 Identify requirements from relevant Australian Standards, codes, plans, specifications, manufacturer requirements and client brief.
 - 1.3 Apply sustainability principles and concepts throughout water audit process.
 - 1.4 Specify types of flow and pressure-measuring devices including their location and use.
 - 1.5 Conduct flow and pressure tests and measure flows at outlets.
 - 1.6 Compare actual water use to ideal use and calculate the difference.
- 2 Identify excessive water and energy use.
 - 2.1 Implement leak identification processes considering safety of system users or building occupants.
 - 2.2 Measure and evaluate flows against relevant standards and user requirements.
 - 2.3 Evaluate suitability of existing fixtures and fittings against new technology.
 - 2.4 Identify and compare water use times against optimal timing.
 - 2.5 Identify and analyse existing inefficient system conditions.
 - 2.6 Conduct pressure test and identify and compare consequences of high and low pressures to industry standards.
 - 2.7 Evaluate energy saving associated with reduction in water use.
- 3 Evaluate methods to conserve water and energy.
 - 3.1 Identify flow restrictors, sensors, pressure-limiting devices and automatic systems for a range of applications.
 - 3.2 Evaluate alternative processes and practices for optimum water and energy savings.
 - 3.3 Evaluate alternative fixtures and fittings for optimum

- water and energy savings.
- 3.4 Apply rainwater harvesting techniques and processes.
 - 3.5 Design recycling and re-use processes.
 - 3.6 Design water metering strategies to monitor and problem solve water saving systems.
- 4 Report findings.
- 4.1 Conduct a cost-benefit analysis including the investment return period.
 - 4.2 Prepare water and energy audit report.
 - 4.3 Identify and report resulting environmental benefits and water and energy savings.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPPS5024A Conduct a water audit and identify water-saving initiatives.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPPS5024 Conduct a water audit and identify water-saving initiatives

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPPS5024A Conduct a water audit and identify water-saving initiatives. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- conducting a water audit, identifying water-saving initiatives for the following building types:
 - a minimum 50-unit residential building
 - a minimum 20 floor commercial office building incorporating a minimum of one toilet block per floor
 - a commercial laundry in a hospital or nursing home
- documenting and reporting on an audit report for each of the above building types.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- hazards associated with devices and systems used in the hydraulic sector
- installation methods used in hydraulic systems
- nature of materials and effect of their performance in a variety of conditions
- preparation and interpretation of plans and specifications
- requirements of Commonwealth, state or territory regulatory authorities, relevant Australian Standards and codes, manufacturer specifications, National Construction Code (NCC) and other relevant codes, standards and operating procedures
- terminology and definitions used in hydraulic design
- variety of applications of technology principles in design of water and energy-efficient usage systems for all classes of building
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
- performance requirements including maintenance of flow, velocity, pressure and discharge requirements of the client, using relevant Australian Standards, NCC or other relevant codes and standards

- alternative processes and practices for water saving
- rainwater harvesting which must include collection, storage and distribution of rainwater, including the use of tanks and dams
- water and energy audit reports.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website -

CPCPPS5025 Design grey water re-use systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Typographical error corrected in Element 1.7.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPPS5025A Design grey water re-use systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design grey water re-use systems. The unit addresses the collection, treatment, diversion and storage options for the design of grey water re-use systems for wide span and high-rise mixed development building projects.

The role may involve interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

The requirements of this unit are typically carried out by experienced people such as hydraulic design consultants or design engineers.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|-------------------|---|
| 1 Evaluate design | 1.1 Establish scope of work for design of grey water re-use |
|-------------------|---|

- parameters.
- systems for wide span and high-rise building projects.
- 1.2 Establish performance requirements considering the safety of system users or building occupants.
 - 1.3 Determine design requirements from relevant Australian Standards, codes, plans, specifications and client brief.
 - 1.4 Identify potential household or community health and environmental risks and take measures to protect public health that impact the design parameters.
 - 1.5 Apply sustainability principles and concepts as part of the design process.
 - 1.6 Conduct additional research to outline design parameters.
 - 1.7 Interpret manufacturer requirements and trade and technical manuals for grey water re-use systems.
 - 1.8 Conduct cost-benefit analysis for implementing the proposed design.
- 2 Plan and detail system components.
- 2.1 Detail primary, secondary and advanced secondary treatment and tertiary systems.
 - 2.2 Plan layout of pipework systems including type and location of fittings, valves, controls and other system components.
 - 2.3 Design and detail changes to building drainage system and identify inspection requirements.
 - 2.4 Evaluate and detail grey water land application, disposal, diversion, storage and wet weather storage options to identify problems and plan solutions.
 - 2.5 Plan and detail stored and pressurised grey water systems for irrigation, sanitary flushing and other approved uses.
 - 2.6 Plan and detail storage tanks and approved disposal options.
 - 2.7 Calculate pipe size and pump duty and size and detail pumpwell, pump and pump control requirements.
 - 2.8 Evaluate approved materials and jointing methods for grey water re-use systems, design pipe supports and

specify installation requirements.

- | | | | |
|---|--------------------------|-----|---|
| 3 | Design and size systems. | 3.1 | Design grey water re-use systems for residential, commercial and industrial applications which include water treatment and backflow protection of drinking and non-drinking water supply systems. |
| | | 3.2 | Design grey water re-use systems to ensure that the systems can be properly and safely maintained. |
| | | 3.3 | Design and size grey water re-use systems using relevant computer software packages. |
| 4 | Prepare documentation. | 4.1 | Prepare client brief of the proposed design. |
| | | 4.2 | Prepare plans and specifications for grey water re-use systems. |
| | | 4.3 | Prepare testing and commissioning schedule. |
| | | 4.4 | Produce operation and maintenance manual including information on how to properly and safely maintain the system. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPPS5025A Design grey water re-use systems.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPPS5025 Design grey water re-use systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Typographical error corrected in Element 1.7.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPPS5025A Design grey water re-use systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout details of a greywater re-use system for a high-rise mixed development building and a wide span project, including:
 - a specification for both
 - planning and detailing systems components, including:
 - storage tanks
 - system overflow
 - treatment systems
 - piping systems
 - plumbing systems
 - usage systems
- designing and sizing a grey water re-use system.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- approved installation methods
- hazards associated with devices and systems used in the hydraulic sector
- nature of materials and effect of their performance in a variety of conditions
- organisational quality procedures and processes
- principles of technology in the design of grey water re-use systems for residential, commercial and industrial applications to include water treatment and backflow protection of drinking and non-drinking water supply systems

- terminology and definitions used in hydraulic design
- work drawings and specifications
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
- scope of work:
 - interpretation of plans and specifications
 - sizing and documenting layout of grey water re-use systems for residential, commercial and industrial applications to include water treatment and backflow protection of drinking and non-drinking water supply systems
- design requirement:
 - architectural plans
 - building specifications
 - owner requirements
 - pipework identification
 - sizing of pipework
 - backflow protection of drinking and non-drinking water supply systems
 - water treatment
 - specialist water use applications
- health risks:
 - abdominal pain
 - acute enteritis
 - bacillary dysentery
 - chest pain
 - cholera
 - common colds
 - coughing
 - diarrhoea
 - digestive and nutritional disturbances
 - dysentery
 - fever
 - gastroenteritis
 - giardiasis
 - helminthes, including flukes and worms
 - hepatitis
 - hookworm disease
 - infectious hepatitis
 - meningitis
 - muscle aches
 - neurological symptoms, including nervousness and insomnia
 - poliomyelitis

- respiratory infections, such as pneumonia
- restlessness
- salmonellosis (food poisoning)
- taeniasis
- toxoplasmosis
- typhoid fever
- vomiting
- weight loss
- environmental risks:
 - algal blooms
 - excess nutrient loads
 - fish kills
 - oxygen depletion
- measures to protect public health:
 - auditing
 - contact avoidance
 - contact minimisation
 - disinfection and sterilisation
 - education
 - legislation
 - licensing
 - maintenance
 - separation barriers
 - set back distances
 - timing discharges
 - wet weather storage
- cost-benefit analysis comparing:
 - the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project
 - water savings and environmental benefits against initial and ongoing maintenance costs
- national water programs, statutory and regulatory requirements, relevant Australian Standards, and codes:
 - AS/NZS 1546 On-site domestic wastewater treatment units
 - AS/NZS 1547 On-site domestic wastewater management
 - AS/NZS 3500 Plumbing and drainage set
 - AS 2200 Design charts for water supply and sewerage
 - National Construction Code (NCC)
 - Commonwealth, state or territory government policies, including health departments
- manufacturer requirements:

- material specifications
- grey water treatment systems
- pump installation
- pipe sizing
- storage systems
- technical and trade manuals
- information gathered during desktop to support design purposes:
 - architectural and building plans
 - developer plans
 - manufacturer data
 - building applications
 - brochures
 - forms
 - policies
 - reports
- performance requirements including compliance limits for:
 - bacteria levels
 - chlorine levels
 - nutrients
 - pH
 - phosphates
- performance requirements established using relevant Australian Standards, codes and local authority plans:
 - cover
 - discharge
 - flow conditions
 - pipe grades
- layout of pipework systems:
 - drainage systems
 - elevated pipework systems
 - gravity systems
 - pumped and rising mains
 - requirements for irrigation systems
 - requirements for flushing water systems
- stack systems:
 - fully vented
 - fully vented modified
 - single stack
 - single stack modified
 - waste stack

- two-pipe system
- reduced velocity aerator system
- layout of pipe work system design:
 - designing pipework systems to not unduly affect building integrity and aesthetic appeal
 - location of pipework (fire rating of enclosure)
 - demonstrating principles of economy, serviceability, durability and fit for use
- fittings, valves and controls:
 - backflow prevention devices
 - irrigation control systems
 - isolating valves
 - level indicators
 - pump controls
- land application options:
 - surface irrigation
 - subsurface irrigation
 - spray irrigation
- storage tanks:
 - connections
 - containment
 - location
 - material
 - overflow provision
 - pumps
 - sizing
 - support
 - switches
 - valves
 - vermin control
- pipe size and pump duty calculations:
 - calculating pipe sizing
 - calculating pressure and flow requirements
 - determining flow and fixture loadings
 - interpreting design charts and tables
- pump well, pump and pump control requirements:
 - automatic controls
 - capacity
 - corrosion-resistant materials
 - detailing
 - high and low-level water controls and alarms

- inlet and outlet design requirements
- installation and mounting requirements
- macerator requirements
- pump sizing
- pump well sizing
- selection of pump type
- valve requirements
- warning system
- materials:
 - copper (Cu)
 - polypropylene (PP)
 - polybutylene (PB)
 - polyethylene (PE)
 - unplasticised polyvinyl chloride (uPVC)
 - other approved material
- jointing methods:
 - brazing
 - compression joints
 - electrofusion welding
 - mechanical joints
 - solvent cement
 - threading
 - other approved jointing methods
- pipe supports:
 - anchors
 - bedding
 - bracket spacing
 - concrete support
 - corrosion protection
 - manufacturer-recommended specific fixings
 - material requirements
 - provision for expansion
 - saddles
- installation requirements:
 - pipe protection such as:
 - cover
 - corrosion
 - impact
 - fire rating
 - level of workmanship

- manufacturer-recommended specific fixings
- pipe support
- provision for expansion
- serviceability and access
- methods for applying sustainability principles and concepts:
 - selecting appropriate material to ensure minimal environmental impact
 - efficient use of material
 - efficient energy usage/capital outlay comparison
 - local environment consideration
 - water efficiency
 - re-use of greywater
 - consideration of the Green Building Council of Australia rating scheme
- types of plans:
 - axonometrics
 - cross-sections
 - details
 - elevations
 - isometrics
 - sections
 - schematics produced using:
 - computer generation
 - drawing equipment
- specification:
 - backflow prevention
 - flow requirements
 - jointing
 - manufacturer requirements
 - materials
 - residual pressures
 - work health and safety (WHS)
 - specialised components
 - storage
 - support
 - testing
 - valve selection
 - water treatment
 - workmanship
- testing for:
 - air pressure
 - backflow protection

- defect inspection
- drainage inspection
- hydrostatic
- performance:
 - flow
 - pressure
- water quality
- quality assurance (QA) audit
- commissioning schedule information:
 - balancing disposal system
 - flow and pressure adjustments
 - leak check
 - pump settings
 - pressure test
 - safety requirements
 - system certification
 - system flushing
 - system defects
 - system functions as per design
 - system purge
 - valve operation
 - ventilation
 - vermin control
- operation and maintenance manual information:
 - as installed drawings
 - certification documentation
 - land application compliance checks
 - maintenance schedules
 - manufacturer brochures
 - ongoing maintenance requirements
 - pump maintenance
 - regular inspections
 - results of commissioning test
 - safety management system
 - surface ponding checks
 - system detail, setting and operations
 - valve function
 - system operational parameter adjustments and checks:
 - chlorine levels
 - dissolved oxygen

- nitrates
- pH
- phosphates
- suspended solids
- water quality.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPPS5026 Design rainwater collection, storage, distribution and re-use systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPPS5026A Design rainwater collection, storage, distribution and re-use systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design systems for the collection, storage, distribution and re-use of rainwater for drinking and non-drinking uses, including irrigation, toilet flushing and other uses approved by relevant authorities for high-rise mixed development buildings and wide span projects, such as a school or industrial complex.

The role involves interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

The unit requirements are typically carried out by experienced people such as hydraulic design consultants or design engineers.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Evaluate design parameters.

1.1 Establish scope of work for rainwater harvesting systems for wide span and high-rise building projects.

- 1.2 Establish performance requirements considering safety of system users or building occupants.
 - 1.3 Determine design requirements from relevant Australian Standards, codes, plans, specifications and client brief.
 - 1.4 Apply sustainability principles and concepts as part of the design process.
 - 1.5 Analyse potential contamination sources and create design solutions.
 - 1.6 Establish rainfall patterns and required rainwater storage volumes.
 - 1.7 Interpret manufacturer requirements and trade and technical manuals for rainwater harvesting systems.
 - 1.8 Conduct research to outline design parameters.
 - 1.9 Conduct cost-benefit analysis to compare a range of pipe materials and system designs.
- 2 Plan and detail system.
- 2.1 Specify tank type and location.
 - 2.2 Plan layout of pipework systems including type and location of fittings, valves and controls.
 - 2.3 Plan and detail first-flush systems.
 - 2.4 Specify water contamination solutions and filtration systems.
 - 2.5 Calculate pipe size for a range of applications.
 - 2.6 Plan and detail separation of services and backflow prevention devices.
 - 2.7 Specify approved non-contaminating materials and jointing methods for rainwater harvesting and design pipe supports.
 - 2.8 Size and detail pump and ancillary requirements.
 - 2.9 Specify installation requirements.
 - 2.10 Specify water treatment according to state and territory health requirements.

- 2.11 Specify vermin protection according to manufacturer and state and territory requirements.
 - 2.12 Provide allowance for expansion and contraction.
- 3 Design and size systems.
 - 3.1 Design and detail rainwater harvesting systems.
 - 3.2 Design and detail rainwater re-use systems.
 - 3.3 Design and size rainwater harvesting systems using calculations and manufacturer's data sheets.
- 4 Prepare documentation.
 - 4.1 Produce client brief of the preferred design.
 - 4.2 Prepare plans and specifications for a range of rainwater harvesting systems.
 - 4.3 Prepare testing and commissioning schedule.
 - 4.4 Produce operation and maintenance manual.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPPS5026A Design rainwater collection, storage, distribution and re-use systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPPS5026 Design rainwater collection, storage, distribution and re-use systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPPS5026A Design rainwater collection, storage, distribution and re-use systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout details for:
 - a high-rise mixed development building, and
 - a wide span project such as a school or industrial complex
- preparing plans and specifications for each of the above projects and include the following system components:
 - authority connection
 - backflow prevention requirements
 - filters
 - fixtures and fitments
 - piping systems
 - pumps
 - storage
 - water treatment
- documenting the evaluation of design parameters including rainfall, client, regulatory, manufacturer and relevant Australian Standard requirements and storage capacity for each design
- preparing plans and specifications for rainwater harvesting and re-use systems to industry standards.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- common terminology and definitions used in the design of rainwater collection, storage, distribution and re-use
- key features of work plans and specifications

- nature of materials used and effects of performance under various conditions
- organisational quality procedures and processes
- principles of technology in the design of rainwater collection, storage, distribution and re-use for residential, commercial and industrial applications to include water treatment and backflow protection of drinking and non-drinking water supply systems
- terminology and definitions used in hydraulic design
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
- scope of work:
 - interpreting plans and specifications
 - rainfall analysis
 - sizing and documenting layout of rainwater harvesting systems for residential, commercial and industrial applications to include water treatment and backflow protection of drinking and non-drinking water supply systems
- design requirements:
 - architectural plans
 - building specifications
 - owner requirements
 - pipework identification
 - sizing of pipework
 - backflow protection of drinking and non-drinking water supply systems
 - water treatment
 - specialist water use applications
- contamination:
 - bacterial
 - heavy metal
 - inorganic
 - odour
 - organic
 - taste
 - silt
 - viral
 - vermin
- cost-benefit analysis comparisons of:
 - design styles
 - energy costs
 - expected design life
 - labour costs
 - material costs
 - safety factors
 - speed of installation

- suitable materials
- statutory, regulatory requirements and relevant Australian Standards and codes:
 - AS/NZS 3500 Plumbing and drainage set
 - AS 2200 Design charts for water supply and sewerage
 - National Construction Code (NCC)
- manufacturer requirements:
 - material specifications
 - pipe sizing
 - pump installation
 - storage system
 - technical and trade manuals
- information gathered through desktop study to support design purposes:
 - architectural and building plans
 - developer plans
 - manufacturer data
 - building applications
 - brochures
 - forms
 - policies
 - reports
- performance requirements:
 - compliance limits for:
 - bacteria levels
 - nutrients
 - pH
 - silt control
 - vermin protection
 - overflow discharge requirements
 - requirements established using relevant Australian Standards, codes and local authority plans for:
 - cover
 - discharge
 - flow conditions
 - pipe grades
- tank types:
 - concrete
 - fibreglass
 - metal
 - polymer
 - other approved materials

- tank locations:
 - above-ground
 - in-ground
- layout of pipework systems:
 - gravity systems
 - pumped systems
 - designing to not unduly affect building integrity and aesthetic appeal
 - designing to include principles of economy, serviceability, durability and fit for use
- fittings, valves and controls:
 - backflow prevention devices
 - inspection openings
 - irrigation control systems
 - isolating valves
 - level indicators
 - pump controls
- first-flush systems:
 - electronic
 - float-activated
 - mechanical
 - volume-activated
- filtration systems:
 - overflow devices
 - sand
 - screens
 - settlement tanks
 - strainers
- water contamination solutions:
 - disinfection
 - ultraviolet
- pipe size calculations:
 - determination of flow
 - interpretation of design charts and tables
 - pipe sizing calculations
 - reduced level calculations
- materials:
 - copper (Cu)
 - polyethylene (PE)
 - polypropylene (PP)
 - polybutylene (PB)
 - unplasticised polyvinyl chloride (uPVC)

- other approved materials
- jointing methods:
 - brazing
 - compression joints
 - electrofusion welding
 - mechanical joints
 - solvent cement
 - threading
 - other approved jointing methods
- pipe support:
 - anchors
 - bedding
 - bracket spacing
 - concrete support
 - corrosion protection
 - manufacturer-recommended specific fixings
 - material requirements
 - provision for expansion
 - saddles
- pump and ancillary requirements:
 - automatic controls
 - pump duties
 - corrosion-resistant materials
 - level controls and alarms
 - pump selection and pump sizing, based on:
 - flow
 - velocity
 - lift
 - probable simultaneous demands
- installation requirements:
 - level of workmanship
 - manufacturer-recommended specific fixings
 - pipe support
 - provision for expansion
 - serviceability and access
 - pipe protection:
 - cover
 - corrosion
 - impact
 - fire rating

- rainwater re-use systems:
 - roof water collection
 - water treatment
 - pumps
 - approved drinking and non-drinking use
 - storage:
 - tanks
 - open in-ground (dam)
- methods for applying sustainability principles and concepts:
 - selecting appropriate material to ensure minimal environmental impact
 - efficient use of material
 - efficient energy usage/capital outlay comparison
 - local environment consideration
 - water efficiency
 - re-use of greywater
 - consideration of the Green Building Council of Australia rating scheme
- types of plans:
 - axonometrics
 - cross-sections
 - details
 - elevations
 - isometrics
 - sections
 - schematics produced using:
 - computer generation
 - drawing equipment
- specification:
 - backflow prevention
 - flow requirements
 - jointing
 - manufacturer requirements
 - materials
 - residual pressures
 - work health and safety (WHS)
 - specialised components
 - storage
 - support
 - testing
 - valve selection
 - water treatment

- workmanship
- testing for:
 - air pressure
 - backflow protection
 - defect inspection
 - drainage inspection
 - hydrostatic
 - performance:
 - flow
 - pressure
 - water quality
 - quality assurance (QA) audit
- commissioning schedule information:
 - balancing disposal system
 - flow and pressure adjustments
 - leak check
 - pressure test
 - pump settings
 - safety requirements
 - system certification
 - system defects
 - system flushing
 - system functions as per design
 - system purge
 - valve operation
 - ventilation
 - vermin control
- operation and maintenance manual information:
 - as installed drawings
 - certification documentation
 - maintenance schedules
 - manufacturer brochures
 - ongoing maintenance requirements
 - pump maintenance
 - regular inspections
 - results of commissioning test
 - safety management system
 - system detail, setting and operations
 - valve function
 - system operational parameter adjustments and checks:

- disinfection
- first flush devices
- pH
- silt control
- suspended solids
- water quality.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPPS5027 Design irrigation systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPPS5027A Design irrigation systems.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design irrigation systems to relevant Australian Standards, codes, the National Construction Code (NCC) and other relevant legislative requirements to meet occupier needs and industry standards.

This unit covers requirements for work in a consultancy or supervisory capacity in relation to the design of irrigation systems for residential, commercial, industrial, sporting ovals and agricultural properties with or without connection to reticulated supply.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Evaluate design parameters.	1.1 Identify and confirm the scope of work for irrigation systems.
	1.2 Determine design requirements from relevant Australian Standards, codes, plans, specifications and client brief.
	1.3 Conduct cost-benefit analysis comparing a range of pipe materials and system designs.

- 1.4 Interpret, analyse and apply statutory and regulatory requirements and relevant Australian Standards and codes for the design of irrigation systems.
 - 1.5 Obtain trade and technical manuals and interpret manufacturer requirements for irrigation systems.
 - 1.6 Conduct research to outline design parameters.
 - 1.7 Conduct flow and pressure tests for the irrigation systems.
 - 1.8 Establish water sources, volumes and areas to be irrigated.
 - 1.9 Analyse and categorise soil types, documenting the impacts on irrigation systems as per workplace procedures.
- 2 Plan and detail system components.
- 2.1 Plan layout of pipework systems including the type and location of fittings, valves and controls.
 - 2.2 Detail the type, location and requirements for backflow prevention devices.
 - 2.3 Calculate pipe sizes, velocities, flows and pressures for a range of applications.
 - 2.4 Specify the approved materials and jointing methods for irrigation systems.
 - 2.5 Detail sections and components of the irrigation system.
 - 2.6 Design pipe supports for a range of applications.
 - 2.7 Size and detail pump enclosure and control requirements.
 - 2.8 Specify installation requirements for irrigation management system.
 - 2.9 Determine water storage requirements.
 - 2.10 Make allowance for pipe movement.
- 3 Design and size systems
- 3.1 Analyse requirements and consider options available to design irrigation systems.

- 3.2 Design delivery systems and layout.
 - 3.3 Design and size irrigation systems.
 - 3.4 Determine required water application to establish and maintain plant life.
 - 3.5 Apply sustainability principles and concepts throughout the design process.
- 4 Prepare documentation.
- 4.1 Prepare and document client brief of the desired design.
 - 4.2 Prepare and document plans and specifications for a range of irrigation systems.
 - 4.3 Prepare testing and commissioning schedule.
 - 4.4 Produce operation and maintenance manual.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPPS5027A Design irrigation systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPPS5027 Design irrigation systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPPS5027A Design irrigation systems.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting layout details of an irrigation system including specification for a:
 - sports oval incorporating stormwater collection and use, with a mains pressure drinking water top-up and with chemical additives
 - a landscaped area for a mixed development site connected to a main pressure recycled (non-drinking) water main
- evaluating and documenting design parameters to relevant Australian Standards and codes, and regulatory, client and manufacturer requirements
- planning and detailing system components that include:
 - backflow prevention devices
 - irrigation management-control system
 - pumping requirements
 - water delivery outlets
 - piping requirements
- designing and sizing two irrigation systems, using appropriate calculations and computer software for specific applications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- statutory and regulatory requirements related to designing irrigation systems including:
 - Commonwealth government
 - state or territory governments
 - local authorities
 - AS/NZS 3500 National plumbing and drainage
 - AS2200 Design charts for water supply and sewerage

- National Construction Code (NCC)
- state or territory health departments
- common terminology and definitions used in the design of irrigation systems
- design requirements including:
 - architectural plans
 - backflow requirements
 - interpretation and application of irrigation services, drawings and symbols
 - irrigation management system
 - owner requirements
 - precipitation and evaporation rates
 - pumping requirements
 - required water application to establish and maintain plant life
 - source of irrigation water
 - sprinkler head systems
 - system requirements
 - water storage requirements
- cost-benefit analysis comparing the range of suitable materials and system choices available to enable cost-effective choices without compromising the integrity of the project
- manufacturer requirements including:
 - irrigation management system
 - material specification
 - pump tables
 - sprinkler head performance
 - sub-surface irrigation
 - technical and trade manuals
- nature of materials used and effects of performance under various conditions including:
 - composite pipework
 - copper (Cu)
 - cross-linked polyethylene (PE-X)
 - polypropylene (PP)
 - polybutylene (PB)
 - polyvinyl chloride (PVC)
- characteristics and application of different backflow prevention devices including:
 - double-check valve assembly (DCV)
 - dual-check valve with intermediate vent (DuCV)
 - pressure type vacuum breaker (PVB)
 - reduced pressure zone device (RPZD)
 - registered air gap (RAG)
 - registered break tank (RBT)

- reduced pressure detector assembly (RPDA)
- reduced pressure zone device (RPZD)
- other approved backflow prevention devices
- layout of pipework systems including:
 - distribution
 - dual feed systems
 - range pipes
 - ring main
 - single pipe
 - control stations
- sections and components of the irrigation systems including:
 - irrigation stations
 - manifold systems
 - sensors
 - automatic controls
 - sprinklers, drippers and irrigators
 - sprinkler patterns
- testing and commissioning schedule requirements including:
 - defect inspection
 - hydrostatic
 - mains pressure
 - performance
 - quality assurance (QA) audit
 - system certification
 - flow test
 - leak check
 - pressure test
 - system defect
 - system functions as per design
 - valve and system operation
- operation and maintenance manual requirements including:
 - as installed drawings
 - results of commissioning test
 - certification documentation
 - maintenance schedules
 - manufacturer brochures and technical information
 - operational procedures
 - valve function
- installation requirements including:
 - pipe connection

- bedding and backfilling
- corrosion
- cover
- ground stability
- impact
- level of workmanship
- manufacturer recommendations
- pipe support
- provision for pipe movement
- serviceability and access
- delivery systems and layout requirements including:
 - main delivery
 - number and design control
 - design:
 - avoiding obstacles
 - irregular shapes
 - minimising water wastage
 - range of irrigation applications
 - range pipes
 - ring mains
 - size and water delivery of sprinklers
 - sprinkler head patterns and placement
- plans and specification requirements including:
 - plans:
 - axonometrics
 - cross-sections
 - details
 - elevations
 - isometrics
 - schematics
 - sections
 - specifications:
 - bedding
 - flow requirements
 - irrigation management control system
 - jointing
 - manufacturer requirements
 - materials
 - pumps
 - residual pressures

- work health and safety (WHS)
 - specialised components
 - sprinkler head selection
 - storage tanks
 - support
 - testing
 - valve selection
 - water treatment
 - workmanship
- principles of technology used in the design of irrigation systems for a range of applications
 - characteristics of different soil types and the impact on the irrigation systems design
 - characteristics and application of different fittings, valves and controls
 - characteristics and application of different jointing methods
 - flow and pressure testing procedures
 - information required to undertake a desktop study to outline design parameters
 - pipe support design requirements
 - sustainability principles and concepts including:
 - selecting appropriate material to ensure minimal environmental impact
 - efficient use of material
 - efficient energy usage/capital outlay comparison
 - water efficiency
 - re-use of water, such as rainwater, grey water and recycled non-drinking water
 - consideration of the Green Building Council of Australia rating scheme.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPPS5028 Design trade waste pre-treatment systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPPS5028A Design trade waste pre-treatment systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design trade waste pre-treatment systems for commercial and industrial premises, such as commercial kitchens and laundries, mechanical workshops and commercial swimming pools, prior to discharge to authority's point of sewer connection.

The role involves interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

The unit requirements are typically undertaken by experienced tradespeople such as hydraulic design consultants or persons in a supervisory capacity in relation to plumbing services on a new or existing site.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Evaluate design parameters.

1.1 Establish scope of work for trade waste pre-treatment systems prior to discharge to authority's point of sewer connection.

- 1.2 Establish performance requirements considering safety of system users or building occupants.
 - 1.3 Determine design requirements from relevant Australian Standards, codes, plans, specifications, authorities' requirements and client brief.
 - 1.4 Apply sustainability principles and concepts as part of the design process.
 - 1.5 Interpret manufacturer requirements and trade and technical manuals.
 - 1.6 Conduct research to outline design parameters.
 - 1.7 Analyse trade waste applications and conduct a cost-benefit analysis to compare a range of pipe materials and system designs.
- 2 Plan and detail system components.
- 2.1 Plan layout of pipework systems including type and location of fittings and controls.
 - 2.2 Plan and detail solid removal systems.
 - 2.3 Plan and detail grease and oil interceptors, neutralising chambers and wash-down areas incorporating stormwater exclusion.
 - 2.4 Plan and detail diffused air flotation systems.
 - 2.5 Detail bacterial treatment processes and combined and specialised treatment processes for a range of commercial and industrial applications.
 - 2.6 Incorporate general housekeeping procedures to minimise discharge of trade waste.
 - 2.7 Perform system calculations for a range of applications.
 - 2.8 Size and detail pump well, pumps, controls and equipment requirements.
 - 2.9 Design pipe supports for a range of applications.
 - 2.10 Specify approved materials, jointing methods and installation requirements for trade waste pre-treatment systems.

- | | |
|----------------------------|---|
| 3 Design and size systems. | 3.1 Design and size trade waste pre-treatment systems for commercial and industrial premises. |
| | 3.2 Design and size trade waste pre-treatment systems using calculations and local authorities and regulators' policies and requirements. |
| | 3.3 Design flow monitoring systems for trade waste applications. |
| | 3.4 Design venting of trade waste systems to comply with local authority requirements. |
| 4 Prepare documentation. | 4.1 Produce client brief of the preferred design. |
| | 4.2 Prepare plans and specifications for trade waste pre-treatment systems. |
| | 4.3 Prepare testing and commissioning schedule. |
| | 4.4 Produce operation and maintenance manual including information on how to properly and safely maintain the system. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPPS5028A Design trade waste pre-treatment systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPPS5028 Design trade waste pre-treatment systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPPS5028A Design trade waste pre-treatment systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the installation and layout details for two trade waste pre-treatment systems from the following:
 - chemical facilities
 - commercial kitchen
 - commercial and industrial facilities that produce a liquid waste stream
 - commercial and industrial laundry
 - food preparation facilities
 - laboratories
 - motor vehicle workshops
 - photography development facilities
 - commercial swimming pool
 - wash-down facilities
- preparing plans and specifications to industry standards for both selections
- documenting the evaluation of design parameters including client, regulatory, manufacturer and relevant Australian Standard requirements for each design.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- hazards associated with devices and systems used in the hydraulic sector
- design of the options for the pre-treatment of trade waste
- approved installation methods for trade waste pre-treatment systems
- key features of work plans and specifications
- nature of materials and effect of their performance in a variety of conditions
- organisational quality procedures and processes

- terminology and definitions used in hydraulic design
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
- scope of work:
 - interpreting plans and specifications
 - sizing and documenting layout of trade waste pre-treatment systems for commercial and industrial applications
- design requirements:
 - architectural plans
 - building specifications
 - cleaning and maintenance procedures
 - installation requirements
 - odour control
 - owner requirements
 - pipework identification
 - sizing
 - trade waste treatment
 - ventilation
- statutory and regulatory requirements and relevant Australian Standards and codes which may include:
 - AS/NZS 3500 Plumbing and drainage set
 - AS 2200 Design charts for water supply and sewerage
 - Commonwealth, state or territory and local governments requirements
 - National Construction Code (NCC)
 - utility provider's trade waste regulations
 - other relevant Australian Standards and codes
- trade waste applications:
 - chemical facilities
 - commercial kitchen
 - commercial and industrial facilities that produce a liquid waste stream
 - commercial and industrial laundry
 - food preparation facilities
 - laboratories
 - motor vehicle workshops
 - photography development facilities
 - commercial swimming pool
 - wash-down facilities
- cost-benefit analysis comparisons:
 - design styles
 - energy costs

- expected design life
- labour costs
- material costs
- safety factors
- speed of installation
- suitable materials
- authorities' requirements
- manufacturer requirements:
 - containment
 - design and installation
 - installation space
 - material specifications
 - pipe sizing
 - pump installation
 - storage systems
 - technical and trade manuals
 - ventilation
- information gathered through desk top study to support design purposes:
 - architectural and building plans
 - developer plans
 - manufacturer data
 - building applications
 - brochures
 - forms
 - policies
 - reports
- performance requirements to:
 - establish acceptable discharge standards for the relevant authority
 - comply with relevant Australian Standards, codes and local authorities' requirements
- layout of pipework systems:
 - location of pipework (fire rating of enclosure)
 - trade waste plumbing and drainage
 - pumped systems
 - accessibility
 - designing to not unduly affect building integrity and aesthetic appeal
 - designing to include principles of economy, serviceability, durability and fit for use
- fittings:
 - bends
 - junctions
 - reflux valves

- inspection openings
- expansion joints
- solid removal systems which remove:
 - bone
 - dirt
 - grit
 - metal
 - paper
 - plastic
 - rubbish
 - sand
 - silt
 - wood
 - other solid contaminants
- grease and oil interceptors:
 - coalescing plate separators (CPS)
 - vertical gravity separators (VGS)
 - dissolved air flotation (DAF)
 - grease arrestors
 - skimmers
- neutralising chambers which neutralise:
 - acid
 - alkaline
 - chemicals
- wash-down areas:
 - bin
 - commercial and industrial wash-down processes that may or may not require stormwater diversion
 - floor
 - vehicle
 - machinery
- bacterial treatment processes:
 - aerobic
 - anaerobic
 - facultative and specialised bacteria for the removal of grease and other contaminants
- combined and specialised treatment processes:
 - bacterial treatment
 - cooling pits
 - diffused air flotation systems
 - neutralising chambers

- solid removal systems
- specialised treatment
- system calculations:
 - calculating gradient
 - interpreting design charts and tables
 - calculating pipe sizing
 - calculating reduced level
 - determining flow and fixture loadings
 - sizing treatment system
 - storage tank capacity
- pump well, pumps, controls and equipment requirements:
 - access covers
 - automatic controls
 - capacity
 - chains
 - corrosion-resistant materials
 - detailing
 - emergency storage
 - high and low-level water controls and alarms
 - impeller sizing
 - inlet and outlet design requirements
 - installation and mounting requirements
 - ladder access
 - odour control
 - macerator requirements
 - pump selection
 - pump sizing
 - pump well sizing
 - space requirements
 - step irons
 - valve requirements
 - ventilation
 - warning system
- pipe supports:
 - anchors
 - bedding
 - bracket spacing
 - concrete support
 - corrosion protection
 - cover

- hanging brackets
- manufacturer-recommended specific fixings
- material requirements
- saddles
- provision for expansion
- wall and ceiling brackets
- materials:
 - pipes:
 - cast iron or epoxy lined
 - earthenware or vitrified clay pipe (VCP)
 - polyethylene (PE)
 - polypropylene (PP)
 - other approved material
 - fittings and fixtures, including sound attenuation requirements
- jointing methods:
 - electrofusion welding
 - mechanical joints
 - rubber ring
 - threading
- installation requirements:
 - bedding
 - fire rating
 - level of workmanship
 - manufacturer-recommended specific fixings
 - pipe support
 - provision for expansion
 - serviceability and access
 - pipe protection:
 - cover
 - corrosion
 - impact
- computer software packages including:
 - proprietary design software
 - manufacturer software
- methods of applying sustainability principles and concepts:
 - selecting appropriate material to ensure minimal environmental impact
 - efficient use of material
 - efficient energy usage/capital outlay comparison
 - effect on the environment due to overflow or leakage
 - material selected to convey the type of discharge

- water efficiency
- types of plans:
 - axonometrics
 - cross-sections
 - details
 - elevations
 - isometrics
 - sections
 - schematics produced using:
 - computer generation
 - drawing equipment
- specification:
 - access chambers (manholes)
 - bedding
 - commissioning
 - concrete support and detailing specialised components
 - jointing
 - manufacturer requirements
 - materials
 - pumps
 - WHS
 - support
 - testing
 - workmanship
- testing for:
 - air pressure
 - compliance with authorities' discharge requirements
 - drainage inspection
 - hydrostatic
 - performance
 - quality assurance (QA) audit
- commissioning schedule information:
 - checking for foreign material
 - checking system defects
 - checking that system functions as per design
 - containment
 - leak check
 - operational commissioning
 - pump commissioning
 - system certification

- treatment system commissioning
- operation and maintenance manual information:
 - as installed drawings
 - certification documentation
 - results of commissioning test
 - maintenance schedules
 - manufacturer brochures and technical information
 - odour control
 - regular treatment system maintenance
 - regular water quality testing
 - ventilation
 - water auditing.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPPS5030 Design pump systems

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPPS5030A Design pump systems.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to undertake the specification, selection and sizing of pumps and the design of associated piping and components for inclusion in hydraulic systems in high-rise mixed development building to a minimum of 29 floors and wide span projects, such as schools.

The role involves interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

The unit requirements are typically carried out by experienced people such as hydraulic design consultants, plumber or persons in a supervisory capacity in relation to plumbing services on a new or existing site.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|-------------------------------|---|
| 1 Evaluate design parameters. | 1.1 Establish scope of work for pump system requirements for wide span and high-rise building projects. |
| | 1.2 Determine design requirements from plans, |

- specifications, system demands and client brief.
- 1.3 Identify statutory and regulatory requirements and Australian Standards and codes for the design of pump systems.
 - 1.4 Apply sustainability principles and concepts as part of the design process.
 - 1.5 Conduct flow and pressure tests of hydraulic system.
 - 1.6 Establish pump duties for the design application.
 - 1.7 Establish performance requirements considering safety of system users or building occupants.
 - 1.8 Interpret manufacturer requirements, trade, sizing and technical manuals.
 - 1.9 Conduct research to outline design parameters.
 - 1.10 Conduct cost-benefit and life cycle analysis to compare a range of pump alternatives, materials and system designs.
- 2 Plan and detail system components.
- 2.1 Size and detail pump, controls and pump room requirements.
 - 2.2 Plan layout of pipework systems including type and location of fittings, valves and controls.
 - 2.3 Calculate pipe sizes, velocities, flows and pressures for applications.
 - 2.4 Specify energy sources for hydraulic pumping applications.
 - 2.5 Plan pump plinths and pump mountings for applications.
 - 2.6 Size and select pump impellers.
 - 2.7 Specify approved materials, jointing methods and installation requirements.
 - 2.8 Provide allowance for vibration.

- | | |
|----------------------------|---|
| 3 Design and size systems. | 3.1 Design pump systems for wide span and high-rise building applications. |
| | 3.2 Evaluate pump acoustic performance. |
| | 3.3 Perform wastewater pump dynamic suction head and flow rate calculations. |
| | 3.4 Apply design principles for optimal performance of pump systems. |
| | 3.5 Design delivery systems for the design application. |
| | 3.6 Design and size pump systems using calculations and computer software packages. |
| | 3.7 Perform domestic water pump flow rate and pressure head calculations. |
| | 3.8 Perform stormwater pump dynamic suction head and flow rate calculations. |
| 4 Prepare documentation. | 4.1 Prepare client brief of the preferred design. |
| | 4.2 Prepare plans and specification details for a range of pump systems. |
| | 4.3 Prepare testing and commissioning schedule. |
| | 4.4 Produce operation and maintenance manual. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPPS5030A Design pump systems.

Assessment Requirements for CPCPPS5030 Design pump systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPPS5030A Design pump systems.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting water and wastewater pumping systems required for the hydraulic services installation of:
 - a high-rise mixed development building to a minimum of 29 floors, including a basement with fixtures on all levels, and
 - a wide span project (such as a school or industrial complex)
- planning and detailing both system components and include:
 - ancillaries
 - control panel
 - fittings
 - flow switches
 - mounting
 - piping
 - plinths
 - pressure switches
 - pump duty.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- hazards associated with pumping equipment used in hydraulic systems
- key features of work plans and specifications
- approved installation methods for pump systems
- principles of technology in the design of pump installations for hydraulic systems
- research methods
- terminology and definitions used in pump installation
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards

- scope of work:
 - interpretation of plans and specifications
 - sizing and documenting layout of pump systems for wide span and high-rise building projects
- pump types:
 - centrifugal
 - circulating
 - constant flow variable speed
 - macerator
 - multiple stage
 - piston
 - positive displacement
 - submersible
 - vacuum
 - variable speed control
- pump duties:
 - constant pressure
 - flow rate
 - head
 - velocity
- design requirements:
 - acoustic performance
 - architectural plans
 - available flow and pressure from authority's main
 - building specifications
 - fire safety
 - owner's requirements
 - pipework identification
 - pump duty
 - sizing of pipework
 - ventilation
 - vibration
 - viscosity of fluids
- cost-benefit and life cycle analysis:
 - balancing initial cost with durability, longevity, maintenance and ongoing fuel and energy cost requirements
 - comparing the range of suitable materials, pumps and system designs available to enable cost-effective choices to be made without compromising integrity of project
- cost-benefit considerations:
 - design

- energy costs
- expected design life
- labour costs
- material costs
- safety factors
- speed of installation
- suitable materials
- statutory and regulatory requirements which may include Acts and regulations Commonwealth, state or territory and local government requirements
- Australian Standards and codes:
 - AS/NZS 3500 Plumbing and drainage set
 - AS 2419 Fire hydrant installations system design, installation and commission
 - AS/NZS 1547 On-site domestic wastewater management
 - AS 2200 Design charts for water supply and sewerage
 - National Construction Code (NCC)
 - other relevant Australian Standards
- manufacturer requirements:
 - material installation specifications
 - pump tables
 - pipe sizing
 - recommended installation and fixings for pipework
 - technical and trade manuals
 - ventilation requirements
- information gathered during desktop study to support design research:
 - architectural and building plans
 - developer plans
 - manufacturer data
 - applications
 - brochures
 - forms
 - policies
 - reports
- flow and pressure tests which may include on-site measurement of flow (l/s), velocity (m/s) and pressure (kPa)
- performance requirements including flow, velocity, pressure and discharge requirements, to satisfy the requirements of the hydraulic system
- pump, controls and pump room requirements:
 - acoustics
 - ancillaries
 - automatic controls

- inlet and outlet design
- installation and mounting
- plinths
- pump sizing and selection
- space
- ventilation
- vibration
- layout of pipework systems:
 - access
 - identification
 - insulation
 - isolation
 - maintenance
 - principles of economy, serviceability, durability and fit for use
 - replacement
- fittings:
 - bends
 - flanges
 - inlet and outlet pressure gauges
 - tees
 - unions
- valves:
 - air relief
 - excess pressure
 - isolating
 - non-return
 - pressure limiting
 - pressure reduction
 - strainers
 - vibration couplings
- energy sources:
 - diesel and diesel-electric generator sets
 - electrical, single phase and three-phase
 - petrol
- pump plinth bases designed to resist forces exerted by pump:
 - concrete
 - masonry
 - timber
 - steel
- pump mountings:

- anchoring bolts
- inertia pads
- rubber and synthetic
- spring loaded
- vibration mounts
- piping materials:
 - copper (Cu)
 - galvanised steel
 - stainless steel
 - polyethylene (PE)
 - polypropylene (PP)
 - polybutylene (PB)
 - other approved material
- pump materials:
 - cast iron
 - bronze
 - stainless steel
 - other appropriate materials
- jointing methods:
 - brazing
 - electrofusion welding
 - mechanical joints
 - other approved jointing method
- installation requirements:
 - pipe protection:
 - corrosion
 - impact
 - fire rating
 - level of workmanship
 - manufacturer-recommended specific fixings
 - pipe support
 - provision for vibration
 - serviceability and access
 - thrust brackets
- delivery systems:
 - circulation
 - constant flow variable speed pump
 - hydropneumatic
 - lift
 - pressure

- rising main
- vacuum
- methods of applying sustainability principles and concepts:
 - selecting appropriate material to ensure minimal environmental impact
 - efficient use of material
 - efficient energy usage/capital outlay comparison
 - effect on the environment due to pump or pipe failure
 - pump efficiency
- types of plans:
 - axonometrics
 - cross-sections
 - details
 - elevations
 - isometrics
 - sections
 - schematics produced using:
 - computer generation
 - drawing equipment
- specification:
 - acoustic performance
 - fire safety
 - jointing
 - manufacturer requirements
 - materials
 - pump duty
 - residual pressures
 - WHS
 - specialised components
 - support
 - testing
 - valve selection
 - vibration control
 - workmanship
- testing of:
 - defect inspection
 - hydrostatic
 - performance
 - quality assurance (QA) audit
- commissioning schedule information:
 - system certification

- exhaust pipe check
- flow check
- leak check
- pressure check
- system purge
- system defects
- system functions as per design
- valve operation
- acoustic performance
- operation and maintenance manual information:
 - as installed drawings
 - results of commissioning test
 - certification documentation
 - emergency shutdown procedures
 - maintenance schedules
 - manufacturer brochures and technical information
 - valve function.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPPS5032 Design siphonic stormwater drainage systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPPS5032A Design siphonic stormwater drainage systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design siphonic stormwater drainage systems, determine installation details, and prepare specifications for a range of residential, commercial and industrial buildings.

The role involves interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

The unit requirements are typically carried out by experienced people such as hydraulic design consultants or persons in a supervisory capacity in relation to plumbing services on a new or existing site.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Evaluate design parameters.

1.1 Establish scope of work for siphonic stormwater drainage systems.

1.2 Determine design parameters from relevant statutory and regulatory requirements, codes, plans, specifications and

- client brief.
- 1.3 Establish performance requirements considering safety of system users or building occupants.
 - 1.4 Apply sustainability principles and concepts as part of the design process.
 - 1.5 Interpret stormwater design manuals, manufacturer requirements and trade and technical manuals
 - 1.6 Conduct additional research, including a desktop study, to outline design parameters.
 - 1.7 Determine factors that contribute to quality, safety and time efficiency.
 - 1.8 Evaluate siphonic system attributes and conduct cost-benefit analysis, comparing a range of pipe materials and system designs.
- 2 Plan and detail system components.
- 2.1 Integrate siphonic stormwater drainage systems with the building structure.
 - 2.2 Calculate volume of roof water and stormwater using approved methods.
 - 2.3 Plan layout of pipework systems including type and location of fittings.
 - 2.4 Calculate pipe size and flow requirements for applications according to stormwater collection requirements.
 - 2.5 Plan pipe supports for applications.
 - 2.6 Specify approved materials and components, jointing methods and installation requirements for siphonic stormwater drainage systems.
- 3 Design and size systems.
- 3.1 Design siphonic stormwater drainage systems for applications.
 - 3.2 Calculate catchment areas, determine collection points and size siphonic systems.

- 3.3 Design and size siphonic stormwater drainage systems using calculations and computer software packages.
- 4 Prepare documentation.
 - 4.1 Prepare client brief of the preferred design.
 - 4.2 Prepare plans and specification for siphonic stormwater drainage systems.
 - 4.3 Prepare testing and commissioning schedule.
 - 4.4 Produce operation and maintenance manual, including information on how to properly and safely maintain the system.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPPS5032A Design siphonic stormwater drainage systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPPS5032 Design siphonic stormwater drainage systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPPS5032A Design siphonic stormwater drainage systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout details, including a specification for two siphonic stormwater drainage system that include:
 - a site incorporating a high-rise mixed development building
 - a wide span project (such as a large bulk goods warehouse)
- preparing documentation which includes:
 - evaluation and details of design parameters relevant to codes and manufacturer requirements for siphonic stormwater drainage systems
 - evaluation of health risks associated with the siphonic system
 - materials and components that are compliant, fit for purpose, durable, compatible and cost-effective.
-

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- common terminology and definitions used in the design of siphonic stormwater drainage systems for residential, commercial and industrial buildings
- drafting principles
- nature of materials used and effects of performance under various conditions
- procedures for estimating volume of stormwater run-off from rainwater collection areas
- principles of technology in the design of siphonic stormwater drainage systems
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
- scope of work:
 - calculation of rainfall intensities in given catchment areas:
 - average rainfall intervals

- meteorological information
- rainfall intensities
- stormwater collection area calculations
- time and concentration
- interpretation of plans and specifications
- sizing and documenting layout of siphonic stormwater drainage systems for residential, commercial and industrial applications
- design requirements:
 - owner requirements
 - architectural plans
 - building specifications
 - pipework identification
 - catchment area
 - approved point of discharge
 - acoustic performance
- siphonic system attributes:
 - availability
 - cost
 - installation requirements
 - risks
 - site conditions
- cost–benefit analysis to enable cost-effective choices to be made without compromising integrity of project:
 - design styles
 - expected design life
 - labour costs
 - material costs
 - safety factors
 - speed of installation
- statutory and regulatory requirements and relevant Australian Standards and codes:
 - AS/NZS 3500 Plumbing and drainage set
 - AS 2200 Design charts for water supply and sewerage
 - Geberit or equivalent approved siphonic drainage system design criteria
 - Commonwealth, state or territory requirements and local governments requirements
 - National Construction Code (NCC)
 - other relevant Australian Standards and codes
- manufacturer requirements:
 - material specifications
 - sizing tables
 - technical and trade manuals

- special siphonic drainage collection inlets
- information gathered during desktop study:
 - architectural and building plans
 - manufacturer data
 - developer plans
 - applications
 - brochures
 - forms
 - policies
 - reports
- performance requirements, including pipe flow velocities, flow conditions and discharge requirements established using relevant Australian Standards, codes and local authorities' requirements
- layout of pipework systems:
 - acoustic performance
 - amenity of the building
 - clipping and pipe support
 - fireproofing
 - function of the building
 - impingement on floor heights
 - location of pipework (fire rating of enclosure)
 - materials to be used
 - size of penetrations
 - type of building structure
 - principles of economy, serviceability, durability and fit for use
 - design which does not unduly affect building integrity and aesthetic appeal
- fittings:
 - bends
 - junctions
- pipe size and flow requirement calculations:
 - discharge
 - flow
 - manufacturers' tables
 - sizing, according to relevant Australian Standards and codes
 - velocity
 - volumes
- pipe supports:
 - anchors
 - bracket spacing
 - corrosion protection

- cover
- hanging brackets
- material requirements
- saddles
- wall and ceiling brackets
- acoustic resilient mounts
- appropriate materials specified, based on fit for purpose, durability, compatibility and cost-effectiveness:
 - copper (Cu)
 - polyethylene (PE)
 - polypropylene (PP)
 - stainless steel
 - other approved material
 - clips
 - fasteners
 - fittings
 - pipework
 - siphonic collection inlets
- jointing methods:
 - brazing
 - electrofusion welding
 - mechanical joints
 - rubber ring
 - other approved jointing methods
- installation requirements:
 - fire rating
 - level of workmanship
 - manufacturer-recommended specific fixings
 - pipe support
 - provision for expansion
 - serviceability and access
 - pipe protection:
 - corrosion
 - impact
- computer software packages:
 - manufacturer software
 - proprietary design software
- methods of applying sustainability principles and concepts:
 - selecting appropriate material to ensure minimal environmental impact
 - efficient use of material

- efficient energy usage/capital outlay comparison
- effect on the environment due to overflow or leakage
- consideration of the Green Building Council of Australia rating scheme
- types of plans:
 - axonometrics
 - elevations
 - details
 - cross-sections
 - isometrics
 - schematics
 - sections
- plans produced using:
 - computer generation
 - drawing equipment
- specification:
 - commissioning
 - bedding
 - support
 - jointing
 - manufacturer requirements
 - materials
 - testing
 - workmanship
 - WHS
- testing:
 - hydrostatic test
 - inspection
 - performance
 - quality assurance (QA) audit
- commissioning schedule information:
 - system certification
 - checking for foreign material
 - checking leaks
 - cleaning grates
 - system defects
 - system functions as per design
- operation and maintenance information:
 - as installed drawings
 - certification documentation
 - results of commissioning test

- maintenance schedules
- manufacturer brochures and technical information
- check for blockages
- leak detection
- regular inspection
- regular maintenance requirements.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPPS5033 Design vacuum drainage systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.
Removed duplicated heading from Performance Evidence.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPPS5033A Design vacuum sewerage systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design vacuum drainage systems, determine installation details, and prepare specifications for 50 residential properties and industrial high-rise mixed development buildings with a minimum of 29 floors using proprietary components.

This unit relates to work in a consultancy or supervisory capacity in relation to plumbing services and hydraulics on a new or existing site.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPDR3025 Plan layout and install vacuum drainage systems

Unit Sector

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|-------------------------------|---|
| 1 Evaluate design parameters. | 1.1 Establish scope of work for vacuum drainage systems designed for vacuum sewer infrastructure systems and high-rise building projects. |
|-------------------------------|---|

- 1.2 Determine design requirements from relevant Australian Standards, codes, plans, specifications and client brief.
 - 1.3 Evaluate vacuum drainage system attributes and conduct a cost–benefit analysis comparing a range of pipe materials and system designs.
 - 1.4 Interpret, analyse and apply statutory and regulatory requirements, including relevant Australian Standards and codes for the design of vacuum drainage systems.
 - 1.5 Obtain trade and technical manuals and interpret manufacturer requirements for the design of vacuum sewer infrastructure systems.
 - 1.6 Conduct additional research including a desktop study to outline design parameters.
 - 1.7 Determine factors that contribute to quality, safety and time efficiency.
 - 1.8 Establish performance requirements considering safety of system users or building occupants.
- 2 Plan and detail system components.
- 2.1 Plan layout of pipework systems including the type and location of fittings, valves and controls.
 - 2.2 Calculate vacuum loading units (VLU) using equivalent population (EP) density for a residential development in excess of 50 dwellings in accordance with the National Construction Code (NCC) for a high-rise project with a minimum of 29 floors.
 - 2.3 Perform pipe size calculations for applications according to regulations and manufacturer requirements.
 - 2.4 Design pipe supports for applications.
 - 2.5 Size and detail vacuum pumping station and pump control requirements.
 - 2.6 Specify approved materials, jointing methods and installation requirements for vacuum drainage systems.
 - 2.7 Determine approved point of discharge to the authority’s main.

- 2.8 Identify acoustic performance of the system and document in the plan.
- 3 Design and size systems.
 - 3.1 Design vacuum drainage system for residential, commercial and industrial building applications.
 - 3.2 Design and size vacuum drainage system using EP density calculations and in accordance with NCC.
 - 3.3 Apply sustainability principles and concepts throughout the design process.
- 4 Prepare documentation.
 - 4.1 Prepare and document client brief of the desired design in accordance with workplace procedures.
 - 4.2 Prepare plans and specifications vacuum drainage systems.
 - 4.3 Prepare testing and commissioning schedule.
 - 4.4 Produce operation and maintenance manual including information on how to properly and safely maintain the system.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPPS5033A Design vacuum sewerage systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPPS5033 Design vacuum drainage systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.
Removed duplicated heading from Performance Evidence.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPPS5033A Design vacuum sewerage systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the installation and layout details for a vacuum infrastructure sewer system for:
 - a residential development of 50 properties incorporating:
 - vacuum sewage collection chambers
 - vacuum sewer mains
 - vacuum pump station
 - pump rising main
 - ventilation
 - odour control
 - a high-rise mixed development building, to a minimum of 29 floors, inclusive of a basement, to include fixtures on each floor level, incorporating:
 - vacuum pump station
 - vacuum sanitary drainage system
 - pump rising main
 - ventilation
 - odour control
- applying sustainability principles and concepts throughout to achieve a star rating under the Green Building Council of Australia rating scheme
- evaluating and documenting design parameters, including client, regulatory and manufacturer requirements and relevant Australian Standards and codes complex sanitary plumbing and drainage systems
- evaluating health risks associated with the sanitary plumbing and drainage system

- selecting materials and components for compliance, fitness for purpose, durability, compatibility and cost-effectiveness.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- common terminology and definitions used in the design of vacuum drainage systems
- application of statutory and regulatory requirements and relevant Australian Standards and codes including:
 - Acts, regulations and Commonwealth, state or territory and local government policies
 - AS/NZ 3500 National plumbing and drainage
 - AS 2200 Design charts for water supply and sewerage
 - Environmental Protection Authority (EPA)
 - National Construction Code (NCC)
 - Sewerage Code of Australia
 - other relevant Australian Standards and codes
- scope of work requirements:
 - interpreting plans and specifications
 - sizing and documenting layout of vacuum drainage systems including residential, commercial and industrial
- design requirements:
 - acoustic performance
 - architectural plans
 - building specifications
 - fire safety requirements
 - flow requirements and sizing of pipework
 - odour control
 - owner requirements
 - pipework identification
 - Sewerage Code of Australia
 - vacuum pumping station
 - ventilation requirements
- cost-benefit analysis comparing suitable materials and system choices available to enable cost-effective choices without compromising the integrity of the project
- nature of materials used and effects of performance under various conditions:
 - copper (Cu)
 - polyethylene (PE)
 - polypropylene (PP)
 - polyvinyl chloride (PVC)
 - stainless steel
 - other approved material

- manufacturer requirements:
 - material specifications
 - collection and storage systems
 - design and installation
 - equipment installation
 - pump installation
 - selection of compatible sanitary fixtures
 - technical manuals
- manufacturer specifications, including hazards identified in relation to devices and systems used
- information required to conduct a desktop study to outline design parameters:
 - architectural and building plans
 - developer plans
 - manufacturer data
 - other documents relevant to designing vacuum sewerage systems
- characteristics and application of different jointing methods
- vacuum drainage system attributes:
 - availability
 - cost
 - flexibility
 - installation requirements
 - low water usage
 - risks
 - vacuum loading units (VLU)
 - site conditions
- performance requirements of vacuum drainage system:
 - discharge requirements
 - durability
 - emergency storage and/or power backup
 - longevity
 - self-cleaning ability
 - sufficient capacity
- layout of pipework systems:
 - sewer infrastructure systems:
 - cover
 - grade
 - location of vacuum pump station
 - location of vacuum sewage collection chambers
 - odour control
 - pipe access

- ventilation
- high-rise building projects:
 - acoustic performance
 - amenity of the building
 - clipping and pipe support
 - location of pipework (fire rating of enclosure)
 - function of the building
 - impingement on floor heights
 - materials to be used
 - size of penetrations
 - type of building structure
- effect on building integrity and aesthetic appeal
- principles of economy, serviceability, durability and fit for use
- installation requirements:
 - acoustic performance
 - bedding
 - pipe protection:
 - cover
 - corrosion
 - impact
 - grade
 - level of workmanship
 - fire rating
 - manufacturer-recommended specific fixings
 - pipe support
 - provision for pipe movement
 - serviceability and access
- pipe size calculations including:
 - determining flow and fixture loadings
 - equivalent population (EP) density
 - calculating gradient
 - interpreting design charts and tables
 - determining self-cleaning velocities
 - manufacturer requirement
 - probable simultaneous demand
- uses and limitations for pipe supports:
 - bedding
 - bracket spacing
 - concrete support
 - corrosion protection

- cover
- hanging brackets
- manufacturer-recommended specific fixings
- material requirements
- provision for expansion
- thrust blocks
- wall and ceiling brackets
- vacuum pumping station and pump control requirements:
 - access covers
 - automatic controls
 - capacity
 - corrosion-resistant materials
 - detailing
 - emergency storage
 - emergency power supply
 - high and low-level water controls and alarms
 - impeller sizing
 - inlet and outlet design requirements
 - installation and mounting requirements
 - macerator requirements
 - odour control
 - pneumatic control switch assembly
 - pump selection
 - pump sizing
 - pump well sizing
 - space requirements
 - vacuum pump systems
 - valve requirements
 - ventilation
 - warning system
- characteristics and application of different fittings, valves and controls:
 - fittings:
 - bends
 - elbows
 - inspection and maintenance access
 - tees
 - unions
 - valves:
 - backflow prevention
 - isolating

- non-return
- strainers
- vacuum diaphragm valve
- controls:
 - pneumatic control switch assembly
 - vacuum pressure sensing
 - motorised actuated valves
 - vacuum management system
- the use and limitations of computer software packages including manufacturer and proprietary design software
- plans and specifications requirements:
 - plans:
 - axonometrics
 - cross-sections
 - details
 - elevations
 - isometrics
 - schematics
 - site
 - sections
 - specifications:
 - access chambers (manholes)
 - bedding
 - commissioning
 - concrete support and detailing specialised components
 - jointing
 - manufacturer requirements
 - materials
 - odour control
 - pump rising main
 - work health and safety (WHS)
 - selection of compatible vacuum sanitary fixtures
 - support
 - testing
 - vacuum pump station
 - vacuum drainage collection chambers
 - vacuum sewer mains
 - ventilation
 - workmanship
- testing methods:

- compressed air test
- flow testing
- hydrostatic test
- inspection checklist
- performance
- vacuum
- quality assurance (QA) audit
- commissioning schedule requirements:
 - system certification
 - check for foreign material
 - leak check
 - emergency procedures
 - system defects
 - system functions as per design
- operation and maintenance manual requirements:
 - as installed drawings
 - results of commissioning test
 - certification documentation
 - maintenance schedules
 - manufacturer brochures and technical information
 - operating procedures
- sustainability principles and concepts:
 - selecting appropriate material to ensure minimal environmental impact
 - efficient use of material
 - efficient energy usage/capital outlay comparison
 - positive effect on the environment in regard to no potential overflow or leakage
 - water efficient
 - consideration of the Green Building Council of Australia rating scheme
 - local environment consideration overflow disposal/reuse.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPRF2022 Select and install roof sheeting and wall cladding

Modification History

Release 2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Typographical error corrected in Element 5 and Performance Evidence reformatted for clarity.
Release 1	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0. Supersedes and is not equivalent to CPCPRF2022A Select and install roof sheeting and wall cladding, and CPCPRF3021A Receive roofing materials. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge to select and install insulation, roof battens and wall cladding involving metallic, non-metallic or other approved roof covering materials.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

CPCPCM2055 Work safely on roofs

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1	Identify installation	1.1	Access, read and determine roof sheeting and wall
---	-----------------------	-----	---

- requirements. cladding installation requirements from job specifications, relevant Australian Standards, codes, manufacturer's instructions and jurisdictional requirements.
- 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
 - 1.3 Identify whether materials to be used are compatible with the surrounding environment and other materials within the installation.
 - 1.4 Determine material types and calculate quantities from plans and specifications.
 - 1.5 Identify roof insulation and wall cladding to meet thermal, acoustic, moisture and bushfire control requirements.
 - 1.6 Identify safety mesh requirements to support the installation requirements.
- 2 Receive delivery of materials.
- 2.1 Provide safe access for delivery vehicles and on-site workers.
 - 2.2 Determine and provide adequate load support at the point of delivery and assist in the unloading and transfer of materials.
 - 2.3 Check conformity of materials against the delivery docket and specifications and report any shortfalls or damage.
 - 2.4 Secure materials and protect from moisture and mechanical damage.
- 3 Prepare for work.
- 3.1 Identify and check condition of plant, equipment and tools required for the installation.
 - 3.2 Select, fit and use appropriate personal protective equipment (PPE).
 - 3.3 Check fall protection system is in place and secure.

- | | | | |
|---|------------------------|-----|--|
| 4 | Install roof sheeting. | 4.1 | Perform installation and fix selected insulation ensuring acoustic, thermal, moisture and bushfire control. |
| | | 4.2 | Measure, cut and fix roof battens for the installation at correct spacings to match plans. |
| | | 4.3 | Measure, cut, weather and install roof sheets using appropriate fastening spacings and methods. |
| | | 4.4 | Remove swarf end of installation. |
| | | | |
| 5 | Install wall cladding. | 5.1 | Perform installation and fix selected insulation ensuring acoustic, thermal, moisture and fire control. |
| | | 5.2 | Measure, cut and fasten battens at correct spacings to match plans. |
| | | 5.3 | Measure, cut and install wall cladding and flashings using appropriate fastening spacing and methods. |
| | | 5.4 | Install thermal breaks as required. |
| | | | |
| 6 | Clean up. | 6.1 | Remove swarf off cladding, flashings and gutter and clear any rivet stems and fasteners. |
| | | 6.2 | Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements. |
| | | 6.3 | Clean tools and equipment, check for serviceability and report any damage, and store and secure. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is not equivalent to CPCPRF2022A Select and install roof sheeting and wall cladding, and CPCPRF3021A Receive roofing materials.

Updated to meet the Standards for Training Packages 2012.</p> |

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- installing steel claddings to structures not less than 2 metres wide and 1.5 metres long including:
 - a flat deck roof system to a pitch $\geq 1^\circ$ using concealed fixing method and installing safety wire mesh, blanket and foil
 - a pitched roof system $\geq 5^\circ$ using an approved pierced fixing method and incorporating:
 - a valley, hip, ridge and barge
 - thermal insulation containing a blanket and foil for fire management
 - a non-structural cladded roof over rigid support using concealed fixing method including valley, hip, ridge, barge and roof discharge detail and moisture control pliable membrane
 - a sandwich panel roof or wall over supports using pierced fixing method with a minimum of two panels
 - a non-metallic roof sheet using pierced fixing and installing safety wire mesh
 - wall cladding incorporating side lapping with one external and internal corner and toe mould and including:
 - an opening of 300 x 600 mm
 - pliable building membrane.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- reading and interpreting plans, including electronic plans
- current standards and codes for roof sheeting and insulation:
 - HB39 Installation Code for metal roof and wall cladding
 - National Construction Code (NCC)
 - AS 1562 Design and installation of sheet roof and wall cladding
 - AS 4200.2 Pliable building membranes and underlays - Installation
 - AS 3999 Bulk thermal insulation - Installation
- calculation of material quantities
- receipt, storage, protection and checking quantities for delivery of roofing materials
- roof components:
 - insulation to meet thermal acoustic, moisture and fire control
 - safety mesh
 - rigid supports
 - roof and safety battens
 - fixings and fasteners
 - metal and non-metallic roofing sheets
 - sandwich panel
 - thermal breaks and approved sealants
- capillary action and thermal expansion
- corrosion control
- weathering
- unloading and storage of roof materials following manufacturers' instructions:
 - stacking dunnage
 - environmental protection
- conformity of materials against the delivery docket
- work health and safety (WHS) requirements:
 - working at heights
 - fragile materials
 - asbestos containing materials
 - selecting and installing roof sheeting and wall cladding
- overhead hazards
- installation in bushfire prone areas and requirements of The National Association of Steel-Framed Housing (NASH) Standard for construction in bushfire areas or AS 3959 *Construction of buildings in bushfire-prone areas*
- how to access relevant information, including codes and standards
- tools, materials and equipment used to select and install roof sheeting and wall cladding.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPRF2023 Collect and store roof water

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0
- Supersedes and is equivalent to CPCPRF2023A Collect and store roof water. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to collect and store roof water. It includes installing storage tanks and related piping for the collection and storage of roof water.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Identify water storage system requirements.	1.1 Access, read and determine water storage installation requirements from job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements. 1.2 Obtain, interpret and follow workplace, work health and safety (WHS) and environmental requirements.
2 Plan and prepare for	2.1 Create a materials list and collect materials.

- installation.
- 2.2 Select appropriate tools and equipment including personal protective equipment (PPE).
- 3 Install storage system.
- 3.1 Prepare the worksite including installation of tank stand or base according to specifications, minimising damage to surrounding structures or existing services.
- 3.2 Install inlet connections and relevant flushing devices to gutters, incorporating leaf catchers and downpipes into the storage tank.
- 3.3 Connect storage tank overflow to an approved stormwater point of discharge.
- 3.4 Perform and review installation of storage tank according to job specification and current statutory and regulatory authority requirements.
- 4 Clean up.
- 4.1 Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements.
- 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPRF2023A Collect and store roof water.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPRF2023 Collect and store roof water

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0
- Supersedes and is equivalent to CPCPRF2023A Collect and store roof water.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- installing a water tank to collect and store water from a roof catchment area
- installing a tank stand or supporting base
- installing a storage tank of not less than 500 litres' capacity
- installing inlet connection and a first flush device connected to a gutter and incorporating a leaf catcher and downpipe to direct rainwater into the storage tank
- connecting the storage tank overflow to an approved stormwater point of discharge.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- procedures for commissioning water storage tanks for use
- characteristics of materials and components of authorised materials that comply with local authority requirements:
 - brackets and supports
 - metal guttering
 - polyvinyl chloride (PVC)
 - sealants, adhesives and fasteners
 - tank stands
- properties of water:
 - effect of gravity and atmospheric pressure
 - procedures for maintaining water quality
 - sources of contamination and impurities
- regulations and identification requirements pertaining to collecting and storing drinking water and non-drinking water
- how to access relevant information, including codes and standards
- tools, materials and equipment used to collect and store roof water

- work health and safety (WHS) requirements for collecting and storing roof water.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPRF2024 Fabricate roof coverings for curved structures

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Typographical error corrected in Element and Performance Criteria 3.4.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPRF2024A Fabricate roof coverings for curved structures. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design and fabricate curved industrial roof coverings.

It covers drawing fabrication patterns based on sketches of roof coverings, calculating curve dimensions and selecting roofing materials for new or existing, domestic or commercial structures.

The unit is suitable for people with basic skills and knowledge who undertake routine work tasks under the direction of more experienced workers.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|--|
| 1 Prepare for work. | 1.1 Determine requirements roof coverings to be designed |
|---------------------|--|

- and fabricated based on plans and specifications.
- 1.2 Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements and sustainability principles associated with fabricating roof coverings for curved structures.
 - 1.3 Consult with relevant personnel to plan and sequence tasks.
 - 1.4 Prepare work area to support efficient fabrication of roof coverings.
- 2 Identify installation requirements.
- 2.1 Select roofing material that is suitable for the fabrication process, job requirements and relevant information.
 - 2.2 Ascertain curvature of roof covering and use to determine the starting and finishing points of curves.
 - 2.3 Create design and freehand sketch of the roof covering to form the basis of fabrication patterns.
 - 2.4 Draw fabrication patterns based on design and freehand sketch of roof covering.
- 3 Fabricate covering.
- 3.1 Determine material list from patterns and calculations.
 - 3.2 Determine method of fabrication, tools and machinery for fabrication to suit job requirements.
 - 3.3 Select and check the serviceability of the appropriate tools, equipment and PPE reporting any faults according to workplace procedures.
 - 3.4 Mark out and fabricate roof covering according to drawings, patterns or calculations.
 - 3.5 Access information to complete documentation according to workplace procedures and submit within specified timeframes.
- 4 Clean up.
- 4.1 Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.

- 4.2 Clean tools and equipment, check for serviceability reporting any damage, store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPRF2024A Fabricate roof coverings for curved structures.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPRF2024 Fabricate roof coverings for curved structures

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
- Typographical error corrected in Element and Performance Criteria 3.4.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPRF2024A Fabricate roof coverings for curved structures. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing and fabricating the curved roof coverings of a bull nosed verandah incorporating one internal and one external angle.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- capillary action, thermal expansion and fabrication techniques to prevent leaking installations
- characteristics of various metals and finishes
- uses and limitations of materials:
 - drawing materials
 - manufacturer catalogues and specifications
 - metal roof sheeting of concealed or fixed type and accessories
- design concepts and performance measures for curved roof covering including
- electrolysis and problems associated with the use of dissimilar metals
- job safety environmental analysis (JSEA) and safe work method statements (SWMSs)
- processes of designing and fabricating curved roof coverings:
 - barrel shaped
 - concave
 - convex
 - hyperbolic

- paraboloid
- processes for accessing information relevant to designing and fabricating roof coverings:
 - charts and hand drawings
 - instructions issued by authorised organisational or external personnel
 - manufacturer specifications and instructions
 - safety data sheets (SDSs)
 - memos
 - organisation work specifications and requirements
 - plans and sketches
 - regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - WHS and environmental requirements
 - plumbing regulations
 - relevant Australian standards
 - safe work procedures relating to the design, and fabrication of coverings for curved roofs
 - signage
 - verbal, written and graphical instructions
 - work bulletins
 - work schedules, plans and specifications.
- different types of tools and equipment, their application and method of operation:
 - drafting equipment
 - hand and power tools
 - lifting and load shifting equipment
 - machinery for shaping the roof material
 - measuring equipment
- processes for reporting faults according to company's workplace procedures this includes both written and verbal
- statutory and regulatory authorities:
 - Commonwealth government
 - state or territory governments
 - local authorities
- SI system of measurements
 - safe work practices associated with designing and fabricating roof coverings for curved structures:
 - handling of materials
 - hazard control
 - personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
 - recognising and preventing hazards associated with:

- electricity
- hazardous materials and substances
- service lines
- surrounding structures and facilities
- trip hazards
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety
- environmental requirements and sustainability principles and concepts:
 - clean-up protection
 - stormwater protection
 - waste management
 - efficient energy
 - efficient use and recycling of material
 - disposing of waste material to ensure minimal environmental impact
 - selecting appropriate components to ensure minimal environmental impact.
- quality assurance requirements:
 - Environment Protection Authority (EPA)
 - internal company quality assurance policy and risk management strategy
 - International Standards Organisation (ISO)
 - site safety plan
 - workplace operations and procedures.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPRF3021 Receive roofing materials

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.
Correction to prerequisite unit code from *CPCPCM2043A Carry out WHS requirements* to *CPCPCM2043 Carry out WHS requirements*.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPRF3021A Receive roofing materials. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to coordinate the delivery, receipt and handling of roofing materials on a site.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|---|
| 1 Prepare for work. | 1.1 Obtain and confirm plans and specifications by site visit. |
| | 1.2 Adhere to work health and safety (WHS) and environmental requirements and materials handling throughout the work. |
| | 1.3 Identify and adhere to quality assurance requirements according to workplace requirements. |
| | 1.4 Select and check tools and equipment, including personal |

- protective equipment (PPE) and barricades and signs, for serviceability.
- 1.5 Prepare work area to support efficient receipt of roofing materials.
- 2 Plan delivery.
- 2.1 Interpret plans, specifications, material quantity details and other relevant information to determine amount and type of material to be delivered to site.
- 2.2 Inspect site to determine capacity, identify risks and hazards, and identify load-handling methods and techniques.
- 2.3 Obtain spot load limits on roof frame structure from structural engineer.
- 2.4 Sequence loads according to job requirements and work site capacity.
- 2.5 Place orders specifying items, quantities and sequence of delivery of each load.
- 2.6 Plan and sequence deliveries in conjunction with others involved in or affected by their arrival.
- 3 Receive delivery of materials.
- 3.1 Inform employees of delivery process.
- 3.2 Clear and provide access to site for crane and other support vehicles and equipment.
- 3.3 Prepare delivery sites and spot load sites and material securing equipment.
- 3.4 Position safety barricades and signs.
- 3.5 Move loads from delivery vehicle to spot load positions or other determined site location.
- 3.6 Cover and secure loads to prevent damage according to standards and manufacturer requirements, and report faults.
- 3.7 Apply sustainability principles and concepts when preparing for and undertaking work process.

- 4 Clean up.
 - 4.1 Remove safety barricades and signs.
 - 4.2 Clear work area and dispose of, re-use or recycle materials according to legislation, regulation, codes of practice and job specification.
 - 4.3 Clean, check, maintain and store tools and equipment according to manufacturer recommendations and workplace procedures.
 - 4.4 Complete documentation according to workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPRF3021A Receive roofing materials.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPRF3021 Receive roofing materials

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.
- Correction to prerequisite unit code from CPCPCM2043A Carry out WHS requirements to CPCPCM2043 Carry out WHS requirements.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPRF3021A Receive roofing materials. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- assessing roofing material requirements from the plans and specifications of a roofing project
- locating, interpreting and applying relevant information, standards and specifications to receiving roofing materials
- sequencing material delivery to correspond with a planned construction project
- receiving the materials (including the location of spot points) and securing arrangements, ensuring:
 - application of sustainability principles and concepts
 - correct identification of requirements and details of their delivery
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with safety regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- work health and safety (WHS), Commonwealth, state and territory legislation and regulations relating to:
 - handling of materials
 - hazard control

- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - electricity
 - hazardous materials and substances
 - lifting and placement of loads
 - service lines
 - surrounding structures and facilities
 - trip hazards
 - use of tools and equipment
 - work site visitors and the public
 - working at heights
 - working in proximity to others
 - use of firefighting equipment
 - use of first aid equipment
 - workplace environment and safety
- tools and equipment:
 - barricades and signage
 - fall protection equipment
 - ladders
 - lifting and load shifting equipment, including:
 - chain blocks
 - elevated work platforms (EWPs)
 - forklifts
 - hand trolleys
 - hoists and jacks
 - restricted height scaffolds
 - rollers
- materials:
 - blanket and batt types
 - industrial roof components
 - laminate
 - metal rainwater products
 - metal roof covers of concealed or pierce fixed types
 - metal self-drilling and tapping screws
 - plastic building sheets for walls and roofs
 - prefabricated roofing components
 - rainwater goods
 - rivets and sealants (silicon and solder)

- thermal insulation of reflective foil
- information:
 - charts and hand drawings
 - instructions issued by authorised organisational or external personnel
 - manufacturer specifications and instructions
 - safety data sheets (SDS)
 - memos
 - organisation work specifications and requirements
 - plans and sketches
- regulatory and legislative requirements:
 - building codes
 - WHS and environmental requirements
 - plumbing regulations
 - relevant Australian standards
 - safe work procedures relating to receiving roofing materials
 - signage
 - verbal, written and graphical instructions
 - work bulletins
 - work schedules, plans and specifications.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPRF3022 Fabricate and install roof drainage systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPRF3022A Fabricate and install roof drainage components. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to fabricate and install roof drainage systems and associated rainwater components.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

CPCPCM2055 Work safely on roofs

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify installation requirements.

1.1 Access, read and determine roof drainage system installation requirements from job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements.

1.2 Identify and apply workplace, work health and safety (WHS) and environmental and sustainability

- requirements.
- 1.3 Calculate material quantities from plans and specifications.
 - 1.4 Draw fabrication pattern based on plans and specifications as required.
 - 1.5 Determine type and size of gutters, downpipes and support system from plans and specifications and to comply with relevant Australian Standards.
 - 1.6 Confirm materials are compatible with the roof in accordance with workplace procedures.
- 2 Prepare for work.
- 2.1 Create a materials list and collect materials.
 - 2.2 Select appropriate tools and equipment including personal protective equipment (PPE).
 - 2.3 Identify materials and equipment required to complete work tasks.
 - 2.4 Inspect access to roof work area and ensure fall protection equipment is in place if required.
- 3 Fabricate roof drainage components.
- 3.1 Mark out material according to pattern drawings or plans and specifications.
 - 3.2 Perform fabrication of roof drainage component in accordance with current Australian Standards and manufacturers' instructions.
 - 3.3 Fasten and seal the roof drainage component to comply with current Australian Standards and manufacturers' instructions if required.
- 4 Install roof drainage components.
- 4.1 Set out the location of roof drainage components according to plans and specifications.
 - 4.2 Install the support system to suit the roof drainage component if required.
 - 4.3 Install the roof drainage component in accordance with current Australian Standards and manufacturers'

instructions.

- 5 Clean up.
 - 5.1 Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements.
 - 5.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPRF3022A Fabricate and install roof drainage components.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPRF3022 Fabricate and install roof drainage systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPRF3022A Fabricate and install roof drainage components. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by using metal to fabricate and install:

- a valley gutter
- a fascia, including one internal and one external angle, that is attached to an approved support system and a minimum of three metres in length
- an eaves gutter, including:
 - gutter support system
 - nozzle
 - stop end
 - internal and external angle
 - fall
 - overflow measure
 - expansion allowance
- a downpipe, including:
 - offset
 - spreader
 - fixings
- a box gutter, including:
 - overflow measures
 - sump or rainwater head
 - expansion allowance
 - gutter support system
 - ridged support
 - fasteners and sealants.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- current standards and codes for roof drainage systems:
 - National Construction Code (NCC)
 - AS/NZS 3500 Plumbing and drainage Set
 - HB39 Installation code for metal roof and wall cladding
- types and sizes of gutters, downpipes and support system
- installation requirements:
 - appropriate falls
 - pitches
 - overflow measures
 - support and fixings
 - cross-sectional area
 - expansions allowances
 - environmental conditions
 - approved sealants and fixings
 - capillary action
 - electrolysis
- tools, materials and equipment used to fabricate and install roof drainage systems
- work health and safety (WHS) requirements for fabricating and installing roof drainage systems.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

CPCPRF3023 Fabricate and install external flashings

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPRF3023A Fabricate and install external flashings. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to fabricate and install external flashings.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

CPCPCM2055 Work safely on roofs

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|--|
| 1 Prepare for work. | 1.1 Access, read and determine installation requirements and methods from relevant plans, specifications, current codes, Australian Standards and manufacturers' instructions. |
| | 1.2 Check that the materials used are compatible with the surrounding environment and other materials associated |

- within the installation.
- 1.3 Identify, interpret and follow workplace policies and procedures, work health and safety (WHS), environmental and sustainability requirements associated with the fabrication and installation of external flashings.
 - 1.4 Determine job priorities and sequence job tasks in consultation with others onsite.
 - 1.5 Identify potential hazards and determine and implement control measures and personal protective equipment (PPE) requirements.
 - 1.6 Check fall protection system is in place and secure.
 - 1.7 Select and check serviceability of appropriate tools, equipment and PPE.
- 2 Identify installation requirements.
 - 2.1 Locate external flashings to be installed from relevant working drawings, plans, specifications, site measurements, codes, Australian Standards and manufacturers' instructions.
 - 2.2 Locate and select materials required for the installation.
 - 2.3 Order and receive required materials and equipment according to workplace requirements.
 - 2.4 Check materials and equipment against the docket and order form for correct product, compliance with Australian Standards and acceptable condition and action discrepancies according to workplace requirements.
 - 3 Fabricate and install external flashings.
 - 3.1 Fabricate external flashings ensuring compliance with relevant working drawings, plans, specifications, site measurements, codes, Australian Standards and manufacturers' instructions.
 - 3.2 Install external flashings using appropriate fastening and sealing methods.
 - 4 Clean up.
 - 4.1 Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation

and workplace requirements.

- 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPRF3023A Fabricate and install external flashings.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPRF3023 Fabricate and install external flashings

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPRF3023A Fabricate and install external flashings. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- measuring site for external flashings with appropriate angles, cover and cutting allowance for fabrication
- fabricating and installing roof flashings to include:
 - an apron, parapet, soaker, hanging or barge with two flashings:
 - that are a minimum length of 600 mm
 - one with an external angle and one with an internal angle
 - a roll top ridge and hip junction capping with three flashings that are each a minimum length of 600 mm
 - hip or barge termination at eave with one flashing that is a minimum length of 600 mm.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- capillary action, thermal expansion and fabrication techniques to maintain weathertightness
- corrosion control
- appropriate fastening, spacing and sealing methods to ensure compliance with relevant current codes, standards and manufacturers' instructions and jurisdictional requirements:
 - National Construction Code (NCC)
 - AS 1562.1 *Design and installation of sheet roof and wall cladding*
 - HB39 *Installation code for metal roof and wall cladding*
- materials and their application for the fabrication and installation of external flashings including suitability for water harvesting
- how to access relevant information, including codes and standards
- tools, materials and equipment used to fabricate and install external flashings

- work health and safety (WHS) requirements for fabricating and installing external flashings.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPRF3024 Install roof components

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Typographical error corrected in Element and Performance Criteria 1.1.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPRF3024A Install roof components.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install roof components. It includes flashing penetrations through a roof to maintain weatherproofing.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

CPCPCM2055 Work safely on roofs

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|-------------------------------------|-----|---|
| 1 | Identify installation requirements. | 1.1 | Access, read and determine roof component installation requirements from job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements. |
|---|-------------------------------------|-----|---|

- 1.2 Identify and apply workplace, work health and safety (WHS) and environmental requirements.
- 2 Prepare for work.
 - 2.1 Create a materials list and collect materials.
 - 2.2 Select appropriate tools and equipment including personal protective equipment (PPE).
 - 2.3 Check roof structure for possible obstructions.
 - 2.4 Identify any battens to be relocated, if required.
 - 2.5 Identify any structural supports to be relocated and report to relevant persons for assessment, if required.
- 3 Install roof components.
 - 3.1 Locate and set out opening for installation of components.
 - 3.2 Relocate battens where required.
 - 3.3 Perform installation, fixing and sealing of roofing components.
- 4 Clean up.
 - 4.1 Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPRF3024A Install roof components.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPRF3024 Install roof components

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Typographical error corrected in Element and Performance Criteria 1.1.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPRF3024A Install roof components.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- installing and sealing two of the following roof components, one to include a soaker tray and one to include a back-pan over flashing:
 - thermal vent or skylight
 - non-mechanised ventilator unit
 - manual box type louvre unit
 - continuous roof ventilator
- installing batten, trimmer or soaker support
- installing one vent that includes non-combustible mesh to be bushfire compliant.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- terminology relating to installation of roof rainwater drainage and roof components
- approved materials, their characteristics and application relating to the installation of roof components:
 - anti-capillary breaks
 - thermal expansion
 - flashing and capping cover
 - flashing jointing
 - sealants
 - fasteners and fixings
 - trimmer and soaker support

- non-combustible mesh
- tools
- electrolysis and problems associated with the use of dissimilar metals
- processes, procedures and techniques for installing roof components:
 - bushfire compliance including National Association for Steel-Framed Housing (NASH) Standard for construction in bushfire areas or AS 3959 *Construction of buildings in bushfire-prone areas*
 - adequate structural supports
- how to access relevant information, including codes and standards
- tools, materials and equipment used to install roof components
- work health and safety (WHS) requirements for installing roof components.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPRF3025 Install roof coverings to curved roof structures

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPRF3025A Install roof coverings to curved roof structures. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to set out and install a curved roof on a roof structure. It includes drawing fabrication patterns based on sketches of roof coverings, calculating curve dimensions and sheet lengths, and selecting required roofing materials.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

CPCPCM2055 Work safely on roofs

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1	Identify installation requirements.	1.1	Access, read and determine curved roof covering installation requirements from job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements.
		1.2	Obtain, interpret and follow workplace, work health and safety (WHS), environmental and sustainability

requirements associated with selecting and receiving materials and installing curved roof structures.

- 2 Prepare for work.
 - 2.1 Ascertain curvature of roof covering and use to determine the starting and finishing points of curves.
 - 2.2 Create design and freehand sketch of the roof covering to form the basis of fabrication patterns.
 - 2.3 Draw fabrication patterns based on design and freehand sketch of roof covering.
 - 2.4 Calculate the quantity and type of manufactured roof covering.
 - 2.5 Create a materials list and collect materials.
 - 2.6 Select and check proposed sealant, fixing, roofing and flashing materials for compatibility.
 - 2.7 Select appropriate tools and equipment including personal protective equipment (PPE).
- 3 Install roof coverings.
 - 3.1 Fix safety mesh and thermal insulation according to relevant Australian Standards, job specifications and manufacturers' instructions.
 - 3.2 Mark and trim sheets prior to fixing and treat cut edges according to manufacturers' instructions.
 - 3.3 Perform installation of roof covering according to manufacturers' instructions.
 - 3.4 Performance-test roof covering and make required adjustments.
 - 3.5 Access installation information to complete documentation according to workplace requirements.
- 4 Clean up.
 - 4.1 Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements.
 - 4.2 Clean tools and equipment, check for serviceability and

report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPRF3025A Install roof coverings to curved roof structures.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPRF3025 Install roof coverings to curved roof structures

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPRF3025A Install roof coverings to curved roof structures. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- determining sheet length and developing a pattern or drawing for the manufacture of the curved roof components
- installing pre-curved roof covering to a bullnose or curved roof structure of a minimum eave width of three metres, incorporating:
 - one internal or one external corner
 - curved flashing or valley
- determining sheet length for a sprung-curved roof
- installing pierced-fixed convex sprung-curved roof covering to a curved roof structure, incorporating a minimum width of two sheets.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- capillary action, thermal expansion and fabrication techniques to prevent leaking installations
- processes for fixing covering to curved roof structures
- characteristics and limitations of materials for installing roof coverings to curved roofs:
 - blanket and batt types
 - curved metal roof covers of concealed or pierce-fixed types
 - metal rainwater goods
 - metal self-drilling and tapping screws
 - plastic building sheets for walls and roofs
 - rivets and sealants
 - thermal insulation of reflective foil laminates
- other approved materials

- how to access relevant information, including codes and standards
- tools, materials and equipment used to install roof coverings to curved roof structures
- work health and safety (WHS) requirements for installing roof coverings to curved roof structures.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPRF3026 Install roof sheets, wall cladding and complex flashings

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is not equivalent to CPCPRF3026A Install composite roof systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install roof sheets, wall cladding and complex flashings.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

CPCPCM2055 Work safely on roofs

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|-------------------------------------|-----|---|
| 1 | Identify installation requirements. | 1.1 | Access, read and determine installation requirements for roof sheets, wall cladding and complex flashings from job plans and specifications, codes, relevant Australian Standards, manufacturer's specifications and jurisdictional requirements. |
| | | 1.2 | Identify and apply workplace, work health and safety |

- (WHS) and environmental requirements.
- 1.3 Identify whether the materials used are compatible with the surrounding environment and other material within the installation, in accordance with workplace procedures.
 - 1.4 Identify roof insulation to meet energy efficient and moisture control requirements.
 - 1.5 Identify safety mesh requirements.
- 2 Prepare for work.
- 2.1 Determine material types and calculate quantities from job plans and specifications and in accordance with truss and/or batten spacings.
 - 2.2 Prepare roof and wall coverings, sealant, non-metallic materials, fixing materials, roofing and catchments to comply with job plans and specifications.
 - 2.3 Create a materials list and collect materials.
 - 2.4 Select and check serviceability of appropriate tools, plant and equipment including application of personal protective equipment (PPE).
 - 2.5 Check fall protection system is in place and secure.
- 3 Install roof sheeting.
- 3.1 Fix safety mesh and insulation according to job plans and specifications, relevant codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
 - 3.2 Mark and trim roof sheets prior to fixing in accordance with truss and roof batten spacings.
 - 3.3 Treat cut edges of roof sheets according to manufacturer's specifications.
 - 3.4 Fix roof sheeting, cladding and non-metallic materials in accordance with relevant codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.

- | | | | |
|---|---|-----|---|
| 4 | Install wall cladding and complex roof flashings. | 4.1 | Measure, cut and fasten support battens, where required, in accordance with relevant codes, Australian Standards manufacturer's specifications and jurisdictional requirements. |
| | | 4.2 | Measure and cut weather cladding using appropriate fastening methods, as required, in accordance with relevant codes, Australian Standards and manufacturer's specifications. |
| | | 4.3 | Perform installation of complex flashing using approved joining and fastening techniques. |
| | | 4.4 | Seal and weatherproof installation according to job plans and manufacturer's specifications. |
| 5 | Clean up. | 5.1 | Clear the work area and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace requirements. |
| | | 5.2 | Clean tools and equipment, check for serviceability reporting any damage, store and secure. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is non-equivalent to CPCPRF3026A Install composite roof systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPRF3026 Install roof sheets, wall cladding and complex flashings

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is not equivalent to CPCPRF3026A Install composite roof systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing roof sheeting, wall cladding and insulation from given plans and specifications ensuring that jointing and sealing are weatherproofed. Each roof sheeting installation to be a minimum of 4 square metres in area, and include flashings and cappings, using the pierced and concealed fastening methods
- installing one complex roof flashing from given plans and specifications, to a dormer or portico and a transition flashing between two different roof pitches, ensuring that jointing and sealing are weatherproofed to a:
 - complex junction of flashings incorporating two barges and a rolled ridge over a dormer; or
 - dormer valley installation penetrating and terminating through a steep pitched roof; and
 - steep pitch to Flatdek transition flashing including a valley over an internal angle in the flashing.

Note: Jointing and sealing to be weatherproof.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- Safe Work Australia - Managing the risk of falls in housing construction, Code of Practice
- sequential installation
- battens and/or safety battens required spacings for:
 - 600 mm truss spacing
 - >900 mm truss spacing
- batten fixing requirements to roof trusses
- roof components:
 - roof sheeting

- wall cladding
- flashing and capping
- complex flashing
- roof battens
- fixings and fasteners
- weathering
- approved sealants
- installation in bushfire prone areas
- how to access relevant information, including codes and standards
- tools, materials and equipment used to install roof sheeting, wall cladding and complex flashings
- work health and safety (WHS) requirements to install roof sheeting, wall cladding and complex flashings.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPRF3027 Select and install a heritage roof system

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Typographical error corrected in Element 1.1.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Application

This unit specifies the skills and knowledge to select and install a heritage roof system. In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

- CPCPCM2043 Carry out WHS requirements
- CPCPCM2055 Work safely on roofs

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Identify installation requirements.	1.1 Access, read and determine heritage roof sheeting installation requirements from job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements. 1.2 Identify and apply workplace, work health and safety

- (WHS), environmental and sustainability requirements associated with selecting and receiving materials and installing heritage roofing systems.
- 1.3 Check whether the materials used are compatible with the surrounding environment and other materials within the installation.
 - 1.4 Determine heritage material types and calculate quantities from plans and specifications.
- 2 Receive delivery of materials.
 - 2.1 Provide safe access for delivery vehicles and onsite workers.
 - 2.2 Check conformity of materials against the delivery docket and specifications and report any shortfalls or damage.
 - 2.3 Secure materials and protect from moisture and mechanical damage.
 - 3 Prepare for work.
 - 3.1 Identify and check serviceability of plant, equipment and tools required for installation and maintenance activities.
 - 3.2 Select, fit and use appropriate personal protective equipment (PPE).
 - 4 Install heritage roof sheeting.
 - 4.1 Measure, cut and fix relevant substrate or roof battens for heritage roofing installation at correct spacings to match plans and job requirements.
 - 4.2 Measure, cut, weather and install heritage roof sheets using appropriate fastening spacing and methods.
 - 4.3 Remove any swarf at end of installation.
 - 5 Fabricate and install flashings.
 - 5.1 Fabricate the required heritage roof flashings.
 - 5.2 Measure, cut, fasten and seal the flashing onto a heritage roof structure matching plans and job specifications.

- 6 Clean up.
 - 6.1 Remove any swarf off cladding, flashings and gutters.
 - 6.2 Clear any rivet stems and fasteners.
 - 6.3 Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements.
 - 6.4 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPRF3027 Select and install a heritage roof system

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Typographical error corrected in Element 1.1.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- installing either copper, lead or galvanised roof cladding to a roof structure not less than 2 metres wide and 1.5 metres long:
 - installing onto appropriate substrate or hardwood timber battens to suit heritage roofing support methods
 - installing a flat or pitched roof system using an approved fixing and sealing method as per heritage requirements
 - selecting and installing 4 short sheet lengths applying laying pattern and end-lap protection
- fabricating and installing the following flashings not less than 600 mm long:
 - one hip or ridge intersection flashing using bossed lead
 - a galvanised steel intersection valley with a soldered saddle
 - a chimney flashing, including soaker tray, back gutter, and hanging and stepped flashing using either lead, zinc or galvanised steel
 - a rolled barge gable intersection with conical end capping
- fabricating and installing at least 600 mm length of galvanised OR lead box gutter including soldered stop ends, round spout, overflow and an external OR internal 45 OR 300 degree angle
- fabricating and installing a round galvanised downpipe offset with soldered joints
- fabricating and installing a bossed OR welded lead collar flashing to suit a 50 mm round penetration
- fabricating and installing a rainwater head from one of the following:
 - zinc, copper or galvanised steel and soldered
 - manufactured in lead, and welded
 - manufactured galvanised

- copper finial.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- plans and specifications
- current standards and codes for roof sheeting and insulation:
 - HB39 *Installation code for metal roof and wall cladding*
 - National Construction Code (NCC)
- receiving roofing materials
- materials and details required to replace heritage roof systems
- heritage cladding profiles, coatings and material-grade roof components:
 - batten types to match existing including Oregon and hardwood
 - lead or galvanised flashing into brickwork or chimneys
 - heritage fixings, fasteners and seals
 - heritage sealing methods
 - vents, finials and decorative features
 - hand bossing
 - lead welding
 - compatibility of materials weathering
 - ventilation
- how to access relevant information, including codes and standards to select and install a heritage roof system
- tools, materials and equipment used to select and install a heritage roof system
- work health and safety (WHS) requirements for installing and maintaining a heritage roof system.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPRF4011 Design and size roof drainage systems

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPRF4011B Design and size roof drainage systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design, size and document the layout of roof drainage systems for Class 1 and 6 buildings as defined in the National Construction Code (NCC).

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Identify roof drainage system requirements.	1.1 Access, read and determine design and size of roof drainage system from plans, job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements. 1.2 Identify and apply workplace, work health and safety (WHS) and environmental requirements.
2 Design and size	2.1 Design and size system layout in accordance with

- system layout. relevant manufacturers' instructions, Australian Standards and jurisdictional requirements.
- 2.2 Determine roof catchment areas and design flows from rainfall data and current Australian standards.
 - 2.3 Determine quantity and size of gutters, sumps, rain heads, overflows and downpipes.
 - 2.4 Produce final roof drainage system layout plans according to relevant drawing design standards.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPRF4011B Design and size roof drainage systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPRF4011 Design and size roof drainage systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPRF4011B Design and size roof drainage systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- designing, sizing and documenting the layout of a roof drainage system including overflows for two varied roof types:
 - one incorporating eaves gutter for a residential (Class 1) building, and
 - one for a commercial (Class 6) building incorporating a box gutter and sumps or rain heads.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- relevant information sources for designing and sizing roof drainage systems
- processes for calculating catchment areas and design flows
- quantity and size of gutters, sumps, rain heads and downpipes determined according to relevant Australian Standards, plans and specifications
- environmental requirements and sustainability principles including efficient design principles
- drawing instruments and sketching techniques, including the use of conventional symbols
- use of computers and computer-aided design (CAD) software for documentation
- how to access relevant information, including codes and standards
- tools, materials and equipment used to design, size and document the layout of roof drainage systems
- work health and safety (WHS) requirements for designing, sizing and documenting the layout of roof drainage systems.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPSN3011 Plan the layout of a residential sanitary plumbing system and fabricate and install sanitary stacks

Modification History

- Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.
Removed duplicative point from Knowledge Evidence: *WHS requirements for fabricating and installing sanitary stacks.*
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Change to Pre-requisite unit. Correction to Knowledge Evidence.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is not equivalent to CPCPSN3023A Fabricate and install sanitary stacks, and CPCPSN3011B Plan layout of a residential sanitary plumbing system. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to plan the layout of a residential sanitary plumbing system for a three-storey residence.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|--|
| 1 Plan and identify installation requirements. | 1.1 Access, read and determine sanitary plumbing system installation requirements from plans, job specifications, codes, relevant Australian Standards, manufacturers' instructions and jurisdictional requirements. |
| | 1.2 Identify and apply workplace, work health and safety (WHS) and environmental requirements. |
| | 1.3 Plan and record layout of sanitary plumbing system. |
| 2 Prepare for work. | 2.1 Create a materials list and collect materials. |
| | 2.2 Select appropriate tools and equipment including personal protective equipment (PPE). |
| 3 Install and test sanitary stack. | 3.1 Set out sanitary stack. |
| | 3.2 Locate and install fixings and supports. |
| | 3.3 Fabricate, join and install stacks. |
| | 3.4 Test sanitary stack installation. |
| 4 Clean up. | 4.1 Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements. |
| | 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is not equivalent to CPCPSN3023A Fabricate and install sanitary stacks, and CPCPSN3011B Plan layout of a residential sanitary plumbing system.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPSN3011 Plan the layout of a residential sanitary plumbing system and fabricate and install sanitary stacks

Modification History

- Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.
- Removed duplicative point from Knowledge Evidence: WHS requirements for fabricating and installing sanitary stacks.
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
- Change to Pre-requisite unit. Correction to Knowledge Evidence.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is not equivalent to CPCPSN3023A Fabricate and install sanitary stacks, and CPCPSN3011B Plan layout of a residential sanitary plumbing system. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- planning the layout for residential sanitary plumbing systems, from given plans and specifications for a three-storey residence, including the following fixtures on each floor:
 - a bath
 - a shower
 - a water closet
 - a basin
 - a floor waste gully
 - a kitchen sink
 - a laundry tub
- fabricating and installing, from a given set of plans and job specifications, three different installations of sanitary plumbing systems across a minimum of two building levels including the following fixtures on each level:
 - a bath
 - a shower
 - a water closet

- a basin
- a floor waste gully
- a kitchen sink
- a laundry tub
- fabricating and installing each planned sanitary system including:
 - using two different materials
 - connecting the discharge piping at each floor
 - preparing stack connection to below ground drain
 - testing the sanitary system.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- terminology relating to sanitary plumbing systems
- installation requirements of sanitary plumbing fixtures
- properties of soil and waste discharges, including temperature and corrosive discharges
- approved materials and components, their characteristics and application relating to sanitary plumbing systems
- how to access relevant information, including codes and standards
- materials and equipment used for planning the installation of residential sanitary plumbing systems
- work health and safety (WHS) requirements for planning the installation of residential sanitary plumbing systems
- principles of sanitary plumbing systems:
 - elevated pipework
 - fully vented modified
 - reduced velocity aerated stack systems
 - single stack
 - single stack modified
- tools, materials and equipment used to fabricate and install sanitary stacks.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

CPCPSN3022 Install discharge pipes

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPSN3022A Install discharge pipes.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install discharge pipes.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------------|--|
| 1 Identify installation requirements. | 1.1 Access, read and determine discharge pipe installation requirements from plans, job specifications, codes, relevant Australian Standards, manufacturers' specifications and jurisdictional requirements. |
| | 1.2 Obtain, interpret and follow workplace, work health and safety (WHS) and environmental requirements. |
| 2 Prepare for work. | 2.1 Create a materials list and collect materials. |
| | 2.2 Select appropriate tools and equipment including personal protective equipment (PPE). |

- | | | | |
|---|---|-----|--|
| 3 | Install and test discharge pipe system. | 3.1 | Set out discharge pipes. |
| | | 3.2 | Locate and install fixings and supports. |
| | | 3.3 | Test discharge pipe system. |
| | | | |
| 4 | Clean up. | 4.1 | Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements. |
| | | 4.2 | Clean tools and equipment, check for serviceability and report any damage, and store and secure. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPSN3022A Install discharge pipes.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPSN3022 Install discharge pipes

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPSN3022A Install discharge pipes.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- installing discharge pipes, from given plans and specifications, to the following:
 - a bath
 - a shower
 - a water closet
 - a basin
 - a floor waste gully
 - a kitchen sink
 - a laundry tub
- installing discharge pipes from given layouts, including:
 - two approved materials and approved joining methods
 - connecting fixture discharge pipes to an approved point of connection.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- terminology relating to discharge pipes
- properties of soil and waste discharges, including temperature and corrosive discharges
- approved materials and components, their characteristics and application relating to discharge pipes
- how to access relevant information
- tools, materials and equipment used for the installation of discharge pipes
- work health and safety (WHS) requirements for installing discharge pipes.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPSN3025 Install pre-treatment facilities

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPSN3025A Install pre-treatment facilities. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install pre-retreatment facilities designed to intercept and retain prohibited discharges to the sanitary plumbing and drainage system.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--------------------------|---|
| 1 Identify requirements. | 1.1 Access, read and determine pre-treatment facility installation requirements from job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements. |
| | 1.2 Obtain, interpret and follow workplace, work health and safety (WHS) and environmental requirements. |
| 2 Prepare for work. | 2.1 Create a materials list and collect materials. |

- 2.2 Select appropriate tools and equipment including personal protective equipment (PPE).
- 3 Install and test pre-treatment facility.
 - 3.1 Set out work and check to confirm compliance with plans, specifications and authority requirements.
 - 3.2 Install pre-treatment facility according to manufacturers' instructions, relevant Australian Standards and jurisdictional requirements.
 - 3.3 Test and analyse system to ensure installation is functioning correctly and is compliant with manufacturers' instructions, relevant Australian Standards and jurisdictional requirements.
 - 3.4 Complete documentation according to workplace requirements.
- 4 Clean up.
 - 4.1 Clear the work area and dispose of any materials in accordance with state or territory legislation and workplace requirements.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPSN3025A Install pre-treatment facilities.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPSN3025 Install pre-treatment facilities

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPSN3025A Install pre-treatment facilities. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing, commissioning and testing two different pre-treatment facilities for a sanitary plumbing or drainage system.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- processes for materials handling when installing pre-treatment facilities
- process for installing pre-treatment facilities:
 - acid traps and neutralisers
 - cooling interceptors
 - grease traps
 - plaster and clay traps
 - silt interceptors
 - solid traps
 - solvent and oil interceptors
- properties and effects of prohibited waste discharges to sewers
- how to access relevant information, including codes and standards
- tools, materials and equipment used to install pre-treatment facilities
- work health and safety (WHS) requirements for installing pre-treatment facilities.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPSN3026 Install sewerage pumpsets

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Typographical error corrected in Element 1.1.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPSN3026A Install sewerage pumpsets.
Updated to meet the Standards for Training Packages 2012.

Application

The unit specifies the skills and knowledge required to install sewerage pumps including installing and testing small bore macerators.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|------------------------|-----|---|
| 1 | Identify requirements. | 1.1 | Access, read and determine sewerage pumpset installation requirements from job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements. |
| | | 1.2 | Identify and follow workplace, work health and safety (WHS) and environmental requirements. |

- | | | | |
|---|----------------------------------|-----|--|
| 2 | Prepare for work. | 2.1 | Create a materials list and collect materials. |
| | | 2.2 | Select appropriate tools and equipment including personal protective equipment (PPE). |
| 3 | Install sewerage pump equipment. | 3.1 | Set out pump according to plans, specifications, site requirements or job instructions, with consideration given to the location of existing services. |
| | | 3.2 | Install pumping equipment in specified locations using required fixings. |
| | | 3.3 | Connect pipework and pump controls according to plans, manufacturers' instructions and Australian Standards. |
| | | 3.4 | Operate and test installed sewerage pump equipment and related pipework according to relevant Australian Standards and manufacturers' instructions. |
| | | 3.5 | Complete documentation according to workplace requirements. |
| 4 | Clean up. | 4.1 | Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements. |
| | | 4.2 | Clean tools and equipment, check for serviceability and report any damage, and store and secure. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPSN3026A Install sewerage pumpsets

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPSN3026 Install sewerage pumpsets

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Typographical error corrected in Element 1.1.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPSN3026A Install sewerage pumpsets.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- installing a small-bore macerator including rising main to an approved point of discharge
- using a submersible sewerage pump and correctly installing pump on an approved base
- ensuring correct operation of pump, float valves and alarm functions.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- methods of fixing techniques
- levelling and alignment processes
- performance measures for various sewerage pumpsets:
 - small bore macerators
 - submersible pumps
- properties of sewerage
- tools and equipment used to install sewerage pumpsets including lifting and load-shifting equipment
- how to access relevant information, including codes and standards
- work health and safety (WHS) requirements for installing sewerage pumpsets.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPSN4011 Design and size sanitary plumbing systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPSN4011B Design and size sanitary plumbing systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to design, size and document the layout of sanitary plumbing systems for multi-floor residential buildings and commercial buildings.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

Nil.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|---|
| 1 Identify sanitary plumbing system requirements. | 1.1 Access, read and determine design and size of sanitary plumbing system from plans, job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements. |
| | 1.2 Identify and apply workplace, work health and safety (WHS) and environmental requirements. |
| | 1.3 Determine quantity, location, fixtures and legal points of discharge. |

- | | |
|----------------------------------|--|
| 2 Design and size system layout. | 2.1 Design and size system layout in accordance with relevant manufacturers' instructions, Australian Standards and jurisdictional requirements. |
| | 2.2 Use the proposed design to identify and specify optimal material requirements. |
| | 2.3 Produce final system layout plans according to relevant drawing design standards. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPSN4011B Design and size sanitary plumbing systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPSN4011 Design and size sanitary plumbing systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPSN4011B Design and size sanitary plumbing systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout and schematic details for a commercial building with the design incorporating:
 - an approved sanitary plumbing system to a minimum of seven floor levels. The design must incorporate the following fixtures on each floor level:
 - a disabled bathroom including a water closet (WC) and basin
 - male toilet facilities including 3 WCs, 3 basins and 3 individual urinals or an equivalent sized urinal slab
 - female toilet facilities including 5 WCs and 3 basins
 - a shower
 - kitchen sink for tea-making purposes
 - one floor level must contain a commercial kitchen with food preparation area including at least:
 - one commercial dishwasher
 - one commercial pot wash facility
 - one commercial glasswasher
 - one bucket trap
 - one basin
 - one floor level must be below the approved point of connection (a basement) and involve an approved trade waste facility
- designing, sizing and documenting the layout and schematic details for a residential building incorporating an approved sanitary plumbing system to a minimum of six floor levels, including a basement and the following fixtures on each floor level, excluding the basement:
 - 3 baths
 - 6 showers

- 6 WCs
- 6 basins
- 3 kitchen sinks
- 3 dishwashers
- 3 laundry tubs
- 3 clothes washing machines.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- relevant manufacturers' instructions, Australian Standards and jurisdictional requirements
- properties of soil and waste discharges, including temperature and corrosive discharges
- approved materials and components, their characteristics and application relating to sanitary plumbing systems
- acoustic treatment of sanitary pipework
- principles of sanitary plumbing systems:
 - elevated pipework
 - fully vented modified
 - reduced velocity aerated stack systems
 - single stack
 - other approved systems
- reduced and invert levels
- drawing instruments and sketching techniques, including the use of conventional symbols
- use of computers and computer-aided design (CAD) software for documentation
- how to access relevant information, including codes and standards
- tools, materials and equipment used to design, size and document the layout of sanitary drainage systems
- work health and safety (WHS) requirements for designing, sizing and documenting the layout of sanitary drainage systems.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPWT3020 Connect and install storage tanks to a domestic water supply

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release5.0.
- Supersedes and is equivalent to CPCPWT3020A Connect and install storage tanks to a domestic water supply. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to connect and install storage tanks to a domestic water supply.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

CPCPCM3023 Fabricate and install non-ferrous pressure piping

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------------|---|
| 1 Identify installation requirements. | 1.1 Access, read and determine storage tank installation requirements from job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements. |
| | 1.2 Identify and apply workplace, work health and safety |

(WHS) and environmental requirements.

- | | | | |
|---|--------------------------------|-----|--|
| 2 | Prepare for work. | 2.1 | Create a materials list and collect materials. |
| | | 2.2 | Select and check serviceability of appropriate tools and equipment including personal protective equipment (PPE). |
| 3 | Install and test storage tank. | 3.1 | Install storage tank and associated pipework according to job instructions or plans, manufacturers' instructions, relevant Australian Standards and jurisdictional requirements. |
| | | 3.2 | Pressure test and commission installed storage tank according to relevant manufacturers' instructions, Australian Standards, job specifications and jurisdictional requirements. |
| 4 | Clean up. | 4.1 | Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements. |
| | | 4.2 | Clean tools and equipment, check for serviceability and report any damage, and store and secure. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPWT3020A Connect and install storage tanks to a domestic water supply.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPWT3020 Connect and install storage tanks to a domestic water supply

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release5.0.
- Supersedes and is equivalent to CPCPWT3020A Connect and install storage tanks to a domestic water supply. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- connecting and commissioning an approved static water storage tank to a water distribution pipe system
- meeting the specified location and installation requirements including:
 - correct air gap
 - operational water level
 - overflow requirements
 - minimum outlet size
 - tank placement
 - safe tray and safe waste.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- uses and limitations of materials involved in connecting and installing water storage tanks
- process for connecting static water storage tanks
- statutory and regulatory authority requirements:
 - correct air gap
 - operational water level
 - overflow requirements
 - minimum outlet size
 - tank placement
 - safe tray and safe waste
 - testing and commissioning
- how to access relevant information, including codes and standards

- tools, materials and equipment used to connect and install storage tanks to a domestic water supply
- work health and safety (WHS) requirements for connecting and installing storage tanks to a domestic water supply.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPWT3021 Set out and install water services

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPWT3021A Set out and install water services. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install heated, tempered, cold, drinking and non-drinking water services from water supply to fixture or points of discharge.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, and regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

CPCPCM3023 Fabricate and install non-ferrous pressure piping

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify installation requirements.

1.1 Access, read and determine water service installation requirements from job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements.

1.2 Obtain, interpret and follow workplace, work health and safety (WHS) and environmental requirements.

- | | | | |
|---|-------------------------------|-----|---|
| 2 | Prepare for work. | 2.1 | Create a materials list and collect materials. |
| | | 2.2 | Select and check serviceability of appropriate tools and equipment including personal protective equipment (PPE). |
| 3 | Install and test pipe system. | 3.1 | Set out and install pipework and connection points according to drawings, relevant specifications, Australian Standards, codes and jurisdictional requirements. |
| | | 3.2 | Test installed pipework according to relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements. |
| 4 | Clean up. | 4.1 | Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements. |
| | | 4.2 | Clean tools and equipment, check for serviceability and report any damage, and store and secure. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPWT3021A Set out and install water services.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPWT3021 Set out and install water services

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPWT3021A Set out and install water services. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by setting out, installing and testing:

- water services from a cold drinking water supply line to a shower, basin, bath, laundry trough and kitchen sink, and include a provision for a water heater
- a heated water supply line to a kitchen sink and laundry trough
- a tempered water supply line to a basin, shower and bath
- a non-drinking water supply to a water closet and hose tap.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- processes and requirements of installing water piping systems:
 - proximity to other services
 - location of piping
 - depth of cover, bedding and backfill
 - insulation
 - protection
 - pipe support
 - identification of piping
 - sizing
- properties of water including density, viscosity, compressibility, boiling point and freezing point
- pressure and flow rates
- water supply backflow and cross-connection
- how to access relevant information, including codes and standards
- tools, materials and equipment used to set out and install water services
- work health and safety (WHS) requirements for setting out and installing water services.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

CPCPWT3022 Install and commission water heating systems and adjust controls and devices

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Minor change in Performance Evidence for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is not equivalent to CPCPWT3022A Install and adjust water service controls and devices, and CPCPWT3023A Install and commission water heating systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install and commission water heaters and install and adjust controls and mixing devices used to manually control water mix and flow.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------------|--|
| 1 Identify installation requirements. | 1.1 Access, read and determine water heating system and control device installation requirements from job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional |
|---------------------------------------|--|

- requirements.
- 1.2 Identify and apply workplace, work health and safety (WHS) and environmental requirements.
- 2 Prepare for work.
 - 2.1 Create a materials list and collect materials.
 - 2.2 Select and check serviceability of appropriate tools and equipment including personal protective equipment (PPE).
- 3 Install water heating system and service control device.
 - 3.1 Position water heating system in accordance with relevant Australian Standards, manufacturers' instructions and jurisdictional requirements.
 - 3.2 Install and connect pipework and valves to water heating system in accordance with relevant Australian Standards, manufacturers' instructions and jurisdictional requirements.
 - 3.3 Determine tempered water control device size from available pressure and number of fixtures supplied in accordance with Australian Standards, manufacturers' instructions and jurisdictional requirements.
 - 3.4 Install tempered water device and connect to pipework in accordance with Australian Standards, manufacturers' instructions and jurisdictional requirements.
 - 3.5 Commission water heating system and control device.
 - 3.6 Test installed pipework according to Australian Standards, manufacturers' instructions and jurisdictional requirements.
 - 3.7 Complete installation and documentation according to relevant regulatory and workplace requirements.
- 4 Clean up.
 - 4.1 Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is not equivalent to CPCPWT3022A Install and adjust water service controls and devices, and CPCPWT3023A Install and commission water heating systems.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPWT3022 Install and commission water heating systems and adjust controls and devices

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Minor change in Performance Evidence for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is not equivalent to CPCPWT3022A Install and adjust water service controls and devices, and CPCPWT3023A Install and commission water heating systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing and commissioning three different water heaters, including one manifold system from the following:
 - a vented storage water heater
 - an unvented storage water heater
 - a continuous flow water heater
 - a solar water heater
 - a heat pump
 - a water service consisting of a tempering valve
- adjusting water service controls and devices from the above installations to manufacturers' instructions, Australian Standards and jurisdictional requirements.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- approved materials and components of water heating systems and control devices
- processes, procedures and techniques for:
 - installing water heaters
 - using testing equipment
- properties of water, including pressure and flow rates
- water service controls and mixing devices

- how to access relevant information, including drawings conventions, symbols and abbreviations, codes and standards
- tools, materials and equipment used to install and commission water heating systems and adjust controls and devices
- work health and safety (WHS) requirements for installing and commissioning water heating systems and adjust controls and devices.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

CPCPWT3024 Install and maintain domestic water treatment equipment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPWT3024A Install and maintain domestic water treatment equipment. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install and maintain domestic water treatment equipment.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify installation requirements.

1.1 Access, read and determine water treatment installation requirements from job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements.

1.2 Obtain, interpret and follow workplace, work health and safety (WHS) and environmental requirements associated with installing and maintaining domestic water treatment equipment.

- | | | |
|---|-----|--|
| 2 Prepare for work. | 2.1 | Create a materials list and collect materials. |
| | 2.2 | Select appropriate tools and equipment including personal protective equipment (PPE). |
| 3 Install, test and commission water treatment equipment. | 3.1 | Set out position of water treatment equipment. |
| | 3.2 | Test water supply adjacent to the equipment for appropriate pressure. |
| | 3.3 | Install water treatment equipment. |
| | 3.4 | Test and commission installation. |
| 4 Maintain water treatment equipment. | 4.1 | Identify service and maintenance requirements. |
| | 4.2 | Conduct maintenance operations following manufacturers' instructions. |
| 5 Clean up. | 5.1 | Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements. |
| | 5.2 | Clean tools and equipment, check for serviceability and report any damage, and store and secure. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPWT3024A Install and maintain domestic water treatment equipment.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPWT3024 Install and maintain domestic water treatment equipment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPWT3024A Install and maintain domestic water treatment equipment. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by installing, commissioning and maintaining one of the following:

- a cartridge water filter
- a water cooler
- a water softener
- a water conditioner
- a reverse osmosis filter
- a sand filter.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and installation requirements:
 - cartridge filters
 - water softeners
 - water coolers
 - water conditioners
 - reverse osmosis filters
 - sand filters
- osmosis and reverse osmosis, filtration and purification
- properties of hard and soft water
- sources of contamination and impurities
- pressure and flow rates
- how to access relevant information, including codes and standards
- tools, materials and equipment used to install and maintain domestic water treatment equipment

- work health and safety (PPE) requirements for installing and maintaining domestic water treatment equipment.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPWT3025 Install water pumpsets

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPWT3025A Install water pumpsets.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install, test and commission water pumpsets.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify installation requirements.	1.1 Access, read and determine water pumpset installation requirements from job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements.
	1.2 Obtain, interpret and follow workplace, work health and safety (WHS) and environmental requirements.
2 Prepare for work.	2.1 Create a materials list and collect materials.
	2.2 Select and check serviceability of appropriate tools and

- equipment including personal protective equipment (PPE).
- 2.3 Prepare work area to support the efficient installation of water pumpset.
- 3 Install water pumpset.
- 3.1 Set out and install pumpset to comply with relevant Australian Standards, job specifications, manufacturers' instructions and jurisdictional requirements.
- 3.2 Test and commission installation.
- 4 Clean up.
- 4.1 Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements.
- 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPWT3025A Install water pumpsets.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPWT3025 Install water pumpsets

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCPWT3025A Install water pumpsets.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- planning layout, installing, testing and commissioning a centrifugal pump.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- atmospheric pressure
- fixing techniques and pump connections
- process for installing and application of water pumpsets:
 - circulating
 - pressure
 - submersible
- properties of water, including pressure, flow rate and velocity
- basic pump sizing
- characteristics and use of pump controls:
 - automatic controls which may float, level or flow switches
 - manual
- how to access relevant information, including codes and standards
- tools, materials and equipment used to install water pumpsets
- work health and safety (PPE) requirements for installing water pumpsets.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPWT3026 Install and fit off sanitary fixtures, water services and adjust water service controls

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is not equivalent to CPCPSN3024A Install and fit off sanitary fixtures, and CPCPWT3026A Fit off and commission heated and cold water services. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to fit off and commission heated, tempered and cold-water services to sanitary fixtures. It includes installing and fitting sanitary fixtures and adjusting water service controls and devices.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|---------------------------------------|-----|---|
| 1 Identify installation requirements. | 1.1 | Access, read and determine fixture and service installation requirements from plans, job specifications, codes, relevant Australian Standards, manufacturers' instructions and jurisdictional requirements. |
| | 1.2 | Identify and apply workplace, work health and safety (WHS) and environmental requirements. |

- 2 Prepare for work.
 - 2.1 Create a materials list and collect materials.
 - 2.2 Select appropriate tools and equipment including personal protective equipment (PPE).

- 3 Install and connect fixtures.
 - 3.1 Set out, position, assemble and install sanitary fixtures in accordance with plans, job specifications, codes, relevant Australian Standards, manufacturers' instructions and jurisdictional requirements.
 - 3.2 Position and install flushing device.
 - 3.3 Flush service lines and connect to fixtures and devices.
 - 3.4 Test water service, fixtures and devices for correct function.
 - 3.5 Adjust controls and devices to operate with even and consistent flow.
 - 3.6 Test installed pipework in accordance with codes, relevant Australian Standards and manufacturers' instructions.
 - 3.7 Maintain tapset and mixer tap in accordance with relevant Australian Standards, codes and manufacturers' instructions.
 - 3.8 Complete documentation according to relevant regulatory requirements.

- 4 Clean up.
 - 4.1 Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is not equivalent to CPCPSN3024A Install and fit off sanitary fixtures, and CPCPWT3026A Fit off and commission heated and cold water services.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPWT3026 Install and fit off sanitary fixtures, water services and adjust water service controls

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is not equivalent to CPCPSN3024A Install and fit off sanitary fixtures, and CPCPWT3026A Fit off and commission heated and cold water services. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- setting out, installing and fitting off sanitary fixtures and tapware from an approved point of connection to a:
 - water closet (WC)
 - shower
 - sink
 - bath
 - basin
 - dishwashing machine
 - wall hung urinal
 - non-drinking water hose tap
- installing and adjusting a programmed flushing device for a cold-water service
- adjusting and commissioning two different WC cisterns
- reseating a brass tap and installing an approved jumper valve
- removing and replacing a mixer tap cartridge with a replacement cartridge.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- properties of water, including pressure and flow rates
- approved materials, components, their characteristics and their application for installing sanitary fixtures, cold water systems and water service controls and devices
- water service controls and mixing devices
- working drawing conventions, symbols and abbreviations
- how to access relevant information, including codes and standards

- tools, materials and equipment used to fit off and commission heated, tempered and cold-water services to sanitary fixtures
- work health and safety (WHS) requirements for fitting off and commissioning heated, tempered and cold-water services to sanitary fixtures.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCPWT3027 Install backflow prevention devices

Modification History

- Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.
Correction to prerequisite unit code from *CPCPCM2043A Carry out WHS requirements* to *CPCPCM2043 Carry out WHS requirements*.
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Typographical error in Elements and Performance Criteria 1 corrected.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPWT3027A Connect irrigation systems from drinking water supply. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install backflow prevention devices. It does not include the commissioning or testing of backflow prevention devices or arrangements.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

CPCPCM3023 Fabricate and install non-ferrous pressure piping.

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Identify installation requirements.	<p>1.1 Access, read and determine backflow prevention device installation requirements from relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.</p> <p>1.2 Identify and apply workplace, work health and safety (WHS) and environmental requirements.</p>
2 Prepare for work.	<p>2.1 Create a materials list and collect materials.</p> <p>2.2 Select and check serviceability of appropriate tools and equipment including personal protective equipment (PPE).</p>
3 Connect and test system.	<p>3.1 Set out and install backflow prevention device according to relevant from relevant job plans, specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.</p> <p>3.2 Test installed pipework according to relevant job specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.</p>
4 Clean up.	<p>4.1 Clear the work area and dispose of any materials in accordance with state and territory legislation and workplace procedures.</p> <p>4.2 Clean, check for serviceability and store and secure plant, equipment and tools reporting any damage to appropriate personnel.</p>

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPWT3027A Connect irrigation systems from drinking water supply.

Assessment Requirements for CPCPWT3027 Install backflow prevention devices

Modification History

- Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.
Correction to prerequisite unit code from CPCPCM2043A Carry out WHS requirements to CPCPCM2043 Carry out WHS requirements.
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Typographical error in Elements and Performance Criteria 1 corrected.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPWT3027A Connect irrigation systems from drinking water supply. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing three different backflow prevention devices one being low hazard rating, one being a medium hazard rating, and one being a high hazard rating from the list below, including pipework to inlet of the backflow device and ancillary equipment.
- Low hazard device defined as:
 - dual-check valve with atmospheric port
 - dual-check valve
 - dual-check valve with intermediate vent
 - atmospheric vacuum breaker
 - single check valve (testable)
 - single check detector assembly (testable).
- Medium hazard testable device defined as:
 - double-check valve assembly
 - double-check detector assembly
 - pressure type vacuum breaker.
- High hazard testable device defined as:
 - registered break tank

- registered air gap
- reduced pressure zone device
- reduced pressure detector assembly.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- pressure and flow rates
- types of backflow prevention devices such as:
 - testable
 - non-testable
- backflow hazard ratings
- suitability of backflow prevention devices
- types of irrigation systems
- how to access relevant information, including codes and standards
- tools, materials and equipment used to install backflow prevention devices
- work health and safety (WHS) requirements to install backflow prevention devices.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPWT3028 Install property service

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPWT3028A Install water service.
Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to install a property service from the authority water main up to and including the water meter assembly.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------------|---|
| 1 Identify installation requirements. | 1.1 Access, read and determine property service installation requirements from job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements. |
| | 1.2 Identify and apply workplace, work health and safety (WHS) and environmental requirements. |
| | 1.3 Determine location of property service and the main. |
| | 1.4 Identify cables, conduits, pipes or other services. |

- | | | | |
|---|--|-----|--|
| 2 | Prepare for work. | 2.1 | Create a materials list and collect materials. |
| | | 2.2 | Select appropriate tools and equipment including personal protective equipment (PPE). |
| 3 | Install, test and commission property service. | 3.1 | Mark out and excavate for installation of property service. |
| | | 3.2 | Excavate point of connection to main. |
| | | 3.3 | Drill and tap main in accordance with relevant Australian Standards, codes and jurisdictional requirements. |
| | | 3.4 | Install property service. |
| | | 3.5 | Test and commission installation. |
| 4 | Clean up. | 4.1 | Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements. |
| | | 4.2 | Clean tools and equipment, check for serviceability and report any damage, and store and secure. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPWT3028A Install water service.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCPWT3028 Install property service

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCPWT3028A Install water service.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by installing a property service, involving:

- determining installation requirements
- tapping into a minimum DN100 mm water main
- connecting a property service to a water meter assembly
- testing and commissioning the installation.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- water meter installation
- drilling and tapping water main
- approved property service materials
- property service installation requirements
- types of water main materials
- corrosion control
- how to access relevant information legislation, including codes and standards
- tools, materials and equipment used to install a property service
- work health and safety (WHS) requirements for installing a property service.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPWT3029 Install water pipe systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Knowledge Evidence.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPWT3029A Install water pipe systems.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install and test water pipes larger than DN65.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

CPCPCM3023 Fabricate and install non-ferrous pressure piping

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------------|--|
| 1 Identify installation requirements. | 1.1 Access, read and determine large water service installation requirements from job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements. |
|---------------------------------------|--|

- 1.2 Identify and apply workplace, work health and safety (WHS) and environmental requirements.
- 2 Prepare for work.
 - 2.1 Create a materials list and collect materials.
 - 2.2 Select and check serviceability of appropriate tools and equipment including personal protective equipment (PPE).
- 3 Install large water service.
 - 3.1 Set out and install large water service.
 - 3.2 Test installation pipework according to standards and manufacturers' instructions.
 - 3.3 Complete documentation according to relevant regulatory requirements.
- 4 Clean up.
 - 4.1 Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCPWT3029A Install water pipe systems.

Assessment Requirements for CPCPWT3029 Install water pipe systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Changes to Knowledge Evidence.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPWT3029A Install water pipe systems.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing and testing a large water service using a length of mains pressure pipe no less than four metres at a minimum of DN65, including:
 - two materials
 - a change of direction or a tee junction
 - one isolation valve.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- types of water mains
- methods of connection to water main or large water service
- installation of large water services
- corrosion control
- how to access relevant information, including codes and standards
- tools, materials and equipment used to install and test water pipe system
- work health and safety (WHS) requirements for installing and testing water pipe systems.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPWT3030 Install home fire sprinkler systems

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Typographical error corrected in Element 1.1.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCPWT3030A Install home fire sprinkler systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install a home fire sprinkler system in a Class 1a building as defined in the National Construction Code (NCC).

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-requisite Unit

CPCPCM2043 Carry out WHS requirements

CPCPCM3023 Fabricate and install non-ferrous pressure piping

Unit Sector

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------------|---|
| 1 Identify installation requirements. | 1.1 Access, read and determine requirements for installing home fire sprinkler systems in a Class 1a building from job specifications, relevant Australian Standards, codes, manufacturers' specifications and jurisdictional |
|---------------------------------------|---|

- requirements.
- 1.2 Identify and apply workplace, work health and safety (WHS) and environmental requirements.
- 2 Prepare for work.
