CPC Construction, Plumbing and Services Training Package

Release: 6.3

CONTENTS

CPC Construction, Plumbing and Services Training Package	36
CPC10120 Certificate I in Construction	37
CPC20120 Certificate II in Construction	40
CPC20220 Certificate II in Construction Pathways	43
CPC20720 Certificate II in Drainage	48
CPC30120 Certificate III in Shopfitting	52
CPC30216 Certificate III in Signs and Graphics	56
CPC30220 Certificate III in Carpentry	59
CPC30320 Certificate III in Concreting	65
CPC30420 Certificate III in Demolition	69
CPC30620 Certificate III in Painting and Decorating	73
CPC30720 Certificate III in Rigging	77
CPC30820 Certificate III in Roof Tiling	81
CPC30920 Certificate III in Scaffolding	84
CPC31020 Certificate III in Solid Plastering	87
CPC31120 Certificate III in Steelfixing	91
CPC31220 Certificate III in Wall and Ceiling Lining	94
CPC31320 Certificate III in Wall and Floor Tiling	99
CPC31420 Certificate III in Construction Waterproofing	103
CPC31920 Certificate III in Joinery	107
CPC32320 Certificate III in Stonemasonry	112
CPC32420 Certificate III in Plumbing	118
CPC32620 Certificate III in Roof Plumbing	126
CPC32720 Certificate III in Gas Fitting	130
CPC32820 Certificate III in Fire Protection	134
CPC32920 Certificate III in Construction Crane Operations	139
CPC33020 Certificate III in Bricklaying and Blocklaying	143
CPC40120 Certificate IV in Building and Construction	149
CPC40320 Certificate IV in Building Project Support	155
CPC40820 Certificate IV in Swimming Pool and Spa Building	160
CPC40920 Certificate IV in Plumbing and Services	164
CPC41020 Certificate IV in Demolition	169
CPC50220 Diploma of Building and Construction (Building)	173
CPC50320 Diploma of Building and Construction (Management)	178
CPC50520 Diploma of Fire Systems Design	183
CPC50620 Diploma of Hydraulic Services Design	187
CPC60121 Advanced Diploma of Building Surveying	191
CPC60220 Advanced Diploma of Building and Construction (Management)	195
CPCBIM4001 Plan to comply with BIM requirements for construction work	199
Assessment Requirements for CPCBIM4001 Plan to comply with BIM requirements for construction work	202
CPCBIM4002 Use BIM processes to carry out construction work	204
Assessment Requirements for CPCBIM4002 Use BIM processes to carry out construction work	207
CPCBIM4003 Contribute to BIM deliverables for construction work	209
Assessment Requirements for CPCBIM4003 Contribute to BIM deliverables for construction work	212
CPCBC4001 Apply building codes and standards to the construction process for Class 1 and 10 buildings	214

Assessment Requirements for CPCCBC4001 Apply building codes and standards to the construction process for Class 1 and 10 buildings217

CPCCBC4002 Manage work health and safety in the building and construction workplace220

Assessment Requirements for CPCCBC4002 Manage work health and safety in the building and construction workplace.....223

CPCCBC4003 Select, prepare and administer a construction contract226

Assessment Requirements for CPCCBC4003 Select, prepare and administer a construction contract.....230

CPCCBC4004 Identify and produce estimated costs for building and construction projects232

Assessment Requirements for CPCCBC4004 Identify and produce estimated costs for building and construction projects.....235

CPCCBC4005 Produce labour and material schedules for ordering.....237

Assessment Requirements for CPCCBC4005 Produce labour and material schedules for ordering240

CPCCBC4006 Select, procure and store construction materials for building and construction projects242

Assessment Requirements for CPCCBC4006 Select, procure and store construction materials for building and construction projects.....246

CPCCBC4007 Plan building and construction work.....249

Assessment Requirements for CPCCBC4007 Plan building and construction work253

CPCCBC4008 Supervise site communication and administration processes for building and construction projects255

Assessment Requirements for CPCCBC4008 Supervise site communication and administration processes for building and construction projects259

CPCCBC4009 Apply legal requirements to building and construction projects262

Assessment Requirements for CPCCBC4009 Apply legal requirements to building and construction projects266

CPCCBC4010 Apply structural principles to residential and commercial constructions 268

Assessment Requirements for CPCCBC4010 Apply structural principles to residential and commercial constructions.....273

CPCCBC4012 Read and interpret plans and specifications277

Assessment Requirements for CPCCBC4012 Read and interpret plans and specifications280

CPCCBC4013 Prepare and evaluate tender documentation282

Assessment Requirements for CPCCBC4013 Prepare and evaluate tender documentation285

CPCCBC4014 Prepare simple building sketches and drawings.....287

Assessment Requirements for CPCCBC4014 Prepare simple building sketches and drawings.....290

CPCCBC4015 Prepare specifications for all construction works.....292

Assessment Requirements for CPCCBC4015 Prepare specifications for all construction works.....295

CPCCBC4017 Arrange resources and prepare for the building and construction project297

Assessment Requirements for CPCCBC4017 Arrange resources and prepare for the building and construction project301

CPCCBC4018 Apply site surveys and set-out procedures to building and construction projects.....303

Assessment Requirements for CPCCBC4018 Apply site surveys and set-out procedures to building and construction projects.....306

CPCCBC4019 Apply sustainable building design principles to water management systems308

Assessment Requirements for CPCCBC4019 Apply sustainable building design principles to water management systems311

CPCCBC4020 Build thermally efficient and sustainable structures.....313

Assessment Requirements for CPCCBC4020 Build thermally efficient and sustainable structures316

CPCBC4021 Minimise waste on the building and construction site	318
Assessment Requirements for CPCBC4021 Minimise waste on the building and construction site	321
CPCBC4022 Supervise tilt-up work	323
Assessment Requirements for CPCBC4022 Supervise tilt-up work	327
CPCBC4024 Resolve business disputes.....	329
Assessment Requirements for CPCBC4024 Resolve business disputes	332
CPCBC4026 Arrange building applications and approvals.....	334
Assessment Requirements for CPCBC4026 Arrange building applications and approvals.....	337
CPCBC4027 Establish a basis for sales consulting	339
Assessment Requirements for CPCBC4027 Establish a basis for sales consulting.....	342
CPCBC4028 Prepare design brief for construction works.....	344
Assessment Requirements for CPCBC4028 Prepare design brief for construction works.....	347
CPCBC4029 Apply construction information to the sales process.....	349
Assessment Requirements for CPCBC4029 Apply construction information to the sales process.....	352
CPCBC4030 Analyse and communicate industry information	354
Assessment Requirements for CPCBC4030 Analyse and communicate industry information.....	357
CPCBC4031 Process client requirements	360
Assessment Requirements for CPCBC4031 Process client requirements.....	363
CPCBC4032 Apply contract law to sales processes	365
Assessment Requirements for CPCBC4032 Apply contract law to sales processes.....	368
CPCBC4033 Maintain the sales environment	370
Assessment Requirements for CPCBC4033 Maintain the sales environment.....	373
CPCBC4052 Lead and manage teams in the building and construction industry.....	375
Assessment Requirements for CPCBC4052 Lead and manage teams in the building and construction industry.....	378
CPCBC4053 Apply building codes and standards to the construction process for Class 2 to 9 Type C buildings.....	380
Assessment Requirements for CPCBC4053 Apply building codes and standards to the construction process for Class 2 to 9 Type C buildings.....	383
CPCBC5001 Apply building codes and standards to the construction process for Type B construction	386
Assessment Requirements for CPCBC5001 Apply building codes and standards to the construction process for Type B construction.....	389
CPCBC5002 Monitor costing systems on complex building and construction projects.....	391
Assessment Requirements for CPCBC5002 Monitor costing systems on complex building and construction projects.....	394
CPCBC5003 Supervise the planning of on-site building and construction work.....	396
Assessment Requirements for CPCBC5003 Supervise the planning of on-site building and construction work.....	400
CPCBC5004 Supervise and apply quality standards to the selection of building and construction materials	402
Assessment Requirements for CPCBC5004 Supervise and apply quality standards to the selection of building and construction materials.....	406
CPCBC5005 Select and manage building and construction contractors	408
Assessment Requirements for CPCBC5005 Select and manage building and construction contractors.....	412
CPCBC5006 Apply site surveys and set-out procedures to building projects up to three storeys	414
Assessment Requirements for CPCBC5006 Apply site surveys and set-out procedures to building projects up to three storeys.....	417

CPCCBC5007 Administer the legal obligations of a building and construction contractor419
Assessment Requirements for CPCCBC5007 Administer the legal obligations of a building and construction contractor.....423

CPCCBC5009 Identify services layout and connection methods for Type B and C constructions425
Assessment Requirements for CPCCBC5009 Identify services layout and connection methods for Type B and C constructions429

CPCCBC5010 Manage construction work432
Assessment Requirements for CPCCBC5010 Manage construction work.....436

CPCCBC5011 Manage environmental management practices and processes in building and construction.....439
Assessment Requirements for CPCCBC5011 Manage environmental management practices and processes in building and construction443

CPCCBC5012 Manage the application and monitoring of energy conservation and management practices and processes.....445
Assessment Requirements for CPCCBC5012 Manage the application and monitoring of energy conservation and management practices and processes449

CPCCBC5013 Manage professional technical and legal reports on building and construction projects451
Assessment Requirements for CPCCBC5013 Manage professional technical and legal reports on building and construction projects454

CPCCBC5018 Apply structural principles to the construction of buildings up to three storeys457
Assessment Requirements for CPCCBC5018 Apply structural principles to the construction of buildings up to three storeys460

CPCCBC5019 Manage building and construction business finances462
Assessment Requirements for CPCCBC5019 Manage building and construction business finances465

CPCCBC6001 Apply building codes and standards to the construction process for large building projects468
Assessment Requirements for CPCCBC6001 Apply building codes and standards to the construction process for large building projects.....472

CPCCBC6002 Generate and direct the development of new projects.....474
Assessment Requirements for CPCCBC6002 Generate and direct the development of new projects.....478

CPCCBC6003 Establish, maintain and review contract administration procedures and frameworks.....480
Assessment Requirements for CPCCBC6003 Establish, maintain and review contract administration procedures and frameworks484

CPCCBC6005 Manage tender developments for major projects.....487
Assessment Requirements for CPCCBC6005 Manage tender developments for major projects.....491

CPCCBC6006 Manage the procurement and acquisition of resources for building and construction projects493
Assessment Requirements for CPCCBC6006 Manage the procurement and acquisition of resources for building and construction projects497

CPCCBC6007 Develop, plan and implement building and construction environmental management processes500
Assessment Requirements for CPCCBC6007 Develop, plan and implement building and construction environmental management processes504

CPCCBC6008 Develop and implement an estimating and tendering system506
Assessment Requirements for CPCCBC6008 Develop and implement an estimating and tendering system509

CPCCB6009 Develop, plan and implement a building and construction planning process511
Assessment Requirements for CPCCB6009 Develop, plan and implement a building and construction planning process514
CPCCB6010 Plan, develop and implement building and construction energy conservation and management processes517
Assessment Requirements for CPCCB6010 Plan, develop and implement building and construction energy conservation and management processes.....521
CPCCB6011 Establish systems to develop and monitor building and construction costs523
Assessment Requirements for CPCCB6011 Establish systems to develop and monitor building and construction costs526
CPCCB6012 Manage and administer development of documentation for building and construction projects528
Assessment Requirements for CPCCB6012 Manage and administer development of documentation for building and construction projects531
CPCCB6013 Evaluate concrete performance for multi-storey buildings.....533
Assessment Requirements for CPCCB6013 Evaluate concrete performance for multi-storey buildings.....537
CPCCB6014 Apply structural principles to the construction of large, high-rise and complex buildings540
Assessment Requirements for CPCCB6014 Apply structural principles to the construction of large, high-rise and complex buildings.....544
CPCCB6015 Apply building surveying procedures.....547
Assessment Requirements for CPCCB6015 Apply building surveying procedures550
CPCCB6016 Assess construction faults in large building projects.....552
Assessment Requirements for CPCCB6016 Assess construction faults in large building projects.....555
CPCCB6017 Evaluate services layout and connection methods for the planning of large building projects558
Assessment Requirements for CPCCB6017 Evaluate services layout and connection methods for the planning of large building projects.....562
CPCCB6018 Manage processes for complying with legal obligations of a building and construction contractor565
Assessment Requirements for CPCCB6018 Manage processes for complying with legal obligations of a building and construction contractor.....569
CPCCB2001 Handle and prepare bricklaying and blocklaying materials571
Assessment Requirements for CPCCB2001 Handle and prepare bricklaying and blocklaying materials.....574
CPCCB2002 Use bricklaying and blocklaying tools and equipment.....576
Assessment Requirements for CPCCB2002 Use bricklaying and blocklaying tools and equipment579
CPCCB3001 Lay paving582
Assessment Requirements for CPCCB3001 Lay paving.....585
CPCCB3002 Carry out masonry veneer construction.....587
Assessment Requirements for CPCCB3002 Carry out masonry veneer construction ..591
CPCCB3003 Carry out cavity brick construction.....593
Assessment Requirements for CPCCB3003 Carry out cavity brick construction596
CPCCB3004 Construct masonry steps and stairs598
Assessment Requirements for CPCCB3004 Construct masonry steps and stairs.....601
CPCCB3005 Lay masonry walls and corners603
Assessment Requirements for CPCCB3005 Lay masonry walls and corners606
CPCCB3006 Lay multi-thickness walls and piers608
Assessment Requirements for CPCCB3006 Lay multi-thickness walls and piers.....611
CPCCB3007 Install glass blockwork613

Assessment Requirements for CPCCBL3007 Install glass blockwork.....616

CPCCBL3009 Install flashings and damp proof course.....618

Assessment Requirements for CPCCBL3009 Install flashings and damp proof course ...621

CPCCBL3010 Construct masonry arches623

Assessment Requirements for CPCCBL3010 Construct masonry arches.....627

CPCCBL3011 Construct curved walls.....629

Assessment Requirements for CPCCBL3011 Construct curved walls633

CPCCBL3012 Construct fireplaces and chimneys635

Assessment Requirements for CPCCBL3012 Construct fireplaces and chimneys641

CPCCBL3013 Construct masonry structural systems643

Assessment Requirements for CPCCBL3013 Construct masonry structural systems.....646

CPCCBL3014 Install fire-rated masonry construction648

Assessment Requirements for CPCCBL3014 Install fire-rated masonry construction651

CPCCBL3015 Construct decorative brickwork.....653

Assessment Requirements for CPCCBL3015 Construct decorative brickwork656

CPCCBL3016 Construct battered masonry walls and piers.....658

Assessment Requirements for CPCCBL3016 Construct battered masonry walls and piers661

CPCCBL3017 Carry out tuck pointing and repointing to masonry663

Assessment Requirements for CPCCBL3017 Carry out tuck pointing and repointing to masonry666

CPCCBL3018 Install aerated autoclaved concrete products.....668

Assessment Requirements for CPCCBL3018 Install aerated autoclaved concrete products672

CPCCBS6101 Research and evaluate construction methods and materials for Class 1 and 10 buildings to three store674

Assessment Requirements for CPCCBS6101 Research and evaluate construction methods and materials for Class 1 and 10 buildings to three store677

CPCCBS6102 Research and evaluate construction methods and materials for Class 2 to 9 buildings to three storeys681

Assessment Requirements for CPCCBS6102 Research and evaluate construction methods and materials for Class 2 to 9 buildings to three storeys.....684

CPCCBS6103 Identify and apply legal and ethical requirements to building surveying functions.....688

Assessment Requirements for CPCCBS6103 Identify and apply legal and ethical requirements to building surveying functions.....692

CPCCBS6104 Assess and advise on compliance of design documentation for Class 1 and 10 buildings to three storey694

Assessment Requirements for CPCCBS6104 Assess and advise on compliance of design documentation for Class 1 and 10 buildings to three storey698

CPCCBS6105 Assess and advise on compliance of design documentation for Class 2 to 9 buildings to three storeys700

Assessment Requirements for CPCCBS6105 Assess and advise on compliance of design documentation for Class 2 to 9 buildings to three storeys704

CPCCBS6107 Prepare planning and development applications for buildings to three storeys706

Assessment Requirements for CPCCBS6107 Prepare planning and development applications for buildings to three storeys.....709

CPCCBS6108 Process building applications for Class 1 and 10 buildings to three storeys711

Assessment Requirements for CPCCBS6108 Process building applications for Class 1 and 10 buildings to three storeys714

CPCCBS6109 Process building applications for Class 2 to 9 buildings to three storeys...716

Assessment Requirements for CPCCBS6109 Process building applications for Class 2 to 9 buildings to three storeys719

CPCCBS6110 Conduct and report on building surveying audits of Class 1 and 10 buildings to three storeys721
Assessment Requirements for CPCCBS6110 Conduct and report on building surveying audits of Class 1 and 10 buildings to three storeys725
CPCCBS6111 Conduct and report on building surveying audits of Class 2 to 9 buildings to three storeys727
Assessment Requirements for CPCCBS6111 Conduct and report on building surveying audits of Class 2 to 9 buildings to three storeys731
CPCCBS6112 Conduct and report on initial construction inspections of Class 1 and 10 buildings to three storeys733
Assessment Requirements for CPCCBS6112 Conduct and report on initial construction inspections of Class 1 and 10 buildings to three storeys.....736
CPCCBS6113 Conduct and report on initial construction inspections of Class 2 to 9 buildings to three storeys739
Assessment Requirements for CPCCBS6113 Conduct and report on initial construction inspections of Class 2 to 9 buildings to three storeys.....742
CPCCBS6114 Conduct and report on advanced and final inspections of Class 1 and 10 buildings to three storeys745
Assessment Requirements for CPCCBS6114 Conduct and report on advanced and final inspections of Class 1 and 10 buildings to three storeys.....748
CPCCBS6115 Conduct and report on advanced and final inspections of Class 2 to 9 buildings to three storeys751
Assessment Requirements for CPCCBS6115 Conduct and report on advanced and final inspections of Class 2 to 9 buildings to three storeys.....754
CPCCBS6116 Assess and advise on performance solutions for Class 2 to 9 buildings to three storeys757
Assessment Requirements for CPCCBS6116 Assess and advise on performance solutions for Class 2 to 9 buildings to three storeys761
CPCCBS6117 Monitor and advise on construction and compliance upgrade work on buildings to three storeys764
Assessment Requirements for CPCCBS6117 Monitor and advise on construction and compliance upgrade work on buildings to three storeys.....768
CPCCBS6118 Assess and advise on performance solutions for Class 1 and 10 buildings to three storeys770
Assessment Requirements for CPCCBS6118 Assess and advise on performance solutions for Class 1 and 10 buildings to three storeys.....774
CPCCCA2002 Use carpentry tools and equipment777
Assessment Requirements for CPCCCA2002 Use carpentry tools and equipment.....780
CPCCCA2011 Handle carpentry materials.....783
Assessment Requirements for CPCCCA2011 Handle carpentry materials786
CPCCCA3002 Carry out setting out788
Assessment Requirements for CPCCCA3002 Carry out setting out.....791
CPCCCA3003 Install flooring systems793
Assessment Requirements for CPCCCA3003 Install flooring systems796
CPCCCA3004 Construct and erect wall frames798
Assessment Requirements for CPCCCA3004 Construct and erect wall frames.....801
CPCCCA3005 Construct ceiling frames803
Assessment Requirements for CPCCCA3005 Construct ceiling frames806
CPCCCA3006 Erect roof trusses.....808
Assessment Requirements for CPCCCA3006 Erect roof trusses811
CPCCCA3007 Construct pitched roofs813
Assessment Requirements for CPCCCA3007 Construct pitched roofs816
CPCCCA3008 Construct eaves.....818

Assessment Requirements for CPCCCA3008 Construct eaves821

CPCCCA3009 Construct advanced roofs823

Assessment Requirements for CPCCCA3009 Construct advanced roofs826

CPCCCA3010 Install windows and doors828

Assessment Requirements for CPCCCA3010 Install windows and doors.....832

CPCCCA3011 Refurbish timber sashes to window frames834

Assessment Requirements for CPCCCA3011 Refurbish timber sashes to window frames837

CPCCCA3012 Frame and fit wet area fixtures839

Assessment Requirements for CPCCCA3012 Frame and fit wet area fixtures842

CPCCCA3014 Construct and install bulkheads844

Assessment Requirements for CPCCCA3014 Construct and install bulkheads847

CPCCCA3016 Construct, assemble and install timber external stairs849

Assessment Requirements for CPCCCA3016 Construct, assemble and install timber external stairs852

CPCCCA3017 Install exterior cladding854

Assessment Requirements for CPCCCA3017 Install exterior cladding858

CPCCCA3018 Construct, erect and dismantle formwork for stairs and ramps860

Assessment Requirements for CPCCCA3018 Construct, erect and dismantle formwork for stairs and ramps.....864

CPCCCA3019 Erect and dismantle formwork to suspended slabs, columns, beams and walls.....866

Assessment Requirements for CPCCCA3019 Erect and dismantle formwork to suspended slabs, columns, beams and walls.....869

CPCCCA3020 Erect and dismantle jump form formwork.....871

Assessment Requirements for CPCCCA3020 Erect and dismantle jump form formwork874

CPCCCA3022 Install curtain walling876

Assessment Requirements for CPCCCA3022 Install curtain walling.....879

CPCCCA3024 Install lining, panelling and moulding881

Assessment Requirements for CPCCCA3024 Install lining, panelling and moulding884

CPCCCA3025 Read and interpret plans, specifications and drawings for carpentry work886

Assessment Requirements for CPCCCA3025 Read and interpret plans, specifications and drawings for carpentry work.....889

CPCCCA3026 Assemble partitions891

Assessment Requirements for CPCCCA3026 Assemble partitions.....894

CPCCCA3027 Set up, operate and maintain indirect action powder-actuated power tools896

Assessment Requirements for CPCCCA3027 Set up, operate and maintain indirect action powder-actuated power tools900

CPCCCA3028 Erect and dismantle formwork for footings and slabs on ground902

Assessment Requirements for CPCCCA3028 Erect and dismantle formwork for footings and slabs on ground.....905

CPCCCM1011 Undertake basic estimation and costing907

Assessment Requirements for CPCCCM1011 Undertake basic estimation and costing...909

CPCCCM1014 Conduct workplace communication911

Assessment Requirements for CPCCCM1014 Conduct workplace communication.....914

CPCCCM2002 Carry out hand excavation916

Assessment Requirements for CPCCCM2002 Carry out hand excavation.....919

CPCCCM2004 Handle construction materials921

Assessment Requirements for CPCCCM2004 Handle construction materials924

CPCCCM2005 Use construction tools and equipment926

Assessment Requirements for CPCCCM2005 Use construction tools and equipment928

CPCCCM2009 Carry out basic demolition931

Assessment Requirements for CPCCCM2009 Carry out basic demolition.....934

CPCCCM2012 Work safely at heights.....936

Assessment Requirements for CPCCCM2012 Work safely at heights	940
CPCCCM2013 Undertake basic installation of wall tiles.....	943
Assessment Requirements for CPCCCM2013 Undertake basic installation of wall tiles ..	946
CPCCCM3002 Operate a truck-mounted loading crane	948
Assessment Requirements for CPCCCM3002 Operate a truck-mounted loading crane..	951
CPCCCO2013 Carry out concreting to simple forms	953
Assessment Requirements for CPCCCO2013 Carry out concreting to simple forms	956
CPCCCO2014 Carry out concrete work	959
Assessment Requirements for CPCCCO2014 Carry out concrete work.....	964
CPCCCO4001 Supervise concreting work	968
Assessment Requirements for CPCCCO4001 Supervise concreting work.....	972
CPCCCDE3014 Remove non-friable asbestos	974
Assessment Requirements for CPCCCDE3014 Remove non-friable asbestos.....	978
CPCCCDE3015 Remove friable asbestos	980
Assessment Requirements for CPCCCDE3015 Remove friable asbestos.....	985
CPCCCDE3016 Identify hazards on demolition sites and apply risk management strategies	987
Assessment Requirements for CPCCCDE3016 Identify hazards on demolition sites and apply risk management strategies	991
CPCCCDE3017 Select and use hand tools and equipment for demolition tasks	993
Assessment Requirements for CPCCCDE3017 Select and use hand tools and equipment for demolition tasks	996
CPCCCDE3018 Select and use small plant and equipment for demolition tasks.....	998
Assessment Requirements for CPCCCDE3018 Select and use small plant and equipment for demolition tasks	1001
CPCCCDE3019 Demolish small buildings and structures using hand tools and small plant and equipment.....	1003
Assessment Requirements for CPCCCDE3019 Demolish small buildings and structures using hand tools and small plant and equipment.....	1007
CPCCCDE3020 Select and use tools and equipment for hot work in the demolition industry	1009
Assessment Requirements for CPCCCDE3020 Select and use tools and equipment for hot work in the demolition industry	1013
CPCCCDE3021 Operate demolition material crushing plants	1015
Assessment Requirements for CPCCCDE3021 Operate demolition material crushing plants	1018
CPCCCDE3022 Manage demolition recyclable waste materials and contaminated soil using load shifting equipment	1020
Assessment Requirements for CPCCCDE3022 Manage demolition recyclable waste materials and contaminated soil using load shifting equipment.....	1024
CPCCCDE3023 Operate skid steer loaders at ground level on demolition sites	1026
Assessment Requirements for CPCCCDE3023 Operate skid steer loaders at ground level on demolition sites.....	1030
CPCCCDE3024 Operate mobile plant on suspended floors on demolition sites	1032
Assessment Requirements for CPCCCDE3024 Operate mobile plant on suspended floors on demolition sites.....	1037
CPCCCDE3025 Operate remote-controlled plant on demolition sites	1039
Assessment Requirements for CPCCCDE3025 Operate remote-controlled plant on demolition sites.....	1044
CPCCCDE3026 Operate excavators at ground level to demolish building elements	1046
Assessment Requirements for CPCCCDE3026 Operate excavators at ground level to demolish building elements	1050
CPCCCDE3027 Read and interpret demolition site plans and drawings	1052
Assessment Requirements for CPCCCDE3027 Read and interpret demolition site plans and drawings.....	1055
CPCCCDE4001 Plan and prepare for activities on demolition sites.....	1057

Assessment Requirements for CPCCDE4001 Plan and prepare for activities on demolition sites1061

CPCCDE4002 Plan demolition work to minimise risk to health, safety and environment1063

Assessment Requirements for CPCCDE4002 Plan demolition work to minimise risk to health, safety and environment.....1066

CPCCDE4003 Supervise operational activities on demolition sites1068

Assessment Requirements for CPCCDE4003 Supervise operational activities on demolition sites.....1071

CPCCDE4004 Finalise demolition activities and supervise property handover1073

Assessment Requirements for CPCCDE4004 Finalise demolition activities and supervise property handover1077

CPCCDE4005 Apply structural principles to the planning of the demolition of a structure1079

Assessment Requirements for CPCCDE4005 Apply structural principles to the planning of the demolition of a structure1082

CPCCDE4006 Demolish stressed panel structure and pre-cast panel structure1084

Assessment Requirements for CPCCDE4006 Demolish stressed panel structure and pre-cast panel structure.....1088

CPCCDE4007 Manage waste streams1090

Assessment Requirements for CPCCDE4007 Manage waste streams1093

CPCCDE4008 Supervise asbestos removal1095

Assessment Requirements for CPCCDE4008 Supervise asbestos removal1099

CPCCDE5001 Conduct air monitoring and clearance inspections for asbestos removal work1101

Assessment Requirements for CPCCDE5001 Conduct air monitoring and clearance inspections for asbestos removal work.....1107

CPCCDO2011 Handle and position dogging tools and equipment1109

Assessment Requirements for CPCCDO2011 Handle and position dogging tools and equipment1112

CPCCDO3011 Perform dogging.....1114

Assessment Requirements for CPCCDO3011 Perform dogging1117

CPCCDO3012 Perform crane scheduling1119

Assessment Requirements for CPCCDO3012 Perform crane scheduling1121

CPCCJN2001 Assemble components1123

Assessment Requirements for CPCCJN2001 Assemble components.....1126

CPCCJN2003 Package manufactured products for transport1128

Assessment Requirements for CPCCJN2003 Package manufactured products for transport1131

CPCCJN3002 Use computer-controlled machinery1133

Assessment Requirements for CPCCJN3002 Use computer-controlled machinery.....1136

CPCCJN3003 Manufacture components for doors, windows and frames1138

Assessment Requirements for CPCCJN3003 Manufacture components for doors, windows and frames1141

CPCCJN3004 Manufacture and assemble joinery components1144

Assessment Requirements for CPCCJN3004 Manufacture and assemble joinery components.....1147

CPCCJN3005 Cut and install glass1149

Assessment Requirements for CPCCJN3005 Cut and install glass.....1152

CPCCJN3100 Process materials to produce components using static machines1154

Assessment Requirements for CPCCJN3100 Process materials to produce components using static machines1158

CPCCJS3002 Manufacture stair components for straight flighted stairs1160

Assessment Requirements for CPCCJS3002 Manufacture stair components for straight flighted stairs.....1163

CPCCJS3003 Assemble and install stairs1165
Assessment Requirements for CPCCJS3003 Assemble and install stairs.....1168
CPCCJS3004 Manufacture and install continuous handrailing and special stair
components.....1170
Assessment Requirements for CPCCJS3004 Manufacture and install continuous
handrailing and special stair components1174
CPCCJS3005 Manufacture stair components for curved and geometric stairs1176
Assessment Requirements for CPCCJS3005 Manufacture stair components for curved
and geometric stairs.....1180
CPCCJS3006 Construct, assemble and install composite external stairs.....1182
Assessment Requirements for CPCCJS3006 Construct, assemble and install composite
external stairs1186
CPCCJS3011 Design and set out stairs1188
Assessment Requirements for CPCCJS3011 Design and set out stairs1191
CPCCLDG3001 Licence to perform dogging1193
Assessment Requirements for CPCCLDG3001 Licence to perform dogging1197
CPCCLHS3001 Licence to operate a personnel and materials hoist1202
Assessment Requirements for CPCCLHS3001 Licence to operate a personnel and
materials hoist1205
CPCCLHS3002 Licence to operate a materials hoist1209
Assessment Requirements for CPCCLHS3002 Licence to operate a materials hoist.....1212
CPCCLRG3001 Licence to perform rigging basic level.....1216
Assessment Requirements for CPCCLRG3001 Licence to perform rigging basic level .1220
CPCCLRG3002 Licence to perform rigging intermediate level.....1226
Assessment Requirements for CPCCLRG3002 Licence to perform rigging intermediate
level.....1230
CPCCLRG4001 Licence to perform rigging advanced level1236
Assessment Requirements for CPCCLRG4001 Licence to perform rigging advanced level1240
CPCCLSF2001 Licence to erect, alter and dismantle scaffolding basic level1245
Assessment Requirements for CPCCLSF2001 Licence to erect, alter and dismantle
scaffolding basic level1249
CPCCLSF3001 Licence to erect, alter and dismantle scaffolding intermediate level1255
Assessment Requirements for CPCCLSF3001 Licence to erect, alter and dismantle
scaffolding intermediate level1259
CPCCLSF4001 Licence to erect, alter and dismantle scaffolding advanced level.....1265
Assessment Requirements for CPCCLSF4001 Licence to erect, alter and dismantle
scaffolding advanced level.....1269
CPCCLTC4001 Licence to operate a tower crane.....1274
Assessment Requirements for CPCCLTC4001 Licence to operate a tower crane1278
CPCCLTC4002 Licence to operate a self-erecting tower crane1283
Assessment Requirements for CPCCLTC4002 Licence to operate a self-erecting tower
crane.....1287
CPCCOM1012 Work effectively and sustainably in the construction industry1292
Assessment Requirements for CPCCOM1012 Work effectively and sustainably in the
construction industry.....1295
CPCCOM1013 Plan and organise work1297
Assessment Requirements for CPCCOM1013 Plan and organise work.....1299
CPCCOM1014 Conduct workplace communication1301
Assessment Requirements for CPCCOM1014 Conduct workplace communication1304
CPCCOM1015 Carry out measurements and calculations.....1306
Assessment Requirements for CPCCOM1015 Carry out measurements and calculations1308
CPCCOM1016 Identify requirements for safe precast and tilt-up work1310

Assessment Requirements for CPCCOM1016 Identify requirements for safe precast and tilt-up work.....1313

CPCCOM1017 Prepare simple construction sketches1315

Assessment Requirements for CPCCOM1017 Prepare simple construction sketches1317

CPCCOM2001 Read and interpret plans and specifications.....1319

Assessment Requirements for CPCCOM2001 Read and interpret plans and specifications1322

CPCCOM3001 Perform construction calculations to determine carpentry material requirements1324

Assessment Requirements for CPCCOM3001 Perform construction calculations to determine carpentry material requirements1327

CPCCOM3006 Carry out levelling operations.....1329

Assessment Requirements for CPCCOM3006 Carry out levelling operations1332

CPCCON2021 Handle concreting materials and components1335

Assessment Requirements for CPCCON2021 Handle concreting materials and components.....1338

CPCCON2022 Select, use and maintain concreting plant, tools and equipment1340

Assessment Requirements for CPCCON2022 Select, use and maintain concreting plant, tools and equipment.....1343

CPCCON3035 Determine concrete supply requirements1346

Assessment Requirements for CPCCON3035 Determine concrete supply requirements1350

CPCCON3036 Plan concrete work and brief team.....1352

Assessment Requirements for CPCCON3036 Plan concrete work and brief team1355

CPCCON3041 Place concrete1357

Assessment Requirements for CPCCON3041 Place concrete.....1361

CPCCON3042 Finish concrete.....1364

Assessment Requirements for CPCCON3042 Finish concrete1367

CPCCON3043 Cure concrete.....1369

Assessment Requirements for CPCCON3043 Cure concrete1372

CPCCON3044 Apply decorative finishes to concrete.....1375

Assessment Requirements for CPCCON3044 Apply decorative finishes to concrete1378

CPCCON3046 Repair and rectify concrete.....1380

Assessment Requirements for CPCCON3046 Repair and rectify concrete.....1383

CPCCON3047 Cut concrete.....1386

Assessment Requirements for CPCCON3047 Cut concrete1389

CPCCON3048 Construct tilt panels on site.....1391

Assessment Requirements for CPCCON3048 Construct tilt panels on site1395

CPCCON3049 Apply and finish sprayed concrete1397

Assessment Requirements for CPCCON3049 Apply and finish sprayed concrete.....1400

CPCCON3050 Carry out high-performance concreting.....1402

Assessment Requirements for CPCCON3050 Carry out high-performance concreting 1405

CPCCON3051 Conduct off-form vertical concrete operations1407

Assessment Requirements for CPCCON3051 Conduct off-form vertical concrete operations1410

CPCCON3052 Conduct concrete boom delivery operations1412

Assessment Requirements for CPCCON3052 Conduct concrete boom delivery operations1416

CPCCON3053 Slump-test concrete.....1418

Assessment Requirements for CPCCON3053 Slump-test concrete1421

CPCCON3054 Operate concrete agitator trucks.....1423

Assessment Requirements for CPCCON3054 Operate concrete agitator trucks1427

CPCCON3055 Install topping slabs1429

Assessment Requirements for CPCCON3055 Install topping slabs.....1432

CPCCON3056 Conduct concrete pump delivery operations.....1434

Assessment Requirements for CPCCON3056 Conduct concrete pump delivery operations1438

CPCCON3057 Core concrete.....1440
 Assessment Requirements for CPCCON3057 Core concrete1443
 CPCCPA3001 Prepare subgrade, base and bedding course for segmental paving1445
 Assessment Requirements for CPCCPA3001 Prepare subgrade, base and bedding course
 for segmental paving.....1449
 CPCCPA3002 Lay segmental paving1451
 Assessment Requirements for CPCCPA3002 Lay segmental paving.....1454
 CPCCPA3003 Cut segmental paving1456
 Assessment Requirements for CPCCPA3003 Cut segmental paving.....1459
 CPCCPA3004 Finish segmental paving1461
 Assessment Requirements for CPCCPA3004 Finish segmental paving.....1464
 CPCCPA3005 Maintain and repair segmental paving1466
 Assessment Requirements for CPCCPA3005 Maintain and repair segmental paving ...1469
 CPCCPB3001 Fix standard plasterboard wall sheets1471
 Assessment Requirements for CPCCPB3001 Fix standard plasterboard wall sheets1474
 CPCCPB3002 Fix standard plasterboard ceiling sheets1476
 Assessment Requirements for CPCCPB3002 Fix standard plasterboard ceiling sheets1479
 CPCCPB3003 Fix battens.....1481
 Assessment Requirements for CPCCPB3003 Fix battens1484
 CPCCPB3004 Fix wet area sheets1486
 Assessment Requirements for CPCCPB3004 Fix wet area sheets.....1489
 CPCCPB3005 Fix ceiling sheets to external protected areas1491
 Assessment Requirements for CPCCPB3005 Fix ceiling sheets to external protected areas1494
 CPCCPB3006 Fix fibre cement board1496
 Assessment Requirements for CPCCPB3006 Fix fibre cement board1499
 CPCCPB3007 Apply levels of finish standards to planning and inspection of own work1501
 Assessment Requirements for CPCCPB3007 Apply levels of finish standards to planning
 and inspection of own work1504
 CPCCPB3008 Mix plastering compounds1506
 Assessment Requirements for CPCCPB3008 Mix plastering compounds.....1509
 CPCCPB3009 Finish plasterboard joints manually1511
 Assessment Requirements for CPCCPB3009 Finish plasterboard joints manually1514
 CPCCPB3010 Manually sand plaster work1516
 Assessment Requirements for CPCCPB3010 Manually sand plaster work1519
 CPCCPB3012 Cut and fix paper-faced cornices.....1521
 Assessment Requirements for CPCCPB3012 Cut and fix paper-faced cornices1524
 CPCCPB3015 Install acoustic and thermal environmental protection systems.....1526
 Assessment Requirements for CPCCPB3015 Install acoustic and thermal environmental
 protection systems.....1529
 CPCCPB3016 Install and finish columns1531
 Assessment Requirements for CPCCPB3016 Install and finish columns1534
 CPCCPB3017 Rectify faults in drywall applications.....1536
 Assessment Requirements for CPCCPB3017 Rectify faults in drywall applications1539
 CPCCPB3018 Use vacuum and electric sanding equipment to finish plaster work1541
 Assessment Requirements for CPCCPB3018 Use vacuum and electric sanding equipment
 to finish plaster work.....1544
 CPCCPB3019 Inspect equipment for serviceability1546
 Assessment Requirements for CPCCPB3019 Inspect equipment for serviceability.....1549
 CPCCPB3020 Match, mitre and install cast ornamental cornices1553
 Assessment Requirements for CPCCPB3020 Match, mitre and install cast ornamental
 cornices1556
 CPCCPB3021 Install and fix residential acoustic plaster products1558

Assessment Requirements for CPCCPB3021 Install and fix residential acoustic plaster products	1561
CPCCPB3022 Use mechanical jointing equipment to finish joints	1563
Assessment Requirements for CPCCPB3022 Use mechanical jointing equipment to finish joints.....	1566
CPCCPB3026 Erect and maintain trestle and plank systems.....	1568
Assessment Requirements for CPCCPB3026 Erect and maintain trestle and plank systems	1571
CPCCPD2011 Handle and store painting and decorating materials	1573
Assessment Requirements for CPCCPD2011 Handle and store painting and decorating materials	1576
CPCCPD2012 Use painting and decorating tools and equipment.....	1578
Assessment Requirements for CPCCPD2012 Use painting and decorating tools and equipment	1581
CPCCPD2013 Remove and replace doors and door and window components.....	1584
Assessment Requirements for CPCCPD2013 Remove and replace doors and door and window components.....	1588
CPCCPD3021 Prepare existing coated surface for painting.....	1591
Assessment Requirements for CPCCPD3021 Prepare existing coated surface for painting	1594
CPCCPD3022 Apply paint by brush and roller	1597
Assessment Requirements for CPCCPD3022 Apply paint by brush and roller	1600
CPCCPD3023 Apply texture coat paint finishes by brush, roller and spray	1603
Assessment Requirements for CPCCPD3023 Apply texture coat paint finishes by brush, roller and spray	1607
CPCCPD3024 Apply paint by spray	1609
Assessment Requirements for CPCCPD3024 Apply paint by spray.....	1613
CPCCPD3025 Match specific paint colours	1616
Assessment Requirements for CPCCPD3025 Match specific paint colours.....	1619
CPCCPD3026 Apply stains and clear timber finishes	1621
Assessment Requirements for CPCCPD3026 Apply stains and clear timber finishes	1625
CPCCPD3027 Remove and apply wallpaper.....	1628
Assessment Requirements for CPCCPD3027 Remove and apply wallpaper	1632
CPCCPD3028 Apply decorative paint finishes	1635
Assessment Requirements for CPCCPD3028 Apply decorative paint finishes	1639
CPCCPD3029 Remove graffiti and apply anti-graffiti coatings.....	1641
Assessment Requirements for CPCCPD3029 Remove graffiti and apply anti-graffiti coatings	1644
CPCCPD3030 Apply protective paint coating systems	1646
Assessment Requirements for CPCCPD3030 Apply protective paint coating systems...	1649
CPCCPD3031 Work safely with lead-painted surfaces in the painting industry.....	1651
Assessment Requirements for CPCCPD3031 Work safely with lead-painted surfaces in the painting industry.....	1655
CPCCPD3032 Apply advanced wall coverings	1658
Assessment Requirements for CPCCPD3032 Apply advanced wall coverings	1661
CPCCPD3033 Apply intumescent coatings	1664
Assessment Requirements for CPCCPD3033 Apply intumescent coatings.....	1668
CPCCPD3034 Apply advanced decorative paint finishes	1670
Assessment Requirements for CPCCPD3034 Apply advanced decorative paint finishes	1674
CPCCPD3035 Prepare uncoated surfaces for painting.....	1677
Assessment Requirements for CPCCPD3035 Prepare uncoated surfaces for painting ..	1680
CPCCPD3036 Work safely to encapsulate non-friable asbestos in the painting industry	1683
Assessment Requirements for CPCCPD3036 Work safely to encapsulate non-friable asbestos in the painting industry	1686
CPCCRI3001 Operate personnel and materials hoists	1688

Assessment Requirements for CPCCRI3001 Operate personnel and materials hoists ...1691
CPCCRI3012 Perform basic rigging1693
Assessment Requirements for CPCCRI3012 Perform basic rigging1696
CPCCRI3013 Perform intermediate rigging.....1698
Assessment Requirements for CPCCRI3013 Perform intermediate rigging1702
CPCCRI3014 Perform advanced structural steel erection1705
Assessment Requirements for CPCCRI3014 Perform advanced structural steel erection1709
CPCCRI3015 Perform advanced tilt-up slab erection1712
Assessment Requirements for CPCCRI3015 Perform advanced tilt-up slab erection....1716
CPCCRI3016 Perform advanced tower crane erection.....1720
Assessment Requirements for CPCCRI3016 Perform advanced tower crane erection ..1724
CPCCRT2001 Handle roof tiling materials.....1728
Assessment Requirements for CPCCRT2001 Handle roof tiling materials1731
CPCCRT2002 Use roof tiling tools and equipment1733
Assessment Requirements for CPCCRT2002 Use roof tiling tools and equipment.....1736
CPCCRT3001 Tile regular roofs1738
Assessment Requirements for CPCCRT3001 Tile regular roofs.....1741
CPCCRT3002 Tile irregular roofs1744
Assessment Requirements for CPCCRT3002 Tile irregular roofs.....1747
CPCCRT3003 Repair and replace valleys, valley irons and flashings.....1750
Assessment Requirements for CPCCRT3003 Repair and replace valleys, valley irons and flashings1753
CPCCRT3004 Repair and renovate tile roofs1756
Assessment Requirements for CPCCRT3004 Repair and renovate tile roofs.....1759
CPCCRT3005 Slate a roof1761
Assessment Requirements for CPCCRT3005 Slate a roof1764
CPCCRT3006 Fix shingles to roofs and facades1767
Assessment Requirements for CPCCRT3006 Fix shingles to roofs and facades.....1771
CPCCSC2001 Handle and position scaffolding tools, equipment and components.....1774
Assessment Requirements for CPCCSC2001 Handle and position scaffolding tools, equipment and components1777
CPCCSC2002 Erect and dismantle basic scaffolding1779
Assessment Requirements for CPCCSC2002 Erect and dismantle basic scaffolding1783
CPCCSC3001 Erect and dismantle intermediate scaffolding1787
Assessment Requirements for CPCCSC3001 Erect and dismantle intermediate scaffolding1790
CPCCSF2001 Handle steelfixing materials1793
Assessment Requirements for CPCCSF2001 Handle steelfixing materials.....1796
CPCCSF2002 Use steelfixing tools and equipment.....1799
Assessment Requirements for CPCCSF2002 Use steelfixing tools and equipment1802
CPCCSF2005 Arc weld reinforcement steel.....1805
Assessment Requirements for CPCCSF2005 Arc weld reinforcement steel1808
CPCCSF2006 Machine-cut reinforcement materials1811
Assessment Requirements for CPCCSF2006 Machine-cut reinforcement materials.....1814
CPCCSF2007 Splice and anchor using mechanical methods.....1816
Assessment Requirements for CPCCSF2007 Splice and anchor using mechanical methods1819
CPCCSF3002 Carry out monostrand post-tensioning1821
Assessment Requirements for CPCCSF3002 Carry out monostrand post-tensioning....1824
CPCCSF3003 Carry out multistrand post-tensioning.....1826
Assessment Requirements for CPCCSF3003 Carry out multistrand post-tensioning1829
CPCCSF3004 Carry out stressbar post-tensioning.....1831
Assessment Requirements for CPCCSF3004 Carry out stressbar post-tensioning1834
CPCCSH2003 Apply and install sealant and sealant devices1836
Assessment Requirements for CPCCSH2003 Apply and install sealant and sealant devices1839

CPCCSP2001 Handle solid plastering materials	1841
Assessment Requirements for CPCCSP2001 Handle solid plastering materials	1844
CPCCSP2002 Use solid plastering tools and equipment	1846
Assessment Requirements for CPCCSP2002 Use solid plastering tools and equipment.....	1849
CPCCSP2003 Prepare surfaces for plastering	1852
Assessment Requirements for CPCCSP2003 Prepare surfaces for plastering.....	1855
CPCCSP3001 Apply float and render to straight and curved surfaces	1857
Assessment Requirements for CPCCSP3001 Apply float and render to straight and curved surfaces	1861
CPCCSP3002 Apply set coats	1863
Assessment Requirements for CPCCSP3002 Apply set coats.....	1866
CPCCSP3003 Apply trowelled texture coat finishes	1868
Assessment Requirements for CPCCSP3003 Apply trowelled texture coat finishes	1871
CPCCSP3004 Restore and renovate solid plasterwork	1873
Assessment Requirements for CPCCSP3004 Restore and renovate solid plasterwork... 	1876
CPCCSP3005 Install pre-cast decorative mouldings.....	1878
Assessment Requirements for CPCCSP3005 Install pre-cast decorative mouldings	1881
CPCCSP3006 Install cast plaster blockwork and wall sheet panels.....	1883
Assessment Requirements for CPCCSP3006 Install cast plaster blockwork and wall sheet panels	1886
CPCCSP3007 Apply plaster by projection machine.....	1888
Assessment Requirements for CPCCSP3007 Apply plaster by projection machine	1891
CPCCSP3008 Carry out conite construction and wall sheet panelling.....	1893
Assessment Requirements for CPCCSP3008 Carry out conite construction and wall sheet panelling.....	1896
CPCCST2001 Prepare for stonemasonry construction process	1898
Assessment Requirements for CPCCST2001 Prepare for stonemasonry construction process.....	1901
CPCCST2003 Finish stone	1903
Assessment Requirements for CPCCST2003 Finish stone.....	1906
CPCCST2004 Lay stone	1908
Assessment Requirements for CPCCST2004 Lay stone.....	1911
CPCCST2005 Carry out load slinging of off-site materials	1913
Assessment Requirements for CPCCST2005 Carry out load slinging of off-site materials	1916
CPCCST2006 Identify and use stone products	1919
Assessment Requirements for CPCCST2006 Identify and use stone products.....	1922
CPCCST2007 Use stonemasonry tools, plant and equipment	1924
Assessment Requirements for CPCCST2007 Use stonemasonry tools, plant and equipment	1927
CPCCST3001 Dress and mould stone	1929
Assessment Requirements for CPCCST3001 Dress and mould stone.....	1932
CPCCST3002 Shape solid stone	1934
Assessment Requirements for CPCCST3002 Shape solid stone	1937
CPCCST3003 Spilt stone manually.....	1939
Assessment Requirements for CPCCST3003 Spilt stone manually	1942
CPCCST3004 Dress stone manually	1944
Assessment Requirements for CPCCST3004 Dress stone manually	1947
CPCCST3006 Machine stone	1949
Assessment Requirements for CPCCST3006 Machine stone.....	1953
CPCCST3007 Turn stone.....	1955
Assessment Requirements for CPCCST3007 Turn stone	1958
CPCCST3009 Use computer-controlled static machinery to produce stone components	1960
Assessment Requirements for CPCCST3009 Use computer-controlled static machinery to produce stone components	1963

CPCCST3010 Set out and cut letters in stone1965
Assessment Requirements for CPCCST3010 Set out and cut letters in stone.....1968
CPCCST3011 Plan monument construction1970
Assessment Requirements for CPCCST3011 Plan monument construction.....1973
CPCCST3012 Build stone veneer walls.....1975
Assessment Requirements for CPCCST3012 Build stone veneer walls1979
CPCCST3013 Carry out cemetery monument fixing1981
Assessment Requirements for CPCCST3013 Carry out cemetery monument fixing.....1985
CPCCST3014 Set and anchor stone facades1987
Assessment Requirements for CPCCST3014 Set and anchor stone facades1990
CPCCST3015 Apply gilding to stone1992
Assessment Requirements for CPCCST3015 Apply gilding to stone.....1995
CPCCST3016 Build solid stonemasonry walls1997
Assessment Requirements for CPCCST3016 Build solid stonemasonry walls.....2001
CPCCST3017 Construct stone arches.....2003
Assessment Requirements for CPCCST3017 Construct stone arches2007
CPCCST3018 Inlay lead to stone.....2009
Assessment Requirements for CPCCST3018 Inlay lead to stone2012
CPCCST3019 Lay stonemasonry stairs2014
Assessment Requirements for CPCCST3019 Lay stonemasonry stairs.....2017
CPCCST3020 Produce reconstituted stone2019
Assessment Requirements for CPCCST3020 Produce reconstituted stone.....2022
CPCCST3021 Restore stone work.....2024
Assessment Requirements for CPCCST3021 Restore stone work2028
CPCCST3022 Carry out profile work.....2030
Assessment Requirements for CPCCST3022 Carry out profile work2033
CPCCST3023 Apply drawing principles to stonemasonry2035
Assessment Requirements for CPCCST3023 Apply drawing principles to stonemasonry2038
CPCCST3024 Apply conservation principles and practices to heritage stonework2040
Assessment Requirements for CPCCST3024 Apply conservation principles and practices
to heritage stonework2043
CPCCST3025 Carry out basic stonemasonry demolition2046
Assessment Requirements for CPCCST3025 Carry out basic stonemasonry demolition2049
CPCCST4001 Prepare to undertake the heritage restoration process2051
Assessment Requirements for CPCCST4001 Prepare to undertake the heritage restoration
process.....2054
CPCCST4002 Undertake the heritage restoration process.....2057
Assessment Requirements for CPCCST4002 Undertake the heritage restoration process2061
CPCCST4003 Undertake preparations for refractory work2064
Assessment Requirements for CPCCST4003 Undertake preparations for refractory work2067
CPCCST4004 Initiate the heritage works process2069
Assessment Requirements for CPCCST4004 Initiate the heritage works process.....2072
CPCCST4005 Prepare drawings for heritage works.....2074
Assessment Requirements for CPCCST4005 Prepare drawings for heritage works2079
CPCCST4006 Prepare report for heritage restoration work2083
Assessment Requirements for CPCCST4006 Prepare report for heritage restoration work2086
CPCCST4007 Construct a fire brick wall and arch using refractory materials.....2089
Assessment Requirements for CPCCST4007 Construct a fire brick wall and arch using
refractory materials.....2092
CPCCSV5009 Assess the impact of fire on building materials2094
Assessment Requirements for CPCCSV5009 Assess the impact of fire on building
materials2097
CPCCVE1002 Undertake a basic computer design project.....2099

Assessment Requirements for CPCCVE1002 Undertake a basic computer design project2101

CPCCVE1011 Undertake a basic construction project.....2103

Assessment Requirements for CPCCVE1011 Undertake a basic construction project ..2106

CPCCWC2001 Complete penetrations and flashings.....2108

Assessment Requirements for CPCCWC2001 Complete penetrations and flashings2111

CPCCWC3001 Install and finish plasterboard and fibre cement sheeting to curved wall and ceiling substrates2113

Assessment Requirements for CPCCWC3001 Install and finish plasterboard and fibre cement sheeting to curved wall and ceiling substrates2116

CPCCWC3002 Install and finish plasterboard and fibre cement sheeting to arch substrate2118

Assessment Requirements for CPCCWC3002 Install and finish plasterboard and fibre cement sheeting to arch substrate2121

CPCCWC3003 Install dry wall passive fire-rated systems2124

Assessment Requirements for CPCCWC3003 Install dry wall passive fire-rated systems2128

CPCCWF2001 Handle wall and floor tiling materials2130

Assessment Requirements for CPCCWF2001 Handle wall and floor tiling materials....2133

CPCCWF2002 Use wall and floor tiling tools and equipment.....2135

Assessment Requirements for CPCCWF2002 Use wall and floor tiling tools and equipment2138

CPCCWF3001 Prepare surfaces for tiling application2141

Assessment Requirements for CPCCWF3001 Prepare surfaces for tiling application ...2144

CPCCWF3002 Install floor tiles2146

Assessment Requirements for CPCCWF3002 Install floor tiles.....2150

CPCCWF3003 Install wall tiles2152

Assessment Requirements for CPCCWF3003 Install wall tiles.....2156

CPCCWF3004 Repair wall and floor tiling.....2158

Assessment Requirements for CPCCWF3004 Repair wall and floor tiling2161

CPCCWF3005 Install decorative tiling.....2163

Assessment Requirements for CPCCWF3005 Install decorative tiling2166

CPCCWF3006 Install mosaic tiling.....2168

Assessment Requirements for CPCCWF3006 Install mosaic tiling2171

CPCCWF3007 Tile curved surfaces.....2173

Assessment Requirements for CPCCWF3007 Tile curved surfaces2176

CPCCWF3008 Tile pools and spas.....2178

Assessment Requirements for CPCCWF3008 Tile pools and spas2182

CPCCWF3009 Apply waterproofing for wall and floor tiling.....2184

Assessment Requirements for CPCCWF3009 Apply waterproofing for wall and floor tiling2187

CPCCWP2001 Handle waterproofing materials and components.....2190

Assessment Requirements for CPCCWP2001 Handle waterproofing materials and components.....2193

CPCCWP2002 Use waterproofing tools and equipment2195

Assessment Requirements for CPCCWP2002 Use waterproofing tools and equipment.2198

CPCCWP2004 Prepare surfaces for waterproofing application2201

Assessment Requirements for CPCCWP2004 Prepare surfaces for waterproofing application2204

CPCCWP3001 Apply waterproofing system to below ground level wet areas2206

Assessment Requirements for CPCCWP3001 Apply waterproofing system to below ground level wet areas2210

CPCCWP3002 Apply waterproofing process to internal wet areas.....2213

Assessment Requirements for CPCCWP3002 Apply waterproofing process to internal wet areas2217

CPCCWP3003 Apply waterproofing process to external above-ground wet areas.....2220

Assessment Requirements for CPCCWP3003 Apply waterproofing process to external above-ground wet areas.....2224

CPCCWP3004 Apply waterproofing remedial processes2227

Assessment Requirements for CPCCWP3004 Apply waterproofing remedial processes2230

CPCCWP3005 Assess construction waterproofing processes.....2233

Assessment Requirements for CPCCWP3005 Assess construction waterproofing processes2236

CPCMCM8001 Plan and manage complex projects.....2238

Assessment Requirements for CPCMCM8001 Plan and manage complex projects2243

CPCMCM8002 Manage the quality of projects and processes.....2246

Assessment Requirements for CPCMCM8002 Manage the quality of projects and processes2251

CPCPCM2039 Carry out interactive workplace communication2253

Assessment Requirements for CPCPCM2039 Carry out interactive workplace communication2256

CPCPCM2040 Read plans, calculate quantities and mark out materials2258

Assessment Requirements for CPCPCM2040 Read plans, calculate quantities and mark out materials.....2261

CPCPCM2041 Work effectively in the plumbing services sector.....2263

Assessment Requirements for CPCPCM2041 Work effectively in the plumbing services sector2265

CPCPCM2043 Carry out WHS requirements2267

Assessment Requirements for CPCPCM2043 Carry out WHS requirements.....2270

CPCPCM2045 Handle and store plumbing materials.....2272

Assessment Requirements for CPCPCM2045 Handle and store plumbing materials2275

CPCPCM2046 Use plumbing hand and power tools2277

Assessment Requirements for CPCPCM2046 Use plumbing hand and power tools.....2280

CPCPCM2047 Carry out levelling2281

Assessment Requirements for CPCPCM2047 Carry out levelling.....2283

CPCPCM2048 Cut and join sheet metal.....2285

Assessment Requirements for CPCPCM2048 Cut and join sheet metal2287

CPCPCM2049 Cut using oxy-acetylene equipment.....2289

Assessment Requirements for CPCPCM2049 Cut using oxy-acetylene equipment2292

CPCPCM2052 Weld mild steel using oxy-acetylene equipment.....2294

Assessment Requirements for CPCPCM2052 Weld mild steel using oxy-acetylene equipment2297

CPCPCM2053 Weld using metal arc welding equipment.....2299

Assessment Requirements for CPCPCM2053 Weld using metal arc welding equipment2302

CPCPCM2054 Carry out simple concreting and rendering2304

Assessment Requirements for CPCPCM2054 Carry out simple concreting and rendering2307

CPCPCM2055 Work safely on roofs.....2309

Assessment Requirements for CPCPCM2055 Work safely on roofs2312

CPCPCM3021 Flash penetrations through roofs and walls2314

Assessment Requirements for CPCPCM3021 Flash penetrations through roofs and walls2317

CPCPCM3022 Weld polymer pipes using fusion method2319

Assessment Requirements for CPCPCM3022 Weld polymer pipes using fusion method2322

CPCPCM3023 Fabricate and install non-ferrous pressure piping.....2324

Assessment Requirements for CPCPCM3023 Fabricate and install non-ferrous pressure piping2327

CPCPCM3024 Prepare simple drawings.....2329

Assessment Requirements for CPCPCM3024 Prepare simple drawings2331

CPCPCM3025 Install trench support2333

Assessment Requirements for CPCPCM3025 Install trench support.....2336

CPCPCM4011 Carry out work-based risk control processes.....2338

Assessment Requirements for CPCPCM4011 Carry out work-based risk control processes2341

CPCPCM4012 Estimate and cost work2343

Assessment Requirements for CPCPCM4012 Estimate and cost work2346

CPCPCM4013 Produce 2-D architectural drawings using design software.....2348

Assessment Requirements for CPCPCM4013 Produce 2-D architectural drawings using design software.....2351

CPCPCM4015 Access and interpret regulatory requirements for the plumbing and services industry.....2353

Assessment Requirements for CPCPCM4015 Access and interpret regulatory requirements for the plumbing and services industry.....2355

CPCPCM5010 Design complex sanitary plumbing and drainage systems.....2357

Assessment Requirements for CPCPCM5010 Design complex sanitary plumbing and drainage systems2360

CPCPCM5011 Design complex cold water systems.....2367

Assessment Requirements for CPCPCM5011 Design complex cold water systems2371

CPCPCM5012 Design complex stormwater and roof drainage systems2378

Assessment Requirements for CPCPCM5012 Design complex stormwater and roof drainage systems2381

CPCPCM5013 Design complex (non-solar) heated water systems.....2386

Assessment Requirements for CPCPCM5013 Design complex (non-solar) heated water systems2389

CPCPCM5014 Design sewer infrastructure systems.....2396

Assessment Requirements for CPCPCM5014 Design sewer infrastructure systems2400

CPCPDR2021 Locate and clear blockages2407

Assessment Requirements for CPCPDR2021 Locate and clear blockages.....2409

CPCPDR2025 Install stormwater and sub-soil drainage systems and drain work site...2411

Assessment Requirements for CPCPDR2025 Install stormwater and sub-soil drainage systems and drain work site.....2414

CPCPDR2026 Install prefabricated inspection openings and inspection chambers2416

Assessment Requirements for CPCPDR2026 Install prefabricated inspection openings and inspection chambers2419

CPCPDR3021 Plan layout and install below ground sanitary drainage systems.....2421

Assessment Requirements for CPCPDR3021 Plan layout and install below ground sanitary drainage systems2424

CPCPDR3023 Install on-site domestic wastewater treatment plants and disposal systems2426

Assessment Requirements for CPCPDR3023 Install on-site domestic wastewater treatment plants and disposal systems.....2428

CPCPDR3024 Maintain and service domestic treatment plants and onsite sewerage facilities2430

Assessment Requirements for CPCPDR3024 Maintain and service domestic treatment plants and onsite sewerage facilities.....2433

CPCPDR3025 Plan layout and install vacuum drainage systems2437

Assessment Requirements for CPCPDR3025 Plan layout and install vacuum drainage systems2440

CPCPDR4011 Design and size sanitary drainage systems.....2442

Assessment Requirements for CPCPDR4011 Design and size sanitary drainage systems2444

CPCPDR4012 Design and size stormwater drainage systems2446

Assessment Requirements for CPCPDR4012 Design and size stormwater drainage systems2448

CPCPDR4013 Design and size domestic treatment plant disposal systems.....2450

Assessment Requirements for CPCPDR4013 Design and size domestic treatment plant disposal systems2452

CPCPFS2021 Connect static storage tanks for fixed fire protection systems2454

Assessment Requirements for CPCPFS2021 Connect static storage tanks for fixed fire protection systems.....2457

CPCPFS2022 Install portable fire equipment2459

Assessment Requirements for CPCPFS2022 Install portable fire equipment2462

CPCPFS3030 Design fire sprinkler systems using pre-calculated charts and tables.....2464

Assessment Requirements for CPCPFS3030 Design fire sprinkler systems using pre-calculated charts and tables2467

CPCPFS3031 Fabricate and install fire hydrant and hose reel systems2469

Assessment Requirements for CPCPFS3031 Fabricate and install fire hydrant and hose reel systems.....2472

CPCPFS3034 Install control valve assemblies, actuating devices and local alarms2474

Assessment Requirements for CPCPFS3034 Install control valve assemblies, actuating devices and local alarms2477

CPCPFS3036 Install special hazard systems2479

Assessment Requirements for CPCPFS3036 Install special hazard systems2482

CPCPFS3037 Install residential life safety sprinkler systems2485

Assessment Requirements for CPCPFS3037 Install residential life safety sprinkler systems2488

CPCPFS3038 Test and maintain fire hydrant and hose reel installations.....2491

Assessment Requirements for CPCPFS3038 Test and maintain fire hydrant and hose reel installations.....2494

CPCPFS3040 Conduct basic functional testing of water-based fire-suppression systems2497

Assessment Requirements for CPCPFS3040 Conduct basic functional testing of water-based fire-suppression systems.....2500

CPCPFS3041 Inspect and test fire pumpsets2505

Assessment Requirements for CPCPFS3041 Inspect and test fire pumpsets2508

CPCPFS3042 Conduct annual routine service of complex water-based fire-suppression systems2512

Assessment Requirements for CPCPFS3042 Conduct annual routine service of complex water-based fire-suppression systems.....2516

CPCPFS3043 Conduct functional water flow testing2521

Assessment Requirements for CPCPFS3043 Conduct functional water flow testing.....2525

CPCPFS3044 Install distribution and range pipes2530

Assessment Requirements for CPCPFS3044 Install distribution and range pipes.....2533

CPCPFS3045 Fit off sprinkler heads, controls and ancillary equipment2535

Assessment Requirements for CPCPFS3045 Fit off sprinkler heads, controls and ancillary equipment2538

CPCPFS3046 Test the integrity of water-based fire protection systems using pressure.2540

Assessment Requirements for CPCPFS3046 Test the integrity of water-based fire protection systems using pressure2543

CPCPFS3047 Test and maintain automatic fire sprinklers2545

Assessment Requirements for CPCPFS3047 Test and maintain automatic fire sprinklers2548

CPCPFS3048 Install fixed fire pumpsets2550

Assessment Requirements for CPCPFS3048 Install fixed fire pumpsets2553

CPCPFS3049 Conduct preventive maintenance on fixed fire pumpsets2555

Assessment Requirements for CPCPFS3049 Conduct preventive maintenance on fixed fire pumpsets2559

CPCPFS4021 Commission domestic and residential fire suppression sprinkler systems2561

Assessment Requirements for CPCPFS4021 Commission domestic and residential fire suppression sprinkler systems2564

CPCPFS4022 Commission and maintain special hazard fire suppression systems.....2567

Assessment Requirements for CPCPFS4022 Commission and maintain special hazard fire suppression systems2571

CPCPFS4023 Commission fire system pumpsets.....2574

Assessment Requirements for CPCPFS4023 Commission fire system pumpsets2577

CPCPFS4024 Design residential fire sprinkler systems2580

Assessment Requirements for CPCPFS4024 Design residential fire sprinkler systems..2583

CPCPFS4025 Commission fire alarm and detection system interface devices2585

Assessment Requirements for CPCPFS4025 Commission fire alarm and detection system interface devices2588

CPCPFS4026 Commission firefighting appliances2591

Assessment Requirements for CPCPFS4026 Commission firefighting appliances.....2594

CPCPFS4027 Commission fire sprinkler systems.....2597

Assessment Requirements for CPCPFS4027 Commission fire sprinkler systems2601

CPCPFS5010 Design fire-compliant hydraulic services.....2605

Assessment Requirements for CPCPFS5010 Design fire-compliant hydraulic services .2608

CPCPFS5011 Design fire sprinkler systems2612

Assessment Requirements for CPCPFS5011 Design fire sprinkler systems.....2615

CPCPFS5012 Design fire hydrant and hose reel systems.....2622

Assessment Requirements for CPCPFS5012 Design fire hydrant and hose reel systems2626

CPCPGS3046 Install LPG systems in caravans, mobile homes and mobile workplaces 2631

Assessment Requirements for CPCPGS3046 Install LPG systems in caravans, mobile homes and mobile workplaces2634

CPCPGS3047 Install LPG systems in marine craft.....2636

Assessment Requirements for CPCPGS3047 Install LPG systems in marine craft2639

CPCPGS3048 Install gas pressure control equipment2641

Assessment Requirements for CPCPGS3048 Install gas pressure control equipment....2643

CPCPGS3049 Install gas appliance flues.....2645

Assessment Requirements for CPCPGS3049 Install gas appliance flues2648

CPCPGS3051 Purge consumer piping2650

Assessment Requirements for CPCPGS3051 Purge consumer piping.....2652

CPCPGS3052 Maintain Type A gas appliances2654

Assessment Requirements for CPCPGS3052 Maintain Type A gas appliances2657

CPCPGS3053 Disconnect and reconnect Type A gas appliances2659

Assessment Requirements for CPCPGS3053 Disconnect and reconnect Type A gas appliances2662

CPCPGS3054 Calculate and install natural ventilation for Type A gas appliances.....2664

Assessment Requirements for CPCPGS3054 Calculate and install natural ventilation for Type A gas appliances2667

CPCPGS3055 Install gas sub-meters2669

Assessment Requirements for CPCPGS3055 Install gas sub-meters.....2671

CPCPGS3056 Size and install consumer gas piping systems.....2672

Assessment Requirements for CPCPGS3056 Size and install consumer gas piping systems2675

CPCPGS3059 Install LPG storage of aggregate storage capacity up to 500 litres2677

Assessment Requirements for CPCPGS3059 Install LPG storage of aggregate storage capacity up to 500 litres.....2680

CPCPGS3060 Install LPG storage of aggregate storage capacity exceeding 500 litres and less than 8 kl2682

Assessment Requirements for CPCPGS3060 Install LPG storage of aggregate storage capacity exceeding 500 litres and less than 8 kl2685

CPCPGS3061 Install and commission Type A gas appliances2687

Assessment Requirements for CPCPGS3061 Install and commission Type A gas appliances2690

CPCPGS4011 Design and size consumer gas installations.....2692

Assessment Requirements for CPCPGS4011 Design and size consumer gas installations2694

CPCPGS4022 Service Type A gas appliances2696

Assessment Requirements for CPCPGS4022 Service Type A gas appliances.....2699

CPCPGS4023 Install, commission and service Type B gas appliances2701
Assessment Requirements for CPCPGS4023 Install, commission and service Type B gas appliances2706
CPCPIG2021 Design domestic urban irrigation systems2709
Assessment Requirements for CPCPIG2021 Design domestic urban irrigation systems 2712
CPCPIG3021 Set out, install and commission irrigation systems2714
Assessment Requirements for CPCPIG3021 Set out, install and commission irrigation systems2717
CPCPIG3022 Install and commission domestic irrigation pumps2719
Assessment Requirements for CPCPIG3022 Install and commission domestic irrigation pumps2722
CPCPMS2021 Assemble mechanical services components2724
Assessment Requirements for CPCPMS2021 Assemble mechanical services components 2727
CPCPMS3031 Fabricate and install steel pressure piping2729
Assessment Requirements for CPCPMS3031 Fabricate and install steel pressure piping 2732
CPCPMS3032 Select and fit insulation and sheathing2734
Assessment Requirements for CPCPMS3032 Select and fit insulation and sheathing2737
CPCPMS3033 Install small bore heating systems2739
Assessment Requirements for CPCPMS3033 Install small bore heating systems2742
CPCPMS3034 Install and test medical gas pipeline systems2744
Assessment Requirements for CPCPMS3034 Install and test medical gas pipeline systems 2747
CPCPMS3035 Install and test ducting systems2749
Assessment Requirements for CPCPMS3035 Install and test ducting systems2752
CPCPMS3036 Install air handling units2754
Assessment Requirements for CPCPMS3036 Install air handling units2757
CPCPMS3037 Install and commission a single head split system air conditioning2759
Assessment Requirements for CPCPMS3037 Install and commission a single head split system air conditioning2762
CPCPMS3038 Install air conditioning control equipment2764
Assessment Requirements for CPCPMS3038 Install air conditioning control equipment 2767
CPCPMS3039 Maintain mechanical services equipment2769
Assessment Requirements for CPCPMS3039 Maintain mechanical services equipment 2772
CPCPMS3040 Install and commission evaporative air cooling systems2774
Assessment Requirements for CPCPMS3040 Install and commission evaporative air cooling systems2777
CPCPMS3041 Install domestic solid fuel burning appliances2779
Assessment Requirements for CPCPMS3041 Install domestic solid fuel burning appliances 2782
CPCPMS4011 Design, size and lay out heating and cooling systems2785
Assessment Requirements for CPCPMS4011 Design, size and lay out heating and cooling systems2787
CPCPMS4022 Commission air and water systems2789
Assessment Requirements for CPCPMS4022 Commission air and water systems2792
CPCPMS4023 Design compressed air systems2794
Assessment Requirements for CPCPMS4023 Design compressed air systems2796
CPCPMS5010 Design steam generation and distribution systems2798
Assessment Requirements for CPCPMS5010 Design steam generation and distribution systems2801
CPCPMS5011 Design air conditioning and ventilation systems2803
Assessment Requirements for CPCPMS5011 Design air conditioning and ventilation systems2807
CPCPMS5012 Design sound attenuated hydraulic services2812
Assessment Requirements for CPCPMS5012 Design sound attenuated hydraulic services 2816
CPCPMS5013 Design hydronic heating and cooling systems2818

Assessment Requirements for CPCPMS5013 Design hydronic heating and cooling systems 2821

CPCPPS5000 Design gas bulk storage systems2823

Assessment Requirements for CPCPPS5000 Design gas bulk storage systems.....2826

CPCPPS5001 Design industrial gas systems.....2831

Assessment Requirements for CPCPPS5001 Design industrial gas systems2834

CPCPPS5002 Design gas reticulation systems2838

Assessment Requirements for CPCPPS5002 Design gas reticulation systems2841

CPCPPS5014 Locate and maintain piping systems2846

Assessment Requirements for CPCPPS5014 Locate and maintain piping systems2849

CPCPPS5015 Inspect plumbing and drainage systems2851

Assessment Requirements for CPCPPS5015 Inspect plumbing and drainage systems ..2854

CPCPPS5023 Design solar water heating systems2857

Assessment Requirements for CPCPPS5023 Design solar water heating systems.....2860

CPCPPS5024 Conduct a water audit and identify water-saving initiatives2863

Assessment Requirements for CPCPPS5024 Conduct a water audit and identify
water-saving initiatives.....2866

CPCPPS5025 Design grey water re-use systems2868

Assessment Requirements for CPCPPS5025 Design grey water re-use systems.....2871

CPCPPS5026 Design rainwater collection, storage, distribution and re-use systems2880

Assessment Requirements for CPCPPS5026 Design rainwater collection, storage,
distribution and re-use systems2883

CPCPPS5027 Design irrigation systems2891

Assessment Requirements for CPCPPS5027 Design irrigation systems2894

CPCPPS5028 Design trade waste pre-treatment systems2899

Assessment Requirements for CPCPPS5028 Design trade waste pre-treatment systems 2902

CPCPPS5030 Design pump systems2910

Assessment Requirements for CPCPPS5030 Design pump systems2914

CPCPPS5032 Design siphonic stormwater drainage systems2921

Assessment Requirements for CPCPPS5032 Design siphonic stormwater drainage systems 2924

CPCPPS5033 Design vacuum drainage systems2930

Assessment Requirements for CPCPPS5033 Design vacuum drainage systems.....2933

CPCPRF2022 Select and install roof sheeting and wall cladding2941

Assessment Requirements for CPCPRF2022 Select and install roof sheeting and wall
cladding2945

CPCPRF2023 Collect and store roof water2948

Assessment Requirements for CPCPRF2023 Collect and store roof water.....2950

CPCPRF2024 Fabricate roof coverings for curved structures2952

Assessment Requirements for CPCPRF2024 Fabricate roof coverings for curved
structures2955

CPCPRF3021 Receive roofing materials2958

Assessment Requirements for CPCPRF3021 Receive roofing materials.....2961

CPCPRF3022 Fabricate and install roof drainage systems2964

Assessment Requirements for CPCPRF3022 Fabricate and install roof drainage systems 2967

CPCPRF3023 Fabricate and install external flashings2969

Assessment Requirements for CPCPRF3023 Fabricate and install external flashings ...2972

CPCPRF3024 Install roof components2974

Assessment Requirements for CPCPRF3024 Install roof components2977

CPCPRF3025 Install roof coverings to curved roof structures2979

Assessment Requirements for CPCPRF3025 Install roof coverings to curved roof
structures2982

CPCPRF3026 Install roof sheets, wall cladding and complex flashings2984

Assessment Requirements for CPCPRF3026 Install roof sheets, wall cladding and complex
flashings2987

CPCPRF3027 Select and install a heritage roof system2989
Assessment Requirements for CPCPRF3027 Select and install a heritage roof system ..2992
CPCPRF4011 Design and size roof drainage systems2994
Assessment Requirements for CPCPRF4011 Design and size roof drainage systems.....2996
CPCPSN3011 Plan the layout of a residential sanitary plumbing system and fabricate and install sanitary stacks2998
Assessment Requirements for CPCPSN3011 Plan the layout of a residential sanitary plumbing system and fabricate and install sanitary stacks3001
CPCPSN3022 Install discharge pipes.....3004
Assessment Requirements for CPCPSN3022 Install discharge pipes3006
CPCPSN3025 Install pre-treatment facilities3008
Assessment Requirements for CPCPSN3025 Install pre-treatment facilities.....3010
CPCPSN3026 Install sewerage pumpsets3012
Assessment Requirements for CPCPSN3026 Install sewerage pumpsets3015
CPCPSN4011 Design and size sanitary plumbing systems3017
Assessment Requirements for CPCPSN4011 Design and size sanitary plumbing systems3019
CPCPWT3020 Connect and install storage tanks to a domestic water supply3022
Assessment Requirements for CPCPWT3020 Connect and install storage tanks to a domestic water supply3024
CPCPWT3021 Set out and install water services.....3026
Assessment Requirements for CPCPWT3021 Set out and install water services3028
CPCPWT3022 Install and commission water heating systems and adjust controls and devices3030
Assessment Requirements for CPCPWT3022 Install and commission water heating systems and adjust controls and devices.....3033
CPCPWT3024 Install and maintain domestic water treatment equipment3035
Assessment Requirements for CPCPWT3024 Install and maintain domestic water treatment equipment3038
CPCPWT3025 Install water pumpsets.....3040
Assessment Requirements for CPCPWT3025 Install water pumpsets3042
CPCPWT3026 Install and fit off sanitary fixtures, water services and adjust water service controls.....3044
Assessment Requirements for CPCPWT3026 Install and fit off sanitary fixtures, water services and adjust water service controls.....3047
CPCPWT3027 Install backflow prevention devices3049
Assessment Requirements for CPCPWT3027 Install backflow prevention devices3052
CPCPWT3028 Install property service.....3054
Assessment Requirements for CPCPWT3028 Install property service3056
CPCPWT3029 Install water pipe systems3058
Assessment Requirements for CPCPWT3029 Install water pipe systems3060
CPCPWT3030 Install home fire sprinkler systems3062
Assessment Requirements for CPCPWT3030 Install home fire sprinkler systems3065
CPCPWT4011 Design and size heated and cold-water services and systems.....3067
Assessment Requirements for CPCPWT4011 Design and size heated and cold-water services and systems3069
CPCPWT4022 Commission and maintain backflow prevention devices.....3071
Assessment Requirements for CPCPWT4022 Commission and maintain backflow prevention devices.....3073
CPCPWT4023 Commission and maintain hot and heated water temperature control devices3075
Assessment Requirements for CPCPWT4023 Commission and maintain hot and heated water temperature control devices3077
CPCSF5001 Define scope and hazard level of fire systems design projects3079

Assessment Requirements for CPCSF5001 Define scope and hazard level of fire systems design projects.....3081

CPCSF5002 Research and interpret detailed fire systems design project requirements3084

Assessment Requirements for CPCSF5002 Research and interpret detailed fire systems design project requirements3087

CPCSF5003 Develop plans and methodology for fire systems design projects.....3091

Assessment Requirements for CPCSF5003 Develop plans and methodology for fire systems design projects.....3094

CPCSF5005 Research and evaluate fire system technologies and components3098

Assessment Requirements for CPCSF5005 Research and evaluate fire system technologies and components.....3101

CPCSF5006 Create detailed designs for fire sprinkler systems3105

Assessment Requirements for CPCSF5006 Create detailed designs for fire sprinkler systems3108

CPCSF5007 Create detailed designs for hydrant and hose reel systems3112

Assessment Requirements for CPCSF5007 Create detailed designs for hydrant and hose reel systems.....3115

CPCSF5008 Create detailed designs for fire detection and warning systems3119

Assessment Requirements for CPCSF5008 Create detailed designs for fire detection and warning systems3122

CPCSF5009 Create detailed designs for fire systems' water supplies3127

Assessment Requirements for CPCSF5009 Create detailed designs for fire systems' water supplies.....3130

CPCSF5010 Provide documentation and support for fabrication of fire sprinkler systems3134

Assessment Requirements for CPCSF5010 Provide documentation and support for fabrication of fire sprinkler systems3137

CPCSF5011 Provide design documentation and review and support fire system installation processes3142

Assessment Requirements for CPCSF5011 Provide design documentation and review and support fire system installation processes3145

CPCSF5013 Support commissioning processes and finalise fire systems design projects3149

Assessment Requirements for CPCSF5013 Support commissioning processes and finalise fire systems design projects.....3152

CPCSF5014 Conduct annual fire systems inspections3157

Assessment Requirements for CPCSF5014 Conduct annual fire systems inspections..3160

CPCSF5015 Prepare documentation for annual fire systems inspections.....3163

Assessment Requirements for CPCSF5015 Prepare documentation for annual fire systems inspections3166

CPCSF5017 Create detailed designs for foam suppression systems3169

Assessment Requirements for CPCSF5017 Create detailed designs for foam suppression systems3173

CPCSH3001 Fabricate shopfitting components using CNC machines3178

Assessment Requirements for CPCSH3001 Fabricate shopfitting components using CNC machines3182

CPCSH3002 Fabricate and assemble shopfront structures.....3185

Assessment Requirements for CPCSH3002 Fabricate and assemble shopfront structures3189

CPCSH3003 Assemble and install shopfront structures3192

Assessment Requirements for CPCSH3003 Assemble and install shopfront structures3195

CPCSH3004 Assemble internal shopfitting units and prepare for transport3198

Assessment Requirements for CPCSH3004 Assemble internal shopfitting units and prepare for transport.....3202

CPCSH3005 Apply and trim decorative additions to shopfittings and components.....3205

Assessment Requirements for CPCSH3005 Apply and trim decorative additions to shopfittings and components.....	3208
CPCSH3006 Prepare shopfittings and surfaces and apply liquid finishes.....	3211
Assessment Requirements for CPCSH3006 Prepare shopfittings and surfaces and apply liquid finishes	3215
CPCSH3007 Install prefabricated internal shopfitting units	3218
Assessment Requirements for CPCSH3007 Install prefabricated internal shopfitting units.....	3221
CPCSH3008 Install internal shop walls and fixtures	3224
Assessment Requirements for CPCSH3008 Install internal shop walls and fixtures....	3228
CPCSH3009 Demolish shopfronts and bulkheads.....	3231
Assessment Requirements for CPCSH3009 Demolish shopfronts and bulkheads	3235
CPCSH3010 Prepare shop floors for new coverings	3238
Assessment Requirements for CPCSH3010 Prepare shop floors for new coverings.....	3241
CPCSPS4001 Investigate and prepare swimming pool site.....	3244
Assessment Requirements for CPCSPS4001 Investigate and prepare swimming pool site	3247
CPCSPS4002 Select, procure and store construction materials for swimming pool and spa projects.....	3249
Assessment Requirements for CPCSPS4002 Select, procure and store construction materials for swimming pool and spa projects.....	3252
CPCSPS4003 Install swimming pool and spa subsoil drainage	3254
Assessment Requirements for CPCSPS4003 Install swimming pool and spa subsoil drainage	3257
CPCSPS4004 Install swimming pool and spa circulation systems and components	3259
Assessment Requirements for CPCSPS4004 Install swimming pool and spa circulation systems and components	3262
CPCSPS4005 Install prefabricated fibreglass swimming pools.....	3264
Assessment Requirements for CPCSPS4005 Install prefabricated fibreglass swimming pools	3267
CPCSPS4006 Apply sprayed concrete to shape and finish swimming pools and spas	3269
Assessment Requirements for CPCSPS4006 Apply sprayed concrete to shape and finish swimming pools and spas	3272
CPCSPS4007 Commission ancillary swimming pool and spa systems and hand over to client.....	3275
Assessment Requirements for CPCSPS4007 Commission ancillary swimming pool and spa systems and hand over to client	3278
CPCSPS4008 Install above-ground swimming pool	3280
Assessment Requirements for CPCSPS4008 Install above-ground swimming pool.....	3283
CPCSPS4009 Undertake interior finishing of swimming pools and spas	3285
Assessment Requirements for CPCSPS4009 Undertake interior finishing of swimming pools and spas.....	3288
CPCSPS4010 Lay swimming pool and spa coping.....	3290
Assessment Requirements for CPCSPS4010 Lay swimming pool and spa coping	3293
CPCSPS4011 Install precast concrete swimming pools.....	3295
Assessment Requirements for CPCSPS4011 Install precast concrete swimming pools ..	3298
CPCSUS4001 Implement and monitor environmentally sustainable work practices	3300
Assessment Requirements for CPCSUS4001 Implement and monitor environmentally sustainable work practices	3303
CPCSUS4002 Use building science principles to construct energy efficient buildings....	3305
Assessment Requirements for CPCSUS4002 Use building science principles to construct energy efficient buildings	3308

CPC10120 Certificate I in Construction

Modification History

- Release 4 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.3.
Minor formatting correction.
- Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.
Change of unit title BSBSUS211 Participate in environmentally sustainable work practices in Elective units to BSBSUS211 Participate in sustainable work practices.
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Unit list typographical error corrected in code CPCCWHS2001.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPC10111 Certificate I in Construction.
Updated to meet the Standards for Training Packages 2012.

Qualification Description

This qualification provides an introduction to the construction industry, its culture, occupations, job roles and workplace expectations. The units of competency cover essential work health and safety requirements, the industrial and work organisation structure, communication skills, work planning, and basic use of tools and materials. The qualification is built around a basic construction project unit that integrates the skills and embeds the facets of employability skills in context.

The qualification is suited to vocational education and training (VET) in Schools programs or learners with no previous connection to the construction industry or relevant employment history.

There are no specific job outcomes to this qualification, but the skills achieved will assist in successfully undertaking a Certificate II pre-vocational program or job outcome qualification or will facilitate entry into an Australian Apprenticeship.

The unit CPCCWHS1001 Prepare to work safely in the construction industry is designed to meet WHS regulatory authority requirements for WHS induction and must be achieved before access to any building and construction work site.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in 11 units of competency:

- 8 core units
- 3 elective units.

The elective units are to be chosen as follows:

- up to 3 units from the elective units below
- one unit from Certificate I or II qualifications in the CPC Training Package or another current Training Package or accredited course, provided the integrity of the AQF alignment is ensured, and it contributes to a valid, industry-supported vocational outcome.

Prerequisite units of competency

An asterisk (*) against a unit code below indicates that there is a prerequisite requirement that must be met. Prerequisite unit(s) must be assessed before assessment of any unit of competency with an asterisk. Check the unit of competency for information on specific prerequisite requirements. All prerequisite requirements are packaged in the qualification.

Core units

CPCCCM1011	Undertake basic estimation and costing
CPCCCM2004*	Handle construction materials
CPCCCM2005*	Use construction tools and equipment
CPCCOM1012	Work effectively and sustainably in the construction industry
CPCCOM1013	Plan and organise work
CPCCVE1011	Undertake a basic construction project
CPCCWHS1001	Prepare to work safely in the construction industry
CPCCWHS2001	Apply WHS requirements, policies and procedures in the construction industry

Elective units

BSBSUS211	Participate in sustainable work practices
CPCCCM2006	Apply basic levelling procedures
CPCCOM1014	Conduct workplace communication
CPCCOM1015	Carry out measurements and calculations
CPCCOM1017	Prepare simple construction sketches
CPCCOM2001*	Read and interpret plans and specifications
CPCCVE1002	Undertake a basic computer design project

CPC20120 Certificate II in Construction

Modification History

Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.

Imported unit codes updated in Elective list:

- RIICCM210D Install trench support to RIICCM210E Install trench support
- RIIWMG203D Drain and dewater civil construction site to RIIWMG203E Drain and dewater civil construction sites.

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.1.

Imported unit code corrected in elective list: RIICCM210E Install trench support to RIICCM310D Install trench support.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPC20112 Certificate II in Construction. Updated to meet the Standards for Training Packages 2012.

Qualification Description

This qualification provides an occupational outcome and a range of support tasks applicable to the majority of construction work sites.

Occupational titles may include:

- builder's labourer.

The qualification has core units of competency that are required in many Certificate III qualifications. The elective options are structured to allow choice from a range of units aligned at Certificate III level and in total could provide meaningful credit in a construction industry Australian Apprenticeship.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in 15 units of competency:

- 10 core units
- 5 elective units.

The elective units are to be chosen as follows:

- up to 5 units from the elective units below
- one unit may be chosen from Certificate I, II or III qualifications in CPC Training Package or another current Training Package or accredited course, provided the integrity of the AQF alignment is ensured, and they contribute to a valid, industry-supported vocational outcome.

Prerequisite units of competency

An asterisk (*) against a unit code below indicates that there is a prerequisite requirement that must be met. Prerequisite unit(s) must be assessed before assessment of any unit of competency with an asterisk. Check the unit of competency for information on specific prerequisite requirements. All prerequisite requirements are packaged in the qualification.

Core units

CPCCCM2005*	Use construction tools and equipment
CPCCCM2006	Apply basic levelling procedures
CPCCCM2012*	Work safely at heights
CPCCCO2013*	Carry out concreting to simple forms
CPCCOM1012	Work effectively and sustainably in the construction industry
CPCCOM1013	Plan and organise work
CPCCOM1014	Conduct workplace communication
CPCCOM1015	Carry out measurements and calculations
CPCCOM2001*	Read and interpret plans and specifications
CPCCWHS2001	Apply WHS requirements, policies and procedures in the construction industry

Elective units

CPCCCM2002*	Carry out hand excavation
-------------	---------------------------

CPCCCM2007*	Use explosive power tools
CPCCCM2008*	Erect and dismantle restricted height scaffolding
CPCCCM2009*	Carry out basic demolition
CPCCRI3001*	Operate personnel and materials hoists
CPCCSF2004*	Place and fix reinforcement materials
RIICCM210E	Install trench support
RIIWHS202E	Enter and work in confined spaces
RIIWHS205E	Control traffic with stop-slow bat
RIIWMG203E	Drain and dewater civil construction site
TLILIC0003	Licence to operate a forklift truck

CPC20220 Certificate II in Construction Pathways

Modification History

- Release 5 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.3.
- Unit CPCCVE1011 Undertake a basic construction project marked with an asterisk as a prerequisite requirement must be met.
- Release 4 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.
- Imported unit codes updated in Elective list:
- RIICCM210D Install trench support to RIICCM210E Install trench support
 - RIIWMG203D Drain and dewater civil construction site to RIIWMG203E Drain and dewater civil construction sites.
- Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.1.
- Imported unit code corrected in Group I elective list: RIIWHS205D Control traffic with stop-slow bat to RIIWHS205E Control traffic with stop-slow bat.
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
- Group I: General elective unit list is updated by removing "A" from the unit codes CPCPCM2043 and CPCPRF2022 and adding CPCPCM2055 Work safely on roofs as prerequisite requirement.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPC20211 Certificate II in Construction Pathways. Updated to meet the Standards for Training Packages.

Qualification Description

This qualification provides a pathway to the primary trades in the construction industry with the exception of plumbing. Trade outcomes are predominantly achieved through an Australian Apprenticeship and this qualification allows for inclusion of skills suited for entry to off-site occupations, such as joinery as well as carpentry, bricklaying and other occupations in general construction.

This qualification is designed to introduce learners to the recognised trade callings in the construction industry and provide meaningful credit in a construction industry Australian Apprenticeship.

The qualification has core unit of competency requirements that are required in most Certificate III qualifications. The elective options are structured to allow choice from areas of trade skills as an introduction to a range of occupations.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency in one of the two occupational streams must be achieved.

- **Construction Pathways**

For the award of the *CPC20220 Certificate II in Construction Pathways*, the candidate must demonstrate competency in 10 units of competency:

- 5 core units
- 5 elective units.

Elective units are to be chosen from at least two but no more than four of groups A to I.

One elective may be chosen from any current training package or accredited course as long as it contributes to a valid industry-supported vocational outcome, maintains the AQF level of this qualification, and does not replicate the content of another unit used to achieve this qualification.

- **Remote Area Building**

For the award of the *CPC20220 Certificate II in Construction Pathways (Remote Area Building)*, the candidate must demonstrate competency in a minimum of 10 units of competency:

- 5 core units
- 5 units can be selected from Group I.

Prerequisite units of competency

An asterisk (*) against a unit code below indicates that there is a prerequisite requirement that must be met. Prerequisite unit(s) must be assessed before assessment of any unit of competency with an asterisk. Check the unit of competency for information on specific prerequisite requirements. All prerequisite requirements are packaged in the qualification.

Core units

CPCCOM1012	Work effectively and sustainably in the Construction Industry
CPCCOM1013	Plan and organise work
CPCCOM1015	Carry out measurements and calculations

- CPCCV1011* Undertake a basic construction project
- CPCCWHS2001 Apply WHS requirements, policies and procedures in the Construction Industry

Elective units

Group A: Brick and blocklaying

- CPCCB2001* Handle and prepare bricklaying and blocklaying materials
- CPCCB2002* Use bricklaying and blocklaying tools and equipment

Group B: Carpentry

- CPCCA2002* Use carpentry tools and equipment
- CPCCA2011* Handle carpentry materials

Group C: Solid plastering (maximum one unit from this group)

- CPCSP2001* Handle solid plastering materials
- CPCSP2002* Use solid plastering tools and equipment

Group D: Wall and floor tiling (maximum one unit from this group)

- CPCCM2013* Undertake basic installation of wall tiles
- CPCWF2002* Use wall and floor tiling tools and equipment

Group E: Waterproofing (maximum one unit from this group)

- CPCWP2001* Handle waterproofing materials
- CPCWP2002* Use waterproofing tools and equipment

Group F: Joinery (maximum one unit from this group)

- CPCCJN2001* Assemble components
- CPCCJN3004* Manufacture and assemble joinery components

Group G: Stonemasonry (maximum one unit from this group)

- CPCCST2006* Identify and use stone products
- CPCCST2007* Use stonemasonry tools, plant and equipment

Group H: Painting and decorating (maximum one unit from this group)

- CPCCPD2011* Handle and store painting and decorating materials
- CPCCPD2012* Use painting and decorating tools and equipment

Group I: General elective units

- CPCCCM1011 Undertake basic estimation and costing
- CPCCCM2004* Handle construction materials
- CPCCCM2006 Apply basic levelling procedures
- CPCCCM2009* Carry out basic demolition
- CPCCCM2012* Work safely at heights
- CPCCCO2013* Carry out concreting to simple forms
- CPCCJN3100* Process materials to produce components using static machines
- CPCCPD3021* Prepare existing coated surfaces for painting
- CPCCPD3022* Apply paint by brush and roller
- CPCCSH2003* Apply and install sealant and sealant devices
- CPCCSP2003* Prepare surfaces for plastering
- CPCCWF3004* Repair wall and floor tiles
- CPCPCM2043 Carry out WHS requirements
- CPCPCM2055 Work safely on roofs

CPCPRF2022*	Select and install roof sheeting and wall cladding
MEM05050*	Perform routine gas metal arc welding
MEM1101	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
RIICCM210E	Install trench support
RIIWHS205E	Control traffic with stop-slow bat
RIIWMG203E	Drain and dewater civil construction site
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEERL0003*	Conduct in-service safety testing of electrical cord connected equipment and cord assemblies

CPC20720 Certificate II in Drainage

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Correction to unit title CPCPCM3022 in Elective units.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPC20712 Certificate II in Drainage.

Qualification Description

This qualification reflects the role of a drainer, responsible for carrying out installation of below ground stormwater and sub-soil drainage systems, sanitary drainage systems, domestic treatment plants, on-site disposal systems and trench support, locating and clearing blockages and/or installing prefabricated inspection openings and chambers.

Occupational titles could include:

- Drainer.

Completion of this qualification indicates that a person has the practical skills and operational knowledge to perform routine drainage tasks in a defined context, usually working under direct supervision.

This qualification includes units of competency common to other qualifications in the plumbing industry as well as specialist drainage units and can provide a pathway to further learning and work in the plumbing industry.

The plumbing industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or closely simulated workplace environment and this qualification requires all units of competency to be delivered and assessed in this context.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required before entering a construction work site. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory and certification requirements apply to drainage in some states and territories. Relevant state and territory regulatory authorities should be consulted to confirm those requirements.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded this qualification, the candidate must achieve competency in:

- 18 units of competency:
 - 13 core units
 - 5 elective units.

The elective units must ensure the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome and are to be chosen as follows:

- 4 elective units must be chosen from electives listed below,
- 1 unit may be chosen from the elective units listed below, or from any relevant nationally endorsed Training Package or accredited course.

An asterisk (*) against a unit code below indicates that the unit has a prerequisite. Please check the unit for information on this. All prerequisites are packaged in the qualification.

Core Units

CPCPCM2039	Carry out interactive workplace communication
CPCPCM2040 *	Read plans, calculate quantities and mark out materials
CPCPCM2041	Work effectively in the plumbing services sector
CPCPCM2043	Carry out WHS requirements
CPCPCM2047 *	Carry out levelling
CPCPCM2054 *	Carry out simple concreting and rendering
CPCPCM3024 *	Prepare simple drawings
CPCPCM3025	Install trench support
CPCPDR2025*	Install stormwater and sub-soil drainage systems and drain work site
CPCPDR2026*	Install prefabricated inspection openings and inspection chambers
CPCPDR3021*	Plan layout and install below ground sanitary drainage systems
CPCPDR3023*	Install on-site domestic wastewater treatment plants and disposal systems
HLTAID011	Provide first aid

Elective Units

CPCCCM2012 *	Work safely at heights
CPCCCST2005*	Carry out load slinging of off-site materials
CPCCWHS200 1	Apply WHS requirements, policies and procedures in the construction industry
CPCPCM2049 *	Cut mild steel using oxy-LPG-acetylene equipment
CPCPCM2052 *	Weld mild steel using oxy-acetylene equipment
CPCPCM3022 *	Weld polymer pipes using fusion method
CPCPDR2021*	Locate and clear blockages
CPCPRF2023*	Collect and store roof water
CPCPSN3025*	Install pre-treatment facilities
CPCPSN3026*	Install sewerage pumpsets
RIICTT306E	Install cure in-place linings for existing pipeline systems
RIIMPO320F	Conduct civil construction excavator operations
RIIWHS202E	Enter and work in confined spaces

CPC30120 Certificate III in Shopfitting

Modification History

Release 2 This version first released with CPC Property Services Training Package Release 6.3.

Units:

- CPCCJN3100 Process materials to produce components using static machines
- CPCCWC3004 Install suspended ceilings

marked with an asterisk as a prerequisite requirement must be met.

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPC30116 Certificate III in Shopfitting.
Updated qualification to meet Standards for Training Packages 2012.

Qualification Description

This qualification reflects the role of shopfitters who construct or renovate commercial premises such as retail or office environments. It includes the skills and knowledge required to work safely using tools and equipment and to apply information from plans and drawings to fabricate, assemble and fix shop fronts and install internal units and partitions.

Occupational titles may include:

- shopfitter.

Licensing, legislative or certification requirements may apply to shopfitting in some states and territories. Relevant state and territory regulatory authorities should be consulted to confirm those requirements.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of CPCCWHS1001 *Prepare to work safely in the construction industry* meets this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 18 units of competency:
 - 12 core units
 - 6 elective units.

For the elective units:

- a minimum of four units must be selected from Group A
- the remaining two units can be selected from Group A and/or Group B or from any currently endorsed Training Package or accredited course as long as they contribute to a valid, industry-supported vocational outcome and maintain the integrity of the Australian Qualifications Framework (AQF) level of this qualification.

Prerequisite units

An asterisk (*) against a unit code below indicates that there is a prerequisite requirement that must be met. Prerequisite units must be assessed before assessment of any unit of competency with an asterisk. Check the unit of competency for information on specific prerequisite requirements. All prerequisite requirements are packaged in the qualification.

Core Units

CPCCCA2002
* Use carpentry tools and equipment

CPCCCM3004 Identify and apply information in construction plans, drawings and specifications

CPCCCJN3100* Process materials to produce components using static machines

CPCCOM3006 Carry out levelling operations

CPCCWHS20 Apply WHS requirements, policies and procedures in the construction industry
01

CPCSHP3001 Fabricate shopfitting components using CNC machines

CPCSHP3002 Fabricate and assemble shopfront structures

CPCSHP3003 Assemble and install shopfront structures

CPCSHP3004 Assemble internal shopfitting units and prepare for transport

CPCSHP3005 Apply and trim decorative additions to shopfittings and components

CPCSHP3007 Install prefabricated internal shopfitting units^{[[L]]}_{[[SEP]]}

CPCSHP3008 Install internal shop walls and fixtures^{[[L]]}_{[[SEP]]}

Group A: Specialist elective units

- CPCSHP3006 Prepare shopfittings and surfaces and apply liquid finishes
- CPCSHP3009 Demolish shopfronts and bulkheads^[1]_[SEP]
- CPCSHP3010 Prepare shop floors for new coverings
- CPCCCWC3004 Install suspended ceilings
*
- MSFFM3009 Produce manual and computer-aided production drawings
- MSFFM3011 Measure and draw site layout for manufactured furniture products
- MSFFM3019 Set up, operate and maintain automated edge banding machines
- MSFFM3020 Fabricate synthetic solid surface products^[1]_[SEP]
- MSFGG3036 Install commercial glazing products

Group B: General elective units

- BSBESB301 Investigate business opportunities^[1]_[SEP]
- BSBESB407 Manage finances for new business ventures^[1]_[SEP]
- CPCCCM2010 Work safely on scaffolding higher than two metres
- CPCCCM3005 Calculate costs of construction work
- CPCCLHS300 Licence to operate a personnel and materials hoist
1
- CPCWHS3001 Identify construction work hazards and select risk control strategies

CPC30216 Certificate III in Signs and Graphics

Modification History

Release 2 This version released with CPP Property Services Training Package Release 11.0.

Imported units updated to current releases.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Version 2.

Revised qualification replacing superseded non-equivalent CPC32111 Certificate III in Signage.

Qualification Description

This qualification reflects the role of sign manufacturers who design and produce signs and graphics for a range of purposes.

Signs and graphics can be produced using a range of traditional and contemporary techniques, often involving the use of advanced printing software and technology, and a range of methods for illumination and fabrication.

No licensing, legislative, regulatory, or certification requirements apply to this qualification at the time of endorsement.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 16 units of competency:
 - 7 core units
 - 9 elective units.

The elective units must ensure the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome and are to be chosen as follows:

- all 9 units may be chosen from the elective units listed below
- up to 3 units may be chosen from other CPC Certificate III or Certificate IV qualifications, or another current Training Package or accredited course, provided they

provided they do not duplicate the outcome of another unit chosen for the qualification.

Core units

CPCCSG3001	Design and lay out digital signs for production
CPCCSG3002	Produce and apply vinyl signs
CPCCSG3003	Colour manage signs
CPCCSG3004	Print digital signs
CPCCSG3011	Install LED technology into signs
CPCCSG3012	Fabricate signs
CPCWHS3001	Identify construction work hazards and select risk control strategies

Elective units

AURVTP109	Apply vehicle body film wrapping
CPCCCM2006	Apply basic levelling procedures
CPCCCM2010	Work safely on scaffolding higher than two metres
CPCCCM3001	Operate elevated work platforms up to 11 meters
CPCCCM3003	Work safely around electrical sources, services and assets
CPCCCM3004	Identify and apply information in construction plans, drawings and specifications
CPCCLSF2001	Licence to erect, alter and dismantle scaffolding basic level
CPCCSG3005	Engrave signs
CPCCSG3006	Apply gilding to signs
CPCCSG3007	Paint lines and scrolls
CPCCSG3008	Hand draw chalkboards and showcards
CPCCSG3009	Screen-print signs
CPCCSG3010	Hand render pictorials

CPCCSG3013	Paint letters and decorative effects for signs
CPCCSG3014	Manufacture gas-charged glass-formed illuminated signs
CPCCSG3015	Produce airbrushed signs
CPCCSG3016	Prepare surfaces for signs
CPCCSG3017	Erect and install signs
MEM05049	Perform routine gas tungsten arc welding
MEM05050	Perform routine gas metal arc welding
MSFFF2006	Apply surface coatings by spray gun
MSFFM3022	Set up, operate and maintain computer numerically controlled (CNC) machining and processing centres

Qualification Mapping Information

No equivalent qualification.

CPC30220 Certificate III in Carpentry

Modification History

Release 4 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.3.

Removal of prerequisite asterisks from:

- CPCCOM1012 Work effectively and sustainably in the construction industry
- CPCCOM1014 Conduct workplace communication

in the unit lists.

Units:

- CPCCJN3100 Process materials to produce components using static machines, and
- CPCCWC3004 Install suspended ceilings

marked with an asterisk as a prerequisite requirement must be met.

Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.1.

Unit code corrected in Group A - Specialist Electives: CPCCCO3048* Construct tilt panels on site to CPCCON3048* Construct tilt panels on site.

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Rectified qualification to reflect endorsed version.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to:

- CPC30211 Certificate III in Carpentry.

Supersedes and is not equivalent to:

- CPC32011 Certificate III in Carpentry and Joinery.
- CPC31511 Certificate III in Formwork/Falsework.

Qualification Description

This is a trade qualification for carpenters in residential and commercial workplaces. It includes setting out, manufacturing, constructing, assembling, installing and repairing products made using timber and non-timber materials.

Occupational titles may include:

- Carpenter - Commercial
- Carpenter - Formwork
- Carpenter - Residential

State and territory jurisdictions may have different licensing, legislative, regulatory or certification requirements. Relevant state and territory regulatory authorities should be consulted to confirm those requirements.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of CPCCWHS1001 *Prepare to work safely in the construction industry* meets this requirement.

This qualification is suitable for an Australian apprenticeship pathway.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 34 units of competency:
 - 27 core units
 - 7 electives
- a minimum of five units must be selected from Group A
- the remaining can be selected from Group A or Group B
- a maximum of two units can be selected from any group or current training package, as long as it contributes to a valid, industry-supported vocational outcome and maintains the AQF level of this qualification.

Prerequisite units of competency

An asterisk (*) against a unit code below indicates that there is a prerequisite requirement that must be met. Prerequisite unit(s) must be assessed before assessment of any unit of competency with an asterisk. Check the unit of competency for information on specific prerequisite requirements. All prerequisite requirements are packaged in the qualification.

Core Units

- CPCCCA2002* Use carpentry tools and equipment
- CPCCCA2011* Handle carpentry materials
- CPCCCA3001* Carry out general demolition of minor building structures

CPCCCA3002*	Carry out setting out
CPCCCA3003*	Install flooring systems
CPCCCA3004*	Construct and erect wall frames
CPCCCA3005*	Construct ceiling frames
CPCCCA3006*	Erect roof trusses
CPCCCA3007*	Construct pitched roofs
CPCCCA3008*	Construct eaves
CPCCCA3010*	Install windows and doors
CPCCCA3016*	Construct, assemble and install timber external stairs
CPCCCA3017*	Install exterior cladding
CPCCCA3024*	Install lining, panelling and moulding
CPCCCA3025*	Read and interpret plans, specifications and drawings for carpentry work
CPCCCA3028*	Erect and dismantle formwork for footings and slabs on ground
CPCCCM2006	Apply basic levelling procedures
CPCCCM2008*	Erect and dismantle restricted height scaffolding
CPCCCM2012*	Work safely at heights
CPCCCO2013*	Carry out concreting to simple forms
CPCCOM1012	Work effectively and sustainably in the construction industry
CPCCOM1014	Conduct workplace communication
CPCCOM1015	Carry out measurements and calculations
CPCCOM3001	Perform construction calculations to determine carpentry material requirements
CPCCOM3006	Carry out levelling operations
CPCCWHS2001	Apply WHS requirements, policies and procedures in the construction industry
CPCWHS3001	Identify construction work hazards and select risk control strategies

Group A - Specialist Electives

CPCCCA3009*	Construct advanced roofs
CPCCCA3012*	Frame and fit wet area fixtures
CPCCCA3014*	Construct and install bulkheads
CPCCCA3018*	Construct, erect and dismantle formwork for stairs and ramps
CPCCCA3019*	Erect and dismantle formwork to suspended slabs, columns, beams and walls
CPCCCA3020*	Erect and dismantle jump-form formwork
CPCCCA3022*	Install curtain walling
CPCCCA3027*	Set up, operate and maintain indirect action powder-actuated power tools
CPCCCM2002*	Carry out hand excavation
CPCCCM3001	Operate elevated work platforms up to 11 metres
CPCCJN3003*	Manufacture components for doors, windows and frames
CPCCJN3004*	Manufacture and assemble joinery components
CPCCJN3100*	Process materials to produce components using static machines
CPCCON3048*	Construct tilt panels on site
CPCCSF2004*	Place and fix reinforcement materials
CPCCWC3003*	Install dry wall passive fire-rated systems
CPCCWC3004*	Install suspended ceilings

Group B - General Electives

CPCCCA3011*	Refurbish timber sashes to window frames
CPCCCA3026*	Assemble partitions
CPCCCM3005	Calculate costs of construction work
CPCCLSF2001	License to erect, alter and dismantle scaffolding basic level

CPCCOM1013	Plan and organise work
CPCCPB3001*	Fix standard plasterboard wall sheets
CPCCPB3002*	Fix standard plasterboard ceiling sheets
CPCCSF2005*	Arc weld reinforcement steel
CPCCSF3002*	Carry out monostrand post-tensioning
CPCCSF3003*	Carry out multistrand post-tensioning
CPCCSF3004*	Carry out stressbar post-tensioning
CPCCST4001	Prepare to undertake the heritage restoration process
CPCCST4002	Undertake the heritage restoration process
CPCPCM2043	Carry out WHS requirements
CPCPCM2052*	Weld mild steel using oxy-acetylene equipment
CPCPCM2053*	Weld using manual metal arc welding equipment

CPC30320 Certificate III in Concreting

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPC30318 Certificate III in Concreting.

Qualification Description

This is a qualification for concreters working in concreting operations on residential and commercial projects.

Occupational titles include:

- concreter
- concrete tilt panel fabricator.

This qualification has core unit of competency requirements that cover common skills for the construction industry, as well as a specialist field of work in concreting.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in an actual workplace or very closely simulated workplace environment, and this qualification requires all units of competency to be delivered in this context.

Licensing, legislative, regulatory or certification requirements apply to concreting in some states and territories. For further information, check with the relevant regulatory authority.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 22 units of competency:
 - 17 core units
 - 5 elective units.

For the elective units:

- 3 units must be selected from Group A
- the remaining 2 elective units may be selected from Group A and/or Group B or from any currently endorsed Training Package or accredited course at Certificate III or Certificate IV level.

Prerequisite units

An asterisk (*) against a unit code below indicates that there is a prerequisite requirement that must be met. Prerequisite unit(s) must be assessed before assessment of any unit of competency with an asterisk. Check the unit of competency for information on specific prerequisite requirements. All prerequisite requirements are packaged in the qualification.

Core units

CPCCCA3002*	Carry out setting out
CPCCCA3028*	Erect and dismantle formwork for footings and slabs on ground
CPCCCM2002*	Carry out hand excavation
CPCCCM2006	Apply basic levelling procedures
CPCCOM1012	Work effectively and sustainably in the construction industry
CPCCOM1013	Plan and organise work
CPCCOM1014	Conduct workplace communication
CPCCOM1015	Carry out measurements and calculations
CPCCOM2001*	Read and interpret plans and specifications
CPCCON2021*	Handle concreting materials and components
CPCCON2022*	Select, use and maintain concreting plant, tools and equipment
CPCCON3035*	Determine concrete supply requirements
CPCCON3041*	Place concrete
CPCCON3042*	Finish concrete
CPCCON3043*	Cure concrete
CPCCSF2004*	Place and fix reinforcement materials
CPCCWHS2001	Apply WHS requirements, policies and procedures in the construction industry

Elective units**Group A: Specialist elective units**

CPCCON3036*	Plan concrete work and brief team
CPCCON3044*	Apply decorative finishes to concrete
CPCCON3046*	Repair and rectify concrete
CPCCON3047*	Cut concrete
CPCCON3048*	Construct tilt panels on site
CPCCON3049*	Apply and finish sprayed concrete
CPCCON3050*	Carry out high performance concreting
CPCCON3051*	Conduct off-form vertical concrete operations
CPCCON3053*	Slump test concrete
CPCCON3054*	Operate concrete agitator trucks
CPCCON3055*	Install topping slabs
CPCCON3056*	Conduct concrete pump delivery operations
CPCCON3057*	Core concrete

Group B: General elective units

CPCCCM2007*	Use explosive power tools
CPCCCM2008*	Erect and dismantle restricted height scaffolding
CPCCCM2012*	Work safely at heights
CPCCLBM3001	Licence to operate a concrete placing boom
CPCCOM1016	Identify requirements for safe precast and tilt-up work
CPCCSF2003*	Cut and bend materials using oxy-LPG equipment
CPCCSF3001*	Apply reinforcement schedule

CPC30420 Certificate III in Demolition

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.

Imported unit code in Elective units updated from RIIRTM203D Work as a safety observer/spotter to RIIRTM203E Work as a safety observer/spotter.

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPC30413 Certificate III in Demolition. Updated to the Standards for Training Packages 2012.

Qualification Description

This qualification is designed to meet the needs of specialist demolition workers who dismantle and demolish public, residential, commercial and industrial structures of all types, and process the resulting materials for salvage, recycling and waste disposal.

Occupational titles could include:

- Demolition worker
- Demolition plant operator
- Demolition team leader.

Licensing, legislative, regulatory or certification requirements for demolition work differ between states and territories. Please consult with the relevant regulatory authority.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 20 units of competency:
 - 11 core units

- 9 elective units.

The elective units can be selected from any of the groups listed below. Two elective units can be selected from any training package or accredited course, as long as they contribute to a valid, industry-supported vocational outcome and supports the AQF level of this qualification.

Prerequisite units of competency

An asterisk (*) against a unit code below indicates that there is a prerequisite requirement that must be met. Prerequisite unit(s) must be assessed before assessment of any unit of competency with an asterisk. Check the unit of competency for information on specific prerequisite requirements. All prerequisite requirements are packaged in the qualification.

Core units

CPCCCM2012*	Work safely at heights
CPCCCDE3016*	Identify hazards on demolition sites and apply risk management strategies
CPCCCDE3017*	Select and use hand tools and equipment for demolition tasks
CPCCCDE3018*	Select and use small plant and equipment for demolition tasks
CPCCCDE3019*	Demolish small buildings and structures using hand tools and small plant and equipment
CPCCCDE3020*	Select and use tools and equipment for hot work in the demolition industry
CPCCCDE3027	Read and interpret demolition site plans and drawings
CPCCCOM1015	Carry out measurements and calculations
CPCCCWHS2001	Apply WHS requirements, policies and procedures in the construction industry
TLID1001	Shift materials safely using manual handling methods
TLID2003	Handle dangerous goods/hazardous substances

Elective units

Group A - General electives

CPCCCDE3014*	Remove non-friable asbestos
CPCCCDE3015*	Remove friable asbestos

CPCCSF2003*	Cut and bend materials using oxy-LPG equipment
RIIWH5202E	Enter and work in confined spaces
RIIWH5205E	Control traffic with stop-slow bat
RIIWH5302E	Implement traffic management plan
RIIRIS202E	Respond to site based spills
RIIRTM203E	Work as a safety observer/spotter

Group B - Plant operation field of work

CPCCCDE3021*	Operate demolition material crushing plants
CPCCCDE3022	Manage demolition recyclable, waste materials and contaminated soil using load shifting equipment
CPCCCDE3023	Operate skid steer loaders at ground level on demolition sites
CPCCCDE3024	Operate mobile plant on suspended floors on demolition sites
CPCCCDE3025	Operate remote-controlled plant on demolition sites
CPCCCDE3026	Operate excavators at ground level to demolish building elements
RIIHAN309F	Conduct telescopic materials handler operations
RIIMPO320F	Conduct civil construction excavator operations

Group C - Licensing field of work

CPCCCM3001	Operate elevated work platforms up to 11 metres
CPCCLDG3001	Licence to perform dogging
CPCCLHS3001	Licence to operate a personnel and materials hoist
CPCCLRG3001*	Licence to perform rigging basic level
CPCCLRG3002*	Licence to perform rigging intermediate level
CPCCLSF2001	Licence to erect, alter and dismantle scaffolding basic level
CPCCLSF3001*	Licence to erect, alter and dismantle scaffolding intermediate level
CPCCLSF4001*	Licence to erect, alter and dismantle scaffolding advanced level

TLILIC0003	Licence to operate a forklift truck
TLILIC0005	Licence to operate a boom-type elevating work platform (boom length 11 metres or more)

CPC30620 Certificate III in Painting and Decorating

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Typographical error in unit code corrected for clarity.
- Release 1 This version first released with CPC Property Services Training Package Release 5.0.
Supersedes and is equivalent to CPC30611 Certificate III in Painting and Decorating. Minor changes to the packaging rules. Minor unit title changes. Updated to the Standards for Training Packages 2012.

Qualification Description

This qualification provides a trade outcome in painting and decorating for residential and commercial construction work.

Occupational titles may include:

- Painter and Decorator.

Licensing, legislative and regulatory or certification requirements for painting and decorating work differ between States and Territories. Please consult with the relevant regulatory authority.

This qualification is suitable for an Australian Apprenticeship pathway.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 29 units of competency:
 - 26 core units
 - 3 elective units.

Elective units of competency can be selected as follows:

- 3 from the listed electives

or

- 2 from listed electives and 1 from any endorsed Training Package or accredited course, as long as it contributes to a valid, industry supported vocational outcome and supports the AQF level of this qualification.

Prerequisite units of competency

An asterisk (*) against a unit code below indicates that there is a prerequisite requirement that must be met. Prerequisite unit/s must be assessed before assessment of any unit of competency with an asterisk. All prerequisite requirements are packaged in the qualification.

Core units

- CPCCCM2008* Erect and dismantle restricted height scaffolding
- CPCCCM2012* Work safely at heights
- CPCCCM3001 Operate elevated work platforms up to 11 metres
- CPCCCM3005 Calculate costs of construction work
- CPCCOM1012 Work effectively and sustainably in the construction industry
- CPCCOM1013 Plan and organise work
- CPCCOM1014 Conduct workplace communication
- CPCCOM1015 Carry out measurements and calculations
- CPCCOM2001* Read and interpret plans and specifications
- CPCCPB3026* Erect and maintain trestle and plank systems
- CPCCPD2011* Handle and store painting and decorating materials
- CPCCPD2012* Use painting and decorating tools and equipment
- CPCCPD2013* Remove and replace doors and door and window components
- CPCCPD3021* Prepare existing coated surface for painting
- CPCCPD3022* Apply paint by brush and roller
- CPCCPD3023* Apply texture coat paint finishes by brush, roller and spray

- CPCCPD3024* Apply paint by spray
- CPCCPD3025* Match specific paint colours
- CPCCPD3026* Apply stains and clear timber finishes
- CPCCPD3027* Remove and apply wallpaper
- CPCCPD3028* Apply decorative paint finishes
- CPCCPD3030* Apply protective paint coating systems
- CPCCPD3031* Work safely with lead-painted surfaces in the painting industry
- CPCCPD3035* Prepare uncoated surfaces for painting
- CPCCPD3036* Work safely to encapsulate non-friable asbestos in the painting industry
- CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Elective units

- BSBESB301 Investigate micro business opportunities
- BSBESB303 Organise finances for new business venture
- CPCCPD3029* Remove graffiti and apply anti-graffiti coatings
- CPCCPD3032* Apply advanced wall coverings
- CPCCPD3033* Apply intumescent coatings
- CPCCPD3034* Apply advanced decorative paint finishes
- CPCCSP3003* Apply trowelled texture coat finishes
- MSFID4016 Design colour schemes for interior and exterior spaces

CPC30720 Certificate III in Rigging

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Typographical error in unit code corrected for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPC30711 Certificate III in Rigging. Updated to meet the Standards for Training Packages.

Qualification Description

This qualification reflects the role of individuals working the area of rigging and dogging in the building and construction industry.

Occupational titles can include rigger and dogger.

The qualification includes units of competency that cover common skills and knowledge for the building and construction industry, as well as those that are more specific to the occupations of a dogger and rigger. Due to the high-risk nature of the job role, the qualification provides a strong focus on safety.

This is a licensed occupation. Users should check requirements with their relevant licensing authority.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 19 units of competency:
 - 12 core units
 - 7 elective units.

The elective units must be selected as follows:

- 6 units must be selected from the list of elective units below
- 1 unit can be selected from the list of elective units below or from any current training package or accredited course where the unit is packaged in an Australian Qualifications Framework (AQF) Certificate III or Certificate IV qualification that maintains the integrity of the AQF level of this qualification, contributes to a valid, industry-supported vocational outcome, and does not duplicate the outcome of another unit used to achieve this qualification.

Prerequisite units of competency

An asterisk (*) against a unit code below indicates that there is a prerequisite requirement that must be met. Prerequisite unit/s must be assessed before assessment of any unit of competency with an asterisk. All prerequisite requirements are packaged in the qualification.

Core units

CPCCCM2012*	Work safely at heights
CPCCCM3003	Work safely around electrical sources, services and assets
CPCCLDG3001	Licence to perform dogging
CPCCLRG3001*	Licence to perform rigging basic level
CPCCLRG3002*	Licence to perform rigging intermediate level
CPCCOM1012	Work effectively and sustainably in the construction industry
CPCCOM1013	Plan and organise work
CPCCOM1014	Conduct workplace communication
CPCCOM1015	Carry out measurements and calculations
CPCCOM2001*	Read and interpret plans and specifications
CPCCWHS2001	Apply WHS requirements, policies and procedures in the construction industry
TLILIC0005	Licence to operate a boom-type elevating work platform (boom length 11 metres or more)

Elective units

CPCCCM2008*	Erect and dismantle restricted height scaffolding
CPCCCM3001	Operate elevated work platforms up to 11 metres

CPCCCM3002*	Operate a truck-mounted loading crane
CPCCCDO2011*	Handle and position dogging tools and equipment
CPCCCDO3011*	Perform dogging
CPCCLHS3001	Licence to operate a personnel and materials hoist
CPCCLHS3002	Licence to operate a materials hoist
CPCCLRG4001*	Licence to perform rigging advanced level
CPCCON3052*	Conduct concrete boom delivery operations
CPCCRI3012*	Perform basic rigging
CPCCRI3013*	Perform intermediate rigging
CPCCRI3014*	Perform advanced structural steel erection
CPCCRI3015*	Perform advanced tilt-up slab erection
CPCCRI3016*	Perform advanced tower crane erection
CUASTA403	Operate flying systems
RIIHAN208E	Perform dogging
RIIHAN209E	Perform basic rigging
RIIHAN301E	Operate elevating work platform
RIIWHS202E	Enter and work in confined spaces
TLILIC0003	Licence to operate a forklift truck
TLILIC0008	Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity)

CPC30820 Certificate III in Roof Tiling

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.3.

Unit CPCCOM2001 Read and interpret plans and specifications marked with an asterisk as a prerequisite requirement must be met.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent CPC30812 Certificate III in Roof Tiling. Updated to meet the Standards for Training Packages.

Qualification Description

This qualification provides a trade outcome in roof tiling for residential and commercial construction work. Roof tilers create a waterproof barrier between the exterior and the interior of a home or other building. The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as the specialist field of work, roof tiling. Roof tilers create a waterproof barrier between the exterior and interior of a home or other building.

Occupational titles may include:

- Roof tiler.

State and territory jurisdictions may have different licensing, legislative, regulatory or certification requirements. Relevant state and territory regulatory authorities should be consulted to confirm those requirements.

This qualification is suitable for an Australian apprenticeship pathway.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 17 units of competency:
 - 14 core units
 - 3 elective units.

Electives must be selected as follows:

- all three units from the electives listed below, or
- two units from the electives listed below, plus one unit selected from any current training package or accredited course as long as it contributes to a valid, industry-supported vocational outcome, maintains the integrity of the AQF level of this qualification and does not duplicate the outcome of another unit used to achieve this qualification.

Prerequisite units

An asterisk (*) against a unit code below indicates that there is a prerequisite requirement that must be met. Prerequisite unit(s) must be assessed before assessment of any unit of competency with an asterisk. Check the unit of competency for information on specific prerequisite requirements. All prerequisite requirements are packaged in the qualification.

Core units

CPCCOM1012	Work effectively and sustainably in the construction industry
CPCCOM1013	Plan and organise work
CPCCOM1014	Conduct workplace communication
CPCCOM1015	Carry out measurements and calculations
CPCCOM2001*	Read and interpret plans and specifications
CPCCRT2001*	Handle roof tiling materials
CPCCRT2002*	Use roof tiling tools and equipment
CPCCRT3001*	Tile regular roofs
CPCCRT3002*	Tile irregular roofs
CPCCRT3003*	Repair and replace valleys, valley irons and flashings
CPCCRT3004*	Repair and renovate tile roofs
CPCCWHS2001	Apply WHS requirements, policies and procedures in the construction industry
CPCPCM2043	Carry out WHS requirements
CPCPCM2055*	Work safely on roofs

Elective units

BSBESB301	Investigate business opportunities
BSBESB407	Manage finances for new business ventures
CPCCPD3030*	Apply protective paint coating systems
CPCCRT3005*	Slate a roof
CPCCRT3006*	Fix shingles to roofs and facades
CPCCCM2007*	Use explosive power tools
CPCCCM2012*	Work safely at heights
CPCCCM3001	Operate elevated work platforms up to 11 metres
CPCCCSC2002*	Erect and dismantle basic scaffolding

CPC30920 Certificate III in Scaffolding

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Typographical error in unit code corrected for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPC30911 Certificate III in Scaffolding.
Updated to meet the Standards for Training Packages.

Qualification Description

This qualification reflects the role of individuals working in the area of scaffolding operations in the residential and commercial construction industry.

Occupational titles include scaffolder.

This is a licensed occupation. Users should check requirements with their relevant licensing authority.

The qualification includes units of competency that cover common skills and knowledge for the building and construction industry, as well as those that are more specific to scaffolding work.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 14 units of competency:
 - 10 core units
 - 4 elective units.

Elective units must be selected as follows:

- 3 units must be selected from the list of elective units below
- 1 unit can be selected from the list of elective units below or from any current training package or accredited course where the unit is packaged in an Australian Qualifications Framework (AQF) Certificate III or Certificate IV qualification that maintains the integrity of the AQF level of this qualification, contributes to a valid, industry-supported vocational outcome, and does not duplicate the outcome of another unit used to achieve this qualification.

Prerequisite units of competency

An asterisk (*) against a unit code below indicates that there is a prerequisite requirement that must be met. Prerequisite unit/s must be assessed before assessment of any unit of competency with an asterisk. All prerequisite requirements are packaged in the qualification.

Core units

CPCCCM2006	Apply basic levelling procedures
CPCCLSF2001	Licence to erect, alter and dismantle scaffolding basic level
CPCCLSF3001*	Licence to erect, alter and dismantle scaffolding intermediate level
CPCCOM1012	Work effectively and sustainably in the construction industry
CPCCOM1013	Plan and organise work
CPCCOM1014	Conduct workplace communication
CPCCOM1015	Carry out measurements and calculations
CPCCOM2001*	Read and interpret plans and specifications

CPC31020 Certificate III in Solid Plastering

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.3
- Unit CPCCOM2001 Read and interpret plans and specifications marked with an asterisk as a prerequisite requirement must be met.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPC31011 Certificate III in Solid Plastering. Updated to meet the Standards for Training Packages.

Qualification Description

This qualification provides a trade outcome in solid plastering for residential and commercial work. The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as the specialist field of work, solid plastering. Solid plasterers apply plaster, cement and other mixtures to walls to create smooth or decorative finishes to interior walls and to render to exterior walls.

Occupational titles may include:

- Solid Plasterer
- Renderer.

State and territory jurisdictions may have different licensing, legislative, regulatory or certification requirements. Relevant state and territory regulatory authorities should be consulted to confirm those requirements.

This qualification is suitable for an Australian apprenticeship pathway.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 20 units of competency:
 - 15 core units
 - 5 elective units.

Electives are to be selected as follows:

- all five units from the electives listed below, or
- four units from the electives listed below, plus one unit selected from any current training package or accredited course as long as it contributes to a valid, industry-supported vocational outcome, maintains the integrity of the AQF level of this qualification and does not duplicate the outcome of another unit used to achieve this qualification.

Pre-requisite units

An asterisk (*) against a unit code below indicates that there is a prerequisite requirement that must be met. Prerequisite unit(s) must be assessed before assessment of any unit of competency with an asterisk. Check the unit of competency for information on specific prerequisite requirements. All prerequisite requirements are packaged in the qualification.

Core units

CPCCCM2006	Apply basic levelling procedures
CPCCCM2008*	Erect and dismantle restricted height scaffolding
CPCCOM1012	Work effectively and sustainably in the construction industry
CPCCOM1013	Plan and organise work
CPCCOM1014	Conduct workplace communication
CPCCOM1015	Carry out measurements and calculations
CPCCOM2001*	Read and interpret plans and specifications
CPCCSP2001*	Handle solid plastering materials
CPCCSP2002*	Use solid plastering tools and equipment
CPCCSP2003*	Prepare surfaces for plastering
CPCCSP3001*	Apply float and render to straight and curved surfaces
CPCCSP3002*	Apply set coats
CPCCSP3003*	Apply trowelled texture coat finishes
CPCCSP3004*	Restore and renovate solid plasterwork
CPCCWHS2001	Apply WHS requirements, policies and procedures in the construction industry

Elective units

BSBESB301	Investigate business opportunities
BSBESB407	Manage finances for new business ventures
CPCCCM2007*	Use explosive power tools
CPCCCM2012*	Work safely at heights
CPCCCM3001	Operate elevated work platforms to 11 metres
CPCCCO2013*	Carry out concreting to simple forms
CPCCPB3015*	Install acoustic and thermal environmental protection systems
CPCCPB3026*	Erect and maintain trestle and plank systems
CPCCSP3005*	Install pre-cast decorative mouldings
CPCCSP3006*	Install cast plaster blockwork and wall panels
CPCCSP3007*	Apply plaster by projection machine
CPCCSP3008*	Carry out concrete construction and wall sheet panelling

CPC31120 Certificate III in Steelfixing

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Typographical error in unit code corrected for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPC31111 Certificate III in Steelfixing.
Updated to meet the Standards for Training Packages.

Qualification Description

This qualification reflects the role of individuals working in the area of steelfixing in the building and construction industry.

Occupational titles include steelfixer.

The qualification includes units of competency that cover common skills and knowledge for the building and construction industry, as well as those that are more specific to steelfixing work.

This is a licensed occupation. Users should check requirements with their relevant licensing authority.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification competency must be demonstrated in:

- 17 units of competency:
 - 14 core units
 - 3 elective units.

Elective units must be selected as follows:

- 2 units must be selected from the list of elective units below
- 1 unit can be selected from the list of elective units below or from any current training package or accredited course where the unit is packaged in an Australian Qualifications Framework (AQF) Certificate III or Certificate IV qualification that maintains the integrity of the AQF level of this qualification, contributes to a valid, industry-supported vocational outcome, and does not duplicate the outcomes of another unit used to achieve this qualification.

Prerequisite units of competency

An asterisk (*) against a unit code below indicates that there is a prerequisite requirement that must be met. Prerequisite unit/s must be assessed before assessment of any unit of competency with an asterisk.

Core units

CPCCCM2006	Apply basic levelling procedures
CPCCOM1012	Work effectively and sustainably in the construction industry
CPCCOM1013	Plan and organise work
CPCCOM1014	Conduct workplace communication
CPCCOM1015	Carry out measurements and calculations
CPCCOM2001*	Read and interpret plans and specifications
CPCCSF2001*	Handle steelfixing materials
CPCCSF2002*	Use steelfixing tools and equipment
CPCCSF2003*	Cut and bend materials using oxy-LPG equipment
CPCCSF2004*	Place and fix reinforcement materials
CPCCSF2005*	Arc weld reinforcement steel
CPCCSF2006*	Machine-cut reinforcement materials
CPCCSF3001*	Apply reinforcement schedule
CPCCWHS2001	Apply WHS requirements, policies and procedures in the construction industry

Elective units

BSBESB301	Investigate business opportunities
-----------	------------------------------------

BSBESB407	Manage finances for new business ventures
CPCCCM2008*	Erect and dismantle restricted height scaffolding
CPCCCO2014*	Carry out concrete work
CPCCSF2007*	Splice and anchor using mechanical methods
CPCCSF3002*	Carry out monostrand post-tensioning
CPCCSF3003*	Carry out multistrand post-tensioning
CPCCSF3004*	Carry out stressbar post-tensioning
CPCPCM2053*	Weld using manual metal arc welding equipment
RIIWHS202E	Enter and work in confined spaces

CPC31220 Certificate III in Wall and Ceiling Lining

Modification History

- Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.3.
- Unit CPCCOM2001 Read and interpret plans and specifications marked with an asterisk as a prerequisite requirement must be met.
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.1.
- Unit code corrected in elective list: CPCSH3007 Install prefabricated internal shopfitting units to CPCSH3007 Install prefabricated internal shopfitting units.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPC31211 Certificate III in Wall and Ceiling Lining. Updated to meet the Standards for Training Packages.

Qualification Description

This qualification provides a trade outcome in wall and ceiling lining for residential and commercial construction work. The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as the specialist field of work wall and ceiling liner. Wall and ceiling liners apply and fix linings for non-structural walls and ceilings.

Occupational titles may include:

- Wall and ceiling liner
- Drywaller
- Plasterer.

State and territory jurisdictions may have different licensing, legislative, regulatory or certification requirements. Relevant state and territory regulatory authorities should be consulted to confirm those requirements.

This qualification is suitable for an Australian apprenticeship pathway.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 29 units of competency:
 - 22 core units
 - 7 elective units.

Electives must be selected as follows:

- all seven units from the electives listed below, or
- five units from the electives listed below, plus two units selected from any current training package or accredited course as long as they contribute to a valid, industry-supported vocational outcome, maintain the integrity of the AQF level of this qualification and do not duplicate the outcome of another unit used to achieve this qualification.

Prerequisite units

An asterisk (*) against a unit code below indicates that there is a prerequisite requirement that must be met. Prerequisite unit(s) must be assessed before assessment of any unit of competency with an asterisk. Check the unit of competency for information on specific prerequisite requirements. All prerequisite requirements are packaged in the qualification.

Core units

CPCCCA3014*	Construct and install bulkheads
CPCCCA3026*	Assemble partitions
CPCCCM2012*	Work safely at heights
CPCCOM1012	Work effectively and sustainably in the construction industry
CPCCOM1013	Plan and organise work
CPCCOM1014	Conduct workplace communication
CPCCOM1015	Carry out measurements and calculations
CPCCOM2001*	Read and interpret plans and specifications
CPCCPB3001*	Fix standard plasterboard wall sheets
CPCCPB3002*	Fix standard plasterboard ceiling sheets

CPCCPB3003*	Fix battens
CPCCPB3004*	Fix wet area sheets
CPCCPB3005*	Fix ceiling sheets to external protected areas
CPCCPB3006*	Fix fibre cement board
CPCCPB3007*	Apply levels of finish standards to planning and inspection of own work
CPCCPB3008*	Mix plastering compounds
CPCCPB3009*	Finish plasterboard joints manually
CPCCPB3010*	Manually sand plaster work
CPCCPB3012*	Cut and fix paper-faced cornices
CPCCWC3003*	Install dry wall passive fire-rated systems
CPCCWC3004*	Install suspended ceilings
CPCCWHS2001	Apply WHS requirements, policies and procedures in the construction industry

Elective units

BSBESB301	Investigate business opportunities
BSBESB407	Manage finances for new business ventures
CPCCCA3001*	Carry out general demolition of minor building structures
CPCCCA3010*	Install windows and doors
CPCCCM2006	Apply basic levelling procedures
CPCCCM2007*	Use explosive power tools
CPCCCM2008*	Erect and dismantle restricted height scaffolding
CPCCCM3001	Operate elevated work platforms up to 11 metres
CPCCPB3014*	Install bulk insulation and pliable membrane products
CPCCPB3015*	Install acoustic and thermal environmental protection systems
CPCCPB3016*	Install and finish columns

CPCCPB3017*	Rectify faults in drywall applications
CPCCPB3018*	Use vacuum and electric sanding equipment to finish plaster work
CPCCPB3019*	Inspect equipment for serviceability
CPCCPB3020*	Match, mitre and install cast ornamental cornices
CPCCPB3021*	Install and fix residential acoustic plaster products
CPCCPB3022*	Use mechanical jointing equipment to finish joints
CPCCPB3027*	Install ceiling insulation products
CPCCSP3003*	Apply trowelled texture coat finishes
CPCCSP3005*	Install pre-cast decorative mouldings
CPCCWC2001*	Complete penetrations and flashings
CPCCWC3001*	Install and finish plasterboard and fibre cement sheeting to curved wall and ceiling substrates
CPCCWC3002*	Install and finish plasterboard and fibre cement sheeting to arch substrates
CPCSH3007*	Install prefabricated internal shopfitting units

CPC31320 Certificate III in Wall and Floor Tiling

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.3.

Core unit CPCCOM2001 Read and interpret plans and specifications marked with an asterisk as a prerequisite requirement must be met.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPC31311 Certificate III in Wall and Floor Tiling. Updated to meet the Standards for Training Packages.

Qualification Description

This qualification provides a trade outcome in wall and floor tiling for residential and commercial construction work. The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as the specialist field of work, wall and floor tiling. Tilers work with materials like ceramic, glass, slate, marble and clay. They cut these materials and lay tiles on walls and floors, both interior and exterior. They may also add decorative touches to their basic work.

Occupational titles may include:

- Tiler
- Wall and Floor tiler.

State and territory jurisdictions may have different licensing, legislative, regulatory or certification requirements. Relevant state and territory regulatory authorities should be consulted to confirm those requirements.

This qualification is suitable for an Australian apprenticeship pathway.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 20 units of competency:
 - 17 core units
 - 3 elective units.

Electives must be selected as follows:

- all three units from the electives listed below, or
- two units from the electives listed below, plus one unit selected from any current training package or accredited course as long as it contributes to a valid, industry-supported vocational outcome, maintains the integrity of the AQF level of this qualification and does not duplicate the outcome of another unit used to achieve this qualification.

Prerequisite units

An asterisk (*) against a unit code below indicates that there is a prerequisite requirement that must be met. Prerequisite unit(s) must be assessed before assessment of any unit of competency with an asterisk. Check the unit of competency for information on specific prerequisite requirements. All prerequisite requirements are packaged in the qualification.

Core units

CPCCCM2006	Apply basic levelling procedures
CPCCOM1012	Work effectively and sustainably in the construction industry
CPCCOM1013	Plan and organise work
CPCCOM1014	Conduct workplace communication
CPCCOM1015	Carry out measurements and calculations
CPCCOM2001*	Read and interpret plans and specifications
CPCCWF2001*	Handle wall and floor tiling materials
CPCCWF2002*	Use wall and floor tiling tools and equipment
CPCCWF3001*	Prepare surfaces for tiling application
CPCCWF3002*	Install floor tiles
CPCCWF3003*	Install wall tiles
CPCCWF3004*	Repair wall and floor tiling
CPCCWF3005*	Install decorative tiling
CPCCWF3006*	Install mosaic tiling

- CPCCFWF3007* Tile curved surfaces
- CPCCFWF3009* Apply waterproofing for wall and floor tiling
- CPCCFWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Elective units

- BSBESB301 Investigate business opportunities
- BSBESB407 Manage finances for new business ventures
- CPCCFM2008* Erect and dismantle restricted height scaffolding
- CPCCFM2009* Carry out basic demolition
- CPCCFM2012* Work safely at heights
- CPCCFM3001 Operate elevated work platforms up to 11 metres
- CPCCFM2013* Carry out concreting to simple forms
- CPCCFPB3004 Fix wet area sheets
- CPCCFWF3008 Tile pools and spas

CPC31420 Certificate III in Construction Waterproofing

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.3.

- Unit CPCCOM2001 Read and interpret plans and specifications marked with an asterisk as a prerequisite requirement must be met.
- Unit CPCCCM2012 Work safely at heights added to the metadata unit grid.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPC31411 Certificate III in Construction Waterproofing. Updated to meet the Standards for Training Packages 2012.

Qualification Description

This qualification is designed to meet the needs of workers who undertake waterproofing for residential and commercial construction work. The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as the specialist field of work, construction waterproofing. Waterproofers apply membranes and special coatings to protect contents and the structural integrity of buildings.

Occupational titles may include:

- Waterproofer.

State and territory jurisdictions may have different licensing, legislative, regulatory or certification requirements. Relevant state and territory regulatory authorities should be consulted to confirm those requirements.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 19 units of competency:

- 14 core units
- 5 elective units.

Electives must be selected as follows:

- all five units from the electives listed below, or
- two units from the electives listed below, plus three units selected from any current training package or accredited course as long as they contribute to a valid, industry-supported vocational outcome, maintain the integrity of the AQF level of this qualification and do not duplicate the outcome of another unit used to achieve this qualification.

Prerequisite units

An asterisk (*) against a unit code below indicates that there is a prerequisite requirement that must be met. Prerequisite unit(s) must be assessed before assessment of any unit of competency with an asterisk. Check the unit of competency for information on specific prerequisite requirements. All prerequisite requirements are packaged in the qualification.

Core units

- CPCCOM1012 Work effectively and sustainably in the construction industry
- CPCCOM1013 Plan and organise work
- CPCCOM1014 Conduct workplace communication
- CPCCOM1015 Carry out measurements and calculations
- CPCCOM2001* Read and interpret plans and specifications
- CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry
- CPCCWP2001* Handle waterproofing materials
- CPCCWP2002* Use waterproofing tools and equipment
- CPCCWP2004* Prepare surfaces for waterproofing application
- CPCCWP3001* Apply waterproofing process to below-ground level wet areas
- CPCCWP3002* Apply waterproofing process to internal wet areas
- CPCCWP3003* Apply waterproofing process to above-ground external wet areas
- CPCCWP3004* Apply waterproofing remedial processes
- CPCCWP3005* Assess construction waterproofing process

Elective units

BSBESB301	Investigate business opportunities
BSBESB407	Manage finances for new business ventures
CPCCCA3012*	Frame and fit wet area fixtures
CPCCCM2002*	Carry out hand excavation
CPCCCM2006	Apply basic levelling procedures
CPCCCM2007*	Use explosive power tools
CPCCCM2008*	Erect and dismantle restricted height scaffolding
CPCCCM2009*	Carry out basic demolition
CPCCCM2012*	Work safely at heights

CPC31920 Certificate III in Joinery

Modification History

Release 3 This version first released with CPC Property Services Training Package Release 6.3.

Removal of prerequisite asterisks from

- CPCCOM1012 Work effectively and sustainably in the construction industry
- CPCCOM1013 Plan and organise work and
- CPCCOM1014 Conduct workplace communication.

Units:

- CPCCCA3011 Refurbish timber sashes to window frames
- CPCCOM2001 Read and interpret plans and specifications

marked with an asterisk as a prerequisite requirement must be met.

Release 2 This version first released with CPC Property Services Training Package Release 6.1.

Unit codes corrected in Group B - General Electives list:

- CPCCSH3001 Fabricate shopfitting components using CNC machines to
CPCSHP3001 Fabricate shopfitting components using CNC machines
- CPCCSH3005 Apply and trim decorative additions to shopfitting and
components to CPCSHP3005 Apply and trim decorative additions to
shopfittings and components
- CPCCSH3006 - Prepare shopfittings and surfaces and apply liquid finishes to
CPCSHP3006 - Prepare shopfittings and surfaces and apply liquid finishes.

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to:

- CPC31912 Certificate III in Joinery.
- CPC32211 Certificate III in Joinery (Stairs).

Qualification Description

This qualification provides a trade outcome in joinery covering work for residential and commercial applications.

Occupational titles may include

- Joiner
- Stair builder.

State and territory jurisdictions may have different licensing, legislative, regulatory or certification requirements. Relevant state and territory regulatory authorities should be consulted to confirm those requirements.

This qualification is suitable for an Australian apprenticeship pathway.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 29 units of competency
 - 18 core units
 - 11 elective units
- a minimum of five units must be selected from Group A
- the remaining units can be selected from any group or any current training package or accredited course, as long as they contribute to a valid, industry-supported vocational outcome and maintain the AQF level of this qualification.

Prerequisite units of competency

An asterisk (*) against a unit code below indicates that there is a prerequisite requirement that must be met. Prerequisite unit(s) must be assessed before assessment of any unit of competency with an asterisk. Check the unit of competency for information on specific prerequisite requirements.

Core Units

CPCCCA2002*	Use carpentry tools and equipment
CPCCCA2011*	Handle carpentry materials
CPCCCA3010*	Install windows and doors
CPCCCM2006	Apply basic levelling procedures
CPCCCM2012*	Work safely at heights
CPCCCM3004	Identify and apply information in construction plans, drawings and specifications
CPCCJN2003*	Package manufactured products for transport
CPCCJN3002*	Use computer-controlled machinery

CPCCJN3004*	Manufacture and assemble joinery components
CPCCJN3100*	Process materials to produce components using static machines
CPCCJS3002*	Manufacture stair components for straight flighted stairs
CPCCOM1012	Work effectively and sustainably in the construction industry
CPCCOM1013	Plan and organise work
CPCCOM1014	Conduct workplace communication
CPCCOM1015	Carry out measurements and calculations
CPCCOM2001*	Read and interpret plans and specifications
CPCCOM3001	Perform construction calculations to determine carpentry material requirements
MSFFM3011	Measure and draw site layout for manufactured furniture products

Group A - Specialist Electives

CPCCCA3012*	Frame and fit wet area fixtures
CPCCCA3016*	Construct, assemble and install timber external stairs
CPCCCA3024*	Install lining, panelling and moulding
CPCCJN3003*	Manufacture components for doors, windows and frames
CPCCJS3003*	Assemble and install stairs
CPCCJS3004*	Manufacture and install continuous handrailing and special stair components
CPCCJS3005*	Manufacture stair components for curved and geometric stairs
CPCCJS3006*	Construct, assemble and install composite external stairs
CPCCJS3011*	Design and set out stairs

Group B - General Electives

CPCCCA3001*	Carry out general demolition of minor building structures
-------------	---

CPCCCA3003*	Install flooring systems
CPCCCA3004*	Construct and erect wall frames
CPCCCA3006*	Erect roof trusses
CPCCCA3011*	Refurbish timber sashes to window frames
CPCCCA3014*	Construct and install bulkheads
CPCCCA3026*	Assemble partitions
CPCCCM3005	Calculate costs of construction work
CPCCJN2001*	Assemble components
CPCCJN3005*	Cut and install glass
CPCCPD3021*	Prepare existing coated surface for painting
CPCCSH2003*	Apply and install sealant and sealant devices
CPCCWHS2001	Apply WHS requirements, policies and procedures in the construction industry
CPCSHP3001	Fabricate shopfitting components using CNC machines
CPCSHP3005	Apply and trim decorative additions to shopfittings and components
CPCSHP3006	Prepare shopfittings and surfaces and apply liquid finishes
CPCWHS3001	Identify construction work hazards and select risk control strategies
MSFFM3009	Produce manual and computer-aided production drawings
MSFFM3020	Fabricate synthetic solid surface products

CPC32320 Certificate III in Stonemasonry

Modification History

Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.3.

Removal of prerequisite asterisks from units:

- CPCCOM1012 Work effectively and sustainably in the construction industry
- CPCCOM1013 Plan and organise work
- CPCCOM1014 Conduct workplace communication.

Unit CPCCOM2001 Read and interpret plans and specifications marked with an asterisk as a prerequisite requirement must be met.

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Minor changes to Core unit list for clarity. Correction to Release 1 version history.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPC32313 Certificate III in Stonemasonry (Monumental/Installation). Updated qualification to meet Standards for Training Packages.

Qualification Description

This qualification is designed to meet the needs of stonemasons working with sandstone, limestone, marble and other types of stone and stone products to produce stone monuments, buildings (heritage and new) and building components, such as walls, floors, arches, chimneys, stairs, windows, decorative mouldings, fireplaces and benchtops.

Occupational titles may include:

- Architectural stonemason
- Monumental stonemason
- Heritage stonemason
- Finisher
- Bench-top mason
- Stonemason.

This qualification is suitable for an Australian Apprenticeship pathway.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

This qualification has core and elective units of competency that cover the skills and knowledge of four specialist groups and general electives:

- Group A - Architectural heritage, conservation and restoration stonemasonry
- Group B - New and contemporary works (building stonemasonry)
- Group C - Monumental stonemasonry
- Group D - Bench-tops

To achieve this qualification, competency must be demonstrated in:

- 30 units of competency:
 - 21 core units
 - 9 electives

The electives are to be chosen as follows:

- all 8 units within Group A - Heritage, conservation and restoration stonemasonry
or
- all 7 units within Group B - New and contemporary works (building stonemasonry)
or
- all 5 units within Group C - Monumental stonemasonry
or
- all 4 units within Group D - Bench-tops
- the remaining units can be selected from any elective group or the general electives as long as the units have not previously been selected
- up to two elective units can be selected from any Training Package or accredited course, as long as they contribute to a valid, industry-supported vocational outcome and support the AQF level of this qualification.

Prerequisite units

An asterisk (*) against a unit code below indicates that there is a prerequisite requirement that must be met. Prerequisite unit(s) must be assessed before assessment of any unit of competency with an asterisk. Check the unit of competency for information on specific prerequisite requirements. All prerequisite requirements are packaged in the qualification.

Core units

CPCCCA3002*	Carry out setting out
CPCCCM2006	Apply basic levelling procedures
CPCCCM2008*	Erect and dismantle restricted height scaffolding
CPCCCM2012*	Work safely at heights
CPCCOM1012	Work effectively and sustainably in the construction industry
CPCCOM1013	Plan and organise work
CPCCOM1014	Conduct workplace communication
CPCCOM1015	Carry out measurements and calculations
CPCCOM2001*	Read and interpret plans and specifications
CPCCST2003*	Finish stone
CPCCST2004*	Lay stone
CPCCST2006*	Identify and use stone products
CPCCST2007*	Use stonemasonry tools, plant and equipment
CPCCST3001*	Dress and mould stone
CPCCST3002*	Shape solid stone
CPCCST3003*	Split stone manually
CPCCST3004*	Dress stone manually
CPCCST3006*	Machine stone
CPCCST3010*	Set out and cut letters in stone
CPCCST3022*	Carry out profile work
CPCCWHS2001	Apply WHS requirements, policies and procedures in the construction industry

Elective units

Group A - Architectural heritage, conservation and restoration stonemasonry

CPCCBL3016*	Construct battered masonry walls and piers
-------------	--

CPCCBBL3017*	Carry out tuck pointing and repointing to masonry
CPCCST3017*	Construct stone arches
CPCCST3019*	Lay stonemasonry stairs
CPCCST3021*	Restore stone work
CPCCST3023	Apply drawing principles to stonemasonry
CPCCST3024*	Apply conservation principles and practices to heritage stonework
CPCCST3025*	Carry out basic stonemasonry demolition

Group B - Architectural new and contemporary works

CPCCBBL3016*	Construct battered masonry walls and piers
CPCCPA3001*	Prepare subgrade, base and bedding course for segmental paving
CPCCST3012*	Build stone veneer walls
CPCCST3016*	Build solid stonemasonry walls
CPCCST3017*	Construct stone arches
CPCCST3019*	Lay stonemasonry stairs
CPCCST3020*	Produce reconstituted stone

Group C - Monumental

CPCCCM2002*	Carry out hand excavation
CPCCST3011*	Plan monument construction
CPCCST3013*	Carry out cemetery monument fixing
CPCCST3015*	Apply gilding to stone
CPCCST3018*	Inlay lead to stone

Group D Bench-Tops

CPCCCM2005*	Use construction tools and equipment
-------------	--------------------------------------

CPCCJN2001*	Assemble components
CPCCJN2003*	Package manufactured products for transport
CPCCST3009*	Use computer-controlled static machinery to produce stone components

General Elective Units

BSBESB301	Investigate business opportunities
BSBESB407	Manage finances for new business ventures
CPCCCO2013*	Carry out concreting to simple forms
CPCCPA3002*	Lay segmental paving
CPCCPA3003*	Cut segmental paving
CPCCSC2002*	Erect and dismantle basic scaffolding
CPCCST2001*	Prepare for stonemasonry construction process
CPCCST2005*	Carry out load slinging of off-site materials
CPCCST3007*	Turn stone
CPCCST3009*	Use computer-controlled static machinery to produce stone components
CPCCST3014*	Set and anchor stone facades
CPCCST3016*	Build solid stonemasonry walls
CPCCST4001	Prepare to undertake the heritage restoration process
CPCCST4002	Undertake the heritage restoration process
CPCCST4003	Undertake preparations for refractory works
CPCCST4004	Initiate the heritage works process
CPCCST4005	Prepare drawings for heritage works
CPCCST4006	Prepare report for heritage restoration work
CPCCST4007	Construct a fire brick wall and arch using refractory materials

CPC32420 Certificate III in Plumbing

Modification History

- Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.
Addition of CPCPCM2052 Weld mild steel using oxy-acetylene equipment and CPCPCM2055 Work safely on roofs to unit grid.
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Addition of CPCPRF2024 Fabricate roof coverings for curved structures to Group D Elective units.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is not equivalent to CPC32413 Certificate III in Plumbing.
Updated to meet the Standards for Training Packages 2012.

Qualification Description

This is a trade qualification for plumbers in residential, industrial and commercial workplaces who are responsible for assembling, installing and maintaining water services, sanitary plumbing and sanitary drainage, gas, roofing and mechanical services in both existing and new constructions.

Occupational titles could include:

- Plumber
- Plumber and drainer
- Plumber and gasfitter
- Gasfitter
- Roof plumber
- Mechanical services plumber.

The plumbing industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or closely simulated workplace environment and this qualification requires all units of competency to be delivered and assessed in this context.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required before entering a construction work site. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

This is a licenced occupation. State and territory jurisdictions may have different licensing, legislative, regulatory or certification requirements. Relevant state and territory regulatory authorities should be consulted to confirm those requirements.

This qualification is suitable for an Australian Apprenticeship pathway.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded this qualification, competency in one of the four occupational options must be achieved.

OPTION 1: General Plumbing

For the award of the CPC32420 Certificate III in Plumbing (General Plumber) a minimum of 58 units are to be completed as follows:

- 43 core units
- 15 elective units

Electives are to be selected as followed:

- 8 units from Group A and
- 4 units from Group B and
- 3 units from Group C

An additional 4 elective units may be selected from any other group or from any relevant nationally endorsed Training Package or accredited course. The units must contribute to the vocational outcomes of the qualification.

OPTION 2: General Plumbing – Roofing

For the award of the CPC32420 Certificate III in Plumbing (General Plumber and Roofing) a minimum of 62 units are to be completed as follows:

- 43 core units
- 19 elective units.

Electives are to be selected as followed:

- 8 units from Group A and
- 4 units from Group B and
- 3 units from Group C and
- 4 units from Group D

An additional 4 elective units may be selected from any other group or from any relevant nationally endorsed Training Package or accredited course. The units must contribute to the vocational outcomes of the qualification.

OPTION 3: General Plumber – Mechanical

For the award of the CPC32420 Certificate III in Plumbing (General Plumber and Mechanical) a minimum of 73 units are to be completed as follows:

- 43 core units
- 30 electives

Electives are to be selected as followed:

- 8 units from Group A and
- 4 units from Group B and
- 3 units from Group C and
- 7 units from Group E and
- 8 units from Group F

An additional 4 elective units may be selected from any other group or from any relevant nationally endorsed Training Package or accredited course. The units must contribute to the vocational outcomes of the qualification.

OPTION 4: General Plumbing – Roofing and Mechanical

For the award of the CPC32420 Certificate III in Plumbing (General Plumber Roofing and Mechanical) a minimum of 77 units are to be completed as follows:

- 43 core units
- 34 electives

Electives are to be selected as followed:

- 8 units from Group A and
- 4 units from Group B and
- 3 units from Group C and
- 4 units from Group D and
- 7 units from Group E and
- 8 units from Group F

An additional 4 elective units may be selected from any other group or from any relevant nationally endorsed Training Package or accredited course. The units must contribute to the vocational outcomes of the qualification.

An asterisk (*) against a unit code below indicates that the unit has a prerequisite. Please check the unit for information on this. All prerequisites are packaged in the qualification.

Core Units

CPCCCM2012*	Work safely at heights
CPCPCM2039	Carry out interactive workplace communication
CPCPCM2040*	Read plans, calculate quantities and mark out materials
CPCPCM2041	Work effectively in the plumbing services sector

CPCPCM2043	Carry out WHS requirements
CPCPCM2045*	Handle and store plumbing materials
CPCPCM2046*	Use plumbing hand and power tools
CPCPCM2047*	Carry out levelling
CPCPCM2048*	Cut and join sheet metal
CPCPCM2054*	Carry out simple concreting and rendering
CPCPCM2055*	Work safely on roofs
CPCPCM3021*	Flash penetrations through roofs and walls
CPCPCM3022*	Weld polymer pipes using fusion method
CPCPCM3023*	Fabricate and install non-ferrous pressure piping
CPCPCM3024*	Prepare simple drawings
CPCPCM3025*	Install trench support
CPCPDR2021*	Locate and clear blockages
CPCPDR2025*	Install stormwater and sub-soil drainage systems and drain work site
CPCPDR2026*	Install prefabricated inspection openings and inspection chambers
CPCPDR3021*	Plan layout and install below ground sanitary drainage systems
CPCPDR3023*	Install on-site domestic wastewater treatment plants and disposal systems
CPCPFS3031*	Fabricate and install fire hydrant and hose reel systems
CPCPGS3048*	Install gas pressure control equipment
CPCPGS3049*	Install gas appliance flues
CPCPGS3051*	Purge consumer piping
CPCPGS3053*	Disconnect and reconnect Type A gas appliances
CPCPGS3054*	Calculate and install natural ventilation for Type A gas appliances
CPCPGS3056*	Size and install consumer gas piping systems
CPCPGS3059*	Install LPG storage of aggregate storage capacity up to 500 litres
CPCPGS3061*	Install and commission Type A gas appliances

CPCPSN3011*	Plan the layout of a residential sanitary plumbing system and fabricate and install sanitary stacks
CPCPSN3022*	Install discharge pipes
CPCPWT3020*	Connect and install storage tanks to a domestic water supply
CPCPWT3021*	Set out and install water services
CPCPWT3022*	Install and commission water heating systems and adjust controls and devices
CPCPWT3025*	Install water pumpsets
CPCPWT3026*	Install and fit off sanitary fixtures, water services and adjust water service controls
CPCPWT3027*	Install backflow prevention devices
CPCPRF2023*	Collect and store roof water
CPCPRF3022*	Fabricate and install roof drainage systems
CPCPRF3023*	Fabricate and install external flashings
CPCPRF3024*	Install roof components
HLTAID011	Provide first aid

Electives Units

Group A

CPCCCM2008*	Erect and dismantle restricted height scaffolding
CPCCCM3001	Operate elevated work platforms up to 11 metres
CPCPCM2049*	Cut mild steel using oxy-LPG-acetylene equipment
CPCPCM2052*	Weld mild steel using oxy-acetylene equipment
CPCPFS3037*	Install residential life safety sprinkler systems
CPCPFS3038*	Test and maintain fire hydrant and hose reel installations
CPCPIG2021*	Design domestic urban irrigation systems
CPCPIG3021*	Set out, install and commission irrigation systems
CPCPIG3022*	Install and commission domestic irrigation pumps

CPCPWT3024*	Install and maintain domestic water treatment equipment
CPCPWT3028*	Install property service
CPCPWT3029*	Install water pipe systems
CPCPWT3030*	Install home fire sprinkler systems
MEM11011*	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006*	Organise and communicate information
MEM05049*	Perform routine gas tungsten arc welding
MEM05050*	Perform routine gas metal arc welding
RIIWHS202E	Enter and work in confined spaces

Group B

CPCPCM2053*	Weld using metal arc welding equipment
CPCPGS3046*	Install LPG systems in caravans, mobile homes and mobile workplaces
CPCPGS3052*	Maintain Type A gas appliances
CPCPGS3055*	Install gas sub-meters
CPCPGS3060*	Install LPG storage of aggregate storage capacity exceeding 500 litres and less than 8 kl
CPCPGS3047*	Install LPG systems in marine craft

Group C

CPCPDR3025*	Plan layout and install vacuum drainage systems
CPCPSN3025*	Install pre-treatment facilities
CPCPSN3026*	Install sewerage pumpsets
RIIWHS202E	Enter and work in confined spaces
RIICTT306E	Install cure in-place linings for existing pipeline systems

Group D

CPCCCM2008*	Erect and dismantle restricted height scaffolding
CPCCCM3001	Operate elevated work platforms up to 11 metres
CPCPRF2022*	Select and install roof sheeting and wall cladding
CPCPRF2024*	Fabricate roof coverings for curved structures
CPCPRF3021*	Receive roofing materials
CPCPRF3025*	Install roof coverings to curved roof structures
CPCPRF3026*	Install roof sheets, wall cladding and complex flashings
CPCPRF3027*	Select and install a heritage roof system

Group E

CPCPMS2021*	Assemble mechanical services components
CPCPMS3031*	Fabricate and install steel pressure piping
CPCPMS3032*	Select and fit insulation and sheathing
CPCPMS3035*	Install and test ducting systems
CPCPMS3036*	Install air handling units
CPCPMS3038*	Install air conditioning control equipment
CPCPMS3039*	Maintain mechanical services equipment

Group F

CPCCCM2008*	Erect and dismantle restricted height scaffolding
CPCCCM3001	Operate elevated work platforms up to 11 metres
CPCCCWC2001*	Complete penetrations and flashings
CPCCWHS2001	Apply WHS requirements, policies and procedures in the construction industry

CPCPCM2053*	Weld using metal arc welding equipment
CPCPMS3033*	Install small bore heating systems
CPCPMS3034*	Install and test medical gas pipeline systems
CPCPMS3037*	Install and commission a single head split system air conditioning
CPCPMS3040*	Install and maintain evaporative air-cooling systems
CPCPMS3041*	Install domestic solid fuel burning appliances
UEECD0007*	Apply work health and safety regulations, codes and practices in the workplace
UEERA0049*	Install and start up single head split air conditioning and water heating heat pump systems
UEERA0059*	Prepare and connect refrigerant tubing and fittings
UEERA0064*	Recover, pressure test, evacuate, charge and leak test refrigerants - split systems

CPC32620 Certificate III in Roof Plumbing

Modification History

- Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.1.
Included CPCCCM2008 Erect and dismantle restricted height scaffolding and CPCCCM2012 Work safely at heights in metadata unit grid.
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Addition of CPCPRF2024 Fabricate roof coverings for curved structures to Elective units.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPC32612 Certificate III in Roof Plumbing.
Updated to meet the Standards for Training Packages 2012.

Qualification Description

This qualification reflects the role of a person installing, maintaining and repairing flashings, metal roof and wall claddings and rainwater products such as gutters and downpipes, and other accessories on residential, industrial and commercial buildings.

Occupational titles could include:

- Roof plumber

This qualification includes units of competency common to other qualifications in the plumbing industry as well as roof plumbing specialist units of competency and can provide a pathway to further learning and work in the plumbing industry.

The plumbing industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or closely simulated workplace environment and this qualification requires all units of competency to be delivered and assessed in this context.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required before entering a construction work site. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

This is a licenced occupation. Licensing, legislative, regulatory and certification requirements may vary between states and territories. Relevant state and territory regulatory authorities should be consulted to confirm those requirements.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded this qualification, competency must be achieved in:

- 23 units of competency:
 - 20 core units
 - 3 elective units.

The elective units must ensure the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome and are to be chosen as follows:

- 2 elective units must be chosen from units listed below
- Up to 1 elective unit may be selected from any other group or from any relevant nationally endorsed Training Package or accredited course.

An asterisk (*) against a unit code below indicates that the unit has a prerequisite. Please check the unit for information on this. All prerequisites are packaged in the qualification.

Core Units

CPCCCM2008*	Erect and dismantle restricted height scaffolding
CPCCCM2012*	Work safely at heights
CPCCCM3001	Operate elevated work platforms up to 11 metres
CPCCWHS2001	Apply WHS requirements, policies and procedures in the construction industry

CPC32720 Certificate III in Gas Fitting

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Title changed for CPCPCM3022 and an asterisk added to MEM11011 and MEM16006 for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPC32713 Certificate III in Gas Fitting. Updated to meet the Standards for Training Packages 2012.

Qualification Description

This qualification reflects role of a person installing, testing, maintaining and repairing gas lines, meters, regulators and piping systems downstream of the billing meter, and appliances and ancillary equipment such as hot water systems, gas heaters and heat pumps associated with the use of fuel gases, including liquefied petroleum gas (LPG) systems.

Occupational titles could include:

- Gas fitter.

This qualification includes units of competency common to other qualifications in the plumbing industry as well as gas fitting specialist units of competency and can provide a pathway to further learning and work in the plumbing industry.

The plumbing industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or closely simulated workplace environment and this qualification requires all units of competency to be delivered and assessed in this context.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required before entering a construction work site. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

This is a licenced occupation. Licensing, legislative, regulatory and certification requirements may vary between states and territories. Relevant state and territory regulatory authorities should be consulted to confirm those requirements.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded this qualification, competency must be achieved in:

- 31 units of competency:
 - 26 core units
 - 5 elective units.

The elective units must ensure the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome and are to be chosen as follows:

- 3 elective units must be chosen from listed below,
- 2 elective units can be selected from the list below or may be replaced by units from any relevant nationally endorsed Training Package or accredited course.

An asterisk (*) against a unit code below indicates that the unit has a prerequisite. Please check the unit for information on this. All prerequisites are packaged in the qualification.

Core Units

CPC32820 Certificate III in Fire Protection

Modification History

- Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.1.
- Unit code corrected in core unit list: CPCPCM2019 Carry out interactive workplace communication to CPCPCM2039 Carry out interactive workplace communication.
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
- Correction to unit title CPCPCM3022 in Elective units.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPC32813 Certificate III in Fire Protection. Updated to meet the Standards for Training Packages 2012.

Qualification Description

This qualification reflects the trade qualified role of a person installing, testing, maintaining, routine service and repairing a range of fire protection systems.

Occupational titles could include:

- Fire sprinkler fitter tradesperson
- Fire sprinkler fitter.

This qualification includes units of competency common to other qualifications in the plumbing industry as well as specialist fire protection units and can provide a pathway to further learning and work in the fire protection industry.

The plumbing industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or closely simulated workplace environment and this qualification requires all units of competency to be delivered and assessed in this context.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required before entering a construction work site. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

This is a licenced occupation. Licensing, legislative, regulatory and certification requirements may vary between states and territories. Relevant state and territory regulatory authorities should be consulted to confirm those requirements.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 37 units of competency:
 - 32 core units
 - 5 elective units.

The elective units must ensure the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome and are to be chosen as follows:

- a minimum of 3 elective units must be chosen from those listed below,
- up to 2 units may be chosen from the elective units listed below or from any Training Package or accredited course.

An asterisk (*) against a unit code below indicates that the unit has a prerequisite. Please check the unit for information on this. All prerequisites are packaged in the qualification.

Core Units

CPCPCM2045*	Handle and store plumbing materials
CPCPCM2046*	Use plumbing hand and power tools
CPCPCM2039	Carry out interactive workplace communication
CPCPCM2041	Work effectively in the plumbing and services sector
CPCPCM2040*	Read plans, calculate quantities and mark out materials
CPCPCM2043	Carry out WHS requirements
CPCPCM2047*	Carry out levelling
CPCPCM2049*	Cut using oxy-LPG-acetylene equipment
CPCPCM2052*	Weld using oxy-acetylene equipment
CPCPCM2053*	Weld using metal arc welding equipment
CPCPCM3023*	Fabricate and install non-ferrous pressure piping
CPCPFS2021*	Connect static storage tanks for fixed fire protection systems
CPCPFS3030	Design fire sprinkler systems using pre-calculated charts and tables

CPCPFS3031*	Fabricate and install fire hydrant and hose reel systems
CPCPFS3034*	Install control valve assemblies, actuating devices and local alarms
CPCPFS3036*	Install special hazard systems
CPCPFS3037*	Install residential life safety sprinkler systems
CPCPFS3038*	Test and maintain fire hydrant and hose reel installations
CPCPFS3040	Conduct basic functional testing of water-based fire-suppression systems
CPCPFS3041	Inspect and test fire pumpsets
CPCPFS3042*	Conduct annual routine service of complex water-based fire-suppression systems
CPCPFS3043*	Conduct functional water flow testing
CPCPFS3044*	Install distribution and range pipes
CPCPFS3045*	Fit off sprinkler heads, controls and ancillary equipment
CPCPFS3046*	Test the integrity of water-based fire protection systems using pressure
CPCPFS3047*	Test and maintain automatic fire sprinklers
CPCPFS3048*	Install fixed fire pumpsets
CPCPMS3031*	Fabricate and install steel pressure piping
CPCPWT3028*	Install property service
CPPFES2025A	Inspect, test and maintain gaseous fire-suppression systems
CPPFES2043A	Prevent ozone depleting substance and synthetic greenhouse gas emissions
CPPFES2047A	Inspect and test control and indicating equipment

General Electives

CPCCCM2008*	Erect and dismantle restricted height scaffolding
CPCCCM2012*	Work safely at heights
CPCCCM3001	Operate elevated work platforms

CPCCPB3015*	Install acoustic and thermal environmental protection systems
CPCCRI3001	Operate personnel and materials hoists
CPC CST2005*	Carry out load slinging of off-site materials
CPC CWHS2001	Apply WHS requirements, policies and procedures in the construction industry
CPCPCM2054*	Carry out simple concreting and rendering
CPCPCM3021*	Flash penetrations through roofs and walls
CPCPCM3022*	Weld polymer pipes using fusion method
CPCPCM2048*	Cut and join sheet metal
CPCPFS2022*	Install portable fire equipment
CPCPFS3049*	Conduct preventive maintenance on fixed fire pumpsets
CPCPWT3025*	Install water pumpsets
CPCPWT3029*	Install water pipe systems
CPPCMN2002	Participate in workplace safety arrangements
HLTAID011	Provide first aid

CPC32920 Certificate III in Construction Crane Operations

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Typographical error in unit code corrected for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPC32912 Certificate III in Construction Crane Operations. Updated to meet the Standards for Training Packages.

Qualification Description

This qualification provides reflects the role of individuals working in the area of crane operations in the construction industry.

Occupational titles include licensed crane operator.

The qualification has core units of competency that cover common skills and knowledge for the building and construction industry, a choice of units for specific crane licences, and elective units that include additional licensing options. Due to the high-risk nature of the job role, the qualification provides a strong focus on safety.

This is a licensed occupation. Users should check requirements with their relevant licensing authority.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 23 units of competency:
 - 16 core units
 - 7 elective units.

Elective units must be selected as follows:

- 1 unit must be selected from the Group A list of elective units below
- at least 4 units must be selected from the remaining Group A list of elective units or Group B list of elective units
- up to 2 units can be selected from the list of elective units below or from any current training package or accredited course where the unit contributes to a valid, industry-supported vocational outcome, maintains the integrity of the Australian Qualifications Framework (AQF) level of this qualification, and does not duplicate the outcomes of another unit used to achieve this qualification.

Prerequisite units of competency

An asterisk (*) against a unit code below indicates that there is a prerequisite requirement that must be met. Prerequisite unit/s must be assessed before assessment of any unit of competency with an asterisk. All prerequisite requirements are packaged in the qualification.

Core units

BSBOPS304	Deliver and monitor a service to customers
CPCCCM2004*	Handle construction materials
CPCCCM2012*	Work safely at heights
CPCCCM3001	Operate elevated work platforms up to 11 metres
CPCCCM3003	Work safely around electrical sources, services and assets
CPCCLDG3001	Licence to perform dogging
CPCCOM1012	Work effectively and sustainably in the construction industry
CPCCOM1013	Plan and organise work
CPCCOM1014	Conduct workplace communication
CPCCOM1015	Carry out measurements and calculations
CPCCOM2001*	Read and interpret plans and specifications
CPCCWHS2001	Apply WHS requirements, policies and procedures in the construction industry
TLIB3015	Undertake site inspection
TLIF2006	Apply accident-emergency procedures
TLIF2010	Apply fatigue management strategies

TLILIC0008 Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity)

Elective units

Group A

TLILIC0010 Licence to operate a slewing mobile crane (up to 20 tonnes)

TLILIC0013 Licence to operate a slewing mobile crane (up to 60 tonnes)

Group B

CPCEDO3012* Perform crane scheduling

CPCCLHS3001 Licence to operate a personnel and materials hoist

CPCCLRG3001* Licence to perform rigging basic level

CPCCLRG3002* Licence to perform rigging intermediate level

CPCCLTC4001 Licence to operate a tower crane

CPCCLTC4002 Licence to operate a self-erecting tower crane have been added to elective Group B

HLTAID011 Provide first aid

TLIB3011 Set up and rig crane for lift

TLIB3013 Maintain mobile cranes

TLIF3084 Follow mobile crane safety procedures

TLILIC0003 Licence to operate a forklift truck

TLILIC0005 Licence to operate a boom-type elevated work platform (boom length 11 metres or more)

TLILIC2016 Licence to drive a heavy rigid vehicle

CPC33020 Certificate III in Bricklaying and Blocklaying

Modification History

Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.3.

Removal of prerequisite asterisks from units:

- CPCCOM1012 Work effectively and sustainably in the construction industry
- CPCCOM1013 Plan and organise work
- CPCCOM1014 Conduct workplace communication.

Unit CPCCOM2001 Read and interpret plans and specifications marked with an asterisk as a prerequisite requirement must be met.

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Title change in unit list for CPCCB3017 Carry out tuck pointing brickwork.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPC30111 Certificate III in Bricklaying/Blocklaying.

Qualification Description

This qualification reflects the trade qualified role of a bricklayer, blocklayer or paver who may have responsibility for undertaking heritage bricklaying, refractory bricklaying, bricklaying, blocklaying and paving work in residential, industrial and commercial contexts, in both existing and new constructions.

Occupational titles could include:

- Bricklayer
- Blocklayer
- Paver.

The bricklaying, blocklaying and paving industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or closely simulated workplace environment and this qualification requires all units of competency to be delivered and assessed in this context.

Licensing, legislative, regulatory and certification requirements vary between states. Relevant state and territory regulatory authorities should be consulted to confirm those requirements.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

This qualification has core units and elective units of competency that cover the skills and knowledge of three specialist groups, and general electives:

- Group A - Traditional and heritage bricklaying
- Group B - Refractory Bricklaying
- Group C - Paving

To achieve this qualification, competency must be demonstrated in:

- 28 units of competency:
 - 20 core units
 - 8 elective units.
- the elective units can be selected, once only, from any of the groups listed below.
- up to two elective units can be selected from any Training Package and or accredited course, as long as they contribute to a valid, industry-supported vocational outcome and support the AQF level of this qualification.

Prerequisite units

An asterisk (*) against a unit code below indicates that there is a prerequisite requirement that must be met. Prerequisite unit(s) must be assessed before assessment of any unit of competency with an asterisk. Check the unit of competency for information on specific prerequisite requirements. All prerequisite requirements are packaged in the qualification.

Core units

CPCCB2001*	Handle and prepare bricklaying and blocklaying materials
CPCCB2002*	Use bricklaying and blocklaying tools and equipment
CPCCB3002*	Carry out masonry veneer construction
CPCCB3003*	Carry out cavity brick construction
CPCCB3005*	Lay masonry walls and corners
CPCCB3006*	Lay multi-thickness walls and piers

CPCCBL3009*	Install flashings and damp proof course
CPCCBL3010*	Construct masonry arches
CPCCBL3011*	Construct curved walls
CPCCBL3013*	Construct masonry structural systems
CPCCCA3002*	Carry out setting out
CPCCCM2006	Apply basic levelling procedures
CPCCCM2008*	Erect and dismantle restricted height scaffolding
CPCCCM2012*	Work safely at heights
CPCCOM1012	Work effectively and sustainably in the construction industry
CPCCOM1013	Plan and organise work
CPCCOM1014	Conduct workplace communication
CPCCOM1015	Carry out measurements and calculations
CPCCOM2001*	Read and interpret plans and specifications
CPCCWHS2001	Apply WHS requirements, policies, and procedures in the construction industry

Elective units

Group A - Traditional and heritage bricklaying

CPCCST4001	Prepare to undertake the heritage restoration process
CPCCST4002	Undertake the heritage restoration process
CPCCBL3004*	Construct masonry steps and stairs
CPCCBL3012*	Construct fireplaces and chimneys
CPCCBL3015*	Construct decorative brickwork
CPCCBL3016*	Construct battered masonry walls and piers
CPCCBL3017*	Carry out tuck pointing and repointing to masonry
CPCCCO2013*	Carry out concreting to simple forms

CPCCSF2004* Place and fix reinforcement materials

Group B – Refractory Bricklaying

CPCCCST4003 Undertake preparations for refractory work

CPCCCST4007 Construct a fire brick wall and arch using refractory materials

CPCCCBL3004* Construct masonry steps and stairs

CPCCCBL3012* Construct fireplaces and chimneys

CPCCCBL3016* Construct battered masonry walls and piers

CPCCCCM2009* Carry out basic demolition

CPCCCCO2013* Carry out concreting to simple forms

CPCCSF2004* Place and fix reinforcement materials

Group C - Paving

CPCCCCO2013* Carry out concreting to simple forms

CPCCCPA3001* Prepare subgrade, base and bedding course for segmental paving

CPCCCPA3002* Lay segmental paving

CPCCCPA3003* Cut segmental paving

CPCCCPA3004* Finish segmental paving

CPCCCPA3005* Maintain and repair segmental paving

CPCCSF2004* Place and fix reinforcement materials

General Electives

AHCLSC307 Implement a retaining wall project

CPCCCBC4003 Select, prepare and administer a construction contract

CPCCCST4003 Undertake preparations for refractory work

CPCCCBL3001* Lay paving

CPCCBBL3004*	Construct masonry steps and stairs
CPCCBBL3007*	Install glass blockwork
CPCCBBL3012*	Construct fireplaces and chimneys
CPCCBBL3014*	Install fire-rated masonry construction
CPCCBBL3015*	Construct decorative brickwork
CPCCBBL3016*	Construct battered masonry walls and piers
CPCCBBL3017*	Carry out tuck pointing and repointing to masonry
CPCCBBL3018*	Install aerated autoclaved concrete products
CPCCCM2009*	Carry out basic demolition
CPCCCO2013*	Carry out concreting to simple forms
CPCCPA3001*	Prepare subgrade, base and bedding course for segmental paving
CPCCPA3002*	Lay segmental paving
CPCCPA3003*	Cut segmental paving
CPCCPA3004*	Finish segmental paving
CPCCPA3005*	Maintain and repair segmental paving
CPCCSF2004*	Place and fix reinforcement materials

CPC40120 Certificate IV in Building and Construction

Modification History

Release 4 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.

Imported Elective unit BSBWOR501 Manage personal work priorities and professional development updated to BSBPEF501 Manage personal and professional development.

Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.1.

Addition of 3 units of competency to the General Electives:

- CPCBIM4001 Plan to comply with BIM requirements for construction work.
- CPCBIM4002 Use BIM processes to carry out construction work
- CPCBIM4003 Contribute to BIM deliverables for construction work

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Imported unit *BSBPEF501 Manage personal and professional development* replaced by *BSBWOR501 Manage personal work priorities and professional development*. Units listed alphanumerically.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

- Supersedes and is equivalent to CPC40110 Certificate IV in Building and Construction (Building).
- Supersedes and is equivalent to CPC40508 Certificate IV in Building and Construction (Site Management).

Updated imported elective units to current versions.

Qualification Description

This qualification reflects the role of builders, site managers and managers of small to medium-sized building businesses who apply knowledge of structural principles, codes, standards and legal requirements to Class 1 and 10, to a maximum of two storeys and Class 2 to 9 Type C constructions, and who plan and supervise safe building and construction work, prepare and administer contracts, and who apply quality principles to building and construction projects.

Building relates to construction and Site Management is about managing the factors around construction, such as the deployment of crews with specialised skills (including builders), product compliance, deployment of contract specialised skills, weather and site location.

Occupational titles depending on packaging options selected may include:

- Builder
- Construction Supervisor
- Site Manager
- Site Supervisor
- Leading Hand

The qualification is designed to enable two specialised occupational outcome pathways depending on elective options which will be reflected as:

- Certificate IV in Building and Construction (Building) or
- Certificate IV in Building and Construction (Site Management)

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit CPCCWHS1001 *Prepare to work safely in the construction industry* meets this requirement.

Builder and Site Supervisor licensing varies across States and Territories and requirements additional to the attainment of this qualification may be required.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 19 units of competency:
 - 11 core units
 - 8 elective units.

To achieve the occupational outcome of **Builder** electives must include:

- All Group A elective units
- Up to two elective units from either Group B or general electives.
- One elective unit may be from any training package or accredited course as long as it ensures the integrity of the qualification's Australian Qualification Framework (AQF) alignment and contributes to a valid, industry supported vocational outcome

To achieve the occupation outcome of **Site Manager** electives must include:

- All Group B electives
- Up to four elective units from either Group A or general electives.

- One unit may be from any training package or accredited course as long as it ensures the integrity of the qualification's Australian Qualification Framework (AQF) alignment and contributes to a valid, industry supported vocational outcome

Prerequisite units

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

Prerequisite requirements

Unit of competency	Prerequisite requirement
CPCBC4010 Apply structural principles to residential and commercial constructions.	<p>CPCBC4053 Apply building codes and standards to the construction process for Class 2 to 9 Type C buildings.</p> <p>CPCBC4001 Apply building codes and standards to the construction process for Class 1 and 10 buildings.</p>

Core Units

CPCBC4001	Apply building codes and standards to the construction process for Class 1 and 10 Buildings
CPCBC4002	Manage work health and safety in the building and construction workplace
CPCBC4007	Plan building or construction work
CPCBC4008	Supervise site communication and administration processes for building and construction projects
CPCBC4009	Apply legal requirements to building and construction projects
CPCBC4010*	Apply structural principles to residential and commercial constructions
CPCBC4012	Read and interpret plans and specifications
CPCBC4014	Prepare simple building sketches and drawings
CPCBC4018	Apply site surveys and set-out procedures to building and construction projects
CPCBC4021	Minimise waste on the building and construction site

CPCBC4053 Apply building codes and standards to the construction process for Class 2 to 9, Type C Buildings

Elective Units

Group A - Building

BSBPMG422 Apply project quality management techniques

CPCBC4003 Select, prepare and administer a construction contract

CPCBC4004 Identify and produce estimated costs for building and construction projects

CPCBC4005 Produce labour and material schedules for ordering

CPCBC4006 Select, procure and store construction materials for building and construction projects

CPCSUS4002 Use building science principles to construct energy efficient buildings

Elective Units

Group B – Site Manager

CPCBC4013 Prepare and evaluate tender documentation

CPCBC4017 Arrange resources and prepare for the building and construction project

CPCBC4052 Lead and manage teams in the building and construction industry

CPCCO4001 Supervise concreting work

General Electives

BSBESB402 Establish legal and risk management requirements of new business ventures

BSBESB406 Establish operational strategies and procedures for new business ventures

BSBESB407 Manage finances for new business ventures

BSBLDR413 Lead effective workplace relationships

BSBPEF501 Manage personal and professional development

BSBPMG426	Apply project risk management techniques
BSBPMG430	Undertake project work
BSBWRT411	Write complex documents
CPCBIM4001	Plan to comply with BIM requirements for construction work
CPCBIM4002	Use BIM processes to carry out construction work
CPCBIM4003	Contribute to BIM deliverables for construction work
CPCCCBC4015	Prepare specifications for all construction works
CPCCCBC4019	Apply sustainable building design principles to water management systems
CPCCCBC4020	Build thermally efficient and sustainable structures
CPCCCBC4022	Supervise tilt-up work
CPCCCBC4024	Resolve business disputes
CPCCCBC4026	Arrange building applications and approvals
CPCCCBC4028	Prepare design brief for construction works
CPCCCBC5019	Manage building and construction business finances
CPCSUS4001	Implement and monitor environmentally sustainable work practices
CPCSUS4003	Maximise energy efficiency through applied trade skills

CPC40320 Certificate IV in Building Project Support

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Imported unit *BSBPMG522 Undertake project work* replaced by *BSBPMG430 Undertake project work*.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

- Supersedes and is equivalent to CPC40308 Certificate IV in Building and Construction (Estimating).
- Supersedes and is equivalent to CPC40208 Certificate IV in Building and Construction (Contract Administration).

Correction to the occupational outcomes titles. Updated to meet the Standards for Training Packages 2012.

Qualification Description

This qualification is designed to meet the needs of estimators and schedulers and or contract administrators in the building and construction field who may have responsibility for the preparation of estimates from predetermined rates, processing of subcontractor claims and preparation of head and subcontracts for building and construction works.

Occupational titles may include:

- Building estimator
- Building scheduler
- Contract administrator

The qualification packaging enables two specialised occupational outcomes depending on elective options which will be reflected as:

- Certificate IV in Building Project Support (Estimator)
- Certificate IV in Building Project Support (Contract Administrator)

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 15 units of competency:
 - 2 core units
 - 13 elective units.

To achieve the occupational outcome of Contract Administrator electives must include:

- all Group A elective units
- minimum of three units from Group B elective units
- remaining units from general electives
- a maximum of two units may be from any training package or accredited course as long as they ensure the integrity of the qualification's Australian Qualification Framework (AQF) alignment and contribute to a valid, industry supported vocational outcome

To achieve the occupation outcome of Estimator electives must include:

- all Group B elective units
- minimum of two units from Group A electives
- remaining units from general electives
- a maximum of two units may be from any training package or accredited course as long as they ensure the integrity of the qualification's Australian Qualification Framework (AQF) alignment and contribute to a valid, industry supported vocational outcome

Prerequisite units

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

Core Units

CPCCCBC4012 Read and interpret plans and specifications

CPCCCBC4014 Prepare simple building sketches and drawings

Elective Units

Group A - Contract Administration

CPCCCBC4003 Select, prepare and administer a construction contract

- CPCBC4006 Select, procure and store construction materials for building and construction projects
- CPCBC4026 Arrange building applications and approvals
- CPCBC4031 Process client requirements

Group B - Estimating

- BSBPMG426 Apply project risk management techniques
- CPCBC4001 Apply building codes and standards to the construction process for Class 1 and 10 buildings
- CPCBC4004 Identify and produce estimated costs for building and construction projects
- CPCBC4005 Produce labour and material schedules for ordering
- CPCBC4010* Apply structural principles to residential and commercial constructions
- CPCBC4013 Prepare and evaluate tender documentation
- CPCBC4053 Apply building codes and standards to the construction process for Class 2 to 9, Type C buildings

Group C - General Electives

- BSBLDR413 Lead effective workplace relationships
- BSBLDR414 Lead team effectiveness^[SEP]
- BSBPMG422 Apply project quality management techniques
- BSBPMG430 Undertake project work
- BSBWRT411 Write complex documents
- BSBPEF501 Manage personal professional development
- CPCBC4007 Plan building or construction work
- CPCBC4015 Prepare specifications for all construction works
- CPCBC4017 Arrange resources and prepare for the building and construction project

CPCBC4019	Apply sustainable building design principles to water management systems
CPCBC4020	Build thermally efficient and sustainable structures
CPCBC4021	Minimise waste on the building and construction site
CPCBC4024	Resolve business disputes

CPC40820 Certificate IV in Swimming Pool and Spa Building

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes but is not equivalent to CPC40808 Certificate IV in Swimming Pool and Spa Building. Updated to meet the Standards for Training Packages 2012.

Qualification Description

This qualification reflects work undertaken by individuals who build and install swimming pools and spas. The work covers a range of trade-related skills associated with in-ground and above-ground pools and spas, as well as planning and project management skills.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of the unit *CPCCWHS1001* Prepare to work safely in the construction industry covers this requirement.

Licensing, legislative, regulatory and certification requirements will vary across states and territories. Relevant state and territory regulatory authorities should be consulted to confirm those requirements.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 18 units of competency:
 - 8 core units
 - 10 elective units

The elective units must be selected as follows:

- 6 units must be selected from Group A
- up to 4 units can be selected from Group B
- 1 unit can be selected from any current training package or accredited course if it maintains the integrity of the AQF level of this qualification, contributes to a valid, industry-supported vocational outcome and does not duplicate the outcome of another unit used to achieve this qualification.

Core units

- CPCCBBC4002 Manage work health and safety in the building and construction workplace
- CPCCBBC4004 Identify and produce estimated costs for building and construction projects
- CPCCBBC4005 Produce labour and material schedules for ordering
- CPCCBBC4007 Plan building and construction work
- CPCCBBC4012 Read and interpret plans and specifications
- CPCCBBC4021 Minimise waste on the building and construction site
- CPCSPS4001 Investigate and prepare swimming pool site
- CPCSPS4002 Select, procure and store construction materials for swimming pool and spa projects

Group A: Specialist Trade Skills elective units

- CPCCCM3005 Calculate costs of construction work
- CPCCON3046 Repair and rectify concrete
- CPCCCO4001 Supervise concreting work
- CPCCWHS200
1 Apply WHS requirements, policies and procedures in the construction industry
- CPCCCWF3008 Tile pools and spas
- CPCSPS4003 Install swimming pool and spa subsoil drainage
- CPCSPS4004 Install swimming pool and spa circulation systems and components
- CPCSPS4005 Install prefabricated fibreglass swimming pools
- CPSSPS4006 Apply sprayed concrete to shape and finish swimming pools and spas
- CPCSPS4007 Commission ancillary swimming pool and spa systems and hand over to client
- CPCSPS4008 Install above-ground swimming pools
- CPCSPS4009 Undertake interior finishing of swimming pools and spas

- CPCSPS4010 Lay swimming pool and spa coping
- CPCSPS4011 Install precast concrete swimming pools
- CPPSPS4017 Detect leaks in swimming pools and spas

Group B: Business Skills elective units

- BSBOPS304 Deliver and monitor a service to customers
- BSBPMG422 Apply project quality management techniques
- BSBPMG430 Undertake project work
- BSBESB305 Address compliance requirements for new business ventures
- BSBESB402 Establish legal and risk management requirements of new business ventures
- BSBLDR4014 Lead team effectiveness
- BSBESB406 Establish operational strategies and procedures for new business ventures
- BSBESB407 Manage finances for new business ventures
- BSBSUS411 Implement and monitor environmentally sustainable work practices
- CPCCBC4003 Select, prepare and administer a construction contract
- CPCCBC4024 Resolve business disputes

CPC40920 Certificate IV in Plumbing and Services

Modification History

Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.

Change of unit title CPCPWT3027 Connect irrigation systems from drinking water service in Group B electives to CPCPWT3027 Install backflow prevention devices.

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.

Typographical error rectified in unit CPCPWT4023. Removed word 'test' from unit title in Group B electives.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is not equivalent to CPC40912 Certificate IV in Plumbing and Services. Updated to meet the Standards for Training Packages 2012.

Qualification Description

This qualification reflects the role of an experienced plumbing service operator with advanced technical skills and/or responsibility for project design and supervision; or a hydraulic consultant responsible for designing hydraulic components and systems that meet client requirements and help in effective water management in domestic, commercial and industry contexts.

Occupational titles could include:

- Plumbing contractor
- Hydraulic designer

The plumbing industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or closely simulated workplace environment and this qualification requires all units of competency to be delivered and assessed in this context.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required before entering a construction work site. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

This is a licenced occupation in some jurisdictions. Licensing, legislative, regulatory and certification requirements may vary between states and territories. Relevant state and territory regulatory authorities should be consulted to confirm those requirements.

Entry Requirements

For the operations stream, a candidate must hold a Certificate III in Plumbing or be authorised to undertake plumbing work by an Australian regulator/licensing body.

There are no entry requirements for the hydraulic services design pathway.

Packaging Rules

To be awarded this qualification, competency must be achieved in:

- 15 units of competency:
 - 10 core units
 - 5 elective units.

For the award of the *CPC40920 Certificate IV in Plumbing and Services (Hydraulic services design)* electives are to be selected as follows:

- 15 units of competency:
 - 10 core units
 - 5 elective units from Group A
 - 2 units may be replaced by units from other Training Packages or nationally accredited courses at Certificate IV level and above, provided they do not duplicate the outcome of another unit chosen for the qualification.
 - Electives cannot be selected from Group B.

For the award of the *CPC40920 Certificate IV in Plumbing and Services (Operations)* electives are to be completed as follows:

- 15 units of competency:
 - 10 core units
 - at least 1 elective from Group B
 - the remaining 4 elective units from Group A or Group B
 - 2 units may be replaced by units from other Training Packages or nationally accredited courses at Certificate IV level and above, provided they do not duplicate the outcome of another unit chosen for the qualification.

The elective units must ensure the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome.

An asterisk (*) against a unit code below indicates that the unit has a prerequisite. Please check the unit for information on this. All prerequisites are packaged in the qualification.

Core Units

BSBESB402	Establish legal and risk management requirements of new business ventures
CPCCB4012	Read and interpret plans and specifications

CPCPCM4011	Carry out work-based risk control processes
CPCPCM4012	Estimate and cost work
CPCPCM4015	Access and interpret regulatory requirements for the plumbing and services industry
CPCPDR4011	Design and size sanitary drainage systems
CPCPDR4012	Design and size stormwater drainage systems
CPCPGS4011	Design and size consumer gas installations
CPCPSN4011	Design and size sanitary plumbing systems
CPCPWT4011	Design and size heated and cold-water services and systems

Group A

BSBESB403	Plan finances for new business ventures
CPCCBC4002	Manage work health and safety in the building and construction workplace
CPCCBC4019	Apply sustainable building design principles to water management systems
CPCCBC4024	Resolve business disputes
CPCPCM4013	Produce 2-D architectural drawings using design software
CPCPDR4013	Design and size domestic treatment plant disposal systems
CPCPPS5033*	Design vacuum sewerage systems
CPCPFS4024*	Design residential fire sprinkler systems
CPCPMS4011	Design, size and lay out heating and cooling systems
CPCPMS4023	Design compressed air systems
CPCPRF4011	Design and size roof drainage systems

Group B

CPCPCM2043	Carry out WHS requirements
------------	----------------------------

CPCPDR3023*	Install on-site domestic wastewater treatment plants and disposal systems
CPCPFS3037*	Install residential life safety sprinkler systems
CPCPFS4021	Commission domestic and residential fire suppression sprinkler systems
CPCPGS3053	Disconnect and reconnect Type A gas appliances
CPCPGS4022*	Service Type A gas appliances
CPCPGS4023*	Install, commission and service Type B gas appliances
CPCPMS4022*	Commission air and water systems
CPCPWT3022*	Install and commission water heating systems and adjust controls and devices
CPCPWT3027*	Install backflow prevention devices
CPCPWT4022*	Commission and maintain backflow prevention devices
CPCPWT4023*	Commission and maintain hot and heated water temperature control devices
UEERL0004	Disconnect-reconnect electrical equipment connected to low voltage (LV) installation wiring

CPC41020 Certificate IV in Demolition

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Inclusion of CPCCWH2001 Apply WHS requirements, policies and procedures in the construction industry to the General Elective units.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPC41013 Certificate IV in Demolition.

Qualification Description

This qualification is designed to meet the needs of project engineers, project managers, demolition supervisors and leading hands responsible for the oversight of a team of demolition workers undertaking specialist demolition work on large public, commercial, industrial or residential buildings, structures and installations, including chemical processing plants.

Occupational titles could include:

- Demolition supervisor
- Demolition project manager

Licensing, legislative, regulatory or certification requirements apply to demolition work in different states and territories. Please consult with the relevant regulatory authorities.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 15 units of competency:
 - 8 core units
 - 7 elective units.

Elective units are to be selected as follows:

- all 7 elective units can be selected from the electives below
- up to 2 units can be selected from any training package or accredited course, as long as they contribute to a valid, industry-supported vocational outcome and supports the AQF level of this qualification.

Prerequisite units of competency

An asterisk (*) against a unit code below indicates that there is a prerequisite requirement that must be met. Prerequisite unit/s must be assessed before assessment of any unit of competency with an asterisk. All prerequisite requirements are packaged in the qualification.

Core units

BSBLDR414	Lead team effectiveness
CPCCBBC4002	Manage work health and safety in the building and construction workplace
CPCCBBC4012	Read and interpret plans and specifications
CPCCCDE4001	Plan and prepare for activities on demolition sites
CPCCCDE4002	Plan demolition work to minimise risk to health, safety and environment
CPCCCDE4003	Supervise operational activities on demolition sites
CPCCCDE4004	Finalise demolition activities and supervise property handover
CPCCCDE4005	Apply structural principles to the planning of the demolition of a structure

Elective units

BSBCMM411	Make a presentation
BSBPEF501	Manage personal and professional development
CPCCBBC4004	Identify and produce estimated costs for building and construction projects
CPCCBBC4008	Supervise communication and administration processes for building and construction projects
CPCCBBC4009	Apply legal requirements to building and construction projects

CPCBC4024	Resolve business disputes
CPCBC4053	Apply building codes and standards to the construction process for Class 2 to 9 Type C buildings
CPCBC5001	Apply building codes and standards to the construction process for Type B construction
CPCBC5018*	Apply structural principles to the construction of buildings up to three storeys
CPCBC6014	Apply structural principles to the construction of large, high-rise and complex buildings
CPCDE3014*	Remove non-friable asbestos
CPCDE3015*	Remove friable asbestos
CPCDE3027	Read and interpret demolition site plans and drawings
CPCDE4006	Demolish stressed panel structure and pre-cast panel structure
CPCDE4007	Manage waste streams
CPCDE4008*	Supervise asbestos removal
CPCDE5001	Conduct air monitoring and clearance inspections for asbestos removal work
CPCWHS2001	Apply WHS requirements, policies and procedures in the construction industry
PUAFER004	Respond to facility emergencies
RIICWD503E	Prepare traffic management plans and traffic guidance schemes
RIIWHS301E	Conduct safety and health investigations

CPC50220 Diploma of Building and Construction (Building)

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPC50210 Diploma of Building and Construction (Building). Updated to meet the Standards for Training Packages 2012.

Qualification Description

This qualification reflects the role of building professionals who apply knowledge of structural principles, risk and financial management, estimating, preparing and administering building and construction contracts, selecting contractors, overseeing the work and its quality and managing construction work in building projects including residential and commercial with the following limitations:

- Residential construction limited to National Construction Code Class 1 and 10 buildings to a maximum of 3 storeys.
- Commercial construction limited to National Construction Code Class 2 to 9 buildings, Type C and B construction.

Occupational titles may include:

- Builder
- General Foreperson
- Building Inspector

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment. To achieve this qualification, the candidate must have access to a live building and construction workplace to meet the requirements detailed in the Assessment Requirements of core unit *CPCBC4008 Supervise communication and administration processes for building and construction projects*.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit CPCCWHS1001 Prepare to work safely in the construction industry meets this requirement.

Builder licensing varies across States and Territories and requirements additional to the attainment of this qualification may be required.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 27 units of competency:
 - 24 core units
 - 3 elective units
- a maximum of one unit may be from any training package or accredited course as long as it ensures the integrity of the qualification's Australian Qualification Framework (AQF) alignment and contributes to a valid, industry supported vocational outcome.

Prerequisite units

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

Core Units

BSBOPS504	Manage risk
BSBWHS513	Lead WHS risk management
CPCCCBC4001	Apply building codes and standards to the construction process for Class 1 and 10 buildings
CPCCCBC4003	Select, prepare and administer a construction contract
CPCCCBC4004	Identify and produce estimated costs for building and construction projects
CPCCCBC4005	Produce labour and material schedules for ordering
CPCCCBC4008	Supervise site communication and administration processes for building and construction projects
CPCCCBC4009	Apply legal requirements to building and construction projects
CPCCCBC4010*	Apply structural principles to residential and commercial constructions
CPCCCBC4012	Read and interpret plans and specifications
CPCCCBC4013	Prepare and evaluate tender documentation
CPCCCBC4014	Prepare simple building sketches and drawings

CPCCCBC4018	Apply site surveys and set-out procedures to building and construction projects
CPCCCBC4053	Apply building codes and standards to the construction process for Class 2 to 9, Type C buildings
CPCCCBC5001	Apply building codes and standards to the construction process for Type B construction
CPCCCBC5002	Monitor costing systems on complex building and construction projects
CPCCCBC5003	Supervise the planning of onsite building and construction work
CPCCCBC5005	Select and manage building and construction contractors
CPCCCBC5007	Administer the legal obligations of a building and construction contractor
CPCCCBC5010	Manage construction work
CPCCCBC5011	Manage environmental management practices and processes in building and construction
CPCCCBC5013	Manage professional technical and legal reports on building and construction projects
CPCCCBC5018*	Apply structural principles to the construction of buildings up to 3 storeys
CPCCCBC5019	Manage building and construction business finances

Elective Units

BSBPMG532	Manage project quality
BSBPMG538	Manage project stakeholder engagement
CPCCCBC4052	Lead and manage teams in the building and construction industry
CPCCCBC5004	Supervise and apply quality standards to the selection of building and construction materials
CPCCCBC5006	Apply site surveys and set-out procedures to building projects up to three storeys
CPCCCBC5009	Identify services layout and connection methods for Type C and B

	construction
CPCCCBC5012	Manage the application and monitoring of energy conservation and management practices and processes
CPCCCBC6001	Apply building codes and standards to the construction process for large building projects
CPCCCDE5001	Conduct air monitoring and clearance inspections for asbestos removal work
CPCSUS5001	Develop workplace policies and procedures for sustainability
CPCSUS5002	Develop action plans to retrofit existing buildings for energy efficiency
CPCSUS5003	Manage energy efficient building methods and strategies
CPPDSM5022A	Implement asset management plan

Prerequisite requirements

Unit of competency	Prerequisite requirement
CPCCCBC5018 Apply structural principles to the construction of buildings up to 3 storeys	CPCCCBC5001 Apply building codes and standards to the construction process for Type B construction CPCCCBC4053 Apply building codes and standards to the construction process for Class 2 to 9, Type C buildings
CPCCCBC4010 Apply structural principles to residential and commercial constructions	CPCCCBC4053 Apply building codes and standards to the construction process for Class 2 to 9 Type C buildings CPCCCBC4001 Apply building codes and standards to the construction process for Class 1 and 10 buildings

CPC50320 Diploma of Building and Construction (Management)

Modification History

Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.1.

Addition of 3 units of competency to the General Electives:

- CPCBIM4001 Plan to comply with BIM requirements for construction work.
- CPCBIM4002 Use BIM processes to carry out construction work
- CPCBIM4003 Contribute to BIM deliverables for construction work.

Updated imported elective unit from CPPBDN5012A Produce and present 3-D models of small-scale building designs to CPPBDN5101 Produce digital 3-D models of building designs.

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Correction to titles for imported elective units BSBOPS502 and BSBOPS505. Imported elective units BSBLDR522 Manage people performance and BSBLDR523 Lead and manage effective workplace relationships removed from Elective units.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is not equivalent CPC50308 Diploma of Building and Construction (Management). Updated to meet the Standards for Training Packages 2012.

Qualification Description

This qualification is designed to meet the needs of senior managers within building and construction firms.

Occupational titles may include:

- Project manager
- Construction manager
- Estimating manager
- Sales manager.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001* Prepare to work safely in the construction industry meets this requirement.

Additional units of competency may be required to meet builder or project manager registration requirements in various States and Territories.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 15 units of competency:
 - 8 core units
 - 7 elective units.

The elective units are to be chosen as follows:

- up to 7 units from general elective units
- a maximum of two units may be from any training package or accredited course as long as they ensure the integrity of the qualification's Australian Qualification Framework (AQF) alignment and contribute to a valid, industry supported vocational outcome

Prerequisite units

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

Prerequisite requirements

Unit of competency	Prerequisite requirement
CPCCBC5018 Apply structural principles to the construction of buildings up to 3 storeys	CPCBC5001 Apply building codes and standards to the construction process for Type B construction CPCCBC4053 Apply building codes and standards to the construction process for Class 2 to 9, Type C buildings

Core Units

BSBPMG536	Manage project risk
BSBWHS513	Lead WHS risk management
CPCCCBC4001	Apply building codes and standards to the construction process for Class 1 and 10 Buildings
CPCCCBC4053	Apply building codes and standards to the construction process for Class 2 to 9, Type C Buildings
CPCCCBC5002	Monitor costing systems on complex building and construction projects
CPCCCBC5005	Select and manage building and construction contractors
CPCCCBC5007	Administer the legal obligations of a building or construction contractor
CPCCCBC5019	Manage building and construction business finances

Elective Units

BSBHRM415	Coordinate recruitment and onboarding
BSBOPS502	Manage business operational plans
BSBOPS505	Manage organisational customer service
BSBPEF502	Develop and use emotional intelligence
BSBPMG532	Manage project quality
CPCBIM4001	Plan to comply with BIM requirements for construction work
CPCBIM4002	Use BIM processes to carry out construction work
CPCBIM4003	Contribute to BIM deliverables for construction work
CPCCCBC4003	Select, prepare and administer construction contract
CPCCCBC4004	Identify and produce estimated costs for building and construction projects
CPCCCBC4052	Lead and manage teams in the building and construction industry
CPCCCBC5001	Apply building codes and standards to the construction process for Type B construction
CPCCCBC5003	Supervise the planning of onsite building or construction work

CPCCBBC5004	Supervise and apply quality standards to the selection of building and construction materials
CPCCBBC5006	Apply site surveys and set-out procedures to building projects up to 3 storeys
CPCCBBC5009	Identify services layout and connection methods for Type B and C construction
CPCCBBC5010	Manage construction work
CPCCBBC5011	Manage environmental management practices and processes in building and construction
CPCCBBC5012	Manage the application and monitoring of energy conservation and management practices and processes
CPCCBBC5013	Develop professional technical and legal reports on building and construction projects
CPCCBBC5018*	Apply structural principles to the construction of buildings up to 3 storeys
CPCSUS5001	Develop workplace policies and procedures for sustainability
CPPBDN5101	Produce digital 3-D models of building designs
CPPDSM5022A	Implement asset management plan

CPC50520 Diploma of Fire Systems Design

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPC50509 Diploma of Fire Systems Design. Updated to meet the Standards for Training Packages 2012.

Qualification Description

The Diploma of Fire Systems Design reflects and supports the role of fire systems designers who prepare detailed technical designs and documentation for water-based fire suppression systems and/or fire detection and occupant warning systems.

The Diploma of Fire Systems Design also includes a stream qualification for the annual certifier of fire systems.

Fire systems designers may enter the industry from a diverse range of occupations and sectors. They may choose to extend their careers by seeking to undertake subsequent higher education qualifications in related disciplines, including mechanical engineering and fire engineering.

The qualification has common core and elective unit of competency requirements that cover common skills for fire systems designers and certifiers, as well as specialist streams for:

- water-based systems
- detection and warning systems
- annual certifiers.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in 12 units of competency:

- 4 core units
- 8 elective units.

The elective units are to be chosen as follows.

All units from one of the specialisations (Group A, B or C) must be completed. That is:

- all 8 units from *Group A Water-based systems*, or

- all 5 units from *Group B Detection and warning systems* plus 3 additional electives, or
- all 4 units from *Group C Annual certifier* plus 4 additional electives.

The additional electives must ensure the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome. Of these, 1 unit can be selected from any endorsed Training Package or accredited course at a Diploma or higher AQF level. One unit can be selected from Group A in the Certificate IV in Plumbing and Services. The remainder are to come from groups A, B, C or D listed below.

An asterisk (*) against a unit code below indicates that the unit has a prerequisite. Please check the unit for information on this. All prerequisites are packaged in the qualification.

Core units

CPCCWHS2001	Apply WHS requirements, policies and procedures in the construction industry
CPCSFS5001	Define scope and hazard level of fire systems design projects
CPCSFS5002	Research and interpret detailed fire systems design project requirements
CPCSFS5005	Research and evaluate fire system technologies and components

Group - A Water-based systems elective unit

CPCPCM4013	Produce 2D architectural drawings using design software
CPCSFS5003	Develop plans and methodology for fire systems design projects
CPCSFS5006	Create detailed designs for fire sprinkler systems
CPCSFS5007	Create detailed designs for hydrant and hose reel systems
CPCSFS5009	Create detailed designs for fire systems' water supplies
CPCSFS5010	Provide documentation and support for fabrication of fire sprinkler systems
CPCSFS5011	Provide design documentation and review and support fire system installation processes
CPCSFS5013	Support commissioning processes and finalise fire systems design projects

Group B - Detection and warning systems elective units

CPCPCM4013	Produce 2-D architectural drawings using design software
------------	--

CPCSFS5003	Develop plans and methodology for fire systems design projects
CPCSFS5008	Create detailed designs for fire detection and warning systems
CPCSFS5011	Provide design documentation and review and support fire system installation processes
CPCSFS5013	Support commissioning processes and finalise fire systems design projects

Group C - Annual certifier elective units

BSBAUD513	Report on a quality audit
CPCCBC4012	Read and interpret plans and specifications
CPCSFS5014	Conduct annual fire systems certification inspections
CPCSFS5015	Assess documentation for annual fire systems certification inspections

Group D - General elective units

BSBOPS404	Implement customer service strategies
BSBOPS505	Manage organisational customer services
BSBPMG535	Manage project information and communication
BSBPMG430	Undertake project work
BSBWHS513	Lead WHS risk management
CHCDIV001	Work with diverse people
CPCCBC4012	Read and interpret plans and specifications
CPCCBC5009	Identify services layout and connection methods to medium rise construction projects
CPCCSV5009*	Assess the impact of fire on building materials
CPCPCM3024	Prepare simple sketches and drawings
CPCPCM4013	Produce 2-D architectural drawings using design software

CPC50620 Diploma of Hydraulic Services Design

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPC50612 Diploma of Hydraulic Services Design. Updated to meet the Standards for Training Packages 2012.

Qualification Description

This qualification reflects the role of a specialist hydraulic design consultant who designs plumbing and services systems in domestic, commercial and industrial contexts. The qualification includes the skills and knowledge to design complex hydraulic systems.

Occupational titles could include:

- Hydraulic design consultant.

The plumbing industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or closely simulated workplace environment and this qualification requires all units of competency to be delivered and assessed in this context.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required before entering a construction work site. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this qualification at the time of publication. This qualification does not meet competency requirements for plumbing licencing or registration.

Entry Requirements

CPC40920 Certificate IV in Plumbing and Services or

CPC40912 Certificate IV in Plumbing and Services and CPCPCM4015 Access and interpret regulatory requirements for the plumbing and services industry

Packaging Rules

To be awarded this qualification, competency must be achieved in:

- 18 units of competency:
 - 14 core units
 - 4 elective units.

The elective units must ensure the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome and are to be chosen as follows:

- 3 elective units must be chosen from the elective units listed below
- 1 elective unit may be selected from any other group or from any relevant nationally endorsed Training Package or accredited course.

An asterisk (*) against a unit code below indicates that the unit has a prerequisite. Please check the unit for information on this. All prerequisites are packaged in the qualification.

Core Units

CPCPCM5010	Design complex sanitary plumbing and drainage systems
CPCPCM5011	Design complex cold water systems
CPCPCM5012	Design complex stormwater and roof drainage systems
CPCPCM5013	Design complex (non-solar) heated water systems
CPCPPS5002	Design gas reticulation systems
CPCPPS5023	Design solar water heating systems
CPCPPS5024	Conduct a water audit and identify water-saving initiatives
CPCPPS5025	Design grey water re-use systems
CPCPPS5026	Design rainwater collection, storage, distribution and re-use systems
CPCPPS5028	Design trade waste pre-treatment systems
CPCPPS5030	Design pump systems
CPCPPS5032	Design siphonic stormwater drainage systems
CPCSFS5001	Define scope and hazard level of fire systems design projects
CPCSFS5007	Create detailed designs for hydrant and hose reel systems

Elective Units

BSBTEC201	Use business software applications
BSBWRT411	Write complex documents

CPCPCM2043	Carry out WHS requirements
CPCPCM3024	Prepare simple drawings
CPCPCM4013	Produce 2-D architectural drawings using design software
CPCPDR3025*	Plan layout and install vacuum drainage systems
CPCPFS5011	Design fire sprinkler systems
CPCPMS5010	Design steam generation and distribution systems
CPCPMS5011	Design air conditioning and ventilation systems
CPCPMS5012	Design sound attenuated hydraulic services
CPCPMS5013	Design hydronic heating and cooling systems
CPCPPS5014	Locate and maintain piping systems
CPCPPS5015	Inspect plumbing and drainage systems
CPCPPS5027	Design irrigation systems
CPCPPS5033*	Design vacuum drainage systems
CPCSUS5001	Develop workplace policies and procedures for sustainability

CPC60121 Advanced Diploma of Building Surveying

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.

Supersedes and is equivalent to CPC60115 Advanced Diploma of Building Surveying.

Qualification Description

This is a qualification for building surveyors or certifiers who apply knowledge of compliance requirements and construction methods and materials to the implementation of statutory building surveying requirements or to the provision of advisory building surveying services.

The scope of work undertaken by building surveyors applies to all Classes of residential and commercial buildings as defined in the National Construction Code (NCC), up to three storeys and not exceeding 2,000 square metres in floor area.

Building surveyors work in a highly regulated environment and require an understanding of relevant compliance requirements as well as traditional, new and emerging construction methods and materials. They make a significant contribution to the development and construction of the built environment, often working in collaboration with specialist consultants to assess and verify that proposed and actual building works are compliant and to ensure the safety of building occupants.

Licensing, legislative, regulatory or certification requirements apply to building surveying in some states and territories. For further information, check with the relevant regulatory authority.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 22 units of competency:
 - 19 core units
 - 3 elective units.

For the elective units:

- up to 3 units may be selected from the elective units listed below

- up to 2 units may be selected from any currently endorsed Training Package or accredited course at Advanced Diploma, Graduate Certificate or Graduate Diploma level.

An asterisk (*) against a unit code below indicates that there is a prerequisite requirement that must be met. Prerequisite unit(s) must be assessed before assessment of any unit of competency with an asterisk. Check the unit of competency for information on specific prerequisite requirements. All prerequisite requirements are packaged in the qualification.

Core units

CPCCBBC4001	Apply building codes and standards to the construction process for Class 1 and 10 buildings
CPCCBBC4010*	Apply structural principles to residential and commercial constructions
CPCCBBC4012	Read and interpret plans and specifications
CPCCBBC4053	Apply building codes and standards to the construction process for Class 2 to 9 Type C buildings
CPCCBS6101	Research and evaluate construction methods and materials for Class 1 and 10 buildings to three storeys
CPCCBS6102	Research and evaluate construction methods and materials for Class 2 to 9 buildings to three storeys
CPCCBS6103	Identify and apply legal and ethical requirements to building surveying functions
CPCCBS6104*	Assess and advise on compliance of design documentation for Class 1 and 10 buildings to three storeys
CPCCBS6105*	Assess and advise on compliance of design documentation for Class 2 to 9 buildings to three storeys
CPCCBS6107	Prepare planning and development applications for buildings to three storeys
CPCCBS6108*	Process building applications for Class 1 and 10 buildings to three storeys
CPCCBS6109*	Process building applications for Class 2 to 9 buildings to three storeys
CPCCBS6110*	Conduct and report on building surveying audits of Class 1 and 10 buildings to three storeys
CPCCBS6112*	Conduct and report on initial construction inspections of Class 1 and 10 buildings to three storeys

CPCCBS6113*	Conduct and report on initial construction inspections of Class 2 to 9 buildings to three storeys
CPCCBS6114*	Conduct and report on advanced and final inspections of Class 1 and 10 buildings to three storeys
CPCCBS6115*	Conduct and report on advanced and final inspections of Class 2 to 9 buildings to three storeys
CPCCBS6116*	Assess and advise on performance solutions for Class 2 to 9 buildings to three storeys
CPCCBS6118*	Assess and advise on performance solutions for Class 1 and 10 buildings to three storeys

Elective units

CPCCBS6111*	Conduct and report on building surveying audits of Class 2 to 9 buildings to three storeys
CPCCBS6117*	Monitor and advise on construction and compliance upgrade work on buildings to three storeys
CPPACC6002A	Apply performance-based codes and risk management principles to assessing buildings for access
CPPACC6003A	Apply unjustifiable hardship principles to Alternative Building Solutions for access
CPPHES4005	Assess household energy use and efficiency improvements
CPPHES4007	Assess thermal performance of existing residential buildings
PUAFIR518	Conduct and record a Bushfire Attack Level (BAL) assessment

Qualification Mapping Information

CPC60121 Advanced Diploma of Building Surveying supersedes and is equivalent to CPC60115 Advanced Diploma of Building Surveying.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPC60220 Advanced Diploma of Building and Construction (Management)

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Mapping statement corrected. General elective units listed alphanumerically.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPC60212 Advanced Diploma of Building and Construction (Management). Update to core unit. Updated to meet the Standards for Training Packages 2012.

Qualification Description

This qualification is designed to meet the needs of builders or senior managers within the building and construction industry who apply knowledge of building, construction and sustainability systems and processes, structural principles, codes, standards and legal obligations to construction projects including high rise.

Occupational titles may include:

- Construction manager.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all included units of competency to be delivered in this context.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Builder licensing varies across States and Territories and requirements additional to the attainment of this qualification may be required. Additional or prescribed units of competency may also be required to meet builder registration requirements in various States and Territories.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 10 units of competency:
 - 4 core units
 - 6 elective units.

The elective units are to be chosen as follows:

- up to 6 units from general elective units
- a maximum of two units may be from any training package or accredited course as long as they ensure the integrity of the qualification's Australian Qualification Framework (AQF) alignment and contribute to a valid, industry supported vocational outcome.

Core Units

BSBWHS516	Contribute to developing, implementing and maintaining an organisation's WHS management system
CPCCCBC6001	Apply building codes and standards to the construction process for large building projects
CPCCCBC6003	Establish, maintain and review contract administration procedures and frameworks
CPCCCBC6018	Manage processes for complying with legal obligations of a building and construction contractor

Elective Units

BSBMKG623	Develop a marketing plan
BSBOPS504	Manage risk
BSBOPS601	Develop and implement a business plan
CPCCCBC6002	Generate and direct the development of new projects
CPCCCBC6005	Manage tender developments for major projects
CPCCCBC6006	Manage the procurement and acquisition of resources for building and construction projects
CPCCCBC6007	Develop, plan and implement building and construction environmental management processes
CPCCCBC6008	Develop and implement an estimating and tendering system

CPCCCBC6009	Develop, plan and implement a building and construction planning process
CPCCCBC6010	Plan, develop and implement building and construction energy conservation and management processes
CPCCCBC6011	Establish systems to develop and monitor building and construction costs
CPCCCBC6012	Manage and administer development of documentation for building and construction projects
CPCCCBC6013	Evaluate concrete performance for multi-storey buildings
CPCCCBC6014	Apply structural principles to the construction of large, high-rise and complex buildings
CPCCCBC6015	Apply building surveying procedures
CPCCCBC6016	Assess construction faults in large building projects
CPCCCBC6017	Evaluate services layout and connection methods for the planning of large building projects
CPCSUS5001	Develop workplace policies and procedures for sustainability
CPPDSM6002A	Conduct a property investment feasibility study
CPPDSM6008A	Develop strategic facilities management plan

CPCBIM4001 Plan to comply with BIM requirements for construction work

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.
New unit.

Application

This unit of competency specifies the skills and knowledge required to recognise a project's Building Information Modelling (BIM) requirements and plan subsequent activities related to own construction work. It includes preparing the tools and technologies required to enable digital processes such as accessing and comparing 2D drawings and 3D models and related data.

The unit applies to builders, tradespersons, project and site managers who work on construction projects that incorporate BIM interaction, collaboration and deliverables. It requires digital literacy skills to use software via information and communication technology (ICT), including applications on mobile devices to find, retrieve and communicate information.

A person who has achieved this unit of competency is able to work with autonomy and take responsibility for applying BIM processes to construction work.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Business information modelling

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Determine BIM requirements for construction work activities. | 1.1 Access and interpret BIM Execution Plan to clarify BIM uses for construction project, specific work standards and methodologies. |
| | 1.2 Identify any gaps in the BIM Execution Plan relating to BIM activities required or already incorporated in the construction project. |
| | 1.3 Access, interpret and clarify available drawings, data and models within Common Data Environment (CDE) for collaborative project requirements. |
| | 1.4 Identify BIM tools and technologies required to comply with BIM Execution Plan. |
| | 1.5 Clarify BIM-required communication methods, roles and responsibilities of self and other project participants detailed in BIM Execution Plan. |
| 2 Prepare BIM tools and technologies. | 2.1 Access tools and technologies required to fulfil the BIM uses, standards and methodologies according to BIM Execution Plan. |
| | 2.2 Set up BIM tools and technologies according to project requirements. |
| | 2.3 Review BIM tools and technologies to ensure correct operation and interoperability with BIM systems for construction work. |
| 3 Access and compare 2D and 3D construction information. | 3.1 Access 2D drawings, 3D model and data relevant to construction work. |
| | 3.2 Use BIM tools and technologies to navigate and interpret 3D model and data, conduct measurements, enquire and extract data and quantities required for construction work. |
| | 3.3 Compare 3D model and data against 2D drawings to clarify understanding of requirements for planned |

construction work.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- digital literacy skills to use software via ICT, including applications on mobile devices to find, retrieve and communicate information.

Unit Mapping Information

No equivalent unit.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBIM4001 Plan to comply with BIM requirements for construction work

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.
New unit.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by planning to ensure that construction work activities comply with Building Information Modelling (BIM) project requirements specified in a BIM Execution Plan and, in doing so:

- use at least two different BIM technologies (tools and software)
- identify own role and responsibilities and that of three other participants in the BIM workflow and detailed in the BIM Execution Plan, including their relationship to the identified BIM uses
- access one 3D model and associated data within a Common Data Environment (CDE) and relevant to planned construction work activities.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- definition and purpose of BIM and its benefits and limitations relating to the lifecycle management of built assets
- common BIM definitions and terminology
- common BIM tools and technologies
- BIM uses relevant to construction phases
- commonly understood meanings of 3D, 4D, 5D and 6D relating to BIM
- benefits of BIM in improving construction efficiency and safety:
 - planning, scheduling and sequencing
 - services and trades coordination
 - fabrication and assembly
 - resource procurement
 - accurate ordering of materials and quantities
- BIM maturity levels
- BIM adoption barriers
- BIM project delivery methods

- BIM standards relevant to planned construction work, including the BIM ISO 19650 *Organization and digitization of information about buildings and civil engineering works, including building information modelling (BIM) - Information management using building information modelling* (or its successor)
- graphical and data communication methods when working with BIM
- level of information need, incorporating definitions of level of development (LOD) and level of information (LOI) relevant to BIM project requirements
- meaning and benefits of visual communication and extended reality technologies during the construction phase of a BIM project
- meaning and purpose of ‘digital twin’, its relationship with BIM, and its context within the facets of the operations and maintenance phase
- meaning of open formats as distinct from proprietary formats and their role in interoperability and archiving of project information
- purpose and content of BIM Execution Plans and their relationship to project information requirements
- role of the CDE in managing project information
- roles and responsibilities of BIM project participants across multiple disciplines.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to documentation and technologies required to achieve the performance criteria and performance evidence.

CPCBIM4002 Use BIM processes to carry out construction work

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.
New unit.

Application

This unit of competency specifies the skills and knowledge required to use Building Information Modelling (BIM) processes to carry out construction work. It includes using 2D drawings and 3D models and related data to clarify construction work requirements, coordinate models and manage risks associated with planned construction work and schedule, and sequence work activities and resources.

The unit applies to builders, tradespersons, project and site managers who work on construction projects that incorporate BIM interaction, collaboration and deliverables. It requires digital literacy skills to use software via information and communication technology (ICT), including applications on mobile devices to find, retrieve and communicate information.

A person who has achieved this unit of competency is able to work with autonomy and take responsibility for applying BIM processes to construction work.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Business information modelling

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Prepare for construction work.
 - 1.1 Identify reporting and documentation processes and protocols to comply with BIM Execution Plan and workplace requirements.
 - 1.2 Identify project participants and clarify roles and responsibilities relevant to planned construction work to meet BIM Execution Plan and workplace requirements.
 - 1.3 Interpret 2D drawings and 3D model and data to clarify scope of construction work and check information to confirm currency.
 - 1.4 Access and assess other documentation related to construction work to ensure full understanding of activities, timeframes and regulatory compliance requirements.
 - 2 Manage risks associated with construction work.
 - 2.1 Use BIM tools and technologies to create and test virtual construction models and detect coordination issues, including clashes associated with planned construction work.
 - 2.2 Use BIM tools and technologies to detect work health and safety (WHS) and regulatory compliance risks associated with planned construction work.
 - 2.3 Consult with project participants to discuss and agree strategies to resolve coordination issues and mitigate risks.
 - 2.4 Implement actions required to resolve coordination issues and mitigate risks associated with planned construction work in accordance with workplace requirements.
 - 3 Schedule and sequence construction work requirements.
 - 3.1 Use BIM data to sequence construction work activities to achieve required efficiencies and compatibilities with other construction disciplines.
 - 3.2 Use BIM data to schedule equipment and resources to meet construction work timeframes in accordance with workplace requirements.

- 3.3 Document and communicate construction work requirements to project participants to meet BIM Execution Plan and workplace requirements.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- digital literacy skills to use software via ICT, including applications on mobile devices to find, retrieve and communicate information.

Unit Mapping Information

No equivalent unit.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBIM4002 Use BIM processes to carry out construction work

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.
New unit.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by using Building Information Modelling (BIM) processes, including at least two different BIM technologies (tools and software) to carry out construction work and, in doing so:

- create and test at least two virtual construction (design) models within the same federated space
- detect coordination and clashing in the federated model based on two different criteria
- detect two work health and safety (WHS) or regulatory compliance risks associated with planned construction work by using a 3D model and visual communication tools
- consult with two other project participants to discuss and agree strategies to resolve model coordination issues and mitigate risks
- analyse and communicate a construction activity using 4D modelling methods.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- BIM project delivery methods
- BIM standards relevant to planned construction work including the BIM ISO 19650 *Organization and digitization of information about buildings and civil engineering works, including building information modelling (BIM) – Information management using building information modelling* (or its successor)
- BIM uses relevant to construction phases
- common BIM tools and technologies
- graphical and data communication methods when working with BIM
- meaning and benefits of visual communication and extended reality technologies during the construction phase of a BIM project
- methods for confirming currency of construction documentation and data
- methods for scheduling equipment and resources for construction work
- methods for sequencing construction work to achieve efficiencies across multi-disciplinary construction projects

- purpose and content of BIM Execution Plans and their relationship to project information requirements
- purpose of virtual construction models and methods for detecting construction coordination issues and other project risks
- role of the Common Data Environment (CDE) in managing project information
- roles and responsibilities of BIM project participants across multiple disciplines
- types of drawings, models and documentation used when conducting construction work that is part of a BIM project
- 4D modelling techniques to record and represent information about the construction sequence
- workplace requirements for conducting construction work using BIM processes:
 - compliance with relevant regulations and standards
 - WHS
 - quality control procedures
 - reporting and documentation.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to documentation, technologies, equipment and other resources required to achieve the performance criteria and performance evidence.

CPCBIM4003 Contribute to BIM deliverables for construction work

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.
New unit.

Application

This unit of competency specifies the skills and knowledge required to contribute to Building Information Modelling (BIM) deliverables for construction work. It includes confirming handover requirements and deliverables, validating data for completed work, capturing data to record as-built conditions, and contributing information to enable a digital handover.

The unit applies to builders, tradespersons, project and site managers who work on construction projects that incorporate BIM interaction, collaboration and deliverables. It requires digital literacy skills to use software via information and communication technology (ICT), including applications on mobile devices to find, retrieve and communicate information.

A person who has achieved this unit of competency is able to work with autonomy and take responsibility for applying BIM processes to construction work.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBIM4003 Contribute to BIM deliverables for construction work

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.
New unit.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit contributing to Building Information Modelling (BIM) deliverables for completed construction work in compliance with project requirements specified in a BIM Execution Plan and, in doing so:

- use at least two different BIM technologies (tools and software)
- identify and correct two problems associated with data capture, information currency and/or format.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- BIM project delivery methods
- BIM standards relevant to planned construction work, including the BIM ISO 19650 *Organization and digitization of information about buildings and civil engineering works, including building information modelling (BIM) - Information management using building information modelling* (or its successor)
- BIM uses relevant to construction phases
- common BIM tools and technologies
- common methods for identifying assets in a BIM asset register
- documentation used to enable model-based collaboration between project participants
- graphical and data communication methods when working with BIM
- meaning and benefits of visual communication and extended reality technologies during the construction phase of a BIM project
- meaning and purpose of 'digital twin', its relationship with BIM, and its context within the facets of the operations and maintenance phase
- meaning of open formats as distinct from proprietary formats and their role in interoperability and archiving of project information
- methods for confirming currency of construction documentation and data
- purpose and content of BIM Execution Plans and their relationship to project information requirements

- purpose and components of the Project Information Model (PIM) that can be expected at handover from using BIM tools and workflows for construction projects
- purpose and identification and classification to elements of a BIM model
- role of the Common Data Environment (CDE) in managing project information
- roles and responsibilities of BIM project participants across multiple disciplines
- types of drawings, models and documentation used for a BIM handover
- workplace requirements for finalising construction work to comply with BIM project requirements:
 - compliance with relevant regulations and standards
 - documentation
 - quality control

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to documentation, technologies, equipment and other resources required to achieve the performance criteria and performance evidence.

CPCBC4001 Apply building codes and standards to the construction process for Class 1 and 10 buildings

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is not equivalent to CPCBC4001A Apply building codes and standards to the construction process for low rise building projects.

CPCBC4001A Apply building codes and standards to the construction process for low rise buildings has been split into two units, one for residential low-rise buildings and one for commercial low-rise buildings.

Attainment of both CPCBC4001 and CPCBC4053 is equivalent to CPCBC4001A.

Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to access, interpret and apply relevant building codes and standards applicable to the National Construction Code (NCC) Classes 1 and 10 buildings, to a maximum of two storeys. It includes knowledge of the structure of the NCC, as well as the ability to access relevant information from the code as applicable to various building projects.

It applies to builders, site managers and related construction industry professionals responsible for ensuring compliance with building codes and standards related to residential construction projects.

This unit of competency is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, regulatory or registration requirements apply to this unit of competency in some jurisdictions. Relevant state and territory regulatory authorities should be consulted to confirm these requirements.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|---|
| 1 Classify building. | 1.1 Determine nature of building, its use and arrangement from construction plans and specifications. |
| | 1.2 Access, read and interpret relevant Australian Standards and codes for residential building and construction projects. |
| | 1.3 Define classification of building from the NCC. |
| | 1.4 Identify and interpret multiple classifications from the NCC. |
| 2 Determine construction compliance requirements. | 2.1 Identify NCC Performance Requirements relevant to Class 1 and 10, up to two storeys, building projects. |
| | 2.2 Determine range of criteria to ensure that construction methods comply with NCC Performance Requirements. |
| | 2.3 Identify and document non-conforming construction methods against NCC Performance Requirements. |
| | 2.4 Propose and discuss Performance Solution with design and building and construction professionals. |
| | 2.5 Analyse and apply Assessment Methods to determine compliance with Performance Solution or Deem-to-Satisfy Solution (DTS). |
| | 2.6 Meet the evidence of suitability requirements for building materials and products stated in the NCC. |
| | 2.7 Complete relevant documentation to meet NCC requirements. |
| 3 Determine fire | 3.1 Identify NCC and other legislative requirements for |

protection requirements.

passive and active fire control elements in buildings.

- 3.2 Determine level of fire resistance required for the construction of various buildings.
- 3.3 Check existing buildings for compliance with passive and active fire protection requirements.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- problem-solving skills to:
 - analyse non-conforming construction methods, define key problem and produce appropriate solution
 - seek clarification of appropriate solution to meet construction method compliance
- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access, extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is not equivalent to CPCBC4001A Apply building codes and standards to the construction process for low rise building projects.

CPCBC4001A Apply building codes and standards to the construction process for low rise buildings has been split into two units, one for residential low-rise buildings and one for commercial low-rise buildings.

Attainment of both CPCBC4001 and CPCBC4053 is equivalent to CPCBC4001A.

Assessment Requirements for CPCBC4001 Apply building codes and standards to the construction process for Class 1 and 10 buildings

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is not equivalent to CPCBC4001A Apply building codes and standards to the construction process for low rise building projects.

CPCBC4001A Apply building codes and standards to the construction process for low rise buildings has been split into two units, one for residential low-rise buildings and one for commercial low-rise buildings.

Attainment of both CPCBC4001 and CPCBC4053 is equivalent to CPCBC4001A.

Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by applying codes and standards to the construction process of one Class 1 or 10 building project, to a maximum of two storeys.

In doing this, the candidate must:

- determine type of construction and use of building from construction plans and specifications and class of building using National Construction Code (NCC) classifications
- identify current building and construction codes and Australian Standards relevant to the building project
- apply NCC Performance Requirements in relation to the design and construction of the building:
 - energy efficiency
 - damp and weatherproofing
 - fire safety
 - health and amenity
 - structure
 - safe movement and access
 - ancillary provisions

- apply Performance Solutions to ensure that construction complies with NCC Performance Requirements
- identify faults and problems and propose actions to rectify
- inspect a building to determine fire protection compliance with NCC and other legislative requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- government building legislation, codes and standards:
 - the NCC:
 - Performance Requirements and General Requirements
 - Performance Solutions and Assessment Methods
 - Performance Hierarchy
 - evidence of suitability for building materials and products
 - classes of building and types of construction
- organisational policies and procedures, quality systems and best practice approaches
- workplace safety requirements
- properties, characteristics and limitations of specified building materials and components
- processes, procedures and techniques of construction
- basic building design principles and the behaviour of structures under stress, strain, compression, bending or combined actions
- causes and implications of building defects related to failure of applying building codes and standards to residential and commercial buildings
- extent of remedial work required for various defects cause by inadequate design and application of building codes and practices
- environmental requirements and sustainability principles and concepts
- project plans, specifications, working drawings and structural details
- construction terminology.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant government building and construction regulations
- current building and construction codes and standards
- NCC Volume 2

- construction drawings, site plans and specifications
- organisational policies and procedures and other quality documentation to undertake the performance criteria and assessment requirements
- digital technology devices, applications and software to source and document information.

CPCBC4002 Manage work health and safety in the building and construction workplace

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Typographical error in Element and Performance Criteria 2.4 corrected.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4002A Manage occupational health and safety in the building and construction workplace. Title change. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to inspect workplaces for hazards and conduct work health and safety (WHS) risk analyses. It includes the development and implementation of appropriate responses to mitigate risks to meet government legislation and regulations.

This unit of competency applies to builders, site managers and forepersons who are responsible for the management of risk in building and construction workplaces.

This unit of competency is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, regulatory or registration requirements apply to this unit of competency in some jurisdictions. Relevant state and territory regulatory authorities should be consulted to confirm these requirements.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|--|
| 1 Assess workplace risk. | 1.1 Evaluate construction site safety and identify potential risk areas. |
| | 1.2 Assess on site worker's health and safety. |
| | 1.3 Identify hazards and determine control measures that comply with legislative requirements and organisational policies. |
| | 1.4 Consult with workers to evaluate effectiveness of existing control measures and WHS experts, as necessary, to contribute to an inspection report. |
| | 1.5 Complete a workplace inspection report with recommended actions to minimise workplace incidents and mitigate risk. |
| 2 Establish and implement safety plans. | 2.1 Establish a workplace safety plan incorporating information from the workplace inspection report to raise safety awareness and support safe workplace practices. |
| | 2.2 Implement processes to identify hazards, rate the risks and put control measures in place. |
| | 2.3 Establish educational programs specific to the building and construction workplace to ensure workers carry out safe work practices. |
| | 2.4 Negotiate and resolve safety issues and conflicts. |
| 3 Monitor workplace safety. | 3.1 Monitor and audit workplace safety to ensure compliance with WHS regulations and workplace safety requirements. |
| | 3.2 Record findings and recommend and implement actions to address non-compliance. |

- 3.3 Review effectiveness of educational programs to ensure all workers have been inducted and maintain safe work practices.
- 3.4 Monitor, review and document effectiveness of control measures to determine changes and improvements as required.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCBC4002A Manage occupational health and safety in the building and construction workplace

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC4002 Manage work health and safety in the building and construction workplace

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Typographical error in Element and Performance Criteria 2.4 corrected.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4002A Manage occupational health and safety in the building and construction workplace. Title change. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by conducting a workplace safety audit for a construction worksite.

In doing this, a candidate must:

- access and interpret relevant government work health and safety (WHS) legislation and regulations
- identify faults, problems and non-compliances and their impact on workplace safety
- introduce safety systems allowing for ease of reporting safety issues, controlling hazards and maintaining worker safety and competence.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- current WHS Acts and regulations
- relevant safety codes, standards and guidelines
- organisation's workplace safety policies and procedures:
 - workplace safety and reporting requirements
- inspection, auditing and investigation processes
- hazards arising from:
 - high-risk construction work:
 - crane operation
 - dogging and rigging
 - concrete pumping

- tilt-up panel construction
- scaffolding
- operation of plant and equipment
- demolition
- asbestos removal and exposure to asbestos fibres
- exposure to silica
- airborne contaminants
- exposure to excessive noise
- electrical work
- working at heights
- hazardous materials and substances
- working in confined spaces
- safe work practices:
 - emergency, first aid and evacuation procedures
 - waste management and environmental practices
 - personal protective equipment (PPE)
- educational programs:
 - worker site-specific induction training
 - contractor detailed WHS induction
 - WHS induction for visitors
 - Health and Safety Representative (HSR) training
- mental health first aid and welfare of workers
- digital tools and devices to communicate and collaborate effectively with others
- a range of digitally-based technology and applications to access, extract, integrate and compile information.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- WHS legislation and regulations
- safety codes, standards and guidelines
- organisational policies and procedures and other quality documentation required to undertake the performance criteria and assessment requirements
- workplace incident data and incident reports
- business equipment to collect and record data, and produce reports

- digital devices, applications and software to research, transmit and receive information electronically.

CPCBC4003 Select, prepare and administer a construction contract

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Typographical error in Element and Performance Criteria 3.3 corrected.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes but is not equivalent to CPCBC4003A Select and prepare a construction contract. Combines CPCBC4003A Select and prepare a construction contract and CPCBC4016A Administer a construction contract. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to select, prepare and administer contracts for commercial and residential construction projects. It includes contract selection, administration of a range of documents related to the contract and identifying causes of breach of contract.

It applies to National Construction Code (NCC) classifications:

- Residential - Class 1 and 10 buildings, maximum two storeys
- Commercial - Class 2 to 9, Type C only constructions.

It applies to builders, estimators and project and site managers who interpret complex documents and communicate clearly and succinctly during contract negotiations.

This unit of competency is suitable for people operating with autonomy. A person working at this level would be expected to take responsibility for selecting and preparing construction contracts.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, regulatory or registration requirements apply to this unit of competency in some jurisdictions. Relevant state and territory regulatory authorities should be consulted to confirm these requirements.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Identify and analyse business contracts.	<p>1.1 Recognise various types of building and construction contracts, their legal requirements and application.</p> <p>1.2 Analyse the importance of the intention to create legal relations.</p> <p>1.3 Read and interpret essential contract elements, terms, sections and clauses of a valid construction contract.</p> <p>1.4 Evaluate rights, obligations and liabilities of all parties.</p> <p>1.5 Identify and analyse circumstances that constitute a breach of contract.</p> <p>1.6 Identify factors involved in the termination of contracts.</p> <p>1.7 Identify legislative requirements and procedures.</p>
2 Select appropriate contract.	<p>2.1 Communicate clearly and directly with all parties to confirm the capacity to form a binding agreement.</p> <p>2.2 Prepare and compile the range of documents that collectively make up the contract.</p> <p>2.3 Establish factors and special conditions associated with the parties' consent to a contract.</p> <p>2.4 Recognise and apply the requirements associated with an offer and acceptance of a contract.</p> <p>2.5 Select a contract appropriate to the type of construction.</p>

- 3 Prepare the contract.
 - 3.1 Draft appropriate contract accurately incorporating all details, including definitions of unreasonable or vexatious notice, repudiation of a contract by either party, conditions for completion at the cost of the contractor, ousting the contractor from the building or construction site and abandonment of a contract.
 - 3.2 Assess and schedule progress payments, including processes for applying for extension of time.
 - 3.3 Ensure any discrepancies or disagreements are resolved prior to contract preparation.
 - 3.4 Ensure legality and validity of draft contract in consultation with relevant persons.
 - 3.5 Prepare final contract in accordance with the organisation's legal process.
- 4 Administer the contract.
 - 4.1 Process progress payments accurately as due under the contract.
 - 4.2 Process applications for extension of time in accordance with organisational policies and contract conditions.
 - 4.3 Identify, negotiate and document variations to contract.
 - 4.4 Act to minimise liquidated damages or penalties nominated in the contract.
 - 4.5 Administer contract and resolve contractual disputes in accordance with contract and relevant legislation and regulations.
 - 4.6 Assess conditions for issuing a final certificate.
- 5 Finalise a contract.
 - 5.1 Apply process for practical completion of contract.
 - 5.2 Finalise defects liability under a building or construction contract.
 - 5.3 Finalise contract in accordance with relevant legislation and contract provisions.
 - 5.4 Issue appropriate certificate upon completion of the

contract work.

- 5.5 Complete and secure documentation arising from finalisation of a contract for records purposes.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

- Supersedes and is not equivalent to CPCBC4003A Select and prepare a construction contract
- Supersedes and is not equivalent to CPCBC4016A Administer a construction contract.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC4003 Select, prepare and administer a construction contract

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Typographical error in Element and Performance Criteria 3.3 corrected.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes but is not equivalent to CPCBC4003A Select and prepare a construction contract. Combines CPCBC4003A Select and prepare a construction contract and CPCBC4016A Administer a construction contract. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by selecting, preparing and administering one contract for a construction project.

In doing this, the candidate must:

- select the correct contract by analysing identified legislative requirements and construction type
- prepare the construction contract specifying requirements for contract termination and special conditions agreed by all parties
- administer the contract following government legal and regulatory requirements and to the organisation's standards
- monitor price and time variations and negotiate with various parties to resolve contract anomalies
- collect all related construction contract and final inspection documentation and issue completion certificate.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- Australian legal system and its relevance to contracts
- various types of housing and construction industry contracts and the circumstances they cover
- definitions and interpretations commonly applied to contracts
- Australian Standards

- *AS2124 General conditions of contract*, and
- *AS4000 General conditions of contract* series
- relationships between the organisation and its clients
- range of documents associated with a contract:
 - equipment, site accommodation and services information
 - human resource projections
 - materials lists
 - construction drawings and specifications
 - project timelines
 - schedules
- digital tools and devices to communicate and collaborate effectively with others
- range of digitally-based technology and applications to access, extract, integrate and compile information.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant government building and construction and contract legislation
- current building and construction codes and standards
- relevant construction industry contracts
- construction drawings and specifications
- organisational policies and procedures and other quality documentation required to undertake the performance criteria and assessment requirements
- digital devices, applications and software to transmit and receive information electronically.

CPCBC4004 Identify and produce estimated costs for building and construction projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4004A Identify and produce estimated costs for building and construction projects. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to establish estimated costs associated with the acquisition of materials and labour for building and construction projects. It includes factoring in relevant overhead costs and margins.

This unit of competency applies to estimators, builders, managers and trade contractors within the construction industry responsible for producing estimated costs on various residential and commercial construction projects within their scope of work as a trade contractor or builder.

This unit of competency is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, regulatory or registration requirements apply to this unit of competency in some jurisdictions. Relevant state and territory regulatory authorities should be consulted to confirm these requirements.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Establish project requirements.	<p>1.1 Read and interpret construction drawings and specifications in conjunction with relevant building and construction regulations, codes and standards.</p> <p>1.2 Identify building site features, type of building and method of construction, and specified building materials.</p> <p>1.3 Establish site facilities, and communication and temporary boundary fencing requirements.</p> <p>1.4 Identify waste removal requirements and apply waste management site fees.</p> <p>1.5 Identify additional project-specific statutory, approvals or compliance costs.</p>
2 Calculate materials and labour costs.	<p>2.1 Produce a materials and consumables quantity list and obtain a price from supplier.</p> <p>2.2 Identify and estimate off-site production costs, including delivery.</p> <p>2.3 Identify numbers of contractors, sub-contractors and employees appropriate for the project and work rates.</p> <p>2.4 Estimate labour hours and calculate labour costs, including on-costs and worker insurance costs.</p>
3 Identify type and cost of physical resources.	<p>3.1 Identify physical resources required for the project.</p> <p>3.2 Determine limitations, conditions, operational costs and timeframes for hire of physical resources.</p> <p>3.3 Obtain supplier prices, including transport of physical resources.</p> <p>3.4 Identify, itemise and cost plant, equipment and machinery.</p>

- 4 Produce estimated project costs.
 - 4.1 Review and compile materials, consumables and off-site production costs and delivery charges.
 - 4.2 Compile labour costs inclusive of rates and entitlements.
 - 4.3 Compile costs of physical resources.
 - 4.4 Apply organisational overhead recovery and margins.
 - 4.5 Produce estimated project costs for inclusion in a tender or bill.
 - 4.6 Manage and mitigate risks associated with estimating project costs.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCBC4004A Identify and produce estimated costs for building and construction projects.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC4004 Identify and produce estimated costs for building and construction projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4004A Identify and produce estimated costs for building and construction projects. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by estimating the cost of one residential or commercial building and construction project.

In doing this, the candidate must:

- estimate project costing from construction drawings, specifications and written information
- list physical resources appropriate for the construction of the project
- produce project cost using an appropriate software program.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- government building and construction regulations
- building and construction standards and codes
- the National Construction Code (NCC)
- organisational policies and procedures
- organisational scope, processes and requirements for using employee and subcontractor labour
- Environmental Protection Authority (EPA) regulations
- construction drawings and specifications
- relevant physical resources and requirements for their operations:
 - earth moving and excavation equipment
 - hoists and lifting equipment
 - mobile cranes
 - compressors
 - generators
 - pumps

- calculating unit costs:
 - construction cost per square metre
 - laying of foundation per metre
 - laying of slabs per square metre
 - masonry walls per square metre
 - laying of steel tray roofing per square metre
 - installation of pipes per metre
 - installation of sanitary ware per unit
 - tiling per square metre
 - painting per square metre
- a range of digitally-based technology and applications to estimate quantities, calculate costs and maintain records
- workplace procedures, workplace safety and environmental requirements.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- current construction drawings and specifications
- building and construction standards and codes
- government building and construction regulations
- organisational policies and procedures and other quality documentation required to undertake the performance criteria and assessment requirements
- calculating technology, online applications and software to produce building and construction costs.

CPCBC4005 Produce labour and material schedules for ordering

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4005A Produce labour and material schedules for ordering. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to produce schedules for physical and human resources and materials for residential or commercial projects. It includes monitoring project schedules and tracking and recording costs as they are incurred.

This unit of competency applies to site managers and forepersons, estimators, project managers and builders in the construction industry with responsibility for producing schedules for ordering materials and allocating labour.

This unit of competency is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, regulatory or registration requirements apply to this unit of competency in some jurisdictions. Relevant state and territory regulatory authorities should be consulted to confirm these requirements.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|--|
| 1 Assess physical and human resource requirements. | 1.1 Check conditions of approval from local government and regulatory bodies and project commencement dates. |
| | 1.2 Identify variations to scope of works and contractual terms and arrangements by the client. |
| | 1.3 Compile a list of nominated and approved suppliers and contractors and develop channels for effective communication. |
| | 1.4 Confirm availability of materials with suppliers and labour with contractors. |
| | 1.5 Enter critical project information into project schedule. |
| 2 Produce schedules. | 2.1 Prepare electronic call forward sheet and site files containing necessary site documentation. |
| | 2.2 Break down project into stages and tasks and set milestones and timeframes for commencement and completion. |
| | 2.3 Itemise materials and labour required for the stages of construction. |
| | 2.4 Sequence material delivery dates and commencement times for labour. |
| | 2.5 Factor in unplanned delays. |
| 3 Monitor project costs and maintain project files. | 3.1 Monitor construction stage progression costs and approved variation costs against estimated project cost. |
| | 3.2 Manage and monitor project progress against scheduled timelines. |
| | 3.3 Record unscheduled and approved variations, changes to the approved plan and specifications and delays to the project. |
| | 3.4 Resolve issues, within scope of responsibilities, and |

maintain a cost analysis against final estimated project cost.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- technology skills to:
 - use digital devices to communicate and collaborate effectively with suppliers, contractors and others
 - use equipment and programs to prepare and access electronic call forward sheets and files.

Unit Mapping Information

Supersedes and is equivalent to CPCBC4005A Produce labour and material schedules for ordering

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC4005 Produce labour and material schedules for ordering

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4005A Produce labour and material schedules for ordering. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by producing a schedule for the ordering of materials and allocation of labour for a residential or commercial building and construction project.

In doing this, the candidate must:

- produce a labour and materials schedule across the life of the project
- develop and manage efficient communications between staff, contractors and suppliers
- monitor, maintain and record project progress and variations, estimated and increased costs and changes to construction drawings and specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- relevant government building legislation and regulations
- building and construction codes and standards
- construction drawings and specifications
- building and construction contractor and supplier contracts
- local authority building application processes, approval and conditions
- organisational policies and procedures:
 - costing and ordering materials
 - selecting and engaging suppliers
 - approving and contacting contractors
- projects costs:
 - organisational and subcontractor labour
 - organisation overheads
 - public liability, professional indemnity and workers' compensation
 - temporary electrical, plumbing and draining services

- temporary site facilities, storage facilities and boundary fencing
- communications
- project administration
- workplace procedures, workplace safety and environmental requirements.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- current construction drawings and specifications
- relevant organisational policies and procedures
- various construction industry contracts
- organisational policies and procedures and other quality documentation required to undertake the performance criteria and assessment requirements
- digital devices, applications and software to set up electronic call forward sheets, compile site files and create channels of communication with internal and external stakeholders.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCBC4006 Select, procure and store construction materials for building and construction projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4006B Select, procure and store construction materials for low rise projects. Title change. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to supervise the systems through which construction materials are typically selected, acquired and stored on site for residential and commercial building and construction projects. It includes knowledge of relevant building and construction materials and technologies, environmental effects on materials and identifying non-compliant materials to ensure the delivered construction materials meet National Construction Code (NCC) requirements and contract and service specifications.

It applies to NCC classifications:

- Residential - Class 1 and 10 buildings, maximum two storeys and
- Commercial - Class 2 to 9, Type C only constructions.

It applies to builders, managers and industry professionals responsible for applying quality standards when procuring and supervising on-site storage of compliant construction materials.

This unit of competency is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, regulatory or registration requirements apply to this unit of competency in some jurisdictions. Relevant state and territory regulatory authorities should be consulted to confirm these requirements.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|---|-----|---|
| 1 Identify and evaluate building materials. | 1.1 | Identify and read current and relevant project plans, specifications, codes and construction requirements. |
| | 1.2 | Identify properties of specified materials and assess their suitability for the building project in the region. |
| | 1.3 | Evaluate materials based on their quality, compatibility and compliance. |
| | 1.4 | Establish environmental impacts of materials. |
| | 1.5 | Determine impact of allowable tolerances on the conversion of naturally occurring materials. |
| | 1.6 | Establish material assembly and installation tolerances to meet requirements of relevant construction industry standards. |
| 2 Select and procure building material. | 2.1 | Select materials that are structurally adequate and appropriate for the building system specified in the contract. |
| | 2.2 | Select materials for their safety, fire resistance rating, suitability, durability, serviceability and cost effectiveness. |
| | 2.3 | Consider short and long-term degradation of materials in relation to the building's proposed life cycle. |
| | 2.4 | Evaluate and consider alternative materials if specified materials are unavailable or unsuitable. |
| | 2.5 | Finalise selection of materials for use in accordance with contractual requirements and in consultation with relevant professionals and the client. |
| | 2.6 | Procure and order materials following organisation's purchasing requirements. |

- | | | |
|---|--|---|
| | 2.7 | Collect evidence of suitability from suppliers or manufacturers to ensure non-compliant materials are not used. |
| 3 | Supervise on-site delivery and storage of materials. | |
| | 3.1 | Determine limitations and effects of transportation on materials and components and take action to limit potentially damaging circumstances. |
| | 3.2 | Check delivered materials are compliant with specifications, are not damaged and correspond with delivery order. |
| | 3.3 | Allocate on-site storage space, supervise safe handling of materials and ensure the security and protection of materials to meet manufacturer specifications. |
| | 3.4 | Implement processes for inspecting all materials delivered on site for quantity, quality, defects, or damage and store safely. |
| | 3.5 | Inform relevant persons of actions relating to quality and inconsistencies of delivered building materials. |
| | 3.6 | Instruct relevant persons of established workplace safety requirements when accepting and storing delivered materials. |
| | 3.7 | Maintain records of deliveries, damaged and inferior materials and variations to specified materials. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access and extract information and develop relevant documentation
- communication skills to:
 - use written and verbal communication with manufactures and suppliers, and other building professionals.

Unit Mapping Information

Supersedes and is equivalent to CPCBC4006B Select, procure and store construction materials for low rise projects.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC4006 Select, procure and store construction materials for building and construction projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4006B Select, procure and store construction materials for low rise projects. Title change. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by selecting, procuring and supervising the delivery and on-site storage of materials for one construction project for a residential or commercial building up to a maximum of two storeys.

In doing this, the candidate must:

- analyse reports, manufacturer specifications and other reference material regarding material technologies, sustainability and environmental efficiency
- test and measure products against relevant industry standards
- develop, supervise and maintain systems to select, acquire and store project materials on site
- seek expert advice from manufacturers, architects, designers and engineers about selecting and procuring alternative materials.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- relevant government building and construction legislation
- relevant project plans, specifications, standards and codes
- the National Construction Code (NCC):
 - evidence of suitability relating to non-conforming building materials and products
- properties, applications and limitations of specified building materials, products and components:
 - cements
 - ceramics
 - concrete

- engineered timber products
- flooring
- framing
- glass
- mortars
- paints and coatings
- plasterboard
- plaster
- roofing
- structural steel
- environmental effects on materials, and preservation and protection methods:
 - timber
 - ferrous and non-ferrous metals
- alternative sustainable materials:
 - structural insulated panel systems
 - mud brick, straw bale and hemp
- construction supply processes and systems
- processes, procedures and techniques for:
 - identifying materials from plans and specifications
 - selecting and ordering compliant materials
 - external quality testing or inspection of materials to meet industry standards
 - referencing external reports and manufacturer specifications
 - seeking expert appraisal from architects, designers, engineers and relevant industry experts
 - refusing to accept non-compliant or substandard materials and taking appropriate action
- operational and functional features of materials handling equipment
- digital technology and applications to access, extract, integrate and compile information
- workplace safety:
 - relevant work health and safety (WHS) Act and regulations
 - hierarchy of control
 - hazardous manual tasks
 - mechanical material handling
 - licensing and competency for operating mechanical material handling equipment.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- current relevant government legislation
- the NCC and other relevant codes and standards
- construction drawings, site plans and specifications
- organisational policies, procedures and other quality documentation to undertake the performance criteria and evidence requirements
- manufacturer reports on materials
- digital devices, applications and software to research, transmit and receive information electronically.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCBC4007 Plan building and construction work

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Performance Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4007A Plan building or construction work. Minor change to title. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to plan on-site activities, employ human resources and obtain physical resources. It includes sequencing construction tasks, identifying appropriate skilled labour, physical resources and suppliers and assessing their availability, and developing documentation and advice for relevant authorities.

The unit of competency applies to those who decide on and arrange building and construction work for residential and commercial projects.

This unit of competency is suitable for builders, site managers, forepersons and other construction industry professionals using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, regulatory or registration requirements apply to this unit of competency in some jurisdictions. Relevant state and territory regulatory authorities should be consulted to confirm these requirements.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--------------------------------------|--|
| 1 Identify operational requirements. | 1.1 Read contract documentation to identify any unusual aspects of construction, use of materials or penalties. |
| | 1.2 Determine availability of selected subcontractors to suit the job requirements. |
| | 1.3 Assess and confirm availability of materials with suppliers. |
| | 1.4 Identify site access requirements and limitations and organise site entry. |
| | 1.5 Determine project commencement date and prepare and submit documentation for authorities controlling construction work. |
| | 1.6 Implement procedures for accepting and recording site deliveries. |
| | 1.7 Identify and implement relevant work health and safety (WHS) requirements. |
| 2 Plan for construction operations. | 2.1 Identify organisational strategies for implementing construction operations. |
| | 2.2 Review procedures for recording the hire of plant and equipment. |
| | 2.3 Review procedures for the removal of existing services and hazardous materials in accordance with Environment Protection Authority (EPA) requirements. |
| 3 Prepare project schedule. | 3.1 Sequence construction operations. |
| | 3.2 Create project schedule using appropriate technology. |
| | 3.3 Define critical path of the project and revise during the life of the project. |

- | | | |
|---|-----|---|
| | 3.4 | Adjust project timeframes to account for anticipated delays. |
| 4 Determine required resources. | 4.1 | Determine and document temporary services and site accommodation requirements. |
| | 4.2 | Determine and document materials and plant requirements and availability dates according to contract documentation. |
| | 4.3 | Determine and document on-site labour requirements according to contract documentation. |
| 5 Prepare and submit condition reports. | 5.1 | Negotiate access to inspect condition of external structure and internal finishing of adjacent properties. |
| | 5.2 | Compile and complete reports on the condition of existing buildings and structures on adjacent site boundaries. |
| | 5.3 | Forward copies of condition reports to the owners of adjacent buildings prior to commencing construction. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- technology skills to:
 - use communication tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access and extract information and develop relevant project schedules and documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCBC4007A Plan building or construction work

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCBC4007 Plan building and construction work

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Performance Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4007A Plan building or construction work. Minor change to title. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by planning construction work for one building and construction project.

In doing this, the candidate must:

- develop a project schedule and associated documentation for:
 - delivery of materials and plant and equipment
 - commencement dates for on site contractors
 - milestones and deliverables
 - project critical path and timeframes
 - contingencies for breakdown of activities.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- relevant government building and construction legislation, codes and standards
- types of building and construction industry contracts
- project plans and specifications
- sustainability and environmental requirements
- workplace safety:
 - work health and safety (WHS) Acts and regulations
 - hierarchy of control
- project management techniques
- organisation strategies and processes:

- briefing internal personnel, external agencies and clients
- calling for tenders for subcontractor operations
- appointing project managers and construction supervisors
- purchasing building supplies and construction materials
- refining project critical path information
- building and construction industry subcontractor system
- internal documentation systems:
 - applications for permits and service connections
 - environmental applications
 - parking restriction applications
- project schedule:
 - human resource schedule
 - material delivery schedule
 - project critical path
 - project timeframes
 - scheduling plant and equipment.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- current relevant government legislation
- current relevant building and construction codes and standards
- construction drawings, site plans and specifications
- organisational policies, procedures and other quality documentation to undertake the performance criteria and evidence requirements
- digital devices, applications and software to create project schedules and documentation.

CPCBC4008 Supervise site communication and administration processes for building and construction projects

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.

Typographical error in Element 4 corrected.

Element 4.2 corrected from; Conduct onsite inspections for project monitoring according to schedule using relevant inspection checklists to:

4.2 Conduct onsite project monitoring and inspection of work quality

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4008B Conduct on-site supervision of building and construction projects. Title change for clarity purposes. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to supervise site communications, monitor and maintain compliance with codes and standards and implement project administration processes on a building and construction project.

It is strongly recommended that the site, as specified in the performance evidence, is 'live' (see Companion Volume for guidance).

This unit of competency specifies the skills and knowledge required to supervise the administration of quality control compliance and the use of site communications and record keeping systems; and conduct onsite inspections to complete the required project administration processes.

This unit applies to National Construction Code (NCC) classifications:

- Residential - Class 1 buildings to a maximum of two storeys
- Commercial - NCC Class 2 to 9, Type C only constructions.

This unit of competency is suitable for builders, site managers, forepersons and other construction industry professionals using specialised knowledge and skills to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

Completion of the general construction induction training program, specified in the model Code of Practice for Construction Work, is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|---|-----|---|
| 1 Supervise the administration of quality control compliance. | 1.1 | Identify project quality control compliance requirements. |
| | 1.2 | Communicate organisational quality control processes and industry requirements to relevant personnel. |
| | 1.3 | Develop processes to ensure onsite work performance meets industry regulatory framework, jurisdictional requirements and quality control standards. |
| | 1.4 | Confirm that regulatory, jurisdictional and organisational compliance and quality control requirements have been met. |
| | 1.5 | Access or develop schedules and checklists detailing specific inspections to be conducted at appropriate stages of construction. |
| 2 Supervise the administration of projects. | 2.1 | Identify project administration requirements. |
| | 2.2 | Authorise payment of material and contractor invoices, drawing against contract allowances and back-charges, as required. |
| | 2.3 | Authorise variations to contracts and take corrective action as required. |
| | 2.4 | Process insurance claims for site loss or damage. |
| 3 Supervise the use of | 3.1 | Develop and implement systems for effective |

- | | | |
|---|-----|--|
| site communications and record keeping systems. | | communication between onsite and offsite staff, contractors and suppliers that systematically gather onsite information. |
| | 3.2 | Develop and implement construction project recording systems to capture relevant project details. |
| | 3.3 | Maintain a daily communications diary and key events. |
| | 3.4 | Record information relating to certifier inspections, union and legislative matters. |
| 4 | 4.1 | Conduct onsite project monitoring and inspection of work quality |
| | 4.2 | Apply workplace safety requirements and project administration procedures during onsite visit. |
| | 4.3 | Conduct onsite project monitoring and inspection of work quality. |
| | 4.4 | Inspect and record quality of work, notify relevant people of defects and issue rectification notice. |
| | 4.5 | Develop systems to monitor rectified work to ensure compliance with organisational quality control requirements, building standards and client satisfaction. |
| 5 | 5.1 | Complete project administration processes. |
| | 5.2 | Record work defects notified by external parties, establish liabilities and remedial action required, and develop inspection checklist. |
| | 5.3 | Notify client of rectification, and record client's response to completed work. |
| | 5.4 | Instigate procedures that will result in client approval and acceptance where this was not the client's initial response. |
| | 5.5 | Confirm contract requirements are fulfilled with relevant company personnel and client. |
| | 5.6 | Arrange for local authority completion inspection. |
| | 5.7 | Prepare certificates and appropriate client handover information, including all guarantees, warranties and termite protection forms. |

Foundation Skills

As well as the foundation skills candidates require:

- technology skills to:
 - use communication tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access, extract information and develop relevant documentation

Unit Mapping Information

Supersedes and is equivalent to CPCBC4008B Conduct on-site supervision of building and construction projects.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC4008 Supervise site communication and administration processes for building and construction projects

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.

Typographical error in Element 4 corrected.

Element 4.2 corrected from; Conduct onsite inspections for project monitoring according to schedule using relevant inspection checklists to:

4.2 Conduct onsite project monitoring and inspection of work quality

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4008B Conduct on-site supervision of building and construction projects. Title change for clarity purposes. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by:

1. Developing a plan to supervise the administration processes for one building and construction project which is either a:
 - Class 1 to a maximum of two storeys, or
 - Class 2 to 9, Type C building

In doing this, the candidate must:

- a. Create a plan to implement, administer, maintain and monitor site quality control.
 - b. Read and understand thoroughly the Site Safety Plan used on site.
 - c. Outline the communication systems that will be used on site.
 - d. Outline how systematic gathering of onsite information will be recorded.
 - e. Develop a progress inspection checklist for at least two trades for a section of building.
2. Conducting at least one site inspection to evaluate safety, project progress and work

quality for at least one section of a building. This worksite must be for a building and construction project which is either a:

- Class 1 to a maximum of two storeys, or
- Class 2 to 9, Type C building
 - a. The inspection checklist used
 - b. The rectification plan which outlines:
 - i. What must be rectified
 - ii. Why it must be rectified (with reference to appropriate standard, code or plan specification, etc)
 - iii. The recommended order in which rectifications should be done
 - iv. Expected duration of each rectification and when they are expected to be rectified by
 - v. Who will carry out the rectification and how they will be notified
 - vi. Will any rectifications affect the work remaining schedule, if yes - who did you notify.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- building and construction industry contracts
- construction methodologies
- workplace procedures and work health and safety (WHS):
 - hierarchy of control
 - duty of care
 - risk assessment
- organisational quality management systems:
 - communicating with regulatory authorities
 - worker and contractor payment systems
 - issuing of completion certificates and appropriate documentation
 - finalising project contractual agreements
- onsite communication:
 - emails
 - face-to-face verbal communication
 - telephone contacts

- site diaries
- written reports and memoranda

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated workplace is one that fully replicates the resources, environment and any time and productivity pressures that exist in the actual workplace, and which meets industry standards for safety and environmental practices. The simulated workplace environment must be developed in consultation with industry stakeholders. (see Companion Volume for guidance).

Candidates must have access to:

- relevant jurisdictional safety legislation and regulations
- building and construction codes and standards
- relevant project plans and specifications
- organisational quality control documentation relevant to supervising the administration of quality control compliance, communications and recording systems, and work progress and quality
- business and safety equipment and materials to supervise administration processes for a building and construction project onsite.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCBC4009 Apply legal requirements to building and construction projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4009B Apply legal requirements to building and construction projects. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to apply legal requirements to residential and commercial building and construction projects. It includes meeting licensing requirements, complying with financial and insurance laws and meeting the conditions of building contracts.

It applies to National Construction Code (NCC) classifications:

- Residential - Class 1 and 10 buildings, maximum two storeys
- Commercial --Class 2 to 9, Type C only constructions.

This unit of competency applies to builders, site managers, forepersons, estimators and other construction industry personnel responsible for applying legal requirements to residential or commercial building and construction projects.

This unit of competency is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems relating to legal requirements of building and construction projects.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, regulatory or registration requirements apply to this unit of competency in some jurisdictions. Relevant state and territory regulatory authorities should be consulted to confirm these requirements.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Identify legislation relating to the construction project.	<p>1.1 Identify legal requirements from relevant government Acts and regulations appropriate to the type of building and construction project.</p> <p>1.2 Identify legal requirements for building contracts, construction insurance, industrial relations obligations and payroll systems.</p> <p>1.3 Determine class of building for the project and check for limitations of builder's registration and licence.</p> <p>1.4 Identify any construction activity restrictions, limitations and conditions from building approvals and permits for the project.</p> <p>1.5 Check licensing requirements or competencies for subcontractors, site supervisors and managers.</p> <p>1.6 Identify sustainability, environmental and waste management legislated requirements.</p> <p>1.7 Identify work health and safety (WHS) legislation and requirements of Construction work Code of Practice.</p>
2 Apply site safety requirements.	<p>2.1 Apply all the relevant requirements of WHS regulations that apply to the project.</p> <p>2.2 Adapt organisation's workplace procedures and workplace safety requirements to align with the project.</p> <p>2.3 Implement strategies to ensure all workers are inducted, informed and regularly updated of their on-site safety responsibilities.</p>
3 Apply legal	<p>3.1 Apply contract law in accordance with common law principles, relevant state or territory laws and</p>

- requirements. regulations, and fair trading legislation.
- 3.2 Apply the contract agreements and meet all the conditions during construction of the project.
 - 3.3 Confirm all mandatory building, subcontractor and worker's compensation insurances are current and applied to comply with legal requirements.
 - 3.4 Administer payroll system which incorporates employee and contractor payments, deduction of taxes, including goods and services tax (GST), tracking of transactions and calculating wages.
- 4 Apply industrial relations.
- 4.1 Apply workplace and subcontractor agreements and relevant awards to comply with industrial relations legislation.
 - 4.2 Identify and apply provisions for training agreements and make information available to all workers.
 - 4.3 Take proactive measures to ensure discrimination and harassment are not practiced in the workplace.
- 5 Resolve disputes and complaints.
- 5.1 Apply dispute resolution processes following organisational policies.
 - 5.2 Address complaints promptly, consult with complainant and resolve issue with the best solution for all.
 - 5.3 Record dispute outcome and maintain documentation.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCBC4009B Apply legal requirements to building and construction projects

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCBC4009 Apply legal requirements to building and construction projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4009B Apply legal requirements to building and construction projects. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by applying legal requirements to one residential or commercial building and construction project.

In doing this, the candidate must:

- identify and apply relevant legislative requirements applicable to the building and construction project
- apply legal obligations for:
 - insurance covering workers, materials and building
 - industrial relations, financial transactions, payment of wages and payment of subcontractor and supplier invoices
 - contractual agreements
- apply building and construction standards and codes during construction.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- building and construction industry contracts
- builder registration and licensing
- Construction work Code of Practice
- appropriate government legislation:
 - business registration and licensing
 - industrial relations
 - work health and safety (WHS)
 - taxation and financial transactions
 - insurance
 - waste management and environmental protection

- organisational policies and procedures.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant government building and construction legislation
- current building and construction codes and standards
- relevant construction industry contracts
- organisational policies and procedures, insurance, industrial relations and other quality documentation required to undertake the performance criteria and assessment requirements
- digital devices, applications and software to obtain legal and building and construction information and record outcomes of disputes.

CPCBC4010 Apply structural principles to residential and commercial constructions

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Correction to mapping.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes but is not equivalent to CPCBC4010B Apply structural principles to residential low rise constructions.
Combines CPCBC4010B Apply structural principles to residential low rise constructions and CPCBC4011B Apply structural principles to commercial low rise constructions.
Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to apply structural principles to the construction of residential or commercial structures. This unit includes applying structural principles to footing, floor, wall and roof systems.

It applies to National Construction Code (NCC) classifications:

- Residential - Class 1 and 10 buildings, maximum two storeys
- Commercial - Class 2 to 9, Type C only constructions.

This unit of competency applies to builders, site managers, forepersons and other managers in the building and construction industry who apply structural principles to the demolition or construction of structures.

This unit of competency is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems relating to building application approvals.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, regulatory or registration requirements apply to this unit of competency in some jurisdictions. Relevant state and territory regulatory authorities should be consulted to confirm these requirements.

Pre-requisite Unit

- CPCBC4053 Apply building codes and standards to the construction process for Class 2 to 9 Type C buildings
- CPCBC4001 Apply building codes and standards to the construction process for Class 1 and 10 buildings

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|---|
| 1 Analyse the structural integrity of building project. | 1.1 Determine the class of building, intended use of building and climate zone from the NCC. |
| | 1.2 Analyse project for compliance with NCC bushfire, high wind, earthquake and alpine environment requirements. |
| | 1.3 Analyse building design and structural integrity from project plans and specifications, building standards and codes. |
| | 1.4 Determine the effect of section properties on various materials. |
| | 1.5 Determine if structural performance meets the General Requirements and Performance Requirements of NCC. |
| | 1.6 Confirm analysis with relevant industry professionals. |
| | 1.7 Conduct pre-commencement site inspection to confirm analysis. |
| | 1.8 Assess new and emerging building technologies for application to the construction process and their compliance with NCC requirements and relevant Australian Standards. |
| 2 Plan, coordinate and | 2.1 Identify earthworks and footing or slab configuration |

- | | |
|---|--|
| manage the laying of footings. | <p>from project plans and specifications.</p> <p>2.2 Establish cut and fill, excavation and compaction compliance with geotechnical report.</p> <p>2.3 Assess performance of reinforcement, concrete and other elements which contribute to structural integrity of specified footings.</p> <p>2.4 Determine compliance with building and construction regulations, standards and codes.</p> <p>2.5 Set out footings in accordance with project plans and specifications.</p> |
| 3 Plan, coordinate and manage laying of flooring systems. | <p>3.1 Identify flooring systems materials, components and configuration from project plans and specifications.</p> <p>3.2 Establish footing type and tie-down details.</p> <p>3.3 Assess suspended flooring system component sections' compliance with standards and codes' span requirements.</p> <p>3.4 Determine if floor framing and flooring is compliant with NCC Performance Requirements for climate zone, fire resistance and rising damp requirements.</p> <p>3.5 Supervise and check laying of specified floor system complies with project documentation.</p> |
| 4 Plan, coordinate and manage the building of wall systems. | <p>4.1 Identify and analyse structural and non-structural wall systems used in the planning of the building and construction project.</p> <p>4.2 Determine materials used for timber and steel framing and structural steel members meet the Performance Requirements of the NCC and timber framing complies with <i>AS 1684 Residential timber-framed construction</i>.</p> <p>4.3 Identify, implement and check processes for erecting structural and non-structural wall systems comply with manufacturer's specifications and building and construction standards and codes.</p> <p>4.4 Plan, implement and check requirements for application of bracing, tie-downs, tolerances, allowances, and fixing</p> |

- and installation of wall frame components for compliance with relevant Australian Standards, codes and manufacturer specifications.
- 4.5 Manage processes to ensure quality of the frame, whether factory pre-cut and pre-nailed, factory pre-cut and assembled on site, or cut and assembled on site.
 - 4.6 Identify and implement allowances for services to be installed.
 - 4.7 Check compliance of installation of windows and doors with building and construction standards and code and manufacturer’s specifications.
- 5 Plan, coordinate and manage the building of structural roof systems.
- 5.1 Identify type of structural roof system and components and determine compliance with Performance Requirements of NCC.
 - 5.2 Plan, implement and check erection of structural roof, roof trusses or hand cut roof members comply with building and construction standards and codes and accepted industry construction practices.
 - 5.3 Plan, implement and check installation of roof sarking and cladding, skylights, roof ventilators and service penetrations comply with building standards, codes and manufacturer specifications.
 - 5.4 Manage processes to ensure roof systems’ quality finish.
- 6 Plan, coordinate and manage wall cladding.
- 6.1 Assess structural performance of cladding to be used for bracing in the frame construction for compliance with building and construction standards, codes and manufacturer specifications.
 - 6.2 Determine cladding, vapour permeable sarking or waterproof membrane and components meet the Performance Requirements of NCC.
 - 6.3 Supervise and check installation of specified cladding complies with building and construction standards, codes and industry-accepted industry practices.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is not equivalent to CPCBC4010B Apply structural principles to residential low rise constructions.

Supersedes and is not equivalent to CPCBC4011B Apply structural principles to commercial low rise constructions.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC4010 Apply structural principles to residential and commercial constructions

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Correction to mapping.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes but is not equivalent to CPCBC4010B Apply structural principles to residential low rise constructions.
Combines CPCBC4010B Apply structural principles to residential low rise constructions and CPCBC4011B Apply structural principles to commercial low rise constructions.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by applying structural principles to the construction of one building project.

In doing this, the candidate must:

- assess the structural integrity of the construction project
- apply technical construction principles and concepts to the appropriate selection, integration and building of construction elements and components
- coordinate, plan, implement and check the construction of the structure
- plan and document the structural principles of the construction of a building.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- government building and construction legislation and regulations
- industry building and construction standards and codes
- the NCC
- classes of buildings described in the NCC
- standards and codes for timber framing
- structural principles:
 - behaviour of structural materials

- dead, live and wind loads
- performance of beams
- performance of columns
- performance of roof trusses
- section properties
- solution of force systems
- wind bracing
- project documentation:
 - approval project plans and specifications
 - structural designs and specifications
 - engineer's footing design and specifications
 - registered plans
 - contour site plan
 - geotechnical report
 - underpinning, rock anchors and shoring design and specifications
 - retaining wall and tanking design and specifications
 - structural, floor, wall and roof systems
- organisational quality documentation:
 - policies and procedures
 - workplace procedures, workplace safety and environmental requirements
 - various construction contracts
- footing systems:
 - bored pier footings
 - columns or stumps
 - concrete slab floors
 - reinforced piers and beams
 - drilled and driven piles
 - mass concrete piers
 - screw piles
 - waffle pod slabs
 - brick bases
- floor system and components:
 - suspended and slab on ground concrete floors
 - suspended timber, metal and steel floor frames
 - engineered floor joists
 - platform floor construction
 - fitted (cut-in) floors
 - compressed sheet wet area flooring
 - sheet flooring
 - tongue and groove flooring

- autoclaved aerated concrete (AAC) panel systems
- structural wall systems:
 - composite walls featuring tilt-up slab, engineered timber products and lightweight AAC
 - framed walls incorporating timber, engineered timber products and lightweight section steel
 - masonry walls incorporating cavity brick, single-leaf masonry and AAC
- wall cladding:
 - weather boards
 - coatings over base materials
 - corrugated metal sheeting
 - fibre cement and compressed wood panelling
 - tilt-up slab
 - unfired and fired AAC masonry
- structural roof systems:
 - timber and metal pre-fabricated trusses
 - hand cut timber
- roof types:
 - box gable
 - dual pitch
 - Dutch gable and Dutch hip
 - gable end
 - hip and valley
 - north light
 - skillion
 - rafter and purlin
- roof cladding:
 - concrete, clay and metal tiles
 - shakes and shingles
 - short and long run, various profile and metal sheeting
- AAC floor and wall systems
- causes and implications of structural defects related to failure of applying structural principles to residential and commercial buildings
- extent of remedial work required for various defects cause by inadequate design and application of structural principles.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant government building and construction legislation
- current building and construction codes and standards
- the NCC
- material manufacturer's specifications
- construction drawings and specifications and other quality documentation required to undertake the performance criteria and assessment requirements
- digital devices, applications and software to obtain and research information electronically and exchange information with other stakeholders.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCBC4012 Read and interpret plans and specifications

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4012B Read and interpret plans and specifications. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to read and interpret plans and specifications applicable to residential and commercial projects. It includes identifying site characteristics, features of the proposed building and details of the construction.

It applies to National Construction Code (NCC) classifications:

- Residential - Class 1 and 10 buildings, maximum two storeys
- Commercial - Class 2 to 9, Type C only constructions.

The unit of competency applies to site managers, forepersons, estimators, builders, managers and other building and construction industry personnel who read and interpret plans and specifications for quantity surveying, costing and tendering and construction of building and construction projects.

This unit is suitable for people with specialised knowledge, completing routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, regulatory or registration requirements apply to this unit of competency in some jurisdictions. Relevant state and territory regulatory authorities should be consulted to confirm these requirements.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Identify types of plans.	1.1 Confirm plans, specifications and amendments are the current version.
	1.2 Identify types of plans and aspects of the drawings specific for the intended purpose.
	1.3 Confirm details on plans comply with the specifications.
2 Read and interpret the plan.	2.1 Distinguish key features on the plans.
	2.2 Identify building location from site plan.
	2.3 Identify building layout, spaces and dimensions from floor plan.
	2.4 Examine detail drawings to determine sizes, thickness and methods of construction.
	2.5 Identify internal linings, external cladding and roof materials from plans and specifications.
3 Identify structural details.	3.1 Identify concrete footing and slab sizes and position and type of reinforcing.
	3.2 Identify load bearing points of the building.
	3.3 Identify wind bracing and tie-down requirements.
4 Identify non-structural details.	4.1 Identify provisional sum (PS) and prime cost (PC) items.
	4.2 Locate installation and connection points of services to the building.
	4.3 Identify location of fixtures from plans and details of finishes from specifications.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCBC4012B Read and interpret plans and specifications

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC4012 Read and interpret plans and specifications

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4012B Read and interpret plans and specifications. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by identifying and interpreting building and construction information from a set of plans and specifications.

In doing this, the candidate must:

- identify orientation of structures, site contours, datum and reduced levels, and site features to be removed or retained
- identify structural load bearing information of the building and compare information from specification
- check wind bracing materials and tie-down methods for accuracy against the wind bracing table
- interpret essential elements from two-dimensional to three-dimensional format, and apply to estimation, planning and supervisory tasks.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- types of plans:
 - concept drawing/sketches
 - architectural
 - structural
 - civil
 - mechanical
 - electrical
 - plumbing and draining
- parts of a plan:
 - site plan
 - floor plan

- elevations
- sections
- details
- drawing conventions:
 - datum and reduced levels (RL)
 - title block
 - scale
 - dimensions
 - abbreviations
- utilities and services plans and specifications
- isometric drawings, oblique drawings, perspective drawings and orthographic drawings
- computer-aided design (CAD) drawings
- building and construction regulations, standards and codes
- classes of buildings
- the NCC
- building information modelling (BIM)
- building and construction methods and terminology
- workplace processes, workplace safety and environmental requirements.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- plans and specifications and other quality documentation required to undertake the performance criteria and assessment requirements
- relevant government building and construction and contract legislation
- current building and construction codes and standards
- National Construction Code
- computers, applications and software to access CAD.

CPCBC4013 Prepare and evaluate tender documentation

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4013A Prepare and evaluate tender documentation. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to evaluate project and contract requirements and prepare and formalise tender documentation in the building and construction industry. It includes interpreting, compiling and documenting essential project information and demands into a final tender document.

It applies to builders, estimators and managers in the building and construction industry who have a responsibility for evaluating and preparing tenders for residential and commercial projects.

This unit of competency is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|--|-----|---|
| 1 Research project requirements. | 1.1 | Gather relevant information for tender preparation from current and approved project plans, specifications and project documentation. |
| | 1.2 | Select appropriate contracts and tender documents. |
| | 1.3 | Identify and record risks during evaluation of contracts and tender documents. |
| 2 Prepare tender documentation. | 2.1 | Collate all information for tender preparation and check for accuracy. |
| | 2.2 | Prepare tender documentation to correspond with selected contracts and organisational processes and procedures. |
| 3 Attach supporting documentation. | 3.1 | Select and accurately complete relevant documentation required to submit with the tender. |
| | 3.2 | Attach vital information, drawings, specifications or other supporting evidence to the tender document. |
| | 3.3 | Prepare and attach client acceptance forms and any amendments and conditions to the tender or contract. |
| 4 Obtain tender approval or endorsement. | 4.1 | Conduct final evaluation of completed tender documentation. |
| | 4.2 | Complete appropriate client contract for the project. |
| | 4.3 | Provide tender documentation to the appropriate staff member for approval or endorsement. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- reading skills to:
 - extract and comprehend relevant information from complex document text
- technology skills to:

- use tools and devices to communicate and collaborate effectively with others
- use equipment and programs to access and extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCBC4013A Prepare and evaluate tender documentation

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC4013 Prepare and evaluate tender documentation

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4013A Prepare and evaluate tender documentation. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by preparing tender documents for two contracts, with one being for a residential project and one for a commercial project.

In doing this, the candidate must:

- source and check relevant plans, specifications and tender documentation for currency and amendments
- evaluate risk associated with the tender process.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- relevant government building and construction regulations, codes and standards
- structure and operations of the organisation's costing, tendering and contracting system
- tender documents and supporting documentation:
 - artist's impressions
 - building information modelling (BIM)
 - product information
 - promotional materials
 - reports and findings beneficial to the organisation
- project risks associated with tendering:
 - breach of contract
 - project delays
 - payment disputes
 - delays in progress payments
 - circumstances, such as:
 - delivery delays that extend project completion dates
 - labour shortages

- weather
- exposure through clauses that work against the organisation
- failure to adequately anticipate labour or materials costs
- inappropriate funding levels and funding shortfalls
- industrial disputes through misunderstandings or overt action
- risk of default or non-performance of key players
- types of building and construction drawings and specifications
- types, scope and usage of labour through the employee and subcontractor systems
- using appropriate costing software programs.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- current relevant government legislation
- current relevant building and construction codes and standards
- construction contracts and associated tender documentation
- organisational policies, procedures and other quality documentation to undertake the performance criteria and evidence requirements
- business technology, applications and software to produce tender documentation.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCBC4014 Prepare simple building sketches and drawings

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4014A Prepare simple building sketches and drawings. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to prepare sketches and drawings used for communicating ideas to clients and other parties. It includes capturing design concepts and options taken from architectural drawings to create simpler versions.

The unit of competency applies to builders, experienced tradespersons, project managers and estimators who prepare sketches and drawings for estimating, explaining details and showing measurements required for building and construction work.

It does not describe more complex drafting skills.

This unit of competency is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, regulatory or registration requirements apply to this unit of competency in some jurisdictions. Relevant state and territory regulatory authorities should be consulted to confirm these requirements.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Prepare to make sketches and drawings.	1.1 Identify and select relevant information from construction plans required for sketching or drawing.
	1.2 Confirm construction plan information complies with building and construction regulations, standards and codes.
	1.3 Consider purpose and presentation of drawings and sketches and the intended audience.
	1.4 Determine format of information and select and inspect equipment for serviceability.
2 Create simple sketches and drawings.	2.1 Establish and record measurements, information and details required for drawing and sketches.
	2.2 Transfer vital information into two-dimensional and three-dimensional drawing and sketches.
	2.3 Create sketches and drawings using standard drawing conventions to detail vital information.
	2.4 Produce sectional drawings to clearly identify and label elements and components.
3 Notate and process drawings.	3.1 Apply essential information to the drawing using dimension lines, symbols and abbreviations following standard drawing conventions.
	3.2 Include drawing and job title, date, scale and sheet number in the title block.
	3.3 Produce completed drawings in an appropriate form for presentation.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCBC4014A Prepare simple building sketches and drawings.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC4014 Prepare simple building sketches and drawings

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4014A Prepare simple building sketches and drawings. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by drawing two components of the fabric of the building from a set of construction plans and prepare drawings for presentation.

In doing this, the candidate must:

- select one structural and one non-structural component and collate vital information required for the drawing
- prepare simple sketches of the structural and non-structural components
- produce clear and descriptive drawings with appropriate notations and labelling.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- types of building and construction plans:
 - presentation drawings
 - isometric drawings
 - orthographic drawings
 - perspective drawings
- drawing conventions:
 - sheet layout
 - title block
 - line types
 - symbols
 - dimensions and dimension lines
 - abbreviations
- key features of a construction plan
- computer-aided design (CAD) drawings

- technical drawing by hand
- building and construction regulations, standards and codes
- the NCC
- building information modelling (BIM)
- building and construction methods and terminology
- workplace processes, workplace safety and environmental requirements.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- construction plans and specifications
- current building and construction codes and standards
- the NCC
- hand drawing equipment
- workplace procedures and other quality documentation required to undertake the performance criteria and assessment requirements
- computers, applications and software to access drawings and other relevant information.

Links

CPCBC4015 Prepare specifications for all construction works

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4015A Prepare specifications for all construction works. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to prepare clearly understood specifications for construction works that may range from an outline to a more detailed specification. It includes establishing the level of detail required in inherent contractual obligations and developing the work specifications.

It applies to National Construction Code (NCC) classifications:

- Residential - Class 1 and 10 buildings, maximum two storeys
- Commercial - Class 2 to 9, Type C only constructions.

This unit of competency applies to builders, site managers, estimators, forepersons and other construction industry personnel responsible for specifying materials, project timelines and quality of work for residential and commercial construction projects.

This unit of competency is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Determine specification requirements. | 1.1 Read and identify prescriptive and performance requirements from development approval, project brief, working drawings, codes and other relevant documents. |
| | 1.2 Determine suitability of information for adaptation into the current project. |
| | 1.3 Identify scope of works. |
| | 1.4 Ascertain contractual obligations and, where necessary, seek clarification and advice from specialists. |
| 2 Assess the nature and scope of the work. | 2.1 Conduct site inspection to establish and record site layout, details and features and preliminary site-work requirements. |
| | 2.2 Evaluate the relevant details and level of quality necessary to carry out the nature and scope of work. |
| | 2.3 Undertake research to establish appropriate schedules, using relevant data sources. |
| | 2.4 Tabulate and cross-reference details to ensure consistency between the design brief, working drawings and specifications. |
| | 2.5 Provide details in the specification that conform to industry codes of practice, Australian Standards and relevant statutory requirements. |
| 3 Prepare the specification document. | 3.1 Identify the contractual obligations and rights of the parties involved in the specification. |
| | 3.2 Collate and add relevant information requested from specialists, colleagues, suppliers, manufacturers and clients. |
| | 3.3 Complete specification document, check and edit thoroughly for compliance with requirements. |
| | 3.4 Present specification to the client in the required format |

and timeframe.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access and extract information and develop relevant documentation.
 -

Unit Mapping Information

Supersedes and is equivalent to CPCBC4015A Prepare specifications for all construction works

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC4015 Prepare specifications for all construction works

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4015A Prepare specifications for all construction works. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by preparing a works specification for one building and construction project.

In doing this, the candidate must:

- arrange researched work specification information into easily understood formats
- draft the specification free of any ambiguities
- structure the specification document using correct terminology and link to other relevant construction documentation
- attach evidence of suitability, as stated in the National Construction Code (NCC), from supplier or manufacturer to repudiate non-conforming building products
- complete the specification to meet National Specification System of Australia (NATSPEC) and other relevant standards applicable to the building project.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- NATSPEC and other relevant industry standard specifications and codes
- building project scope of work:
 - standards of work
 - work schedules
 - milestones
- prescriptive requirements:
 - performance requirements
 - detail relating to materials and quality of work
 - nominated subcontractors
 - provision and costs of site access and facilities
- contractual obligations:
 - expected performance levels

- insurance requirements
- work health and safety (WHS) issues
- type of tender
- organisational quality assurance relating to works specifications
- relevant legislation:
 - contract law
 - consumer protection legislation
 - WHS
- requirements of evidence of suitability stated in the NCC
- documentation requirements arising from building information modelling (BIM).

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant government regulations, codes and standards
- current project plans, building specifications and manufacturer's product information
- organisational policies, procedures and other quality documentation to undertake the performance criteria and evidence requirements
- NATSPEC and other industry standard specifications
- digital devices, applications and software to prepare construction specifications.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCBC4017 Arrange resources and prepare for the building and construction project

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4017A Arrange resources and prepare for the building or construction project. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to identify and procure the necessary on-site physical and human resources and systematically apply the supply process for a building and construction project. It includes notifying external agencies, employees and contractors and coordinating activities to meet scheduled timeframes.

It applies to National Construction Code (NCC) classifications:

- Residential - Class 1 and 10 buildings, maximum two storeys
- Commercial - Class 2 to 9, Type C only constructions.

This unit of competency applies to builders, site managers and forepersons, estimators and other building and construction industry professionals who are responsible for pre-construction preparation of residential and commercial construction projects.

This unit of competency is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Complete preliminary construction requirements.	1.1	Source, read and interpret relevant project documentation.
	1.2	Set site handover date with client once appropriate fees are confirmed paid with relevant persons.
	1.3	Establish and provide insurance and security requirements.
	1.4	Notify authorities of the commencement of scheduled works.
	1.5	Determine and advise relevant persons of work, parking and other restrictions.
2 Organise on-site services and facilities.	2.1	Identify requirements for on-site facilities and services.
	2.2	Arrange, receive and position site office, storage sheds and on-site toilets and facilities.
	2.3	Identify and develop processes to protect or utilise existing services at the site.
	2.4	Arrange temporary power and water connections with service providers.
	2.5	Identify and meet council requirements for temporary site set-up.
3 Arrange public protection.	3.1	Follow work health and safety (WHS) and local authority authorisations for site setup.
	3.2	Erect compliant hoardings, fencing and signage.
	3.3	Arrange temporary site access and egress to meet local authority requirements.

- | | | |
|--------------------------------------|-----|--|
| | 3.4 | Organise waste facilities and waste removal. |
| 4 Organise on-site delivery. | 4.1 | Confirm and order materials to meet scheduled delivery dates. |
| | 4.2 | Check availability of physical resources and schedule delivery as needed. |
| | 4.3 | Receive, secure and protect materials and plant and equipment. |
| 5 Organise on- site human resources. | 5.1 | Address industrial relations and on-site safety matters that could impact on the preparation and human resourcing for building work. |
| | 5.2 | Identify and allocate on-site human resource requirements. |
| | 5.3 | Engage or appoint construction work supervisor. |
| | 5.4 | Engage appropriate employees or contractors as stated for project needs. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access and extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCBC4017A Arrange resources and prepare for the building or construction project.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC4017 Arrange resources and prepare for the building and construction project

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4017A Arrange resources and prepare for the building or construction project. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by identifying, planning and establishing the essential pre-construction infrastructure for a commercial or residential project.

In doing this, the candidate must:

- procure sufficient on-site facilities and materials to support the project requirements
- schedule temporary services and human resources
- sequence delivery of materials and equipment and allocation of human resources
- record and maintain information from local council, external authorities, employees and contractors.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- external service authorities, including:
 - electricity authorities
 - environmental protection agencies
 - local government agencies
 - road traffic authorities
 - water authorities
 - electronic communications
- relevant government building and construction regulations, codes and standards
- local council requirements:
 - consent matters
 - heritage protection
 - tree conservation

- environmental requirements
- organisational quality documentation:
 - resource procurement processes
 - policies and procedures
- workplace safety requirements
- relevant employee and contractor industrial relations and licensing requirements.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant government building and industrial relations legislation
- current relevant Building and Construction codes and standards
- current project plans, specifications and manufacturer's product information
- organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- business equipment and technology to facilitate arranging resources and preparing for a construction project.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCBC4018 Apply site surveys and set-out procedures to building and construction projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4018A Apply site surveys and set-out procedures to building and construction projects. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to use technical instruments and levelling and surveying techniques to accurately set-out a building on site. It includes determining grid levels and developing contour plans.

It applies to National Construction Code (NCC) classifications:

- Residential - Class 1 and 10 buildings, maximum two storeys
- Commercial - Class 2 to 9, Type C only constructions

This unit of competency applies to builders, site supervisors and related construction industry professionals responsible for ensuring accurate application of site surveys and set-out of a residential and/or commercial building.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, regulatory or registration requirements apply to this unit of competency in some jurisdictions. Relevant state and territory regulatory authorities should be consulted to confirm these requirements.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Prepare for and conduct site set-out.	1.1 Source, read and follow current project plans and site set-out procedures.
	1.2 Select and use levelling devices in accordance with standard operating procedures (SOPs).
	1.3 Apply the 'two peg test' to check the amount of error present in the instrument.
	1.4 Carry out reduction in a closed level run by rise and fall method and by height of plane collimation (HPC) method.
	1.5 Calculate accurate staff readings to enable a specific reduced level (RL) set-out.
	1.6 Identify and explain errors in measured distances due to site characteristics and measurement methods.
2 Develop a contour grid.	2.1 Determine set-out grid and levels.
	2.2 Prepare contour plans from grid levels to specified tolerances and stated contour intervals.
	2.3 Determine surface area being levelled and calculate cut and fill volumes.
	2.4 Calculate and record trigonometric and geometric calculations commonly used with grid lines, off sets and right-angle triangles without error.
3 Determine grades and levels.	3.1 Draw longitudinal sections from RLs.
	3.2 Determine levels and clearances from given grades and distances to specified tolerances.
	3.3 Express calculation angles, percentages and run ratios in grades.

- 3.4 Determine calculations for batter levels from grades and distances.
- 3.5 Construct longitudinal sections and determine associated grades and levels in typical drainage and pipeline situations.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require

- numeracy skills to:
 - extract, interpret and comprehend measurements and information from site and set-out plans
 - perform trigonometric and geometric calculations
- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access and extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCBC4018A Apply site surveys and set-out procedures to building and construction projects.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC4018 Apply site surveys and set-out procedures to building and construction projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4018A Apply site surveys and set-out procedures to building and construction projects. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by surveying and setting out a residential or commercial building on site.

In doing this, the candidate must:

- select and operate one surveying and one levelling device
- develop a topographic contour plan
- calculate cut and fill quantities:
 - area and volume of land to be levelled
 - area of land to be filled
 - volume of fill required.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- working drawings, specifications and design principles
- relevant building codes and specifications
- linear and angular measurements, geometry and trigonometry
- principles of surveying and set-out
- operational and functional features of levelling and surveying devices:
 - electronic distance measuring (EDM) equipment
 - laser
 - optical level
 - water level
 - theodolite.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- current project and site plans and specifications
- organisational surveying, set-out and associated documents
- relevant computer software packages and technology applicable to survey and set-out practices
- levelling devices and survey equipment to enable site survey and set-out for a building and construction project.

CPCBC4019 Apply sustainable building design principles to water management systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4019A Apply sustainable building design principles to water management systems. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to apply sound water management principles as part of the implementation of sustainable building and construction processes.

It covers legislative and planning requirements, identifying and applying opportunities for improved water management, and promoting best practice in water management to meet the demand for sustainable buildings and environmentally friendly developments.

This unit of competency applies to builders, site supervisors and related construction industry professionals who apply sustainable water management systems to residential or commercial building.

It applies to National Construction Code (NCC) classifications:

- Residential - Class 1 and 10 buildings, maximum two storeys
- Commercial - Class 2 to 9, Type C constructions.

This unit of competency is suitable for people with specialised knowledge, completing routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|---|
| 1 Identify legislative and planning requirements. | 1.1 Identify government legislation and local council requirements for sustainable water systems as part of the building and construction design process. |
| | 1.2 Confirm design and use of water management systems requirements with client. |
| | 1.3 Seek expert plumbing advice as part of the planning process. |
| | 1.4 Consult the National Construction Code (NCC), Australian Standards and other codes and standards to identify the implications for the building project. |
| | 1.5 Identify and address environmental and resource efficiency issues. |
| 2 Identify and apply opportunities for improved water management. | 2.1 Identify and appraise the impact of client and resident behaviour on effective water management and use. |
| | 2.2 Identify, evaluate and apply opportunities to select efficient water management fixtures and appliances as part of the building design. |
| | 2.3 Calculate and communicate installation and ongoing usage costs of efficient water management fixtures and appliances to the client. |
| | 2.4 Select efficient water management fixtures and appliances as negotiated. |
| 3 Apply sound water management principles to the site and its | 3.1 Contain soil and sediment as part of site preparation and management. |
| | 3.2 Apply sound waste management practices on site. |

- landscaping.
 - 3.3 Put in place and use effective sediment control barriers.
 - 3.4 Stockpile and retain topsoil and local rocks for later reuse.
 - 3.5 Optimise reuse and recycling of water in the landscape design.
- 4 Promote best practice in water management.
 - 4.1 Select, locate and install tanks to optimise the reuse of roof water.
 - 4.2 Identify costs for construction of reuse of grey water facilities and negotiate with the client.
 - 4.3 Identify costs and performance characteristics of various materials used in the installation of water management systems and negotiate selection of materials with client.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access and extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCBC4019A Apply sustainable building design principles to water management systems

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC4019 Apply sustainable building design principles to water management systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4019A Apply sustainable building design principles to water management systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by applying sustainable building design principles to the water management system of one Class 1 or 10 building, up to two storey or one Class 2 to 9, Type C building project.

In doing this, the candidate must:

- source and analyse legislative and planning requirements for water management design
- apply the principles of effective water use, recycling and reusing in the planning process
- calculate costs and savings of implementing an alternative water management system
- produce work plans that reflect effective water management.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- building and construction codes and standards
- the National Construction Code (NCC)
- government building and construction legislation
- environmental requirements
- sustainability principles and concepts
- building and construction industry contracts
- construction plans and specifications
- water management systems:
 - grey water recycling
 - roof water reuse
- fixtures and appliances:
 - dishwashers
 - showerheads (low flow and maxi flow)
 - spas

- taps
- toilets
- washing machines
- waste management practices:
 - run-off from the cleaning up of equipment:
 - painting
 - concreting
 - plastering
 - brickwork
 - on-site waste management
- workplace safety requirements
- workplace procedures.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must be provided with:

- relevant government building and construction regulations
- current building and construction codes and standards
- the NCC
- construction plans, site plans and specifications
- policies and procedures
- environmental, sustainability and other quality documentation to undertake the performance criteria and evidence requirements
- digital technology devices, applications and software to source and document information.

CPCBC4020 Build thermally efficient and sustainable structures

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Element 1.2 changed to allow for continuing compliance with NCC.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4020A Build thermally efficient and sustainable structures. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to apply sound principles of thermal efficiency as part of the implementation of sustainable building and construction processes in response to the need to respond to growing consumer demand for sustainable buildings and environmentally friendly developments.

It applies to National Construction Code (NCC) classifications:

- Residential - Class 1 and 10 buildings, maximum two storeys
- Commercial - Class 2 to 9, Type C only constructions.

This unit of competency supports the needs of builders, site managers and forepersons, and estimators in the building and construction industry.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Apply legislative and planning requirements for thermal efficiency to the building process.	1.1 Identify current relevant state, territory and council requirements for building thermally efficient structures. 1.2 Identify factors that contribute to the construction of a star rated dwelling identified within the NCC and assess the impact of regional climate differences. 1.3 Identify and negotiate client needs and expectations for the design and construction of thermally efficient structures. 1.4 Gather expert design and other advice as part of the planning and construction process. 1.5 Consult relevant Australian Standards to identify the implications for the conduct of the building project.
2 Review design solutions for effectiveness and compliance.	2.1 Identify impact of radiation, convection, conduction and evaporation on the thermal comfort of residents. 2.2 Evaluate orientation of the building, location and size of glazing, and use of thermal mass as design features for effectiveness and compliance with planning and other regulatory requirements. 2.3 Evaluate, cost and communicate effective strategies for insulating the structure to the client. 2.4 Assess building designs for their compliance with the energy efficiency requirements of the NCC. 2.5 Consult designers and clients to ensure final construction plans are effective, efficient and compliant.
3 Manage the building process to ensure an effective outcome.	3.1 Establish effective communications between designers, architects and clients to ensure effective thermal performance is embedded from the design to construction phase. 3.2 Confirm effective quality assurance processes are in place to evaluate and implement the building of a

five-star dwelling.

- 3.3 Assess and communicate to client, cost-effective strategies to achieve desired level of thermal performance.
- 3.4 Assess and negotiate life cycle costs of various construction approaches with the client.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access and extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCBC4020A Build thermally efficient and sustainable structures

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC4020 Build thermally efficient and sustainable structures

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Element 1.2 changed to allow for continuing compliance with NCC.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4020A Build thermally efficient and sustainable structures. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by effectively applying mechanical services principles and concepts to the construction of a thermally efficient and sustainable building structure.

In doing this, the candidate must:

- sourcing and analysing legislative and planning requirements for thermal efficiency in the building process
- calculating costs and savings of implementing alternative thermally efficient systems
- applying principles of thermal efficiency to planning of a building project
- producing work plans that reflect effective thermal efficiency.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- building and construction industry processes for building sustainability
- requirements for building thermally efficient structures:
 - appropriate use of thermal mass (noting impact of climatic conditions)
 - glazing size and orientation
 - insulation
 - orientation of building
 - use of relevant construction methods
- regional climate differences areas:
 - cooling climates

- hot arid climates
- hot humid climates
- mixed climates
- relevant state or territory building and construction codes, standards and government regulations
- underlying mathematics related to the calculation of thermal efficiency
- workplace safety requirements.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must be provided with:

- relevant government building and construction regulations
- current building and construction codes and standards
- the NCC
- construction plans, site plans and specifications
- policies and procedures
- environmental, sustainability and other quality documentation to undertake the performance criteria and evidence requirements
- digital technology devices, applications and software to source and document information.

Links

CPCCBC4021 Minimise waste on the building and construction site

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCBC4021A Minimise waste on the building and construction site. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to support sustainable building practices by minimising waste removed from residential or commercial building and construction sites. It includes planning a waste minimisation strategy, calculating cost benefits and implementing alternative waste minimisation systems.

This unit of competency applies to builders, site managers and forepersons, and estimators in the building and construction industry responsible for managing compliance with waste regulations and minimising waste on construction sites.

This unit of competency is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Plan a waste management strategy.	1.1 Identify current government and council environmental requirements for managing and minimising building waste.
	1.2 Research environmental guidelines and standards and develop an alternative waste management strategy to support the building and construction project.
	1.3 Calculate costs, potential savings and advantages of a waste management strategy and negotiate with client.
	1.4 Establish effective communication with the architect, designer, engineer and other relevant professionals to ensure project plans incorporate waste minimisation strategies.
2 Manage materials procurement to minimise waste.	2.1 Evaluate building and construction materials to identify high quality and more durable materials that will extend the life of the structure and simplify its future extension and refurbishment.
	2.2 Use recycled materials where appropriate that meet regulatory and standards' restrictions.
	2.3 Develop procurement specifications that seek to minimise packaging waste.
3 Manage the building process to reduce waste.	3.1 Determine and use demolition practices to increase the recovery of materials for recycling and reuse.
	3.2 Adopt strategies to minimise the volume of site excavation and other materials that are disposed of in landfill.
	3.3 Adopt litter abatement strategies on site.
	3.4 Plan and implement safe and environmentally effective disposal of unavoidable waste.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCBC4021A Minimise waste on the building and construction site.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC4021 Minimise waste on the building and construction site

Modification History

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4021A Minimise waste on the building and construction site. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by developing and implementing an alternative sustainable waste management strategy to minimise building and construction waste for one residential and one commercial building and construction site.

In doing this, the candidate must:

- include the principles of sustainable waste management appropriate to each project
- develop the waste management strategies to comply with environmental and sustainability regulations and guidelines.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- building and construction methods and principles
- government building and construction regulations
- building and construction standards and codes
- the National Construction Code (NCC)
- environmental and sustainability regulations
- minimising adverse environmental impacts and promoting sustainability by:
 - effective, efficient and economical procurement of materials and products
 - assessment of whole of life cycle of materials and products
 - engaging with environmentally responsible suppliers
 - managing resource demand and consumption
 - managing environmental risk
 - recycling, reclaiming and reusing materials
 - onsite litter abatement
 - packaging waste reduction

- workplace procedures and workplace safety requirements
- digital tools and devices to communicate and collaborate effectively with others
- a range of digitally-based technology and applications to research environmental guidelines and standards and compile information electronically.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant government and council building and construction environmental and sustainability requirements
- current building and construction codes and standards
- construction drawings and specifications and other quality documentation required to undertake the performance criteria and assessment requirements
- digital devices, applications and software to access, extract and manipulate relevant information electronically to use and share with others.

CPCBC4022 Supervise tilt-up work

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Weight corrected in Performance Evidence. Formatting corrected in the Knowledge Evidence.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4022A Supervise tilt-up work. *Prior to final endorsement of this unit of competency, the Construction IRC changed the weight in the Performance Evidence of the in-situ tilt slab from at least 10 tonnes to at least 6 tonnes. This change occurred to provide more flexible assessment conditions to suit industry.*

Application

This unit of competency specifies the skills and knowledge required to organise, coordinate and supervise tilt-up work on a construction site. It includes the application of safe work practices during the erection and temporary bracing of tilt-up pre-cast concrete panels.

This unit of competency applies to site supervisors and builders who have a sound understanding of licensing and competency requirements for crane operation, dogging and rigging and are responsible for planning, organising and supervising tilt-up work on a construction site.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Provide effective administration.	<p>1.1 Read and interpret relevant project plans, details and specifications for tilt-up work.</p> <p>1.2 Store all structural and design documents, pre-cast panel shop drawings, layout plans and other required documents on site.</p> <p>1.3 Check licence and competency details of persons assigned to perform tilt-up work and ensure regulatory training requirements have been met.</p> <p>1.4 Check mandatory licences and approvals required for tilt-up work are obtained.</p> <p>1.5 Notify relevant regulatory authorities of work commencement and ensure the administration process is complete.</p>
2 Plan work and set up site.	<p>2.1 Prepare and implement a site-specific work health and safety (WHS) management plan and work plan and apply WHS risk control measures.</p> <p>2.2 Provide site security, amenities, services and emergency/first aid facilities and prepare site procedures.</p> <p>2.3 Develop traffic management and public safety plans and procedures and plan exclusion zones for concrete panel delivery, casting and erection operations.</p> <p>2.4 Review and provide requirements for footings, structural elements, concrete slabs and site access roads for the tilt-up work.</p> <p>2.5 Determine suitable onsite crane operating positions in consultation with crane suppliers and operators.</p> <p>2.6 Identify ground conditions such as soak wells and drains likely to affect crane stability and check crane standing areas for strength and compaction.</p>
3 Supervise and	<p>3.1 Check concrete panel inspection records to confirm</p>

- coordinate tilt-up work.
- design specifications have been followed during panel fabrication and manufacture.
- 3.2 Coordinate delivery sequence for concrete panels cast off site or coordinate a casting and curing schedule and distribution of panels on site.
- 3.3 Supervise placement and storage of concrete panels onsite and ensure it meets engineer's requirements.
- 3.4 Put in place processes to ensure erection areas are cleared, exclusion zones set up, barriers erected, and site personnel advised of restricted access areas prior to erection of concrete panels.
- 3.5 Check fixings and anchor bolts supplied for temporary bracing are compliant with designer and engineer specifications.
- 3.6 Check correct type of braces, locating dowels and shims are correctly placed and components positioned and propped in accordance with shop drawings or as approved by the engineer.
- 3.7 Supervise workers and contractors during the erection of the concrete panels and ensure that safe systems of work and safe work practices are enforced and followed.
- 3.8 Use job safety and environmental analysis (JSEA) and other tools to identify hazards, assess risks and create safe systems in the event of unanticipated circumstances.
- 4 Confirm tilt-up stabilisation.
- 4.1 Check erected concrete panels for compliance with design and engineering specifications.
- 4.2 Check compliance of structural steel elements being fixed to the temporarily braced panels are in accordance with designed engineering specifications.
- 4.3 Inspect integrity of erected structure prior to removal of temporary bracing to ensure it meets engineer certification.
- 4.4 Supervise the sequential removal of temporary bracing.
- 4.5 Oversee the safe removal of temporary bracing, plant and equipment from site.

- 4.6 Supervise the completion of the erection work and clearing and cleaning of work areas prior to other trades being permitted to enter work zones.
- 4.7 Notify relevant personnel of work completion and maintain site records to company requirements.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access and extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCBC4022A Supervise tilt-up work. Prior to final endorsement of this unit of competency, the Construction IRC changed the weight in the Performance Evidence of the in-situ tilt slab from at least 10 tonnes to at least 6 tonnes. This change occurred to provide more flexible assessment conditions to suit industry.

Weight corrected in Performance Evidence. Formatting corrected in the Knowledge Evidence.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4022A Supervise tilt-up work. *Prior to final endorsement of this unit of competency, the Construction IRC changed the weight in the Performance Evidence of the in-situ tilt slab from at least 10 tonnes to at least 6 tonnes. This change occurred to provide more flexible assessment conditions to suit industry.*

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by demonstrating the supervision on at least one occasion of the erection of:

- one multi-point pre-cast tilt slab or one cast in-situ tilt slab each of at least 6 tonnes.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- government building and construction legislation, standards and codes
- National Standard for Construction Work and the Code of Practice for Construction Work
- relevant tilt-up construction codes and standards including current versions of AS3850.1:2015 Prefabricated concrete elements Part 1: General requirements and National Code of Practice for Precast Tilt-Up and Concrete Elements in Building Construction
- project plans, drawings and specifications for tilt-up work
- processes, procedures and techniques for:
 - lifting and placing tilt-up panels
 - securing panels to base
 - levelling and plumbing panels
 - temporary bracing panels
 - grouting, bracing, torquing, stabilisation and fixing of panels

- competency and licensing requirements to operate plant and equipment and carry out tilt-up panel work
- capacity and limitations of plant, lifting gear and equipment used in tilt-up work
- capacity and limitations of rigging and equipment
- workplace safety:
 - hierarchy of control
 - hazard identification
 - emergency first aid
 - emergency shutdown and stopping
 - working at heights
 - fall arrest equipment
 - scaffolding
 - access equipment
 - electrical hazards
 - overhead hazards
 - confined spaces.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant government building and construction legislation
- current relevant building and construction industry codes and standards
- organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- project plans and specifications
- plant, equipment and qualified personnel necessary to supervise tilt-up work.

CPCBC4024 Resolve business disputes

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4024A Resolve business disputes.
Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to advise on or resolve business disputes that may arise during activities in residential and commercial contracting projects. It includes the development and implementation of dispute resolution processes and procedures.

This unit of competency applies to builders, site supervisors and related construction industry professionals responsible for resolving business disputes in a positive manner.

This unit of competency is suitable for people with specialised knowledge, completing routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, regulatory or registration requirements apply to this unit of competency in some jurisdictions. Relevant state and territory regulatory authorities should be consulted to confirm these requirements.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Evaluate dispute information.
 - 1.1 Review and evaluate information to identify the dispute issue, potential causes, circumstances and persons involved.
 - 1.2 Analyse and appraise contractual arrangements and agreements and relevant legislation.
 - 1.3 Identify risks and prepare contingency strategies.
 - 1.4 Obtain advice from senior managers and other professionals to develop a dispute resolution strategy.
 - 1.5 Follow dispute resolution procedure.
 - 1.6 Secure agreement for procedure from all parties.
- 2 Negotiate with parties.
 - 2.1 Interview concerned parties individually to clarify reasons for dispute, issues and desired outcome.
 - 2.2 Conduct an inspection of work in dispute, as required, to determine compliance with the requirements.
 - 2.3 Develop solutions based on interview with parties, inspection of work and compliance with requirements to optimise likelihood of a favourable outcome.
 - 2.4 Offer parties recommended solutions to resolve dispute equitably and advise parties of legal processes should resolution not occur.
 - 2.5 Record and maintain dispute process, information and outcome.
- 3 Identify opportunities for dispute resolution.
 - 3.1 Identify and detail process to consult with external arbitrators or conciliators when disputes cannot be resolved internally.
 - 3.2 Implement procedures to settle dispute promptly following statutory law, professional and organisational requirements.
 - 3.3 Communicate with relevant parties to ensure client satisfaction or follow up actions.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- speaking and listening skills to:
 - actively listen and use observational and questioning techniques to identify different perspectives and confirm, clarify and revise understanding.

Unit Mapping Information

Assessment Requirements for CPCBC4024 Resolve business disputes

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4024A Resolve business disputes.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria of this unit by resolving one construction project dispute.

In doing this, the candidate must:

- identify the nature of the dispute and identify the parties in the dispute
- document dispute details accurately and in sufficient terms to eliminate any ambiguity
- follow established dispute resolution procedures and develop and implement dispute resolution procedures where none are established
- maintain impartiality throughout the dispute resolution process.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- contractual and business frameworks underpinning the building and construction industry
- legislation and other guidelines:
 - common law
 - consumer law
 - contract law
 - government dispute resolution guidelines
 - privacy
- dispute resolution and conflict theory
- risk assessment and evaluation strategies
- negotiating processes and strategies
- industry dispute resolution guidelines
- organisational policies and procedures
- values and attitudes of various groups in the community that should be accounted for in discussions
- possible reactions and behaviours from persons in a dispute situation

- dispute resolution procedures:
 - mutual resolution
 - on-site negotiations
 - reference to contractual obligations
 - arbitrated decisions
 - common law outcomes
 - litigated decisions
- causes of business disputes:
 - contract payment issues
 - different opinions about design, structural layout or dimensions
 - dissatisfaction with project progress
 - structural finish, quality, materials or construction methodology
- digital tools and devices to communicate and collaborate effectively with others
- a range of digitally-based technology and applications to access, extract integrate and compile information.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- current building and construction codes and standards
- contracts, construction drawings and specifications
- relevant government legislation and other quality documentation to undertake the performance criteria and assessment requirements
- digital devices, applications and software to receive, record and save dispute information electronically.

CPCBC4026 Arrange building applications and approvals

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4026A Arrange building applications and approvals. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to prepare and submit building applications to appropriate authorities for approval and manage the submission through to its final approval. It includes communicating effectively with clients, building professionals and planning officers.

The unit of competency applies to builders, project managers and related construction industry professionals responsible for coordinating and managing the building approval process for residential and/or commercial projects.

This unit of competency is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems relating to building application approvals.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, regulatory or registration requirements apply to this unit of competency in some jurisdictions. Relevant state and territory regulatory authorities should be consulted to confirm these requirements.

Assessment Requirements for CPCBC4026 Arrange building applications and approvals

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4026A Arrange building applications and approvals. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by preparing, submitting and managing one residential and one commercial building and construction application for approval.

In doing this, the candidate must:

- develop a submission plan, which includes:
 - stages and dates for submission of applications
 - forms, documents and supporting evidence required to be submitted
 - application fees, charges and costs.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- relevant government building legislation, codes and standards
- plans, specifications and contracts
- local authority building application processes:
 - full approval
 - staged approval
 - development applications
 - sustainability requirements
 - fees and levies
 - complaints and appeals
- documentation requirements of building approval submissions:
 - design briefs
 - specialist's reports
 - working drawings, plans, details and specifications
- organisational quality assurance processes and practices:

- authorities and approval delegations
- document control
- specialist services for certification of documentation:
 - building surveyors, quantity surveyors and site surveyors
 - geotechnical and environmental specialists
 - structural, mechanical and electrical engineers.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must be provided with:

- relevant government regulations, codes and standards
- current project plans, specifications and manufacturer's product information
- organisational quality assurance documents
- local authority building approval processes and application forms
- sufficient materials and equipment to facilitate arrange building applications and approvals.

CPCBC4027 Establish a basis for sales consulting

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4027B Establish a base for sales consulting. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to establish a basis for sales consulting. It includes managing self-development to improve personal performance.

It applies to sales consultants and other professionals who are responsible for the marketing and sale of newly constructed residential and commercial structures.

This unit of competency is suitable for people operating with autonomy. A person working at this level would be expected to take responsibility for establishing a basis for sales consulting.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|---------------------------------------|-----|---|
| 1 | Develop and apply industry knowledge. | 1.1 | Obtain, read and interpret organisational policies and procedures relating to sales consulting. |
| | | 1.2 | Develop knowledge of organisation's products and services. |
| | | 1.3 | Research and identify market segments within the |

- industry sector.
- 1.4 Provide customers with accurate and clear industry information.
- 2 Apply key attributes of an industry sales consultant.
- 2.1 Use appropriate body language, gestures, facial expressions and tone of voice to support the sales process.
- 2.2 Determine customer type and needs by using open-ended questions and active listening.
- 2.3 Apply persuasive communication techniques to secure buyer interest.
- 2.4 Communicate other unique features to enhance buyer retention.
- 2.5 Obtain and present proof of benefits through the product purchase process.
- 2.6 Utilise sales aids to build buyer understanding of how the product is aligned with their needs.
- 3 Manage buyer resistance and complete documentation.
- 3.1 Determine customer interest from behaviour and cues.
- 3.2 Identify source of buyer resistance by using probing techniques.
- 3.3 Identify buyer strengths and limitations and formulate a strategy to overcome resistance.
- 3.4 Record customer sales information.
- 4 Manage self-evaluation and personal performance.
- 4.1 Identify self-development improvements and produce a plan that reflects individual and company goals and targets.
- 4.2 Review, evaluate and modify personal performance.
- 4.3 Establish processes to maintain personal mental and physical wellbeing.

- | | | | |
|---|---|-----|---|
| 5 | Develop and maintain personal competence. | 5.1 | Identify and attend ongoing training and professional development programs that support competence. |
| | | 5.2 | Participate in professional networks and associations to enhance knowledge, skills and relationships. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Assessment Requirements for CPCBC4027 Establish a basis for sales consulting

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4027B Establish a base for sales consulting. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by consulting a minimum of three customers.

In doing this the, the candidate must:

- explain sectors of the construction industry and range of products available in each sector
- convey information factually and accurately without overpowering the client
- adhere to organisational ethical and probity standards
- use technology skills and equipment to aid presentation
- manage and resolve customer dissatisfaction.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- relevant government legislation affecting business operations:
 - standards and codes of practice
 - anti-discrimination
 - consumer protection
 - contract law
 - ethical principles
 - privacy laws
 - Competition and Consumer Act
- government building and construction regulations, standards and codes
- legal and contractual requirements relating to building and construction
- types and classes of building as classified in the National Construction Code (NCC)
- market segments:
 - first and subsequent home buyers
 - speculative and investor buyers

- sources of buyer resistance and dissatisfaction and strategies to overcome and resolve them
- characteristics of the marketplace which influence an individual's decision to invest in a building
- methods to improve personal performance and self and professional development
- digital tools and devices to communicate and collaborate effectively with others
- a range of digitally-based technology and applications to access, extract integrate and compile information.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant government sale legislation
- current building and construction codes and standards
- construction drawings and specifications
- organisational policies and procedures and other quality documentation required to undertake the performance criteria and assessment requirements
- digital devices, applications and software to transmit and receive information electronically.

CPCBC4028 Prepare design brief for construction works

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4028A Prepare design brief for construction works. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to prepare a construction design brief for a client. It includes negotiating with the client, seeking feedback on the design and preparing a final design brief for client approval.

This unit of competency applies to builders, site managers, estimators, forepersons and other construction industry personnel who prepare residential and commercial project design briefs from client requests.

This unit of competency is suitable for those using specialised technical and creative skills to express ideas and perspectives and use their own judgement to deal with predictable and sometimes unpredictable problems relating to preparation of design briefs.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Gather client requirements.
 - 1.1 Discuss project requirements with client and design team.
 - 1.2 Confirm financial expectations of the client.
 - 1.3 Discuss preliminary design notions with team members to ensure consistency with client's vision.
 - 1.4 Prepare a draft design brief.
 - 1.5 Clarify and confirm draft with client and team members.

- 2 Clarify stakeholder requirements.
 - 2.1 Assess input from stakeholders to confirm the responsibilities, requirements and limitations of the design brief.
 - 2.2 Commission site survey analysis and gather and use all relevant information to inform development of the brief.

- 3 Negotiate engagement with the client.
 - 3.1 Amend and formalise fee proposal and agreement.
 - 3.2 Detail scope of services to be undertaken within the contract and fee proposal with the client, either directly or by delegation to a team member.
 - 3.3 Present draft proposals to the client and use client feedback to modify and improve the proposal.
 - 3.4 Finalise design brief in compliance with client and stakeholder satisfaction.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- communication skills to:
 - listen and question to clarify and negotiate stakeholder and client requirements and share information
- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access and extract information and develop relevant documentation.

Assessment Requirements for CPCBC4028 Prepare design brief for construction works

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4028A Prepare design brief for construction works. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by preparing client design briefs for one residential and one commercial construction project.

In doing this, the candidate must:

- prepare the brief from compiled information through consultation with client and stakeholders
- compile a comprehensive construction design brief that includes the scope, scale and core details from commencement to completion of the works.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- current project plans, building specifications, codes and standards
- relevant government legislation
- financial, legal and administrative factors affecting the contractual relationship
- roles and responsibilities of stakeholders:
 - architects and designers
 - construction managers and site supervisors
 - principals and senior management of the building and construction company
 - regulatory bodies
 - services authorities
 - subcontractors
- scope of services provided by the organisation:
 - fee proposals
 - client profile and relationship to the building and construction company
 - cost-benefit analysis
 - financing options

- workplace safety requirements and workplace processes and procedures.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must be provided with:

- current relevant building and construction codes of practice and standards
- relevant government regulations
- organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- business equipment and technology, applications and software to prepare a design brief.

CPCBC4029 Apply construction information to the sales process

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4029B Apply construction information to the sales process. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to apply construction information in the sales process to develop the customer's knowledge of construction processes and the effects on contract and building timelines. It includes communicating accurate construction information to the client to contribute to a positive relationship between the client and the organisation.

This unit of competency applies to sales consultants and other professionals within the building and construction industry responsible for the marketing and sale of new residential and commercial constructions.

This unit of competency is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Identify pre-construction approvals. | 1.1 Obtain, read and apply organisational policies, procedures, client contractual and legal requirements relating to the construction process. |
| | 1.2 Identify scope of works and scheduled timeframes. |
| | 1.3 Identify nature and conditions of approvals, site establishment and facilities set-up and connection of temporary services. |
| 2 Explain the construction sequence to the client. | 2.1 Brief the client about construction public liability, indemnity and workers' compensation insurance. |
| | 2.2 Describe the construction process, main stages and approximate duration of construction. |
| | 2.3 Explain site establishment, set-up of facilities and connection of temporary services. |
| | 2.4 Outline trade contractor, materials and product delivery and other personnel access to site. |
| | 2.5 Give the client an overview of circumstances that affect progress and delays construction timeframes. |
| 3 Provide construction information. | 3.1 Provide information of long-term benefits of sustainable building solutions and other unique selling features. |
| | 3.2 Confirm accuracy of contractual requirements and construction information with client. |
| | 3.3 Review and resolve identified issues with client. |
| | 3.4 Follow organisational policies for recording and saving information. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- communication skills to:
 - actively listen and respond accordingly to client questions
 - interpret non-verbal communication to reinforce or modify the interaction
- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access and extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCBC4029B Apply construction information to the sales process.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC4029 Apply construction information to the sales process

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4029B Apply construction information to the sales process. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by applying construction information to the sales process for one building and construction project.

In doing this, the candidate must:

- provide accurate, timely and understandable information to the client
- identify the nature of building approvals and their limitations, conditions and duration
- explain circumstances that can contribute to delays and the impact of those delays on the building process
- provide information of all builder's insurances required for the duration of the building and construction project.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- building approvals and permits:
 - building licence
 - electricity supply permits
 - water service and sewerage connection
 - drainage and water disposal
 - Local Government Acts and building provisions
- building construction process and sequence of events
- industry conditions:
 - availability of labour and materials
 - provisions for inclement weather
 - subcontracting structure
- insurance cover:

- builder's all risk
- indemnity
- public liability
- workers' compensation
- site establishment requirements:
 - access and egress
 - drainage
 - earthworks
 - electricity supply
 - protection for adjoining owners
 - rubbish and waste disposal
 - signage
 - site facilities
 - water connection
- building and construction standards and codes
- digital tools and devices to communicate and collaborate effectively with others
- a range of digitally-based technology and applications to access, extract integrate and compile information.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant building and construction standards and codes
- building approvals and permits
- construction drawings, site plans and specifications
- construction contracts, organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- a range of digitally-based technology and applications to compile, record and save information.

CPCBC4030 Analyse and communicate industry information

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCBC4030A Analyse and communicate industry information. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to research, analyse and communicate information about the building and construction industry environment and opportunities. It includes identifying competition and informing clients of investment opportunities.

It applies to sales consultants and other professionals within the building and construction industry responsible for the marketing and sale of new residential or commercial constructions.

This unit of competency is suitable for people operating with autonomy. A person working at this level would be expected to take responsibility for analysing and communicating industry information.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Review building industry environment.

1.1 Identify the internal and external operating factors of the building and construction operating environment.

- 1.2 Identify economic factors impacting on the housing industry.
 - 1.3 Collate information on geographic location of new subdivisions and characteristics and availability of land.
 - 1.4 Research the impact of social factors affecting the building and construction industry.
 - 1.5 Recognise and note personal perceptions of potential clients.
- 2 Identify competition to building and investment.
- 2.1 Investigate financial factors that support and oppose investment.
 - 2.2 Identify strengths and weaknesses of other competitive markets which compete for investments.
 - 2.3 Analyse industry products or services to benefit the customer.
 - 2.4 Determine the capacity to meet potential client requirements.
- 3 Communicate industry information.
- 3.1 Use organisational operating structures and industry productivity information effectively to attract customers.
 - 3.2 Interact and engage with the client to determine their needs.
 - 3.3 Explain the benefits of the industry's housing as a form of investment.
 - 3.4 Communicate the competitive nature of the industry marketplace as a strength benefiting the client.
 - 3.5 Explain alternative opportunities in speculative and project construction to the client.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- communication skills to:
 - use appropriate protocols and conventions to communicate with a broad range people
- listening skills to:
 - process information and avoid misinterpretation of client requirements.

Unit Mapping Information

Supersedes and equivalent to CPCBC4030A Analyse and communicate industry information.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC4030 Analyse and communicate industry information

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCBC4030A Analyse and communicate industry information. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by researching, preparing and submitting a current market analysis for the local region.

In doing this, the candidate must:

- outline the external and internal operating environment of the building and construction industry
- identify and evaluate economic and social factors impacting the local area, and perceptions of potential clients
- analyse the strengths and weaknesses of competing investment markets and opportunities
- provide detailed information to effectively meet client requirements
- adhere to organisational ethical and probity standards.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- characteristics of the marketplace which influence an individual's decision to invest in a building:
 - interest rate movements
 - perceptions about the investment value of the completed property
 - perceptions about the resale value of the property
 - perceptions about the value of the currency and possible movements
 - speculative ambitions
- economic factors, circumstances and seasonal factors that influence the volume of housing sales:
 - level of economic activity
 - availability of finance

- current interest rates
- competition for finance
- share market
- effects of investments for rental properties
- investor's personal perceptions:
 - about the investment value of the completed property
 - about the resale value of the property
 - about the value of the currency and possible movements
 - of potential interest rate movements
 - speculative ambitions
- influences effecting the capacity to meet client requirements:
 - availability of labour and materials
 - current financial situation
 - current order levels
 - projects already committed
- industry market segments and product range:
 - apartments
 - duplexes and triplexes
 - existing real estate properties
 - high-rise apartments
 - high-rise construction
 - holiday homes and resorts
 - mobile homes
 - retirement villages
 - terrace housing
- purchasing patterns and other socioeconomic factors:
 - business confidence
 - job security or insecurity
 - level of socioeconomic activity
 - migration
- government building and construction regulations, standards and codes
- legal and contractual requirements relating to building and construction.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant government building and construction and contract legislation
- current building and construction codes and standards
- construction drawings and specifications
- organisational policies and procedures and other quality documentation required to undertake the performance criteria and assessment requirements
- digital devices, applications and software to transmit and receive information electronically.

CPCBC4031 Process client requirements

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4031A Process client requirements.
Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to obtain, confirm and process client requirements from project inception through the contract and documentation development process.

It includes accurately conveying client requirements to those developing the contract and related documentation.

The unit of competency applies to sales consultants, site managers, forepersons, estimators and other professionals within the building and construction industry responsible for processing client requirements.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify client

1.1 Access, read and interpret relevant government

- requirements.
- construction legislation.
- 1.2 Identify local government requirements, restrictive covenants, necessary permits and planning requirements.
 - 1.3 Provide correct legal, technical and product information to the client.
 - 1.4 Arrange site investigation and identify site features and factors that may contribute to and influence the building design.
 - 1.5 Collate and discuss site and building information that may influence and effect the design requirements with client.
 - 1.6 Determine and confirm client requirements.
- 2 Prepare preliminary documentation.
- 2.1 Identify and follow organisational processes for preparing documentation.
 - 2.2 Identify and address documentation, design and copyright risks.
 - 2.3 Communicate requirements for sketch plans and drawings accurately to drafting personnel.
 - 2.4 Prepare and complete preliminary contract, agreement and estimated processing costs.
 - 2.5 Submit documents to the relevant department or person for checking and recording.
- 3 Establish client satisfaction.
- 3.1 Forward plans, developed documentation and estimated costs to client for review, amendment and approval.
 - 3.2 Confirm client's understanding of extent and cost of required site works.
 - 3.3 Identify variations and problem areas and analyse and rectify issues in consultation with client.
 - 3.4 Verify accuracy of amended documentation and ensure client requirements are met.

- | | | | |
|---|--------------------------------|-----|---|
| 4 | Finalise contract requirements | 4.1 | Check all plans, documents and specifications sighted by client are signed or initialled. |
| | | 4.2 | Compile signed documents and forward to relevant person for verification and processing for the next stage. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- technology skills to:
 - use communication tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access and extract information and develop relevant project schedules and documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCBC4031A Process client requirements

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC4031 Process client requirements

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4031A Process client requirements.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by preparing contract documentation, drawings and specifications for a construction project that meets client requirements.

In doing this, the candidate must:

- research current and relevant local government building design requirements and approval processes
- select, complete and present construction contract and related project documentation to client for approval and formal acceptance.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- government building and construction legislation, codes and standards
- relevant sections of the National Construction Code (NCC)
- building and construction industry planning processes:
 - town planning and building application requirements
 - certifications from local authorities
 - building permits and approvals
- various types of building contracts and their application and legal requirements
- development of project plans and specifications:
 - site plans and sketches
 - design details
 - material specifications
- financial and business principles related to dealing with clients
- site evaluation and site works:
 - site location and suitability for intended use
 - site aspect, slope, drainage and surrounding sites

- site access and egress during construction
- site preparation, excavation and earthmoving.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must be provided with:

- government building legislation
- relevant building industry and local authority codes and standards
- site plans and project contracts
- organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- business equipment and technology, applications and software to prepare client contracts, drawings, costings and other documentation to meet client requirements.

CPCBC4032 Apply contract law to sales processes

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4032A Apply contract law to sales processes. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to apply contract law to the sales processes for construction of residential and commercial buildings. It includes selection and administration of contract and pre-contract agreements.

This unit of competency applies to builders, site supervisors and related construction industry professionals responsible for ensuring contract law is applied to the sales process of building.

This unit of competency is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify legislative	1.1 Identify relevant government legislation relating to
------------------------	--

- requirements applying to the sales process.
- 1.2 Identify types and purposes of contracts employed within the building and construction industry.
 - 1.3 Identify pre-contract agreements that meet legal and organisational requirements.
 - 1.4 Identify pre-contract clauses within the agreement.
- 2 Apply contract law as it relates to the sales process.
- 2.1 Explain the importance of contract to sales process and implications of contract law to the client.
 - 2.2 Describe clauses in the contract to the client, the reasons for their inclusion and their impact.
 - 2.3 Explain the offer and acceptance element of a contract to the client.
 - 2.4 Apply common law principles, federal laws and contract standards and codes to the sales process.
 - 2.5 Apply cooling off periods, definitions of building work and provisional sum (PS) and prime cost (PC) allowances.
 - 2.6 Explain to the client contract anomalies and appropriate measures to be taken in the rendering of the contract.
- 3 Finalise the pre-contract agreement with customer.
- 3.1 Ensure clauses that reflect client's requirements are included in pre-contract agreement.
 - 3.2 Ensure documents are signed in accordance with legal and organisational requirements.
 - 3.3 Receive payment or deposit from client in accordance with legal and contractual requirements.
 - 3.4 Process and save documents following organisational procedures.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- communication skills to:
 - use contract terminology relevant to the context
 - use written and oral communication to clearly confirm client understanding and agreement with contract clauses
- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access and extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCBC4032A Apply contract law to sales processes

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC4032 Apply contract law to sales processes

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4032A Apply contract law to sales processes. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by applying contract law to the sales process for one building and construction project.

In doing this, the candidate must:

- select the correct contract for the building project
- select the appropriate clauses and conditions within the contract and explain the reasons and impacts to the client
- administer the contract to meet government legal and regulatory requirements
- follow organisational procedures to apply contract law to the sales process
- determine and explain to the client appropriate measures to be taken in the event of anomalies in rendering the contract
- communicate and finalise pre-contract agreements with client.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- contract types and the circumstances they cover
- contract law and related government legislation and regulations
- legal meanings of terms and clauses in building and construction contracts
- definitions and interpretations commonly applied to contracts
- definitions of building work
- pre-contract agreements:
 - offer and acceptance documentation
 - preliminary contracts
 - preparation of plan agreements
- clauses in construction contracts:
 - cost adjustments

- extensions of time
- offers and acceptances
- payments
- retention of moneys
- scope of work
- terms and representations
- pre-contract clauses:
 - conditions
 - scope of work
 - time for completion
- relationship between the organisation and its clients.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- variety of construction contracts
- government contract law legislation and regulation
- organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- digital technology to access information and software to process and save contract documentation
- relevant building industry and local authority codes and standards
- site plans and project contracts

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCBC4033 Maintain the sales environment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCBC4033A Maintain the sales environment.
Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to maintain the sales environment, providing a clean and attractive location in which to promote and sell the organisation's products and services. It includes establishing and maintaining an environment that features up-to-date displays where potential customers can gather accurate information and discuss their ideas and options.

The unit of competency is suitable for sales consultants and other professionals within the building and construction industry responsible for the marketing and sale of new residential and commercial constructions.

This unit of competency is suitable for people operating with autonomy. A person working at this level would be expected to take responsibility for maintaining the sales environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|-------------------------------------|--|
| 1 Plan and organise the sales area. | 1.1 Obtain, read and interpret the organisation's products and services range. |
|-------------------------------------|--|

- 1.2 Plan the design of the display or presentation area to accommodate staff and client requirements.
 - 1.3 Provide facilities to a professional standard that cater for the comfort and needs of diverse customers.
 - 1.4 Arrange display or presentation area ensuring safe and adequate access, noise reduction, privacy and adequate lighting.
- 2 Arrange product information.
- 2.1 Design and present window and external displays in a manner to attract prospective customer attention.
 - 2.2 Set up internal displays at an appropriate level, within reach, ensuring that traffic through the area is not impeded.
 - 2.3 Provide product information that is accurate, understandable and attractively presented.
 - 2.4 Identify and highlight product visual features, design, specifications and cost advantages.
 - 2.5 Make enterprise promotional campaign materials available to all sales consultants.
- 3 Implement housekeeping requirements.
- 3.1 Use displays, sales areas and offices in accordance with organisational policies.
 - 3.2 Address housekeeping requirements, such as cleaning, lighting and room aesthetics, to maintain a pleasant and fresh environment.
 - 3.3 Develop a housekeeping schedule and notify organisation regarding maintenance requirements and costs.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCBC4033A Maintain the sales environment.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC4033 Maintain the sales environment

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and equivalent to CPCBC4033A Maintain the sales environment.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by maintaining a sales environment to market new residential or commercial constructions on at least three occasions.

In doing this, the candidate must:

- arrange the sales environment to cater for customer needs
- organise displays of product information without obstructing the movement of people.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- products and services offered by the organisation:
 - artist's impressions and sketches
 - brochures
 - colour charts
 - plans and drawings
 - price list
 - samples of materials and building products
- organisation's policies and procedures:
 - sales and promotions
 - management of display home or settings
 - diverse customer requirements
- work health and safety (WHS) legislation relating to public safety
- workplace safety:
 - risk assessment
 - lighting
 - electrical hazards

- cleanliness and hygiene
- contemporary and effective interior and exterior design solutions:
 - promotional, display and presentation area
 - exhibition spaces
 - front of office
 - mobile display spaces
 - portable display areas and stands
- housekeeping:
 - general cleanliness and hygiene of display areas
 - maintaining adequate lighting
 - maintaining the cleanliness of display racks and spaces
 - regular dusting and vacuuming
 - rubbish and litter removal
- digital tools and devices to communicate and collaborate effectively with others
- a range of digitally-based technology and applications to access, extract integrate and compile information.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or in a realistically simulated workplace environment.

Candidates must have access to:

- desks, chairs and office equipment required in a sales environment
- presentation drawings and specifications
- organisational policies and procedures
- current building and construction codes and standards
- promotional materials, banners, brochures and other quality documentation required to undertake the performance criteria and assessment requirements
- digital devices, applications and software to transmit and receive information electronically.

Links

CPCBC4052 Lead and manage teams in the building and construction industry

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Application

This unit of competency specifies the skills and knowledge required to lead, manage and engage with a variety of teams working in the building and construction industry. Building and construction industry work teams may include subcontractors and employees, with cultural, competency or other diversities, who are engaged on the project for different periods of time and at different times. It includes liaising with team supervisors or leading hands to establish team objectives, maintain team performance and progress and achieve project quality.

This unit of competency applies to builders, site supervisors and related construction industry professionals responsible for managing diverse work teams to complete projects to specifications and on time.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify responsibilities of work teams.

- 1.1 Identify project timeframes, stages of construction and scheduled commencement dates for work teams.
- 1.2 Interpret subcontractor and employee work obligations, conditions and limitations from contracts and associated documentation.
- 1.3 Clearly define and communicate team roles, responsibilities and accountabilities.
- 1.4 Develop effective communication systems to track team outcomes, progress, delays and any specific requirements.
- 1.5 Identify, implement and manage workplace safety requirements that apply to various teams.

2 Liaise with supervisors of teams.

- 2.1 Identify diversities within teams and negotiate support requirements.
- 2.2 Identify and resolve potential conflict within work teams, between other teams and between self and teams on a construction project.
- 2.3 Consult with supervisors and provide constructive feedback, information and advice to support teams and individuals to work together on a project and achieve quality work outcomes.
- 2.4 Conduct regular meetings and assist team supervisors to plan and prioritise team tasks and workload.
- 2.5 Actively encourage team members to participate in and take responsibility for team activities and communication processes.
- 2.6 Resolve issues relating to access to workplace areas where multiple teams intend to carry out work.
- 2.7 Issue improvement or safety breach notices to team supervisor or individuals.

- | | | | |
|---|---|-----|---|
| 3 | Monitor and manage team performance and progress. | 3.1 | Monitor teams' effectiveness, progress and work quality. |
| | | 3.2 | Delegate responsibilities to teams or team individuals to improve performance and productivity. |
| | | 3.3 | Monitor skills level of individuals within a team, evaluate and address training requirements. |
| | | 3.4 | Discuss barriers and issues that impact on performance and progress. |
| | | 3.5 | Address and solve current and potential problems. |
| | | 3.6 | Encourage active participation in work activities, innovation and initiative. |
| | | 3.7 | Monitor resource utilisation. |
| | | 3.8 | Record and save team information. |

Foundation Skills

As well as the Foundation skills explicit in the performance criteria of this unit, candidates require:

- communication skills to:
 - select and use appropriate conventions and protocols when communicating with different teams
 - adapt personal communication styles to model required behaviour, build trust and positive working relationships and to show respect for the opinions and values of others.

Unit Mapping Information

No equivalent unit.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC4052 Lead and manage teams in the building and construction industry

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by leading and managing at least three different work teams on a building and construction project.

In doing this, the candidate must:

- manage teams with varying competency levels of workers
- work effectively and interact with team supervisors or leading hands to achieve quality work within set timeframes
- manage and support teams experiencing difficulties and take necessary action to rectify issues
- effectively manage communications with, and between diverse groups
- resolve negative interactions or problems between project teams.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- conditions and requirements of contracts and agreements
- government legislation relating to employment of employees and contractors
- delegation and work allocation
- workplace planning and performance measurement systems and processes
- diversity:
 - gender
 - culture
 - language
 - age
 - ability
- approaches to support teams and individuals and respond to diversity in the workplace
- cultural diversity and cultural values
- work teams:

- trades
- labourers
- suppliers
- administration support
- sales
- professionals
- team relationships and group dynamics
- duty of care when informing teams and allocating job tasks
- workplace procedures relating to on-site contractors
- workplace safety requirements.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- industrial relations and work health and safety (WHS) legislation
- digital devices, applications and software to access, share and save information
- relevant building industry and local authority codes and standards
- workplace safety documentation.

CPCBC4053 Apply building codes and standards to the construction process for Class 2 to 9 Type C buildings

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is not equivalent to CPCBC4001A Apply building codes and standards to the construction process for low rise building projects.

CPCBC4001A Apply building codes and standards to the construction process for low rise buildings has been split into two units, one for residential low-rise buildings and one for commercial low-rise buildings.

Attainment of both CPCBC4001 and CPCBC4053 is equivalent to CPCBC4001A.

Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to access, interpret and apply relevant building codes and standards applicable to National Construction Code (NCC) Class 2 to 9 Type C building projects. It includes knowledge of the structure of the NCC, as well as the ability to access relevant information from the code as applicable to various building projects.

It applies to builders, site managers and related construction industry professionals responsible for ensuring compliance with building codes and standards related to Class 2 to 9 Type C construction projects.

This unit of competency is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, regulatory or registration requirements apply to this unit of competency in some jurisdictions. Relevant state and territory regulatory authorities should be consulted to confirm these requirements.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Classify buildings. | 1.1 Determine nature of building, its use and arrangement from construction plans and specifications. |
| | 1.2 Access, read and interpret relevant Australian Standards for commercial building and construction projects. |
| | 1.3 Define classification of building from NCC. |
| | 1.4 Identify and interpret multiple classifications from NCC. |
| 2 Determine construction compliance requirements from NCC. | 2.1 Identify NCC Performance Requirements relevant to Class 2 to 9 Type C building projects. |
| | 2.2 Determine range of criteria to ensure that construction methods comply with NCC Performance Requirements. |
| | 2.3 Identify and document non-conforming construction methods with NCC Performance Requirements. |
| | 2.4 Propose and discuss Performance Solution with design and building and construction professionals. |
| | 2.5 Analyse and apply Assessment Methods to determine compliance with Performance Solution or Deem-to-Satisfy Solution. |
| | 2.6 Meet the evidence of suitability requirements for building materials and products stated in the NCC. |
| | 2.7 Complete relevant documentation to meet NCC requirements. |

- | | |
|---|--|
| 3 Determine fire protection requirements. | 3.1 Identify NCC and other legislative requirements for passive and active fire control elements in buildings. |
| | 3.2 Determine level of fire resistance required for the construction of various buildings. |
| | 3.3 Check existing building for compliance with passive and active fire protection requirements. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access, extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is not equivalent to CPCBC4001A Apply building codes and standards to the construction process for low rise building projects.

CPCBC4001A Apply building codes and standards to the construction process for low rise buildings has been split into two units, one for residential low-rise buildings and one for commercial low-rise buildings.

Attainment of both CPCBC4001 and CPCBC4053 is equivalent to CPCBC4001A.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC4053 Apply building codes and standards to the construction process for Class 2 to 9 Type C buildings

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes but is not equivalent to CPCBC4001A Apply building codes and standards to the construction process for low rise building projects.

Unit has been separated into two units for residential low rise and commercial low rise.

Attainment of both CPCBC4053 and CPCBC4001 is equivalent to CPCBC4001A. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by applying codes and standards to the construction process of two Type C building projects:

- one Class 2, 3 or 9
- one Class 5 to 8.

In doing this, the candidate must:

- determine the type of construction and the use of the building from construction plans and specifications and class of building using National Construction Code (NCC) classifications
- identify current building and construction codes and Australian Standards relevant to the building project
- apply NCC Performance Requirements in relation to the design and construction of the building:
 - structure
 - fire protection
 - access and egress
 - services and equipment
 - health and amenities
 - ancillary provisions
 - energy efficiency
- apply Performance Solutions to ensure that construction complies with Performance Requirements

- identify faults and problems and propose actions to rectify
- inspect a building to determine fire protection compliance with NCC and other legislative requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- government building legislation, codes and standards
- the NCC:
 - Performance Requirements and General Requirements
 - Performance Solutions and Assessment Methods
 - Deem-to-Satisfy Solution (DTS)
 - Performance Hierarchy
 - evidence of suitability for building materials and products
 - classes of building and types of construction
- Assessment Methods stated in the NCC:
 - comparison with DTS provisions
 - evidence of suitability
 - Expert Judgement
 - Verification Method
- below ground construction:
 - methods
 - structural sufficiency
 - water ingress
 - water proofing
 - work health and safety (WHS)
- organisational policies and procedures, quality systems and best practice approaches
- workplace safety requirements
- properties, characteristics and limitations of specified building materials and components
- processes, procedures and techniques for construction of wide span and complex designed buildings
- basic commercial building design principles and the behaviour of structures under stress, strain, compression, bending or combined actions
- causes and implications of building defects related to failure of applying building codes and standards to residential and commercial buildings
- extent of remedial work required for various defects caused by inadequate design and application of building codes and practices
- environmental requirements and sustainability principles and concepts
- project plans, specifications and structural details
- construction terminology.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant government building and construction regulations
- current building and construction codes and standards
- NCC Volume 1
- construction drawings, site plans and specifications
- organisational policies and procedures and other quality documentation to undertake the performance criteria and assessment requirements
- digital technology devices, applications and software to source and document information.

CPCBC5001 Apply building codes and standards to the construction process for Type B construction

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5001B Apply building codes and standards to the construction process for medium rise building projects. Change to title. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to access, interpret and apply relevant building codes and standards to the construction processes for Type B construction. It includes interpreting the National Construction Code (NCC) and other codes and standards related to a specific building.

It applies to NCC classifications:

- Commercial - Class 2 to 9, Type B

This unit of competency applies to builders, project managers and related construction industry professionals responsible for ensuring compliance with building codes and standards in the building and construction industry.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, regulatory or registration requirements apply to this unit of competency in some jurisdictions. Relevant state and territory regulatory authorities should be consulted to confirm these requirements.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Classify buildings. | 1.1 Determine the nature, use and arrangement of buildings. |
| | 1.2 Apply NCC criteria to determine the defined building classification. |
| | 1.3 Identify relevant Performance Requirements of the NCC that apply to a project. |
| | 1.4 Identify compliance and assess non-compliance against the NCC Performance Requirements. |
| 2 Determine compliance solutions within the NCC. | 2.1 Determine Performance Solutions to meet the Performance Requirements. |
| | 2.2 Discuss options with relevant persons to necessitate design or construction change. |
| | 2.3 Apply Deem-to-Satisfy (DTS) solution with supporting evidence to comply with the Performance Requirements. |
| | 2.4 Consider Performance Solutions and supporting evidence to achieve compliance with Performance Requirements. |
| | 2.5 Document performance-based solutions in accordance with organisational quality procedures and processes. |
| | 2.6 Complete and compile relevant documentation and evidence that complies with NCC Performance Requirements. |
| 3 Apply fire protection requirements. | 3.1 Identify passive and active fire control elements required by relevant legislation. |
| | 3.2 Determine level of fire resistance required for the construction of buildings up to three storeys. |
| | 3.3 Apply NCC requirements with respect to passive and active fire protection to buildings up to three storeys. |
| | 3.4 Check passive and active fire protection requirements are applied during and on completion of works. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- technology skills to:
 - use communication tools and devices to communicate and collaborate effectively with others
 - use applications to access, extract and share information.

Unit Mapping Information

Supersedes and is equivalent to CPCBC5001B Apply building codes and standards to the construction process for medium rise building projects.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCBC5001 Apply building codes and standards to the construction process for Type B construction

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5001B Apply building codes and standards to the construction process for medium rise building projects. Change to title. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by applying building codes and standards to the construction of two Type B buildings:

- one Class 2, 3 or 9 and
- one Class 5 to 8.

In doing this, the candidate must:

- identify the National Construction Code (NCC) Performance Requirements of the project:
 - structure
 - fire resistance
 - access and egress
 - services and equipment
 - health and amenity
 - ancillary provisions
- determine Performance Solutions by applying performance based and Deem-to-Satisfy solutions or a combination of both to meet the Performance Requirements
- apply assessment methods, within the General Requirements of the NCC, to determine whether the solutions meet the relevant Performance Requirements
- apply evidence of suitability requirements, as stated in the National Construction Code (NCC), to repudiate non-conforming building products.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- relevant government building and construction legislation, codes and standards
- contractual requirements
- the NCC:

- building classification
- Performance Requirements
- Performance Solutions
- Performance Hierarchy
- Assessment Methods
- Verification Methods
- comparison with Deem-to-Satisfy provisions
- evidence of suitability
- Expert Judgement
- causes and implications of building defects related to failure of applying building codes and standards to residential and commercial buildings
- extent of remedial work required for various defects caused by inadequate design and application of building codes and practices
- working drawings and specifications
- organisational quality assurance and policies and procedures

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- current and relevant government building and construction Acts and regulations
- project plans and specifications
- building codes, standards and manufacturer's products and materials specifications
- the NCC
- technology, applications and software to access and source information.

CPCBC5002 Monitor costing systems on complex building and construction projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5002A Monitor costing systems on medium rise building and construction projects. Change to title. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to monitor costing systems for building and construction projects. It includes processes and practices involved in controlling costs, and the production and maintenance of expenditure schedules and other arrangements, to ensure contracts or projects remain on budget.

This unit of competency applies to builders, senior managers in building and construction firms, and other construction industry personnel who work independently and in groups to investigate, evaluate and report project costing.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Identify and classify project costs.
 - 1.1 Access, read and interpret current building codes of practice, standards, legislation and specifications.
 - 1.2 Identify construction costs and produce accurate estimations from project schedules.
 - 1.3 Define cost estimates appropriate to contract requirements and accurately translate into the correct cost centres.
 - 1.4 Identify cost centres and correctly incorporate into a planned project cost network.
 - 1.5 Undertake risk assessment and compare estimated cost with estimated risk.

- 2 Prepare schedules for project expenditure.
 - 2.1 Identify project critical points and prepare draft schedules of project expenditure.
 - 2.2 Produce hard copies of prepared expenditure schedules in line with organisational processes.
 - 2.3 Identify critical financial phases of the project and match cash flows to expenditure.

- 3 Create curves for projected cash flow and payments.
 - 3.1 Prepare interim payment claims and rise and fall calculations for contractors and subcontractors.
 - 3.2 Prepare projected S curve to show cash flow and resource control.
 - 3.3 Prepare and compare projected cash flow and payments using time risk and cost risk.
 - 3.4 Compare cash flows using early start and late finish for pessimistic or optimistic outcomes.
 - 3.5 Calculate pessimistic overdraft requirements.

- 4 Monitor and maintain expenditure.
 - 4.1 Monitor cash flow and creditor payments daily.
 - 4.2 Compare network budget cost to actual costs in the tender calculations.

- | | | | |
|---|----------------------------|--|--|
| | 4.3 | Calculate rise and fall expenditure and advise financial controller of variations. | |
| | 4.4 | Identify and analyse reasons for any cost variations. | |
| | 4.5 | Take necessary remedial action and record to retain contract financial compliance. | |
| 5 | Prepare final cost report. | 5.1 | Compare actual costs with estimates at the completion of the job and compile a report detailing future actions. |
| | | 5.2 | Adjust organisational rates as required, based on the final cost report and current movements in prices and rates. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- numeracy skills to:
 - use and apply graphical techniques to analyse and compile costing information
 - research and investigate statistical and numerical data to measure performance against cost estimations
- technology skills to:
 - use a range communication tools and devices to communicate and collaborate effectively with others
 - use specialised programs to access, extract and share information in effective ways.

Unit Mapping Information

Supersedes and is equivalent to CPCBC5002A Monitor costing systems on medium rise building and construction projects.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC5002 Monitor costing systems on complex building and construction projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5002A Monitor costing systems on medium rise building and construction projects. Change to title. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by monitoring the costing systems for a Class 2 to 9 Type A building and construction project.

In doing this, the candidate must:

- produce schedules of expenditure from comparing the extent of actual costs to estimated cost
- produce accurate and timely financial reporting in the format required by the organisation
- plan and continuously revise the schedules of payments and cash flows to match contract performance and efficiency.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- advanced estimating and costing systems used in the building and construction industry
- relevant government standards, codes of practice, legislation and licensing requirement for medium-rise construction projects
- building and construction costs:
 - building or construction materials
 - temporary on-site services and permanent utilities
 - human resources and specialist services labour
 - plant and equipment purchase, lease and operating
 - pre-cast and off-site prefabricated materials
 - consumables
- project finance cost centre
- financial principles:
 - evaluating and eliminating or reducing risk

- progress payments to maintain cash flow
- expenditure evaluation and overhead costs
- project cost reporting:
 - cost-benefit analyses of overtime payments
 - detailed summaries of actual costs against estimates
 - details of cost over-runs and savings on labour and contracting out
 - details of savings or under-expenditure on materials or supplies
 - equipment performance information and efficiencies
 - variations in rates occurring through rise and fall clauses and effects
 - wages, salaries and penalties
 - insurances, including workers' compensation premiums
- project processes and timelines.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant and current project plans, specifications, codes, standards and regulations
- organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- organisational systems for cash flow and payments
- technology and applications to access, extract, integrate and compile information to facilitate monitoring costing systems on a construction project.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCBC5003 Supervise the planning of on-site building and construction work

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5003A Supervise the planning of on-site medium rise building or construction work. Change to title. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to supervise the planning process and organisation of on-site work for building and construction projects. It includes interpreting contract and planning requirements and developing strategies for scheduling human and physical resources effectively to comply with contractual obligations and meet planning timelines.

It applies to National Construction Code (NCC) classifications:

- Residential - Class 1 and 10 buildings, maximum three storeys
- Commercial - Class 2 to 9, Type B and C

This unit of competency applies to builders, related construction industry professionals and senior managers within building and construction firms who are self-directed and initiate and manage complex planning and scheduling.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, regulatory or registration requirements apply to this unit of competency in some jurisdictions. Relevant state and territory regulatory authorities should be consulted to confirm these requirements.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------------|--|
| 1 Appraise project requirements. | 1.1 Access, read and interpret copies of building approvals and conditions relating to the building and construction project. |
| | 1.2 Review contracts to determine any unusual aspects of construction, conditions, use of materials or penalty provisions. |
| | 1.3 Identify possible design problems and bring to the attention of project consultants. |
| | 1.4 Review availability of subcontractors and their suitability to meet job requirements specific to a project. |
| | 1.5 Review availability of materials and conditions of purchase and payment. |
| | 1.6 Establish site access, temporary services and appropriate location of on-site facilities. |
| | 1.7 Establish and maintain contact with relevant statutory building authorities. |
| 2 Establish strategies and schedules. | 2.1 Establish the project's critical path and sequence planned project operations. |
| | 2.2 Develop project schedules incorporating delivery of physical resources and assignment of human resources. |
| | 2.3 Plan and schedule for the removal of existing services and hazardous materials in accordance with regulatory and environmental requirements. |
| | 2.4 Establish work health and safety (WHS) site requirements for rehabilitation procedures, hazard identification and risk management. |
| | 2.5 Develop project contingency strategies to consider anticipated delays. |
| | 2.6 Establish strategies for the control of multiple projects. |

- | | | | |
|---|-------------------------------|-----|--|
| 3 | Supervise on site operations. | 3.1 | Inspect and record condition and structural integrity of on-site and surrounding buildings to be retained. |
| | | 3.2 | Submit reports to owners and relevant stakeholders and retain copies. |
| | | 3.3 | Supervise removal of unwanted structures, disconnection of unutilised services and site preparation. |
| | | 3.4 | Direct location and positioning of on-site amenities and facilities and connection of temporary services. |
| | | 3.5 | Coordinate delivery dates and on-site locations for physical resources and materials. |
| | | 3.6 | Implement and maintain a resources control system for recording materials, equipment and personnel entering and leaving the site. |
| | | 3.7 | Manage data entry into an appropriate scheduling system for analysis. |
| | | | |
| 4 | Delegate and supervise staff. | 4.1 | Employ effective human resources and implement practices and policies which maximise performance and productivity. |
| | | 4.2 | Allocate staff to meet the demands of the project site or sites as stated in regulatory and organisational employment conditions. |
| | | 4.3 | Delegate and manage staff to hire and record physical resource activity and authorise payments. |
| | | 4.4 | Monitor activities against contractual requirements, facilitate adjustments to the project timeframe and advise management of cost-benefits and implications of providing overtime payments. |
| | | 4.5 | Maintain a safe, effective and productive work environment. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- planning and organising skills to:
 - sequence and schedule complex activities
 - reassess priorities and apply contingencies, as circumstances change, to meet scheduled timeframes
- technology skills to:
 - use communication tools and devices to communicate and collaborate effectively with others
 - use applications to access, extract and share information and data.

Unit Mapping Information

Supersedes and is equivalent to CPCBC5003A Supervise the planning of on-site medium rise building or construction work.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC5003 Supervise the planning of on-site building and construction work

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5003A Supervise the planning of on-site medium rise building or construction work. Change to title. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by supervising the planning of one on-site building and construction project for:

- a Class 1 and 10 building, to a maximum of three storeys, or
- a Class 2 to 9, Type B or C.

In doing this, the candidate must:

- translate contract requirements into construction plans and processes
- develop strategies that effectively maximise physical and human resource use
- apply construction planning processes that effect desired outcomes and meet proposed timeframes
- establish and maintain a workplace environment representative of good management practice.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- relevant government building and construction legislation, codes and standards for construction
- building and construction industry contracts
- building and construction industry subcontracting system:
 - organisational and subcontracted human resources
 - human resource principles and practices
 - subcontractor requirements and availability
 - relevant licensing arrangements
 - rates and costs related to payments and claims
- on-site and off-site management practices, including:
 - on-site facilities

- plant and equipment
- power, water, telephone and other temporary services
- pre-cut or pre-cast components
- raw materials
- temporary site facilities
- construction planning process, including:
 - project scheduling
 - critical events and milestones
 - labour, materials and plant and equipment coordination
- workplace safety requirements.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Assessors are responsible for ensuring that the person demonstrating competency has access to:

- relevant project plans, specifications, codes, standards and regulations for building class
- organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- technology and applications to access, extract, integrate and compile information
- national and state industrial relations legislation.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCBC5004 Supervise and apply quality standards to the selection of building and construction materials

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5004A Supervise and apply quality standards to the selection of building and construction materials. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to apply quality standards to the selection of building and construction materials. It includes supervising the selection of building materials that meet building standards, contract specifications and service requirements for the project.

This unit of competency applies to builders, related construction industry professionals and project managers within building and construction firms responsible for supervising systems through which compliant and quality materials are selected, acquired and stored on site for construction of building projects.

This unit of competency applies to those who are self-directed and have substantial depth of knowledge and skills to make independent judgements.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|--|
| 1 Determine the properties of building materials. | 1.1 Access, read and interpret construction specifications and material standards. |
| | 1.2 Identify suitability of materials commonly used in the region for a given building system. |
| | 1.3 Determine properties of materials, their standards of quality and their compatibility and non-compatibility with different materials. |
| | 1.4 Identify environmental impacts of different materials. |
| | 1.5 Determine the impact of allowable tolerances on the conversion of naturally occurring materials. |
| | 1.6 Identify and check tolerances for installing and assembling materials regarding the nature of the work being performed and the requirements of Australian Standards. |
| 2 Select suitable building materials for application. | 2.1 Select building materials regarding structural requirements and suitability for the building system specified in the contract. |
| | 2.2 Select materials for their safety, required fire resistance rating, serviceability and cost effectiveness. |
| | 2.3 Consider short and long-term degradation of materials in relation to the proposed life cycle of the building. |
| | 2.4 Select alternative materials if specified materials are unavailable or unsuitable. |
| | 2.5 Arrange for expert advice as necessary to confirm or refute materials options. |
| | 2.6 Apply evidence of suitability, as stated in the National Construction Code (NCC), for all building materials and products. |
| 3 Supervise the | 3.1 Identify and communicate organisational procedures for |

- | | |
|---|---|
| acceptance, safe handling and storage of materials on site. | the acceptance, safe handling, storage and protection of materials on site. |
| 3.2 | Instruct workers on the process to refuse acceptance of substandard or non-compliant materials. |
| 3.3 | Determine limitations and effects of transportation on materials and components and take action in the case of potentially damaging circumstances. |
| 3.4 | Handle materials correctly and safely on site using appropriate equipment and safe work practices. |
| 3.5 | Store materials in accordance with manufacturer specifications and in compliance with the relevant standards. |
| 3.6 | Implement systems for inspecting all materials delivered on site for naturally occurring and/or manufactured defects before installation. |
| 3.7 | Ensure personnel are aware of actions to be taken in the case of defects caused by incorrect installation, application or placement. |
| 3.8 | Preserve timber and protect ferrous and non-ferrous metals used in the construction process using established methods. |
| 4 Supervise suitability and fit for purpose testing of materials. | 4.1 Carry out testing of materials, including soil, filling, compacting, surfacing, concreting and welding, to specifications and analyse results on site before and during installation. |
| | 4.2 Accurately identify samples of materials taken during placement or installation and send for laboratory testing. |
| | 4.3 Visually check materials for suitability before building and send materials off site for testing, as required. |
| | 4.4 Implement processes to ensure defective materials are identified and remedial action is recorded. |
| 5 Establish, record and report findings. | 5.1 Establish and maintain records of tests and testing procedures completed by the organisation in accordance with its quality management obligations. |

- 5.2 Evaluate test results and reports periodically to maintain integrity of organisational quality standards.
- 5.3 Notify non-conforming on-site material tests immediately to the appropriate organisation officer for further action.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- communication skills to:
 - liaise verbally and/or in writing with manufactures, suppliers and industry experts and regulators about materials and effectively resolve material quality or compliance issues
 - communicate organisational procedures to workers
- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access, extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCBC5004A Supervise and apply quality standards to the selection of building and construction materials.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC5004 Supervise and apply quality standards to the selection of building and construction materials

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5004A Supervise and apply quality standards to the selection of building and construction materials. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by applying quality standards to the selection of specified construction materials and supervising on-site processes for acquiring, receiving and storing materials for one building and construction project.

In doing this, the candidate must:

- identify and interpret building and construction materials specified in the project building specifications or contract documentation
- communicate effectively with manufacturers and suppliers to issue evidence of suitability for building materials and products
- supervise acceptance, handling and storage of materials
- confirm delivered material and products against delivery orders and compliance with project specifications
- conduct materials testing:
 - arranging external quality testing or inspections and receive results
 - arranging on-site quality and fit-for-purpose testing
 - taking remedial action for non-conforming test results
- provide advice and information to regulatory authorities as required by the organisation.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- determining and evaluating materials and products from project plans, specifications, codes and standards
- building and construction materials and technologies and alternative materials and products
- characteristics, applications and limitations of building material, products and components

- non-compliant building materials and products and the evidence of suitability requirements in the National Construction Code (NCC)
- environmental effects on building and construction materials
- construction supply processes
- processes for the selection of building materials:
 - identifying materials from specifications and drawings
 - identifying specifications and standards described in contract documents
 - selecting and ordering materials that meet those requirements
- maintaining records:
 - completing appropriate organisational records
 - distributing copies in accordance with organisational policy
 - following up reports that indicate departures from quality or manufacturing requirements
 - obtaining appropriate records and reports for review and analysis
- workplace safety:
 - hierarchy of control
 - hazardous manual handling tasks
 - safe use of mechanical lifting equipment
 - licensing and competency requirements to safely operate lifting equipment.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- the NCC
- relevant and current project plans, specifications, codes, standards and regulations
- manufacturer's product and equipment specifications and information
- organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- technology, applications and software to access, extract and record information and develop relevant documentation.

CPCBC5005 Select and manage building and construction contractors

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Performance Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5005A Select and manage building and construction contractors. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to select and manage building and construction contractors. It includes identifying and quantifying project resource needs and engaging with contractors to determine contract conditions and evaluating their performance.

This unit of competency applies to builders and senior managers within building and construction firms and other construction industry personnel who engage and manage various contractors with diverse occupations.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, regulatory or registration requirements apply to this unit of competency in some jurisdictions. Relevant state and territory regulatory authorities should be consulted to confirm these requirements.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Determine subcontractor requirements.	<p>1.1 Assess subcontractor resource requirements based on expected operations and reference to the business plan.</p> <p>1.2 Manage, prioritise and document subcontractor requirements based on expected work sequence and volume.</p> <p>1.3 Conduct and manage task analyses to identify competences from the nature of the work to be done and organisational structure.</p> <p>1.4 Determine the type and number of subcontractors and develop a formal subcontractor structure for the project.</p> <p>1.5 Research industrial relations legislation and contract legal matters to clarify workplace obligations and subcontractor rights that impact on operations.</p>
2 Review subcontractor performance.	<p>2.1 Build an operational profile for each subcontractor from reviewed and identified existing subcontractor areas of expertise.</p> <p>2.2 Examine existing subcontractor's previous work profiles and history to gather information on their performance.</p> <p>2.3 Review subcontractor performance to identify strengths and weaknesses.</p> <p>2.4 Develop a management plan for each subcontractor to enhance their ability to meet contractual obligations.</p>
3 Establish terms and conditions for subcontractor engagement.	<p>3.1 Develop or review subcontractor terms of engagement and scope of operations to ensure obligations can be met under the contract.</p> <p>3.2 Review subcontractor terms of engagement and periodically reinforce to ensure conditions are met.</p>
4 Manage the selection	4.1 Develop and facilitate subcontractor engagement

and engagement of subcontractors.		strategies and processes to meet organisational timelines and contract dates.
	4.2	Manage processes for selection and engagement of subcontractors to ensure that equal opportunity principles apply to all applicants.
	4.3	Manage subcontractor short-listing and qualification checking to enable the selection and engagement of the most appropriate subcontractor.
	4.4	Notify successful and unsuccessful applicants about the outcomes of the selection process.
	4.5	Manage and implement processes for commencement, induction and any required pre-engagement training.
5 Evaluate subcontractor performance.	5.1	Develop and manage systems that evaluate subcontractor performance and compliance with contract requirements.
	5.2	Collect strategic information regarding subcontractor performance within the collection parameters and terms of confidentiality and security.
	5.3	Discuss performance review outcomes with subcontractors on a confidential and equitable basis.
	5.4	Introduce and manage feedback and appeal systems to ensure that subcontractors can challenge review outcomes.
	5.5	Undertake remedial or disciplinary action against the subcontractor in accordance with organisational policy and operational guidelines where appropriate.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- speaking skills to:
 - negotiate appropriate solutions when engaging with subcontractors during selection and performance reviews
 - question and confirm requirements and clarify any misinterpretations that may create issues

- listening skills to:
 - to interpret responses to understand other's perspectives
- technology skills to:
 - use communication tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access, extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCBC5005A Select and manage building and construction contractors.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC5005 Select and manage building and construction contractors

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Performance Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5005A Select and manage building and construction contractors. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by selecting and managing building and construction contractors for one building and construction project.

In doing this, the candidate must:

- identify subcontractor needs against current and projected workloads and contractual commitments and the business plan of the organisation
- manage the subcontractor selection, engagement and appointment process to meet project timeframes:
 - developing and managing terms of engagement for subcontracting opportunities
 - advising interviewees of the outcome of the selection process
 - undertaking referee and credit checks to determine subcontractor performance and financial viability
 - ensuring selection interviews with subcontractors meet the determined criteria
 - undertaking contractual arrangements between the organisation and successful subcontractors
- action and remediate below standard subcontractor performance.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- industrial relations legislation, structures and processes
- organisational quality assurance requirements relating to contracts and contractors
- contracts, workplace agreements and relevant licensing arrangements

- industry subcontracting system and industry benchmarks for subcontractors
- subcontractor administration and performance management systems:
 - work sequence and nature of job roles
 - project timeframe from start to finish
 - quantum of hours required to perform the work
 - performance benchmarks within subcontracts
 - project meetings and provision of progress reports
 - performance monitoring against project timelines and objectives
 - performance management where performance is sub-standard or inappropriate:
 - anecdotal evidence, including input from project managers and administrators
 - examination of data provided by the subcontractor
 - input about subcontractor performance from other organisations
 - observation of the subcontractor on other project sites
 - using subcontractor performance records from previous associations.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must be provided with:

- industrial relations and privacy legislation and appropriate awards and workplace agreements
- construction project plans, specifications, codes and standards
- organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- technology, applications and software to access, extract, integrate and compile information and data, and securely retain documentation and records

CPCBC5006 Apply site surveys and set-out procedures to building projects up to three storeys

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5006B Apply site surveys and set-out procedures to medium rise building projects. Change to title. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to apply site surveys and set-out procedures to building and construction projects up to three storeys. It includes the skills and practices required to set out building projects, measure, record and interpret data using measuring and levelling equipment.

It applies to National Construction Code (NCC) classifications:

- Residential - Class 1 and 10 buildings, maximum three storeys
- Commercial - Class 2 to 9, Type B and C.

This unit of competency supports builders, surveyors and related construction industry professionals who have responsibility for applying design concepts and principles to survey and site set-out on building and construction projects up to three storeys.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, regulatory or registration requirements apply to this unit of competency in some jurisdictions. Relevant state and territory regulatory authorities should be consulted to confirm these requirements.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|---|
| 1 Assess and select levelling equipment. | 1.1 Identify specialised levelling and surveying equipment available on large building projects for various set-out and levelling procedures. |
| | 1.2 Research and record differences between types of specialised surveying equipment. |
| | 1.3 Identify components of levelling devices. |
| 2 Select, test and operate levelling devices. | 2.1 Select levelling devices appropriate for the set-out |
| | 2.2 Perform basic tests on levelling device accuracy in accordance with manufacturer specifications. |
| | 2.3 Calculate and record effects of maladjustment in levelling devices using standard operating procedures (SOPs). |
| | 2.4 Carry out temporary adjustments to set up levelling equipment in accordance with SOPs. |
| | 2.5 Determine horizontal and vertical angles using levelling devices. |
| 3 Conduct site set-out. | 3.1 Obtain, read and identify site information and dimensions from project working drawings, site plan and surveyor's plans. |
| | 3.2 Access, read and follow relevant workplace safety requirements. |
| | 3.3 Identify correct location of survey pegs prior to positioning pilot pegs. |
| | 3.4 Locate profile pegs at a working distance from survey pegs and parallel to pilot line. |
| | 3.5 Set out overall of building and load bearing members to plans and specifications. |
| | 3.6 Check vertical accuracy of each survey to a tolerance of |

10 mm using different levelling devices.

- | | | | |
|---|---|-----|--|
| 4 | Compute grid distances and coordinates. | 4.1 | Calculate coordinates and bearings, distances related to grids and general set-out work. |
| | | 4.2 | Demonstrate angular relationship between different bearings (whole circle). |
| | | 4.3 | Calculate bearing and distance between coordinates. |
| | | 4.4 | Calculate coordinates of a point given the bearing and distance from a point with known coordinates. |
| | | 4.5 | Determine offsets from a coordinated point given the bearing and distance from a point with known coordinates. |
| | | 4.6 | Determine information necessary to set-out a structure using a site plan. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- numeracy skills to:
 - interpret, calculate and transfer project plan dimensions to on site set-out.
- technology skills to:
 - use a range of sophisticated levelling equipment to optimise set-out outcomes
 - use applications to access, extract and share information.

Unit Mapping Information

Supersedes and is equivalent to CPCBC5006B Apply site surveys and set-out procedures to medium rise building projects.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC5006 Apply site surveys and set-out procedures to building projects up to three storeys

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5006B Apply site surveys and set-out procedures to medium rise building projects. Change to title. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by site surveying and setting out one building project, up to three storeys.

In doing this, the candidate must:

- use two different surveying and levelling devices
- apply survey and levelling principles for site set-out
- perform calculations and conversions using collected survey data.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- design principles and work drawings and specifications
- the National Construction Code (NCC) and Australian Standards
- building systems and application to survey and site set-out
- level and grade checking used to perform survey control to accuracy criteria
- functional and operational features of surveying and levelling equipment:
 - electronic distance measuring (EDM) equipment
 - laser
 - optical levels
 - peg methods
 - theodolite
- workplace safety requirements.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- project working drawings, specifications and site set-out plans
- relevant building, safety and environmental legislation
- current relevant building codes and standards
- at least two survey and levelling devices
- relevant computer software packages and technology applicable to collecting, calculating, analysing and recording survey data.

CPCBC5007 Administer the legal obligations of a building and construction contractor

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5007B Administer the legal obligations of a building or construction contractor. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to administer the legal obligations of a building and construction contractor, as either party to a contract. It includes maintaining legal obligations, licensing and registration, and managing systems for ensuring compliance with legislation.

It applies to National Construction Code (NCC) classifications:

- Residential - Class 1 and 10 buildings, maximum three storeys
- Commercial - Class 2 to 9, Type B and C.

This unit of competency applies to builders, senior managers within building and construction organisations and other construction industry personnel responsible for administering and ensuring contractor obligations and responsibilities are fulfilled for building and construction projects.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of CPCWHS1001 *Prepare to work safely in the construction industry* meets this requirement.

Licensing, regulatory or registration requirements apply to this unit of competency in some jurisdictions. Relevant state and territory regulatory authorities should be consulted to confirm these requirements.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|---|-----|--|
| 1 Establish legal requirements of the business. | 1.1 | Secure business registration of the organisation in accordance with owner/operator preferences and legal requirements. |
| | 1.2 | Seek approval of licensing and registration as a contractor/supervisor from the appropriate government agency. |
| | 1.3 | Investigate and meet legal responsibilities of operating a construction business. |
| | 1.4 | Complete, submit and maintain accurate and secure legal documents and records. |
| 2 Engage personnel for the project. | 2.1 | Identify and interpret relevant industrial awards for the hiring of staff or labour. |
| | 2.2 | Determine contracts of employment on a case-by-case basis and implement the principles and legalities of workplace agreements. |
| | 2.3 | Apply equal opportunity principles in all aspects of recruitment and selection of staff and other personnel. |
| | 2.4 | Follow procedures for employment termination and redundancy. |
| | 2.5 | Establish, document and implement dispute resolution processes as necessary. |
| | 2.6 | Identify and implement workers compensation policies. |
| 3 Meet work health and safety (WHS) requirements. | 3.1 | Comply with WHS legislation. |
| | 3.2 | Investigate and apply for necessary approvals or permits from WHS authority prior to work commencing. |
| | 3.3 | Inform workers of their rights and responsibilities and ensure a safe workplace that complies with legislative requirements. |

- | | | |
|---|---|---|
| | 3.4 | Adhere to regulations relating to noise abatement and working hours. |
| | 3.5 | Inform workers of personal and organisational obligations and ensure that workers have been inducted. |
| | 3.6 | Facilitate and implement rehabilitation arrangements for employees returning from injury or illness. |
| | 3.7 | Assist workers returning to work after injury or illness to regain full employment status as soon as practicable. |
| 4 | Administer business obligations. | |
| | 4.1 | Collect, record and make taxation and Goods and Services Tax (GST) payments in compliance with Australian Taxation Office (ATO) requirements. |
| | 4.2 | Calculate and contribute individual worker's superannuation entitlements. |
| | 4.3 | Evaluate and attain adequate personnel, property and project work insurance policies. |
| | 4.4 | Implement and maintain consumer fair trading practices ethically, effectively and efficiently. |
| 5 | Comply with environmental requirements. | |
| | 5.1 | Introduce and use renewable materials as a primary aim, wherever possible, over non-renewable materials. |
| | 5.2 | Minimise use of high energy materials and introduce low energy materials where practical. |
| | 5.3 | Implement processes to ensure compliance with environmental protection and sustainability requirements. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- writing skills to:
 - complete legal documents and records
- communication skills to:

- liaise verbally and in writing with government agencies
- provide information to employees and other stakeholders
- technology skills to:
 - use communication tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access, extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCBC5007B Administer the legal obligations of a building or construction contractor.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC5007 Administer the legal obligations of a building and construction contractor

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5007B Administer the legal obligations of a building or construction contractor. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by administering the contractor's legal obligations of one building or construction project.

In doing this, the candidate must:

- advise appropriate authorities and gain the necessary approvals or responses
- establish and maintain good human relations with contracted employees, subcontractors and other stakeholders
- manage organisational taxation and insurance obligations

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- Commonwealth and state/territory legislation and regulations appropriate to the operations of the business:
 - Building Code of Australia (BCA)
 - Australian Consumer Law (ACL)
 - Australian Securities and Investments Commission (ASIC)
 - public liability, workers compensation, property and project work insurance requirements
 - industrial relations Acts and regulations
 - privacy
 - superannuation contributions
 - work health and safety (WHS)
 - environmental and sustainability
- Australian Tax Office (ATO) requirements
- builder's registration and licensing requirements
- return to work and rehabilitation arrangements

- employees and subcontractor's awards and agreements
- building industry codes of practice and standards
- Australian Business Licence and Information Service (ABLIS)
- local building authority regulations.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a realistically simulated workplace environment.

Candidates must have access to:

- current and relevant Commonwealth and state and territory legislation for businesses
- relevant codes, standards and regulations for operating a business
- copies of appropriate awards, workplace agreements and contracts
- business equipment and technology to access information, lodge documentation and records, securely store legal documentation and records and facilitate administration of legal obligations of a building or construction contractor.

Links

CPCBC5009 Identify services layout and connection methods for Type B and C constructions

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5009A Identify services layout and connection methods to medium rise construction projects. Change to title. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to identify services requirements, layouts and connections from project drawings and specifications for Type B and C construction projects. It includes identifying and evaluating differing layouts for services to comply with building codes, regulations and standards.

This unit of competency applies to builders, project managers and related construction industry professionals responsible for determining services layouts using design concepts and principles relating to installations.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, regulatory or registration requirements apply to this unit of competency in some jurisdictions. Relevant state and territory regulatory authorities should be consulted to confirm these requirements.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|--|
| 1 Evaluate layout for water storage supply. | 1.1 Sketch layout for residential water supply and connection from a town supply or tank storage to comply with relevant building regulations and standards. |
| | 1.2 Document single and two-stage pumping systems used to maintain water levels in storage tanks. |
| | 1.3 Identify and address limitations of multi-function and single function services connected to water storage tanks. |
| 2 Evaluate layout and methods of sewerage and drainage disposal. | 2.1 Sketch sewerage connection and layout in accordance with relevant building regulations and standards. |
| | 2.2 Assess number of fixtures and building type to determine stack type. |
| | 2.3 Identify fixture units. |
| | 2.4 Determine appropriate connection methods of main drains to local authority sewers against relevant building standards. |
| | 2.5 Assess disposal of sewerage from fixtures situated below the level of the local authority sewer. |
| | 2.6 Monitor collection, treatment and disposal of prohibited discharges for non-domestic buildings. |
| 3 Assess layout of mechanical ventilation. | 3.1 Identify and sketch methods of mechanical ventilation and air distribution. |
| | 3.2 Check mechanical ventilation and air distribution system design layout is appropriate to the building design and complementary to other services. |
| 4 Evaluate the range of hot water systems. | 4.1 Evaluate operating principles of various types of hot water systems. |
| | 4.2 Select suitable hot water system according to accepted and agreed requirements and specifications. |
| 5 Evaluate lighting for a | 5.1 Identify roof construction used and outline methods for |

range of situations.		appropriate daylight transmission.
	5.2	Compare various service situations with methods of artificial lighting used.
6 Determine compliance of fire protection.	6.1	Identify authorities involved in plan perusal and site inspection for the various building classifications.
	6.2	Identify requirements for sprinkler systems and fire hoses for the various building classifications.
	6.3	Address fire detector and alarm systems and the application of fire doors.
	6.4	Identify extinguishing agents and their applications.
7 Plan installation of electrical and electronic services.	7.1	Identify electrical supply connection to site and comply with appropriate authority.
	7.2	Implement electrical design and provision for services.
	7.3	Identify and outline electronic cabling, type of service, categories of cabling, layout of equipment, safe guards, access for maintenance, repair and extensions.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access and extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCBC5009A Identify services layout and connection methods to medium rise construction projects.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCBC5009 Identify services layout and connection methods for Type B and C constructions

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5009A Identify services layout and connection methods to medium rise construction projects. Change to title. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by determining, documenting and conveying layout and connection methods to a range of services appropriate to Type B and C constructions, which may be undertaken over several projects and must include:

- water supply
- sewerage and drainage disposal
- mechanical ventilation and air distribution
- hot water systems
- natural and artificial lighting
- fire protection
- electrical and electronic.

In doing this, the candidate must:

- apply design concepts and principles relating to performance of service installations
- identify typical faults and problems and take remedial action
- comply with the National Construction Code (NCC) and Australian standards.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- relevant government building legislation, codes and standards
- the NCC
- project drawings, details and specifications
- organisational work practices and procedures
- manufacturer specifications and installation instructions
- properties, characteristics and limitations of specified materials, products and components
- service installation terminology and definitions

- water supply:
 - single and two-stage pumping for multi-function and single function
 - tank storage supply relative to the public water supply and reservoir heights
 - town supply
- sewage connection and layout:
 - graded or vertical discharge pipes
 - inspection shafts and overflow relief gullies (ORGs)
 - local authority sewerage drainage system
 - septic or biochemical treatment unit
- methods of mechanical ventilation:
 - air conditioning applications
 - air distribution, including mechanical ventilation requirements for enclosed car parks
 - air filtration, including air filters, ducting and main filter types
 - mechanical ventilation
- hot water system:
 - area to be serviced
 - energy sources available
 - height of installation
 - number of outlets
 - type of occupancy
 - type of system
- lighting:
 - emergency lighting
 - natural and artificial lighting
- electronic cabling factors:
 - access for maintenance, repair and extension
 - categories of cabling:
 - data
 - lift controls
 - power supplies
 - telecommunications
 - layout of equipment:
 - computers
 - telephones
 - safe guards
 - type of service.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant state and territory building legislation codes and standards
- the NCC
- manufacturer's specification and installation instructions
- project plans, details and specifications
- technology, equipment and applications to access, extract, integrate, compile and produce information and drawings necessary to identify services layout and methods of connection.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCBC5010 Manage construction work

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5010B Manage construction work.
Updated to meet the Standards for Training Packages 2012..

Application

This unit of competency specifies the skills and knowledge required to manage on-site work for building and construction projects to meet commercial contractual obligations. It includes establishing effective communication processes, managing risks and work health and safety (WHS), managing processes for ordering materials and installing equipment, as well as management of on-site operations.

It applies to National Construction Code (NCC) classifications:

- Residential - Class 1 and 10 buildings, maximum three storeys
- Commercial - Class 2 to 9, Type B and C.

This unit of competency applies to builders, related construction industry professionals and senior managers within building and construction firms responsible for monitoring and measuring actions and coping with contingencies to meet scheduled timeframes on medium-rise construction work and/or commercial building projects.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of CPCWHS1001 *Prepare to work safely in the construction industry* meets this requirement.

Licensing, regulatory or registration requirements apply to this unit of competency in some jurisdictions. Relevant state and territory regulatory authorities should be consulted to confirm these requirements.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|---|-----|--|
| 1 Establish site communication processes. | 1.1 | Read, interpret and follow organisational quality management requirements. |
| | 1.2 | Establish and manage site communication processes. |
| | 1.3 | Organise dates and times of-site meetings and notify relevant personnel. |
| 2 Establish site safety procedures. | 2.1 | Establish and implement on site safety and welfare requirements to meet WHS legislation and make available to all workers on site. |
| | 2.2 | Identify plant and equipment that require operator licensing to comply with risk management procedures and state and territory licensing requirements. |
| | 2.3 | Establish and implement hazard management procedures and instigate precautionary measures. |
| | 2.4 | Address hazardous manual handling tasks and inform workers of their responsibilities. |
| | 2.5 | Establish construction safety procedures and identify key personnel. |
| | 2.6 | Establish and manage safety induction procedures in the event of dangerous incidents, injuries and accidents. |
| | 2.7 | Develop and implement safety reporting processes and documentation in accordance with organisational and legislative requirements. |
| 3 Manage supply of materials and equipment. | 3.1 | Establish and manage a timely and cost-effective process for ordering, receiving, checking and safely stacking and protecting materials. |
| | 3.2 | Establish, manage and monitor procedures for selecting, hiring and maintaining plant and equipment. |

- | | | | |
|---|---|-----|--|
| 4 | Manage on-site operations. | 4.1 | Maintain a safe and cost-effective work environment to achieve schedules and meet contractual obligations. |
| | | 4.2 | Manage and coordinate human resources and subcontractor obligations to ensure compliance with company operations. |
| | | 4.3 | Apply contingencies to deal with problems and delays affecting performance and project timelines. |
| | | 4.4 | Manage industrial relations issues in accordance with established company policy and regulatory guidelines. |
| | | 4.5 | Revise project schedules, as necessary, and document variations to assist with meeting of timeframes. |
| | | 4.6 | Implement a quality management system to create a continuous improvement environment in which operational procedures are monitored, analysed and reported. |
| | | 4.7 | Facilitate variations to approved project plan and specifications with contractual parties and statutory authorities. |
| | | 4.8 | Implement multi-site management plans in accordance with organisational policy and site conditions. |
| 5 | Manage processing of progress payments. | 5.1 | Validate and approve progress claims and payments in accordance with contract requirements. |
| | | 5.2 | Manage project expenditure and check claims against scheduled projected costs for accuracy. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- communication skills to:
 - liaise with subcontractors, staff, clients and local or regulatory authorities
- technology skills to:
 - use communication tools and devices to communicate and collaborate effectively with others

- use equipment and programs to access and extract information and develop relevant documentation.
-

Unit Mapping Information

Supersedes and is equivalent to CPCBC5010B Manage construction work.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC5010 Manage construction work

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCBC5010B Manage construction work.
Updated to meet the Standards for Training Packages 2012..

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by managing on-site construction work of one Class 1 to 10, maximum of three storeys, or a Class 2 to 9, Type B or C building project.

In doing this, the candidate must:

- interpret project material specifications in design documentation and procure quality, compliant materials, products and components
- manage at least one variation to the contract
- manage project financials, with timely payments for completed work
- manage on-site safety, personnel and resources to achieve project outcomes.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- work health and safety (WHS) Acts and regulation
- on-site safety:
 - hierarchy of control
 - duty of care
 - hazardous manual handling
 - risk assessment
 - rehabilitation and return to work requirements
 - environmental management requirements and sustainability principles
- construction methodologies:
 - planned methods of construction
 - construction constraints
 - risks and opportunities
 - temporary and permanent works and services
 - electrical cabling

- plumbing and gas piping systems
- temporary lighting and power outlets
- wastewater disposal systems
- fire suppression systems
- government codes, standards and regulations
- the National Construction Code (NCC)
- Australian Business Licence and Information Service (ABLIS)
- organisational quality management processes and procedures:
 - building and construction industry contracts
 - managing expenditure
 - communicating with regulatory authorities to ensure compliance with their requirements
- allocation and management of human resources:
 - dispute resolution
- selection and hiring physical resources:
 - relevant licensing arrangements
 - lifting equipment
- on-site communication:
 - emails
 - face-to-face verbal communication
 - mobile and fixed telephone contact
 - site diaries
 - written reports and memoranda
- properties, characteristics and limitations of approved materials:
 - concrete and pre-formed concrete
 - raw construction materials, such as sand, aggregate, timber and cement
 - sarking, insulation, air conditioning ducting and roofing
 - production of materials and prefabrication of products off site.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- current relevant building, industrial relations and consumer legislation
- the NCC and other relevant codes and standards

- project plans and schedules, construction drawings, site plans and specifications
- organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- business equipment and technology, applications and software to facilitate effective management of construction work.

CPCBC5011 Manage environmental management practices and processes in building and construction

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.

PC 2.4 has been amended to read: 'Evaluate a new project to determine its impact on existing environmental planning obligations.'

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5011A Manage environmental management practices and processes in building and construction. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to plan and implement effective environmental practices and processes and manage improvements of environmental issues. It includes determining and managing energy efficient systems, measuring and dealing with non-conforming practices and improving performance.

This unit of competency applies to builders, senior managers and other construction industry professionals responsible for developing effective environmental management plans and strategies to reduce environmental risk on building and construction projects.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Prepare an organisational environmental management plan. | 1.1 Analyse the potential impact on the organisation of current shifts in environmental legislation or regulations. |
| | 1.2 Determine current environmental management performance using best practice and benchmarking methods. |
| | 1.3 Analyse project requirements in relation to environmental obligations. |
| | 1.4 Prepare an environmental management plan using available information. |
| | 1.5 Seek senior management advice concerning implementation of the plan as required. |
| 2 Manage environmental management plan implementation. | 2.1 Inform staff and contractors of their obligations to comply with the environmental plan. |
| | 2.2 Monitor staff and contractor compliance with implementing the environmental plan. |
| | 2.3 Manage the effectiveness and accuracy of the environmental data gathering systems. |
| | 2.4 Evaluate a new project to determine its impact on existing environmental planning obligations. |
| | 2.5 Contact local authorities and regulatory bodies where the plan requires ongoing external monitoring or overseeing. |
| | 2.6 Communicate information to staff and stakeholders concerning updates to the environmental management plan. |
| | 2.7 Manage and evaluate the environmental management plan and track changing circumstances to maintain organisation compliance. |
| 3 Monitor organisational legal obligations. | 3.1 Manage organisational feedback systems to assist with conformance of the plan. |

- 3.2 Seek regular feedback concerning the operations of the environmental management plan to assist the organisation to meet its legal obligations.
 - 3.3 Manage and maintain legally required auditing practices to ensure probity and accountability towards legislative requirements.
 - 3.4 Maintain contact with contractors and monitor their compliance with environmental management requirements.
 - 3.5 Implement emergency and remediation response strategies as necessary to assist compliance with the environmental management plan.
- 4 Review environmental management plan.
- 4.1 Review environmental management plan to identify areas that need actioning or improvement.
 - 4.2 Introduce measures to encourage staff to suggest innovations to improve the performance of the environmental management plan.
 - 4.3 Redraft plans to include improvements or address deficiencies found during the review process.
 - 4.4 Submit revised plans for endorsement by senior management and implement reviewed procedures.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- technology skills to:
 - use communication tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access, extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCBC5011A Manage environmental management practices and processes in building and construction.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCBC5011 Manage environmental management practices and processes in building and construction

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.

PC 2.4 has been amended to read: 'Evaluate a new project to determine its impact on existing environmental planning obligations.'

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5011A Manage environmental management practices and processes in building and construction. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by developing, implementing and managing an effective environmental management action plan for one building or construction project.

In doing this, the candidate must:

- determine the impact of environmental legislation on the project
- research current trends in environmental management and controls
- assess the recording and reporting system's effectiveness and efficiency
- manage organisational improvement processes to reduce environmental risk and non-conformance.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- current environmental legislative and regulatory requirements and obligations
- environmental management planning:
 - environmental management practices and methodologies
 - environmental prohibitions or restrictions applied within specific projects
 - formally or informally gathered information concerning environmental issues and requirements
 - key people to be consulted or included in decision making

- specific forms of activity to be pursued or which are subject to monitoring or evaluation
- timeframes and key environmental benchmarks to be achieved
- current trends in environmental management and controls
- benchmarking and the establishment of environmental goals
- penalties for various breaches and non-conformity
- environmental data gathering and feedback systems
- statistical analysis methodologies.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- environmental legislation, regulations and requirements
- government building legislation
- building and environmental codes and standards
- business equipment and technology, applications and software to facilitate effective management of environmental practices and processes in building and construction.

CPCBC5012 Manage the application and monitoring of energy conservation and management practices and processes

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5012A Manage the application and monitoring of energy conservation and management practices and processes. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to monitor energy conservation and manage practices and processes within the building and construction industry. It includes applying energy practices and methodologies, statistical analysis, current trends and factors in energy conservation, and legislative and regulatory requirements.

This unit of competency applies to builders, senior managers within building and construction firms and other industry professionals responsible for determining and recording the effectiveness and efficiency of energy conservation to meet organisational targets.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Prepare the organisation energy conservation and management plan.
 - 1.1 Review organisational policies and operational guidelines for energy conservation and management.
 - 1.2 Analyse the potential impact on the organisation of current shifts in environmental legislation or regulations.
 - 1.3 Use best practice and benchmarking methods to determine current energy conservation and management performance.
 - 1.4 Identify opportunities for energy conservation and savings within the immediate work area and on project sites.
 - 1.5 Consult with staff and contractors for ideas and suggestions concerning organisational energy conservation.
 - 1.6 Prepare an energy conservation and management plan based on available information.
 - 1.7 Seek advice from senior management, as required, concerning implementation of the plan.
 - 1.8 Develop an environmental management plan.

- 2 Manage the energy conservation plan.
 - 2.1 Inform staff and contractors of their obligations in implementing the energy conservation and management plan.
 - 2.2 Manage the energy data-gathering systems for maximum efficiency and accuracy and make changes as necessary.
 - 2.3 Determine the impact of new projects on existing energy conservation planning.
 - 2.4 Encourage staff and contractor participation to achieve the plan's objectives and monitor their compliance.
 - 2.5 Identify difficulties, obstructions or factors that impact on the achievement of the energy conservation plan and take measures to address them.
 - 2.6 Communicate information concerning updates of the plan to staff and stakeholders.
 - 2.7 Evaluate strategies to ensure that organisational

objectives are achieved.

- | | | | |
|---|--|-----|---|
| 3 | Monitor the energy conservation plan. | 3.1 | Use organisational feedback systems to assist with compliance and management of the plan. |
| | | 3.2 | Obtain regular feedback on the efficiency and operations of the energy conservation and management plan from staff and contractors. |
| | | 3.3 | Identify and promote energy savings throughout the organisation. |
| | | 3.4 | Implement strategies to assist with compliance of the energy management plan regarding reported energy wastage. |
| 4 | Evaluate and recommend changes to the energy conservation and management plan. | 4.1 | Review and action identified areas of improvement to maintain compliance with plan. |
| | | 4.2 | Introduce measures to encourage staff to suggest more efficient procedures and innovations to improve the performance of the energy conservation and management plan. |
| | | 4.3 | Redraft plans to include improvements or address deficiencies identified during monitoring. |
| | | 4.4 | Amend and submit revised plans to senior management for approval. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- analytical skills to:
 - assess variations in energy management performance and identify reasons for variations
- communication skills to:
 - enable clear and direct communication of environmental management plan requirements, and seek feedback on improvement initiatives
- technology skills to:

- use communication tools and devices to communicate and collaborate effectively with others
- use equipment and programs to access and extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCBC5012A Manage the application and monitoring of energy conservation and management practices and processes.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC5012 Manage the application and monitoring of energy conservation and management practices and processes

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5012A Manage the application and monitoring of energy conservation and management practices and processes. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by developing, implementing and monitoring effective energy conservation and management action plans and strategies for one building and construction project.

In doing this, the candidate must:

- research current trends in energy conservation and management
- monitor and record effectiveness, efficiency and compliance of the organisation's standards and identify areas for improvement
- conform to relevant environmental and sustainability legislation, regulations and requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- environmental and sustainability requirements
- development, application and monitoring of energy conservation plans:
 - gathering and evaluating formal or informal information and data
 - researching current energy conservation trends and factors
 - energy management practices and methodologies
 - conformance, milestones and performance targets
- energy data-gathering systems:
 - reports from suppliers
 - scheduled management meetings and briefings
 - statistical and analytical data supporting energy objectives
 - feedback from authorities
 - spot checks on aspects of energy management process

- benchmarking and best practice:
 - comparison of current, previously established and external energy conservation and management plans
 - costs associated with optimum environmental conformance
 - performance indicators against energy management objectives
 - performance measuring against industry, local authority, regulatory or international standards
 - energy targets, electrical power usage, fuel usage, heat loss and thermal efficiency
 - statistics of measurements from start, ongoing and at conclusion
- organisational policies and practices supporting energy conservation and management.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- environmental legislation, regulations and local jurisdictional requirements
- government building legislation
- organisational energy data and costs and product manufactures energy specifications
- building and environmental codes and standards
- business equipment and technology, applications and software to facilitate effective management of environmental practices and processes in building and construction.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCBC5013 Manage professional technical and legal reports on building and construction projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5013A Develop professional technical and legal reports on building and construction projects. Change to title. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to manage the development of technical and legal reports on buildings and commercial construction projects. It includes pre-property inspections and reports, building design and planning advice and reviewing and monitoring construction works.

This unit of competency applies to builders, senior managers, building consultants and other construction industry personnel who advise on building design processes and conduct inspections to develop building and construction reports.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Perform pre-purchase property inspections and assessments.
 - 1.1 Inspect building and identify and document defects to the agreed level of detail requested by a client.
 - 1.2 Obtain engineers' certificates according to the state of repair or number and type of defects.
 - 1.3 Estimate rectification costs to the degree of accuracy required or recommend demolition of the structure.
 - 1.4 Conduct feasibility studies at the direction of government agencies, financial institutions or investment houses.

- 2 Advise and coordinate the design process and planning approval.
 - 2.1 Prepare a project brief on behalf of client.
 - 2.2 Assess site conditions and structure.
 - 2.3 Produce or obtain preliminary design drawings and estimate probable costs.
 - 2.4 Coordinate a process through which final design documentation will be completed and approved by a client.
 - 2.5 Submit documentation to obtain authorised planning approval for the project.
 - 2.6 Prepare and present planning appeals to the authority, as necessary.

- 3 Review building or construction works.
 - 3.1 Check contract documentation to ensure client interests are protected.
 - 3.2 Monitor building or construction works regularly and provide reports on the progress and quality of work.
 - 3.3 Check variations and refer to contractors as required.
 - 3.4 Check and approve progress claims.

- 4 Provide advice on dispute resolution.
 - 4.1 Negotiate disputes on behalf of the client.
 - 4.2 Provide impartial advice to the parties involved in a building related dispute for equitable settlement.

- 4.3 Provide referrals for expert legal interpretation of contractual matters.
- 4.4 Provide expert testimony and evidence in the event of disputes going to court.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- oral communication skills to:
 - engage in oral negotiations and explore complex issues to reconcile and resolve disputes
- technology skills to:
 - use communication tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access and extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCBC5013A Develop professional technical and legal reports on building and construction projects.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC5013 Manage professional technical and legal reports on building and construction projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5013A Develop professional technical and legal reports on building and construction projects. Change to title. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by preparing, from contract requirements, a construction project feasibility study, including advice on building, site use, plans and processes.

In doing this, the candidate must:

- maximise the effectiveness of resources, and oversee the building and construction works to effect contractual outcomes
- coordinate the design process and obtain planning approval
- address assessment of any controversy or doubts.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- government building and construction legislative requirements:
 - construction industry contracts including quantities establishment, rates and costs related to payments and claims
 - building and construction industry subcontracting system
 - relevant licensing arrangements
 - human resource principles and practices
- work health and safety (WHS) Acts and regulations
- workplace safety requirements
- relevant state or territory building and construction codes, standards and regulations:
 - National Construction Code (NCC)
 - zoning and compliance with laws and by-laws by local authorities
- environmental and sustainability requirements:
 - Environment Protection Authority (EPA)
- building and construction quality practices and processes:

- planning
- management of on and off-site operations technical and legal requirements
- engineering approvals by architectural or design consultants
- final design or specification client approvals
- finance approvals by lending bodies
- feasibility studies, including related information from:
 - architectural or engineering practicalities
 - availability and quantum of finance
 - availability of services and conditions governing service provision
 - change of use for existing buildings
 - confirmation of ownership
 - development on vacant land
 - encumbrances or caveats on property
 - environmental factors or constraints
 - existing buildings/structures for a given purpose
 - most cost-effective method of building for a given site or location
 - refurbishment costs of buildings/structures
 - special conditions that may apply to developments
- identification of defects through property inspections:
 - adjoining properties
 - confirmation of boundaries
 - on-site inspections of buildings, structures or features
 - site access and egress
 - topographical and geological surveys.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must be provided with:

- relevant government building and environmental legislation
- current relevant codes and standards
- organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- business equipment and technology, applications and software to facilitate management of the development of technical and legal reports.

Links

Companion volumes to this training package are available at the VETNet website -

CPCBC5018 Apply structural principles to the construction of buildings up to three storeys

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5018A Apply structural principles to the construction of medium rise buildings. Change to title. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the outcomes required to apply structural principles to the construction of buildings up to three storeys. It includes applying structural principles that meet building codes and standards.

It applies to National Construction Code (NCC) classifications:

- Residential - Class 1 and 10 buildings, maximum three storeys
- Commercial - Class 2 to 9, Type B and C.

This unit of competency applies to builders, project managers and related construction industry professionals responsible for ensuring the structural integrity of materials as well as building and construction work so that site safety and quality control measures are maintained during residential and commercial projects.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, regulatory or registration requirements apply to this unit of competency in some jurisdictions. Relevant state and territory regulatory authorities should be consulted to confirm these requirements.

Pre-requisite Unit

CPCBC5001 Apply building codes and standards to the construction process for Type B construction

CPCBC4053 Apply building codes and standards to the construction process for Class 2 to 9 Type C buildings

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|--|-----|---|
| 1 Apply structural principles to planning | 1.1 | Identify main structural principles that apply to the construction of residential and commercial buildings up to three storeys. |
| | 1.2 | Identify structural elements from project plans and specifications. |
| | 1.3 | Analyse and interpret performance characteristics of building materials and apply them to the planning of the construction work. |
| 2 Coordinate and manage site and job set-up. | 2.1 | Implement processes to analyse the stability of soils and capacity of the site to support the construction loads. |
| | 2.2 | Identify structural requirements for retaining walls in conjunction with related industry professionals and apply them to the planning process. |
| | 2.3 | Analyse structural function and requirements for temporary structural elements and apply to the planning process. |
| 3 Coordinate and manage construction of footing systems. | 3.1 | Check set-out of a building for compliance with documented building plans. |
| | 3.2 | Assess structural performance of specified footings in the specifications for compliance with accepted construction principles and relevant building codes. |
| | 3.3 | Excavate, prepare and lay footings to meet compliance with relevant building codes and accepted industry construction principles. |

- | | | |
|--|-----|---|
| | 3.4 | Check damp coursing, termite barriers and provisions for tie-down in accordance with building codes and standards. |
| 4 Coordinate and manage structural elements of the construction process. | 4.1 | Identify and analyse technical construction principles and performance characteristics of construction materials in the project plan. |
| | 4.2 | Manage the installation of services in accordance with building plans with allowable tolerances stated in building codes and standards. |
| | 4.3 | Confirm compliance of the construction processes of structural elements in conjunction with specialist personnel and implement those processes. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- technology skills to:
 - use communication tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access, extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCBC5018A Apply structural principles to the construction of medium rise buildings.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC5018 Apply structural principles to the construction of buildings up to three storeys

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5018A Apply structural principles to the construction of medium rise buildings. Change to title. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by applying structural design principles to one residential or commercial construction project up to three storeys, with below ground construction as specified by the National Construction Code (NCC) classification.

In doing this, the candidate must:

- accurately apply design principles relating to performance
- coordinate the support of the structural components by applying temporary structure elements
- identify typical faults and problems and rectify as required.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- government building and construction legislation and regulations
- building codes, specifications and standards:
 - NCC
 - Australian Standards
 - project specifications
- design principles and behaviour of structural members undergoing stress, strain, compression, bending or combined actions
- below ground construction:
 - methods
 - structural sufficiency
 - water ingress
 - water proofing
 - site safety requirements

- properties, characteristics and limitations of structural materials:
 - concrete, including reinforced, pre-stressed concrete and tilt-up panels
 - composite steel and concrete
 - masonry
 - steel (cold-formed steel) and aluminium
- applications of structural principles in buildings:
 - dead and live load calculations and characteristics
 - fire resistance of materials
 - impact of thermal effects
 - impact of time-dependent effects, including creep and shrinkage
 - impact of wind, snow, groundwater, earthquake, liquid pressure, rainwater and earth pressure actions
 - structural resistance of forms of construction
 - structural resistance of materials
- project working drawings and specifications
- work health and safety (WHS) and organisational quality procedures and processes
- temporary structural elements.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant state and territory building and safety legislation, codes and standards
- environmental requirements and sustainability principles
- manufacturer's specification and installation instructions for materials specified in a project
- project plans, work drawings and specifications
- business equipment and technology, applications and software to facilitate effective application of structural principles to the construction and demolition of a building.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCBC5019 Manage building and construction business finances

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Application

This unit of competency specifies the skills and knowledge required to manage and administer finances within a building and construction business. It includes managing business financial risks, revenue and expenditure and meeting statutory financial obligations.

This unit of competency applies to builders, site supervisors and related construction industry professionals responsible for managing organisational finance systems to ensure the financial viability of a building and construction business.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Identify requirements of the business. | 1.1 Identify building and construction business legislation, regulations and operational and business requirements. |
|--|---|

- 1.2 Recognise areas of the business requiring expert advice and assistance to meet compliance.
 - 1.3 Establish business systems and programs to manage business financial requirements and remain up to date and compliant with industry and business changes.
 - 1.4 Conduct a risk assessment to determine adverse outcomes and consequences.
 - 1.5 Interpret obligations and responsibilities of managing building and construction finances.
- 2 Manage business finances.
- 2.1 Review project budgets and scheduled progress payments to schedule project expenses over the life of the project.
 - 2.2 Manage cash flow, pay supplier and contractor invoices and retain taxation records.
 - 2.3 Manage receipt of revenue and progress payments, and action processes for outstanding debt.
 - 2.4 Monitor financial health of the business regularly to identify potential problems and take appropriate action.
 - 2.5 Introduce options to improve the financial position of the business.
 - 2.6 Maintain and save accurate financial records.
- 3 Process taxation, insurance and payments.
- 3.1 Lodge and pay taxes and employee liabilities that apply to a building and construction business.
 - 3.2 Review and adjust all insurance cover to accommodate business growth or changes to business operation.
 - 3.3 Process payments to employees on time and contractors and suppliers by the due date.
 - 3.4 Monitor loan and interest repayments.
 - 3.5 Review ongoing business finances against project budgets.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC5019 Manage building and construction business finances

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by managing the business finances for a building and construction business over at least six months of business activity and including at least one building and construction project.

In doing this, the candidate must:

- manage business financial systems and processes
- schedule, monitor and process incoming and outgoing payments
- manage budgeting, cash flow and debt recovery
- lodge monthly, quarterly or annual statements and pay tax and workplace liabilities for the registered business
- conduct a business financial risk assessment.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- economic and industry trends
- financial concepts:
 - revenue streams
 - expenses
 - project costings
 - contingency planning
 - business overheads
 - profit
- key government sources for industry information
- Australian Consumer Law
- Competition and Consumer Act
- Australian Taxation Office (ATO) obligations for building and construction businesses:
 - income tax

- capital gains tax
- payroll tax
- fringe benefits tax
- pay as you go (PAYG) instalments
- goods and services tax (GST)
- tax differences between a sole trader and a company
- registering for taxes
- methods of paying taxes
- maintaining business and taxation records
- accounting systems:
 - types of invoices
 - invoicing and collecting payments
 - budgeting and reporting
 - end of financial year
- payment methods:
 - credit and debit card
 - direct debit
 - cheque
 - cash
- analysing business finances:
 - financial health check
 - sales calculators
 - profit ratios
 - liquidity and finance ratios
- options to improve business financial position:
 - recover outstanding debt
 - reduce or rearrange expenses
 - sell assets
 - increase prices
 - consolidate debt
 - track and improve cash flow
- insurance policies:
 - public liability
 - builders' risk
 - income loss
 - workers compensation
 - commercial vehicles
- contractual financial arrangements:
 - payment subject to quality of work
 - product quality and compliance

- terms and conditions of payment.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- financial documentation and other quality documentation to undertake the performance criteria and assessment requirements
- digital devices, applications and software to monitor, manage and record business finances
- government business legislation.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCBC6001 Apply building codes and standards to the construction process for large building projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6001B Apply building codes and standards to the construction process for large building projects. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to access, interpret and apply relevant building codes and standards applicable to the construction processes of large, high-rise and complex buildings. It includes ensuring building design and specifications comply with the National Construction Code (NCC) and related standards for large residential or commercial building projects.

This unit of competency applies to builders, project managers and related construction industry professionals who make a range of critical decisions in relatively complex situations and take responsibility for their actions.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, regulatory or registration requirements apply to this unit of competency in some jurisdictions. Relevant state and territory regulatory authorities should be consulted to confirm these requirements.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction.

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

essential outcomes.	demonstrate achievement of the element.
1 Interpret relevant codes and standards' requirements.	1.1 Identify relevant clauses from the NCC that apply to individual open classification projects.
	1.2 Determine scope of works and prescriptive requirements relevant to the NCC.
	1.3 Access and interpret requirements of relevant Australian Standards referenced in the NCC.
2 Classify buildings.	2.1 Determine the nature of buildings according to use and arrangement.
	2.2 Apply NCC criteria to determine the defined classification.
	2.3 Identify and interpret NCC requirements for multiple classifications.
3 Apply solutions to construction problems.	3.1 Determine the range of NCC criteria required to ensure project compliance.
	3.2 Identify alternative, compliant solutions for construction problems to comply with NCC Performance Requirements.
	3.3 Meet the Performance Requirement of the NCC by applying a Performance Solution supported by one or a combination of the Assessment Methods.
	3.4 Use a Deem-to-Satisfy (DTS) solution supported by one or a combination of Assessment Methods to meet NCC compliance.
	3.5 Use a combination of Performance Solutions and DTS solutions to comply with the Performance Requirements of the NCC.
	3.6 Identify and complete relevant documentation to meet Performance Requirements of the NCC.
	3.7 Discuss compliance options with relevant construction personnel to ensure compliance with NCC Performance Requirements.

- | | | | |
|---|---|-----|---|
| 4 | Apply fire protection requirements. | 4.1 | Determine fire resistance required for the construction of all classes and types of buildings. |
| | | 4.2 | Identify and apply NCC requirements with respect to passive and active fire protection to all classes and types of buildings. |
| | | 4.3 | Check existing buildings for compliance with passive and active fire protection requirements according to NCC requirements. |
| 5 | Implement strategy to manage construction compliance. | 5.1 | Establish strategies to manage construction compliance of large, complex and high-rise buildings with the NCC. |
| | | 5.2 | Implement and coordinate the work of professionals involved in the development and management of the building process. |
| | | 5.3 | Seek effective design solutions for buildings of more than three storeys to meet the needs of clients and ensure compliance with the NCC. |
| | | 5.4 | Design and implement quality assurance processes to ensure effective and compliant management of the construction process. |
| | | 5.5 | Detect non-conforming building materials and products and manage the evidence of suitability as required in the NCC. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- communication skills to:
 - lead discussions to explore solutions to complex design problems
- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access and extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCBC6001B Apply building codes and standards to the construction process for large building projects.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCBC6001 Apply building codes and standards to the construction process for large building projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6001B Apply building codes and standards to the construction process for large building projects. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by applying building codes and standards to one building project over three storeys, with below ground construction to meet the requirements of the National Construction Code (NCC).

In doing this, the candidate must:

- interpret and apply relevant General Requirements and Performance Requirements of the NCC to the building project
- apply compliance options and determine Assessment Methods to verify and support compliance with the Performance Requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- government building and construction legislation
- building standards and codes
- the NCC:
 - building classification
 - Performance Requirements
 - Performance Solutions
 - Performance Hierarchy
 - Assessment Methods
 - evidence of suitability
 - Verification Methods
 - comparison with Deem-to-Satisfy provisions
 - Expert Judgement
- working drawings and specifications

- organisational quality assurance, policies, procedures and workplace safety requirements
- definitions and technical building terms
- design principles and the behaviour of structures under stress, strain, compression, bending or combined actions
- properties, characteristics and limitations of building materials, products and components
- below ground construction:
 - methods
 - structural sufficiency
 - water ingress
 - water proofing
 - work health and safety (WHS).

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- current and relevant government building Acts and regulations
- design brief drawings, project plans, construction schedules and specifications
- building and related industry codes, standards and manufacturer product information and materials specifications
- the NCC
- technology, applications and software systems for accessing, researching, extracting, analysing and presenting information, interpreting data and developing documents and reports.

CPCBC6002 Generate and direct the development of new projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6002A Generate and direct the development of new projects. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to generate and direct the development of new projects in a building and construction organisation involved in either residential or commercial projects.

This unit of competency applies to builders, project managers and related construction industry professionals who collate, analyse and synthesise detailed information from a range of sources to create, supervise and control the development of new projects.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify potential new 1.1 Examine the organisation's project history to identify

- projects.
- 1.2 Review the property and construction market for available sites and buildings with development potential.
- 1.3 Monitor new trends in development and construction.
- 1.4 Analyse available statistical data on possible areas of project development.
- 1.5 Use network contacts to source businesses requiring new or upgraded facilities.
- 1.6 Short-list most promising projects and prepare preliminary costings and returns.
- 2 Formulate development proposals and feasibility studies.
- 2.1 Review short-listed projects to facilitate selection of preferred options for detailed design work.
- 2.2 Develop project briefs.
- 2.3 Review the environmental impact of projects and assess any existing environmental impact statements.
- 2.4 Carry out feasibility studies on the project's commercial viability and ascertain the capacity to generate income through the various alternatives.
- 2.5 Generate accurate costings for each proposal.
- 2.6 Hold discussions with potential clients and investors and explain the benefits and risks of each project.
- 2.7 Decide to proceed once client and investor agreement is obtained.
- 3 Negotiate project approvals.
- 3.1 Submit project plans to relevant authorities to seek their reaction and identify any impediments to project approval.
- 3.2 Revise project plan to comply with authorities' directives.
- 3.3 Resubmit plans for formal planning approval as necessary.

- | | | | |
|---|--|-----|--|
| 4 | Obtain project finance. | 4.1 | Approach finance institutions or investors for financial support. |
| | | 4.2 | Obtain suitable finance package for the project from institutions or investors. |
| | | 4.3 | Identify and approach possible joint partners for the project and determine interest. |
| 5 | Manage the commissioning of a project. | 5.1 | Appoint and retain project consultants. |
| | | 5.2 | Prepare documentation for proposed project, check against the brief and send for formal building approval. |
| | | 5.3 | Complete detailed costing of approved documentation. |
| | | 5.4 | Make modifications to the project to bring it within or under budget if required. |
| | | 5.5 | Make final decision to proceed with the project or defer to a future date. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- writing skills to:
 - prepare project briefs, plans and associated documentation for stakeholder /investor review, financial support and building approvals
- analytical skills to:
 - interpret statistical data and apply calculations
 - interpret strategic and often ambiguous information to develop logical, supportable and practical decisions
- planning and organising skills to:
 - sequence and schedule complex activities
 - utilise existing structures and systems to coordinate activities or design new processes as required
- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others

- use equipment and programs to access, extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCBC6002A Generate and direct the development of new projects.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC6002 Generate and direct the development of new projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6002A Generate and direct the development of new projects. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by generating and directing the development of one new building and construction project.

In doing this, the candidate must:

- select and deploy human and physical resources to enable new project to be developed
- conduct an in-depth analysis of collated information and data to inform a feasibility study
- identify possible financial constraints and investigate financial options and investors.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- appropriate sector of the building and construction industry and nature of the contracts upon which its activities are based
- factors to be considered in assessing the risk inherent in different types of building and construction projects
- business administration principles commensurate with organisational needs and financial options:
 - bank or finance company loans
 - customer or client funding
 - overdrafts
 - personal venture capital
 - speculative funds provided for investment
- industry industrial relations climate and practices
- legislative, regulatory, and administrative obligations incumbent on the building and construction industry:
 - work health and safety (WHS)
 - environmental requirements and sustainability principles and concepts

- employment and financial practices
- feasibility studies:
 - detailed analyses of markets and opportunities
 - examination of possible extensions to existing projects
 - gathering data from government or private sector publications
 - personal investigation of opportunities
 - socioeconomic and urban studies.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- current and relevant government building Acts and regulations, codes and standards
- organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- organisational financial reports and business data
- industrial relations legislation, awards and agreements
- technology, applications and software systems for accessing, researching, extracting, analysing and presenting information, interpreting data, calculating costs and developing documents and reports to facilitate development of new projects.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCBC6003 Establish, maintain and review contract administration procedures and frameworks

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6003A Establish, maintain and review contract administration procedures and frameworks. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to manage organisational contract administration procedures and frameworks for building and construction projects. It includes establishing and maintaining a contract management system necessary to produce accurate and successful project outcomes in accordance with organisational guidelines.

This unit of competency applies to builders, project managers and related construction industry professionals responsible for coordinating and managing building and construction projects.

This unit of competency is suitable for those using cognitive, technical and communication skills to analyse, plan, design and evaluate approaches to unpredictable problems and/or management requirements.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|--|-----|--|
| 1 | Establish contract administration procedures and frameworks. | 1.1 | Establish contract administration team comprising of persons with wide experience and knowledge in the building and construction industry. |
| | | 1.2 | Develop overview of the organisation's current legal and administrative climate and communicate this to the contract administration team. |
| | | 1.3 | Develop strategic plan for construction contract administration procedures and frameworks. |
| | | 1.4 | Establish information gathering mechanisms that draw strategic performance advice from all parts of the organisation. |
| | | 1.5 | Develop and implement quality assurance measures as part of the contract administration process. |
| | | 1.6 | Develop and establish reporting and feedback structures through which advice and action instructions can be conveyed to employees and subcontractors. |
| | | 1.7 | Establish benchmarks for contract performance and introduce a management framework for achieving, maintaining and exceeding those parameters. |
| | | 1.8 | Develop and introduce measures through which contract defaulters can be managed back into contract compliance. |
| 2 | Maintain contract administration procedures and frameworks. | 2.1 | Introduce policy and administrative guideline documentation that supports the contract administration process. |
| | | 2.2 | Develop and implement evaluation and review methods to ensure administration procedures and frameworks are effective. |
| | | 2.3 | Initiate internal feedback systems and methods to ensure that difficulties with administration of contracts are resolved within organisational guidelines. |

- 2.4 Introduce measures which ensure the safety and security of contract administration documentation.
 - 2.5 Maintain overall corporate contract administration framework comprising of employees, subcontractors, client and management.
 - 3 Review contract administration procedures.
 - 3.1 Develop, implement and manage review, recording and evaluation system to ensure probity and effectiveness of the contract administration system.
 - 3.2 Implement and manage regular scheduled and unscheduled reviews of contract administration procedures.
 - 3.3 Undertake formal evaluation of the contract and administration system regularly in consultation with organisation's legal advisors.
 - 3.4 Review and clarify operating procedures.
 - 3.5 Review contract documentation processes and provide feedback to those preparing contracts.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- communication skills to:
 - consult with staff, stakeholders, clients and legal advisors
 - direct activities of personnel involved in contract administration processes
- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access, extract information and complex data to analyse for strategic purposes.

Unit Mapping Information

Supersedes and is equivalent to CPCBC6003A Establish, maintain and review contract administration procedures and frameworks.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC6003 Establish, maintain and review contract administration procedures and frameworks

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6003A Establish, maintain and review contract administration procedures and frameworks. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by establishing a contract administration framework and monitoring its effectiveness across two different building or civil construction projects.

In doing this, the candidate must:

- establish contract administration system quality assurance measures, processes and procedures to achieve organisational benchmarks for contract performance
- evaluate and review the compliance, effectiveness and probity of the framework.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- appropriate sector of the building and construction industry and nature of the contracts upon which its activities are based
- factors to be considered in assessing the risk inherent in different types of building and construction projects
- financial and business administration principles commensurate with organisational needs
- human resource practices and the industry's industrial relations climate and practices:
 - employment conditions
 - individual organisational contracts
 - enterprise agreements
 - subcontractor contractual arrangements
- legislative, regulatory, and administrative obligations incumbent on the building and construction industry:
 - work health and safety (WHS)
 - environmental requirements and sustainability principles and concepts
 - employment and financial practices

- contract administration procedures and frameworks:
 - authorised courses of action
 - dispute resolution
 - document and contract distribution
 - document preparation, completion and handling
 - internal and external communication models
 - progress and contract performance reviews
 - response times
 - staff roles and organisational procedures
- organisational policies and procedures:
 - safety and security measures
 - confidentiality in contract handling
 - documentation security identification
 - limitations on contract access
 - limitations on contract circulation
 - limitations on document distribution
 - security and protection of document filing and storage
- quality assurance measures:
 - distributing information
 - establishing performance benchmarks for system
 - maintaining a quality dialogue with all parties to the construction process
 - managing within organisational policy
 - monitoring internal expenditures and funding allocations
 - obtaining adequate feedback from clients, subcontractors and suppliers
 - providing feedback and developing remediation procedures
 - responding to external legislation and regulation requirements.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- current and relevant government building, privacy and consumer law Acts and regulations
- regulations, codes and standards relevant to contracts and contract administration
- construction contracts relevant to the projects

- business technology, applications and software systems for accessing, researching, extracting, analysing and presenting information, interpreting data and developing documents and reports.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCBC6005 Manage tender developments for major projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6005A Manage tender developments for major projects. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to manage the development of tenders for major projects. It covers the facilitation, implementation and management of the tender development system in a building and construction organisation involved in residential and/or commercial projects.

This unit of competency applies to builders and senior managers in building, construction and services who use sound economic business and resource data to manage complex projects and processes and are responsible for managing tender developments for major projects.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Evaluate contract risk. 1.1 Review and analyse an invitation to tender.

- 1.2 Obtain and examine in detail contract documents pertinent to the project.
 - 1.3 Examine and confirm conditions of contract in accordance with legislative and organisational requirements.
 - 1.4 Verify the organisation's current workload to determine capacity to meet contract timelines.
 - 1.5 Conduct risk analysis and investigate and establish the degree of risk in the project.
 - 1.6 Consult the management team in relation to likely construction approach and resources.
 - 1.7 Advise client of the intention or otherwise to submit a tender response.
- 2 Manage the tender process.
- 2.1 Allocate staff members to tender preparation process.
 - 2.2 Supervise staff contact with subcontractors and suppliers to obtain quotations for services or physical resources.
 - 2.3 Manage and supervise the development of pre-tender construction or project schedule.
- 3 Manage the development of human and physical resource costs.
- 3.1 Monitor determination of equipment and materials charge-out rates.
 - 3.2 Manage the establishment of labour rates for elements of work.
 - 3.3 Analyse project elements to ensure they conform to organisational contracting processes.
 - 3.4 Arbitrate on rates applied to elements of the work to ensure they compare to relevant existing records of costs.
 - 3.5 Supervise staff members to ensure appropriate rates are applied to the bill of quantities.
 - 3.6 Review and monitor extensions of human and physical resource costs to ensure their accurate translation into the estimate summary.

- | | | |
|--|-----|---|
| | 3.7 | Monitor extended values for preliminaries and overheads calculated by staff. |
| | 3.8 | Monitor staff to ensure they are calculating and including all supplementary costs. |
| 4 Prepare complete tender documentation and operating margins. | 4.1 | Review and assess conditions of contract to ensure there are no variations to the tender. |
| | 4.2 | Review and assess subcontractor quotes to ensure there are no variations to the tender. |
| | 4.3 | Check and confirm availability of plant and equipment. |
| | 4.4 | Confirm delivery schedules and follow up material suppliers. |
| 5 Evaluate tender documentation prior to submission. | 5.1 | Supervise and manage staff engaged in the preparation of the schedules which detail the sequence of work. |
| | 5.2 | Monitor progress of the tender development for timeliness and accuracy. |
| | 5.3 | Review documentation to ensure that the tender is finalised for the client in standard industry format. |
| | 5.4 | Appraise final tender documentation for completeness and allocation of critical rates and allowances prior to submission. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- communication skills to:
 - direct the activities of personnel involved in the tender development process
 - delegate tasks
- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access, extract and share strategic information.

Unit Mapping Information

Supersedes and is equivalent to CPCBC6005A Manage tender developments for major projects.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC6005 Manage tender developments for major projects

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCBC6005A Manage tender developments for major projects. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by managing the development of tenders for one building and construction project.

In doing this, the candidate must:

- develop a tender that comprehensively addresses project requirements
- implement management practices that result in a high level of strategic input and accuracy
- manage data acquisition from within and external to the organisation
- demonstrate conceptual and strategic problem solving
- comply with relevant legislative and regulatory requirements, standards and codes of practice.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- appropriate sector of the building and construction industry and conditions of the contracts upon which its activities are based:
 - contract clauses and intentions
 - dispute resolution
 - general conditions of contract
 - legislative and regulatory requirements
 - liabilities
 - parties' obligations under contracts
- factors to be considered in assessing the risk inherent in different types of building and construction projects
- conducting risk analysis:
 - analysis and revision of data
 - critical incident analysis and reporting
 - proposing solutions and recovery scenarios

- risk management practices
- scheduling and planning for contingencies
- financial and business administration principles commensurate with organisation's needs
- human resource processes:
 - accuracy and legitimacy of the tender process
 - management of material costs and availability
 - management of work practices, discipline and performance appraisal
 - staff selection and training in tender functions
- industry's industrial relations climate and practices:
 - costing methods and calculating standard time for activities
 - subcontractor contractual arrangements
 - independent workplace agreements
 - employment conditions
 - enterprise agreements
- relevant state or territory building and construction codes, standards and regulations
- socioeconomic and political factors which determine the climate in that sector of the building and construction industry.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must be provided with:

- current and relevant government building, industrial relations, privacy, consumer protection legislation, regulations, codes and standards
- technology, applications and software systems for accessing, researching, extracting, analysing and presenting information, interpreting data and developing tender and associated documentation
- copies of appropriate awards and workplace agreements
- organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements.

CPCBC6006 Manage the procurement and acquisition of resources for building and construction projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6006A Manage the procurement and acquisition of resources for building or construction projects. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to establish and strategically manage the resource procurement process. It includes the evaluation and moderation of practices, resulting in generating appropriate information and activities to support and maintain the timely provision of supplies, equipment and people to residential and commercial projects.

This unit of competency applies to builders, project managers and related construction industry professionals who apply their knowledge and skills in contexts that are subject to change and demonstrate autonomy and judgement in their area of responsibility.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

-
- | | | | |
|---|--|-----|--|
| 1 | Direct the resource acquisition process. | 1.1 | Manage organisational strategic resource procurement and acquisition processes. |
| | | 1.2 | Inform staff members responsible for procurement and acquisition of resources of organisational resource requirements. |
| | | 1.3 | Apply financial and business principles to the resource acquisition process. |
| 2 | Maintain financial and administrative control over the resource acquisition process. | 2.1 | Monitor the effectiveness of the financial and administrative systems and controls through which resources are procured and acquired. |
| | | 2.2 | Exercise financial and corporate responsibility over maintenance of the procurement and acquisition system. |
| | | 2.3 | Evaluate procurement reports in preparation for management team meetings. |
| | | 2.4 | Prepare schedules of staff duties for setting up of each site. |
| | | 2.5 | Allocate staff to specific tasks within the procurement process. |
| | | 2.6 | Facilitate and conduct regular meetings between team members and the client to report on progress. |
| 3 | Manage industrial relations matters. | 3.1 | Monitor industrial relations practices within the building and construction industry to ensure compliance. |
| | | 3.2 | Address and resolve industrial relations disputes emanating from either the supply or delivery of physical resources in accordance with organisational policy. |
| | | 3.3 | Maintain industrial relationships between the organisation's personnel, subcontractors and other workers. |
| 4 | Evaluate the procurement and acquisition process. | 4.1 | Develop and manage procurement process evaluation and moderation systems in accordance with company policy. |

- 4.2 Address and resolve industrial relations disputes from the supply or delivery of physical resources.
 - 4.3 Initiate and monitor evaluations of the resource procurement system and related processes to identify possible system improvements.
 - 4.4 Gather and evaluate strategic information relating to the procurement or acquisition of resources.
 - 4.5 Evaluate reports on trends in costs and quality of the resources provided to organisational worksites by suppliers.
 - 4.6 Scrutinise and evaluate orders for resources using approved company documentation and procedures to ensure compliance.
-
- 5 Administer the provision and withdrawal of resources from site.
 - 5.1 Establish and maintain systems for the effective supply and withdrawal of resources from sites.
 - 5.2 Manage strategic information on the usage and movement of resources on site.
 - 5.3 Establish and maintain communications principles and policies between on-site personnel and providers of physical resources.
 - 5.4 Obtain and monitor feedback from sites at commencement, during and on completion of the project.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- communication skills to:
 - address and resolve disputes
 - facilitate meetings
 - direct the activities of personnel
- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access, extract information and data to analyse for management purposes.

Unit Mapping Information

Supersedes and is equivalent to CPCBC6006A Manage the procurement and acquisition of resources for building or construction projects.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCBC6006 Manage the procurement and acquisition of resources for building and construction projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6006A Manage the procurement and acquisition of resources for building or construction projects. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by managing the procurement and acquisition of resources for at least one building and construction project.

In doing this, the candidate must:

- strategically focus on the procurement process and system to handle activities on more than one site
- overcome obstacles to procurement of human and physical resources to maintain project scheduled timeframes
- effectively deal with delays
- develop resource supply schedules and prioritise events, allowing for possible contingencies
- evaluate the system and recommend and implement remedial or improvement-based changes
- communicate information, including work health and safety (WHS) regulations applicable to the workplace.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- building and construction industry contracts
- factors that contribute to the provision of physical and human resources in a construction environment
- financial and business principles as they apply to the building and construction industry:
 - accountability and integrity
 - accurate and timely development and maintenance of financial records
 - compliance with all legal and financial obligations

- probity and honest dealing
- transparency of financial processes
- financial and administrative controls over the procurement process:
 - agreements with subcontractors and material suppliers
 - authorising payment for services provided
 - generation of procurement documentation
 - managing the raising of purchase orders
- human resource and industrial relations practices within the building and construction industry:
 - associations and industrial relationships between the organisation and subcontractors
 - associations and industrial relationships between the organisation and material suppliers
 - dispute resolution between on-site personnel involved in the procurement process
 - dispute resolution involving disagreements between the organisation and subcontractors
 - engaging on-site labour
 - negotiating payments under awards, agreements and workplace agreements
 - proactive communication and incident avoidance
- relevant building and construction codes, standards and regulations
- organisational strategic and operational activities and the mechanisms through which they are addressed.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant government construction legislation, regulations, codes and standards
- organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- copies of appropriate awards and workplace agreements
- business equipment, technology, applications and software systems for accessing, researching, extracting, analysing and presenting information, tracking and monitoring orders, deliveries and invoices and developing documents and reports.

CPCBC6007 Develop, plan and implement building and construction environmental management processes

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6007A Develop, plan and implement appropriate building or construction environmental management practices and processes. Change to title. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to develop, plan and implement systems designed to manage environmental practices and processes in either residential or commercial projects.

It includes establishing soundly based environmental management systems and strategic problem solving necessary to produce environmental outcomes that meet the legislative requirements of statutory authorities.

This unit of competency applies to builders, project managers and related construction industry professionals who use their technical and communication skills to analyse, plan, design and evaluate approaches to unpredictable problems and are responsible for managing environmental practices and processes on building or construction projects.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|---|
| 1 Identify environmental management plan factors. | 1.1 Identify and quantify strategic factors impacting on the organisation's compliance with environmental obligations. |
| | 1.2 Quantify range and scope of activities being undertaken by the organisation within environmental guidelines and obligations. |
| | 1.3 Identify and maintain knowledge of environmental issues from information in government publications. |
| | 1.4 Qualify and measure strategic and operational factors impinging on organisational environmental management processes. |
| 2 Establish and implement the organisational environmental management system. | 2.1 Direct and manage design and development of the organisational environmental planning system. |
| | 2.2 Develop criteria for implementing and maintaining environmental management systems for construction sites. |
| | 2.3 Develop methods to gather and monitor environmental management information essential to the construction process. |
| | 2.4 Evaluate environmental management processes regularly to ensure accuracy and compliance with policy. |
| 3 Establish and implement an environment management control system. | 3.1 Manage environmental control system quality in accordance with sound management principles and practices. |
| | 3.2 Introduce methods for determining effectiveness of the major elements of the environmental management control system. |
| | 3.3 Train and manage staff to ensure that quality assurance practices are applied to the environmental management process on a daily basis. |

- | | | |
|---|-----|---|
| | 3.4 | Conduct routine monitoring of environmental benchmarks. |
| 4 Facilitate the introduction of systems to manage organisational environmental management. | 4.1 | Develop and introduce organisational policies and procedures for environmental management. |
| | 4.2 | Document policies and routines for future reference. |
| | 4.3 | Circulate policy guidelines and obligations within the organisation and obtain sign-off by staff, employees and contractors. |
| | 4.4 | Monitor compliance of staff with environmental policy. |
| 5 Implement an environmental conformance feedback system. | 5.1 | Develop and introduce processes to monitor and report on environmental issues and procedures. |
| | 5.2 | Develop, circulate and maintain feedback systems to ensure all stakeholders can support the environmental management process. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- writing skills to:
 - develop clear environmental management policies, procedures, guidelines and associated implementation and monitoring documentation
- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access and extract information and data to analyse for management purposes.

Unit Mapping Information

Supersedes and is equivalent to CPCBC6007A Develop, plan and implement appropriate building or construction environmental management practices and processes.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC6007 Develop, plan and implement building and construction environmental management processes

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6007A Develop, plan and implement appropriate building or construction environmental management practices and processes. Change to title. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by developing, implementing and maintaining an environmental management system for a building and construction organisation, or a specific project.

In doing this, the candidate must:

- develop an effective environmental conformance strategy
- develop identifiable roles and responsibilities for organisation personnel involved in the management control system
- implement management practices that result in a high level of conformance by the organisation to meet environmental obligations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- environmental issues that impact on the organisation and its practices
- legislative, regulatory and administrative obligations incumbent on the building and construction industry for environmental practices
- environment management control system quality principles and practices:
 - ensuring availability of appropriately qualified personnel to deal with environmental issues
 - maintenance of agreed expenditure for environmental management compliance
 - obtaining timely and relevant expert advice as required by the project
 - organisational compliance with appropriate legislation and regulations
 - periodic review of environmental management practices and processes
 - preventative maintenance of environmental management practices and processes

- public liabilities and exposure to risk
- risk management strategies and policies
- feedback systems
- financial and business administration principles commensurate with organisational needs
- factors to be considered in assessing the environmental risk inherent in different types of building and site utilisation projects
- key factors that influence decisions on environmental issues and decision making:
 - federal, state or territory environmental legislation
 - local authority by-laws, Acts or regulations concerning environmental issues
 - location and nature of the construction activity
 - cope of operations and activities of the organisation
 - types of licences and permits held or needing to be held by the organisation.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant national construction and environmental legislation, regulations, codes and standards
- organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- business equipment, technology, applications and software systems for accessing, researching, extracting, analysing and presenting information, securely storing documents and records, and developing documents and reports.

CPCBC6008 Develop and implement an estimating and tendering system

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6008A Develop and implement an appropriate estimating and tendering system. Change to title. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to develop and implement an appropriate estimating and tendering system. It includes the facilitation and maintenance of an estimating and tendering system in a building and construction organisation involved in residential and/or commercial projects and the establishment of the human resources and facilities necessary to produce accurate and successful tenders in accordance with contractual guidelines.

This unit of competency applies to builders and senior managers within larger building, construction and services organisations who are responsible for managing estimating and tendering systems on complex residential or commercial projects.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

essential outcomes.	demonstrate achievement of the element.
1 Identify tendering system inclusions.	1.1 Quantify and qualify strategic economic and social factors impacting on the organisation. 1.2 Quantify and qualify range and scope of the organisation's activities and their impact. 1.3 Review and qualify strategic operational and financial structures within the organisation and its information needs.
2 Establish and implement an organisational tendering system.	2.1 Facilitate and implement design and development of the organisational estimating and tendering system in accordance with legislative and organisational requirements. 2.2 Establish and disseminate strategic criteria for personnel and processes concerned with estimating and tendering. 2.3 Obtain endorsement of senior management for implementation of the system. 2.4 Appoint staff with the necessary expertise and industry knowledge to excel at the tasks involved.
3 Establish and implement a tendering quality control system.	3.1 Identify and apply appropriate financial structures which underpin the tendering process. 3.2 Facilitate and implement review and feedback system using organisation project records and performance criteria.
4 Develop and implement a client feedback system.	4.1 Establish and implement a communication system to enable effective contact with clients. 4.2 Plan and strategically implement a client feedback system based on price, performance, progress and other strategic factors.
5 Establish a recording	5.1 Design and implement a tender recording system which meets organisational needs for ongoing evaluation of

and evaluation system.

tender performance.

- 5.2 Develop and implement strategic balances and checks which enable the ongoing maintenance of quality of the estimating and tendering system.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access, extract information and complex data to analyse for strategic purposes.

Unit Mapping Information

Supersedes and is equivalent to CPCBC6008A Develop and implement an appropriate estimating and tendering system.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC6008 Develop and implement an estimating and tendering system

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6008A Develop and implement an appropriate estimating and tendering system. Change to title. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by developing and implementing an effective estimating and tendering system for a building and construction organisation appropriate to the organisation's business activities.

In doing this, the candidate must:

- comply with building, financial and industrial relations legislation, regulations, codes and standards
- develop conceptual and strategic problem-solving systems
- implement management practices which result in high level of staff productivity
- interact effectively with internal and external stakeholders.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the appropriate building and construction industry sector and the nature of the contracts upon which its activities are based
- relevant state or territory building and construction codes, standards and regulations
- factors to be considered in assessing the risk inherent in different types of building and construction projects
- financial and business administration principles commensurate with organisational needs:
 - identifying and interpreting strategic information relating to financial viability
 - accounting methods and systems
 - calculating and apportioning of overheads and margins
 - subcontracting and organisational contracting rates
- human resource practices and the industry's industrial relations climate and practices
- socioeconomic and political factors which determine the climate in that sector of the building and construction industry
- factors impacting on the tender process:

- legislative and regulatory requirements and codes of practice
- market rates, trends and technological improvements and variations
- materials and labour cost determination
- range of contracts employed by the organisation
- standard organisational documentation.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- current relevant legislation, codes and standards
- construction and subcontractor contracts
- organisational policies and procedures, including workplace safety requirements
- financial and tendering legislation, codes, standards and guidance information
- business equipment, technology, applications and software systems for accessing, researching, extracting and interpreting data, calculating costs, analysing and presenting information and developing documents and reports.

CPCBC6009 Develop, plan and implement a building and construction planning process

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6009A Develop, plan and implement an appropriate building or construction planning process. Change of title. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to develop, plan and implement a building and construction planning process. It includes the establishment of a construction planning system necessary to produce accurate and successful project outcomes in accordance with organisational guidelines and legislation, codes and standards governing project completion.

The unit of competency applies to the construction planning process of large organisations involved in residential and/or commercial projects of significant size and complexity.

This unit of competency applies to builders and senior managers responsible for managing staff and system performance and monitoring and reviewing planning systems within large building, construction and services organisations.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Identify factors for inclusion in the planning system.	1.1 Identify and quantify strategic factors impacting on the planning process in accordance with legislative, code, standard and organisational requirements. 1.2 Quantify range and scope of activities to be undertaken by the organisation. 1.3 Review and qualify strategic and operational planning structures and their information and data needs.
2 Establish and implement organisational construction planning system.	2.1 Facilitate design and development of the organisational construction project planning system. 2.2 Establish criteria for personnel and processes concerned with construction planning. 2.3 Facilitate and obtain endorsement of senior management for implementation of the system. 2.4 Select and appoint senior project staff to meet organisational needs.
3 Establish a planning quality control system.	3.1 Identify and apply construction methodologies applicable to the type of construction project to the planning quality control process. 3.2 Facilitate and direct the implementation of a review and feedback system using company project records and performance criteria.
4 Develop an organisational feedback system.	4.1 Establish and implement a means of effectively communicating planning information within the strategic and operational sectors of the organisation. 4.2 Develop and strategically implement an organisational feedback system based on performance, progress and project outcomes and other strategic factors.

- 5 Establish a recording and evaluation system.
- 5.1 Institute and manage a documentation and recording system that meets organisational needs for ongoing recording and evaluation of the planning process.
- 5.2 Develop and apply strategic balances and checks, which enable the ongoing maintenance of the quality of the planning system.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- technology skills to:
 - use digital tools, devices and programs to communicate and collaborate effectively with others
 - use equipment and programs to access and extract information and complex data to analyse for strategic purposes.

Unit Mapping Information

Supersedes and is equivalent to CPCBC6009A Develop, plan and implement an appropriate building or construction planning process.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC6009 Develop, plan and implement a building and construction planning process

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6009A Develop, plan and implement an appropriate building or construction planning process. Change of title. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by developing and implementing a building and construction planning process for the organisation, commensurate with the business activities of the organisation.

In doing this, the candidate must:

- develop a strategic focus on the mechanisms implemented to enable the construction planning process
- interpret organisational information and reporting requirements, which results in the establishment of mechanisms that demonstrate those needs are being met
- implement and maintain mechanisms and systems which enable demonstrable improvements to occur within the organisational construction planning process
- delegate effectively and oversee tasks
- communicate effectively both verbally and in writing with owners, senior management and employees.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- financial and business principles as they apply to the building and construction industry
- human resource and industrial relations practices within the building and construction industry:
 - appropriate experience and qualifications of workers
- organisational strategic and operational activities and mechanisms through which they are addressed:
 - correct and timely selection of key project supervisors and administrators
 - effective lines and methods of communication
 - suitability and timing of communication
 - suitability of documentation and reporting methods

- suitability of work habits and timeliness of personnel
- relevant state or territory building and construction codes, standards and regulations
- the National Construction Code (NCC)
- socioeconomic and political factors which impact on the building and construction industry
- type, breadth and scope of building and construction industry contracts
- organisational quality assurance and policies and procedures
- planning quality control process:
 - documentation and graphical representation of data
 - establishment of performance benchmarks
 - evaluation and review methods and practices
 - feedback loops and information extraction
 - personnel and system information gathering and insert points
 - project review meetings and project progress reporting
- strategic factors that impact on the planning process:
 - clients and client needs
 - location of projects
 - logistics and location of personnel
 - market focus and structure of the organisation
 - organisation information needs and timelines
 - relevant legislative requirements, codes and standards
 - strategic organisational objectives
 - type of work being undertaken
- recording and evaluation systems that meet the organisation's needs:
 - key point data availability and crisis flagging
 - maintenance and redevelopment of information recording systems
 - manual and electronic data recording processes
 - performance data entry and responsibility
 - programmed and crisis evaluation strategies.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- government building legislation, codes and standards

- project plans, specifications and manufacturer's product and material specifications and installation instructions
- organisational policies and procedures including workplace safety requirements
- business equipment, technology and software to access information and data, run costing programs, secure and store documentation and records, and produce and share documentation to facilitate the development and implementation of a building and construction planning process.

CPCBC6010 Plan, develop and implement building and construction energy conservation and management processes

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6010A Plan, develop and implement building or construction energy conservation and management practices and processes. Change to title. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to develop, plan and implement practices and processes concerning energy conservation and management practices of organisations involved in either residential or commercial projects. It includes the establishment of management strategies focused on reducing energy waste through greater awareness and the implementation of practices which result in savings both within and external to the organisation.

This unit of competency applies to builders, project managers and related construction industry professionals who take responsibility for their own output when managing conservation practices and processes on construction projects.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|--|-----|---|
| 1 | Develop strategies for management of energy conservation. | 1.1 | Quantify and qualify factors to be included in the organisational energy conservation and management system. |
| | | 1.2 | Evaluate strategic factors that impact on the organisation's ability to improve energy conservation and management practices and processes. |
| | | 1.3 | Quantify range and scope of activities being undertaken by the organisation in regard to energy conservation and management. |
| | | 1.4 | Evaluate previous policies and operational factors contributing to energy conservation and management. |
| | | 1.5 | Develop organisational energy conservation and management policy and strategy, with assessment of savings and benefits to be derived. |
| 2 | Scope the energy conservation management principles and processes. | 2.1 | Consult board and senior management concerning the introduction and implementation of the energy conservation and management policy and strategy. |
| | | 2.2 | Develop organisational policy and management guidelines covering energy conservation and management within and external to the organisation. |
| | | 2.3 | Develop and document strategic plans for the introduction of the policy and strategy. |
| | | 2.4 | Brief staff on criteria for implementing and maintaining systems concerned with energy conservation and management. |
| | | 2.5 | Develop methods to gather and monitor energy conservation and management information essential to the management process. |
| | | 2.6 | Develop methods to translate the policy into on-site and organisational practices. |

- | | | |
|--|-----|---|
| 3 Implement the energy conservation and management system. | 3.1 | Build energy conservation and management instructions into organisational operating procedures. |
| | 3.2 | Introduce a staff training program to ensure that energy conservation and management practices are applied to organisational activities on a daily basis. |
| | 3.3 | Introduce methods for determining effectiveness of the energy conservation and management system. |
| | 3.4 | Establish and maintain routine monitoring of energy benchmarks. |
| 4 Manage the organisational energy conservation processes. | 4.1 | Add energy conservation and management issues to the process agenda at all levels of the organisation. |
| | 4.2 | Advise contractors and employees of the framework and monitor their performance within the framework. |
| | 4.3 | Circulate policy guidelines and obligations within the organisation and obtain sign-off by staff, employees and contractors. |
| | 4.4 | Monitor staff compliance with energy conservation and management policy. |
| 5 Implement an energy management feedback system. | 5.1 | Develop and introduce processes to monitor and report on energy conservation and management achievements. |
| | 5.2 | Develop, circulate and maintain feedback systems to ensure all stakeholders can support the energy conservation and management process. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- communication skills to:
 - explain technical concepts and explore solutions to complex energy and conservation management issues
 - brief and train staff, and consult with board members and senior management
- technology skills to:

- use digital tools and devices to communicate and collaborate effectively with others
- use equipment and programs to access, extract information and complex data to analyse for strategic purposes.

Unit Mapping Information

Supersedes and is equivalent to CPCBC6010A Plan, develop and implement building or construction energy conservation and management practices and processes.

Assessment Requirements for CPCBC6010 Plan, develop and implement building and construction energy conservation and management processes

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6010A Plan, develop and implement building or construction energy conservation and management practices and processes. Change to title. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by developing, implementing and maintaining an energy conservation and management system for a building and construction organisation.

In doing this, the candidate must:

- contribute to creating an energy conservation culture and an energy conservation management strategy which result in compliance with environmental guidelines and organisational objectives
- establish identifiable roles and responsibilities for organisation personnel involved in the strategy
- communicate verbally and in writing with senior management, employees, clients, regulatory authorities and legal representatives.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- operational issues and factors that may impact on energy conservation and practices:
 - public liabilities and exposure to risk
 - risk management strategies and policies
 - skills and experience of organisational personnel
 - structure of the management team and apportionment of responsibilities
 - timing of activities and project deadlines
 - types of materials and consumables being employed in the process
- energy conservation principles and practices:
 - qualified personnel to deal with energy issues

- expenditures for energy management compliance
- expert advice as required by the organisation or project
- compliance with appropriate legislation and regulations
- periodic review and preventative maintenance for energy conservation and management practices and processes
- financial and business administration principles commensurate with organisational needs
- key factors influencing decision making:
 - location and type of building/construction project
 - extent and types of equipment being operated
 - location and nature of the construction activity
 - organisational policy and practices
 - scope of operations and activities of an organisation
 - operational factors
- legislative, regulatory and administrative obligations incumbent on the building and construction industry for energy conservation and management practices.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant and current government building legislation, codes and standards
- environmental and sustainability legislation, regulations and guidelines
- project plans, specifications and manufacturer and supplier product and services specifications
- organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- business equipment and technology, applications and software to facilitate effective development, implementation and management of energy conservation management processes and practices.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCBC6011 Establish systems to develop and monitor building and construction costs

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6011A Establish systems to develop and monitor building and construction costs. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to establish systems to develop and monitor building and construction costs for residential or commercial projects. It includes implementing and maintaining a construction costing system and recording outcomes.

It includes establishing the human resources and facilities necessary to produce accurate and successful costing information and providing a basis for accurate estimating and tendering processes in accordance with organisational guidelines.

This unit of competency supports builders, project managers and related construction industry professionals who integrate information from a broad range of sources to develop systems and take responsibility establishing and managing construction costing systems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Identify factors for inclusion into the costing system.	1.1 Identify and quantify strategic factors impacting on the construction costing process. 1.2 Quantify range and scope of activities being undertaken by the organisation under the contract. 1.3 Qualify strategic and operational factors impinging on organisation costing processes and introduce measures to capture cost data.
2 Establish and implement organisational costing systems.	2.1 Direct and manage the design and development of an organisational project planning system. 2.2 Develop criteria for implementing and maintaining systems concerned with costing the construction process and formulate into active practice. 2.3 Develop methods to gather and monitor actual cost information essential to the construction costing process. 2.4 Obtain approval of the costing process from senior management. 2.5 Evaluate the costing process regularly to ensure accuracy and compliance with policy.
3 Establish and implement a costing quality control system.	3.1 Base quality control procedures on sound financial principles and practices. 3.2 Train staff to ensure that quality assurance practices are applied to the costing process on a daily basis. 3.3 Develop a system that allows reconciliation of invoices for progress payments against work completed, or due for completion, prior to payments being approved.
4 Develop and implement a costing feedback system.	4.1 Establish and implement a method to effectively and quickly communicate financial information concerning construction costs within the organisation.

- 4.2 Develop and maintain a review and feedback system using company project records and performance criteria to identify cost over-runs or savings within the contract.
 - 4.3 Plan and strategically implement a subcontractor feedback system, based on performance, progress and other strategic factors.
- 5 Establish recording and costing evaluation systems.
- 5.1 Institute a documentation and recording system to meet organisational needs for ongoing evaluation of the costing process.
 - 5.2 Apply strategic balances and checks that enable the ongoing maintenance of quality of the costing system.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- technology skills to:
 - use digital tools, devices and programs to communicate and collaborate effectively with others
 - use equipment and programs to access, extract information and complex data to analyse for strategic purposes.

Unit Mapping Information

Supersedes and is equivalent to CPCBC6011A Establish systems to develop and monitor building and construction costs.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC6011 Establish systems to develop and monitor building and construction costs

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6011A Establish systems to develop and monitor building and construction costs. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by developing and implementing a construction costing system for a building and construction organisation.

In doing this, the candidate must:

- incorporate monitoring processes to ensure continued financial viability of the organisation
- communicate effectively both verbally and in writing with senior management, employees, clients, regulatory authorities and legal representatives.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- appropriate sector of the building and construction industry and the nature of contracts upon which its activities are based
- factors to be considered in assessing the risk inherent in different types of building and construction projects
- financial and business administration principles commensurate with organisational processes:
 - establishing and maintaining accurate estimating practices
 - ability to gather specific information concerning actual versus estimated costs
 - relationships with financial management and construction management systems
- human resource practices and the industry's industrial relations climate and practices:
 - awards, agreements and work practices
 - entitlements, margins, allowances, rates and penalties
 - using the services of well-trained and experienced personnel
- socioeconomic and political factors which determine the climate in that sector of the building and construction industry

- quality assurance systems:
 - control procedures for maintaining costing
 - establishing performance benchmarks for system
 - monitoring internal expenditure and funding allocations
 - establishing and maintaining comprehensive records of bids
 - appropriate manual or electronic databases to assist performance comparisons
 - programmed and spontaneous reviews of success rates
 - providing secure and safe accommodation for costing information.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant and current government building, safety, environmental and industrial relations legislation, codes and standards
- project plans, specifications and manufacturer instructions
- organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- relevant financial and consumer protection legislation
- business equipment and technology, applications and software to facilitate establishing costing systems to monitor building and construction costs.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCBC6012 Manage and administer development of documentation for building and construction projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6012A Manage and administer development of documentation for building or construction projects. Change to title. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to manage and administer the development of documentation for residential and/or commercial construction projects to produce accurate and successful project outcomes. It includes development of a quality document control and recording system.

It applies to those with a wide range of technical and management skills and knowledge to initiate alternative approaches to produce accurate and successful project outcomes in accordance with organisational guidelines.

This unit of competency applies to builders, project managers and related construction industry professionals responsible for coordinating and managing building or construction projects.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Identify factors for inclusion in organisational documentation.	1.1 Identify and quantify organisational administrative and operational structures and processes.
	1.2 Identify legal and financial obligations that must be reflected in and conformed to in the development of documentation for building and construction projects.
	1.3 Quantify range and scope of activities to be undertaken by the organisation and types of documentation and documentation processes required to support building and construction projects.
	1.4 Review and qualify documentation requirements of strategic operational and project structures within and external to the organisation.
2 Implement and manage documentation system.	2.1 Facilitate and manage the design and development of a documentation system for construction organisation.
	2.2 Establish operational criteria for personnel and processes concerned with construction and project documentation.
	2.3 Obtain endorsement from senior management for implementation of system.
	2.4 Appoint staff members with necessary expertise and industry knowledge to excel at the work involved.
3 Establish a construction documentation quality control system.	3.1 Identify and develop appropriate corporate guidelines for a construction documentation quality control system which underpins the development and maintenance of construction or project documentation.
	3.2 Establish and manage organisation rules for the accurate and timely completion of construction and project documentation.
	3.3 Produce documentation impinging on or requiring adherence to Acts, regulations or local authority requirements, that meets the necessary legal and or

financial obligations.

3.4 Implement and facilitate a review and feedback system using internal and external advice about the usability of company documentation.

4 Establish a recording and evaluation system. 4.1 Institute a documentation recording system which fosters ongoing evaluation of construction or project performance.

4.2 Apply strategic checks and balances which enable ongoing maintenance of the quality of construction and project documentation.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access and extract information and complex data to analyse for strategic purposes.

Unit Mapping Information

Supersedes and is equivalent to CPCBC6012A Manage and administer development of documentation for building or construction projects.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC6012 Manage and administer development of documentation for building and construction projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6012A Manage and administer development of documentation for building or construction projects. Change to title. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by managing and administering the development of contractual, regulatory, financial and associated documentation for a building and construction project.

In doing this, the candidate must:

- manage practices that maintain confidentiality of information
- provide safe, secure and controlled access and storage of electronic and hard copy documents and records
- monitor documentation quality and manage documentation within an organisation's established documentation quality controls.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- appropriate sector of the building and construction industry and nature of the contracts upon which its activities are based
- processes, procedures and techniques of documentation development:
 - tenders, offers, contracts, drawings, specifications, schedules, materials list and variations
 - recording, tracking and security
 - quality control systems:
 - confidentiality in document handling
 - development by experienced personnel
 - limitations on document circulation, access and distribution
 - security in document filing, storage and identification

- factors to be considered in assessing the risk inherent in different types of building and construction projects
- financial and business administration principles commensurate with organisational needs
- human resource practices and the industry's industrial relations climate and practices
- legislative, regulatory and administrative obligations incumbent on the building and construction:
 - industry work health and safety (WHS)
 - environmental and sustainability requirements
 - employment and financial requirements.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant and current government building, consumer protection, intellectual property, privacy and quality systems legislation, codes and standards
- organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- organisational templates and guidelines for documentation and control
- business equipment and technology, applications and software to facilitate managing and administering the development of documentation for building and construction projects.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCBC6013 Evaluate concrete performance for multi-storey buildings

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Minor typographical error corrected in Foundation Skills.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCBC6013A Evaluate materials for multi-storey buildings. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to evaluate the performance of concrete for use in the construction of multi-storey buildings. It includes evaluating the properties and performance of concrete, impacts on concrete integrity and analysing the ability of concrete to withstand fire.

This unit of competency applies to builders, project managers and related construction industry professionals responsible for evaluating and considering a range of factors vital to ensuring the integrity of concrete used in the construction of commercial and residential multi-storey buildings.

This unit of competency is suitable for those who have a broad range of cognitive, technical and communication skills to identify, analyse, evaluate and synthesise information from a range of sources.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Identify and assess the application of concrete materials.	<p>1.1 Identify the application of concrete from project plans and confirm details and specifications for different building and construction types.</p> <p>1.2 Determine distribution methods of concrete following analysis of site access.</p> <p>1.3 Manage correct distribution and placement methods of concrete.</p> <p>1.4 Identify reasons and effects of compaction on both plastic and hardened concrete.</p> <p>1.5 Compare immersion, surface and form vibration.</p> <p>1.6 Maintain accurate records relating to the application of concrete.</p> <p>1.7 Identify and record types of curing methods and detrimental effects on concrete of poor or no curing.</p>
2 Assess the nature and performance of concrete.	<p>2.1 Identify and record plastic and hardened concrete properties for building types.</p> <p>2.2 List sources of aggregate and detail the properties of each.</p> <p>2.3 Describe and record effects of impurities in concrete.</p> <p>2.4 Conduct testing of concrete in accordance with relevant Australian Standards.</p>
3 Evaluate methods undertaken to repair concrete.	<p>3.1 Identify live and dormant cracks.</p> <p>3.2 Describe and record causes of cracked concrete, concrete cancer and repair methods.</p>

- | | | |
|--|-----|---|
| | 3.3 | Diagnose and record faults in concrete following organisational requirements. |
| 4 Evaluate effects of fire and heat on concrete. | 4.1 | Test reinforced concrete for effects of fire and heat. |
| | 4.2 | Determine and apply methods of fire protection for concrete elements. |
| | 4.3 | Establish that fire resistance and stability meet the Performance Requirements of the National Construction Code (NCC). |
| 5 Monitor environmental impacts of concrete. | 5.1 | Confirm compliance of concrete used in buildings with the organisation's sustainability policies. |
| | 5.2 | Monitor and apply new technologies in concrete in the construction of multi-storey buildings. |
| | 5.3 | Apply performance requirements of concrete in fire resistance construction in accordance with the NCC. |
| | 5.4 | Identify cost-effectiveness of using recycled materials in accordance with acceptable standard construction practices. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- writing skills to:
 - record information and maintain records
 - communicate non-compliant products
- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access, extract information and complex data to analyse for strategic purposes.

Unit Mapping Information

Supersedes and is equivalent to CPCBC6013A Evaluate materials for multi-storey buildings.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC6013 Evaluate concrete performance for multi-storey buildings

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Minor typographical error corrected in Foundation Skills.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6013A Evaluate materials for multi-storey buildings. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by evaluating the nature and performance of concrete materials and products that form the structural components of a complex multi-storey building project.

In doing this, the candidate must:

- determine compliance with the National Construction Code (NCC)
- ensure the Performance Requirements within the NCC are satisfied.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- working drawings, details and specifications
- the NCC:
 - Performance Requirements
 - Performance Solutions
 - Deemed-to-Satisfy Solutions
 - Assessment Methods
- government building and construction legislation and regulations
- characteristics, applications and limitations of concrete:
 - alternative uses
 - cost effectiveness
 - hazard potential and environmental safety
 - installation requirements

- need for use of cranes and hoists
- recycling capacity
- rubbish removal demands
- transport problems and restrictions
- applications of structural principles in buildings
- building types:
 - bridge and pier construction
 - buildings with concrete skeleton and slabs
 - concrete column or wall 10 metres high
 - slab on ground floor
- design principles and behaviour of structural members undergoing stress, strain, compression, bending or combined actions
- work health and safety (WHS) Acts and regulations and workplace safety requirements
- type, nature and performance of concrete:
 - properties and uses of cement
 - reinforced concrete:
 - methods of pre-stressed concrete
 - principles of reinforced concrete using steel, wire, fibres, etc
 - types of curing methods:
 - accelerated curing
 - continuously wetting concrete
 - impermeable membrane curing
- records, including details of:
 - causes of surface defects during concrete placement
 - compaction of concrete
 - finishing processes and surface treatments to slab concrete.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- project working drawings, details and specifications
- government building and construction legislation
- current version of *AS 3600 Concrete structures* series of concrete standards
- the NCC

- concrete test results
- business equipment and technology to record sampling and testing data and to facilitate evaluation of concrete products for multi-storey buildings.

Links

CPCBC6014 Apply structural principles to the construction of large, high-rise and complex buildings

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6014A Apply structural principles to the construction of large, high rise and complex buildings. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to apply structural principles to the construction of large, high-rise and complex buildings.

The design and construction of large buildings requires the input of a range of skilled professionals, including architects and engineers. Building and construction professionals require the ability to identify a range of factors that impact on structural principles within the building design and collaborate with other professionals to reach consensus.

This unit of competency applies to builders, project managers and related construction industry professionals responsible for ensuring the structural integrity of materials and building and construction work so that site safety and quality control measures are maintained during residential and commercial projects.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, regulatory or registration requirements apply to this unit of competency in some jurisdictions. Relevant state and territory regulatory authorities should be consulted to confirm these requirements.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Apply structural principles to the planning of a construction project.	1.1 Identify main structural principles that apply to the construction of large, high-rise and complex structures.
	1.2 Identify, analyse and apply performance characteristics of structural elements.
	1.3 Apply the performance of materials in the building plan to the planning of the construction work.
2 Coordinate and manage the site assessment and job set-up.	2.1 Implement processes to analyse stability of soils and capacity of the site to support the construction loads.
	2.2 Identify and apply requirements for retaining walls to the planning process in conjunction with related industry professionals.
	2.3 Analyse and apply structural function and requirements for temporary structural elements to the planning process.
3 Coordinate and manage construction of footing systems.	3.1 Undertake coordination of the set-out of the building in accordance with documented building plans, following the full assessment of the site.
	3.2 Assess structural performance of the footings specified in the building plan for compliance with relevant codes and accepted industry construction structural principles.
	3.3 Lay footings, as specified in the building plan, and check for compliance with standards and accepted industry construction principles.
	3.4 Plan, implement and check damp coursing and the provision of termite barriers and other relevant techniques in accordance with codes, standards and industry practice.
4 Coordinate and manage structural	4.1 Identify and analyse technical construction principles and performance characteristics of construction materials in

elements of the construction process.		the planning of project.
	4.2	Identify, implement and check processes for construction of all structural elements for compliance with manufacturer specifications and relevant Australian Standards and codes.
	4.3	Identify and implement building plans and relevant standards to ensure appropriate allowances have been made for plumbing, electrical conduits and other services to be installed.
5 Analyse and plan for structural integrity of buildings.	5.1	Consult relevant industry professionals to provide advice regarding the structural integrity of proposed buildings.
	5.2	Assess structural requirements and loads of the building design.
	5.3	Conduct analysis of the effects of force and movements on structural elements.
	5.4	Conduct analysis of properties and behaviours of structural materials.
	5.5	Conduct analysis of section properties of structural elements using standard industry formulas and performance comparisons.
	5.6	Evaluate performance characteristics of columns using standard industry techniques.
	5.7	Assess methods used for stress distribution in connections between structural elements.
	5.8	Assess impact of various loads on the building structure.
	5.9	Consider design impact of high-performance structural elements.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- communication skills to:

- consult effectively with industry professionals, and use relevant industry terminology and concepts
- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access, extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCBC6014A Apply structural principles to the construction of large, high rise and complex buildings.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC6014 Apply structural principles to the construction of large, high-rise and complex buildings

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6014A Apply structural principles to the construction of large, high rise and complex buildings. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by applying structural design principles to the construction planning for a large, high-rise, or complex building project.

In doing this, the candidate must:

- coordinate professional input to evaluate structural integrity of large and complex buildings
- select, position and size all structural members that form fixed or temporary building structures
- clearly analyse structural impact of design decisions
- apply design principles relating to performance
- identify typical faults and problems and the action required to rectify such faults.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- government building legislation and regulation
- building codes, specifications and standards:
 - the National Construction Code (NCC)
 - Australian Standards
 - project specifications
- design principles and behaviour of structural members undergoing stress, strain, tension, compression, bending or combined actions
- structural design:
 - aesthetics
 - economy

- equilibrium
- functionality
- stability
- strength
- properties, characteristics and limitations of structural materials:
 - reinforced and pre-stressed concrete and tilt-up panels
 - composite steel and concrete
 - masonry
 - steel (cold-formed steel) and aluminium
- performance characteristics of columns analysis:
 - bending behaviour and performance of loaded support beams
 - eccentric and axial load effect
 - load spanning elements for bending moments, shear forces, deflection and torsion
 - effect of connections
 - effect of slab behaviour in relation to spans and stress distribution
 - effect of slenderness ratio
- high performance structural elements:
 - castellated beams
 - connections
 - fire resistance
 - laminated beams
 - pre-stressed beams
 - slabs
 - trusses
 - use of steel to reinforce concrete
 - waffle slabs
- application of structural principles in buildings:
 - dead and live load calculations and characteristics
 - fire resistance of materials
 - impact of thermal effects
 - impact of time-dependent effects, including creep and shrinkage
 - impact of wind, snow, groundwater, earthquake, liquid pressure, rainwater and earth pressure actions
 - structural resistance of forms of construction
 - structural resistance of materials
- project working drawings and specifications
- work health and safety (WHS) and organisational quality procedures and processes
- temporary structural elements:
 - bracing
 - close sheeting

- formwork props
- pressure resistant formwork
- scaffolding sole plates
- shields
- shoring collar sets
- soldier sets
- ties.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant current government building and construction and WHS legislation
- the NCC, and other relevant industry and Australian codes and standards
- environmental requirements and sustainability principles
- manufacturer's materials and product specifications and installation instructions for building materials in the project specifications
- project plans, design brief, working drawings and specifications.

CPCBC6015 Apply building surveying procedures

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6015A Apply building surveying procedures. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to conduct assessments on the construction of buildings up to 25 metres in height with a total floor area less than 2,000 square metres, for compliance with relevant building codes, standards, performance requirements and design principles.

It also includes examining and reporting on the general condition of existing buildings and their compliance with building and land use standards.

This unit of competency applies to builders, project managers and related construction industry professionals responsible for ensuring buildings comply with relevant building legislation and codes for residential and commercial projects.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Review building approval documentation. | 1.1 Access and interpret project plans, specifications and engineering drawings for building. |
| | 1.2 Interpret and apply legislative requirements to various building projects. |
| | 1.3 Review submitted documents for building and land use approval for compliance with relevant legislation and codes. |
| | 1.4 Identify and record building non-compliances. |
| 2 Inspect building work. | 2.1 Monitor progress of construction work for compliance with standard construction practice and organisational quality assurance procedures. |
| | 2.2 Identify and record non-compliant work against the performance requirements. |
| | 2.3 Resolve issues in conjunction with industry professionals and manage remedial work. |
| | 2.4 Maintain ongoing communication with appropriate personnel to assist in monitoring compliant building work. |
| 3 Prepare reports on various building types. | 3.1 Prepare and report advice with respect to work on medium-rise buildings. |
| | 3.2 Document reports on suitability of existing buildings prior to purchase inspections. |
| | 3.3 Document records of building safety inspections conducted on existing buildings. |
| | 3.4 Document reports on construction work prior to occupancy inspection. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- technology skills to:

- use tools, devices and programs to communicate and collaborate effectively with others
- use equipment and programs to access, extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCBC6015A Apply building surveying procedures.

Assessment Requirements for CPCBC6015 Apply building surveying procedures

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6015A Apply building surveying procedures. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by conducting building inspections on two buildings: one during construction, and one an existing building.

Buildings must be up to 25 metres and not exceeding 2,000 square metres.

In doing this, the candidate must:

- confirm compliance with building codes and standards
- establish legal issues, permits and approvals are in place
- apply building survey procedures to assess all structural components that form a building project
- apply design concepts and principles.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- government planning regulations
- building legislation, codes and standards
- the National Construction Code (NCC)
- project work drawings, details and specifications
- design principles and behaviour of structural members undergoing stress, strain, compression bending or combined actions
- performance requirements
- nature of materials and effects on performance.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must be provided with:

- government building legislation, codes and standards
- project working drawings, details and specifications
- the NCC
- business equipment, technology and software to facilitate applying building surveying procedures.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCBC6016 Assess construction faults in large building projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6016A Assess construction faults in large building projects. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to identify construction faults in large, high-rise and complex buildings and define the problem. It includes analysing faults, determining alternative options and methods and deciding on a reasonable and compliant solution.

It applies to builders and other related construction industry professionals who identify the root cause of construction faults, clarify key issues and establish processes to remediate faults.

This unit of competency supports builders, project managers and related construction industry professionals responsible for assessing construction faults, addressing complex construction problems and seeking advice from relevant experts to eliminate potential future implications.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

essential outcomes.	demonstrate achievement of the element.
1 Identify and analyse construction faults.	<p>1.1 Collect information relating to specific construction faults.</p> <p>1.2 Analyse original construction project plans and specifications to identify potential causes of construction problems.</p> <p>1.3 Document and communicate construction problems to relevant personnel following organisational work practices.</p> <p>1.4 Gather expert analysis and opinions as required from project team members and external professionals.</p> <p>1.5 Use problem-solving techniques to identify typical faults and problems.</p> <p>1.6 Develop a rectification action that meets the Performance Requirements of the National Construction Code (NCC).</p>
2 Analyse construction techniques, methods and materials.	<p>2.1 Use building terminology accurately in the communication of issues.</p> <p>2.2 Evaluate working drawings and specifications to identify any existing or designed-in construction problems.</p> <p>2.3 Prepare alternative methods and materials to meet the project specification objectives and comply with the NCC and relevant building legislation.</p>
3 Evaluate alternative construction solutions.	<p>3.1 Consider and evaluate commonly occurring on-site problems with building materials and their causes.</p> <p>3.2 Prepare reports identifying available alternative methods and materials available to meet the construction aims and objectives of the specifications.</p> <p>3.3 Prepare detailed sketches of available alternative methods and materials that meet the construction aims and objectives of the specification.</p>
4 Resolve construction	<p>4.1 Evaluate solutions and recommend suitable alternative</p>

faults using alternative construction methods.		methods to resolve the problem and meet project aims and objectives and organisational processes.
	4.2	Integrate selected methods into the project construction works to align with construction schedules and timeframes.
	4.3	Manage and monitor alternative forms of construction to ensure compliance.
5 Communicate preferred solution to construction problem.	5.1	Document technical resolution in detail of identified problem.
	5.2	Lodge appropriate documentation and communicate with appropriate project and other construction professionals.
	5.3	Determine and implement strategies to monitor corrective action processes and procedures.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access, extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCBC6016A Assess construction faults in large building projects.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC6016 Assess construction faults in large building projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6016A Assess construction faults in large building projects. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by identifying and assessing the impact of construction faults on a Type A building project.

In doing this, the candidate must identify, assess the impact of and determine remedial action for construction faults associated with at least two of the following:

- structural
- installation
- refurbishment
- renovation
- restoration.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- government building legislation and regulation
- building codes and standards
- the National Construction Code (NCC)
- project drawings, details and specifications
- design principles and behaviour of structural members undergoing stress, strain, tension, compression, bending or combined actions
- nature of materials and effects on performance
- structural design:
 - aesthetics
 - economy
 - equilibrium
 - functionality

- stability
- strength
- properties, characteristics and limitations of structural materials:
 - reinforced and pre-stressed concrete and tilt-up panels
 - composite steel and concrete
 - masonry
 - steel (cold-formed steel) and aluminium
- performance characteristics of columns analysis:
 - bending behaviour and performance of loaded support beams
 - eccentric and axial load effect
 - load spanning elements for bending moments, shear forces, deflection and torsion
 - effect of connections
 - effect of slab behaviour in relation to spans and stress distribution
 - effect of slenderness ratio
- high performance structural elements:
 - castellated beams
 - connections
 - fire resistance
 - laminated beams
 - pre-stressed beams
 - slabs
 - trusses
 - use of steel to reinforce concrete
 - waffle slabs
- applications of structural principles in buildings:
 - dead and live load calculations and characteristics
 - fire resistance of materials
 - impact of thermal effects
 - impact of time-dependent effects, including creep and shrinkage
 - impact of wind, snow, groundwater, earthquake, liquid pressure, rainwater and earth pressure actions
 - structural resistance of forms of construction
 - structural resistance of materials
- work health and safety (WHS) and organisational quality procedures and processes
- temporary structural elements:
 - bracing
 - close sheeting
 - formwork props
 - pressure resistant formwork
 - scaffolding sole plates

- shields
- shoring collar sets
- soldier sets.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant government building legislation codes and standards
- environmental and sustainability requirements
- manufacturer specifications and installation instructions
- organisational policies, procedures and workplace safety requirements
- project plans and specifications
- business equipment, technology and software to assess and remediate construction faults in large building projects and collaborate effectively with external professionals.

CPCBC6017 Evaluate services layout and connection methods for the planning of large building projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6017A Evaluate services layout and connection methods for the planning of large building projects. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to evaluate the layout of services and connection methods in large, high-rise and complex buildings that comply with government building requirements and the National Construction Code (NCC). It includes cold and hot water supply, sewerage layout, electric and electronic installation, mechanical ventilation and air conditioning, smoke alarms and fire preventative systems.

This unit of competency applies to builders and other related construction industry professionals and senior managers who determine and manage services installation and connection and resolve issues relating to the planning of services layout and solving related problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

essential outcomes.	demonstrate achievement of the element.
1 Evaluate layout of water supply for general and firefighting use.	<p>1.1 Identify, evaluate and record specified water supply layout and connection in project plans and specifications.</p> <p>1.2 Check water connection approvals and determine layout meets NCC performance requirements.</p> <p>1.3 Record installation of water services supplying fire hydrants, fire hose reels and fire sprinkler systems.</p> <p>1.4 Evaluate results of interconnected and non-return water tanks for fire services.</p> <p>1.5 Confirm plumbing systems for general water supply is detailed and compliant with the NCC.</p>
2 Evaluate layout of sewerage and drainage disposal methods.	<p>2.1 Check approval documentation from the sewerage and drainage authority for any conditions related to the project.</p> <p>2.2 Identify and evaluate planned sewerage layout and connect for compliance with NCC and authority requirements.</p> <p>2.3 Identify, evaluate and record connection methods of main drains to local authority sewers across open ground and within buildings for the whole site.</p> <p>2.4 Evaluate local authority requirements for disposal of sewerage from fixtures situated below the level of local authority sewer mains.</p> <p>2.5 Evaluate and document the design and installation of stormwater drainage systems.</p> <p>2.6 Evaluate and document methods for disposal of stormwater drainage systems.</p>
3 Evaluate mechanical services and ventilation layout and connection.	<p>3.1 Establish mechanical ventilation control methods and use correct terminology to state how ventilation, volume, velocity and content is controlled.</p> <p>3.2 Identify, evaluate and record methods of air distribution and smoke hazard management and ensure compliance with the NCC.</p>

- 3.3 Identify, evaluate and record functions, application and basic elements of air conditioning and mechanical ventilation for various occupancy types in buildings.
- 4 Select hot water systems.
 - 4.1 Identify and evaluate design factors, height of installation, area to be serviced, number of outlets and energy sources available to select appropriate hot water system.
 - 4.2 Evaluate and document operating principles of various types of hot water systems.
 - 4.3 Evaluate layout and connection for selected hot water system.
- 5 Evaluate natural and artificial lighting.
 - 5.1 Determine the intent of natural lighting and aim of design from plans and specifications.
 - 5.2 Identify luminance requirements and compare artificial lighting types and sources for various service situations to meet relevant codes and standards.
 - 5.3 Evaluate layout and connection methods for lighting systems from plans and specifications.
- 6 Evaluate firefighting and fire detection systems.
 - 6.1 Identify building classification and relevant authorities responsible for fire safety regulations and inspection.
 - 6.2 Identify and evaluate requirements for sprinkler systems, fire hydrants and fire hoses for compliance with the building classifications and codes.
 - 6.3 Identify and evaluate fire detection and alarm systems for compliance with the building classification and codes.
 - 6.4 Evaluate layout and connection of fire detection and firefighting systems.
- 7 Determine requirements for
 - 7.1 Identify electrical design and requirements for service connection from electrical supply authorities.

- | | | |
|---|-----|---|
| general electrical and electronic service installation. | 7.2 | Evaluate layout and connection for general electrical supply and electronic services. |
| | 7.3 | Identify design and evaluate layout and connection of emergency warning systems, emergency lighting and exit signage systems. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- writing skills to:
 - articulate evaluations and apply organisational and industry protocols in the preparation and provision of reports to appropriate bodies or individuals
 - document evaluations, methods and requirements.
- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access, extract and record information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCBC6017A Evaluate services layout and connection methods for the planning of large building projects.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC6017 Evaluate services layout and connection methods for the planning of large building projects

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6017A Evaluate services layout and connection methods for the planning of large building projects. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by evaluating the layout of services and connection methods for the planning of one large building project.

In doing this, the candidate must:

- establish the class of building and determine that layout and connection of services meet the requirements of the National Construction Code (NCC) and other relevant standards
- identify any non-compliances, determine solutions and seek advice from relevant professional expertise to meet compliance.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- relevant government building and construction legislation
- the NCC:
 - evidence of suitability
- organisational quality assurance systems
- design concepts and principles in relation to service installations
- hot water system:
 - type of occupancy and area to be serviced
 - type of system
 - energy sources available
 - height of installation
- general electrical and electronic service systems:
 - cabling and equipment layout for data, lift controls, power supplies and telecommunications

- switchroom and substations for electrical supply and distribution
- emergency lighting and exit signage systems
- emergency warning and intercommunication systems
- fire stopping
- service systems safeguards
- service systems access for maintenance, repair and extension
- lighting system:
 - natural and artificial lighting
 - emergency and exit signage
 - terminology such as brightness, control of glare, installation of fire stopping, intensity, reflections, lifespan and locations for installation
- sewerage connections:
 - local authority sewerage drainage system
 - septic or bio-chemical treatment unit
 - graded or vertical discharge pipes
 - inspection shafts and overflow relief gullies (ORGs)
- stormwater:
 - design, installation and disposal
 - connection to local government water drains
 - use of soakage pits and on-site water detection systems
 - size, location and construction requirements for eaves and box gutters
- downpipes and underground or concealed piping
- water supply:
 - town supply
 - tank storage supply relative to public water supply and reservoir heights
 - single and two-stage pumping for multi-function and single function connected services
- mechanical ventilation and air conditioning:
 - air conditioning applications
 - air distribution, including mechanical ventilation requirements for enclosed car parks
 - air filtration, including air filters, ducting and main filter types
 - air intake systems
 - fire dampers
 - fume discharge systems
 - installation of fire stopping
 - smoke control and exhaust systems
 - warm water and cooling towers
- general services installation terminology, definitions and installation methods
- nature of materials and effect of performance
- processes for the interpretation of working drawings and specifications

- construction terminology relating to services installation
- research methods
- processes for the preparation of documentation
- workplace safety requirements.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant government building legislation codes and standards
- the NCC
- environmental and sustainability requirements
- manufacturer specifications and installation instructions
- project plans, working drawings and specifications
- business equipment and technology, applications and software to facilitate effective evaluation of services layout and connection methods.

CPCBC6018 Manage processes for complying with legal obligations of a building and construction contractor

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6018A Manage processes for complying with legal obligations of a building or construction contractor. Change to title. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to manage the processes to ensure the legal obligations of a building and construction contractor involved in either residential and/or commercial contracting projects are fully met.

It involves managing relationships with advisors and ensuring that the organisation meets the requirements of licensing, work health and safety (WHS), welfare, workers compensation, taxation, insurance, fair trading and environmental legislation.

This unit of competency supports builders, project managers and related construction industry professionals responsible for ensuring the legal obligations of a contractor are met.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Building and Construction

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

essential outcomes.	demonstrate achievement of the element.
1 Determine contract compliance and licensing requirements.	<p>1.1 Evaluate the type of building contract and identify provisions of the contract, terms, conditions, inclusions and variations.</p> <p>1.2 Determine building contractor licensing and contract requirements and communicate to company employees to ensure contract and licensing requirements are met.</p> <p>1.3 Identify changes to licensing arrangements in a timely manner.</p> <p>1.4 Apply for and take necessary steps to obtain the necessary building or construction licenses.</p> <p>1.5 Advise staff of the consequences of non-compliance with relevant legal obligations and licensing requirements.</p>
2 Manage relationships on legal matters.	<p>2.1 Identify areas of contract requiring professional legal advice and introduce and manage processes to enable the organisation to obtain such legal advice.</p> <p>2.2 Introduce and manage systems through which legal interpretations of contract or tender documents may be obtained before submission.</p> <p>2.3 Establish and maintain mechanisms to improve communications and dialogue between the organisation and the client to facilitate conciliation.</p>
3 Administer organisation's obligations.	<p>3.1 Develop and manage administration systems that facilitate conforming with organisation's obligations and meeting WHS and welfare, workers' compensation, noise abatement and working hours' regulations.</p> <p>3.2 Maintain and manage records demonstrating organisational compliance with legal obligations.</p> <p>3.3 Establish and maintain administrative guidelines and facilities for the proper and secure storage of organisational legal documentation.</p>
4 Manage compliance	<p>4.1 Instigate and manage systems that support and maintain</p>

with government legislation.		organisational capacity to meet legal obligations with regard to insurance and taxation.
	4.2	Arrange appropriate training and instruction for personnel in matters relating to insurance and taxation and make them aware of their responsibilities.
5 Apply and manage consumer protection practices.	5.1	Develop and implement practices and policies which facilitate the organisation meeting its obligations to its clients, subcontractors and employees.
	5.2	Establish and enforce codes of conduct for all employees and subcontractors.
	5.3	Take remedial action where evidence of non-compliance with consumer protection principles is identified.
6 Manage compliance with environmental legislation.	6.1	Establish and manage mechanisms to gather information in relation to the organisational environmental management plan.
	6.2	Manage supply and removal of subcontract works and materials and constantly scrutinise to ensure compliance with environmental standards.
	6.3	Record changes to legislation or environmental requirements and alter organisational activities and systems to ensure ongoing compliance.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access, extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCBC6018A Manage processes for complying with legal obligations of a building or construction contractor.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCBC6018 Manage processes for complying with legal obligations of a building and construction contractor

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC6018A Manage processes for complying with legal obligations of a building or construction contractor. Change to title. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by managing the processes to ensure the compliance of contractor's legal obligations for one building and construction project.

In doing this, the candidate must:

- develop policies, procedures and controls to ensure the contractor meets legal obligations
- manage the efficiency and performance of the contract management systems and individuals involved in the process
- investigate problems, symptoms and causes of non-compliance and recognise key issues and synthesise information to generate solutions.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- government legislation and regulations relevant to building and construction contractors:
 - industrial relations
 - workers compensation and rehabilitation
 - taxation law
 - business and project insurance
 - consumer protection
- various types and nature of building and construction contracts appropriate to the building and construction industry
- factors to be considered in assessing the risk inherent in different types of building and construction projects
- financial and business administration principles commensurate with organisational needs
- human resource practices and the industry's industrial relations climate and practices

- legislative, regulatory, and administrative obligations incumbent on a building and construction contractor for licensing, work health and safety (WHS), welfare, workers compensation, noise abatement, working hours, taxation, insurance and fair work requirements
- environmental requirements
- Australian Business Licence and Information Service (ABLIS).

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant government legislation and regulations relating to building and construction contractors
- organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- building and construction contract for project
- environmental and sustainability requirements
- business equipment, technology, applications and software systems for accessing and researching legal obligations, extracting, analysing and interpreting information, and controlling access to and securely storing legal documentation and records.

CPCCB2001 Handle and prepare bricklaying and blocklaying materials

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCB2001A Handle and prepare bricklaying and blocklaying materials. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to safely handle bricklaying and blocklaying materials using manual and mechanical means. It includes sorting, stacking and protecting onsite materials.

This unit applies to those who carry out preparatory bricklaying and blocklaying work on new or existing structures. It is suitable for people with basic skills and knowledge who undertake routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Bricklaying and Blocklaying

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Prepare for work
 - 1.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 1.2 Read and interpret bricklaying and blocklaying requirements from current plans, specifications and codes.
 - 1.3 Follow relevant information from workplace procedures, workplace safety and environmental documentation.
 - 1.4 Calculate brick and block quantities and materials required for the task.
 - 1.5 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.6 Identify potential hazards and determine and implement control measures.
 - 1.7 Select and check condition of tools and equipment and report damage or faults to appropriate person.
 - 1.8 Check materials against the delivery docket and report damage and inconsistencies to supervisor.
- 2 Handle, sort and stack materials.
 - 2.1 Prepare work area for loading of materials.
 - 2.2 Identify method of handling and moving onsite materials.
 - 2.3 Follow job instructions to prepare, sort and handle materials.
 - 2.4 Apply safe and effective manual handling techniques when unloading, lifting, moving and loading materials.
 - 2.5 Position materials for ease of access and clear of walkways.
- 3 Mix bricklaying and blocklaying mortar.
 - 3.1 Set up, level and stabilise cement mixer.
 - 3.2 Conduct a pre-operation check on cement mixer.
 - 3.3 Mix mortar using correct ingredient ratios and process as instructed.
 - 3.4 Confirm the quality and consistency of the mortar with

relevant person.

- | | | | |
|---|-----------|-----|---|
| 4 | Clean up. | 4.1 | Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements. |
| | | 4.2 | Clean tools and equipment, check for serviceability and report damage or faults. |
| | | 4.3 | Store, secure and protect tools, equipment and materials following workplace procedures. |

Foundation Skills

Candidates require:

- oral communication skills to:
 - understand and follow spoken instructions
 - use suitable industry and workplace language
 - use questions to confirm instructions
- technology skills to:
 - use digital tools and devices to source job information and communicate effectively with others.

Unit Mapping Information

Supersedes and is equivalent to CPCCB2001A Handle and prepare bricklaying and blocklaying materials.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCB2001 Handle and prepare bricklaying and blocklaying materials

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCB2001A Handle and prepare bricklaying and blocklaying materials. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by preparing one bricklaying and one blocklaying project on ground level.

In doing this, the candidate must:

- use manual techniques to appropriately position a pallet of bricks and blocks to reflect the laying sequence of the project
- blend bricks and blocks from different pallets to achieve a balanced masonry finish
- produce consistent mortar mixes to a strength factor of M3 using the bucket gauging technique
- relocate a pallet of bricks using mechanical equipment
- stack bricks and blocks and load mortar boards on a raised platform.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- terminology relating to bricklaying and blocklaying
- relevant building and construction standards and codes
- environmental requirements for workplace processes and waste disposal
- characteristics, applications and limitations of specified materials for bricklaying and blocklaying:
 - clay bricks
 - solid and hollow blocks
 - pavers
 - refractory bricks and mortars
 - various natural and manufactured stone
 - aggregates, cement, lime, mortar additives
- processes and techniques for:

- laying bricks and blocks
- mixing mortar
- manual handling
- mechanical handling
- functional and operational features of plant, equipment and hand and power tools:
 - cement mixers
 - brick cutting saw
 - brick buggies
 - elevators
 - forklifts
 - materials hoists
 - pallet trolleys
 - scaffolds
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - hazardous manual tasks
 - exposure to silica
 - exposure to loud noise
 - electrical hazards and the use of earth leakage boxes.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCB2002 Use bricklaying and blocklaying tools and equipment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCB2002A Use bricklaying and blocklaying tools and equipment. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to safely and effectively use bricklaying and blocklaying tools and equipment. It includes understanding the functional features and applying the operational requirements of tools and equipment.

The unit is suitable for people with basic skills and knowledge who undertake routine bricklaying and blocklaying tasks under the direction of more experienced workers on new or existing structures.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Bricklaying and Blocklaying

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan the work.
 - 1.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 1.2 Read and interpret work plans and specifications.
 - 1.3 Follow requirements in workplace safety and environmental documentation and workplace procedures.
 - 1.4 Identify potential hazards and determine and implement control measures.
 - 1.5 Clarify job priorities and sequence tasks with others on site.

- 2 Prepare for work.
 - 2.1 Select plant, equipment and tools for the task.
 - 2.2 Identify any limitations of plant, equipment and tools from manufacturer's instructions.
 - 2.3 Check equipment and tools to ensure guards, guides, controls and switches are fitted and functional.
 - 2.4 Examine hoses for damage and check electrical leads and power tools are tagged.
 - 2.5 Inspect clamps, guides, and equipment used for holding and supporting materials during operation, for faults.
 - 2.6 Set aside, tag and report damaged equipment and tools.

- 3 Use plant, equipment and tools.
 - 3.1 Level and stabilise static equipment in appropriate location.
 - 3.2 Connect electrical tools to a residual current device (RCD).
 - 3.3 Use plant, equipment and tools safely and effectively and only for their intended purpose.
 - 3.4 Disconnect portable electrical equipment from source and place in a safe location when not in use.

- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental

requirements.

- 4.2 Clean tools and equipment, check for serviceability and report damage or faults.
- 4.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Candidates require:

- technology skills to:
 - use digital tools and devices to source job information and communicate effectively with others.

Unit Mapping Information

Supersedes and is equivalent to CPCCB2002A Use bricklaying and blocklaying tools and equipment

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCL2002 Use bricklaying and blocklaying tools and equipment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCL2002A Use bricklaying and blocklaying tools and equipment. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by assisting in at least one bricklaying or blocklaying project.

In doing this, the candidate must:

- conduct a pre-operation check on equipment
- set up and safely use the following tools and equipment:
 - wheelbarrow
 - hand brick grab to load the job
 - cement mixer to mix consistent mortar for the project
 - wet cut brick saw to cut bricks and blocks accurately to varying sizes and shapes
 - hand and power assisted tools and equipment appropriate for the project
- use hand tools to achieve three different joint finishes
- wear appropriate personal protective equipment:
 - hearing protection
 - mask or appropriate respirator for the cutting task/s.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- terminology relating to bricklaying and blocklaying tools and equipment
- basic construction terminology
- features and purpose of plans and specifications
- manufacturer's specifications and instructions for tools and equipment:
 - safety requirements during operation
 - location and purpose of parts
 - uses and limitations

- cleanliness and maintenance
- troubleshooting problems
- functional and operational features of plant, equipment and hand and power tools:
 - wheel barrow
 - spirit, pocket and water level
 - automatic and laser level
 - trowels and jointing tools
 - corner blocks and string lines
 - tingle plate
 - profiles and straight edges
 - bolster chisels
 - mash hammer/lump hammer
 - builder square and sliding bevels
 - power drills
 - battery operated tools
 - pallet trolleys
 - materials hoist
 - brick buggies
 - elevators
 - small petrol or diesel engines, compressors or mixers
 - forklifts
- the characteristics and application of specified materials for bricklaying and blocklaying
- processes and techniques for:
 - manual handling
 - mechanical handling
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - electrical safety
 - noise reduction
 - dust suppression
 - working at heights
 - exposure to silica
 - exposure to loud noise
- environmental requirements relating to workplace processes and waste disposal.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCB3001 Lay paving

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCB3001A Lay paving. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to pave external areas. It includes laying pavers to varying grades, substrates and patterns.

This unit applies to those who carry out paving on new or existing residential or commercial sites. It is suitable for people operating with some autonomy. A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Bricklaying and Blocklaying

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Prepare for work.

1.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.

- 1.2 Read and interpret paving requirements from current plans, specifications, standards and codes.
 - 1.3 Follow requirements in workplace safety and environmental documentation and workplace procedures.
 - 1.4 Calculate material quantities required for the task.
 - 1.5 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.6 Identify underground services and potential hazards and determine and implement control measures.
 - 1.7 Select and check condition of plant, equipment and tools and report any damage or faults to relevant person.
 - 1.8 Check conformity of materials against the specifications and place materials ready for the work.
- 2 Set out for paving.
- 2.1 Identify sub-soil, substrate types and compaction requirements.
 - 2.2 Identify paver thickness and bed thickness and determine excavation depth.
 - 2.3 Set out paved area, levels, grades and finished height of pavers.
- 3 Prepare for paving
- 3.1 Excavate area to required depth, treat area for sub-soil drainage and dispose of spoil.
 - 3.2 Position and straighten screed rails.
 - 3.3 Spread, screed and compact bedding material to specified height.
 - 3.4 Grade surface evenly to avoid ponding.
- 4 Lay pavers
- 4.1 Determine specified pattern, starting point, and check measurements for parallel and square.
 - 4.2 Lay paving to specified pattern, cut segments and align joints.

- 4.3 Compact pavers as specified, grout joints and clean pavers.
 - 4.4 Finish perimeters of pavers as specified.
- 5 Clean up.
- 5.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 5.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 5.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Candidates require:

- numeracy skills to:
 - use measurements and formulas to calculate material quantities
 - apply measurements to set heights and paver patterns
- technology skills to:
 - use digital tools and devices to source job information and communicate effectively with others.

Unit Mapping Information

Supersedes and is equivalent to CPCCB3001A Lay paving

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCL3001 Lay paving

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCL3001A Lay paving. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by laying two different paving patterns onto two separate areas.

In doing this, the candidate must:

- prepare and lay pavers to a specified design to an area of a minimum of 3.0 m x 2.4 m on a sand bed and fill joints with sand:
 - set out paved area and excavate for a sand bed
 - compact the substrate and sand bed using a plate compactor
- prepare and lay butter and joint clay paving bricks to an area of a minimum of 1.2 m x 1.4 m on a cement bed
- apply the appropriate paving processes for the two paved areas.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of specified paving products and materials:
 - bedding materials
 - clay bricks and pavers
 - concrete blocks and pavers
 - mortar and sand
 - paving materials
 - slate
 - stone segments
 - waterproofing materials
 - mortar ingredients and consistency
 - paver sealing products
- processes and techniques for:
 - setting out paver levels and heights
 - manual and mechanical excavation

- compacting subsoils, substrates and bedding
- laying paving in various patterns
- finishing paver surface evenly and free of water ponding
- controlling surface water runoff and subsoil drainage
- construction terminology relating to paving
- functional and operational features of plant, equipment and hand and power tools:
 - plate compactors
 - cement mixers
 - wet cut saws
 - battery operated tools
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - noise reduction
 - dust suppression
 - hazardous manual tasks
 - exposure to silica
 - exposure to loud noise
- standards and codes relating to laying pavers
- features of working drawings and specifications
- environmental requirements for workplace processes and waste disposal.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCL3002 Carry out masonry veneer construction

Modification History

Release 1	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0. Supersedes and is equivalent to CPCCL3002A Carry out masonry veneer construction. Updated to meet the Standards for Training Packages 2012.
-----------	---

Application

This unit specifies the skills and knowledge required to construct masonry veneer buildings and structures. It includes structural, non-structural components and finishing of masonry veneer construction.

This unit applies to people who work on masonry veneer construction on new or existing structures. It is suitable for people operating with some autonomy. A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Bricklaying and Blocklaying

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Prepare for work.
 - 1.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 1.2 Read and interpret masonry veneer construction requirements from current plans, specifications, standards and codes.
 - 1.3 Follow requirements in workplace safety and environmental documentation and workplace procedures.
 - 1.4 Calculate material quantities for the task.
 - 1.5 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.6 Identify potential hazards and determine and implement control measures.
 - 1.7 Select and check condition of plant, equipment and tools and report damage to relevant person.
 - 1.8 Check materials against the specifications and report non-conformities to relevant person.
- 2 Set out brickwork/blockwork.
 - 2.1 Set out and mark base brickwork/blockwork.
 - 2.2 Set out brickwork/blockwork gauge and bond.
 - 2.3 Set out and mark masonry veneer walls, load bearing brickwork, and corbelling.
- 3 Construct base brickwork/blockwork.
 - 3.1 Place materials ready for the work.
 - 3.2 Mix mortar to specified consistency.
 - 3.3 Locate, prepare and install damp proof course and weepholes.
- 4 Construct veneer walls.
 - 4.1 Check and ensure that structural frame is plumb and straight.
 - 4.2 Position and correctly fix wall ties to framework.
 - 4.3 Install specified lintels to openings.

- | | | |
|---|----------------------------------|---|
| | 4.4 | Install flashings to window and door openings. |
| | 4.5 | Construct brickwork/blockwork walls to eaves height. |
| | 4.6 | Construct veneer gable maintaining gauge, level, plumb and straightness. |
| | 4.7 | Locate and form control joints as specified. |
| | 4.8 | Cut and lay sill bricks to a line. |
| 5 | Rake/rule joints and clean face. | |
| | 5.1 | Clean cavities of mortar droppings and bridging. |
| | 5.2 | Rake or rule joints to specified profile and depth. |
| | 5.3 | Clean face of brickwork/blockwork to remove unwanted mortar. |
| 6 | Clean up. | |
| | 6.1 | Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements. |
| | 6.2 | Clean tools and equipment, check for serviceability and report damage or faults. |
| | 6.3 | Store and secure tools and equipment following workplace procedures. |

Foundation Skills

Candidates require:

- numeracy skills to:
 - use measurements and formulas to calculate materials
 - set out brick gauge and bond
- technology skills to:
 - use digital tools and devices to source job information and communicate effectively with others.

Unit Mapping Information

Supersedes and is equivalent to CPCCB3002A Carry out masonry veneer construction

Assessment Requirements for CPCCL3002 Carry out masonry veneer construction

Modification History

Release 1	<p>This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.</p> <p>Supersedes and is equivalent to CPCCL3002A Carry out masonry veneer construction. Updated to meet the Standards for Training Packages 2012.</p>
-----------	--

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by constructing a minimum of 2.1 m long and 2.0 m high section of a masonry veneer building.

In doing this, the candidate must:

- install weepholes, damp proof course; frame ties, lintels and loadbearing components, window and door frame, roof tie-downs and spread of fire requirements.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of specified materials for masonry veneer construction:
 - aggregates, cement and lime
 - mortar ingredients and consistency
 - clay and masonry bricks
- construction terminology relating to masonry veneer construction
- processes and techniques for masonry veneer construction:
 - incorporating suspended floor
 - on concrete slab on ground
 - vermin control and anti-termite measures
 - damp-proofing, flashing and ventilation
 - fire control and separation requirements
 - frame tying components
 - lintels and load bearing components
 - timber, steel and aluminium windows
 - timber and steel door frames

- gable and eaves construction
- brick bond patterns
- brick and block expansion and growth, control and articulation joints
- functional and operational features of plant, equipment and hand and power tools:
 - battery operated tools
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - work at heights
 - exposure to silica dust
 - exposure to loud noise
 - requirements to erect and dismantle restricted height scaffolds
- acceptable brickwork tolerances stated in Australian Standards and building codes
- fire resistance and stability
- key requirements of National Construction Code (NCC) relating to masonry veneer construction
- features of working drawing and specifications
- environmental requirements relating to workplace processes and waste disposal.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCB3003 Carry out cavity brick construction

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCB3003A Carry out cavity brick construction. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to construct cavity brick buildings and structures. It includes installing moisture barriers, ventilation and roof tie downs.

This unit applies to bricklayers and blocklayers who work on new or existing structures. It is suitable for people operating with some autonomy. A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Bricklaying and Blocklaying

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Prepare for work.

1.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.

- 1.2 Read, interpret and apply cavity brick construction requirements from current plans, specifications, standards and codes.
 - 1.3 Follow requirements in workplace safety and environmental documentation and workplace procedures.
 - 1.4 Use measurements and apply formulas to calculate material quantities.
 - 1.5 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.6 Identify potential hazards and determine and implement control measures.
 - 1.7 Select and check condition of plant, equipment and tools and report damage or faults to relevant person.
 - 1.8 Check materials against the specifications and report non-conformities to relevant person.
- 2 Set out brickwork.
- 2.1 Set out and mark base brickwork.
 - 2.2 Set out brickwork gauge and bond.
 - 2.3 Set out load bearing brickwork.
 - 2.4 Set out door and window positions.
- 3 Construct base brickwork.
- 3.1 Mix mortar to specified consistency.
 - 3.2 Lay cavity brick base to set out marks.
 - 3.3 Locate and install damp-proofing, weepholes and ventilation for suspended floor construction.
- 4 Construct brick walls.
- 4.1 Construct brick walls straight, plumb and level.
 - 4.2 Fix wall ties to specified positions.
 - 4.3 Locate and build in standard height door jambs and window frames into cavity walls.

- 4.4 Install lintels and head flashings to openings.
 - 4.5 Construct gables and parapets maintaining line, level and plumb.
 - 4.6 Install roof tie down and lateral support into walls.
 - 4.7 Cut and lay sill bricks to a line as specified.
- 5 Rake or rule joints.
- 5.1 Rake or rule joints to specified profile and depth.
 - 5.2 Brush down face of brickwork to remove unwanted mortar prior to drying.
- 6 Clean up.
- 6.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 6.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 6.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Candidates require:

- technology skills to:
 - use digital tools and devices to source job information and communicate effectively with others.

Unit Mapping Information

Supersedes and is equivalent to CPCCB3003A Carry out cavity brick construction

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCL3003 Carry out cavity brick construction

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCL3003A Carry out cavity brick construction. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by constructing a 2.1 m long x 2.0 m high cavity brick wall which incorporates an internal and external corner.

In doing this, the candidate must:

- install damp proof course and ventilation
- install brick cavity wall ties, door jamb and window frame
- install lintels, loadbearing components and roof tie-downs
- construct parapets and install step flashing
- comply with relevant cavity brick standards and codes.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- construction terminology relating to cavity brick construction
- characteristics, applications and limitations of specified materials for cavity brick construction:
 - clay bricks
 - aggregates, cement and lime
 - mortar ingredients and consistency
- processes and techniques for:
 - suspended floor construction
 - construction of cavity brick on slab construction
 - anti-termite measures
 - damp-proofing, flashing and ventilation
 - installing lintels and load bearing components
 - installing windows and doors
 - gable and eaves construction

- level flashing for parapets
- tie down methods and applications
- closing of cavities and capping systems
- fire control and separation requirements
- brick and block expansion and growth and control and articulation joints
- brick bond patterns
- functional and operational features of plant, equipment and hand and power tools:
 - battery operated tools
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - exposure to silica dust
 - exposure to loud noise
 - hazardous manual tasks
 - erecting and dismantling of scaffolds
- allowable brickwork tolerances stated in current and relevant Australian Standards and building codes
- fire control and separation codes and legislation
- key requirements of the National Construction Code (NCC) relevant to cavity brick construction
- features of working drawings and specifications
- environmental requirements for workplace processes and waste disposal.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCB3004 Construct masonry steps and stairs

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCB3004A Construct masonry steps and stairs. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to calculate and construct masonry steps, stairs and wing walls using various masonry products.

This unit applies to bricklayers and blocklayers who set out and construct steps and stairs on new or existing structures. It is suitable for people operating with some autonomy. A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Bricklaying and Blocklaying

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Prepare for work.

1.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.

- 1.2 Read, interpret and apply masonry steps and stairs requirements from current plans, specifications, standards and codes.
 - 1.3 Follow requirements in workplace safety and environmental documentation and workplace procedures.
 - 1.4 Calculate material quantities for the task.
 - 1.5 Identify potential hazards and determine and implement control measures.
 - 1.6 Select and check condition of plant, equipment and tools and report damage or faults to relevant person.
 - 1.7 Check conformity of materials against the specifications, blend masonry products and place materials in preparation for the work.
- 2 Set out brickwork/blockwork.
- 2.1 Calculate the total rise and going of the flight of stairs.
 - 2.2 Calculate tread, riser sizes and slope relationship rule.
 - 2.3 Set out position of stairs on a prepared footing to comply with plans, specifications and Australian Standards.
 - 2.4 Set out parallel wing wall to maintain bond and gauge with treads and risers.
- 3 Lay steps and wing walls.
- 3.1 Mix mortar to consistency for job requirements.
 - 3.2 Construct base brickwork or blockwork accurately to set out marks.
 - 3.3 Lay stairs square and plumb to the specified bond.
 - 3.4 Construct parallel sloping wing wall to align with tread and riser bond and gauge.
 - 3.5 Finish joints to specified profile.
 - 3.6 Brush down face of brickwork/blockwork prior to drying to remove unwanted mortar.

- 4 Clean up.
 - 4.1 Clear the work area, and dispose, reuse or recycle materials following workplace and environmental requirements.
 - 4.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 4.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Candidates require:

- numeracy skills to:
 - use measurements and formulas to calculate quantities
 - apply geometry to stair calculations and set out
- technology skills to:
 - use digital tools and devices to communicate and collaborate effectively with others.
 -

Unit Mapping Information

Supersedes and is equivalent to CPCCB3004A Construct masonry steps and stairs

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCL3004 Construct masonry steps and stairs

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCL3004A Construct masonry steps and stairs. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by constructing two flights of stairs both with a parallel wing wall to one side.

In doing this, the candidate must construct:

- one flight with a minimum of three pre-cast concrete treads
- one flight with a minimum of three solid masonry treads
- all treads with a 3 mm slope for water run-off
- wing wall to match the slope of the stairs with symmetrically cut mitres and uniform joints
- both flights to comply with current and relevant Australian Standards, specifications and within the codes for brickwork tolerances.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- construction terminology relating to the construction of masonry steps and stairs:
 - total rise
 - total going
 - landing
 - nosing
 - wing wall
- current Australian Standards and codes for staircase construction:
 - min/max permitted riser size
 - min/max permitted tread size
 - slope calculation 2R + 1G rule
 - min height of a wing wall
 - max number of steps in one flight
 - step size tolerance ± 5 mm

- max permitted deviation from level (10 mm in 10 m, or max of 15 mm)
- max permitted bow of a masonry wall (+/- 5 mm)
- max lipping of materials (Max 2 mm)
- max/min permitted perpend joint size (Min size 5 mm, +/- 10 mm from specified size)
- max min permitted bed joint size (10 mm +/- 3 mm)
- vertical alignment of perpend joints (15 mm per 2 m height of wall, measured centre to centre)
- key features of National Construction Code (NCC) relevant to constructing masonry stairs and steps
- characteristics, applications and limitations of approved materials for step and stair construction
- brick bond patterns
- functional and operational features of plant, equipment and hand and power tools
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - hazardous manual handling
 - exposure to silica
 - exposure to loud noise
- features of working drawings and specification
- processes and techniques for:
 - masonry steps and stairs construction
 - applying geometry to stair calculations and set out
- environmental requirements for workplace processes and waste disposal.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCB3005 Lay masonry walls and corners

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCB3005A Lay masonry walls and corners. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to construct masonry walls and corners to different types and styles of buildings.

This unit applies to bricklayers and blocklayers who construct masonry walls and corners on new or existing structures. It is suitable for people operating with some autonomy. A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Bricklaying and Blocklaying

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Prepare for work.

1.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.

- 1.2 Read, interpret and apply wall and corner construction requirements from current plans, specifications, standards and codes.
 - 1.3 Follow requirements in workplace safety and environmental documentation and workplace procedures.
 - 1.4 Calculate material quantities required for the task.
 - 1.5 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.6 Identify potential hazards and determine and implement control measures.
 - 1.7 Select and check condition of plant, equipment and tools and report damage or faults to relevant person.
 - 1.8 Check conformity of materials against the specifications and place materials in preparation for the work.
- 2 Set or brickwork and blockwork.
- 2.1 Set out position of walls and corners.
 - 2.2 Set up and plumb corner profiles.
 - 2.3 Set out brickwork/blockwork to size using set out rod or brickies tape to manufacturer's coursing chart.
 - 2.4 Mix mortar to required quality and consistency.
- 3 Lay bricks or blocks
- 3.1 Lay base courses level to set out marks.
 - 3.2 Lay bricks or blocks using specified bond throughout the construction.
 - 3.3 Build corners plumb, maintaining bond and gauge.
 - 3.4 Rake or rule joints to specified profile and depth.
 - 3.5 Brush down face of brickwork/blockwork prior to drying to remove unwanted mortar
- 4 Clean up.
- 4.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental

requirements.

- 4.2 Clean tools and equipment, check for serviceability and report damage or faults.
- 4.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Candidates require:

- numeracy skills to:
 - use measurements and formulas to calculate quantities
 - determine and apply coursing chart measurements
- technology skills to:
 - use digital tools and devices to source job information and communicate effectively with others.

Unit Mapping Information

Supersedes and is equivalent to CPCCB3005A Lay masonry walls and corners

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCL3005 Lay masonry walls and corners

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCL3005A Lay masonry walls and corners. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by building one brick and one block wall to a minimum length of 2.3 m and a minimum height of 850 mm.

In doing this, the candidate must:

- construct both walls between a profile at one end and a hand built corner at the other
- incorporate an external and internal corner and a stopped end to both walls
- comply with allowable tolerances in Australian Standards and building codes for construction of both walls
- comply to the brickwork tolerances stated in the current Australian Standards and codes.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- construction terminology relating to masonry wall and corner construction
- structural principles of loadbearing masonry walls
- building and construction regulations, codes and standards
- key features of National Construction Code (NCC) relating to laying masonry walls and corners
- brick and block expansion and growth, control and articulation joints
- characteristics, applications and limitations of specified materials for masonry wall and corner construction:
 - ingredients and additives to produce consistent mortar (M code)
 - acid for cleaning masonry work
- functional and operational features of plant, equipment and hand and power tools:
 - battery operated tools
- workplace safety:
 - hierarchy of control

- working at heights
- hazardous manual tasks
- exposure to silica
- exposure to loud noise
- features of working drawings and specifications
- fire control and separation codes and legislation
- processes and techniques for laying masonry walls and corners
- environmental requirements for workplace processes and waste disposal.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCB3006 Lay multi-thickness walls and piers

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCB3006A Lay multi-thickness walls and piers. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to lay multi-thickness walls and piers. It includes laying masonry walls in different brick bonds and laying engaged and isolated piers.

This unit applies to bricklayers and blocklayers who work on a new or existing structures. It is suitable for people operating with some autonomy. A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Bricklaying and Blocklaying

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Prepare for work.

1.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.

- 1.2 Read, interpret and apply multi-thickness wall and pier construction requirements from current plans, specifications, standards and codes.
 - 1.3 Follow requirements in workplace safety and environmental documentation and workplace procedures.
 - 1.4 Use measurements and apply formulas to calculate material quantities.
 - 1.5 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.6 Identify potential hazards and determine and implement control measures.
 - 1.7 Select and check condition of plant, equipment and tools and report damage or faults to relevant person.
 - 1.8 Check conformity of materials against the specifications and place materials in preparation for the work.
- 2 Set out brickwork.
- 2.1 Identify brick bond from plans and set out and mark position of brickwork on footing.
 - 2.2 Set out engaged and isolated piers to specified height and gauge.
- 3 Construct walls and piers.
- 3.1 Mix mortar quality and consistency to job requirements.
 - 3.2 Lay walls with engaged piers straight, level and plumb.
 - 3.3 Lay isolated piers square and plumb to the specified height maintaining gauge.
 - 3.4 Remove excess mortar prior to drying.
 - 3.5 Finish joints to specified profile and depth.
 - 3.6 Brush down and clean brickwork prior to mortar drying.
- 4 Clean up.
- 4.1 Clear the work area, and dispose of, reuse or recycle materials in following workplace and environmental requirements.

- 4.2 Clean tools and equipment, check for serviceability and report damage or faults.
- 4.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Candidates require:

- technology skills to:
 - use digital tools and devices to source job information and communicate effectively with others.

Unit Mapping Information

Supersedes and is equivalent to CPCCB3006A Lay multi-thickness walls and piers

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCL3006 Lay multi-thickness walls and piers

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCL3006A Lay multi-thickness walls and piers. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

- To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by laying three 230 mm thick brick walls, to a minimum height of 634 mm.

In doing this, the candidate must:

- lay one English bond wall to minimum length of 2100 mm with one 90° return external corner to the same height and a minimum length of 700 mm
- lay one Flemish bond wall to a minimum length of 1700 mm which incorporates a 590 mm (minimum) squint corner return; wall to be finished with a brick on edge capping finish with symmetrically mitred cuts over squint corner
- lay one wall in chosen bond (not stretcher) to a minimum length of 2100 mm with a 'T' junction with a minimum length of 600 mm
- engaged one pier to each wall at the same height of wall
- set out and lay one isolated pier in the same bond for each wall, to the set-out wall height
- comply to the brickwork tolerances stated in the current Australian Standards and codes.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of approved materials used for multi-thickness walls and pier construction
- processes and techniques for:
 - multi-thickness brick and pier construction
 - installing specified reinforcing
 - laying bricks to specified bond to provide structural stability
 - damp-proofing, installing drainage pipes and weep holes
- construction terminology relating to multi-thickness wall and pier construction
- brick bond patterns:
 - Flemish
 - Flemish garden wall

- English bond
- English garden wall bond
- Monk bond
- Dutch
- 1/3 bond
- Stretcher
- functional and operational features of plant, equipment and hand and power tools
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - working at heights
 - hazardous manual tasks
 - dust suppression
 - exposure to silica
 - exposure to loud noise
- features of working drawings and specification
- relevant and current building, brick and block laying standards and codes
- key features of National Construction Code (NCC) relating to multi-thickness walls and piers
- environmental requirements for workplace processes and waste disposal.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCB3007 Install glass blockwork

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCB3007A Install glass blockwork.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install glass blocks into non-structural panels.

This unit applies to people who install fire rated or standard glass blocks using various fixing methods to new or existing structures. It is suitable for people operating with some autonomy. A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Bricklaying and Blocklaying

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Prepare for work.

1.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.

- 1.2 Read, interpret and apply glass block installation requirements from current plans, specifications, standards and codes.
 - 1.3 Follow requirements in workplace safety and environmental documentation and workplace procedures.
 - 1.4 Use measurements and apply formulas to calculate material quantities.
 - 1.5 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.6 Identify potential hazards and determine and implement control measures.
 - 1.7 Select and check condition of plant, equipment and tools and report damage or faults to relevant person.
 - 1.8 Check conformity of glass bricks, adhesives and accessories and place materials in preparation for the work.
- 2 Set out for installation.
- 2.1 Check opening size, lintel and flashing to suit glass block installation.
 - 2.2 Check base and head for level and abutting surfaces for plumb.
 - 2.3 Mix mortar to the correct consistency or use approved silicone product following manufacturer's instructions.
- 3 Install glass blocks.
- 3.1 Install expansion strips and reinforcements.
 - 3.2 Lay glass blocks level and plumb to the specified design.
 - 3.3 Remove excess mortar or silicone at completion and clean glass blocks.
 - 3.4 Use appropriate tool to achieve specified joint finish.
- 4 Clean up.
- 4.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.

- 4.2 Clean tools and equipment, check for serviceability and report damage or faults.
- 4.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Candidates require:

- technology skills to:
 - use digital tools and devices to source job information and communicate effectively with others.

Unit Mapping Information

Supersedes and is equivalent to CPCCB3007A Install glass blockwork

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCL3007 Install glass blockwork

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCL3007A Install glass blockwork.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by installing a minimum of 1.44 square metres of glass blocks into frame.

In doing this, the candidate must:

- apply the appropriate glass block installation processes
- use both mortar or recommended adhesive
- fix reinforcement, expansion joint and grouting
- comply with glass block installation standards, codes and manufacturer's instructions.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of specified materials and components for glass block installation:
 - aluminium frames
 - reinforcement
 - manufacturer's silicone products
 - mortar mixture
 - grouts
 - fire rated glass blocks
- processes and techniques for installing various systems and ranges of glass bricks
- construction terminology relating to installation of glass bricks
- functional and operational features of plant, equipment and hand and power tools:
 - battery operated tools
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - working with hazardous substances

- working at heights
- exposure to silica
- exposure to loud noise
- relevant and current standards and building codes
- features of working drawings and specification
- environmental requirements for workplace processes and waste disposal.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

- 3.3 Form and seal flashing and moisture barrier around openings.
 - 3.4 Finish any exposed flashing and moisture barrier.
 - 3.5 Locate and ensure weep holes are clean and functional.
- 4 Clean up.
- 4.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 4.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 4.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Candidates require:

- technology skills to:
 - use digital tools and devices to source job information and communicate effectively with others.

Unit Mapping Information

Supersedes and is equivalent to CPCCB3009A Install flashings and damp proof course

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCL3009 Install flashings and damp proof course

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Knowledge Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCL3009A Install flashings and damp proof course. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by installing moisture barriers and fixing flashings to masonry construction to provide moisture movement and ensure the effective diversion of collected moisture.

In doing this, the candidate must:

- install damp proof course (DPC) in a cavity brick or masonry veneer construction, which includes internal and external corners
- install window and door head and stile flashings to a cavity brick or masonry veneer construction
- install stepped and tray flashing to a masonry wall at roof abutment or to a chimney at the roof line
- install flashing to a masonry parapet
- comply with flashing and damp proof course standards, codes and manufacturer's specifications.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of specified materials used for flashing and damp proofing:
 - aluminium sheeting
 - copper
 - bituminous sheeting
 - emulsions
 - lead and polyurethane sheeting

- polythene sheeting
- processes and techniques for:
 - damp-proofing to provide a barrier to moisture movement
 - flashing to divert the travel of moisture
 - stepped and level flashing for parapets and gables
 - dressing, fitting and building in various flashings
- construction terminology relating to flashing and damp proofing
- functional and operational features of plant, equipment and hand and power tools:
 - battery operated tools
- workplace safety:
 - working at heights
 - exposure to silica
 - exposure to loud noise
 - hazardous manual handling
 - hazardous materials
- current and relevant standards and building codes relating to flashings and DPC
- key requirements of the National Construction Code (NCC) relevant to installation of flashings and damp proof course
- features of working drawings and specifications
- environmental requirements for workplace processes and waste disposal.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCL3010 Construct masonry arches

Modification History

- Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.3.
Changes to Performance Evidence.
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Performance Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCL3010A Construct masonry arches.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to construct various types of masonry arches within walls and above columns or attached piers.

This unit applies to bricklayers and blocklayers who construct masonry arches in new or existing structures. It is suitable for people operating with some autonomy. A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Bricklaying and Blocklaying

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Prepare for work.	<ul style="list-style-type: none">1.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.1.2 Read, interpret and apply masonry arch construction requirements from current plans, specifications and codes.1.3 Follow requirements in workplace safety and environmental documentation and workplace procedures.1.4 Calculate material quantities required for the task.1.5 Determine job priorities and sequence job tasks in consultation with others on site.1.6 Identify potential hazards and determine and implement control measures.1.7 Select and check condition of plant, equipment and tools and report damage or faults to relevant person.1.8 Check conformity of materials against the specifications and place materials in preparation for the work.
2 Construct wall to springing line of arch.	<ul style="list-style-type: none">2.1 Set out location of first course and determine span of arch.2.2 Lay abutting walls maintaining plumb, gauge and level up to springing line to comply with Australian standards tolerances.
3 Set up arch template.	<ul style="list-style-type: none">3.1 Set out arch centre and curve and where appropriate produce a full-size drawing of arch.3.2 Transfer shape to template materials and cut to shape.3.3 Locate arch template to height of springing line and crown.

- 3.4 Adjust toms and wedges or adjustable metal props to ensure arch centre and springing line is level.
- 4 Cut and lay voussoirs.
 - 4.1 Use full size drawing to determine voussoir shape and size.
 - 4.2 Mark, cut and test voussoirs for parallel joints.
 - 4.3 Lay voussoirs around arch centre.
 - 4.4 Cut and lay spandrels maintaining even collar joints.
- 5 Clean up.
 - 5.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 5.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 5.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Candidates require:

- numeracy skills to:
 - use measurements and formulas to calculate material quantities
 - apply geometry to arch set out
- technology skills to:
 - use digital tools and devices to source job information and communicate effectively with others.

Unit Mapping Information

Supersedes and is equivalent to CPCCB3010A Construct masonry arches

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCL3010 Construct masonry arches

Modification History

- Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.3.
Changes to Performance Evidence.
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Performance Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCL3010A Construct masonry arches.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by:

- constructing a segmental arch using brick or block
- constructing three other brick or block arches from the following:
 - semicircular arch
 - multicentre arch
 - gothic arch
 - bull's eye arch.

In doing this, the candidate must:

- calculate and develop a full-scale template for a gothic arch
- carry out calculations to determine voussoir size and shape for a gauged arch
- build abutments to the specified height maintaining gauge and bond
- fit the arch centre allowing for ease of stripping on completion
- comply to the brickwork tolerances stated in the current Australian Standards and codes.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of materials used for masonry arch construction
- processes and techniques for:
 - setting out and constructing various types of arches
 - preparing voussoirs for an arch
 - setting out, cutting, assembling and fitting arch templates
- categories and terminologies relating to arches
- structural and load bearing forces applied to arches
- features of working drawings and specifications
- mortar ingredients and consistency
- functional and operational features of plant, equipment, hand and power tools:
 - battery operated tools
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - working safely at heights
 - erecting and dismantling work platforms
 - exposure to silica
 - exposure to loud noise
- key requirements of the National Construction Code (NCC) relevant to masonry arch construction
- environmental requirements for workplace processes and waste disposal.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

CPCCB3011 Construct curved walls

Modification History

- Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.3.
- Performance Criteria 3.6 updated.
 - Changes to Performance Evidence.
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
- Knowledge Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCCB3011A Construct curved walls.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to construct masonry curved walls. It includes using geometry to calculate and set out curves.

This unit applies to bricklayers and blocklayers working on new and existing structures. It is suitable for people operating with some autonomy. A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Bricklaying and Blocklaying

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--------------------------------|--|
| 1 Prepare for work. | 1.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job. |
| | 1.2 Read, interpret and apply curved wall construction requirements from current plans, specifications, standards and codes. |
| | 1.3 Follow requirements in workplace safety and environmental documentation and workplace procedures. |
| | 1.4 Calculate material quantities required for the task. |
| | 1.5 Determine job priorities and sequence job tasks in consultation with others on site. |
| | 1.6 Identify potential hazards and determine and implement control measures. |
| | 1.7 Select and check condition of plant, equipment and tools and report damage or faults. |
| | 1.8 Check conformity of materials against the specifications and place materials in preparation for the work. |
| 2 Set out and lay curved wall. | 2.1 Identify wall shape from job drawings and calculate curve using geometry. |
| | 2.2 Locate and set out curved wall using a trammel. |
| | 2.3 Set out wall length and height maintaining brickwork gauge and bond. |
| | 2.4 Mix mortar quality and consistency to job specifications. |
| | 2.5 Lay first course level and in line with curve set out. |
| | 2.6 Lay wall maintaining gauge, bond and alignment with vertical face maintaining a constant 'V' shape perpendicular joint. |
| | 2.7 Remove excess mortar and rake or rule joints to specified |

- profile and depth.
- 2.8 Brush down face brickwork prior to mortar drying.
- 3 Set out and lay serpentine wall.
- 3.1 Identify wall shape from job drawings and calculate curves using geometry.
- 3.2 Locate and set out serpentine wall curves using trammel heads and trammel arm.
- 3.3 Set out length and height of wall maintaining brickwork gauge and bond.
- 3.4 Mark and cut required bricks to maintain equal perpendicular joints.
- 3.5 Lay bricks to curve set out maintaining bond, gauge and alignment with vertical face.
- 3.6 Remove excess mortar and finish jointing to meet the current Australian Standards.
- 4 Clean up.
- 4.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
- 4.2 Clean tools and equipment, check for serviceability and report damage or faults.
- 4.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Candidates require:

- numeracy skills to:
 - calculate various curves using geometry
- technology skills to:
 - use digital tools and devices to source job information and communicate effectively with others.

Unit Mapping Information

Supersedes and is equivalent to CPCCB3011A Construct curved walls

Assessment Requirements for CPCCL3011 Construct curved walls

Modification History

Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.3.

- Performance Criteria 3.6 updated.
- Changes to Performance Evidence.

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCL3011A Construct curved walls.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by setting out and laying two curved masonry walls to height of 600 mm.

In doing this, the candidate must:

- construct one serpentine masonry wall to a minimum length of 4.0 m using the plotted points or template method and finished with appropriate capping
- construct one curved masonry wall with a minimum rise of 290 mm and radius of 2.4 m using the trammel technique
- comply with brickwork tolerances stated in the current Australian Standards.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of materials used for curved wall construction
- processes and techniques for:
 - calculating and setting out various size curves
 - curved wall construction
- using measurements and formulas to calculate quantities
- facets generated by curved walls
- aspects and factors relating to curved walls

- construction terminology relating to curved wall construction
- wall types, movement of joints and bonding patterns
- functional and operational features of plant, equipment, hand and power tools
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - hazardous manual handling
 - exposure to silica
 - exposure to loud noise
- current and relevant Australian Standards relating to constructing curved walls
- key requirements of the National Construction Code (NCC) for constructing curved walls
- features of working drawings and specifications
- environmental and waste management requirements.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCB3012 Construct fireplaces and chimneys

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCB3012A Construct fireplaces and chimneys. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to construct brick fireplaces and chimneys in various types and styles of buildings.

This unit applies to bricklayers and blocklayers who work on new and existing structures. It is suitable for people operating with some autonomy. A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Bricklaying and Blocklaying

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Prepare for work.
 - 1.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.
 - 1.2 Read, interpret and apply fireplace and chimney construction requirements from current plans, specifications, standards and codes.
 - 1.3 Follow requirements in workplace safety and environmental documentation and workplace procedures.
 - 1.4 Use measurements and apply formulas to calculate material quantities.
 - 1.5 Identify potential hazards and determine and implement control measures.
 - 1.6 Select appropriate plant, equipment and tools, check condition and report damage or faults to relevant person.
 - 1.7 Check conformity of materials against the specifications and place materials in preparation for the work.

- 2 Set out and construct base and hearth.
 - 2.1 Locate and set out fireplace base to specified size.
 - 2.2 Mix mortar to quality and consistency specifications.

- 2.3 Lay masonry base level, straight and plumb to the correct gauge and bond.
- 3 Construct firebox and inner hearth.
- 3.1 Set out the first course for fire box and jambs to specified dimensions.
- 3.2 Set out gathering/curve of fireback on floor.
- 3.3 Construct firebox maintaining gauge, level and plumb to allowable tolerances.
- 3.4 Form gather with corbelled brickwork to provide the specified throat size.
- 3.5 Install the lintel at the specified height to meet bearing rules and maintain bond.
- 4 Form smoke shelf and throat.
- 4.1 Form smoke shelf to the specified shape with mortar parging.
- 4.2 Cover finished smoke shelf to protect from damage during construction.

- 4.3 Check and alter throat size to meet the specified size.
- 5 Form smoke chamber.
- 5.1 Lay gathering over/corbellings to specified angle and correct bond.
- 5.2 Parge smoke chamber to minimum thickness to achieve a smooth mortar finish.
- 6 Construction flue.
- 6.1 Lay gathering with directional change to break the light.
- 6.2 Parge inside of flue.
- 7 Complete chimney stack.
- 7.1 Install lead chimney tray at the specified height.
- 7.2 Extend chimney square and plumb to finished height.

- 7.3 Lay chimney capping or sand cement flashing to prevent water intrusion.
 - 7.4 Finish joints to specified profile and depth.
 - 7.5 Clean excess mortar and brush down face work.
 - 7.6 Lay brickwork hearth and complete to meet Australian Standards.
-
- 8 Clean up.
 - 8.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 8.2 Clean tools and equipment, check for serviceability and report damage or faults
 - 8.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Candidates require:

- technology skills to:
 - use digital tools and devices to source job information and communicate effectively with others.

Unit Mapping Information

Supersedes and is equivalent to CPCCB3012A Construct fire places and chimneys

Assessment Requirements for CPCCL3012 Construct fireplaces and chimneys

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCL3012A Construct fireplaces and chimneys. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by constructing a fireplace and chimney for a single storey building.

In doing this, the candidate must:

- install chimney flashing
- install weather proof chimney capping
- comply with fireplace and chimney standards and codes.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- terminology relating to fireplace and chimney construction
- current and relevant standards and building codes:
 - minimum and maximum dimensions for components
 - allowable tolerances
 - flashing requirements
- key requirements of the National Construction Code (NCC) relevant to fireplaces and chimneys
- characteristics, applications and limitations of specified materials and products for fireplace and chimney construction:
 - mortar specifications (M code)
 - parging ingredients
 - refractory bricks
- processes and techniques for fireplace and chimney construction:
 - brick bond patterns
 - roof flashing and weathering
- working drawing and specifications
- functional and operational features of plant, equipment and hand and power tools:

- power assisted tools
- workplace safety:
 - erecting and dismantling work platforms
 - working at heights
 - job safety and environmental analysis (JSEA)
 - exposure to silica
 - exposure to loud noise
- environmental requirements for workplace processes and waste disposal.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Assessment Requirements for CPCCL3013 Construct masonry structural systems

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.3.

Change to Performance Criteria 4.1.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCL3013A Construct masonry structural systems. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by constructing a 2.1 m long x 2.0 m high load bearing block wall with one 390 mm x 390 mm engaged pier.

In doing this, the candidate must:

- install wall tie down and lateral reinforcing support system
- install a door jamb and bond beam lintel
- secure tie down for roof structures
- clean core in preparation for core filling
- comply with current masonry structural systems standards and codes.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, application and limitation of approved materials for structural wall construction:
 - mortar ingredients and consistency
 - steel reinforcing and steel ties
- processes and techniques for structural wall construction:
 - methods of engaging piers
 - fixing of horizontal and vertical reinforcing
 - installing roof tie down systems
- construction terminology relating to structural wall construction
- brick and block expansion and growth, control and articulation joints

- functional and operational features of plant, equipment, hand and power tools
- workplace safety:
 - job safety and environmental analysis (JSEA)
 - working at heights
 - exposure to silica
 - exposure to loud noise
- fire control and separation requirements
- key requirements of the National Construction Code (NCC) relevant to masonry structural systems
- features of working drawings and specification
- environmental requirements for workplace processes and waste disposal.

CPCCB3014 Install fire-rated masonry construction

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCB3014A Install fire-rated masonry construction. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install fire-rated masonry construction. It includes laying fire resistant masonry to buildings, walls and service openings

This unit applies to bricklayers and block layers who work on new and existing structures. It is suitable for people operating with some autonomy. A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Bricklaying and Blocklaying

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Prepare for work.

1.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job.

- 1.2 Read, interpret and apply fire-rated masonry construction requirements from current plans, specifications, standards and codes.
 - 1.3 Follow requirements in workplace safety and environmental documentation and workplace procedures.
 - 1.4 Identify fire resistance level (FRL), location and composition of masonry wall.
 - 1.5 Use measurements and apply formulas to calculate material quantities.
 - 1.6 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.7 Identify potential hazards and determine and implement control measures.
 - 1.8 Select and check condition of plant, equipment and tools and report damage or malfunction to relevant person.
 - 1.9 Check conformity of materials against the specifications and place materials in preparation for the work.
- 2 Construct masonry wall.
- 2.1 Set out and mark position, gauge and bond of masonry wall.
 - 2.2 Mix mortar and check consistency with job requirements.
 - 2.3 Construct fire-rated masonry wall maintaining bond, gauge and level to the set-out height.
 - 2.4 Remove excess mortar, rake or rule joints to specified profile and depth.
 - 2.5 Clean and brush down face of brickwork prior to mortar drying.
- 3 Clean up.
- 3.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 3.2 Clean tools and equipment, check for serviceability and report damage or faults.

- 3.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Candidates require:

- technology skills to:
 - use digital tools and devices to source job information and communicate effectively with others.

Unit Mapping Information

Supersedes and is equivalent to CPCCL3014A Install fire-rated masonry construction

Assessment Requirements for CPCCL3014 Install fire-rated masonry construction

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCL3014A Install fire-rated masonry construction. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by constructing a 2.1 m long x 2.0 m high fire-resistant masonry wall.

In doing this, the candidate must:

- install a fire-rated steel door jamb
- fire-proof two service penetrations of various sizes
- fit fire-rated insulation between brick wall and roof covering
- comply with fire control and separation requirements of National Construction Code (NCC) and other standards and legislation.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of materials used in fire-rated masonry construction:
 - mortar ingredients
 - fire-resistant masonry blocks and bricks
 - fire seals and insulation
- principles of heat and effects on materials
- fire control and separation required by the NCC and other legislation:
 - fire resistant levels (FRL) of materials used in fire-rated masonry requirements
- processes and techniques for:
 - installing fire-rated masonry
 - damp proofing and flashing
 - installing fire-rated steel door jambs
 - fitting continuous fire-rated seal between structure and roof cladding
- construction terminology relating to fire-rated masonry construction
- functional and operational features of plant, equipment, hand and power tools

- workplace safety:
 - job safety and environmental analysis (JSEA)
 - work at heights
 - hazardous manual handling
 - exposure to silica
 - exposure to loud noise
- acceptable brickwork tolerances stated in Australian Standards and building codes
- features of working drawings and specifications
- environmental requirements for workplace processes and waste disposal.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

 - 1.4 Use measurements and apply formulas to calculate material quantities.
 - 1.5 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.6 Identify potential hazards and determine and implement control measures.
 - 1.7 Select and check condition of plant, equipment and tools and report damage or malfunction to relevant personnel.
 - 1.8 Check conformity of materials against the specifications and place materials in preparation for the work.
- 2 Set out and prepare for decorative brickwork.
- 2.1 Identify structural and design details of decorative brickwork and panels from plans and specifications.
 - 2.2 Locate position and set out specified design.
 - 2.3 Determine batch proportions, mortar colour, joint size and profile, method of tying and damp proofing.
 - 2.4 Select and sort bricks for appearance, dimensions, colour variations, durability and damage.
 - 2.5 Batch and mix mortar ensuring consistency with job requirements.
- 3 Lay decorative brickwork.
- 3.1 Lay corbel to form feature protrusions adhering to the overhang specifications and maintaining level, bond and gauge.
 - 3.2 Form a protruding plinth and sill using plinth bricks.
 - 3.3 Create a dentil course using standard bricks.
 - 3.4 Create a dogtooth pattern using standard bricks.

- 3.5 Lay decorative brickwork panel using accurate cuts and maintaining bond and gauge consistency.
 - 3.6 Rake or rule joints to specified profile and depth.
 - 3.7 Brush down face of brickwork/blockwork prior to drying to remove unwanted mortar.
- 4 Clean up.
- 4.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 4.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 4.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Candidates require:

- technology skills to:
 - use digital tools and devices to source job information and communicate effectively with others.

Unit Mapping Information

Supersedes and is equivalent to CPCCB3015A Construct decorative brickwork

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCL3015 Construct decorative brickwork

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCL3015A Construct decorative brickwork. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by constructing a decorative brick wall to a minimum height of 1.5 m.

In doing this, the candidate must incorporate a 900 mm x 1200 mm minimum decorative masonry panel, which includes:

- two base plinth and sill courses using full bricks
- three courses of corbelling
- one dogtooth course pattern
- one dental course pattern
- internal and external junctions neatly cut and flushed
- various finishes to mortar joints
- comply with tolerances stated in the current Australian Standards and codes.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of decorative brick materials:
- processes and techniques of:
 - setting out and constructing decorative brickwork
 - strengthening brickwork around openings
- terminology relating to decorative brickwork
- brick bond patterns
- functional and operational features of plant, equipment and hand and power tools
- workplace safety:
 - dust suppression
 - exposure to silica
 - exposure to loud noise
 - job safety and environmental analysis (JSEA)

- working at height
- Australian Standards and building codes relating to acceptable brickwork tolerances
- architectural styles and masonry details
- architectural elements of buildings
- features of working drawings and specification
- environmental requirements for workplace processes and waste disposal.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|--|
| 1 Prepare for work. | 1.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job. |
|---------------------|--|

- 1.2 Read, interpret and apply battered masonry walls and pier construction requirements from current plans, specifications, standards and codes.
 - 1.3 Follow requirements in workplace safety and environmental documentation and workplace procedures.
 - 1.4 Use measurements and apply formulas to calculate material quantities from plans and specifications.
 - 1.5 Determine job priorities and sequence job tasks in consultation with others on site.
 - 1.6 Identify potential hazards and determine and implement control measures.
 - 1.7 Select and check condition of plant, equipment and tools and report damage or malfunction to relevant person.
 - 1.8 Check conformity of materials against the specifications and place materials in proximity of the work.
- 2 Prepare base and lay masonry to battered wall.
- 2.1 Set out wall position and length on footing.
 - 2.2 Set out piers maintaining gauge and brickwork bond.
 - 2.3 Set up profile to the specified batter angle and check with battered rod board and battering level.
 - 2.4 Lay first course level and straight.
 - 2.5 Lay masonry to the specified pattern maintaining bond and gauge.
 - 2.6 Finish mortar joint as specified and brush down masonry face work.
- 3 Clean up.
- 3.1 Clear the work area, and dispose of, reuse or recycle materials workplace and environmental requirements.
 - 3.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 3.3 Store and secure tools and equipment following workplace procedures.

Foundation Skills

Candidates require:

- technology skills to:
 - use digital tools and devices to source job information and communicate effectively with others.

Unit Mapping Information

Supersedes and is equivalent to CPCCB3016A Construct battered masonry walls and piers.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCCL3016 Construct battered masonry walls and piers

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCL3016A Construct battered masonry walls and piers. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by constructing a minimum 1.0 m high x 1.5 m long x 230 mm battered masonry wall.

In doing this, the candidate must:

- construct a 1.0 m long x 230 mm wide pier at 90 degrees and to the same height as the battered wall
- lay brick on edge capping to top of wall
- comply with battered masonry walls and piers standards and codes.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of materials for battered wall construction:
 - mortar ingredients and consistency
 - waterproofing products
- designed concrete foundations to counteract overturning or sliding of battered walls
- processes and techniques for constructing various battered walls and piers:
 - installing drainage pipes
 - backfilling materials and aggregates
 - installing weep holes
- construction terminology relating to battered wall construction
- brick bond patterns
- functional and operational features of plant, equipment, hand and power tools
- workplace safety requirements:
 - hierarchy of control
 - hazardous manual tasks
 - exposure to silica

- exposure to loud noise
- features of working drawings and specification
- key requirements of the National Construction Code (NCC) relevant to battered masonry wall and pier construction
- standards and building codes relating to acceptable tolerances in brickwork
- environmental requirements for workplace processes and waste disposal.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCB3017 Carry out tuck pointing and repointing to masonry

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCB3017A Carry out tuck pointing to brickwork. Title change. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to apply repointing and decorative tuck pointing for joint finishes to masonry on different types and styles of buildings.

This unit applies to bricklayers, and stonemasons who work on new, existing and heritage structures. It is suitable for people operating with some autonomy.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Bricklaying and Blocklaying

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1	Plan and prepare for	1.1	Select, correctly fit and use personal protective
---	----------------------	-----	---

- work. equipment (PPE) appropriate for job.
- 1.2 Read and interpret brickwork tuck pointing and repointing requirements from work instructions, standards and codes.
 - 1.3 Follow relevant information from work workplace safety, workplace procedures and environmental documentation.
 - 1.4 Use measurements and apply formulas to calculate material quantities.
 - 1.5 Determine job priorities and sequence job tasks in conjunction with others on site.
 - 1.6 Identify potential hazards and determine and implement control measures.
 - 1.7 Select and check condition of plant, equipment and tools and report damage or faults to relevant person.
 - 1.8 Check conformity of materials against the specifications.
- 2 Prepare brickwork surfaces.
- 2.1 Remove individual loose or broken bricks.
 - 2.2 Match and replace broken bricks.
 - 2.3 Scrap mortar joints to specified depth.
 - 2.4 Clean brickwork surface and joints in preparation for tuck pointing and repointing.
 - 2.5 Form an indent key to bond with joint finishing material.
 - 2.6 Prepare mortar/putty to required colour and mix.
- 3 Carry out tuck pointing and repointing.
- 3.1 Apply decorative tuck pointing to bed and perpendicular joints to specified depth and shape.
 - 3.2 Repoint masonry joints ensuring that bed and perpendicular joints are compacted and full.
 - 3.3 Remove excess putty/mortar.
 - 3.4 Repair any imperfections and lightly brush down

brickwork.

- 4 Clean up.
 - 4.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 4.2 Clean tools and equipment, check for serviceability and report any damage or faults.
 - 4.3 Store and secure tools and equipment.

Foundation Skills

Candidates require:

- technology skills to:
 - use digital tools and devices to source job information and communicate effectively with others.

Unit Mapping Information

Supersedes and is equivalent to CPCCB3017A Carry out tuck pointing to brickwork

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCL3017 Carry out tuck pointing and repointing to masonry

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCL3017A Carry out tuck pointing to brickwork. Title change. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by tuck pointing and repointing the bed and perpendicular joints of a masonry wall.

In doing this, the candidate must:

- apply decorative tuck pointing to a minimum of two square metres to a specified colour and finish
- apply repointing to a minimum of two square metres.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of materials for tuck pointing and repointing:
 - mortar ingredients and consistency
 - mortar adhesive ability, stability and durability
 - colouring agents and pigments
 - slaked rock lime
- processes and techniques for tuck pointing and repointing:
 - door and window reveals and sills
 - internal and external corners
 - maintaining consistent bed and perpendicular joints
- terminology relating to tuck pointing:
 - ribbon
 - struck
- functional and operational features of plant, equipment, hand and power tools
- workplace safety:
 - job safety and environmental analysis (JSEA)

- work at heights
- hazardous manual tasks
- hazardous substances
- exposure to silica
- exposure to loud
- work instructions, standards, codes relating to tuck pointing and repointing
- environmental and waste management requirements:
 - disposal of waste material
 - recycling materials

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCL3018 Install aerated autoclaved concrete products

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCL3018A Install aerated autoclaved concrete products. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to install aerated autoclaved concrete (AAC) products to walls and floors of different types and styles of buildings.

It includes installing AAC blockwork, lintels, floor panels and wall panels to buildings or structures.

The unit applies to bricklayers and block layers who work on new and existing structures. It is suitable for people operating with some autonomy. A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|-----------------------|--|
| 1 Prepare for work. | 1.1 Select, fit correctly and use personal protective equipment (PPE) appropriate for job. |
| | 1.2 Read, interpret and apply AAC installation requirements from current plans, specifications, standards and codes. |
| | 1.3 Follow requirements in workplace safety and environmental documentation and workplace procedures. |
| | 1.4 Use measurements and apply formulas to calculate material quantities from plans and specifications. |
| | 1.5 Determine job priorities and sequence job tasks in consultation with others on site. |
| | 1.6 Identify potential hazards and determine and implement control measures. |
| | 1.7 Select and check condition of plant, equipment and tools and report damage or faults to relevant person. |
| | 1.8 Check conformity of materials against the specifications. |
| 2 Set out AAC blocks. | 2.1 Set out and mark base blockwork gauge and bond. |
| | 2.2 Set position of damp-proof course (DPC) and wall ties. |
| | 2.3 Set out and mark load bearing blockwork. |
| | 2.4 Set out door and window positions. |
| 3 Lay AAC blockwork. | 3.1 Mix adhesive and check consistency with job and manufacturer's requirements and apply evenly to AAC blocks. |
| | 3.2 Lay blocks level, plumb and to a straight line. |
| | 3.3 Install damp proofing and all associated ties. |
| | 3.4 Cut blocks accurately to maintain even bond at end of course and into openings. |

- 3.5 Install AAC lintels level, straight and maintain bond and gauge to openings.
 - 3.6 Fix all brackets for control joints for internal, external and wall junctions and roof tie down.
 - 3.7 Remove excess adhesive in preparation for wall finish.
- 4 Install AAC floor panels.
 - 4.1 Check floor supports are level and prepared for the AAC floor panels.
 - 4.2 Check floor panel size, span for load design and install panels applying the manufacturer's fitting requirements.
 - 4.3 Place reinforcement rods between the panels and apply concrete grout to a solid and flat finish.
 - 4.4 Remove excess grout in preparation for floor finish.
- 5 Install AAC wall panels.
 - 5.1 Check base is level and prepared for specified tie downs.
 - 5.2 Set out vertical panels for load bearing application and horizontal panels for cladding to manufacturer's specifications.
 - 5.3 Lay horizontal or vertical panels level, plumb and to a straight line using the recommended installation process.
 - 5.4 Fix specified brackets to panel joints, internal, external or T intersections, structural supports and roof tie downs.
 - 5.5 Install all damp proofing and sealants.
 - 5.6 Remove excess adhesive and repair any damaged panels in preparation for wall finish.
- 6 Clean up.
 - 6.1 Clear the work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.
 - 6.2 Clean tools and equipment, check for serviceability and report damage or faults.
 - 6.3 Store and secure tools and equipment following

workplace procedures.

Foundation Skills

Candidates require:

- technology skills to:
 - use digital tools and devices to source job information and communicate effectively with others.

Unit Mapping Information

Supersedes and is equivalent to CPCCB3018A Install aerated autoclaved concrete products

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCCL3018 Install aerated autoclaved concrete products

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCL3018A Install aerated autoclaved concrete products. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the performance criteria of this unit by building an aerated autoclaved concrete (AAC) block wall to a minimum height 1.5 m and minimum length of 2.0 m.

In doing this, the candidate must:

- build an external corner into the wall
- install damp proof course
- install a door opening with lintel and flashing
- install roof tie down requirements
- install AAC vertical and horizontal wall panels, using the recommended fixing system, to a minimum of a four-square metre timber wall
- comply with ACC manufacturer's specifications, standards and codes.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and limitations of materials for AAC construction:
 - mortar consistency and adhesives
 - AAC block and panel bond patterns
 - expansion and control and articulation joints
- fire control and separation required by the National Construction Code (NCC) and other legislation
- processes and techniques for AAC block and panel construction:
 - vermin control and anti-termite measures

- damp proofing, flashing and ventilation
- wall tying components
- lintels and load bearing components
- timber, steel and aluminium windows
- timber and steel door frames
- installing AAC flooring panels to suspended flooring system, using the recommended fixings
- construction terminology relating to AAC block and panel construction
- functional and operational features of plant, equipment and hand and power tools
- workplace safety requirements:
 - job safety and environmental analysis (JSEA)
 - work at heights
 - hazardous manual tasks
 - hazardous materials
 - exposure to silica
 - exposure to loud noise
- features of working drawings and specification
- key requirements of the National Construction Code (NCC) relevant to ACC installation
- environmental requirements for workplace processes and waste disposal.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCBS6101 Research and evaluate construction methods and materials for Class 1 and 10 buildings to three store

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.
- Supersedes and is equivalent to CPCCBS6001 Research and evaluate construction methods and materials for residential buildings to three storeys.

Application

This unit of competency specifies the skills and knowledge required to develop an understanding of traditional, new and emerging construction methods and materials, including systems and components for services, for Class 1 and 10 buildings as defined in the National Construction Code (NCC), and up to three storeys and not exceeding 2,000 square metres in floor area. It requires researching and evaluating construction industry information, including research papers, engineering reports, material specifications and performance data; and establishing information management procedures to maintain data currency, classify and store research information.

This unit is suitable for building surveyors who draw on their broad theoretical knowledge and technical skills to provide advisory code-consulting services or authorised statutory services relating to planning or building permit application assessment or building audit and inspection services for Class 1 and 10 buildings.

This unit forms part of the licensing requirements for building surveying in some states and territories. Relevant state and territory regulatory authorities should be consulted to clarify these requirements.

Pre-requisite Unit

Nil.

Unit Sector

Building surveying

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|---|-----|--|
| 1 Research and evaluate construction methods for Class 1 or 10 buildings. | 1.1 | Research information to identify traditional, new and emerging construction methods and conduct required checks to confirm the validity and reliability of gathered information. |
| | 1.2 | Investigate and evaluate methods for site investigation and preparation. |
| | 1.3 | Evaluate the application of different construction methods to structural elements, components or systems for Class 1 or 10 buildings. |
| 2 Research and evaluate construction materials for Class 1 or 10 buildings. | 2.1 | Research information to identify traditional, new and emerging construction materials and conduct required checks to confirm the validity and reliability of gathered information. |
| | 2.2 | Evaluate the application of different construction materials to structural elements, components or systems for Class 1 or 10 buildings. |
| 3 Research and evaluate service provisions for Class 1 or 10 buildings. | 3.1 | Research information to identify service requirements, compliance and installation methods, and conduct required checks to confirm the validity and reliability of gathered data. |
| | 3.2 | Evaluate options for energy supply and infrastructure, heating and cooling systems, fire protection and gas and hydraulic service supply and infrastructure. |
| | 3.3 | Evaluate service systems and components in relation to different user groups, geographical locations and climatic conditions, and note strengths and weaknesses of each context. |
| 4 Report research and evaluation outcomes. | 4.1 | Prepare report containing research and evaluation findings, recommendations and supporting evidence for Class 1 or 10 building according to workplace requirements. |
| | 4.2 | Distribute research and evaluation report to relevant persons for feedback. |

- 4.3 Implement information management procedures to maintain data currency and classify and store research and evaluation information for easy retrieval.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- numeracy skills to:
- interpret construction material characteristics and performance data using fractions, decimals, percentages, ratio, rates and proportions
- use mathematical language relating to properties of materials including fire ratings and load bearing capacities.

Unit Mapping Information

Supersedes and is equivalent to CPCCBS6001 Research and evaluate construction methods and materials for residential buildings to three storeys.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCBS6101 Research and evaluate construction methods and materials for Class 1 and 10 buildings to three store

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.
- Supersedes and is equivalent to CPCCBS6001 Research and evaluate construction methods and materials for residential buildings to three storeys.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by researching and evaluating construction methods and materials to support building surveying services for three different buildings of less than 2,000 square metres in floor area, involving the following Classes as defined by the National Construction Code (NCC):

- two buildings in Class 1, each with three storeys
- one building in Class 1 and less than three storeys, or in Class 10.

Each building must be in a different geographical location/area selected from the following:

- high wind area
- highly corrosive area (within 1 kilometre of the ocean)
- bushfire-prone area
- cyclone area
- earthquake area
- alpine area
- metropolitan area.

For each building, the candidate must evaluate:

- construction methods and materials in relation to different geographical locations and climatic conditions and note strengths and weaknesses of each context
- the application of different construction methods to:
 - foundations and footings
 - structural and supporting systems
 - enclosing systems
 - fire safety
 - health and amenity
 - safe movement and access
 - energy efficiency

- construction processes in relation to trade sequencing
- the application of different construction materials to:
 - foundations and footings
 - structural and supporting systems
 - enclosing systems.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- characteristics and applications of materials suitable for structural elements and building envelope of Class 1 and 10 buildings:
 - construction materials in common use:
 - adhesives and sealants
 - admixtures
 - clay products
 - concrete and concrete products
 - glass
 - masonry
 - metal
 - mortar for load bearing walls
 - plaster and plasterboard
 - plastic
 - pre-stressed structural concrete components
 - protective and fire-rated protective coatings
 - timber and timber products
 - waterproofing
 - suitability of construction materials for different applications:
 - behaviour under stress
 - compatibility with other materials in use
 - cost-effectiveness
 - durability
 - energy efficiency
 - environmental impact
 - fire resistance
 - standards
 - structural suitability
 - sustainability
 - visual characteristics
- compliance requirements of construction materials and methods for Class 1 and 10 buildings in different geographic locations and climate zones:

- NCC
- Australian Standards referenced by the NCC
- components and systems for services associated with Class 1 and 10 buildings:
 - compliance requirements
 - installation methods
- different construction methods and systems for Class 1 and 10 buildings applicable to:
 - methods for site investigation and preparation:
 - principles and practices of site establishment: drainage, earthworks and pest risk management
 - soil investigation, assessment and clarification
 - structural and supporting systems:
 - masonry systems: earthwall construction, reinforced and unreinforced masonry and weatherproofing
 - systems for floors, roofs, sub-floor ventilation and walls
 - enclosing systems:
 - glazing
 - gutters and downpipes
 - roof and wall cladding
 - fire safety:
 - clearances and protection from heating appliances
 - fire separation
 - requirements for bushfire areas
 - smoke alarms
 - health and amenity:
 - facilities
 - light
 - room heights
 - sound insulation
 - ventilation
 - wet areas
 - safe movement and access:
 - balustrades
 - stair construction
 - swimming pool access
 - energy efficiency:
 - air movement
 - building fabric
 - building sealing and insulation
 - external glazing
 - services

- information management procedures to maintain data currency, and classify and store information for easy retrieval
- NCC classifications and definitions for Class 1 and 10 buildings
- structural engineering principles sufficient to interpret and apply NCC requirements to work activities
- types and sources of reliable information on traditional, new and emerging uses of construction materials and methods.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessors must also:

- be licensed as a Building Surveyor Level 1 (or equivalent) or Level 2 (or equivalent) in their state or territory, or
- demonstrate current membership of a relevant industry association and have current registration on the National Building Professionals Register in the Building Industry Control category (level 1), or
- be accredited under the Australian Institute of Building Surveyors (AIBS) National Accreditation Scheme at Building Surveyor level or be accredited by the Royal Institute of Chartered Surveyors as a building certifier.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to equipment, software, documentation and materials required to achieve the performance evidence.

CPCCBS6102 Research and evaluate construction methods and materials for Class 2 to 9 buildings to three storeys

Modification History

Release 1 This version released with CPC Construction, Plumbing and Services Training Package Release 6.0.

Supersedes and is equivalent to CPCCBS6002 Research and evaluate construction methods and materials for commercial buildings to three storeys.

Application

This unit of competency specifies the skills and knowledge required to develop an understanding of traditional, new and emerging construction methods and materials, including systems and components for services, for buildings included in Classes 2 to 9 as defined in the National Construction Code (NCC), up to three storeys and not exceeding 2,000 square metres in floor area. It includes researching and evaluating construction industry information, including research papers, engineering reports, material specifications and performance data; and establishing information management procedures to maintain data currency, classify and store research information.

This unit is suitable for building surveyors who draw on their broad theoretical knowledge and technical skills to provide advisory code-consulting services or authorised statutory services relating to planning or building permit application assessment or building audit and inspection services for Class 2 to 9 buildings.

This unit forms part of the licensing requirements for building surveying in some states and territories. Relevant state and territory regulatory authorities should be consulted to clarify these requirements.

Assessment Requirements for CPCCBS6102 Research and evaluate construction methods and materials for Class 2 to 9 buildings to three storeys

Modification History

Release 1 This version released with CPC Construction, Plumbing and Services Training Package Release 6.0.

Supersedes and is equivalent to CPCCBS6002 Research and evaluate construction methods and materials for commercial buildings to three storeys.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by researching and evaluating construction methods and materials to support building surveying services for three different projects involving the follow Classes of buildings as defined by the National Construction Code (NCC):

- one project incorporating Class 5 or Class 6
- one project incorporating Class 2 or Class 3 or Class 9c
- one project incorporating Class 7 or Class 8.

Each building must be up to three storeys and not exceeding 2,000 square metres in floor area, and in a different geographical location/area selected from the following:

- high wind area
- highly corrosive area (within 1 kilometre of the ocean)
- bushfire-prone area
- cyclone area
- earthquake area
- alpine area
- metropolitan area.

For each building, the candidate must evaluate:

- construction methods and materials in relation to different geographical locations and climatic conditions and note strengths and weaknesses of each context
- the application of different construction methods to:
 - foundations and footings
 - structural and supporting systems
 - enclosing systems
 - installation of services
- construction processes in relation to trade sequencing

- the application of different construction materials to:
 - foundations and footings
 - structural and supporting systems
 - enclosing systems.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- characteristics, including fire resistance and applications of materials suitable for structural elements and building envelope of buildings included in Classes 2 to 9
- compliance requirements of construction materials and methods for buildings included in Classes 2 to 9 in different geographic locations and climate zones:
 - NCC
 - Australian Standards referenced by the NCC
- components and systems for services associated with buildings included in Classes 2 to 9:
 - compliance requirements
 - installation methods
- different construction methods and systems applicable to the structural elements and building envelope of buildings included in Classes 2 to 9:
 - methods for site investigation and preparation:
 - principles and practices of site establishment: underpinning, de-watering, ground stabilisation and demolition procedures
 - soil investigation, assessment and clarification
 - foundations and footings:
 - anchors, including grouted, mechanical or rock
 - basements
 - damp proof courses
 - footing systems
 - grillage
 - ground stabilisation
 - membranes
 - pest control
 - retaining walls
 - shoring
 - systems for earthquake zones
 - tanking
 - underpinning
 - water exclusion
 - structural and supporting systems:
 - forces
 - loads

- openings
- spatial relationships
- stresses and strains applied to arches, beams, braces, columns, concrete floor slabs, load-bearing walls, masonry ties and anchors, roof frames (including trusses) and structural footings
- structural materials and systems for floors, roofs, sub-floors and walls
- systems for cyclonic areas and earthquake zones
- enclosing systems, materials and fixings:
 - claddings and linings
 - coatings
 - finishes
 - flashings
 - linings, including acoustic system installations and fire-rated systems
 - partitioning
 - sarking and insulations
 - wet areas
- information management procedures to maintain data currency, and classify and store information for easy retrieval
- NCC classifications and definitions for buildings included in Classes 2 to 9
- structural engineering principles sufficient to interpret and apply NCC requirements to work activities
- types and sources of reliable information on traditional, new and emerging uses of construction materials and methods.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessors must also:

- be licensed as a Building Surveyor Level 1 (or equivalent) or Level 2 (or equivalent) in their state or territory, or
- demonstrate current membership of a relevant industry association and have current registration on the National Building Professionals Register in the Building Industry Control category (level 1), or
- be accredited under the Australian Institute of Building Surveyors (AIBS) National Accreditation Scheme at Building Surveyor level or be accredited by the Royal Institute of Chartered Surveyors as a building certifier.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to equipment, software, documentation and materials required to achieve the performance evidence.

CPCCBS6103 Identify and apply legal and ethical requirements to building surveying functions

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.

Supersedes and is equivalent to CPCCBS6003 Apply legal and ethical requirements to building surveying functions.

Application

This unit of competency specifies the skills and knowledge required to identify and apply building control legislation, ethical standards and industry codes of practice to building surveying functions. It includes identifying and applying the requirements of particular geographic locations, climate zones, and local planning schemes and codes.

This unit is suitable for building surveyors who draw on their broad theoretical knowledge and technical skills to provide building surveying services while operating in a highly regulated environment.

This unit forms part of the licensing requirements for building surveying in some states and territories. Relevant state and territory regulatory authorities should be consulted to clarify these requirements.

Pre-requisite Unit

Nil.

Unit Sector

Building surveying

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify and apply legal and ethical standards.

1.1 Review workplace code of conduct to clarify own responsibilities and apply to building surveying activities and client communications.

- 1.2 Identify potential conflicts of interest prior to undertaking building surveying projects according to workplace code of conduct.
 - 1.3 Check client contractual arrangements to confirm compliance with legislative and regulatory requirements.
 - 1.4 Conduct research to confirm own authority, licence and insurances to undertake building surveying activities.
 - 1.5 Apply legal and ethical standards to building surveying activities including client and stakeholder communications.
- 2 Identify and apply building control legislative and regulatory requirements.
 - 2.1 Research and identify relevant jurisdictional building control legislation and regulations and apply to building surveying activities.
 - 2.2 Identify relevant requirements of the National Construction Code (NCC) and Australian Standards and apply to building surveying activities.
 - 2.3 Research and identify relevant jurisdictional authority planning constraints and apply to building surveying activities.
- 3 Identify and apply relevant administrative requirements.
 - 3.1 Identify and follow timelines, documentation and compliance requirements of relevant authorities according to the nature of building surveying tasks being undertaken.
 - 3.2 Submit exemption requests to relevant authorities according to legislative and regulatory procedures.
 - 3.3 Anticipate, identify and manage problems in meeting administrative requirements of relevant authorities and seek advice as required from relevant persons.
 - 3.4 Identify and maintain record-keeping processes to meet legislative and regulatory requirements.
- 4 Communicate and manage building
 - 4.1 Advise client on the availability and scope of internal and external dispute resolution processes.

surveying legal requirements.	4.2	Manage dispute or complaint about own building surveying services professionally and ethically to resolution according to workplace requirements and relevant codes of practice.
	4.3	Check and verify that building contractors hold appropriate licence, insurances and registration for building Class and type.
5 Identify and apply processes to enforce requirements of legislation.	5.1	Receive and process advice or complaints regarding non-compliant or unsafe building works according to workplace requirements.
	5.2	Arrange and conduct site inspection of properties and buildings to assess extent of non-compliance and risk to public health and safety and record detailed observations on site.
	5.3	Seek advice from relevant persons to clarify extent of non-compliance or risk to public health and safety.
	5.4	Prepare building orders or notices to relevant persons where properties or buildings are found to be non-compliant or posing a risk to public health and safety.
	5.5	Identify and apply statutory enforcement procedures to ensure required remedies to building works are completed within specified timeframes and to required compliance standards.
	5.6	Maintain and use accurate, detailed and current records to represent clients or other stakeholders according to workplace and regulatory requirements.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- oral communication skills to use questioning, active listening, paraphrasing and summarising to seek advice and determine client or stakeholder needs
- reading skills to understand complex vocabulary used in the NCC and building control legislation and regulations.

Unit Mapping Information

Supersedes and is equivalent to CPCCBS6003 Apply legal and ethical requirements to building surveying functions

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCBS6103 Identify and apply legal and ethical requirements to building surveying functions

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.

Supersedes and is equivalent to CPCCBS6003 Apply legal and ethical requirements to building surveying functions.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by identifying and applying the legal and ethical requirements of the applicable jurisdiction, workplace and industry codes of practice to building surveying functions for one building project.

In doing the above, the candidate must arrange and conduct a site inspection of a Class 1 building to assess the extent of non-compliance and risk to public health and safety noting the following while on site:

- details of inspection conducted:
 - date, location and time
 - names of those who conducted and participated in the inspection, including other specialist experts or consultants
 - property identification details
- documents sighted or provided at the inspection
- interviews or discussions held on site
- observations made during inspection.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- authorities, licences and insurances to undertake building surveying activities in relevant jurisdictions
- dispute-resolution procedures available to property owners and community members in relevant jurisdictions
- duty of care to clients and subsequent building owners
- legislative and regulatory compliance requirements for buildings in different climate zones and geographic locations:
 - building control legislation and regulations

- National Construction Code (NCC) including referenced Australian Standards to meet deemed-to-satisfy provisions and/or performance solutions
- legislative and regulatory requirements for professional conduct in communications with clients and building contractors
- nature of admissible evidence that may be presented in arbitration hearings or court proceedings relating to building disputes
- principles of contract law that apply to building surveying contractual agreements with clients or applicants
- principles of negotiation and conflict resolution applicable to professional relationships
- processes for representing clients in arbitration hearings and court proceedings relating to building disputes
- requirements for documentation compliance in relevant jurisdictions
- scope and limitations of the statutory enforcement authority regulating building surveyors in relevant jurisdictions.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessors must also:

- be licensed as a Building Surveyor Level 1 (or equivalent) or Level 2 (or equivalent) in their state or territory, or
- demonstrate current membership of a relevant industry association and have current registration on the National Building Professionals Register in the Building Industry Control category (level 1), or
- be accredited under the Australian Institute of Building Surveyors (AIBS) National Accreditation Scheme at Building Surveyor level or be accredited by the Royal Institute of Chartered Surveyors as a building certifier.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to equipment, software, documentation, properties and buildings required to achieve the performance evidence.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCBS6104 Assess and advise on compliance of design documentation for Class 1 and 10 buildings to three storey

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.

Supersedes and is not equivalent to CPCCBS6004 Assess and advise on compliance of design documentation for residential buildings to three storeys.

New prerequisite requirement.

Application

This unit of competency specifies the skills and knowledge required to assess proposed design documentation during the design process for buildings included in National Construction Code (NCC) definitions for Class 1 and 10 up to three storeys and not exceeding 2,000 square metres in floor area. It includes providing client advice on the preparation of planning and building approval applications and the compliance of design documentation with the building and planning legislation, regulations, codes and standards that apply to the nature and location of each project.

This unit is suitable for building surveyors who draw on their broad theoretical knowledge and technical skills to provide advisory code-consulting services to building and construction professionals involved in developing building design documentation up to the building approval application stage.

This unit forms part of the licensing requirements for building surveying in some states and territories. Relevant state and territory regulatory authorities should be consulted to clarify these requirements.

Pre-requisite Unit

CPCCBS6101 Research and evaluate construction methods and materials for Class 1 and 10 buildings to three storeys.

Unit Sector

Building surveying

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|--|
| 1 Plan and manage code-consulting services. | 1.1 Identify and confirm scope and nature of design project for Class 1 or 10 building, and timelines, fees and details of services to be offered at different project stages. |
| | 1.2 Identify, engage and brief relevant persons to provide advice at different stages of project or on specialist areas of expertise. |
| | 1.3 Advise and monitor project management processes to ensure accurate and timely advice is provided within the scope of specified service levels. |
| | 1.4 Advise and monitor file management processes according to workplace requirements. |
| 2 Confirm project compliance requirements for Class 1 or 10 building. | 2.1 Conduct research to confirm jurisdictional building control legislation and regulations for the building and its location. |
| | 2.2 Conduct research to confirm relevant requirements of the NCC and Australian Standards for Class 1 or 10 building and its location. |
| | 2.3 Research planning constraints for building in consultation with relevant jurisdictional authority. |
| | 2.4 Consult with relevant persons to ensure technically accurate interpretation and application of compliance requirements in relation to performance solutions. |
| | 2.5 Explain compliance requirements for building to client and invite and address questions. |
| 3 Advise on planning approval compliance of drawings and documentation for Class 1 or 10 building. | 3.1 Advise client of drawings and documentation required for building planning approval process. |
| | 3.2 Examine architectural drawings and documentation prepared for planning approval application to ensure completeness according to service agreement. |
| | 3.3 Identify and record planning approval compliance issues |

- and seek specialist advice as required to determine options for their resolution.
- 3.4 Identify and document cost-effective and efficient design alternatives that meet planning approval compliance requirements and explain to client.
- 3.5 Prepare compliance advisory report, present to client and invite and address questions.
- 4 Advise on building approval compliance of drawings and documentation for Class 1 or 10 building.
- 4.1 Advise client of drawings and documentation required for building approval process.
- 4.2 Examine architectural drawings and documentation prepared for building approval application to ensure completeness according to service agreement.
- 4.3 Identify and record building approval compliance issues and seek specialist advice as required to determine options for their resolution.
- 4.4 Identify and document cost-effective and efficient design alternatives that meet building approval compliance requirements and explain to client.
- 4.5 Prepare and present compliance advisory report to client and invite and address questions to explain content.
- 5 Respond to client enquiries.
- 5.1 Assess client requests for compliance information according to service agreement and negotiate and agree additional fees as required.
- 5.2 Assess information request and research appropriate response in consultation with relevant persons as required.
- 5.3 Present client advice in the required format and invite and address questions to explain content.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- numeracy skills to interpret ratios, rates and proportions when examining architectural drawings and documentation.

Unit Mapping Information

Supersedes and is not equivalent to CPCCBS6004 Assess and advise on compliance of design documentation for residential buildings to three storeys

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCCBS6104 Assess and advise on compliance of design documentation for Class 1 and 10 buildings to three storey

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.

Supersedes and is not equivalent to CPCCBS6004 Assess and advise on compliance of design documentation for residential buildings to three storeys.

New prerequisite requirement.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by assessing and advising on the compliance of design documentation for three buildings involving the following Classes as defined by the National Construction Code (NCC):

- two types of Class 1 buildings in different geographical locations/areas selected from:
 - high wind area
 - highly corrosive area (within 1 kilometre of the ocean)
 - bushfire-prone area
 - cyclone area
 - earthquake area
 - alpine area
 - metropolitan area
- one Class 10 building excluding sheds and swimming pools.

Each building must be up to three storeys and not exceeding 2,000 square metres in floor area.

While performing the above, the candidate must analyse complete sets of building design documentation for three related building approval applications and, for each application, provide advice on two cost-effective, energy efficient and compliant design alternatives.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- different compliance requirements of planning and building applications
- NCC classifications and definitions for Class 1 and 10 buildings:
 - building types

- geographic and climate zones
- possible solutions to design documentation compliance issues for building and planning applications to meet the requirements of the NCC and:
 - insurers
 - jurisdictional legislation and regulations
 - statutory authorities governing the environment, fire protection and services
- project management strategies that ensure thorough and timely advice is delivered according to service level agreement
- regulatory and legislative compliance requirements for Class 1 and 10 buildings in different climate zones and geographic locations:
 - building control legislation and regulations
 - NCC including referenced Australian Standards to meet deemed-to-satisfy provisions and/or performance solutions
- regulatory constraints that govern the relationship between the advisory and statutory roles of building surveyors
- types of disciplines from which specialist advice may be sought.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessors must also:

- be licensed as a Building Surveyor Level 1 (or equivalent) or Level 2 (or equivalent) in their state or territory, or
- demonstrate current membership of a relevant industry association and have current registration on the National Building Professionals Register in the Building Industry Control category (level 1), or
- be accredited under the Australian Institute of Building Surveyors (AIBS) National Accreditation Scheme at Building Surveyor level or be accredited by the Royal Institute of Chartered Surveyors as a building certifier.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to equipment, software, architectural drawings, documentation and materials required to achieve the performance evidence.

CPCCBS6105 Assess and advise on compliance of design documentation for Class 2 to 9 buildings to three storeys

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.

Supersedes and is not equivalent to CPCCBS6005 Assess and advise on compliance of design documentation for commercial buildings to three storeys.

New prerequisite requirement.

Application

This unit of competency specifies the skills and knowledge required to assess proposed design documentation during the design process for buildings included in National Construction Code (NCC) definitions for Classes 2 to 9 (up to three storeys). It includes providing client advice on the preparation of planning and building approval applications and the compliance of design documentation with the building and planning legislation, regulations, codes and standards that apply to the nature and location of each project.

This unit is suitable for building surveyors who draw on their broad theoretical knowledge and technical skills to provide advisory code-consulting services to building and construction professionals involved in developing building design documentation up to the building approval application stage.

This unit forms part of the licensing requirements for building surveying in some states and territories. Relevant state and territory regulatory authorities should be consulted to clarify these requirements.

Pre-requisite Unit

CPCCBS6102 Research and evaluate construction methods and materials for Class 2 to 9 buildings to three storeys.

Unit Sector

Building surveying

CPCCBS6107 Prepare planning and development applications for buildings to three storeys

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.

Supersedes and is equivalent to CPCCBS6007 Process planning applications for commercial buildings up to three storeys. Code and title changed to better reflect outcome. Function broadened to incorporate deleted CPCCBS6006 Process planning applications for residential buildings up to three storeys. Updated assessor requirements. Edited for clarity and updated to reflect current industry practice.

Application

This unit of competency specifies the skills and knowledge required to prepare planning and development applications for buildings included in National Construction Code (NCC) definitions for all classes of buildings up to three storeys and not exceeding 2,000 square metres in floor area. It includes gathering and assessing documentation that supports the planning and development application process required to obtain planning permission.

The unit is suitable for building surveyors who draw on their broad theoretical knowledge and technical skills to carry out the statutory role of ensuring that proposed building projects meet requirements for issuing planning permits.

This unit forms part of the licensing requirements for building surveying in some states and territories. Relevant state and territory regulatory authorities should be consulted to clarify these requirements.

Pre-requisite Unit

Nil.

Unit Sector

Building surveying

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare to assess planning and development application.
 - 1.1 Review scope and nature of planning and development application against jurisdictional planning legislation including local planning schemes and policies.
 - 1.2 Use geographical and aerial mapping to assess development site for suitability.
 - 1.3 Identify need for specialist expertise and engage relevant persons to provide advice throughout the planning application process.

- 2 Assess planning and development application documentation.
 - 2.1 Review planning and development application documentation to ensure accuracy, currency and completeness according to local authority requirements, and request additional information from client as required.
 - 2.2 Confirm property ownership with reference to titles and other relevant documentation.
 - 2.3 Assess submitted documentation for compliance with current and relevant local planning scheme, codes and legislation, and document areas of non-compliance.
 - 2.4 Review site of proposed planning and development application for possible environmental protection laws and exclusions and note and document compliance requirements.
 - 2.5 Assess design plans for compliance with relevant legislation, codes and regulations, and document areas of non-compliance.
 - 2.6 Document required amendments to plans and proposed design alternatives to ensure compliance and communicate to client.
 - 2.7 Discuss non-compliances and proposed design alternatives with relevant persons to arrange re-submission of plans and documentation for planning approval.

- 3 Assess revised design plans and
 - 3.1 Assess revised plans and documentation for planning approval compliance.

documentation.

- 3.2 Identify design features requiring clarification and discuss with relevant persons to ensure plans meet compliance requirements.
- 3.3 Update client to provide updates on progress with planning and development application process.
- 3.4 Arrange required public notices and advertising according to regulatory and workplace requirements.
- 3.5 Document responses to objections according to regulatory and workplace requirements.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- numeracy skills to interpret ratios, rates and proportions when examining drawings and documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCCBS6007 Process planning applications for commercial buildings up to three storeys. Function broadened to incorporate deleted CPCCBS6006 Process planning applications for residential buildings up to three storeys. Updated assessor requirements.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=6f3f9672-30e8-4835-b348-205dfcf13d9b>

Assessment Requirements for CPCCBS6107 Prepare planning and development applications for buildings to three storeys

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.

Supersedes and is equivalent to CPCCBS6007 Process planning applications for commercial buildings up to three storeys. Code and title changed to better reflect outcome. Function broadened to incorporate deleted CPCCBS6006 Process planning applications for residential buildings up to three storeys. Updated assessor requirements. Edited for clarity and updated to reflect current industry practice.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by:

- preparing one planning and development application for a project involving a two or three-storey building.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- legislative and local planning requirements governing the issuing of planning and development approvals in the jurisdictions relevant to each building specified in the performance evidence
- legislative roles and responsibilities of those issuing planning permits in the relevant jurisdiction
- planning permit processes and submission requirements including triggers for planning and development approvals
- types of disciplines from which specialist advice may be sought
- types of plans and documentation submitted as part of planning and development approval applications as required under relevant jurisdictional planning legislation for buildings to three storeys:
 - concept drawings to scale, with relevant calculations, levels, notes and specifications
 - planning and development approval application forms
 - proof of building site ownership.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessors must also:

- be licensed as a Building Surveyor Level 1 (or equivalent) or Level 2 (or equivalent) in their state or territory, or
- demonstrate current membership of a relevant industry association and have current registration on the National Building Professionals Register in the Building Industry Control category (level 1), or
- be accredited under the Australian Institute of Building Surveyors (AIBS) National Accreditation Scheme at Building Surveyor level or be accredited by the Royal Institute of Chartered Surveyors as a building certifier.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to equipment, software, drawings, documentation and materials required to achieve the performance evidence.

CPCCBS6108 Process building applications for Class 1 and 10 buildings to three storeys

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.
- Supersedes and is not equivalent to CPCCBS6008 Process building applications for residential buildings up to three storeys.
- New prerequisite requirement.

Application

This unit of competency specifies the skills and knowledge required to process building applications for buildings included in National Construction Code (NCC) definitions for Class 1 and 10 up to three storeys and not exceeding 2,000 square metres in floor area. It includes gathering and assessing documentation that supports the building application process required to obtain a building permit.

This unit is suitable for building surveyors who draw on their broad theoretical knowledge and technical skills to carry out the statutory role of ensuring that proposed building projects meet relevant compliance requirements prior to commencement of construction.

This unit forms part of the licensing requirements for building surveying in some states and territories. Relevant state and territory regulatory authorities should be consulted to clarify these requirements.

Pre-requisite Unit

CPCCBS6101 Research and evaluate construction methods and materials for Class 1 and 10 buildings to three storeys.

Unit Sector

Building surveying

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|---------------------|-----|---|
| 1 | Plan and prepare to | 1.1 | Review scope and nature of building application for |
|---|---------------------|-----|---|

- assess building application.
- Class 1 or 10 building, and check to confirm compliance with relevant legislation, codes and local planning policies.
- 1.2 Identify and clarify specific building approval timelines and administrative requirements of the relevant local authority.
- 1.3 Inspect proposed development site to clarify nature of development and potential impact on surrounding environment and structures.
- 1.4 Identify need for specialist expertise and engage relevant persons to provide advice throughout the building application process.
- 1.5 Identify and initiate processes to achieve required consents or approvals from service authorities.
- 2 Assess building application documentation for Class 1 or 10 building.
- 2.1 Review building application documentation to ensure accuracy, currency and completeness according to local authority requirements, and request additional information from client as required.
- 2.2 Confirm property ownership with reference to titles and other relevant documentation.
- 2.3 Assess submitted documentation for compliance with current and relevant local planning scheme, codes and legislation, and document areas of non-compliance.
- 2.4 Review site of proposed building application for possible environmental protection laws and exclusions and note and document compliance requirements.
- 2.5 Assess design plans for compliance with relevant legislation, codes and regulations, and document areas of non-compliance.
- 2.6 Document required amendments to plans and proposed performance solutions to ensure compliance and communicate to client.
- 2.7 Discuss non-compliances and proposed performance solutions with relevant persons to arrange re-submission of plans and documentation for building approval.

- | | | |
|--|-----|---|
| 3 Assess revised design plans and documentation. | 3.1 | Assess revised plans and documentation for building approval compliance. |
| | 3.2 | Identify design features requiring clarification and discuss with relevant persons to ensure plans meet compliance requirements. |
| | 3.3 | Update client to provide updates on progress with building application process. |
| 4 Finalise building permit. | 4.1 | Arrange required public notices and document and handle objections according to regulatory and workplace requirements. |
| | 4.2 | Process final building permit including relevant permission conditions that ensure the environment, adjacent structures and any heritage listed structures are protected. |
| | 4.3 | Submit copy of building permit to local authority and relevant persons according to regulatory and workplace requirements. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- numeracy skills to interpret ratios, rates and proportions when examining drawings and documentation.

Unit Mapping Information

Supersedes and is not equivalent to CPCCBS6008 Process building applications for residential buildings up to three storeys.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCBS6108 Process building applications for Class 1 and 10 buildings to three storeys

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.

Supersedes and is not equivalent to CPCCBS6008 Process building applications for residential buildings up to three storeys.

New prerequisite requirement.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by processing three building applications involving the following Classes of buildings as defined by the National Construction Code (NCC):

- two Class 1 buildings
- one Class 10 building excluding sheds and swimming pools.

Each building must be up to three storeys and not exceeding 2,000 square metres in floor area, and in a different geographical location as defined by the NCC.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- building permit processes and submission requirements
- legislative and local planning and building requirements governing the issuing of building approval permits in the jurisdictions relevant to each building specified in the performance evidence
- legislative roles and responsibilities of those issuing building permits in the relevant jurisdiction
- NCC classifications and definitions for Class 1 and 10 buildings:
 - building types
 - geographic and climate zones
- processes for seeking and obtaining approval or consent from service authorities
- types of disciplines from which specialist advice may be sought
- types of plans and documentation submitted as part of building applications for Class 1 and 10 buildings:
 - building approval application form
 - concept drawings to scale, with relevant calculations, levels, notes and specifications

- documentation applicable to or as specified by the local authority
- proof of building site ownership.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessors must also:

- be licensed as a Building Surveyor Level 1 (or equivalent) or Level 2 (or equivalent) in their state or territory, or
- demonstrate current membership of a relevant industry association and have current registration on the National Building Professionals Register in the Building Industry Control category (level 1), or
- be accredited under the Australian Institute of Building Surveyors (AIBS) National Accreditation Scheme at Building Surveyor level or be accredited by the Royal Institute of Chartered Surveyors as a building certifier.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations. Submission of building permits to local authorities may be simulated.

Candidates must have access to equipment, software, drawings, documentation and materials required to achieve the performance evidence.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCBS6109 Process building applications for Class 2 to 9 buildings to three storeys

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.
- Supersedes and is not equivalent to CPCCBS6009 Process building applications for commercial buildings up to three storeys.
- New prerequisite requirement.

Application

This unit of competency specifies the skills and knowledge required to process building applications for buildings included in the National Construction Code (NCC) definitions for Classes 2 to 9 up to three storeys and not exceeding 2,000 square metres in floor area. It includes gathering and assessing documentation that supports the building application process required to obtain a building permit.

This unit is suitable for building surveyors who draw on their broad theoretical knowledge and technical skills to carry out the statutory role of ensuring that proposed building projects meet relevant compliance requirements prior to commencement of construction.

This unit forms part of the licensing requirements for building surveying in some states and territories. Relevant state and territory regulatory authorities should be consulted to clarify these requirements.

Pre-requisite Unit

CPCCBS6102 Research and evaluate construction methods and materials for Class 2 to 9 buildings to three storeys.

Unit Sector

Building surveying

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|---------------------|-----|---|
| 1 | Plan and prepare to | 1.1 | Review scope and nature of building application for |
|---|---------------------|-----|---|

- assess building application.
- building included in Classes 2 to 9, and check to confirm compliance with relevant legislation, codes and local planning policies.
- 1.2 Identify and clarify specific building approval timelines and administrative requirements of the relevant local authority.
 - 1.3 Inspect proposed development site to clarify nature of development and potential impact on surrounding environment and structures.
 - 1.4 Identify need for specialist expertise and engage relevant persons to provide advice throughout the building application process.
 - 1.5 Identify and initiate processes to achieve required consents or approvals from service authorities.
- 2 Assess building application documentation for building included in Classes 2 to 9.
- 2.1 Review building application documentation to ensure accuracy, currency and completeness according to local authority requirements, and request additional information from client as required.
 - 2.2 Confirm property ownership with reference to titles and other relevant documentation.
 - 2.3 Assess submitted documentation for compliance with current and relevant local planning scheme, codes and legislation, and document areas of non-compliance.
 - 2.4 Review site of proposed building application for possible environmental protection laws and exclusions and note and document compliance requirements.
 - 2.5 Assess design plans for compliance with relevant legislation, codes and regulations, and document areas of non-compliance.
 - 2.6 Document required amendments to plans and proposed performance solutions to ensure compliance and communicate to client.
 - 2.7 Discuss non-compliances and proposed performance solutions with relevant persons to arrange re-submission of plans and documentation for building approval.

- | | | |
|--|-----|---|
| 3 Assess revised design plans and documentation. | 3.1 | Assess revised plans and documentation for building approval compliance. |
| | 3.2 | Identify design features requiring clarification and discuss with relevant persons to ensure plans meet compliance requirements. |
| | 3.3 | Update client to provide updates on progress with building application process. |
| 4 Finalise building permit. | 4.1 | Arrange required public notices and document and handle objections according to regulatory and workplace requirements. |
| | 4.2 | Process final building permit including relevant permission conditions that ensure the environment, adjacent structures and any heritage listed structures are protected. |
| | 4.3 | Submit copy of building permit to local authority and relevant persons according to regulatory and workplace requirements. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- numeracy skills to interpret ratios, rates and proportions when examining drawings and documentation.

Unit Mapping Information

Supersedes and is not equivalent to CPCCBS6009 Process building applications for commercial buildings up to three storeys.

Assessment Requirements for CPCCBS6109 Process building applications for Class 2 to 9 buildings to three storeys

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.
- Supersedes and is not equivalent to CPCCBS6009 Process building applications for commercial buildings up to three storeys.
- New prerequisite requirement.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by processing building applications for three different projects involving the following Classes of buildings as defined by the National Construction Code (NCC):

- one project incorporating Class 5 or Class 6
- one project incorporating Class 2 or Class 3 or Class 9c
- one project incorporating Class 7 or Class 8.

Each building must be up to three storeys and not exceeding 2,000 square metres in floor area, and in a different geographical location as defined by the NCC.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- building permit processes and submission requirements
- legislative and local planning and building requirements governing the issuing of building approval permits in the jurisdictions relevant to each building specified in the performance evidence
- legislative roles and responsibilities of those issuing building permits in the relevant jurisdiction
- NCC classifications and definitions for buildings included in Classes 2 to 9:
 - building types
 - geographic and climate zones
- processes for seeking and obtaining approval or consent from service authorities
- types of disciplines from which specialist advice may be sought
- types of plans and documentation submitted as part of building applications for buildings included in Classes 2 to 9:

CPCCBS6110 Conduct and report on building surveying audits of Class 1 and 10 buildings to three storeys

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.

Supersedes and is not equivalent to CPCCBS6010 Conduct and report on building surveying audits of residential buildings up to three storeys.

New prerequisite requirement.

Application

This unit of competency specifies the skills and knowledge required to audit Class 1 and 10 buildings against the current requirements of the National Construction Code (NCC) and local planning policies. These Class 1 and 10 buildings are as defined in the NCC up to three storeys and not exceeding 2,000 square metres in floor area. The unit includes planning and conducting audit activities including visual inspections, noting structural elements and taking photographic evidence, and reporting audit findings and recommendations.

This unit is suitable for building surveyors who draw on their broad theoretical knowledge and technical skills to provide advisory code-consulting services, carry out building surveying audits and advise on building compliance. Building surveying audits are required as part of a sales process to inform planned works, including demolishing existing structures, or to inform planned upgrades to existing buildings.

This unit forms part of the licensing requirements for building surveying in some states and territories. Relevant state and territory regulatory authorities should be consulted to clarify these requirements.

Pre-requisite Unit

CPCCBS6101 Research and evaluate construction methods and materials for Class 1 and 10 buildings to three storeys.

Unit Sector

Building surveying

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

essential outcomes.

demonstrate achievement of the element.

1 Scope and plan building surveying audit.

- 1.1 Review building surveying audit application for Class 1 or 10 building and related documentation to clarify property details and audit purpose.
- 1.2 Determine audit scope and limitations and negotiate agreed audit criteria with relevant persons.
- 1.3 Review relevant building plans and documentation prior to and during building surveying audit.
- 1.4 Confirm building ownership, classification and use, and contact owner or owner's corporation to arrange access to the building.
- 1.5 Research and identify compliance requirements for the building according to building classification, location and potential change of use.
- 1.6 Obtain required equipment and apply work health and safety (WHS) requirements to audit activities according to workplace requirements.
- 1.7 Identify need for expert advice and engage relevant specialist consultant.
- 1.8 Consult with local planning authority and other relevant persons to confirm building compliance requirements and relevant planning permissions.
- 1.9 Document audit plan outlining audit schedule, scope and limitations and audit compliance criteria.

2 Conduct building surveying audit for Class 1 or 10 building.

- 2.1 Carry out building surveying audit according to agreed audit criteria and workplace requirements.
- 2.2 Visually inspect building interior and exterior, note and document construction elements and obtain required photographic evidence.
- 2.3 Confirm and document actual use of building and check against compliance requirements.
- 2.4 Evaluate agreed elements of building against agreed criteria according to audit scope and limitations, and document non-compliances.

- 2.5 Note and document elements of the building that comply with NCC deemed-to-satisfy provisions.
 - 2.6 Document construction materials that pose a risk to health and safety and seek specialist advice to investigate and report on findings.
 - 3 Produce building surveying audit report.
 - 3.1 Prepare building surveying audit report specifying audit scope, purpose, limitations, assumptions and findings in the required format according to workplace requirements.
 - 3.2 Incorporate findings and recommendations obtained from specialist consultant.
 - 3.3 Incorporate details of any non-compliances, prioritised compliance strategies and associated cost estimates and timeframes to achieve compliance according to workplace requirements.
 - 3.4 Provide final building surveying audit report to relevant persons according to agreed compliance criteria and workplace requirements.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- oral communication skills to use specialised construction industry vocabulary when providing explanations and using questions to seek advice
- numeracy skills to interpret ratios, rates and proportions when examining drawings and documentation.

Unit Mapping Information

Supersedes and is not equivalent to CPCCBS6010 Conduct and report on building surveying audits of residential buildings up to three storeys.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCBS6110 Conduct and report on building surveying audits of Class 1 and 10 buildings to three storeys

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.

Supersedes and is not equivalent to CPCCBS6010 Conduct and report on building surveying audits of residential buildings up to three storeys.

New prerequisite requirement.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by conducting and reporting on three building surveying audits involving the following Classes of buildings as defined by the National Construction Code (NCC):

- two Class 1 buildings
- one Class 10 building excluding sheds and swimming pools.

Each building must be up to three storeys and not exceeding 2,000 square metres in floor area, and in a different geographical location as defined by the NCC.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- audit methodology and criteria
- content and format requirements for building surveying audit reports
- NCC classifications and definitions for Class 1 and 10 buildings:
 - building types
 - geographic and climate zones
- roles and responsibilities of specialist consultants in building surveying audits
- principles of negotiation and conflict resolution used to maintain professional relationships during building surveying audit processes
- processes for writing building surveying audit reports including using assumptions
- types of disciplines from which specialist advice may be sought
- typical purpose, scope and limitations of building surveying audits
- workplace requirements for conducting and reporting on building surveying audits:
 - equipment, including personal protective equipment (PPE)
 - reporting

- work health and safety (WHS).

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessors must also:

- be licensed as a Building Surveyor Level 1 (or equivalent) or Level 2 (or equivalent) in their state or territory, or
- demonstrate current membership of a relevant industry association and have current registration on the National Building Professionals Register in the Building Industry Control category (level 1), or
- be accredited under the Australian Institute of Building Surveyors (AIBS) National Accreditation Scheme at Building Surveyor level or be accredited by the Royal Institute of Chartered Surveyors as a building certifier.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to buildings, equipment, software, drawings, documentation and materials required to achieve the performance evidence.

CPCCBS6111 Conduct and report on building surveying audits of Class 2 to 9 buildings to three storeys

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.

Supersedes and is not equivalent to CPCCBS6011 Conduct and report on building surveying audits of commercial buildings up to three storeys.

New prerequisite requirement.

Application

This unit of competency specifies the skills and knowledge required to audit buildings included in Classes 2 to 9 against the current requirements of the National Construction Code (NCC) and local planning policies. These Class 2 to 9 buildings are as defined in the NCC up to three storeys and not exceeding 2,000 square metres in floor area. The unit includes planning and conducting audit activities including visual inspections, noting structural elements and taking photographic evidence, and reporting audit findings and recommendations.

This unit is suitable for building surveyors who draw on their broad theoretical knowledge and technical skills to provide advisory code-consulting services, carry out building surveying audits and advise on building compliance. Building surveying audits are required as part of a sales process to inform planned works or upgrades to existing commercial buildings, where advice on compliance requirements related to the proposed change of use of a commercial building or as part of an insurance assessment is required. The audit is primarily concerned with the compliance implications of the building.

This unit forms part of the licensing requirements for building surveying in some states and territories. Relevant state and territory regulatory authorities should be consulted to clarify these requirements.

Pre-requisite Unit

CPCCBS6102 Research and evaluate construction methods and materials for Class 2 to 9 buildings to three storeys.

Unit Sector

Building surveying

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |

CPCCBS6112 Conduct and report on initial construction inspections of Class 1 and 10 buildings to three storeys

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.

Supersedes and is not equivalent to CPCCBS6012 Conduct and report on initial construction inspections of residential buildings up to three storeys.

New prerequisite requirement.

Application

This unit of competency specifies the skills and knowledge required to conduct and report on initial construction inspections to verify the compliance of site preparation, foundations, footings, framing and wet areas of Class 1 and 10 buildings, as defined in the National Construction Code (NCC), up to three storeys and not exceeding 2,000 square metres in floor area. The unit includes planning and conducting inspections, reporting on issues of non-compliance, and preparing certificates of compliance according to legislative and regulatory requirements.

This unit is suitable for building surveyors who draw on their broad theoretical knowledge and technical skills to conduct mandated inspections of Class 1 and 10 buildings at the initial stage of construction. The certificate of compliance must be completed and processed before the next stage of construction can commence.

This unit forms part of the licensing requirements for building surveying in some states and territories. Relevant state and territory regulatory authorities should be consulted to clarify these requirements.

Pre-requisite Unit

CPCCBS6101 Research and evaluate construction methods and materials for Class 1 and 10 buildings to three storeys.

Unit Sector

Building surveying

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

essential outcomes.	demonstrate achievement of the element.
1 Identify and interpret compliance requirements for Class 1 or 10 building.	<p>1.1 Determine site classification and design wind speed for Class 1 or 10 building according to NCC definitions and building type, geographical location and climate zone.</p> <p>1.2 Access and interpret approved building design drawings and specifications and consult with relevant persons to confirm compliance of any variations from deemed-to-satisfy provisions.</p> <p>1.3 Identify and interpret compliance requirements for site preparation, foundations and footings, sub-floor ventilation, steel framing and structural steel members.</p> <p>1.4 Determine extreme weather events for the area and interpret compliance requirements for timber framing.</p> <p>1.5 Identify wall and substrate construction methods and materials and interpret compliance requirements for wet areas and waterproofing.</p>
2 Plan building inspection.	<p>2.1 Schedule inspection according to building and regulatory requirements and notify relevant persons.</p> <p>2.2 Record and report missed inspections as relevant according to regulatory requirements.</p> <p>2.3 Obtain equipment required for inspection according to workplace requirements.</p> <p>2.4 Apply work health and safety (WHS) requirements to planned inspection activities according to workplace requirements.</p>
3 Inspect and report compliance of Class 1 or 10 building.	<p>3.1 Conduct initial construction inspection of building according to regulatory and workplace requirements.</p> <p>3.2 Determine soil type and characteristics, effects on site stability and any required soil testing.</p> <p>3.3 Assess building features against compliance requirements and approved drawings for site preparation, foundations and footings, framing and wet areas.</p> <p>3.4 Document and report details of non-compliant features</p>

according to regulatory and workplace requirements.

- 3.5 Discuss non-compliant features of building with relevant persons and negotiate work required to remedy non-compliances according to workplace requirements.
- 3.6 Negotiate timeframe for remedial action and further inspection and report any failure to comply according to regulatory and workplace requirements.
- 3.7 Prepare and process certificate of compliance according to regulatory and workplace requirements.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- oral communication skills to use specialised construction industry vocabulary when exchanging technical information and negotiating remedial work
- numeracy skills to measure and calculate dimensions.

Unit Mapping Information

Supersedes and is not equivalent to CPCCBS6012 Conduct and report on initial construction inspections of residential buildings up to three storeys.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCBS6112 Conduct and report on initial construction inspections of Class 1 and 10 buildings to three storeys

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.

Supersedes and is not equivalent to CPCCBS6012 Conduct and report on initial construction inspections of residential buildings up to three storeys.

New prerequisite requirement.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by conducting and reporting on three initial construction inspections involving the following Classes of buildings as defined by the National Construction Code (NCC):

- two Class 1 buildings
- one Class 10 building excluding sheds and swimming pools.

Each building must be up to three storeys and not exceeding 2,000 square metres in floor area, and in a different geographical location as defined by the NCC.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- legislative and regulatory compliance requirements for site preparation, foundations, footings, framing and wet areas of Class 1 and 10 buildings at the initial stage of construction:
 - building control legislation and regulations
 - NCC including referenced Australian Standards to meet deemed-to-satisfy provisions and/or performance solutions:
 - stormwater drainage and connections to street gutter and easements
 - excavations, filling under concrete slabs and pest risk management
 - sub-floor ventilation
 - steel framing and structural steel members:
 - corrosion protection
 - National Association of Steel-Framed Housing (NASH) standards
 - service penetrations

- timber framing:
 - high wind areas
 - specific requirements for use in conjunction with concrete floors, steel members and timber species scheduled for structural use
- waterproofing.
- methods for determining site classification and design wind speed
- methods for identifying soil types and characteristics and effects on site stability including the potential for:
 - collapsing soil
 - ground movement due to moisture change
 - land slips
 - mine subsidence
 - soil erosion
- NCC classifications and definitions for Class 1 and 10 buildings:
 - building types
 - geographic and climate zones
- principles of negotiation and conflict resolution used to maintain professional relationships during building inspection and reporting processes
- workplace requirements for conducting and reporting on initial construction inspections of Class 1 and 10 buildings:
 - equipment, including personal protective equipment (PPE)
 - reporting
 - work health and safety (WHS).

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessors must also:

- be licensed as a Building Surveyor Level 1 (or equivalent) or Level 2 (or equivalent) in their state or territory, or
- demonstrate current membership of a relevant industry association and have current registration on the National Building Professionals Register in the Building Industry Control category (level 1), or
- be accredited under the Australian Institute of Building Surveyors (AIBS) National Accreditation Scheme at Building Surveyor level or be accredited by the Royal Institute of Chartered Surveyors as a building certifier.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to buildings, equipment, software, drawings, documentation and materials required to achieve the performance evidence.

CPCCBS6113 Conduct and report on initial construction inspections of Class 2 to 9 buildings to three storeys

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.
- Supersedes and is not equivalent to CPCCBS6013 Conduct and report on initial construction inspections of commercial buildings up to three storeys.
- New prerequisite requirement.

Application

This unit of competency specifies the skills and knowledge required to conduct and report on initial construction inspections to verify the compliance of site preparation, foundations, footings, structural provisions and wet areas of buildings included in Classes 2 to 9, as defined in the National Construction Code (NCC), up to three storeys and not exceeding 2,000 square metres in floor area. The unit includes planning and conducting inspections, reporting on issues of non-compliance, and preparing certificates of compliance according to legislative and regulatory requirements.

This unit is suitable for building surveyors who draw on their broad theoretical knowledge and technical skills to conduct mandated inspections of buildings included in Class 2 to 9 at the initial stage of construction. The certificate of compliance must be completed and processed before the next stage of construction can commence.

At the time of publication, this unit forms part of the licensing requirements for building surveying in some states and territories. Relevant state and territory regulatory authorities should be consulted to clarify these requirements.

Pre-requisite Unit

CPCCBS6102 Research and evaluate construction methods and materials for Class 2 to 9 buildings to three storeys.

Unit Sector

Building surveying

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Identify and interpret compliance requirements for building included in Classes 2 to 9.
 - 1.1 Determine site classification and design wind speed for building included in Classes 2 to 9 according to NCC definitions and building type, geographical location and climate zone.
 - 1.2 Access and interpret approved building design drawings and specifications and consult with relevant persons to confirm compliance of any variations from deemed-to-satisfy provisions.
 - 1.3 Identify and interpret compliance requirements for site preparation, foundations and footings and structural provisions.
 - 1.4 Determine extreme weather events for the area and interpret compliance requirements for structural provisions.
 - 1.5 Identify wall and substrate construction methods and materials and interpret compliance requirements for wet areas and waterproofing.
 - 1.6 Identify wall and substrate construction methods and materials and interpret compliance requirements for wet areas and waterproofing.
 - 2 Plan building inspection.
 - 2.1 Schedule inspection according to building and regulatory requirements and notify relevant persons.
 - 2.2 Record and report missed inspections as relevant according to regulatory requirements.
 - 2.3 Obtain equipment required for inspection according to workplace requirements.
 - 2.4 Apply work health and safety (WHS) requirements to planned inspection activities according to workplace requirements.
 - 3 Inspect and report compliance of building included in Classes 2 to 9.
 - 3.1 Conduct initial construction inspection of building according to regulatory and workplace requirements.
 - 3.2 Determine soil type and characteristics, effects on site stability and any required soil testing.

- 3.3 Assess building features against compliance requirements and approved drawings for site preparation, foundations and footings, structural provisions and wet areas.
- 3.4 Document and report details of non-compliant features according to regulatory and workplace requirements.
- 3.5 Discuss non-compliant features of building with relevant persons and negotiate work required to remedy non-compliances according to workplace requirements.
- 3.6 Negotiate timeframe for remedial action and further inspection and report any failure to comply according to regulatory and workplace requirements.
- 3.7 Prepare and process certificate of compliance according to regulatory and workplace requirements.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- oral communication skills to use specialised construction industry vocabulary when exchanging technical information and negotiating remedial work
- numeracy skills to measure and calculate dimensions.

Unit Mapping Information

Supersedes and is not equivalent to CPCCBS6013 Conduct and report on initial construction inspections of commercial buildings up to three storeys.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCBS6113 Conduct and report on initial construction inspections of Class 2 to 9 buildings to three storeys

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.
- Supersedes and is not equivalent to CPCCBS6013 Conduct and report on initial construction inspections of commercial buildings up to three storeys.
- New prerequisite requirement.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by conducting and reporting on initial construction inspections for three projects involving the following Classes of buildings as defined by the National Construction Code (NCC):

- one project incorporating Class 5 or Class 6
- one project incorporating Class 2 or Class 3 or Class 9c
- one project incorporating Class 7 or Class 8.

Each building must be up to three storeys and not exceeding 2,000 square metres in floor area, and in a different geographical location as defined by the NCC.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- legislative and regulatory compliance requirements for site preparation, foundations, footings, framing and wet areas of Class 2 to 9 buildings at the initial stage of construction:
 - building control legislation and regulations
 - NCC including referenced Australian Standards to meet deemed-to-satisfy provisions and/or performance solutions:
 - excavations, filling under concrete slabs and pest risk management
 - structural provisions:
 - aluminium
 - composite steel and concrete
 - concrete, including tilt-up panel construction
 - glazed assemblies

- masonry
- roofs
- steel
- timber
- waterproofing
- methods for determining site classification and design wind speed
- methods for identifying soil types and characteristics and effects on site stability including the potential for:
 - collapsing soil
 - ground movement due to moisture change
 - land slips
 - mine subsidence
 - soil erosion
- NCC classifications and definitions for buildings included in Classes 2 to 9:
 - building types
 - geographic and climate zones
- principles of negotiation and conflict resolution used to maintain professional relationships during building inspection and reporting processes
- workplace requirements for conducting and reporting on initial construction inspections of Class 2 to 9 buildings:
 - equipment, including personal protective equipment (PPE)
 - reporting
 - work health and safety (WHS).

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessors must also:

- be licensed as a Building Surveyor Level 1 (or equivalent) or Level 2 (or equivalent) in their state or territory, or
- demonstrate current membership of a relevant industry association and have current registration on the National Building Professionals Register in the Building Industry Control category (level 1), or
- be accredited under the Australian Institute of Building Surveyors (AIBS) National Accreditation Scheme at Building Surveyor level or be accredited by the Royal Institute of Chartered Surveyors as a building certifier.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to buildings, equipment, software, drawings, documentation and materials required to achieve the performance evidence.

CPCCBS6114 Conduct and report on advanced and final inspections of Class 1 and 10 buildings to three storeys

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.
- Supersedes and is not equivalent to CPCCBS6014 Conduct and report on advanced and final inspections of residential buildings up to three storeys.
- New prerequisite requirement.

Application

This unit of competency specifies the skills and knowledge required to conduct and report on advanced and final inspections that occur after constructing the structural elements of Class 1 and 10 buildings. Class 1 and 10 buildings are as defined in the National Construction Code (NCC) up to three storeys and not exceeding 2,000 square metres in floor area. The unit includes planning and conducting inspections, reporting on issues of non-compliance, preparing certificates of compliance and issuing occupancy permissions according to legislative and regulatory requirements.

This unit is suitable for building surveyors who draw on their broad theoretical knowledge and technical skills to conduct mandated inspections of Class 1 and 10 buildings at the advanced and final stages of construction. Inspections are those specified in the building approval documentation for the project including the final inspection required prior to issuing occupancy permission.

This unit forms part of the licensing requirements for building surveying in some states and territories. Relevant state and territory regulatory authorities should be consulted to clarify these requirements.

Pre-requisite Unit

CPCCBS6101 Research and evaluate construction methods and materials for Class 1 and 10 buildings to three storeys.

Unit Sector

Building surveying

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|--|
| 1 Interpret compliance requirements for Class 1 or 10 building. | 1.1 Access and interpret approved building design drawings and specifications and consult with relevant persons to confirm compliance of any variations from deemed-to-satisfy provisions. |
| | 1.2 Assess building features detailed in approved drawings to check compliance with NCC and regulatory requirements. |
| 2 Plan building inspections. | 2.1 Review building approval documentation to identify requirements for specific additional inspections. |
| | 2.2 Identify need for expert advice and engage relevant specialist consultant. |
| | 2.3 Obtain required equipment to inspect building and apply work health and safety (WHS) requirements to inspection activities according to workplace requirements. |
| | 2.4 Schedule advanced and final inspections according to building and regulatory requirements and notify relevant persons. |
| 3 Inspect and report compliance of Class 1 or 10 building. | 3.1 Conduct advanced and final inspections of building according to regulatory and workplace requirements. |
| | 3.2 Assess building features against compliance requirements and approved drawings. |
| | 3.3 Document and report details of non-compliant features according to regulatory and workplace requirements. |

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- oral communication skills to use specialised construction industry vocabulary when exchanging technical information and negotiating remedial work
- numeracy skills to measure and calculate dimensions.

Unit Mapping Information

Supersedes and is not equivalent to CPCCBS6014 Conduct and report on advanced and final inspections of residential buildings up to three storeys.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCBS6114 Conduct and report on advanced and final inspections of Class 1 and 10 buildings to three storeys

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.
- Supersedes and is not equivalent to CPCCBS6014 Conduct and report on advanced and final inspections of residential buildings up to three storeys.
- New prerequisite requirement.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by conducting and reporting on three advanced and final inspections involving the following Classes of buildings as defined by the National Construction Code (NCC):

- two Class 1 buildings
- one Class 10 building excluding sheds and swimming pools.

Each building must be up to three storeys and not exceeding 2,000 square metres in floor area, and in a different geographical location as defined by the NCC.

For each building, the candidate must assess and confirm the compliance of the following building features against approved drawings, NCC and regulatory requirements:

- building roof and wall cladding
- glazing
- fire safety
- health and amenity
- safe movement and access
- energy efficiency.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- legislative and regulatory compliance requirements for roof and wall cladding, glazing, fire safety, health and amenity, safe movement and access, and energy efficiency of Class 1 and 10 buildings at the advanced and final stages of construction:
 - building control legislation and regulations
 - NCC including referenced Australian Standards to meet deemed-to-satisfy provisions and/or performance solutions:

- roof and wall cladding including gutters and downpipes
- glazing
- fire safety:
 - alpine locations
 - bushfire locations
 - fire separation
 - heating appliances
- health and amenity:
 - facilities
 - light
 - room heights
 - sound insulation
 - ventilation
 - waterproofing of wet areas
- safe movement and access:
 - balustrades
 - stair construction
 - swimming pool access
- energy efficiency:
 - air movement
 - building: fabric and sealing
 - external glazing
 - services
- NCC classifications and definitions for Class 1 and 10 buildings:
 - building types
 - geographic and climate zones
- principles of negotiation and conflict resolution used to maintain professional relationships during building inspection and reporting processes
- workplace requirements for conducting and reporting on advanced and final construction inspections of Class 1 and 10 buildings:
 - equipment, including personal protective equipment (PPE)
 - reporting
 - work health and safety (WHS).

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessors must also:

- be licensed as a Building Surveyor Level 1 (or equivalent) or Level 2 (or equivalent) in their state or territory, or
- demonstrate current membership of a relevant industry association and have current registration on the National Building Professionals Register in the Building Industry Control category (level 1), or
- be accredited under the Australian Institute of Building Surveyors (AIBS) National Accreditation Scheme at Building Surveyor level or be accredited by the Royal Institute of Chartered Surveyors as a building certifier.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to buildings, equipment, software, drawings, documentation and materials required to achieve the performance evidence.

Assessment Requirements for CPCCBS6115 Conduct and report on advanced and final inspections of Class 2 to 9 buildings to three storeys

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.
- Supersedes and is not equivalent to CPCCBS6015 Conduct and report on advanced and final inspections of commercial buildings up to three storeys.
- New prerequisite requirement.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by conducting and reporting on advanced and final inspections for three projects involving the following Classes of buildings as defined by the National Construction Code (NCC):

- one project incorporating Class 5 or Class 6
- one project incorporating Class 2 or Class 3 or Class 9c
- one project incorporating Class 7 or Class 8.

Each building must be up to three storeys and not exceeding 2,000 square metres in floor area, and in a different geographical location as defined by the NCC.

For each project, the candidate must assess and confirm the compliance of the following building features against approved drawings, NCC and regulatory requirements:

- access and egress
- services and equipment
- health and amenity
- ancillary provisions
- energy efficiency.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- legislative and regulatory compliance requirements for fire resistance, access and egress, services and equipment, health and amenity, ancillary provisions, safe movement and access, and energy efficiency of Class 2 to 9 buildings at the advanced and final stages of construction in different climate zones and geographic locations:
 - building control legislation and regulations

- NCC including referenced Australian Standards to meet deemed-to-satisfy provisions and/or performance solutions:
 - fire resistance:
 - fire resistance and stability
 - compartmentation and separation and protection of openings
 - access and egress:
 - provisions for escape
 - construction of exits
 - access for people with disabilities
 - services and equipment:
 - emergency lighting
 - exit signs and warning systems
 - fire suppression and detection equipment
 - lift installations
 - smoke hazard management
 - health and amenity:
 - damp and weather proofing
 - light and ventilation
 - room sizes
 - sanitary or other facilities
 - sound transmission and insulation
 - waterproofing of wet areas
 - ancillary provisions:
 - construction in bushfire prone areas
 - heating appliances, fireplaces, chimneys and flues
 - minor structures and components
 - energy efficiency:
 - access for maintenance
 - air movement
 - air conditioning and ventilation systems
 - artificial lighting and power
 - building: fabric and sealing
 - external glazing
 - hot water supply
- NCC classifications and definitions for buildings included in Classes 2 to 9:
 - building types
 - geographic and climate zones
- principles of negotiation and conflict resolution used to maintain professional relationships during building inspection and reporting processes

- workplace requirements for conducting and reporting on advanced and final construction inspections of Class 1 and 10 buildings:
 - equipment, including personal protective equipment (PPE)
 - reporting
 - work health and safety (WHS).

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessors must also:

- be licensed as a Building Surveyor Level 1 (or equivalent) or Level 2 (or equivalent) in their state or territory, or
- demonstrate current membership of a relevant industry association and have current registration on the National Building Professionals Register in the Building Industry Control category (level 1), or
- be accredited under the Australian Institute of Building Surveyors (AIBS) National Accreditation Scheme at Building Surveyor level or be accredited by the Royal Institute of Chartered Surveyors as a building certifier.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to buildings, equipment, software, drawings, documentation and materials required to achieve the performance evidence.

CPCCBS6116 Assess and advise on performance solutions for Class 2 to 9 buildings to three storeys

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.

Supersedes and is not equivalent to CPCCBS6016 Assess and advise on performance-based solutions for buildings up to three storeys.

New prerequisite requirement.

Application

This unit of competency specifies the skills and knowledge required to advise on the application of National Construction Code (NCC) requirements for performance solutions for buildings in Classes 2 to 9 up to three storeys and not exceeding 2,000 square metres in floor area, and to apply approved assessment methods to determine whether a proposed solution is compliant. It includes assessing architectural drawings and specifications for performance solutions and analysing them in relation to the relevant sections of the NCC and the Plumbing Code of Australia (PCA).

This unit is suitable for building surveyors who draw on their broad theoretical knowledge and technical skills to provide advice to architects and building designers on compliance requirements and options for performance solutions, or act in the statutory role with responsibility for assessing and certifying compliance of performance solutions. Under legislation building surveyors are responsible for ensuring that there is no conflict of interest between the two roles. Building surveyors cannot advise on, and then certify, the same performance solution.

This unit forms part of the licensing requirements for building surveying in some states and territories. Relevant state and territory regulatory authorities should be consulted to clarify these requirements.

Pre-requisite Unit

CPCCBS6102 Research and evaluate construction methods and materials for Class 2 to 9 buildings to three storeys.

Unit Sector

Building surveying

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Determine building surveying service requirements.	1.1 Obtain architectural drawings and specifications and identify performance solutions to be advised on or certified.
	1.2 Clarify requirement for performance solution in consultation with relevant persons.
	1.3 Negotiate and confirm building surveying services to advise on or certify performance solutions and agree on timelines and costs where relevant.
2 Analyse performance requirements of performance solution for building included in Classes 2 to 9.	2.1 Assess performance solution for building to clarify its regulatory intent.
	2.2 Identify performance requirements and confirm level of performance applied to the performance solution.
3 Determine assessment requirements for performance solution for building included in Classes 2 to 9.	3.1 Interpret NCC requirements and specifications for the material, form of construction or design of performance solution for building.
	3.2 Determine NCC assessment methods that may be applied to performance solution.
	3.3 Determine and negotiate requirements for services of technical experts qualified to provide evidence or expert judgement in relation to performance solution.
4 Analyse performance solution for building included in Classes 2 to 9.	4.1 Analyse compliance of performance solution in consultation with relevant persons.
	4.2 Apply principles of fire safety engineering to compliance analysis of performance solution for fire safety.
	4.3 Apply design principles to compliance analysis of performance solution for structural safety, health, amenity and sustainability.
	4.4 Determine and record strengths and weaknesses of

performance solution.

- | | |
|--|---|
| 5 Advise on performance solution. | 5.1 Explain assessment requirements for performance solution to client and invite and address questions. |
| | 5.2 Evaluate strengths and weaknesses of proposed performance solutions in consultation with client. |
| | 5.3 Develop optional performance solutions in consultation with client. |
| | 5.4 Assist client to select preferred performance solution. |
| | 5.5 Evaluate verification methods and evidence or expertise to support performance solution and explain findings to client. |
| | 5.6 Gather documentation for performance solution and prepare to submit for assessment. |
| 6 Assess compliance of performance solution. | 6.1 Review documentation for performance solution to ensure completeness and request further information as required. |
| | 6.2 Analyse and evaluate verification information supplied to support performance solution. |
| | 6.3 Analyse and evaluate evidence or expert judgment to support performance solution. |
| | 6.4 Determine and document compliance of performance solution according to regulatory and workplace requirements. |
| | 6.5 Process documentation and notify client of assessment outcome according to regulatory and workplace requirements. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- numeracy skills to interpret ratios, rates and proportions when examining drawings and documentation.

Unit Mapping Information

Supersedes and is not equivalent to CPCCBS6016 Assess and advise on performance-based solutions for buildings up to three storeys.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCBS6116 Assess and advise on performance solutions for Class 2 to 9 buildings to three storeys

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.

Supersedes and is not equivalent to CPCCBS6016 Assess and advise on performance-based solutions for buildings up to three storeys.

New prerequisite requirement.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by assessing, advising on, and certifying as compliant a total of three performance solutions for projects that include the following Classes of buildings as defined by the National Construction Code (NCC):

- one project incorporating Class 5 or Class 6
- one project incorporating Class 2 or Class 3 or Class 9c
- one project incorporating Class 7 or Class 8.

Each building must be up to three storeys and not exceeding 2,000 square metres in floor area, and in a different geographical location as defined by the NCC.

Of the three performance solutions:

- one must be a performance solution for fire safety
- two must be performance solutions for structural safety, health, amenity and sustainability.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- design principles that are applied when analysing the compliance of performance solutions for structural safety, health, amenity and sustainability:
 - access and egress, including access for people with a disability
 - damp and weatherproofing
 - energy efficiency
 - light and ventilation
 - room heights

- sanitary and other facilities
- services and equipment
- sound transmission and insulation
- structural safety
- NCC classifications and definitions for buildings included in Classes 2 to 9:
 - building types
 - geographic and climate zones
- NCC requirements for assessing performance solutions relevant to buildings included in Classes 2 to 9
- principles of fire safety engineering relevant to buildings included in Classes 2 to 9:
 - characteristics of building materials in relation to fire
 - fire-modelling
 - fire science:
 - fire behaviour and dynamics
 - impact of fire on structures and materials
 - products of combustion
 - fire control strategies
 - fire retardants
 - fire detection technologies
 - fire suppression technologies
 - fire containment
 - human response to fire
 - interconnection of fire systems, including cause and effect matrix
 - interaction with other services
- project management strategies that ensure thorough and timely advice is delivered according to service level agreement
- regulatory intent of performance solutions
- scope and limitations of building surveyor role in relation to advising on or certifying performance solutions
- workplace requirements for assessing and advising on performance solutions for buildings included in Classes 2 to 9:
 - client service
 - documentation and reporting.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessors must also:

- be licensed as a Building Surveyor Level 1 (or equivalent) or Level 2 (or equivalent) in their state or territory, or

- demonstrate current membership of a relevant industry association and have current registration on the National Building Professionals Register in the Building Industry Control category (level 1), or
- be accredited under the Australian Institute of Building Surveyors (AIBS) National Accreditation Scheme at Building Surveyor level or be accredited by the Royal Institute of Chartered Surveyors as a building certifier.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to equipment, software, drawings, documentation and materials required to achieve the performance evidence.

CPCCBS6117 Monitor and advise on construction and compliance upgrade work on buildings to three storeys

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.
- Supersedes and is not equivalent to CPCCBS6017 Monitor and advise on construction and compliance upgrade work on buildings up to three storeys.
- New prerequisite requirements.

Application

This unit of competency specifies the skills and knowledge required to monitor construction work and provide advice to clients on meeting compliance requirements for construction work on both new and existing buildings of all classes as defined in the National Construction Code (NCC) up to three storeys. It involves arranging and conducting site visits during construction.

This unit is suitable for building surveyors who draw on their broad theoretical knowledge and technical skills to provide consultancy services during the construction phase of a project and who assist in finding solutions to problems, including construction faults and compliance issues.

This unit forms part of the licensing requirements for building surveying in some states and territories. Relevant state and territory regulatory authorities should be consulted to clarify these requirements.

Pre-requisite Unit

- CPCCBS6101 Research and evaluate construction methods and materials for Class 1 and 10 buildings to three storeys
- CPCCBS6102 Research and evaluate construction methods and materials for Class 2 to 9 buildings to three storeys.

Unit Sector

Building surveying

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Plan and manage construction monitoring and advisory services. | 1.1 Identify and confirm scope and nature of construction monitoring services, required client advice, and timelines, fees and details of services to be offered at different project stages. |
| | 1.2 Schedule site visits according to project and regulatory requirements and notify relevant persons. |
| | 1.3 Obtain required equipment for site visit according to work health and safety (WHS) and workplace requirements. |
| | 1.4 Plan and monitor project management processes to ensure accurate and timely advice is provided within the scope of specified service levels. |
| | 1.5 Obtain project documentation and analyse approved designs, compliance requirements, construction methods and specified materials. |
| | 1.6 Identify and monitor file management processes according to workplace requirements. |
| 2 Identify and advise on construction faults. | 2.1 Monitor construction work according to agreed schedule and assess against approved designs, specifications and compliance requirements. |
| | 2.2 Identify and document faults in construction work in consultation with relevant persons according to project and workplace requirements. |
| | 2.3 Develop and evaluate options for rectifying construction faults in consultation with relevant persons. |
| | 2.4 Assess rectification work to ensure it meets compliance requirements, complete assessment documentation and provide to client according to project and workplace requirements. |
| 3 Advise on construction | 3.1 Provide advice to relevant persons to clarify interpretation of compliance requirements, working |

- problems. drawings and specifications according to agreed service levels.
- 3.2 Analyse problems arising during construction work in consultation with relevant persons according to project and workplace requirements.
 - 3.3 Develop and evaluate solutions to construction problems in consultation with relevant persons.
 - 3.4 Develop detailed sketches and notes relating to solutions to construction problems and provide to relevant persons according to project and workplace requirements.
- 4 Report on construction and compliance upgrade work.
- 4.1 Collate and review drawings and documentation from different site visits to construction project site.
 - 4.2 Report details of monitoring and advisory services to the construction project including faults and problems addressed.
 - 4.3 Present report to client and invite and address questions to clarify findings.
 - 4.4 Report and process solutions to construction faults and problems relevant to future projects according to workplace requirements.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- numeracy skills to interpret ratios, rates and proportions when examining drawings and documentation.

Unit Mapping Information

Supersedes and is not equivalent to CPCCBS6017 Monitor and advise on construction and compliance upgrade work on buildings up to three storeys.

Assessment Requirements for CPCCBS6117 Monitor and advise on construction and compliance upgrade work on buildings to three storeys

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.
- Supersedes and is not equivalent to CPCCBS6017 Monitor and advise on construction and compliance upgrade work on buildings up to three storeys.
- New prerequisite requirements.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by monitoring and advising on construction and compliance upgrade work for three projects involving buildings up to three storeys in the following Classes as defined by the National Construction Code (NCC):

- one project incorporating a Class 1 building
- two projects selected from:
 - a project incorporating buildings in Class 5 or Class 6
 - a project incorporating buildings in Class 2 or Class 3 or Class 9c
 - a project incorporating buildings in Class 7 or Class 8.

For each project, the person must:

- develop and evaluate two options for rectifying a construction fault
- provide solutions for two different construction problems.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- legislative and regulatory compliance requirements for critical stage inspections relating to buildings at the site preparation, foundations and footings and framing stages of construction in different climate zones and geographic locations:
 - building control legislation and regulations
 - NCC including referenced Australian Standards to meet deemed-to-satisfy provisions and/or performance solutions
- NCC classifications and definitions for all Classes of buildings
- regulatory constraints that govern the relationship between the advisory and statutory roles of building surveyors

- workplace requirements for monitoring and advising on construction and compliance upgrade work on buildings:
 - equipment, including personal protective equipment (PPE)
 - file management
 - reporting
 - work health and safety (WHS) associated with site inspections.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessors must also:

- be licensed as a Building Surveyor Level 1 (or equivalent) or Level 2 (or equivalent) in their state or territory, or
- demonstrate current membership of a relevant industry association and have current registration on the National Building Professionals Register in the Building Industry Control category (level 1), or
- be accredited under the Australian Institute of Building Surveyors (AIBS) National Accreditation Scheme at Building Surveyor level or be accredited by the Royal Institute of Chartered Surveyors as a building certifier.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to buildings, equipment, software, drawings, documentation and materials required to achieve the performance evidence.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCBS6118 Assess and advise on performance solutions for Class 1 and 10 buildings to three storeys

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.
New unit.

Application

This unit of competency specifies the skills and knowledge required to advise on the application of National Construction Code (NCC) requirements for performance solutions for Class 1 and 10 buildings up to three storeys and not exceeding 2,000 square metres in floor area, and to apply approved assessment methods to determine whether a proposed solution is compliant. It includes assessing architectural drawings and specifications for performance solutions and analysing them in relation to the relevant sections of the NCC and the Plumbing Code of Australia (PCA).

This unit is suitable for building surveyors who draw on their broad theoretical knowledge and technical skills to provide advice to architects and building designers on compliance requirements and options for performance solutions, or act in the statutory role with responsibility for assessing and certifying compliance of performance solutions. Under legislation building surveyors are responsible for ensuring that there is no conflict of interest between the two roles. Building surveyors cannot advise on, and then certify, the same performance solution.

This unit forms part of the licensing requirements for building surveying in some states and territories. Relevant state and territory regulatory authorities should be consulted to clarify these requirements.

Pre-requisite Unit

CPCCBS6101 Research and evaluate construction methods and materials for Class 1 and 10 buildings to three storeys.

Unit Sector

Building surveying

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

essential outcomes.	demonstrate achievement of the element.
1 Determine building surveying service requirements	1.1 Obtain architectural drawings and specifications and identify performance solutions to be advised on or certified. 1.2 Clarify requirement for performance solution in consultation with relevant persons. 1.3 Negotiate and confirm building surveying services to advise on or certify performance solutions and agree on timelines and costs where relevant.
2 Analyse performance requirements of performance solution for Class 1 or 10 building.	2.1 Assess performance solution for building to clarify its regulatory intent. 2.2 Identify performance requirements and confirm level of performance applied to the performance solution.
3 Determine assessment requirements for performance solution for Class 1 or 10 building.	3.1 Interpret NCC requirements and specifications for the material, form of construction or design of performance solution for Class 1 or 10 building. 3.2 Determine NCC assessment methods that may be applied to performance solution. 3.3 Determine and negotiate requirements for services of technical experts qualified to provide evidence or expert judgement in relation to performance solution.
4 Analyse performance solution for Class 1 or 10 building.	4.1 Analyse compliance of performance solution in consultation with relevant persons. 4.2 Apply principles of fire safety engineering to compliance analysis of performance solution for fire safety. 4.3 Apply design principles to compliance analysis of performance solution for structural safety, health, amenity and sustainability. 4.4 Determine and record strengths and weaknesses of performance solution.

- | | |
|--|---|
| 5 Advise on performance solution. | 5.1 Explain assessment requirements for performance solution to client and invite and address questions. |
| | 5.2 Evaluate strengths and weaknesses of proposed performance solutions in consultation with client. |
| | 5.3 Develop optional performance solutions in consultation with client. |
| | 5.4 Assist client to select preferred performance solution. |
| | 5.5 Evaluate verification methods and evidence or expertise to support performance solution and explain findings to client. |
| | 5.6 Gather documentation for performance solution and prepare to submit for assessment. |
| 6 Assess compliance of performance solution. | 6.1 Review documentation for performance solution to ensure completeness and request further information as required. |
| | 6.2 Analyse and evaluate verification information supplied to support performance solution. |
| | 6.3 Analyse and evaluate evidence or expert judgment to support performance solution. |
| | 6.4 Determine and document compliance of performance solution according to regulatory and workplace requirements. |
| | 6.5 Process documentation and notify client of assessment outcome according to regulatory and workplace requirements. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- numeracy skills to interpret ratios, rates and proportions when examining drawings and documentation.

Unit Mapping Information

No equivalent unit

Assessment Requirements for CPCCBS6118 Assess and advise on performance solutions for Class 1 and 10 buildings to three storeys

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.0.
New unit.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by assessing, advising on and certifying as compliant a total of three performance solutions involving the following Classes of buildings as defined by the National Construction Code (NCC):

- two Class 1 buildings
- one Class 10 building excluding sheds and swimming pools.

Each building must be up to three storeys and not exceeding 2,000 square metres in floor area, and in a different geographical location as defined by the NCC.

Of the three performance solutions:

- one must be a performance solution for fire safety
- two must be performance solutions for structural safety, health, amenity and sustainability.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- design principles that are applied when analysing the compliance of performance solutions for structural safety, health, amenity and sustainability:
 - access and egress, including access for people with a disability
 - damp and weatherproofing
 - energy efficiency
 - light and ventilation
 - room heights
 - sanitary and other facilities
 - services and equipment
 - sound transmission and insulation

- structural safety
- NCC classifications and definitions for Class 1 and 10 buildings:
 - building types
 - geographic and climate zones
- NCC requirements for assessing performance solutions relevant to Class 1 and 10 buildings
- principles of fire safety engineering relevant to Class 1 and 10 buildings:
 - fire retardants for buildings in bushfire prone areas
 - purpose and scope of AS 3959 *Construction of buildings in bushfire-prone areas*
- project management strategies that ensure thorough and timely advice is delivered according to service level agreement
- regulatory intent of performance solutions
- scope and limitations of building surveyor role in relation to advising on or certifying performance solutions
- workplace requirements for assessing and advising on performance solutions for Class 1 and 10 buildings:
 - client service
 - documentation and reporting.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessors must also:

- be licensed as a Building Surveyor Level 1 (or equivalent) or Level 2 (or equivalent) in their state or territory, or
- demonstrate current membership of a relevant industry association and have current registration on the National Building Professionals Register in the Building Industry Control category (level 1), or
- be accredited under the Australian Institute of Building Surveyors (AIBS) National Accreditation Scheme at Building Surveyor level or be accredited by the Royal Institute of Chartered Surveyors as a building certifier.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to equipment, software, drawings, documentation and materials required to achieve the performance evidence.

CPCCCA2002 Use carpentry tools and equipment

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA2002B Use carpentry tools and equipment. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to select and safely use and maintain carpentry tools and equipment, meeting all relevant requirements of national construction codes, Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

The unit includes hand tools, power tools, pneumatic tools and equipment.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|--|
| 1 Plan and prepare. | 1.1 Review work instructions to use tools and equipment. |
| | 1.2 Plan all work to comply with laws and regulations, national construction codes, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements. |
| | 1.3 Select and use personal protective equipment (PPE) for each part of the task. |
| | 1.4 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades. |
| 2 Select, check and use tools and equipment. | 2.1 Select equipment and hand, power and pneumatic tools for the carpentry task, identify their functions and operations, check for serviceability and report any faults. |
| | 2.2 Use equipment and hand, power and pneumatic tools following WHS requirements and manufacturers' recommendations. |
| | 2.3 Sharpen and maintain tools. |
| 3 Clean up. | 3.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling. |
| | 3.2 Check, maintain, store and secure tools and equipment and report any faults. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCA2002B Use carpentry tools and equipment.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCCCA2002 Use carpentry tools and equipment

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA2002B Use carpentry tools and equipment. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must safely and effectively, across three different carpentry tasks, use and maintain all of the listed tools and equipment at least once:

- hand tools:
 - retractable tape measure
 - folding or steel ruler
 - combination square
 - string line
 - chalk line
 - hand saw
 - coping saw
 - carpenters hammer / claw hammer
 - wood chisel
 - hand plane
 - trimming knife
 - clamps
 - bevels
 - spirit level
 - tin snips
- power/battery/pneumatic tools and equipment:
 - circular saw
 - reciprocating saw
 - sliding compound saw

- jigsaw
- angle grinder
- planer
- laminate trimmer or router
- drill
- rotary hammer drill
- impact driver
- nail gun
- bench grinder
- extension lead
- portable residual current device
- air compressor and hoses.

The candidate must also:

- replace blades/cutters/grinding discs in:
 - a power saw
 - a powered planer
 - a router
 - grinder
- grind, sharpen and hone a hand plane blade
- grind, sharpen and hone a chisel.
-

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace quality policies and standards for using carpentry tools and equipment
- safety requirements for using carpentry tools and equipment
- types of tools and equipment and their characteristics, uses and limitations:
 - hand tools including:
 - retractable tape measure
 - folding or steel ruler
 - combination square
 - spirit level
 - string line
 - chalk line
 - hand saw
 - coping saw
 - carpenters hammer/claw hammer
 - wood chisel
 - hand plane

- metal trimming knife
- clamp
- bevel
- tin snips
- power/battery/pneumatic tools and equipment:
 - bench grinder
 - circular saw
 - reciprocating saw
 - sliding compound saw
 - jigsaw
 - angle grinder
 - mobile plane
 - laminate trimmer or router
 - drill
 - rotary hammer drill
 - impact driver
 - nail gun
 - extension lead
 - portable residual current device
 - air compressor and hoses
- processes to safely grind, sharpen and hone a hand plane blade and a chisel.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

CPCCCA2011 Handle carpentry materials

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA2011A Handle carpentry materials. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to safely manually handle and store carpentry materials, meeting all relevant requirements of work health and safety (WHS) and Commonwealth and state or territory legislation.

The unit includes preparing material for mechanical handling and applying environmental management principles associated with carpentry materials.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare.	1.1 Read and interpret work instructions and plan sequence
---------------------	--

- of work.
- 1.2 Plan all work to comply with laws and regulations, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.
 - 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.
- 2 Manually handle, sort, stack and store materials.
 - 2.1 Apply safe manual handling techniques to move carpentry materials to specified location.
 - 2.2 Sort carpentry materials to suit material type and size, and stack clear of access ways for ease of identification, retrieval, task sequence and task location.
 - 2.3 Protect carpentry materials against physical and water damage.
- 3 Prepare for mechanical handling of materials.
 - 3.1 Stack and secure carpentry materials for mechanical handling in accordance with the type of material and equipment to be used.
 - 3.2 Unload, move or locate carpentry materials at specified location.
- 4 Check and store tools and equipment.
 - 4.1 Check, tools and equipment and report any faults.
 - 4.2 Store tools and equipment in accordance with workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCA2011A Handle carpentry materials.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCCA2011 Handle carpentry materials

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCCCA2011A Handle carpentry materials. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by handling carpentry materials for three different carpentry tasks, including:

- safely handling, sorting and stacking:
 - varying lengths of timber or similarly-proportioned materials onto an Australian standard pallet, a minimum of 0.5 cubic metres, secured ready for mechanical handling
 - different sizes and types of sheet material onto an Australian standard pallet, a minimum of 0.1 cubic metres, secured ready for mechanical handling
- preparing the following for mechanical handling:
 - varying lengths of timber or similarly-proportioned materials
 - different sizes and types of sheet material.
 -

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- requirements of Commonwealth and state or territory work health and safety (WHS) legislation relevant to handling carpentry materials
- safety data sheets
- workplace quality policies and standards for handling carpentry materials
- safety requirements for handling carpentry materials
- methods of securing materials
- types and uses of tools and equipment for handling carpentry materials:
 - hammers
 - pallets
 - pinch bars
 - tin snips
 - wheelbarrows

- requirements and processes for safely preparing the following materials for mechanical handling, and manual handling, sorting, and stacking:
 - concrete components
 - insulation
 - joinery units
 - metal sheeting
 - paints and sealants
 - plaster or fibre cement sheeting
 - reconstituted timber products
 - reinforcement materials
 - scaffolding components
 - structural steel sections and components
 - timber
- methods of handling carpentry materials:
 - material size, weight or shape factors necessitating the assistance of other workers
 - correct lifting and carrying techniques, use of pallets and control of waste
 - preparation for mechanical handling, including the use of forklifts, pallet jacks and trucks.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions and standards, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCCA3002 Carry out setting out

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3002A Carry out setting out. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to identify perimeter site boundaries and survey indicators to establish, measure and set up profiled set-outs for buildings and structural components of building work, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

The unit includes setting out pads, posts, slabs, strips, and stumps and installing string lines to profile the footings of a building and associated structures on a site.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare.	1.1 Read and interpret work instructions and plan sequence
---------------------	--

- of work.
- 1.2 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.
- 2 Show site boundaries.
- 2.1 Locate survey pegs at corners of site.
 - 2.2 Set string lines to accurately show site boundary markings in accordance with site drawings and survey pegs.
- 3 Set out first line for building alignment.
- 3.1 Determine, from drawings, the distance of the building line from the boundary or existing building.
 - 3.2 Determine approximate position and length of line and building clearances at each end from drawings and survey pegs.
 - 3.3 Install pegs and profiles, ensuring that they are level across and between one another and have adequate provision to mark footing width on profile.
 - 3.4 Accurately mark location for line with nails on profiles and set taut string line to true alignment with boundary.
- 4 Set out right-angled corners.
- 4.1 Determine and mark corner of building with peg on set building line to true measurement from adjacent boundary.
 - 4.2 Use triangulation principles to set up right angle to line from corner peg.

- | | | |
|------------------------------------|-----|--|
| | 4.3 | Install profiles to approximate level of other profiles and set taut string line to right-angled alignment. |
| 5 Install other building lines. | 5.1 | Install profiles for remaining building lines level with established profiles. |
| | 5.2 | Mark measurements for remaining building lines accurately, and nail on profiles to dimensions from drawings. |
| | 5.3 | Set taut string lines to nailed locations on profiles. |
| 6 Check building lines for square. | 6.1 | Check diagonal measurements for square and adjust lines to provide square relationship within 3 mm tolerance over minimum diagonal length of 10 m. |
| | 6.2 | Check measurements for accuracy. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCA3002A Carry out setting out.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCCA3002 Carry out setting out

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3002A Carry out setting out. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by setting out one L- and one T-shape building on a site with fall.

Setting out must be to 3 mm tolerance over minimum diagonal length of 10 metres, and include pads, slabs, strips and piers.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of Australian Standards relevant to carrying out setting out
- workplace quality policies and standards for carrying-out setting-out
- safety requirements for carrying out setting out
- application and requirements for line, level and plumb in construction projects
- mathematical techniques associated with setting out
- processes for reading and interpreting construction plans, drawings and sketches when carrying out setting out of pads, slabs, strips and piers
- processes and techniques for accurate setting-out on flat, sloping and steep sites
- processes for setting-out
- site isolation responsibilities when carrying out setting out
- types, characteristics, technical capabilities and limitations of devices used to carry out setting out activities.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions and standards, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCCA3003 Install flooring systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3002A Carry out setting out. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to plan, prepare, set out and install timber and steel flooring systems to support the internal and external walls of a residential building, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation and National Association of Steel-Framed Housing (NASH) standard for steel-framed construction in bushfire areas.

The unit includes installation of flooring systems in bedrooms, living areas, kitchens, bathrooms, balconies and decks.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare.
 - 1.1 Read and interpret work instructions and plan sequence of work.
 - 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) as required for each stage of the task.
 - 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Set out and install support structure.
 - 2.1 Position support structure, stumps/piers to set-out lines, drawings and specifications.
 - 2.2 Install support structure.
 - 2.3 Check support structure, posts, stumps and piers for level, plumb and square.
- 3 Install bearers.
 - 3.1 Mark and cut bearer material to lengths for joining over supports.
 - 3.2 Make arrangements for damp proof course and termite shield to be installed where specified by regulations.
 - 3.3 Locate and fix bearers and check and adjust for square, in-line and level.
 - 3.4 Fix waling plates for decks and balconies to external walls.

- | | | | |
|---|-----------------------|-----|---|
| 4 | Install floor joists. | 4.1 | Set out location for floor joists using spacings in accordance with drawings and specifications. |
| | | 4.2 | Check floor joists for straightness, then fit and fix to line and level. |
| | | 4.3 | Fit and fix supporting blocks and trimmers around doorways and openings. |
| | | 4.4 | Cut, fit and fix trimmers to support sheet flooring joints. |
| | | | |
| 5 | Install flooring. | 5.1 | Check flooring materials for suitability. |
| | | 5.2 | Confirm floor measurements and cut and prepare flooring materials for installation with a minimum of waste. |
| | | 5.3 | Install and secure flooring to manufacturers' specifications. |
| | | | |
| 6 | Clean up. | 6.1 | Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling. |
| | | 6.2 | Check, maintain and store tools and equipment and report any faults. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCA3003A Install flooring systems.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCCA3003 Install flooring systems

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3002A Carry out setting out. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by installing each of the following flooring systems:

- a bearer and joist system on supports to carry external walls and internal walls parallel to joists for a home or equivalent, not less than 30 square metres, including:
 - balcony/deck fixings
 - deep joists
- a tongue and groove fitted strip flooring surface, not less than 5 square metres
- an approved wet-area floor system, not less than 5 square metres
- a sheet platform system for a home or equivalent, not less than 10 square metres.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code including requirements for attachment of decks, Australian Standards and National Association of Steel-Framed Housing (NASH) Standards relevant to installing flooring systems
- workplace quality policies and standards for installing flooring systems
- safety requirements for installing flooring systems
- requirements and arrangements for installing damp proof systems and termite barriers
- floor and flooring system types, characteristics, construction methods and installation techniques
- application of the following floor framing:
 - premanufactured joists
 - conventional bearers and joists
 - drop-in (or in-line or deep) joist construction
 - sub-floor frame, including timber or steel
 - sub-floor support construction

- flooring support systems:
 - concrete stumps
 - masonry piers
 - patented adjustable supports
 - steel posts
 - timber or brick walls
 - timber stumps
- flooring system materials and their uses as required by the National Construction Code (NCC) and other legislation:
 - strip flooring
 - engineered products
 - floor boards
 - sheet products
- acclimatisation of flooring materials
- types of imposed loads and their effects
- types of insulation products
- plans, specifications and drawings for installing flooring systems
- types and uses of tools and equipment used to install flooring systems
- processes for calculating material requirements to minimise waste when installing flooring systems
- regulatory requirements applicable to floor framing and flooring
- setting out and levelling techniques.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions and standards, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCCA3004 Construct and erect wall frames

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3004A Construct wall frames. Title change. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to plan, prepare, set out, construct and erect load-bearing and non-load-bearing wall frames for the different types of loadings, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

The unit includes setting out, cutting and fabrication of timber frames and preparation of steel frames and the erection, connection and bracing of frames.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare.	1.1 Read and interpret work instructions and plan sequence
---------------------	--

- of work.
- 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Construct wall frames.
- 2.1 Set out location of walls on a slab or subfloor frame.
 - 2.2 Set out wall plates and a pattern stud meeting specifications and requirements under AS:1684 Residential timber-framed construction and National Association of Steel-framed Housing (NASH): Standard Residential and Low-rise Steel Framing.
 - 2.3 Assemble wall frames, lintels and bracing.
- 3 Erect frames.
- 3.1 Select timber and steel frames and components.
 - 3.2 Erect frames, fix into place and align using fixtures and fastenings in accordance with AS 1684 Residential timber-framed construction and National Association of Steel-framed Housing (NASH): Standard Residential and Low-rise Steel Framing.
 - 3.3 Attach temporary wall braces.
 - 3.4 Plumb corners at intersections, straighten wall plates and complete bracing.
 - 3.5 Straighten studs to maintain a flat surface for wall

coverings.

- 4 Clean up.
 - 4.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling.
 - 4.2 Check, maintain and store tools and equipment and report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCA3004A Construct wall frames.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for CPCCCA3004 Construct and erect wall frames

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3004A Construct wall frames. Title change. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- setting-out and constructing timber framed walls to a minimum height of 2.4 metres and minimum floor area of 30 square metres to accommodate roof and ceiling members and different types of cladding or linings, including:
 - two external load-bearing walls with one window opening and one door opening in each wall
 - two external straight walls with external intersection
 - two internal non-load-bearing walls encompassing an internal T junction and an external junction
- setting-out and erecting steel framed walls to a minimum height of 2.4 metres and minimum floor area of 30 square metres to accommodate roof and ceiling members and different types of cladding or linings, including:
 - two external load-bearing walls with one window opening and one door opening in each wall
 - two external straight walls with external intersection
 - two internal non-load-bearing walls encompassing an internal T junction and an external junction.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code (NCC) and Australian Standards relevant to constructing wall frames, including AS:1684 Residential timber-framed construction
- requirements of the National Association of Steel-framed Housing (NASH) Standards relevant to constructing and erecting wall frames
- workplace quality policies and standards for constructing and erecting wall frames
- safety requirements for constructing and erecting wall frames

- electrolysis and corrosion of dissimilar steels relevant to erecting steel wall frames
- plans, specifications and drawings for constructing and erecting wall frames
- types and uses of tools and equipment for constructing and erecting wall frames
- processes for:
 - setting out and measuring materials for frames
 - calculating material requirements
- applications for materials used for constructing and erecting wall frames
- timber types, structural properties and uses, including engineered timber products
- frame construction techniques.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions and standards, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCCA3005 Construct ceiling frames

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Performance Criteria 3.3 removed

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3005B Construct ceiling frames.
Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to plan, prepare, set-out, construct and erect timber ceiling frames to accommodate ceiling joists, hanging beams, strutting beams, combined hanging/strutting beams, and combined strutting/counter beams, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

The unit includes selection of members and setting out of ceiling frames in conjunction with roof members.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|---|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions and plan sequence of work. |
| | 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications. |

Assessment Requirements for CPCCCA3005 Construct ceiling frames

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Performance Criteria 3.3 removed

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3005B Construct ceiling frames.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by planning, setting out, constructing and erecting a timber ceiling frame for structure with a minimum of three rooms and minimum area of 30 square metres.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards relevant to constructing ceiling frames, including AS 1684 Residential timber-framed construction
- workplace quality policies and standards for constructing ceiling frames
- safety requirements for constructing ceiling frames:
 - working at heights
- waste disposal requirements relevant to constructing ceiling frames
- materials handling relevant to constructing ceiling frames
- correct use of tools and equipment used to construct ceiling frames
- processes for:
 - setting out and measuring materials for ceiling frames
 - calculating material requirements for ceiling frames
- materials for constructing ceiling frames:
 - types of timber
 - engineered timber products and their structural properties and applications.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions and standards, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCCA3006 Erect roof trusses

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Performance Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCCA3006B Erect roof trusses. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to select, set out, erect and brace timber and steel roof trusses in preparation for the installation of waterproof roof coverings, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, National Association of Steel-framed Housing (NASH) Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

The unit includes erection of manufactured roof trusses in accordance with AS 4440 Installation of nail-plated timber roof trusses.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|-----------------------|---|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions and plan sequence of work. |
| | 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications. |
| | 1.3 Select tools and equipment, check for serviceability and report any faults. |
| | 1.4 Select and use personal protective equipment (PPE) for each part of the task. |
| | 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades. |
| | 1.6 Identify materials required from truss layout plan, including fasteners and steel brackets, calculate quantities, handle safely and prepare and position ready for use. |
| 2 Erect roof trusses. | 2.1 Set out location of roof trusses on top plates to truss layout plan. |
| | 2.2 Manage lifting and handling of materials, including lifting trusses and stacking loads on wall frames ready for use. |
| | 2.3 Erect, plumb and fix roof trusses to set out positions in correct sequence to align at apex. |
| | 2.4 Install bottom chord at constant height above internal wall plates and use to provide lateral support for internal walls. |
| | 2.5 Fix ceiling trimming and creeper trusses. |
| | 2.6 Construct and fix roof bracing following AS 4440 Installation of nail-plated timber roof trusses and |

- National Association of Steel-framed Housing (NASH) Standards.
- 2.7 Fix lateral restraints to truss chords in position to manufacturers' specifications.
 - 2.8 Install roof and internal wall bracing connections, including tie downs, for wind load following manufacturers' guidelines and AS 4440 and NASH.
- 3 Clean up.
- 3.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling.
 - 3.2 Check, maintain and store tools and equipment and report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCA3006B Erect roof trusses.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCCA3006 Erect roof trusses

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Performance Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3006B Erect roof trusses. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- setting out and erecting timber trusses manufactured to AS 4440 *Installation of nail-plated timber roof trusses* and steel trusses to the requirements of the NASH Standards including:
 - a minimum 30 square metres of timber roof trusses with a major and minor span, including:
 - one hip end and valley
 - one gable end
 - a minimum 30 square metres of steel roof trusses with a major and minor span, including:
 - one hip end and valley
 - one gable end
- installing:
 - gable bracing, bottom chord bracing, web bracing and top chord bracing installed in line with the requirements of both AS 4440 *Installation of nail-plated timber roof trusses* to the requirements of the NASH Standards
 - a connection between an internal brace wall running parallel to the bottom chord
 - a connection between an internal brace wall running at 90 degrees to the bottom chord.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards relevant to erecting roof trusses, including AS 4440 *Installation of nail-plated timber roof trusses* required by the National Construction Code (NCC)

- requirements of the National Association of Steel-framed Housing (NASH) Standards relevant to erecting roof trusses
- workplace quality policies and standards relevant to erecting roof trusses
- safety requirements for erecting roof trusses
- plans, specifications and drawings for erecting roof trusses
- types and uses of tools and equipment required to erect roof trusses
- materials used in roof truss erection
- quality requirements for roof trusses
- roof truss erection and construction techniques
- types of roof construction and components of roof trusses
- techniques for lifting and positioning trusses
- processes and requirements for the temporary and permanent bracing of roof trusses and elementary bracing principles for various shaped roofs
- types of timber and their structural properties and uses, including engineered timber products.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions and standards, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

CPCCCA3007 Construct pitched roofs

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3007C Construct pitched roofs.
Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to set out, construct and erect pitched roofs to accommodate roof coverings for weatherproofing purposes, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

The unit includes determining the required materials and process, and constructing scotch valley gable, broken hip and valley roof structures.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Plan and prepare.
 - 1.1 Read and interpret work instructions and plan sequence of work.
 - 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
 - 2 Set out, prepare and erect pitched roof members.
 - 2.1 Set out and mark position of members on top plates for roof type and rafter spacing.
 - 2.2 Determine bevels for all roof members.
 - 2.3 Calculate and set out pattern rafter to length allowing for overhang and creeper reductions.
 - 2.4 Set out and cut main ridge boards to length.
 - 2.5 Cut common rafters to length, and check.
 - 2.6 Erect common rafters in correct sequence.
 - 2.7 Calculate lengths for hip and valley rafters from pitch of roof.
 - 2.8 Cut and fix hip and valley rafters.
 - 2.9 Cut and fix creeper rafters from pattern rafter allowing for overhang.

- 3 Install roof support.
 - 3.1 Determine lengths for under-purlins.
 - 3.2 Cut and install under-purlins.
 - 3.3 Measure, cut and install struts to under-purlins, hips, valley and ridges.
 - 3.4 Install collar ties and tie-downs to span tables in *AS 1684 Residential timber-framed construction*.
 - 3.5 Fit trimmers to gable ends to take gable end rafter and barge board.
 - 3.6 Cut and fix valley boards and surrounding battens.

- 4 Clean up.
 - 4.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling.
 - 4.2 Check, maintain and store tools and equipment and report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCA3007C Construct pitched roofs.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCCA3007 Construct pitched roofs

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3007C Construct pitched roofs. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- setting-out, constructing and erecting:
 - a skillion roof above 10 degrees for a structure of a minimum 10 square metres
 - a roof, or a series of roofs, together covering a minimum of 30 square metres, including:
 - a broken hip and valley
 - a gable end
 - a scotch valley
- setting-out:
 - a pattern rafter with birdsmouth, creeper reductions and eave over-hang
 - roof bevels
 - strutting beams and under purlins as required by span tables in *AS 1684 Residential timber-framed construction* and manufacturers' specifications.
-

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards relevant to constructing pitched roofs, including AS 1684 Residential timber-framed construction
- workplace quality policies and standards relevant to constructing pitched roofs
- safety requirements relevant to constructing pitched roofs
- roofing frame construction techniques

- contents of, and terms and symbols used in plans, specifications and drawings for constructing pitched roofs
- types and uses of tools and equipment used for constructing pitched roofs
- processes, relevant to constructing pitched roofs, for:
 - setting out and measuring materials for frames
 - calculating material requirements
- materials relevant to constructing pitched roofs
- roofing set-out procedures
- types, structural properties and uses of timber, engineered timber products and steel for constructing pitched roofs
- characteristics and construction techniques of pitched roof types:
 - scotch valley
 - broken hip and valley
 - hip and valley
 - gable and verge
 - skillion
 - strut/props
- geometric development of bevels.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

CPCCCA3008 Construct eaves

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3008B Construct eaves. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to prepare, set out and construct eaves, including the cutting and fixing of fascia and barges to provide a finish between the wall and the roof, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

The unit includes:

- construction of boxed and raked eaves
- finishing of gable ends including verge and flush.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare.
 - 1.1 Read and interpret work instructions and plan sequence of work.
 - 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) as required for each stage of the task.
 - 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.

- 2 Construct framework for eaves or soffits.
 - 2.1 Determine eaves design from drawings and specifications and set out and fix framework.
 - 2.2 Set out, mark and cut timber and steel framework members to lengths for framework structure.
 - 2.3 Construct boxed eaves with soffit bearers and fix to line and level to wall frame or support by hangers from rafters/trusses.
 - 2.4 Set-out and install eave supports.

- 3 Line and clad eaves and soffits.
 - 3.1 Mark and cut eaves cladding and sheeting material to shape to suit task application and jointing methods.
 - 3.2 Fit, join and fix eaves lining, cladding and soffits using methods for type of material and task application.
 - 3.3 Fit and fix mouldings to finish eaves.
 - 3.4 Fit raked eaves to rafters or framing.

- 4 Clean up.
 - 4.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling.
 - 4.2 Check, maintain and store tools and equipment and rectify or report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCA3008B Construct eaves.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCCA3008 Construct eaves

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3008B Construct eaves. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by marking and cutting roof members to line to accommodate plumb fascia and barge and constructing:

- three metres of timber verge gable eaves
- three metres of timber boxed gable eaves
- three metres of timber boxed eaves
- three metres of timber raked eaves
- three metres of steel fascia with hangers.

In constructing these timber eaves, the following must be included:

- an apex junction on the barge board
- a junction between the barge board and the plumb fascia
- a junction of the fascia and eave lining at the valley
- a junction of the fascia and eave lining at the hip.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code (NCC) and Australian Standards relevant to constructing eaves, including AS 1684 Residential timber-framed construction and the National Association of Steel-framed Housing (NASH) Standards
- workplace quality policies and standards relevant to constructing eaves
- safety requirements for constructing eaves
- construction techniques for eave fascia and soffit
- eaves design:
 - sloping soffits and boxed eaves
 - verandas, concealed gutters and open eaves
- materials for constructing eaves:
 - beads

- sheeting
- joining mould
- steel
- quads
- timber and steel fascia
- roof battens
- timber lining boards
- levelling techniques for constructing eaves
- plans, specifications and drawings for constructing eaves
- types and uses of tools and equipment for constructing eaves
- processes for the calculation of material requirements for constructing eaves
- timber shrinkage and required clearances for various constructions
- geometry for constructing eaves.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions and standards, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCCA3009 Construct advanced roofs

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3009B Constructed advanced roofs. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to plan, prepare, set out and construct pitched roofs on irregular plan building shapes, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

The unit includes gable, hip, hip and valley, or combinations of these in roofs that are applied to different types and styles of buildings. The roofs may have skewed, splayed or octagonal ends, may contain two separate roof pitches in the one structure, and have varying eave widths.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS200 1 Apply WHS requirements, policies and procedures in the construction industry.

CPCCCA3007 Construct pitched roofs

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions and plan sequence of work. |
| | 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications. |
| | 1.3 Select tools and equipment, check for serviceability and report any faults. |
| | 1.4 Select and use personal protective equipment (PPE) for each part of the task. |
| | 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades. |
| | 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use. |
| 2 Set out, prepare and erect roof members. | 2.1 Set out and check position of members on top of plates. |
| | 2.2 Determine bevels for all roof members. |
| | 2.3 Set out pattern rafter and cut to length allowing for overhang. |
| | 2.4 Mark main ridge boards and cut to length. |
| | 2.5 Cut common rafters to length. |
| | 2.6 Erect common rafters in sequence. |
| | 2.7 Calculate length of hip and valley rafters. |
| | 2.8 Cut and fix hip and valley rafters. |
| | 2.9 Cut and fix creeper rafters allowing for overhang. |

- 3 Install roof support.
 - 3.1 Determine lengths for under purlins.
 - 3.2 Cut and install under purlins.
 - 3.3 Measure, cut and install struts to under purlins, hips, valleys and ridges.
 - 3.4 Install collar ties and tie-downs to span tables in *AS 1684 Residential timber-framed construction*.
 - 3.5 Fit trimmers to gable ends to take gable end rafter and barge board.
 - 3.6 Cut and fix valley boards.

- 4 Clean up.
 - 4.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling.
 - 4.2 Check, maintain and store tools and equipment and report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCA3009B Construct advanced roofs.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCCA3009 Construct advanced roofs

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3009B Constructed advanced roofs.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by constructing a roof, or a series of roofs, totalling a minimum of 30 square metres. These must include:

- a splayed end incorporating a hip end
- a splayed end incorporating a gable end
- incorporation of an octagonal end
- an intersection with another roof of a different pitch
- varying eave widths along the roof's length.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards, including AS:1684 Residential timber-framed construction, relevant to constructing advanced roofs
- workplace quality policies and standards relevant to constructing advanced roofs
- safety requirements for constructing advanced roofs
- types of tools and equipment required for constructing advanced roofs
- processes for determining the following for pattern rafters:
 - vertical height above birdsmouth
 - length of rafters for pitch of roof
 - pitch and plumb cut for rafters
- ridge boards:
 - abutment joints scarfed or butt jointed
 - those marked for rafter positions from wall plates
- plans, specifications and drawings for constructing advanced roofs
- processes for the calculation of material requirements for constructing advanced roofs

- roof calculations for lengths, quantities and pitch for constructing advanced roofs
- roof geometry
- roof set-out
- roof types and design.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions and standards, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCCA3010 Install windows and doors

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3010A Install and replace windows and doors. Title change. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to plan, prepare and install window and door units, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|---|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions and plan sequence of work. |
| | 1.2 Plan all work to comply with laws and regulations, the |

- National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
- 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) as required for each stage of the task.
 - 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Install window units.
- 2.1 Check wall frame opening for adequate clearance for window unit.
 - 2.2 Position window unit with packing and flashings so that the head and sill are level, stiles are plumb and in wind, and reveals or frame are finished flush with face of inside wall lining.
 - 2.3 Select type, gauge and quantity of fasteners as per *Australian Window Association - An Industry Guide to the Correct Fixing of Windows and Doors* and fix window to wall frame.
- 3 Prepare internal and external door openings, and construct and fix jamb.
- 3.1 Check wall frame for adequate clearance for door frame.
 - 3.2 Mark door jamb and head, cut to length, allowing for door clearances.
 - 3.3 Trench the door head to accommodate jambs, allowing for specified clearances.
 - 3.4 Assemble, square, fix and brace door frame with flush rebates.
 - 3.5 Select type, gauge and quantity of fasteners as per *Australian Window Association - An Industry Guide to the Correct Fixing of Windows and Doors*. Install door

frame into wall frame opening, ensuring the door jambs are plumb and in wind, positioned flush to linings, head is level, and all appropriate flashings are in place.

- | | | | |
|---|------------------------------------|-----|---|
| 4 | Install door. | 4.1 | Mark out hinges and fit to door and jamb. |
| | | 4.2 | Fit door to frame and adjust gaps to requirements of <i>AS2688 Timber and composite doors</i> . |
| | | 4.3 | Fit and fix door furniture and door stop components to manufacturers' specifications. |
| 5 | Install cavity door and door unit. | 5.1 | Fit hardware (rollers) to door according to manufacturer's specifications. |
| | | 5.2 | Fit door to cavity sliding door unit and adjust height of rollers to ensure leading door edge is plumb and closes neat against cavity sliding door stile. |
| | | 5.3 | Make final adjustments to packing of cavity sliding door stile. |
| | | 5.4 | Fit and fix door furniture and cavity door centring locators, according to manufacturer's specifications. |
| 6 | Clean up. | 6.1 | Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling. |
| | | 6.2 | Check, maintain and store tools and equipment and report any faults. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCA3010A Install and replace windows and doors.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCCCA3010 Install windows and doors

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3010A Install and replace windows and doors. Title change. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- installing in wall frames:
 - a standard window
 - a sliding cavity door unit and door
- constructing and fitting a standard external rebated door frame
- fitting and hanging one door, including door furniture, privacy set and door stops
- fitting and hanging a pair of doors.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards, relevant to installing windows and doors, including *AS2688 Timber and composite doors* and *AS2047 Windows and external glazed doors in buildings*, and *Australian Window Association - An Industry Guide to the Correct Fixing of Windows and Doors*
- workplace quality policies and standards relevant to installing windows and doors
- safety requirements for installing windows and doors
- flashing requirements and installation techniques relevant to installing windows and doors
- plans, specifications and drawings for installing windows and doors
- types of tools and equipment required to install windows and doors, their characteristics, uses and limitations
- processes for setting out windows and doors
- processes for calculating material requirements for installing windows and doors
- materials relevant to installing windows and doors
- various types of doors:
 - flush panel, framed and panelled, and glazed

- hinged door units including standard doors, sliding, flywire, combination window and door units, door sidelight units (glazed or unglazed) and internal doors
- jambs, stiles and sills
- flashing
- door furniture, including flush pulls, latches and deadlocks, push plates and closers, handles and locks
- window, door installation including flashing and fixing
- types of windows and doors, materials used and their characteristics and uses.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCCA3011 Refurbish timber sashes to window frames

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3011A Refurbish timber sashes to window frames. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to refurbish timber sashes to window frames to rectify operation of external windows, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|---|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions and plan sequence of work. |
| | 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian |

- Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
- 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.5 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Refurbish casement/awning windows.
 - 2.1 Remove sash and hardware.
 - 2.2 Refurbish, fit and hang sash to correct margins.
 - 2.3 Fit window hardware.
- 3 Refurbish double hung windows.
 - 3.1 Remove sashes from frame in correct sequence.
 - 3.2 Refurbish and fit sashes to correct margins.
 - 3.3 Fit sash cords and weights or spiral balances or spring balances, check and adjust.
 - 3.4 Fit window hardware and mouldings.
- 4 Refurbish double hung windows.
 - 4.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling.
 - 4.2 Check, maintain and store tools and equipment and report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCA3011A Refurbish timber sashes to window frames.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for CPCCCA3011 Refurbish timber sashes to window frames

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3011A Refurbish timber sashes to window frames. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- removing, refurbishing and refitting one sash to a top or side hung window frame
- removing, refurbishing and refitting one pair of sashes to a double hung window.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards relevant to refurbishing timber sashes to window frames
- workplace quality policies and standards relevant to refurbishing timber sashes to window frames
- safety requirements for refurbishing timber sashes to window frames
- plans, specifications and drawings for refurbishing timber sashes to window frames
- processes for calculating material requirements for refurbishing timber sashes to window frames
- timber sash refurbishment techniques
- types and uses of tools and equipment required to refurbish timber sashes to window frames
- materials and construction methods used to construct window frames and sashes
- window hardware:
 - window furniture, including hinges, sash stays, weights and cords, spiral balances, spring balances, locks, winders, handles and knobs, lifts
 - frame and sash moulding, including:
 - parting beads
 - pocket pieces
 - stop beads
 - outside linings

- processes for setting out hardware of refurbished windows.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions and standards, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCCA3012 Frame and fit wet area fixtures

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3012A Frame and fit wet area fixtures. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to install supporting framework for fixtures and flashings for wet area construction of a bath, shower base, and prepare for wet area linings, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

The unit includes setting out, cutting and fabrication of frames and installation of frames in bathroom, laundry, shower, toilet and en suite wet areas.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare.	1.1 Read and interpret work instructions and plan sequence
---------------------	--

- of work.
- 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) as required for each stage of the task.
 - 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Construct frames for bath installation.
- 2.1 Set out noggings and housings for bath fitments and fixtures.
 - 2.2 Notch studs to height and level for required depth to receive lip of bath.
 - 2.3 Construct support to front edge of bath to height and level.
 - 2.4 Fit and fix noggings and jack studs flush for lining.
- 3 Construct frames for shower base installation.
- 3.1 Set out location of shower base, noggings and housings for shower fitments and fixtures.
 - 3.2 Mark and notch all plates and studs to required depth to receive shower base.
 - 3.3 Fit and fix noggings and jack studs flush to wall face for lining.
 - 3.4 Install corner flashing.

- 4 Clean up.
 - 4.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling.
 - 4.2 Check, maintain and store tools and equipment and report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCA3012A Frame and fit wet area fixtures.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCCA3012 Frame and fit wet area fixtures

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3012A Frame and fit wet area fixtures. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by setting out and erecting timber framing for a minimum of:

- one bath
- one shower base.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code (NCC) and Australian Standards relevant to framing and fitting wet area fixtures
- workplace quality policies and standards for framing and fitting wet area fixtures
- safety requirements for framing and fitting wet area fixtures
- contents of and terms and symbols used in plans, specifications and drawings for framing and fitting wet area fixtures
- types of tools and equipment used to frame and fit wet area fixtures
- materials for framing and fitting wet area fixtures
- processes for framing and fitting wet area fixtures for:
 - setting out and measuring materials for frames
 - calculating material requirements
- impacts of requirements for waterproofing on framing for wet areas.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCCA3014 Construct and install bulkheads

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3014A Construct bulkheads. Title change. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to construct bulkheads for decorative purposes, to contain fittings, such as range hoods and cupboards, to conceal services, and to help facilitate changes in ceiling heights, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

The unit includes preparing for sheeting bulkheads with plasterboard, lining boards, reconstituted timber products and metal or plastic decorative panels; and installation of bulkheads which may be hung from, incorporated into, or fastened onto a structure in situ.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare.
 - 1.1 Read and interpret work instructions and plan sequence of work.
 - 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Identify materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Fabricate bulkhead components.
 - 2.1 Set out bulkhead.
 - 2.2 Cut bulkhead trimmers and plates to set out.
- 3 Install bulkhead components.
 - 3.1 Select fasteners to support the weight of the bulkhead.
 - 3.2 Assemble bulkhead, fix to position and specification.
- 4 Install pre-manufactured bulkheads.
 - 4.1 Set out pre-manufactured bulkhead sections.
 - 4.2 Use fasteners as specified by frame manufacturer.
 - 4.3 Fix to position and specification.
- 5 Clean up
 - 5.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling.
 - 5.2 Check, maintain and store tools and equipment and

report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCA3014A Construct bulkheads.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for CPCCCA3014 Construct and install bulkheads

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3014A Construct bulkheads. Title change. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- constructing and installing:
 - one straight bulkhead framed in timber or steel measuring a minimum of 2 m width, 300 mm height and 300 mm depth
 - one curved bulkhead framed in timber or steel measuring a minimum of 2 m width, 300 mm height and 300 mm depth
- installing a pre-manufactured bulkhead measuring a minimum of 2 m width, 300 mm height and 300 mm depth.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards relevant to constructing and installing bulkheads
- workplace quality policies and standards relevant to constructing and installing bulkheads
- safety requirements relevant to constructing and installing bulkheads
- purposes of bulkheads:
 - decoration, to contain fittings (bar hoods and cupboards) and help facilitate changes in height to ceilings
 - services
 - range hoods
- materials and methods used to construct and install bulkheads
- application of curved geometry in the construction of bulkheads
- load and anchor capacities for bulkheads
- use of plans, specifications and drawings when constructing and installing bulkheads
- types and uses of tools and equipment used to construct and install bulkheads
- processes for setting out and measuring materials used to construct bulkheads

- processes for calculating material requirements for constructing and installing bulkheads.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions and standards, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCCA3016 Construct, assemble and install timber external stairs

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3016A Construct timber external stairs. Title change. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to construct, assemble and install timber external stairs of one or more flights to provide access into a building or structure, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

The unit includes external stairs:

- installed from ground level to a landing
- constructed with open risers and with housed strings or metal brackets to accommodate treads
- freestanding or installed against an existing wall
- incorporating timber treads, stringers and balustrading.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--------------------------------|---|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions and plan sequence of work. |
| | 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications. |
| | 1.3 Select tools and equipment, check for serviceability and report any faults. |
| | 1.4 Select and use personal protective equipment (PPE) for each part of the task. |
| | 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades. |
| | 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use. |
| 2 Set out stair components. | 2.1 Determine exit and ground finish levels from site drawings and location. |
| | 2.2 Calculate rise and going of stairs. |
| | 2.3 Set out newel posts to layout of designed stairs. |
| | 2.4 Set out risers and goings to regulated pitch of stairs on stringers. |
| | 2.5 House stringers to accommodate treads or fix metal brackets to support treads. |
| | 2.6 Set out and cut material for treads to length. |
| 3 Assemble and install stairs. | 3.1 Cut stringers and attach into newel posts and landings. |
| | 3.2 Fix treads to stringers. |

- 3.3 Locate and secure bolts to maintain stair width.
 - 3.4 Fix bracing and lateral ties to newels to maintain rigidity of stair structure.
- 4 Fit handrails, balustrade and finish.
 - 4.1 Mark material for handrails and balusters and cut to length.
 - 4.2 Fit and fix handrails and balusters.
 - 4.3 Install non-slip finish to treads.
- 5 Clean up.
 - 5.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal, materials handling and protection of the environment.
 - 5.2 Check, maintain and store tools and equipment and report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCA3016A Construct timber external stairs.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCCA3016 Construct, assemble and install timber external stairs

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCCCA3016A Construct timber external stairs. Title change. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by constructing, assembling and installing one flight of timber external stairs from ground level to a minimum height of 1.1 metres, including a handrail and balustrade to the open side of the flight and landing.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards relevant to constructing, assembling and installing timber external stairs
- workplace quality policies and standards relevant to constructing, assembling and installing timber external stairs
- safety requirements for constructing, assembling and installing timber external stairs
- application of and requirements for line, level and plumb when constructing and installing stairs
- processes for reading and interpreting plans, specifications and drawings for constructing, assembling and installing timber external stairs
- types and uses of tools and equipment required to construct and install timber external stairs
- materials relevant to constructing, assembling and installing timber external stairs
- processes for measuring and calculating material lengths and quantities for constructing, assembling and installing timber external stairs
- durability, quality and treatment requirements of timber used for external stairs
- techniques used for constructing and installing timber external stairs, including different methods of joining and fixing components
- range and characteristics of different stair types
- characteristics of different handrails and balusters.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions and standards, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCCA3017 Install exterior cladding

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3017B Install exterior cladding.
Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to apply material finishes to an external framed wall surface for the purpose of weatherproofing and securing the building, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

The unit includes application of both sheet and linear style claddings in a range of materials.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|---|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions and plan sequence of work. |
|---------------------|---|

- 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC) including fire protection, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.5 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Prepare exterior wall frames for cladding.
- 2.1 Check frames are true and plumb.
 - 2.2 Check frame and trim or pack studs to provide an even surface across studs and noggins.
 - 2.3 Fit and fix rows of noggings to frames to line, flush with wall face.
 - 2.4 Prepare frames to cladding manufacturers' installation instructions.
- 3 Fix thermal and moisture management.
- 3.1 Cut weatherproofing, vapour barrier, and flashing materials, fit into position, and secure.
 - 3.2 Identify locations for ancillary materials and prepare to required lengths, position and secure as per manufacturers' installation instructions.
- 4 Set out, cut and fix horizontal weatherboards.
- 4.1 Determine effective cover or overlap for cladding from recommended lap, type and profile of board and height of wall.
 - 4.2 Produce set-out rod or jig.

- 4.3 Mark locations of each profile on the building paper or corner stop to determine height of each row of profile.
 - 4.4 Cut cladding to fit length of wall faces or to join on intermediate studs.
 - 4.5 Join butt joints of cladding at centre of studs with joint flush to face and line.
 - 4.6 Join manufactured boards using manufacturers' specification/method.
 - 4.7 Fix and finish internal and external corners to manufacturers' specification/method.
- 5 Fix panelling.
- 5.1 Determine starting position of first panel against windows, doors and corners in accordance with specified design and finished effect.
 - 5.2 Cut panelling to fit height of wall.
 - 5.3 Fix abutting joints of panelling following manufacturers' specifications and requirements for flashing.
 - 5.4 Cut, fit and fix panelling plumb and level.
- 6 Clean up.
- 6.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling.
 - 6.2 Check, maintain and store tools and equipment and report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCA3017B Install exterior cladding.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for CPCCCA3017 Install exterior cladding

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3017B Install exterior cladding.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- producing a set-out rod for a minimum height of 2.1 metre using the effective cover of a weatherboard of a given profile
- installing weatherproofing, a vapour barrier and flashing
- fixing two different profiled weatherboards to eave height of at least 2.1 metres, incorporating an internal and an external corner with stops, flashings and sarking for a window and a door
- installing a minimum of two different types of external cladding panels, incorporating an internal and an external corner, abutting a window or door, and joints between boards determined by the material being used, manufacturers' recommendations and job specifications
- attaching vertical and horizontal cladding to frames.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards relevant to installing exterior cladding, including AS 1562 Design and installation of sheet roof and wall cladding
- requirements for fire management and moisture and energy efficiency for installing exterior cladding
- systems of cladding forming part of a fire-rated system
- workplace quality policies and standards relevant to installing exterior cladding
- safety requirements for installing exterior cladding
- materials and techniques used when installing common forms of exterior cladding
- manufactured cladding strips, sheets, boards and planks
- application of both sheet and linear style claddings in a range of materials
- use of pliable membranes, thermal break strips, sheets and battens relevant to installing exterior cladding

- process and requirements for installing flashing and sarking when installing exterior cladding
- procedures for safely handling and storing materials, and disposing of hazardous materials and waste
- plans, specifications and drawings relevant to installing exterior cladding
- types and uses of tools and equipment required to install exterior cladding
- processes for calculating material requirements for installing exterior cladding
- wall frame construction methods and their impact on processes to install exterior cladding.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions and standards, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCCA3018 Construct, erect and dismantle formwork for stairs and ramps

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3018A Construct, erect and dismantle formwork for stairs and ramps. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to construct, erect and dismantle formwork for stairs and ramps to provide access between floors and landings, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

It includes:

- establishing required levels on site
- constructing timber, metal or prefabricated formwork to contain wet poured concrete until it is completely cured
- stripping the formwork
- preparing and storing formwork for re-use.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|---|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions and plan sequence of work. |
| | 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications. |
| | 1.3 Select tools and equipment, check for serviceability and report any faults. |
| | 1.4 Select and use personal protective equipment (PPE) for each part of the task. |
| | 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades. |
| | 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use. |
| 2 Set out formwork. | 2.1 Check formwork location for accuracy against plans and specifications. |
| | 2.2 Check design of stairs or ramp and method of joining formwork, and determine levels from drawings, specifications and site inspection. |
| | 2.3 Determine rise, going and pitch of stairs and ramp from drawings, specifications, site inspection, rise measurements, and requirements of the National Construction Code (NCC). |
| | 2.4 Calculate full size of stairs or ramp and set out. |
| | 2.5 Set out materials for formwork, including stringer form, to pitch of stairs with rises not exceeding specified space between treads. |

- | | |
|--------------------------------|---|
| 3 Assemble and erect formwork. | 3.1 Place, fix and brace landing bearers and joists. |
| | 3.2 Erect and brace stairs or ramp formwork soffit. |
| | 3.3 Cut, install and brace formwork for stringers. |
| | 3.4 Locate and fix formwork stringers for stairs and ramps. |
| | 3.5 Set out, cut square to length, and fix material for face of treads. |
| | 3.6 Brace risers at mid-span to prevent deflection under the load of wet concrete. |
| 4 Strip formwork. | 4.1 Strip formwork and bracing sequentially and safely. |
| | 4.2 Check formwork for reusability and dispose of damaged components. |
| | 4.3 Safely de-nail, clean, oil and store or stack reusable formwork components. |
| 5 Clean up. | 5.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling. |
| | 5.2 Check, maintain and store tools and equipment and report any faults. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCA3018A Construct, erect and dismantle formwork for stairs and ramps.

Assessment Requirements for CPCCCA3018 Construct, erect and dismantle formwork for stairs and ramps

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3018A Construct, erect and dismantle formwork for stairs and ramps. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by constructing, erecting, stripping and dismantling the formwork for:

- one flight of stairs, freestanding or against a wall with a minimum rise of 1800 mm
- one ramp with a minimum rise of 400 mm and 5.6 metres long.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards relevant to constructing, erecting and dismantling formwork for stairs and ramps
- workplace quality policies and standards for constructing, erecting and dismantling formwork for stairs and ramps
- safety requirements for constructing, erecting and dismantling formwork for stairs and ramps
- line, level and plumb for constructing, erecting and dismantling formwork for stairs and ramps
- common formwork faults, problems and rectification methods
- materials used to construct and erect formwork
- fixings for formwork
- techniques to construct, erect and strip and dismantle formwork
- contents, terms and symbols used in plans, specifications and drawings for constructing, erecting and dismantling formwork for stairs and ramps
- types and uses of tools and equipment used to erect and strip and dismantle formwork
- processes for measuring and setting out formwork
- processes for calculating material requirements for constructing and erecting formwork for stairs and ramps
- regulations on stair and ramp construction for safe use, including disability access

- processes to construct stairs and ramps.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions and standards, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCCA3019 Erect and dismantle formwork to suspended slabs, columns, beams and walls

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3019A Erect and dismantle formwork to suspended slabs, columns, beams and walls. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to erect and dismantle formwork to suspended slabs, columns, beams and walls to contain concrete in above-ground construction, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

The unit includes:

- setting out, assembling and bracing formwork
- sorting formwork materials and preparing for re-use

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Plan and prepare.
 - 1.1 Read and interpret work instructions and plan sequence of work.
 - 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.

 - 2 Erect formwork.
 - 2.1 Clear work area and prepare surface for safe erection of formwork for suspended slabs, columns, beams and walls.
 - 2.2 Set-out formwork to requirements of drawings and specifications.
 - 2.3 Assemble formwork with support system to drawings, specifications and class of surface finish and set to correct height, level and line.
 - 2.4 Brace formwork to maintain rigidity and stability.
 - 2.5 Erect formwork support system sequentially to initial set-out and task specifications.
 - 2.6 Fabricate and erect formwork shutters and edge boxing to designed form requirements and dimensions specified to allow for safe stripping.
 - 2.7 Install block-outs and cast-in services to specified locations.
 - 2.8 Remove debris, sawdust and other waste materials from completed formwork following waste management requirements.

- 2.9 Apply release agent to formwork face to manufacturers' specifications.
- 3 Strip formwork.
 - 3.1 Strip formwork and bracing sequentially and safely.
 - 3.2 Check formwork for re-usability and disposed of damaged components to requirements.
 - 3.3 Safely de-nail, clean, oil and store or stack reusable formwork components.
- 4 Clean-up.
 - 4.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling.
 - 4.2 Check, maintain and store tools and equipment and report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCA3019A Erect and dismantle formwork to suspended slabs, columns, beams and walls.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCCA3019 Erect and dismantle formwork to suspended slabs, columns, beams and walls

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3019A Erect and dismantle formwork to suspended slabs, columns, beams and walls. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by setting-out and erecting suspended slab formwork for a slab size of a minimum of 10 square metres.

The formwork must incorporate:

- one beam
- one wall of a minimum of 1.8 metres high by 1.0 metre long
- two different types of columns with a specified formwork system at a minimum height of 1.8 metres
- block-outs and cast-in services.

Formwork may be prefabricated or fabricated in situ and must be rigid and able to withstand the mass of wet concrete and actions imposed during placement. It must comply with regulations and specifications for height, level and loadings.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards including AS 3610 Formwork for concrete requirements relevant to erecting, stripping and dismantling formwork to suspended slabs, columns, beams and walls
- workplace quality policies and standards relevant to erecting, stripping and dismantling formwork to suspended slabs, columns, beams and walls
- safety requirements for erecting, stripping and dismantling formwork to suspended slabs, columns, beams and walls
- environmental requirements for erecting and dismantling formwork to suspended slabs, columns, beams and walls
- line, level and plumb for erecting formwork
- common formwork faults and problems, and suitable methods to rectify them

- formwork componentry
- materials and erection techniques used when erecting formwork to suspended slabs, columns, beams and walls
- contents of and terms and symbols used in plans, specifications and drawings relevant to erecting and dismantling formwork to suspended slabs, columns, beams and walls
- types and uses of tools and equipment used to erect and dismantle formwork
- processes for setting out formwork and measuring required materials
- purpose, application and properties of commonly used release agents relevant to erecting formwork to suspended slabs, columns, beams and walls.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions and standards, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCCA3020 Erect and dismantle jump form formwork

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3020A Erect and dismantle jump form formwork. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to erect and dismantle jump-form formwork for concrete-pouring activities to construct wall structures where the formwork process is continuous, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

The unit includes curved and straight jump-form formwork, which is erected and then moved to its next position.

Jump-form formwork requires work as a member of a mixed trades team, including carpenters, riggers, electricians, concreters and steel fixers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare.
 - 1.1 Read and interpret work instructions and plan sequence of work.
 - 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Set out formwork.
 - 2.1 Locate set out points and lines to engineer's drawings, survey datum points, and site drawings.
 - 2.2 Locate jump-form formwork to set out.
- 3 Assemble core form system.
 - 3.1 Erect and fix internal prefabricated system wall form shutters into location.
 - 3.2 Fit system onto concrete nib walls at heights consistent with requirements.
 - 3.3 Install shear key feet.
 - 3.4 Fit platforms and assembly into core.
 - 3.5 Fit structural steel system grid work and hydraulic hose lines.
 - 3.6 Suspend wall form shutters and fit system cladding and platforms.

- | | | | |
|---|----------------------------------|-----|---|
| 4 | Locate and install penetrations. | 4.1 | Set out locations and dimensions of penetrations to designated tolerance. |
| | | 4.2 | Construct penetrations, block-outs and cast-in services. |
| | | 4.3 | Install penetrations. |
| 5 | Jump the formwork. | 5.1 | Erect and fix external prefabricated system wall shutters. |
| | | 5.2 | Loosen and strip shutters to manufacturers' and WHS requirements. |
| | | 5.3 | Instruct rigger to activate electric or hydraulic jacking of the system to the new position. |
| | | 5.4 | Install trailing platforms. |
| | | 5.5 | Dismantle formwork. |
| 6 | Clean up. | 6.1 | Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling. |
| | | 6.2 | Check, maintain and store tools and equipment and report any faults. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCA3020A Erect and dismantle jump-form formwork.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCCA3020 Erect and dismantle jump form formwork

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3020A Erect and dismantle jump form formwork. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by completing, as a member of a team, the erection and dismantling of curved and straight jump-form formwork for at least one jump operation, including penetrations, block-outs and cast-in services.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards relevant to erecting and dismantling jump-form formwork
- workplace quality policies and standards relevant to erecting and dismantling jump-form formwork
- safety requirements for erecting and dismantling jump-form formwork
- common formwork faults and problems, and suitable methods to rectify them
- concrete characteristics and properties used in jump-form formwork
- functions and operations of electric or hydraulic jacking systems relating to jump-form systems
- formwork materials and erection techniques
- contents of and terms and symbols used in plans, specifications for erecting and dismantling jump-form formwork
- types and uses of tools and equipment required to erect and dismantle jump-form formwork
- processes for calculating material requirements for erecting and dismantling jump-form formwork.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions and standards, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCCA3022 Install curtain walling

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3022A Install curtain walling.
Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to fit and fix curtain walling facades to multi-storey structures to provide external cladding of structural steel or reinforced concrete, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

The unit includes the installation of fabricated frameworks with metal cladding, fabricated framework with glass panels, precast concrete panels, and manufactured and natural stone products in or on the structure.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare.
 - 1.1 Read and interpret work instructions and plan sequence of work.
 - 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.

- 2 Prepare site for installation.
 - 2.1 Set out location of curtain wall installation connections.
 - 2.2 Clear area below construction face to allow operation of support plant and equipment and isolate with barricades to work health and safety (WHS) requirements.
 - 2.3 Inspect surface of structure to receive curtain walling for conformity and prepare to receive fixings.

- 3 Install panels or cladding.
 - 3.1 Check and install curtain wall fixing brackets to set out points.
 - 3.2 Place and fix curtain walling into correct position.
 - 3.3 Install curtain walling plumb and level, align and fix into position.
 - 3.4 Fit and secure junctions between placed sections of curtain walling to fixing specifications.
 - 3.5 Install curtain wall trims.

- | | | |
|-------------------------|-----|--|
| 4 Seal curtain walling. | 4.1 | Clean surface areas in preparation for application of caulking sealants. |
| | 4.2 | Apply sealants to curtain walling and trims. |
| 5 Clean up. | 5.1 | Clean up, meeting all legislative and workplace requirements for safety, waste disposal, materials handling and protection of the environment. |
| | 5.2 | Check, maintain and store tools and equipment and report any faults. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCA3022A Install curtain walling.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for CPCCCA3022 Install curtain walling

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA3022A Install curtain walling.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by installing a minimum of 20 square metres of curtain walling for a multi-storey project:

In doing this, the candidate must:

- prepare the external surface to receive fixings
- secure fixings ensuring conformity with allowable tolerances
- install and fix sections of curtain walling checking for line and plumb
- seal erected surfaces using specified products.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards relevant to installing curtain walling
- workplace quality policies and standards for installing curtain walling
- safety requirements for installing curtain walling
- types of curtain walling materials, systems and techniques
- curtain wall fixing:
 - drilling holes
 - fixing brackets to steelwork
 - installing masonry anchors
 - trimming concrete surfaces for flatness
- contents of and terms and symbols used in plans, specifications and drawings for installing curtain walling
- procedures for safely using fall arrest systems and fall prevention methods
- processes for calculating material requirements for installing curtain walling
- purpose and safe use of swing scaffolding
- types and uses of tools and equipment used to install curtain walling.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions and standards, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCCA3024 Install lining, panelling and moulding

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit

Application

This unit of competency specifies the skills and knowledge required to prepare, set out and install lining and panelling to masonry and timber and/or metal framed walls, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

The unit includes installation of mouldings to provide decorative finishes.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|---|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions and plan sequence of work. |
| | 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian |

- Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
- 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) as required for each stage of the task.
 - 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Prepare surface for lining/panelling.
- 2.1 Select fixing procedures for lining materials.
 - 2.2 Set out surface to provide a balanced panel or board effect to width and height.
- 3 Install lining/panelling.
- 3.1 Mark lining materials and cut to length and/or shape, fit and position.
 - 3.2 Secure and fix panelling/lining.
 - 3.3 Install panelling/lining to plumb, level and uniform plane.
- 4 Cut and fix profiled architrave mouldings.
- 4.1 Mark standard architraves for edging and cut to length, position and fit.
 - 4.2 Mark skirtings and cut to length, position and fit.
 - 4.3 Mark mitre joints, cut to length, position and fit flush to face and true without gaps.
 - 4.4 Mark scribed joints and cut to length, position and fit.
 - 4.5 Cut scotia return end to profile shape and length.
 - 4.6 Mark standard pelmet moulding to length and cut, fit,

assemble and fix with mitres true without gaps.

4.7 Set out raked moulding to position and shape mould to pattern for each position.

5 Clean up.

5.1 Clean up meeting all legislative and workplace requirements for safety, waste disposal and materials handling.

5.2 Check, maintain and store tools and equipment and report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for CPCCCA3024 Install lining, panelling and moulding

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by completing to specifications:

- lining a continuous wall that includes one opening with lining boards to a minimum of 3.0 metres by 2.4 metres
- lining a continuous wall that includes one opening with sheet panelling to a minimum of 3.0 metres by 2.4 metres
- fitting profiled architraves to a minimum of one door or one window or a combination of both, with specified margins and tight fitting mitre joints
- cutting and fixing a profiled skirting with a minimum of one internal scribed joint and one external mitre joint with tight fitting joints
- scribing and mitring a Scotia, quad and colonial architrave with a minimum of one internal joint and one external mitre joint with tight fitting joints
- constructing a raking mould using either an internal scribed or external mitre joint with tight fitting joints.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards relating to all aspects of installing lining, panelling and moulding
- workplace quality policies and standards for installing lining, panelling and moulding
- safety requirements for installing lining, panelling and moulding
- types of tools and equipment required for installing lining, panelling and moulding, and their appropriate uses
- processes for lining of framed walling or battened surfaces to provide a finished surface:
 - all moulding applications where joining occurs at surface intersections and involves change of levels and mouldings running at a slope or rake.
 - junctions of surfaces, which may be at right angles or obtuse or acute angles
 - lining boards, which may be vertical, horizontal or raked

- applications of lining materials:
 - lining, panelling, mouldings, nails, screws, adhesives and gap fillers
 - lining and panelling sheet materials, including lining boards, veneer panelling, plywood, hardboard, MDF board, particle board and fibre cement board
 - to floors, walls, ceilings, windows, door frames and jambs, built-in cupboards, built-in robes, fitments and stairs
- preparation of surfaces for lining:
 - fixing of battens to surface
 - trimming of frame members to line
 - fixing of additional noggings
 - packing of frame members
 - wedging of frame members
- various mouldings:
 - beading (flat, quad, cover strips and nosings)
 - bull nosed
 - multi-curved
 - ornate period profile
 - Scotia
 - splayed
 - square
- edging:
 - architrave
 - raking moulds
 - skirting
- joints.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions and standards, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCCA3025 Read and interpret plans, specifications and drawings for carpentry work

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Application

This unit of competency specifies the skills and knowledge required to read and interpret plans and specifications for carpentry work in order to plan and sequence the work, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|--|-----|---|
| 1 Plan and prepare. | 1.1 | Locate and access plans, specifications and drawings. |
| | 1.2 | Verify currency of plans, specifications and drawings. |
| 2 Interpret construction plans, drawings and their features. | 2.1 | Determine key features of plans, specifications and drawings. |
| | 2.2 | Interpret legend symbols and abbreviations. |
| | 2.3 | Check plans, specifications and drawings dimensions against workplace site for accuracy. |
| | 2.4 | Check plans and drawing dimensions against specifications for accuracy and inconsistencies. |
| 3 Locate key features on site plan. | 3.1 | Orient the plans, specifications and drawings with the site. |
| | 3.2 | Locate site services, main features, contours and datum from the site plan. |
| 4 Determine project requirements and plan project. | 4.1 | Review drawings, plans and specifications to determine construction details and dimensions for project. |
| | 4.2 | Determine location, dimensions and tolerances for ancillary works. |
| | 4.3 | Identify environmental controls and locations. |
| | 4.4 | Determine specifications for materials, standards of work, finishes and tolerances. |
| | 4.5 | Determine material requirements and processes to be followed. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for CPCCCA3025 Read and interpret plans, specifications and drawings for carpentry work

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by reading and interpreting plans, specifications and drawings for two, minimum 30m², carpentry projects. Each project must have a minimum of seven materials. A candidate must prepare a work plan for each project that should identify the dimensions, material requirements and processes to be followed.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- features and uses of project documentation, including:
 - construction plans
 - cross-sectional plans
 - dimensions and notes
 - illustrations
 - project specifications
 - site plans, elevations, floor plans and sections
 - structural detail and specification providing illustrations and dimensions
 - drawings
 - specifications
 - supplementary specifications
 - work schedules
 - detail relating to materials and quality of work, quality assurance, nominated subcontractors, and provision of site access and facilities
 - details relating to performance, including:

- characteristics
 - material types
 - standards of work
 - tolerances
 - treatments and finishes
- processes for planning and scheduling carpentry work from plans and specifications.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCCA3026 Assemble partitions

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit

Application

This unit of competency specifies the skills and knowledge required to set out and assemble partitions for the purpose of dividing areas into useable spaces, meeting all relevant requirements of national construction codes, Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

It includes prefabricated and demountable partitions constructed of timber or metal.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|---------------------|-----|--|
| 1 Plan and prepare. | 1.1 | Read and interpret work instructions and plan sequence of work. |
| | 1.2 | Plan all work to comply with laws and regulations, national construction codes, Australian Standards, work |

- health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
- 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Set out and cut components.
- 2.1 Set out and mark location for partitions.
 - 2.2 Cut components to size.
 - 2.3 Distribute prefabricated or cut components and stack to suit job location and sequence of construction.
- 3 Assemble partitions.
- 3.1 Mark and prepare locations for member connections to designed spacings.
 - 3.2 Install fixing and fastenings to secure each junction of members tight together, flush on partition face and within ± 2 mm of set out.
 - 3.3 Assemble partitions and secure square and plumb to specification.
- 4 Clean up
- 4.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling.
 - 4.2 Check, maintain and store tools and equipment and report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for CPCCCA3026 Assemble partitions

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by setting out, cutting and assembling partitions a minimum of 4.8 metres in length and 1.8 metres in height, including:

- an L shape intersection
- a T intersection
- a window and door panel.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of national construction codes and Australian Standards relevant to assembling partitions
- workplace quality policies and standards relevant to assembling partitions
- safety requirements for assembling partitions
- types and uses of tools and equipment required for assembling partitions
- processes for assembling partitions for:
 - pre-glazed panels
 - lined or unlined door units
 - modular and custom window units
 - framed or solid
- fixing and fasteners for assembling partitions
- partition assembly techniques
- partitioning materials and manufacturers' instructions
- plans, specifications and drawings for partitions
- processes for setting out for assembling partitions.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

CPCCCA3027 Set up, operate and maintain indirect action powder-actuated power tools

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Application

This unit of competency specifies the skills and knowledge required to set-up, operate and maintain powder-actuated power tools safely and effectively to fasten materials or fix fasteners to bases, meeting all relevant requirements of work health and safety (WHS), and Commonwealth and state or territory legislation.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|---------------------|-----|---|
| 1 Plan and prepare. | 1.1 | Read and interpret work instructions and plan sequence of work. |
| | 1.2 | Plan all work to comply with laws and regulations, work health and safety (WHS) and environmental |

- requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
- 1.3 Select tools and equipment, check for serviceability and rectify or report any faults.
 - 1.4 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.
- 2 Set out fasteners.
- 2.1 Set out fasteners, adhering to minimum distances from edge of substrate material.
 - 2.2 Position and hold or fix material into designed position.
- 3 Prepare powder-actuated power tool.
- 3.1 Strip, check and reassemble tool.
 - 3.2 Check tool for operation and test fire following manufacturer's specifications and WHS requirements for use of powder-actuated power tools.
 - 3.3 Select fastener.
 - 3.4 Assess requirements for material, base and penetration and select charge.
 - 3.5 Install attachments and accessories to tool following manufacturers' specifications and WHS requirements for use of powder-actuated power tools.
 - 3.6 Locate fastener and charge in powder-actuated power tool to manufacturers' specifications.
- 4 Operate powder-actuated power tool.
- 4.1 Operate tool to fix fastener in place to manufacturers' recommendations, legislation, regulations and codes of practice.
 - 4.2 Check fastening penetration, applying appropriate depth into material.
 - 4.3 Adjust power regulating device for conditions.

- | | | |
|---|--|---|
| | 4.4 | Perform misfire procedures in accordance with manufacturers' recommendations, legislation, regulations and codes of practice. |
| | 4.5 | Remove temporary holding and fixings. |
| 5 | Maintain powder-actuated power tools and kits. | |
| | 5.1 | Check safety features of tools for serviceability in accordance with manufacturers' recommendations. |
| | 5.2 | Clean and lubricate tools to manufacturers' recommendations. |
| | 5.3 | Perform periodic maintenance service to manufacturers' specifications. |
| 6 | Store powder-actuated power tools and charges. | |
| | 6.1 | Store charges in designated container in accordance with legislation, regulations and codes of practice, and record used charges. |
| | 6.2 | Store unused fasteners, tool and attachments in carry case following manufacturers' recommendations. |
| | 6.3 | Check logbook and record maintenance. |
| 7 | Clean up. | |
| | 7.1 | Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling. |
| | 7.2 | Record safety or waste disposal discrepancies in accordance with workplace procedures. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for CPCCCA3027 Set up, operate and maintain indirect action powder-actuated power tools

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by setting up, operating and maintaining powder-actuated power tools and attachments to:

- fix steel framing to a steel base
- fix steel framing to a concrete base
- fix timber to a steel base
- fix timber to a concrete base.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of legislation and codes of practice relevant to setting up, operating and maintaining powder-actuated power tools
- workplace quality policies and standards relevant to setting up, operating and maintaining powder-actuated power tools
- safety requirements for setting up, operating and maintaining powder-actuated power tools
- types and uses of powder-actuated power tools
- powder-actuated power tools materials
- powder-actuated power tools charges and fasteners
- equipment safety manuals and instructions
- security and storage procedures for equipment and charges.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCCA3028 Erect and dismantle formwork for footings and slabs on ground

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Equivalency changed to non-equivalent.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA2003 Erect and dismantle formwork for footings and slabs on the ground. Updated to reflect current industry terminology, tools and equipment.

Application

This unit of competency specifies the skills and knowledge required to erect and dismantle formwork for slabs on ground, rebates to slabs on ground, and steps to strip footings, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

The unit includes:

- establishing required levels on site and constructing formwork using boxing materials, including timber, metal, masonry, fibre cement sheeting or reconstituted timber products, and fixings to contain wet poured concrete until it is completely cured
- stripping the formwork and preparing and storing it for re-use.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|---|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions and plan sequence of work. |
| | 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications. |
| | 1.3 Select tools and equipment, check for serviceability and report any faults. |
| | 1.4 Select and use personal protective equipment (PPE) for each part of the task. |
| | 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades. |
| | 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use. |
| 2 Erect formwork. | 2.1 Clear work area and prepare surface for safe erection of formwork. |
| | 2.2 Measure, set out and level formwork. |
| | 2.3 Apply fixing and fasteners to ensure stable formwork construction. |
| | 2.4 Construct and erect edge rebate. |
| | 2.5 Check and brace formwork for accuracy of square and dimension. |
| | 2.6 Install block-outs and cast-in services to specified locations. |

- 2.7 Apply release agent to formwork face following manufacturers' specifications.
- 3 Strip formwork and prepare for reuse.
 - 3.1 Strip edge boxing and bracing support sequentially and safely.
 - 3.2 Check formwork for re-usability and dispose of damaged components to meet safety and environmental requirements.
 - 3.3 Safely de-nail, clean, oil and store or stack reusable formwork components.
- 4 Clean up.
 - 4.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling.
 - 4.2 Check, maintain and store tools and equipment and report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is not equivalent to CPCCCA2003 Erect and dismantle formwork for footings and slabs on the ground.

Equivalency changed to non-equivalent.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCA2003 Erect and dismantle formwork for footings and slabs on the ground. Updated to reflect current industry terminology, tools and equipment.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by erecting and dismantling formwork for one slab on ground with:

- a minimum area of 30 square metres
- a minimum thickness of 100 millimetres
- an edge rebate and an internal corner.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards relevant to erecting and dismantling formwork for footings and slabs on ground
- workplace quality policies and standards relating to formwork
- safety requirements for erecting and dismantling formwork for footings and slabs on ground
- environmental requirements for erecting and dismantling formwork for footings and slabs on ground
- types and uses of tools and equipment for erecting and dismantling formwork for footings and slabs on ground
- types, characteristics and applications of formwork materials
- formwork techniques
- types of plans, specifications and drawings relating to formwork
- symbols and notations used on plans, specifications and drawings for formwork
- processes for measuring and setting out formwork

- processes for calculating material requirements for erecting formwork for footings and slabs on ground
- requirements for line, level and plumb for erecting formwork for footings and slabs on ground.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCCM1011 Undertake basic estimation and costing

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCM1011A Undertake basic estimation and costing. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to prepare a basic estimate of material, labour and costs for a construction project.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Common

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|-----------------------|-----|--|
| 1 Gather information. | 1.1 | Review plans and specifications for basic construction task. |
| | 1.2 | Create a material list for the basic construction task. |

- | | | |
|---|-----|---|
| | 1.3 | Obtain unit costs of materials on material list from suppliers. |
| 2 Estimate and cost materials for basic construction task | 2.1 | Estimate quantities of each item on material list. |
| | 2.2 | Calculate cost of materials based on estimated quantities and unit costs. |
| 3 Estimate and cost labour for basic construction task. | 3.1 | Estimate labour hours required for the basic construction task. |
| | 3.2 | Calculate cost of labour based on estimated hours and hourly rate. |
| 4 Document costs of basic construction task. | 4.1 | Calculate total cost of task materials and labour. |
| | 4.2 | Prepare basic costing sheet for the task. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCM1011A Undertake basic estimation and costing.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCCM1011 Undertake basic estimation and costing

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCM1011A Undertake basic estimation and costing. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all the elements, performance criteria and foundation skills of this unit by estimating, calculating and recording materials and labour requirements for a construction task and preparing a basic costing sheet.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, national construction codes, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, plans and specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace policies and standards for estimating and costing basic construction tasks
- processes for reviewing and interpreting plans and specifications for basic construction tasks
- processes for sourcing material and unit costs
- processes for estimating:
 - quantities of materials for basic construction tasks
 - labour for basic construction tasks
- processes for calculating requirements and costs of:
 - materials for basic construction tasks
 - labour for basic construction tasks
- processes for preparing basic costing sheets.

Assessment Conditions

This unit must be assessed while undertaking workplace tasks:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCCM1014 Conduct workplace communication

Modification History

Release 1.

Supersedes and equivalent to CPCCCM1014A Conduct workplace communication.

The unit of competency was updated to the Standards for Training Packages 2012.

This version first released with CPC Construction, Plumbing and Services Training Package Version 4.0.

Application

This unit specifies the skills and knowledge required to communicate effectively with other workers in a construction workplace.

It includes gathering, conveying and receiving information through verbal and written forms of communication.

The unit requires a person undertaking this work to demonstrate communication skills as an integral part of routine work.

It applies to workers in the construction industry. It involves working under supervision in a team environment.

No licensing, legislative, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1. Gather, convey and receive information.	1.1 Gather, receive and respond to verbal and written instructions with appropriate actions. 1.2 Convey instructions accurately.

	<p>1.3 Receive, interpret and confirm conveyed information.</p> <p>1.4 Use questions to gain additional information and to clarify understanding, using appropriate communication transfer techniques.</p> <p>1.5 Respond to work signage and other work health and safety (WHS) requirements with appropriate actions.</p>
2. Use routine face-to-face communication.	<p>2.1 Receive and respond to routine instructions and messages.</p> <p>2.2 Follow workplace procedures for workplace requirements in communication with others.</p> <p>2.3 Access and interpret information from a range of sources using a variety of communication modes.</p> <p>2.4 Select and sequence information appropriately.</p> <p>2.5 Complete verbal and written reporting.</p>
3. Use visual communication.	<p>3.1 Use visual communication that follows accepted industry practice or social conventions.</p> <p>3.2 Obtain, confirm and acknowledge attention of communicating parties.</p> <p>3.3 Clarify and confirm the intention of the visual communication at each step.</p> <p>3.4 Question or visually cancel visual communication that is unclear or ambiguous.</p> <p>3.5 Follow up instances of unclear visual communication to avoid repeated problems.</p>
4. Participate in simple meeting processes.	<p>4.1 Identify and follow meeting processes.</p> <p>4.2 Seek responses and provide them to others in the meeting group.</p> <p>4.3 Provide constructive contributions.</p> <p>4.4 Identify and record meeting goals and outcomes.</p>

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCM1014A Conduct workplace communication.

Assessment Requirements for CPCCCM1014 Conduct workplace communication

Modification History

Release 1.

Supersedes and equivalent to CPCCCM1014A Conduct workplace communication.

The unit of competency was updated to the Standards for Training Packages 2012.

This version first released with CPC Construction, Plumbing and Services Training Package Version 4.0.

Performance Evidence

To demonstrate competency in this unit, a person must demonstrate conducting workplace communication three times in the English language, including during a simple meeting on at least one occasion.

In doing this, the person must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- construction industry requirements for undertaking all aspects of conducting workplace communication including interpreting work orders and reporting problems
- construction industry processes to:
 - gather, convey and receive information in the workplace
 - carry out routine face-to-face communication in the workplace
 - apply visual communication in the workplace
 - participate in simple meetings.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment. Tasks are to be performed to the level of proficiency and within the time limits expected in a workplace.

This unit must be assessed in the English language.

Assessors are responsible for ensuring that the person demonstrating competency has access to:

- a work role in a construction industry team

- appropriate documents, materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- requirements of appropriate sections of legislation and regulations
- relevant workplace policies and procedures.

CPCCCM2002 Carry out hand excavation

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCCM2002A Carry out excavation. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to undertake hand excavation tasks to form excavations for footings and the provision of services.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Common

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare for hand excavation.	1.1 Read and interpret work instructions and plan sequence of work.
	1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian

- Standards, work health and safety (WHS) and environmental requirements, workplace requirements, drawings and specifications.
- 1.3 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.4 Select tools and equipment, check for serviceability and report any faults.
- 2 Prepare excavation site and erect safety equipment.
- 2.1 Inspect work site to locate above ground services and assess hazards and determine risk controls.
 - 2.2 Locate service markers or taped areas to ensure underground services are avoided and free from interference.
 - 2.3 Establish line and depth using site pegs/profiles to mark excavation limits.
 - 2.4 Establish required signage and barricades and other risk controls.
 - 2.5 Establish temporary drainage system to divert surface and sub-surface water from excavation.
- 3 Dig excavations.
- 3.1 Dig excavations with hand tools to route, line and depth, following procedures to minimise risk to self and others.
 - 3.2 Install basic trench/excavation support.
 - 3.3 Use hand tools to remove loose material from excavation.
- 4 Check and store tools and equipment.
- 4.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling.
 - 4.2 Check, maintain and store tools and equipment and report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCCM2002A Carry out excavation.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCCM2002 Carry out hand excavation

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCCM2002A Carry out excavation. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all the elements, performance criteria and foundation skills of this unit by excavating, by hand, a 3 metre trench with a right angle, .5 metres deep and .5 metres wide.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, workplace requirements, drawings and specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the Commonwealth and state or territory legislation relevant to carrying out excavations
- workplace quality policies and standards for carrying out excavations
- safety requirements for carrying out excavations
- environmental requirements for carrying out excavations
- types and uses of hand tools and equipment required for carrying out excavations
- locating services on construction sites
- use and types of service markers
- processes for establishing trench line and depth
- temporary drainage systems to divert surface and sub-surface water from excavations
- types of basic trench excavation support.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCCM2004 Handle construction materials

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCCM2004A Handle construction materials.
Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to safely handle and store commonly used construction materials manually or in preparation for mechanical handling.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Common

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|---|-----|---|
| 1 Prepare to handle construction materials. | 1.1 | Review work instructions to handle construction materials. |
| | 1.2 | Prepare all work to comply with laws and regulations, national construction codes, Australian Standards, work |

- health and safety (WHS) and environmental requirements, manufacturers' specifications and safety data sheets (SDS), workplace requirements, drawings and specifications.
- 1.3 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.4 Select tools and equipment, check for serviceability and report any faults.
- 2 Manually handle, sort, stack and store construction materials.
- 2.1 Sort materials to suit material type, size and safety requirements, including SDS.
 - 2.2 Apply safe manual handling techniques to move materials to specified location or to stack and secure materials for mechanical handling in accordance with the type of material and equipment to be used.
 - 2.3 Stack materials clear of access ways and for ease of identification, retrieval, task sequence and task location.
 - 2.4 Protect materials against physical and water damage.
 - 2.5 Apply procedures to ensure no cross-contamination of materials.
 - 2.6 Identify and isolate hazardous materials for separate handling.
 - 2.7 Apply dust suppression procedures to minimise health risk.
- 3 Clean up.
- 3.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling.
 - 3.2 Check, maintain and store tools and equipment and report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCCM2004A Handle construction materials.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCCM2004 Handle construction materials

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCCM2004A Handle construction materials.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all the elements, performance criteria and foundation skills of this unit by handling construction materials for three different tasks, including:

- safely handling, sorting and stacking:
 - varying lengths of timber or similarly proportioned materials
 - different sizes and types of sheet material
 - bagged materials
 - simulated hazardous materials
- preparing the following for mechanical handling:
 - varying lengths of timber or similarly proportioned materials
 - different sizes and types of sheet material.

All work must be performed to the standard required in the workplace and must comply with work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- requirements of Commonwealth and state or territory work health and safety (WHS) legislation relevant to handling construction materials
- safety data sheets
- workplace quality policies and standards for handling construction materials
- safety requirements for handling construction materials
- methods of securing materials for mechanical handling
- types and uses of tools and equipment for handling construction materials:
 - hammers
 - pallets

- pallet jacks
- pinch bars
- tin snips
- wheelbarrows
- hand trolleys
- requirements, including personal protection equipment, and processes for safely manually handling each of the following materials:
 - insulation
 - joinery units
 - metal sheeting
 - paints and sealants
 - plaster or fibre cement sheeting
 - reinforcement materials
 - scaffolding components
 - structural steel sections and components
 - timber
 - hazardous materials
- methods of handling construction materials:
 - material size, weight or shape factors necessitating the assistance of other workers
 - correct lifting and carrying techniques, use of pallets and control of waste
 - preparation for mechanical handling, including the use of forklifts, pallet jacks and trucks.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed while undertaking workplace tasks:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCCM2005 Use construction tools and equipment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCCM2005B Use construction tools and equipment. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to safely select and use basic construction tools and equipment.

It includes hand tools, power tools and pneumatic tools.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Common

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Select and use tools and equipment.

1.1 Review work instructions for a construction task.

1.2 Select equipment and hand, power and pneumatic tools

- for the construction task, identify functions and operations, check for serviceability and report any faults.
- 1.3 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.4 Conduct pre-operational checks to manufacturers' specifications.
 - 1.5 Use equipment and hand, power and pneumatic tools following WHS requirements and manufacturers' specifications.
- 2 Clean up.
- 2.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling.
 - 2.2 Check, maintain and/or sharpen, store and secure tools and equipment and report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCCM2005B Use construction tools and equipment.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCCM2005 Use construction tools and equipment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCCM2005B Use construction tools and equipment. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must complete three different construction tasks. Over the course of these three tasks, they must satisfy all the elements, performance criteria and foundation skills of this unit by safely and effectively using and maintaining and/or sharpening each of the following at least once:

- hand tools:
 - retractable tape measure
 - builders square
 - string line
 - hand saw
 - hammer
 - chisel
 - trimming knife
 - clamps
 - spirit level
 - tin snips
 - shovel/spade
 - mattock
 - crow bar/fencing bar
- power/battery/pneumatic tools and equipment:
 - circular saw
 - reciprocating saw
 - angle grinder
 - drill/driver drill
 - nail gun
 - bench grinder
 - jack hammer

- extension lead
- portable residual current device
- air compressor and hoses.

Use of all tools must be to the standard required in the workplace and use must comply with work health and safety (WHS) requirements and manufacturers' specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace quality policies and standards for using basic construction tools and equipment
- safety requirements for using basic construction tools and equipment
- manufacturers' specifications for basic construction tools and equipment
- types and uses of basic tools and equipment, including:
 - hand tools:
 - retractable tape measure
 - builders square
 - string line
 - hand saw
 - hammer
 - chisel
 - trimming knife
 - clamps
 - spirit level
 - tin snips
 - shovel/spade
 - mattock
 - crow bar/fencing bar
 - power/battery/pneumatic tools and equipment:
 - circular saw
 - reciprocating saw
 - angle grinder
 - drill/driver drill
 - nail gun
 - bench grinder
 - jack hammer
 - extension lead
 - portable residual current device
 - air compressor and hoses.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed while undertaking workplace tasks:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- industry-standard equipment used to perform the tasks specified in performance evidence
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCCM2009 Carry out basic demolition

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCCM2009A Carry out basic demolition.
Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required remove components from single storey buildings and structures using basic demolition techniques. It includes the preparation of the site for the demolition process and the removal of components.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Common

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|--|
| 1 Plan and prepare for basic demolition. | 1.1 Read and interpret site demolition plan and plan sequence of work. |
|--|--|

- 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, workplace requirements, drawings and specifications.
 - 1.3 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.4 Select tools and equipment, check for serviceability and report any faults.
- 2 Prepare demolition site and erect safety equipment.
 - 2.1 Inspect work site to assess hazards and determine risk controls.
 - 2.2 Confirm with supervisor or regulatory authorities that existing services have been disconnected.
 - 2.3 Install signs and barriers around the demolition site and to identify underground and above-ground services.
 - 2.4 Identify and report hazardous material for separate demolition and handling.
- 3 Remove building components.
 - 3.1 Remove building components in sequence and in accordance with site demolition plan, demolition method statement, standards and workplace procedures.
 - 3.2 Remove components to storage or disposal area using safe materials handling techniques.
- 4 Check and store tools and equipment.
 - 4.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling.
 - 4.2 Check, maintain and store tools and equipment and report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and equivalent to CPCCCM2009A Carry out basic demolition.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCCM2009 Carry out basic demolition

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and equivalent to CPCCCM2009A Carry out basic demolition.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must satisfy all the elements, performance criteria and foundation skills of this unit by, on one occasion, following a site demolition plan, demolition method statement and instructions to safely remove fixtures and fittings, ceilings and walls of a structure, clean up, and dispose of or salvage materials.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, workplace requirements and the site demolition plan.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the Commonwealth and state or territory legislation and Australian Standards relevant to carrying out basic demolition
- workplace policies and standards for carrying out basic demolition
- safety requirements for carrying out basic demolition, including personal protection equipment and asbestos safety requirements
- environmental requirements for carrying out basic demolition
- types and uses of tools and equipment required for carrying out basic demolition
- processes for:
 - assessing hazards and determining risk controls when carrying out basic demolition
 - identifying and reporting hazardous materials when carrying out basic demolition
- safe manual handling techniques for:
 - removing components to storage or disposal areas
 - stacking components for storage
 - preparing components for transport.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, industry standard equipment, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCCM2012 Work safely at heights

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCM2010B Work safely at heights.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to work safely on construction sites where the worker has the potential to fall from one level to another.

This unit of competency does not cover the erection of scaffold or work platforms, but it does include identifying and reporting common faults with scaffold or work platform systems.

Work at heights is undertaken in a range of construction work, including new construction, renovation, refurbishment and maintenance.

This unit also applies to workers in other industries who need to control the two separate risks associated with people and objects falling from heights.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Identify task requirements.
 - 1.1 Read work order and associated drawings and consult with relevant persons to determine the proposed work-at-heights task, including where and how work is to be carried out, and the equipment or plant to be used.
 - 1.2 Participate in the development of the safe work method statement (SWMS) for the specified task.
 - 1.3 Select appropriate work-at-heights control measures including required fall restraint devices and/or fall arrest devices in accordance with workplace and regulatory requirements.
 - 1.4 Determine location of anchor points for harness-based work to safely access required work area.
 - 1.5 Review completed SWMS and clarify issues with relevant persons.

 - 2 Access and assess work area.
 - 2.1 Select personal protective equipment (PPE), check for serviceability and report problems.
 - 2.2 Identify unstable, fragile or brittle work surfaces and implement control measures to prevent a fall from height.
 - 2.3 Check fall protection equipment, including required fall restraint and fall arrest devices to ensure serviceability and report problems.
 - 2.4 Identify, select and install signage and barricade equipment in accordance with SWMS or relevant safe work procedure.
 - 2.5 Install/fit fall protection equipment, including fall restraint devices and fall arrest devices as appropriate, within the limitations of licensing requirements, level of authority and SWMS.
 - 2.6 Ensure required fall protection, scaffold and barriers have been adequately installed and where necessary certified, in accordance with regulatory and workplace requirements.
 - 2.7 Connect to fall protection equipment, including temporary anchor points, without being exposed to a risk

- of a fall from height.
- 2.8 Consult with relevant persons to confirm fall protection equipment and safety systems are correctly fitted, adjusted and installed, and are appropriate to the task.
 - 2.9 Access work area safely and move and place tools, equipment and materials using methods that eliminate or minimise the risk of falling objects.
- 3 Conduct work tasks.
- 3.1 Undertake work tasks in compliance with the SWMS and workplace requirements.
 - 3.2 Traverse between anchor points while remaining connected to the fall prevention system and protected from a risk of a fall from height.
 - 3.3 Use PPE appropriate to the task and in accordance with manufacturer requirements.
 - 3.4 Maintain communication with relevant persons while working at height.
 - 3.5 Keep fall protection equipment in place and adjust to allow for movement during work.
 - 3.6 Keep fall prevention equipment adjusted to prevent falling off or through a structure using the restraint technique.
 - 3.7 Keep scaffold/work platform components and fall barriers in place during work.
 - 3.8 Monitor control measures and consult with relevant persons to respond to changing work practices or site conditions.
 - 3.9 Exit from work area removing tools and materials in compliance with worksite procedures, safety and environmental requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCM2010B Work safely at heights.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCCCM2012 Work safely at heights

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCM2010B Work safely at heights.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by working safely at heights above 2 m on three occasions, using different fall protection equipment/devices on each occasion.

One occasion must include a restraint technique (anchor point) system with a minimum of three anchor points.

The candidate must access the work area, traverse between anchor points and exit from the work area.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace and regulatory requirements for working safely at heights under applicable Commonwealth, state or territory work health and safety (WHS) legislation, Australian Standards and codes of practice:
 - hazard identification and risk control
 - job safety and environmental analyses (JSEAs)
 - safe work method statements (SWMSs)
 - safety data sheets (SDSs)
 - safety manuals and instructions for plant, tools and equipment:
 - operation manuals
 - manufacturer specifications
 - safety signs and load charts for plant
 - signage and barricades
 - selection, fitting and use of personal protective equipment (PPE)
 - environmental and worksite safety plans
 - reporting problems
- processes for planning to work safely at heights:

- assessment of weather and ground conditions that may affect safety while working at heights
- assessment of conditions and hazards
- determination of work requirements
- identification of equipment defects
- inspection of worksites
- methods for identifying common faults with scaffold or work platform systems
- types, characteristics, uses and limitations of equipment used when working safely at heights:
 - air compressors and hoses
 - anchor points
 - edge protection
 - elevated work platforms (EWPs)
 - fall arrest anchors
 - fall arrest inertia reels
 - guard rails
 - hand and power tools including nail guns
 - ladders
 - power leads
 - rescue equipment
 - ropes
 - safety harnesses, lanyards and attachments such as snap hooks and carabiners
 - scaffolding
 - shock absorbers
 - stairways
 - static line systems
 - temporary anchor systems
 - trestles
- safe methods for accessing work area, traversing between anchor points and exiting from work area including removing tools and materials when working at heights.
-

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- industry-standard equipment required to perform the tasks specified in the Performance Evidence
- appropriate workplace information and records, including policies, procedures and legislative requirements.

CPCCCM2013 Undertake basic installation of wall tiles

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Application

This unit of competency specifies the skills and knowledge required to use adhesive to undertake basic installation of tiles to flat wall substrates.

It includes the preparation, installation and grouting of tiles for walls, including cutting simple penetrations. It does not include tiling internal and external wall junctions and junctions between walls and floors.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Common

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Prepare for basic installation of wall | 1.1 Read and interpret task work instructions. |
| | 1.2 Select and use personal protective equipment (PPE) as |

- tiles. required for each stage of the task.
- 1.3 Plan all work to comply with laws and regulations, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.4 Select tools and equipment, check for serviceability and report any faults.
 - 1.5 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
 - 1.6 Cover surrounding surfaces to protect from damage.
- 2 Set out basic wall tiling.
- 2.1 Check tiles conform to the requirements of the task and are fit for purpose.
 - 2.2 Set out basic tile work grid pattern to be symmetrical and balanced.
- 3 Prepare substrate and tiles, and install tiles
- 3.1 Check that the wall substrate is flat.
 - 3.2 Prepare and apply adhesive to substrate and/or tile surface.
 - 3.3 Prepare and install tiles set to level and plumb, maintaining joint and face alignment.
 - 3.4 Cut simple penetration/s in tiles.
 - 3.5 Check joints, tile edges and surface alignment.
- 4 Grout tiles.
- 4.1 Clean and prepare joints to receive grout.
 - 4.2 Mix and apply grout.
 - 4.3 Clean and polish tiles.
- 5 Clean up.
- 5.1 Clear work area and dispose of, reuse or recycle materials.

- 5.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers' recommendations.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCCM2013 Undertake basic installation of wall tiles

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Performance Evidence

To demonstrate competency, a candidate must satisfy all the elements, performance criteria and foundation skills of this unit by preparing a flat wall substrate and tiling a minimum of 1.62 square metres with a penetration.

All work must be performed to the standard required in the workplace and must comply with work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace policies for basic installation of wall tiles
- safety requirements for installing wall tiles, including personal protective equipment (PPE)
- environmentally friendly waste management for basic installation of wall tiles
- simple drawings for basic installation of wall tiles
- types and uses of tools and equipment for basic installation of wall tiles
- processes for calculation of material requirements for basic installation of wall tiles.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCCM3002 Operate a truck-mounted loading crane

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCM3002A Operate a truck mounted loading crane. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to safely and effectively operate a truck-mounted loading crane to load and unload building products delivered from suppliers to the construction site. It includes set-up, operation, control and shutdown of the crane.

This unit supports workers who safely and efficiently use a truck-mounted loading crane to handle construction materials and who would be expected to take responsibility for organising and completing these tasks with a high degree of self direction.

Completion of the general construction induction training program, specified in the Safe Work Australia model Code of Practice: Construction Work, is required by anyone carrying out construction work. Achievement of CPCCWHS1001 Prepare to work safely in the construction industry meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare to	1.1 Interpret work order and associated documentation and
-----------------------	---

- operate truck-mounted crane.
- 1.1 clarify requirements with relevant persons.
- 1.2 Plan all work to comply with relevant legislation, regulations, standards, codes, work health and safety, environmental and workplace requirements.
- 1.3 Select plant, tools and equipment required for work tasks, check for serviceability and rectify or report identified faults.
- 1.4 Conduct calculations to ensure load mass does not exceed the working capacity of the crane and manufacturer limits.
- 1.5 Select and fit personal protective equipment (PPE) appropriate for work activities.
- 2 Set up and operate truck-mounted crane.
- 2.1 Position truck at the designated drop-off point on a level operating surface.
- 2.2 Activate crane and manoeuvre it to its operating position from its lockdown position.
- 2.3 Check crane movements comply with requirements for safe crane operation.
- 2.4 Prepare load for lifting in accordance with crane, truck and dogging requirements.
- 2.5 Check that site is clear and safe to receive or dispatch the load.
- 2.6 Manoeuvre load to position using controls in accordance with manufacturer requirements.
- 2.7 Monitor load continually throughout its travels.
- 2.8 Shut down crane and return it to its lockdown position.
- 3 Finalise operation of truck-mounted crane.
- 3.1 Complete documentation in accordance with workplace requirements.
- 3.2 Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.

- 3.3 Clean, check, maintain and store plant, tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCM3002A Operate a truck mounted loading crane.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCCM3002 Operate a truck-mounted loading crane

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCM3002A Operate a truck mounted loading crane. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by setting up and operating a truck-mounted loading crane involving loading and unloading at least two full loads of building and construction materials and products, and extending all functions of the crane to their maximum working capacity.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace and regulatory requirements for operating a truck-mounted loading crane under applicable Commonwealth, state or territory work health and safety (WHS) legislation, Australian Standards and codes of practice:
- job safety and environmental analyses (JSEAs)
- safe work method statements (SWMSs)
- safety data sheets (SDSs)
- safety manuals and instructions for plant, tools and equipment
- signage and barricades
- environmental and worksite safety plans
- personal protective equipment (PPE)
- reporting problems
- processes for preparing loads for lifting in accordance with crane, truck and dogging requirements
- designs and functions of truck-mounted loading cranes
- safe truck-mounted crane operations:
 - boom up and down
 - operation of attachments
 - operation of outriggers
 - slew left and right

- telescope in and out
- mathematical processes for ensuring load masses do not exceed the working capacity of the crane and manufacturer limits
- requirements for cleaning up work area, maintaining and storing plant, tools, equipment and materials, and for environmentally friendly waste management.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- industry-standard equipment required to perform the tasks specified in the Performance Evidence
- appropriate workplace information and records, including policies, procedures and legislative requirements.

CPCCCO2013 Carry out concreting to simple forms

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Knowledge Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCCO2013A Carry out concreting to simple forms. Updated to meet the Standards for Training Packages.

Application

This unit of competency specifies the skills and knowledge required to safely install formwork, reinforcement and place and finish concrete for the construction of minor slabs, pathways and other minor works to a specified design finish, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Concreting

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--------------------------------|---|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions and plan sequence of work. |
| | 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications. |
| | 1.3 Select tools and equipment, check for serviceability and report any faults. |
| | 1.4 Select and use personal protective equipment (PPE) for each part of the task. |
| | 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades. |
| | 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use. |
| 2 Erect simple formwork. | 2.1 Prepare substrate. |
| | 2.2 Review formwork design from drawings. |
| | 2.3 Erect formwork. |
| | 2.4 Install vapour barrier. |
| 3 Place and tie reinforcement. | 3.1 Handle, cut and position reinforcing components. |
| | 3.2 Position reinforcing bars and mesh. |
| | 3.3 Position bar chairs and spacers with minimum edge cover. |
| 4 Place concrete. | 4.1 Clean formwork or excavation of excess material and |

- debris before concrete placement.
- 4.2 Transport concrete by wheelbarrow.
 - 4.3 Place concrete in formwork to specified depth.
 - 4.4 Screed concrete to the alignment of formwork and specified datums.
 - 4.5 Finish surface of concrete to specifications.
- 5 Strip simple formwork.
- 5.1 Denail timber components following stripping of formwork.
 - 5.2 Clean and stack components and store for reuse or bundle for removal.
 - 5.3 Remove formwork components from site.
- 6 Clean up.
- 6.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal, materials handling and protection of the environment.
 - 6.2 Check, maintain and store tools and equipment and report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCO2013A Carry out concreting to simple forms.

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCCO2013 Carry out concreting to simple forms

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Knowledge Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCCO2013A Carry out concreting to simple forms. Updated to meet the Standards for Training Packages.

Performance Evidence

To demonstrate competency, a candidate must satisfy all the elements, performance criteria and foundation skills of this unit by carrying out concreting to a simple form slab of at least 1 square metre and 100 mm in depth by:

- preparing substrate
- erecting formwork
- cutting, placing and tying reinforcement
- placing and hand-screeding concrete to the required finished level and job specification.

All work must be planned and performed using appropriate tools and equipment to the standard required in the workplace and must comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards relevant to concreting to simple forms
- workplace quality policies and standards relevant to concreting to simple forms
- safety requirements for concreting to simple forms
- types and uses of tools and equipment required for concreting to simple forms
- uses of concreting materials, including:
 - bar chairs
 - bracing

- edge form and boards
- fabric sheet mesh
- pegs
- spacers
- reinforcing bars
- vapour barriers
- concreting techniques, including:
 - placing
 - screeding
 - finishing
 - floating
- simple forms of concrete, including:
 - beam thickeners
 - channels
 - garden edges
 - pathways
 - post holes
 - simple concrete aprons and slabs
- finishing, including:
 - broomed
 - trowelled
 - trowelling machine finish
 - wood-floated
- properties and use of concrete relevant to concreting to simple forms, including:
 - uses and limitations at differing strength levels
 - ingredients and proportions
 - maintaining design strength during placement
 - mixing techniques
 - curing techniques
 - vibrating and over-vibration
- levelling techniques for concreting to simple forms
- materials storage and environmentally friendly waste management
- plans, drawings and specifications for concreting to simple forms
- processes for the calculation of material requirements for concreting to simple forms, including volume of concrete
- quality requirements for concreting to simple forms
- simple formwork and reinforcing componentry.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions and standards, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCCO2014 Carry out concrete work

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Correction to Foundation Skills.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCO2014A Carry out concrete work.
Updated to meet the Standards for Training Packages.

Application

This unit of competency specifies the skills and knowledge required to carry out concreting work on general construction projects for the construction of in situ reinforced concrete structures, such as slabs and other common concrete works.

It includes setting-out, reinforcing, erecting and dismantling formwork, and placing, finishing and curing concrete.

The unit supports workers to use the tools, equipment and materials to carry out concrete work, working as members of a team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Determine

| requirements to carry-out concrete work. | 1.2 | Review task specifications, and check to make sure they are in accordance with legislation, regulations and codes of practice. |
| | 1.3 | Review work health and safety (WHS) requirements for the task in accordance with safety plans and policies. |
| | 1.4 | Identify safety signage and barricade requirements. |
| | 1.5 | Review environmental requirements for the task in accordance with environmental plans and legislative requirements. |
| | 1.6 | Determine plant, tools, equipment and formwork components and materials required to carry out task. |
| | 1.7 | Calculate materials quantities. |
| | 1.8 | Determine location of steel reinforcement and formwork from drawings and reinforcement schedule. |
| | 2 Prepare to carry-out concrete work. | 2.1 |
| 2.2 | | Obtain, safely handle, locate and prepare materials. |
| 2.3 | | Obtain plant, tools, equipment and formwork components and materials, check for serviceability and rectify or report any faults |
| 2.4 | | Check reinforcement against reinforcement drawings and specifications. |
| 2.5 | | Select fixing and fasteners. |
| 3 Set out for concrete work. | 3.1 | Set string lines accurately from existing pegs. |
| | 3.2 | Check grades to ensure correct fall. |
| | 3.3 | Protect surfaces to prevent damage. |
| 4 Construct and install reinforcement for | 4.1 | Cut and bend reinforcing fabric and bars in accordance with project drawings and specifications. |

- concrete work.
- 4.2 Tie and fix fabric and bars to configuration from project drawings and specifications.
 - 4.3 Attach stiffening rods to panels as required to facilitate handling.
 - 4.4 Locate reinforcement material in formwork and place on bar chairs or spacers in accordance with drawings, noting clearance from formwork.
 - 4.5 Locate and secure cast-in items.
- 5 Erect formwork for concrete work.
- 5.1 Clear work area and prepare surface for safe erection of formwork.
 - 5.2 Set out formwork to requirements of drawings and specifications.
 - 5.3 Assemble and erect formwork to specifications.
 - 5.4 Remove debris, sawdust and other waste material from formwork.
 - 5.5 Apply form release agent in accordance with manufacturers' specifications.
- 6 Carry out concrete work.
- 6.1 Use correct manual handling techniques with wheelbarrow to transport concrete and to discharge into formwork.
 - 6.2 Ensure control of discharge of concrete from concrete pump line and chute into formwork.
 - 6.3 Place concrete in accordance with requirements and screed to specified levels and grades.
 - 6.4 Compact concrete to specification using immersion vibrator or other specified method.
 - 6.5 Finish and cure concrete in accordance with specifications.
 - 6.6 Position and install control joints to specification and to current Australian Standard and codes.
 - 6.7 Position dowel joints in accordance with specification.

	6.8	Ensure concrete surface is adequately covered and protected.
7 Strip formwork from concrete work.	7.1	Carefully remove edge boxing and braces in sequence.
	7.2	De-nail, clean and store timber components.
	7.3	Remove, clean, oil and store steel components.
	7.4	Discard damaged formwork components after stripping.
	7.5	Clean screens safely before movement.
8 Clean up after completing concrete work.	8.1	Clear work area and dispose of, reuse or recycle materials in accordance with legislation, regulations, codes of practice and task requirements.
	8.2	Clean, check, maintain and store plant, tools and equipment in accordance with manufacturers' specifications and workplace requirements.

Foundation Skills

A person demonstrating competency in this unit must have the following language, literacy, numeracy and employment skills:

- reading skills to:
 - interpret task documentation, including drawings, specifications and plans
 - review safety plans and policies and environmental plans
 - understand written instructions, procedures and signs
 - interpret manufacturers' specifications and workplace requirements
 - interpret legislative requirements including those of regulatory authorities, Australian standards and the National Construction Code (NCC)
- numeracy skills to:
 - calculate quantities of materials
 - calculate formwork and fixing requirements
 - set out for concrete work
- communication and teamwork skills to:
 - determine requirements

- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- follow instructions
- identify and accurately report any faults
- use and interpret non-verbal communication, such as hand signals

Unit Mapping Information

Supersedes and is equivalent to CPCCCO2014A Carry out concrete work

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCCCO2014 Carry out concrete work

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Correction to Foundation Skills.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCO2014A Carry out concrete work.
Updated to meet the Standards for Training Packages.

Performance Evidence

To demonstrate competency in this unit, a person must carry out concrete work in three concreting projects. Each project must:

- use a minimum of two cubic metres of concrete
- incorporate a minimum of two different finishes.

At least one project must contain angled formwork and bent reinforcement.

In doing this, the person must meet the requirements of the unit's elements and associated performance criteria:

- determining requirements to carry-out concrete work
- preparing to carry-out concrete work\
- setting-out for concrete work
- constructing and installing reinforcement for concrete work
- erecting formwork for concrete work
- carrying out concrete work
- stripping formwork from concrete work
- cleaning-up after completing concrete work.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- rules and guidelines for using explosive power tools under applicable Commonwealth, state or territory legislation, standards and codes of practice. These include requirements for work health and safety and protection of the environment:
 - job safety analyses (JSAs)

- safe work method statements (SWMSs)
- safety data sheets (SDSs)
- safety manuals and instructions for plant, tools and equipment
- signage and barricades
- personal protection equipment (PPE)
- working at heights requirements
- environmental and work site safety plans
- requirements of state and territory regulators, Australian standards and the National Construction Code (NCC) relating to carrying out concrete work
- site and equipment safety requirements, including:
 - job safety analysis (JSA) and safe work method statements (SWMS)
 - safety data sheets (SDS)
- workplace requirements for all aspects of carrying out concrete work including interpreting work orders and reporting problems
- interpreting engineering drawings and specifications
- processes for determining materials quantities
- quality requirements
- concreting work, including:
 - beams
 - columns
 - footings
 - footpaths
 - lintels
 - pads
 - ramps
 - repairing of kerb and channel
 - slabs on ground
 - stairs
 - structural members
 - suspended slab
 - walls
- concrete characteristics and properties
- concreting principles
- steel reinforcement characteristics
- structural technology principles relative to minor concreting works
- concreting equipment types, characteristics, technical capabilities and limitations, including:
 - bolt cutters
 - brushes
 - buckets
 - chutes

- curing agent applicator
- edging tools
- floats
- hammers
- hoses
- kibble
- mesh guillotine
- nips
- rakes
- reinforcement benders
- rods
- screeds
- short handle shovels
- shutters
- sponges
- steam generator
- tarpaulins
- tremies
- trowels
- vibrators
- wheelbarrows
- types of concreting formwork, their applications and installation methods, including:
 - expanded polystyrene
 - fiberglass
 - masonry
 - plywood
 - steel shutters
 - structural cardboard
 - timber
- concreting processes and equipment, including:
 - setting out
 - erecting formwork
 - transporting concrete, including:
 - crane and kibble
 - pre-mix truck
 - pumping equipment
 - wheelbarrow
 - placing concrete, including:
 - kibble
 - pumping equipment

- shoveling
- tremies
- truck placed
- vibrating
- wheelbarrow
- materials handling methods
- finish techniques, including:
 - broom finished
 - brushed
 - using bull float
 - using mechanical troweling machine
 - using steel trowel
 - using wood float
- curing, including:
 - applied moisture
 - coating with a membrane
 - curing compound
 - flooding
 - plastic sheeting
 - steam.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment. Tasks are to be performed to the level of proficiency and within the time limits expected in a workplace.

Candidates must have access to:

- industry-standard equipment used to perform the tasks specified in performance evidence
- appropriate workplace information and records, including policies, procedures and legislative requirements.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCCO4001 Supervise concreting work

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCO4001A Supervise concreting work.
Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the outcomes required to oversee on-site preparation and finish of concreting work. It includes initiating, supervising and monitoring concreting operations to ensure completion within scheduled timeframes and quality standards.

This unit of competency applies to builders, site supervisors and other industry personnel responsible for concreting work on residential and commercial projects.

This unit of competency is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Concreting.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Supervise preparation 1.1 Communicate work instructions to team members and

- for concreting work.
- invite and address questions.
- 1.2 Confirm team members' understanding of work health and safety (WHS) and environmental requirements.
 - 1.3 Confirm team members' selection of materials, tools and equipment is consistent with job requirements.
 - 1.4 Process reports of faulty equipment and tools and source replacements as required.
 - 1.5 Manage and monitor team members' manual handling of equipment and tools to ensure workplace safety requirements are met.
- 2 Supervise on-site preparation for concrete pour.
- 2.1 Direct and monitor site excavation and preparation of sub-grade to meet safety, quality and scheduled timeframe requirements.
 - 2.2 Supervise, monitor and direct formwork installation to comply with work plans and specifications.
 - 2.3 Check levels for finish heights against datum.
 - 2.4 Inspect placement of reinforcing to ensure compliance with specifications.
 - 2.5 Confirm site and preparation work is ready for concrete pour.
- 3 Monitor and manage concrete material delivery.
- 3.1 Monitor weather conditions and apply contingencies as required to ensure safety, quality and timeliness of project completion.
 - 3.2 Supervise concrete pour and compacting and levelling procedures to comply with specifications.
 - 3.3 Manage concrete finish in compliance with specifications.
 - 3.4 Check completed work for compliance and coordinate team members to address areas of non-compliance.
 - 3.5 Monitor weather conditions and apply contingencies as required to ensure safety, quality and timeliness of project completion.

- | | | | |
|---|---|-----|---|
| 4 | Monitor and manage concreting on-site work. | 4.1 | Monitor weather conditions and apply contingencies as required to ensure safety, quality and timeliness of project completion. |
| | | 4.2 | Supervise concrete pour and compacting and levelling procedures to comply with specifications. |
| | | 4.3 | Manage concrete finish in compliance with specifications. |
| | | 4.4 | Check completed work for compliance and coordinate team members to address areas of non-compliance. |
| 5 | Supervise site clean-up. | 5.1 | Arrange for clean-up of tools and equipment, and disposal and removal of excess material to meet organisation quality processes and environmental requirements. |
| | | 5.2 | Organise safe storage and protection of tools, equipment and materials. |
| | | 5.3 | Debrief team members and action identified opportunities for learning or improvement. |
| | | 5.4 | Complete and process project documentation according to workplace and project requirements. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- oral communication skills to:
 - interact with team members and suppliers and choose appropriate language to give instructions and feedback
- technology skills to:
 - use communication tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access, extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCCCO4001A Supervise concreting work.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCCO4001 Supervise concreting work

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCCCO4001A Supervise concreting work.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by supervising concreting works for three different concreting projects.

In doing this, the candidate must:

- supervise team members ensuring timely completion of each project to required quality standards and specifications
- manage the accurate placement of formwork, reinforcing, services and penetrations
- supervise accurate transfer of datum, finish heights of concrete, concrete compaction and concrete finishes
- organise concrete testing and documenting results.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- application, processes and techniques of concreting:
 - suspended slabs
 - slabs on ground
- properties and limitations of concrete:
 - composition
 - slump test measurement
 - temperature
- principles of task management
- regulations, standards and codes of practice relevant to concreting work
- organisational quality assurance requirements
- team leadership strategies
- operational and functional factors of concreting tools and equipment
- workplace safety:
 - hierarchy of control

- hazardous manual tasks
- working at heights
- hazardous materials and substances
- personal protective equipment (PPE)
- sustainability and environmental requirements:
 - clean-up management
 - dust suppression
 - noise management
 - stormwater management
 - vibration management
 - waste management.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant government legislation
- current industry and Australian codes and standards
- project schedules, construction drawings, site plans and specifications
- organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- tools and equipment to supervise safe concrete works and document test outcomes.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCE3014 Remove non-friable asbestos

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Rectified pre-requisite unit.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCE3014A Remove non-friable asbestos.
Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the outcomes required to remove non-friable asbestos containing material (ACM).

It includes preparing, containing and removing non-friable ACM, and knowledge of decontamination and disposal requirements.

Site location can be a real workplace or simulated environment that may include domestic or commercial premises, a demolition site, a new worksite or an existing structure being renovated, extended, restored or maintained.

Project sites for removal of non-friable asbestos include construction sites, ships and soils.

The model work health and safety (WHS) regulations and the Code of Practice: How to safely remove asbestos (2018) requires workers to hold certification for the class of licensed asbestos removal work they will be undertaking. Completion of this unit of competency is certification to undertake non-friable (Class B) removal work.

Occupational licenses are required nationally. This unit is required for all ACM removal workers engaged in the removal of more than ten square metres of non-friable ACM.

Candidates are advised to consult with the relevant state and territory regulatory authorities to confirm specific jurisdictional licensing requirements to remove non-friable ACM.

Pre-requisite Unit

CPCCWHS1001 Prepare to work safely in the construction industry

Unit Sector

Demolition

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Prepare for asbestos removal.	<p>1.1 Obtain work instructions and participate in review of asbestos removal control plan (ARCP) and safe work method statements (SWMS).</p> <p>1.2 Gather safety requirements and data from an on-site assessment and asbestos register where available.</p> <p>1.3 Use information sources to ensure the ARCP and SWMS are site-specific for the removal of asbestos materials.</p> <p>1.4 Select tools, equipment and personal protective equipment (PPE) consistent with job requirements to carry out tasks, check for serviceability, and rectify or report faults prior to commencement.</p> <p>1.5 Notify regulator, occupants, neighbours and other affected parties according to legislation and within limits of own responsibility and code of practice.</p> <p>1.6 Contribute to the preparation and use of an emergency plan, within limits of own responsibility and according to legislative and company requirements.</p> <p>1.7 Contribute to processes required to undertake air monitoring and to meet health monitoring requirements in line with level of authority and responsibility and regulatory requirements.</p>
2 Prepare asbestos removal site.	<p>2.1 Identify location of non-friable asbestos materials and confirm with supervisor location of site boundaries.</p> <p>2.2 Implement signage and barricade requirements to delineate the asbestos removal site according to ARCP.</p> <p>2.3 Prepare and place materials and equipment required for removal of ACM from site.</p>
3 Set up asbestos work area.	<p>3.1 Designate boundaries of asbestos work area according to ARCP requirements.</p> <p>3.2 Set up decontamination according to ARCP.</p>

- 3.3 Set up asbestos waste storage and waste transit route according to ARCP.
 - 3.4 Undertake processes to ensure the safety of the site, including deactivating or securing utilities where necessary prior to commencing work.
- 4 Remove non-friable asbestos.
 - 4.1 Fit-check respiratory protective equipment (RPE) and fit PPE.
 - 4.2 Wet down or spray work area with particle binder.
 - 4.3 Carry out asbestos removal ensuring airborne asbestos fibres are kept to a minimum (i.e. appropriate tools, wet removal, minimise breakage, good handling techniques).
 - 4.4 Contain, wrap or otherwise seal the wet asbestos, place into removal bags or bins, seal and label according to ARCP.
- 5 Carry out decontamination process.
 - 5.1 Carry out decontamination of the work area and tools according to ARCP.
 - 5.2 Carry out personal decontamination according to ARCP.
- 6 Clean up work area.
 - 6.1 Remove asbestos waste materials and equipment from the area according to ARCP.
 - 6.2 Store tools, plant and equipment according to manufacturer recommendations and regulatory requirements to ensure site is ready for clearance inspection.
 - 6.3 Take steps to ensure clearance inspection requirements are met, within the limits of own responsibility and to ensure clearance certificate is gained from a competent person or licensed asbestos assessor.
- 7 Complete regulatory processes
 - 7.1 Ensure clearance inspection is undertaken prior to removing signage, plant and equipment.

- 7.2 Contribute to the preparation and use of documentation for regulatory notification processes, within limits of own responsibility and according to legislative and company requirements.
- 7.3 Provide stakeholders with clearance inspection certificate prior to reoccupation, as required.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCE3014A Remove non-friable asbestos.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCDE3014 Remove non-friable asbestos

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Rectified pre-requisite unit.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCDE3014A Remove non-friable asbestos.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must undertake two separate non-friable asbestos removal and disposal tasks.

This must include:

- planning and preparing for removal of non-friable asbestos
- preparing non-friable asbestos removal site and removal area
- isolating non-friable removal area
- carrying out non-friable asbestos removal process
- carrying out non-friable asbestos decontamination process
- cleaning up removal work area after removal of non-friable asbestos.

In doing this, the candidate must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the compliance requirements of the relevant Australian Standards, Building Code of Australia (BCA), model codes of practice, environmental and work health and safety (WHS) legislation
- range of materials manufactured using asbestos, the type of asbestos used in each material, and the usual applications associated with the material, together with an understanding of:
 - health effects caused by exposure to non-friable asbestos containing material (ACM) and requirements for safe handling and removal
 - health impacts on the community and requirements for safe handling and disposal

- hazards, including health hazards, associated with non-friable ACM and circumstances that may change the nature of ACM from non-friable to friable
- safe work methods for the removal of non-friable asbestos
- requirements of current legislation and standards
- handling requirements of differing types of asbestos materials
- work area procedures
- risk assessment processes and contingency planning, job safety analysis (JSA), safety data sheets (SDS), asbestos registers and register amendments and safe work method statements (SWMS) related to removal of non-friable asbestos
- materials storage and hazardous waste management
- method of operation, and cleaning, use and maintenance requirements of equipment
- techniques associated with removing asbestos
- types, characteristics, uses and limitations of plant and equipment involved in enclosing and removing asbestos
- workplace and equipment safety requirements, including other associated hazard areas
- purpose and application of documentation for notification; and use of asbestos removal control plan (ARCP) and clearance inspections.
-

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment.

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

- worksite/s and specifications for removal of non-friable asbestos
- appropriate documents, materials, tools, equipment and personal protective equipment (PPE) currently approved for use in industry, as per codes of practice, Australian Standards, requirements of legislation, regulations and requirements of workplace policies and as required by state, territory and Commonwealth regulators.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCE3015 Remove friable asbestos

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE3015A Remove friable asbestos.
Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the outcomes required to remove friable asbestos containing material (ACM).

It includes preparing, containing and removing friable ACM, and knowledge and application of decontamination and disposal requirements.

Site location can be a real workplace or simulated environment that may include domestic or commercial premises; a demolition site; or an existing structure being renovated, extended, restored or maintained.

Project sites for removal of friable asbestos include construction sites, ships, fences and soils.

The model work health and safety (WHS) regulations and the Code of Practice: How to safely remove asbestos (2018) requires workers to hold certification for the class of licensed asbestos removal work they will be undertaking. Completion of this unit of competency is certification to undertake friable (Class A) removal work.

Occupational licenses are required nationally. This unit is required for all ACM removal workers engaged in the removal of friable ACM.

Candidates are advised to consult with the relevant state and territory regulatory authorities to confirm specific jurisdictional requirements to remove non-friable ACM.

Pre-requisite Unit

CPCCWHS10 Prepare to work safely in the construction industry
01

CPCCE3014 Remove non-friable asbestos

Unit Sector

Demolition.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Prepare for asbestos removal.

- 1.1 Obtain work instructions and participate in review of asbestos removal control plan (ARCP) and safe work method statements (SWMS).
- 1.2 Gather safety requirements and data from an on-site assessment and asbestos register where available.
- 1.3 Use information sources to ensure the ARCP and SWMS are site-specific for the removal of asbestos materials.
- 1.4 Calculate required quantity of materials according to plans and specifications and ensure materials meet code of practice and regulatory requirements.
- 1.5 Identify and apply environmental requirements for the project according to environmental plans and regulatory obligations.
- 1.6 Contribute to processes required to undertake air monitoring and to meet health monitoring requirements in line with level of authority and responsibility and regulatory requirements.
- 1.7 Finalise preparation for the removal process and obtain authorisation according to legislative and company requirements and the ARCP.
- 1.8 Select plant, equipment and personal protective equipment (PPE) consistent with job requirements to carry out tasks, check for serviceability, and rectify or report faults prior to commencement.
- 1.9 Notify regulator, occupants, neighbours and other affected parties according to legislation and the code of practice and within scope of own responsibility.
- 1.10 Contribute to the preparation and use of an emergency plan within limits of own responsibility and according to legislative and company requirements.
- 1.11 Contribute to the preparation and use of a certified safety management systems (SMS) within limits of own responsibility and according to legislative and company requirements.

- 2 Prepare asbestos removal area and removal site.
 - 2.1 Identify location of friable and non-friable asbestos and confirm with supervisor location of site boundaries.
 - 2.2 Implement signage and barricade requirements to delineate the asbestos removal site according to the ARCP.
 - 2.3 Position and assemble decontamination unit to manufacturer requirements.
 - 2.4 Connect services to decontamination unit according to regulatory requirements and codes of practice.
 - 2.5 Test decontamination procedure within scope of own responsibility and according to workplace procedures and the ARCP.

- 3 Enclose removal site.
 - 3.1 Designate boundaries of asbestos work area according to ARCP requirements.
 - 3.2 Construct negative pressure enclosure.
 - 3.3 Undertake processes to ensure the safety of the site, including deactivating or securing utilities where necessary prior to commencing work.
 - 3.4 Follow requirements to enclose the removal site safely to prevent the further release of fibres according to the ARCP and legislative and company requirements.
 - 3.5 Identify types of enclosures, impact of the size of the removal on the methodology selected, and types and use of removal processes.
 - 3.6 Test integrity of enclosure by smoke test and ensure negative air pressure is maintained within the enclosure within limits of responsibility and in line with legislative requirements.
 - 3.7 Provide notification of proposed asbestos removal to the licensed assessor within required timeframe and limits of own responsibility.
 - 3.8 Establish asbestos waste storage and waste transit route according to the ARCP.

- 4 Carry out asbestos removal process.
 - 4.1 Fit-check respiratory protection equipment (RPE) and fit PPE.
 - 4.2 Carry out asbestos removal within enclosure ensuring airborne asbestos fibres are kept to a minimum by using appropriate tools, wet removal, and handling techniques.
 - 4.3 Contain and place removed friable asbestos, asbestos dust and debris into double-lined removal bags or bins, seal, label appropriately and remove from site according to regulatory requirements and the ARCP.
 - 4.4 Use manual-handling principles for bagged and sealed ACM wherever possible to prevent breakages of plastic.

- 5 Carry out decontamination process.
 - 5.1 Use decontamination unit according to manufacturer and regulatory requirements and codes of practice.
 - 5.2 Carry out decontamination of the work area according to ARCP.
 - 5.3 Carry out personal decontamination according to ARCP.
 - 5.4 Get approval to dismantle asbestos removal and decontamination equipment according to regulatory requirements and codes of practice.

- 6 Clean up work site.
 - 6.1 Remove asbestos and decontamination equipment from the area according to the ARCP and regulatory requirements and following clearance from the licensed asbestos assessor.
 - 6.2 Clear work area and dispose of materials according to legislation, regulations, codes of practice and job specification.
 - 6.3 Clean, check, maintain and store plant, tools and equipment according to manufacturer recommendations and standard work practices.
 - 6.4 Take steps to ensure clearance inspection requirements are met, within the limits of own responsibility and to ensure clearance certificate is gained from a competent

person or licensed asbestos assessor.

- | | | |
|----------------------------------|-----|--|
| 7 Complete regulatory processes. | 7.1 | Ensure clearance inspection is undertaken prior to removing signage, plant and equipment. |
| | 7.2 | Contribute to the preparation and use of documentation for regulatory notification processes, within limits of own responsibility and according to legislative, company and regulatory requirements. |
| | 7.3 | Provide stakeholders with clearance inspection certificate prior to reoccupation, as required. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCE3015A Remove friable asbestos.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCE3015 Remove friable asbestos

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE3015A Remove friable asbestos.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must undertake two different friable asbestos removal and disposal tasks.

Performance must include:

- erecting enclosures, installing negative air pressure units and decontamination units
- integrity testing of enclosures

In doing this, the candidate must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the compliance requirements of the relevant Australian Standards, Building Code of Australia (BCA), model codes of practice, environmental and work health and safety (WHS) legislation
- range of materials manufactured using asbestos, the type and characteristics of asbestos used in each material, the usual applications associated with the material
- methods and purpose for assessing hazards relating to friable asbestos containing material (ACM), together with an understanding of:
 - health effects caused by exposure to ACM and requirement for safe handling and removal
 - health impacts on the community and requirement for safe handling and disposal
- decontamination techniques
- hazards, including health hazards associated with friable ACM, using enclosures and removing friable asbestos
- licensing requirements for the use of specific equipment, such as excavators
- requirements of current legislation and standards
- handling requirements of differing types of asbestos materials
- worksite and work area procedures

- risk assessment processes and contingency planning, job safety analysis (JSA), safety data sheets (SDS), asbestos registers and register amendments and safe work method statements (SWMS) related to removal of friable asbestos
- materials storage and hazardous waste management
- method of operation, cleaning, use and maintenance requirements of equipment
- demolition plant and equipment as applicable to asbestos removal only
- techniques associated with enclosing and removing asbestos, including:
 - use of large and small-scale enclosures for different sites
 - use of negative pressure exhaust units
 - encapsulation methods prior to removal
- types, characteristics, uses and limitations of plant and equipment involved in removing asbestos
- workplace and equipment safety requirements, including other associated hazard areas
- application of the documentation for notification; and use of ARCP, clearance inspections, visual and air-monitoring processes and clearance certificates
- use of certified WHS management system and emergency plan.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment.

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

- worksite/s and specifications for removal of friable asbestos
- materials to build a negative pressure enclosure that meets negative pressure requirements for enclosing airborne asbestos fibres arising from asbestos removal
- negative air unit/s
- equipment such as manometer and smoke generator to validate negative pressure and no leaks from the enclosure
- appropriate documents, materials, tools, equipment and personal protective equipment (PPE) currently approved for use in industry, as per codes of practice, Australian Standards, requirements of legislation, regulations and requirements of workplace policies and as required by state, territory and Commonwealth regulators.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCE3016 Identify hazards on demolition sites and apply risk management strategies

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE3016A Identify hazards on demolition sites and apply risk management strategies. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to identify hazards common to demolition work, and undiscovered hazards that may arise during the course of work on demolition sites. It includes assessing risks and applying risk management strategies according to compliance and workplace requirements.

It supports the induction procedure for specialist demolition workers before beginning work on site.

This unit does not replace requirements for completion of construction work health and safety (WHS) units.

Completion of the general construction induction training program specified by the model code of practice for construction work is required for any person who is to carry out construction work. Achievement of unit CPCWHS1001 *Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to demolition work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-requisite Unit

CPCWHS20 Apply WHS requirements, policies and procedures in the construction
01 industry

Unit Sector

Demolition.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|--|-----|---|
| 1 | Review site and work plans. | 1.1 | Identify issues relating to the age and integrity of buildings and structures, and construction methods and materials used, and apply this to review potential risks. |
| | | 1.2 | Review approved demolition plan and safe work method statements (SWMS) and apply information relating to hazards and risk management strategies to participation in job briefing according to work role requirements. |
| | | 1.3 | Identify and clarify job roles and responsibilities for people involved in the demolition according to workplace procedures. |
| 2 | Apply WHS risk management strategies to work activities on demolition sites. | 2.1 | Identify and apply compliance, site and workplace requirements to work tasks and appropriate personal protective equipment (PPE). |
| | | 2.2 | Identify hazards that may cause trips, falls or falling objects and apply risk management strategies. |
| | | 2.3 | Identify hazards relating to hazardous substances and apply risk management strategies. |
| | | 2.4 | Identify hazards relating to structural composition and integrity of structures and apply risk management strategies. |
| | | 2.5 | Identify hazards relating to services and apply risk management strategies. |
| | | 2.6 | Identify hazards relating to the use of mobile and static plant, tools and equipment and apply risk management strategies. |
| | | 2.7 | Identify hazards relating to the use of high reach excavators and apply risk management strategies. |
| | | 2.8 | Identify hazards relating to noise, dust and vibrations and apply risk management strategies. |
| | | 2.9 | Identify hazards that may cause fire or explosions and apply risk management strategies. |

- 2.10 Monitor worksite during demolition process for signs of undiscovered hazards and apply risk management strategies.
 - 2.11 Report WHS hazards and incidents.
- 3 Apply public health and safety risk management strategies on demolition sites.
 - 3.1 Identify site boundaries and exclusion zones and implement strategies to prevent access by unauthorised persons.
 - 3.2 Identify site traffic access and egress points and pedestrian and vehicle routes and apply traffic management plans.
 - 3.3 Identify demolition activities with potential to cause dust, noise and vibrations and apply risk management strategies.
 - 3.4 Identify demolition activities which may result in falling structures, flying debris or with the potential to affect structural integrity of adjoining buildings and apply risk management strategies.
 - 3.5 Report public health and safety hazards and incidents.
- 4 Apply environmental risk management strategies on demolition sites.
 - 4.1 Identify and apply environmental compliance, site and workplace requirements to work tasks.
 - 4.2 Identify and apply strategies to maximise environmentally sound use of energy and water.
 - 4.3 Identify potential risks to air quality resulting from demolition work and apply risk management strategies.
 - 4.4 Identify potential risks associated with stormwater management and apply risk management strategies.
 - 4.5 Identify potential risks to groundwater and groundwater monitoring wells and apply risk management strategies.
 - 4.6 Identify potential risks to the environment resulting from removing and handling hazardous substances and waste materials and apply risk management strategies.
 - 4.7 Report environmental hazards and incidents.

- | | | | |
|---|---|-----|--|
| 5 | Contribute to improvement of demolition risk management strategies. | 5.1 | Review demolition methods, procedures and risk management strategies and discuss with team members to develop ideas for improvements in risk management. |
| | | 5.2 | Undertake industry professional development activities relating to demolition risk management as required. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCE3016A Identify hazards on demolition sites and apply risk management strategies.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCE3016 Identify hazards on demolition sites and apply risk management strategies

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE3016A Identify hazards on demolition sites and apply risk management strategies. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must identify two different hazards on two separate occasions and apply a risk management strategy for each hazard on each occasion.

In doing this, the candidate must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the compliance requirements of the relevant Australian Standards, Building Code of Australia (BCA), model codes of practice, environmental and work health and safety (WHS) legislation
- workplace safety risk management strategies for:
 - exposure to silica dust
 - exposure to loud noise
 - hazardous manual tasks
 - trips or falls
 - air quality
- demolition methods and procedures
- general construction terminology
- hazards occurring and risk management strategies used on demolition sites:
 - falling objects
 - flying debris
 - structural composition hazards
 - services hazards
 - fire or explosion risk
 - stormwater management

- groundwater monitoring
- traffic management
- types of plant, tools and equipment applicable to demolition tasks:
 - applications of each tool or piece of equipment
 - maintenance requirements
 - safe methods of operation for different demolition tasks.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment.

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

- demolition worksite/s and specifications for identifying hazards and applying risk management strategies
- appropriate documents, materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- requirements of workplace policies, procedures and demolition plans.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCE3017 Select and use hand tools and equipment for demolition tasks

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE3017A Select and use hand tools and equipment for demolition tasks. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to select and use hand tools and equipment safely and effectively to complete different demolition tasks.

It includes removing fixtures and fittings, ceilings, walls, floors and floor support systems; pulling apart equipment; knocking down structures; and loading out rubbish; using hand tools and equipment for on-site demolition tasks on public, residential, commercial and industrial structures of all types, including chemical processing plants.

These tasks may be completed at ground level, at heights, over water, under water or underground and in confined spaces, on new construction sites or on existing structures being removed, renovated or extended.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit CPCWHS1001 *Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to demolition work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-requisite Unit

CPCWHS20 Apply WHS requirements, policies and procedures in the construction
01 industry

Unit Sector

Demolition.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|---|
| 1 Plan and prepare for work. | 1.1 Review work instructions to select hand tools and equipment in accordance with work health and safety (WHS) and environmental requirements. |
| | 1.2 Identify, select and fit personal protective equipment (PPE). |
| | 1.3 Prepare work area for the use of demolition hand tools and equipment. |
| 2 Identify and check tools and equipment. | 2.1 Identify and check hand tools and equipment to be used in the demolition process for serviceability and rectify and report faults. |
| | 2.2 Identify functions and methods of operation of demolition tools and equipment from specifications, standards and manufacturer instructions. |
| | 2.3 Complete pre-operational checks according to manufacturer recommendations. |
| 3 Complete demolition tasks. | 3.1 Conduct worksite inspection and assess hazards associated with individual demolition tasks immediately prior to commencing work. |
| | 3.2 Use tools and equipment for their intended purpose in demolition tasks. |
| | 3.3 Communicate work progress and any hazards or issues arising during work tasks with work team. |
| | 3.4 Place tools and equipment in safe locations when not in immediate use. |
| 4 Clean up work area. | 4.1 Clear work area and sort materials for reuse or recycling and remove and dispose of waste using safe manual-handling techniques. |
| | 4.2 Clean, check, maintain and store hand tools and |

equipment according to manufacturer recommendations.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCE3017A Select and use hand tools and equipment for demolition tasks.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCE3017 Select and use hand tools and equipment for demolition tasks

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE3017A Select and use hand tools and equipment for demolition tasks. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must select and use hand tools and equipment for an on-site demolition task and remove each of the following at least once:

- fixtures and fittings
- a ceiling of at least 10 square metres
- an internal load bearing wall of at least 10 square metres
- flooring and flooring support system covering at least 3 square metres
- knock down a small structure of at least 10 square metres
- load out a minimum of one cubic metre of rubbish.

In doing this, the candidate must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the compliance requirements of the relevant Australian Standards, Building Code of Australia (BCA), model codes of practice, environmental and work health and safety (WHS) legislation
- general construction terminology
- hazards that may exist or arise on demolition sites, including those associated with the use of demolition tools and equipment
- procedures for:
 - environmentally friendly waste management
 - managing risks and hazards on demolition sites
 - sorting and storing reusable and recyclable materials
- types of information required to plan and prepare for safe and effective completion of demolition tasks

- types of industry-recognised portable power tools, hand tools and equipment applicable to demolition tasks:
 - applications of each tool or piece of equipment
 - maintenance requirements
 - safe methods of operation for different demolition tasks
- technology types and operation used in demolition.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment.

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

- worksites and specifications for using demolition hand tools and equipment
- appropriate documents, materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- requirements of workplace policies, procedures and demolition plans.

CPCCE3018 Select and use small plant and equipment for demolition tasks

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE3018A Select and use small plant and equipment for demolition tasks. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to select and use small plant and equipment safely and effectively to complete individual demolition tasks, such as breaking concrete, stripping out interior of buildings, pulling down walls and separating waste for recycling.

The unit applies to workers performing on-site specialist demolition work using powered small plant and equipment on public, residential, commercial and industrial buildings.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to demolition work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-requisite Unit

CPCWHS20 Apply WHS requirements, policies and procedures in the construction
01 industry

Unit Sector

Demolition.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|--|
| 1 Plan and prepare for work. | 1.1 Obtain, confirm and apply work instructions to planning and preparation, using required information, and in consultation with colleagues or supervisors. |
| | 1.2 Complete tasks according to regulatory, legislative and workplace policies and requirements. |
| | 1.3 Identify and apply work health and safety (WHS) requirements to task planning according to safety plans. |
| | 1.4 Identify and apply environmental requirements according to environmental plans. |
| | 1.5 Identify, select and fit personal protective equipment (PPE). |
| 2 Identify and check small plant and equipment. | 2.1 Identify and check small plant and equipment to be used in the demolition process for serviceability and rectify and report faults. |
| | 2.2 Identify functions and methods of operation of demolition small plant and equipment from specifications, standards and manufacturer instructions. |
| | 2.3 Identify and apply specific WHS requirements for the selected small plant and equipment. |
| 3 Complete demolition tasks. | 3.1 Obtain confirmation from supervisor and regulatory authorities that existing services have been disconnected. |
| | 3.2 Conduct worksite inspection and assess hazards associated with individual demolition tasks immediately prior to commencing work according to workplace procedures. |
| | 3.3 Amend safe demolition work method if required and confirm with colleagues or supervisor. |
| | 3.4 Prepare work area for the use of demolition small plant and equipment. |

- 3.5 Select small plant and equipment that meet the requirements of the demolition task.
 - 3.6 Complete pre-operational checks according to manufacturer recommendations.
 - 3.7 Use small plant and equipment for their intended purpose in demolition tasks.
 - 3.8 Communicate work progress and hazards or issues arising during work tasks with work team.
 - 3.9 Place small plant and equipment in safe locations when not in immediate use.
- 4 Clean up work area.
- 4.1 Clear work area and sort materials for reuse, recycling or removal and dispose of waste using safe manual-handling or plant techniques.
 - 4.2 Clean, check, maintain and store small plant and equipment according to manufacturer recommendations.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCE3018A Select and use small plant and equipment for demolition tasks.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCE3018 Select and use small plant and equipment for demolition tasks

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE3018A Select and use small plant and equipment for demolition tasks. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must select and use small plant and equipment to complete three of the following on-site demolition tasks:

- break a minimum of two square metres of concrete
- dismantle 20 square metres of purlins and wall or roof sheeting
- demolish 10 lineal metres of three-metre high masonry wall
- identify services infrastructure in a minimum 20 square-metre section of a building, and remove the infrastructure (ducting, cabling, pipework) for one service
- remove wall cladding and floor coverings from a minimum 10 square-metre section of a building
- remove a ceiling from a 20 square-metre section of a building.

In doing this, the candidate must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the compliance requirements of the relevant Australian Standards, Building Code of Australia (BCA), model codes of practice, environmental and work health and safety (WHS) legislation
- general construction terminology
- hazards that may exist or arise on demolition sites, including those associated with the use of demolition small plant and equipment
- procedures for:
 - environmentally friendly waste management
 - managing risks and hazards on demolition sites
 - sorting and storing reusable and recyclable materials
- types of information required to plan and prepare for safe and effective completion of demolition tasks

- types of small plant and equipment applicable to demolition tasks:
 - applications of each type of small plant or piece of equipment
 - maintenance requirements
 - safe methods of operation for different demolition tasks.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment.

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

- worksite/s and specifications for selecting and using small plant and equipment for demolition tasks
- appropriate documents, materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- requirements of workplace policies, procedures and demolition plans.

CPCCE3019 Demolish small buildings and structures using hand tools and small plant and equipment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE3019A Demolish small buildings and structures using hand tools and small plant and equipment. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to select and use hand tools, small plant and equipment safely and effectively to demolish small buildings and structures. Manual demolition processes include dismantling or demolishing and removing materials and component parts of a building or structure using only hand tools, small plant and equipment.

The unit applies to workers performing on-site specialist demolition work using powered small plant and equipment on public, residential, commercial and industrial buildings.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to demolition work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-requisite Unit

CPCWHS20 Apply WHS requirements, policies and procedures in the construction
01 industry

Unit Sector

Demolition.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|------------------------------|---|
| 1 Plan and prepare for work. | 1.1 Obtain work instructions using required information, confirm and apply to planning and preparation. |
| | 1.2 Complete tasks according to regulatory, legislative and workplace policies and requirements. |
| | 1.3 Identify and apply work health and safety (WHS) requirements to task planning. |
| | 1.4 Select and check hand tools, small plant and equipment to carry out tasks consistent with job requirements, check for serviceability, and rectify and report faults before work begins. |
| | 1.5 Identify environmental requirements for the project. |
| | 1.6 Identify, select and fit personal protective equipment (PPE). |
| 2 Prepare demolition site. | 2.1 Confirm demolition tasks and determine requirements of site demolition plan. |
| | 2.2 Conduct site inspection to determine condition of worksite and surrounds before work begins. |
| | 2.3 Obtain confirmation from supervisor and regulatory authorities that relevant services have been disconnected and identify services that will remain live on the demolition site. |
| | 2.4 Identify hazardous material for separate handling. |
| | 2.5 Identify requirements for safe work at heights, including fall protection devices, and ensure these are installed. |
| | 2.6 Ensure small plant and equipment are positioned in operating locations and arrange appropriate exclusion zones and traffic control. |
| | 2.7 Protect and secure site according to compliance requirements and unauthorised access is prevented. |

- | | |
|--|--|
| 3 Dismantle or demolish building components. | 3.1 Dismantle or demolish and remove building components in a directed sequence according to site demolition plan and safe work method statements (SWMS). |
| | 3.2 Operate selected types of small plant to carry out demolition of building components. |
| | 3.3 Maintain communication with team members during the demolition process. |
| | 3.4 Monitor worksite conditions and progress in consultation with team members and stop work or adjust techniques as required. |
| 4 Sort and store demolition materials and waste. | 4.1 Relocate removed components to storage or disposal area. |
| | 4.2 Handle materials and building components safely and effectively using selected material handling techniques. |
| | 4.3 Identify materials and components for salvaging and handle, store and stack these ready for transport according to standard material handling practices. |
| 5 Clean up work area. | 5.1 Clear work area and dispose, reuse or recycle materials. |
| | 5.2 Clean, check, maintain and store plant, tools and equipment. |

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria:

- numeracy skills to:
 - check levels of lubricants in equipment
 - estimate weights of volumes of demolition debris and recyclable materials
 - perform measurements and calculations associated with work, such as when determining specified length of wall to be removed
- writing skills to complete:
 - pre-operational checklists and equipment fault forms.
 -

Unit Mapping Information

Supersedes and is equivalent to CPCCE3019A Demolish small buildings and structures using hand tools and small plant and equipment.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCE3019 Demolish small buildings and structures using hand tools and small plant and equipment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE3019A Demolish small buildings and structures using hand tools and small plant and equipment. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must use hand tools, small plant and equipment to demolish a small building or structure, including removing at least four of the following components:

- fixtures and fittings
- a pitched metal/tiled roof
- trusses
- ceiling
- external and internal walls
- floor and floor support system.

In doing this, the candidate must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the compliance requirements of the relevant Australian Standards, Building Code of Australia (BCA), model codes of practice, environmental and work health and safety (WHS) legislation
- general construction terminology
- hazards associated with demolition tasks
- demolition processes and techniques for small structures
- procedures for material storage and environmentally friendly waste management
- types of small plant, tools and equipment used in the demolition of small buildings:
 - applications
 - characteristics
 - limitations

- maintenance requirements
- methods of operation
- quality requirements relating to the demolition of small structures
- work and equipment safety requirements that apply to the demolition of small buildings and structures.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment.

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

- worksite/s and specifications for using hand tools, small plant and equipment to demolish small buildings and structures
- appropriate documents, materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- requirements of workplace policies, procedures and demolition sites.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCE3020 Select and use tools and equipment for hot work in the demolition industry

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE3020A Select and use tools and equipment for hot work in the demolition industry. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to cut materials using cutting processes that create a heat source that could cause an ignition. The unit covers the safe operation and maintenance of tools and equipment for hazardous demolition hot work.

It includes the safe on-site operation and maintenance of tools and equipment used for hazardous demolition hot work.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Hot work permits and licenses for the operation of specialised hot-work equipment are required in different states and territories.

Licensing, legislative, regulatory or certification requirements apply to demolition work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-requisite Unit

CPCWHS20 Apply WHS requirements, policies and procedures in the construction
01 industry

Unit Sector

Demolition.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|---|-----|--|
| 1 | Plan and prepare for work. | 1.1 | Obtain, confirm and apply work instructions to planning and preparation, using required information, and in consultation with colleagues or supervisors. |
| | | 1.2 | Complete tasks according to regulatory, legislative and workplace policies and requirements. |
| | | 1.3 | Identify and apply site work health and safety (WHS) requirements to task planning according to safety. |
| | | 1.4 | Identify, select and fit personal protective equipment (PPE). |
| | | 1.5 | Conduct worksite inspection and assess hazards associated with individual demolition hot work tasks immediately prior to commencing work. |
| | | 1.6 | Identify and apply environmental requirements according to environmental plans. |
| | | 1.7 | Obtain and check permits for hot work and licences for specialised equipment before starting work. |
| 2 | Select tools and equipment and prepare for use. | 2.1 | Select tools and equipment for different hot work tasks according to manufacturer recommendations. |
| | | 2.2 | Complete pre-operational checks and maintenance requirements according to manufacturer recommendations and rectify and report faults. |
| | | 2.3 | Identify and apply specific WHS requirements and safe methods of operation of tools and equipment for hot work from manufacturer instructions. |
| 3 | Complete cutting, grinding and hot work. | 3.1 | Obtain confirmation from supervisor and regulatory authorities that existing services have been disconnected. |
| | | 3.2 | Amend safe demolition work method statement if required and confirm with colleagues or supervisor. |
| | | 3.3 | Prepare work area for hot work according to site safety |

requirements.

- 3.4 Use tools and equipment for their intended purpose in hot work demolition tasks.
 - 3.5 Communicate work progress and hazards or issues arising during work tasks with work team.
 - 3.6 Place tools and equipment in safe locations when not in immediate use.
- 4 Clean up work area.
- 4.1 Clear work area and sort materials for reuse or recycling and remove or dispose of waste using safe manual-handling techniques.
 - 4.2 Clean, check, maintain and store tools and equipment according to manufacturer recommendations.

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria:

- learning skills to:
 - recognise signs indicating undiscovered hazards on a demolition site, for example presence of residual fuel
 - respond to change, such as differences in current worksite environmental and sustainability requirements
- numeracy skills to:
 - check levels of lubricants in tools
 - perform measurements and calculations associated with work, such as when determining specified length of wall to be removed
- writing skills to:
 - complete pre-operational checklists and simple equipment fault forms.

Unit Mapping Information

Supersedes and is equivalent to CPCCE3020A Select and use tools and equipment for hot work in the demolition industry.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCE3020 Select and use tools and equipment for hot work in the demolition industry

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE3020A Select and use tools and equipment for hot work in the demolition industry. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must select and use tools and equipment for hot work in the demolition industry. The candidate must perform the following:

- set up and use oxy-fuel gas cutting equipment to cut through one 200 mm x 200 mm structural steel element
- set up and use a demolition saw to cut through:
 - a one metre length of 50 mm concrete ground slab
 - an 800 mm width of metal cladding
- set up and use an angle grinder to cut through an 800 mm width of metal cladding
- use a lower explosive level (LEL) unit to identify LEL at the locations for two different hot work tasks.

In doing this, the candidate must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the compliance requirements of the relevant Australian Standards, Building Code of Australia (BCA), model codes of practice, environmental and work health and safety (WHS) legislation
- general construction terminology
- hazards that may exist or arise on demolition sites, especially those associated with hot work:
 - build-up of combustible materials
 - chemical compounds
 - drums
 - dust
 - gas

- residual fuels, for example, in pipework to be cut
- sparks
- storage tanks
- procedures for:
 - environmentally sound waste management
 - managing risks and hazards on demolition sites
 - sorting and storing reusable and recyclable materials
- types of information required to plan and prepare for safe and effective completion of demolition tasks
- types of tools and equipment used for cutting, grinding and hot work in the demolition industry:
 - applications of each type of tool or piece of equipment
 - maintenance requirements
 - safe methods of operation for different cutting, grinding or hot work tasks.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment.

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

- worksite/s and specifications for selecting and using tools and equipment for demolition hot work
- appropriate documents, materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- requirements of workplace policies, procedures and demolition plans.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCE3021 Operate demolition material crushing plants

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE3021A Operate demolition material crushing plants. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to operate a stationary or mobile crushing plant to produce crushed demolition materials in a range of sizes. It includes the preparation, inspection, maintenance, operation and shut down of a crushing plant. It may include working with others and as a member of a team.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to demolition work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-requisite Unit

CPCWHS20 Apply WHS requirements, policies and procedures in the construction
01 industry

Unit Sector

Demolition.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|------------------------------|---|
| 1 Plan and prepare for work. | 1.1 Access and apply compliance requirements relevant to crushing and screening plant operations. |
|------------------------------|---|

- 1.2 Obtain, confirm and apply work requirements using required information for planning and preparation.
 - 1.3 Complete tasks according to manufacturer's instructions and regulatory, legislative and workplace policies and requirements.
 - 1.4 Follow work health and safety (WHS) requirements.
 - 1.5 Select plant and equipment to carry out tasks that are consistent with job requirements and check for serviceability and rectify and report faults before work begins.
 - 1.6 Identify environmental requirements for the project.
 - 1.7 Identify, select and fit personal protective equipment (PPE).
 - 1.8 Conduct crushing plant pre-start, start-up, run and shutdown procedures to ensure correct operational condition according to manufacturer requirements, and identify and correct faults or report these to supervisor.
 - 1.9 Prepare work area and equipment and plan sequence of tasks in coordination with personnel.
- 2 Operate crushing plant.
- 2.1 Select and modify operating technique to meet changing work conditions according to manufacturer recommendations.
 - 2.2 Direct uncrushed materials into hopper and maintain feed of uncrushed materials according to manufacturer instructions.
 - 2.3 Monitor conduct and control operations within the equipment limitations and communicate with relevant personnel to maintain crushing and screening efficiency and effectiveness.
 - 2.4 Stop and clear crushing of blocked materials and restart as required.
 - 2.5 Maintain crushing plant settings.
 - 2.6 Complete work within the operating capacity of the allocated equipment.

- | | | | |
|---|--|-----|---|
| 3 | Carry out post-operational procedures. | 3.1 | Inspect plant and equipment and report faults. |
| | | 3.2 | Conduct operational maintenance, servicing, lubricating and housekeeping tasks. |
| | | 3.3 | Maintain and process operational records and report. |
| | | 3.4 | Shut down crushing plant according to site safety and operation plan. |
| | | | |
| 4 | Clean up work area. | 4.1 | Clear work area and dispose of, reuse or recycle materials. |
| | | 4.2 | Clean, check, maintain and store tools and equipment. |

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria:

- learning skills to:
 - evaluate own actions and make judgements about performance and necessary improvements
 - respond to change, such as differences in current worksite environmental and sustainability requirements
- numeracy skills to:
 - estimate weight of volumes of demolition debris
 - perform measurements and calculations associated with work, such as determining maximum load capacity of equipment.

Unit Mapping Information

Supersedes and is equivalent to CPCCE3021A Operate demolition material crushing plants.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCE3021 Operate demolition material crushing plants

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE3021A Operate demolition material crushing plants. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must operate a demolition material crushing plant to process a minimum of 100 tonnes of demolition material into two different nominal sizes of crushings, of between 5 mm and 100 mm.

In doing this, the candidate must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the compliance requirements of the relevant Australian Standards, Building Code of Australia (BCA), model codes of practice, environmental and work health and safety (WHS) legislation
- construction terminology
- procedures for material storage and environmentally friendly waste management
- quality requirements relating to products of crushing operations
- types, characteristics, uses and limitations of plant and equipment involved in the conduct of crushing operations:
 - hazards associated with the conduct of crushing operations
 - method of operation and maintenance requirements of crushing plant and equipment
 - techniques associated with the conduct of crushing operations
- workplace and equipment safety requirements that apply to the operation of a demolition material crushing plant.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment.

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

- worksite/s and specifications for operating a demolition material crushing plant
- appropriate documents, materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- requirements of workplace policies, procedures and demolition plans.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCE3022 Manage demolition recyclable waste materials and contaminated soil using load shifting equipment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE3022A Manage demolition recyclable and waste materials using load shifting equipment. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to organise the removal of different types of demolition recyclable and waste materials and contaminated soil. It involves the operation of a range of load shifting equipment on demolition sites and incorporates knowledge of recyclable materials and the safe disposal of hazardous materials.

The unit does not provide training and assessment for operation of individual items of plant.

Candidates may only enrol in this unit after successfully completing separate operator training and assessment that confirms the capability of the person to safely operate the items of plant covered in this unit.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to demolition work in different states and territories. Candidates are advised to consult with the relevant regulatory authority.

Pre-requisite Unit

Nil.

Unit Sector

Demolition.

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Plan and prepare for work.
 - 1.1 Obtain work instructions using required information, confirm and apply to planning and preparation.
 - 1.2 Complete tasks according to manufacturer specifications and regulatory, legislative and workplace policies and requirements.
 - 1.3 Identify and apply work health and safety (WHS) requirements to task planning.
 - 1.4 Select load shifting equipment, associated attachments and emergency and personal protective equipment (PPE) to maximise efficiency and effectiveness of transportation.
 - 1.5 Present licence to operate specific plant to relevant personnel for compliance inspection.
 - 1.6 Identify and deal with potential hazards and risks.
 - 1.7 Identify and apply environmental requirements to work planning.
 - 2 Perform routine checks on load shifting and other equipment.
 - 2.1 Inspect load shifting equipment and rectify or report faults as required.
 - 2.2 Conduct service checks and test load shifting equipment systems to ensure compliance with manufacturer specifications.
 - 2.3 Check emergency and PPE to ensure it is serviceable.
 - 2.4 Check associated equipment to ensure that it is operational and complies with manufacturer specifications.
 - 3 Organise materials and equipment for loading.
 - 3.1 Confirm with relevant personnel worksite procedures for segregating and locating recyclable and waste demolition materials.
 - 3.2 Identify recyclable materials to be loaded and check to ensure integrity of on-site sorting, as required.
 - 3.3 Identify waste materials to be loaded and check to ensure

- integrity of containment, as required.
- 3.4 Determine loading procedures according to material or waste type.
 - 3.5 Park load shifting equipment or set up in a loading position that ensures efficiency and safety of loading.
 - 3.6 Erect barriers and warning signs at loading sites to ensure safety of surrounding personnel.
- 4 Load and move materials.
- 4.1 Load materials safely and efficiently according to type and using an approved loading method to maintain integrity.
 - 4.2 Maintain visual checks of load and surrounding environment to identify and avoid, minimise or remedy potential hazards.
 - 4.3 Maintain clear communication with relevant personnel.
 - 4.4 Check load to ensure it conforms to equipment capacity requirements, manufacturer specifications, and requirements of relevant legislation and codes.
 - 4.5 Operate and drive equipment in a safe and efficient manner following all road and traffic regulations.
 - 4.6 Move and secure materials safely.
- 5 Unload and store materials.
- 5.1 Unload materials safely and efficiently in designated area according to type and using an approved unloading method to maintain integrity.
 - 5.2 Maintain visual checks to identify and remedy potential hazards during unloading.
 - 5.3 Stack or house load at destination.
- 6 Shut down and secure load shifting equipment.
- 6.1 Park or store equipment in a safe location to avoid damage to equipment or obstruction of surrounding site activity.
 - 6.2 Complete shutdown procedures.

- 6.3 Secure and store equipment in a manner that prevents unauthorised access or use.
- 7 Carry out basic housekeeping and maintenance.
 - 7.1 Clean equipment to remove debris and contamination and to ensure safe operating procedures.
 - 7.2 Conduct service checks.
 - 7.3 Report equipment faults and defects to relevant personnel.
 - 7.4 Complete record of moving activities promptly.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCE3022A Manage demolition recyclable and waste materials using load shifting equipment.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCE3022 Manage demolition recyclable waste materials and contaminated soil using load shifting equipment

Modification History

.Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE3022A Manage demolition recyclable and waste materials using load shifting equipment. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must manage a minimum of 10 cubic metres of demolition recyclable and waste materials using load shifting equipment, including:

- two items of earth moving equipment from the following list:
 - dozer
 - front-end loader
 - excavator
 - skid steer loader
 - tailgate loader
- one material separator from the following list:
 - grapple
 - bucket (plant attachments), screening or skeleton
- one truck type from the following list:
 - articulated truck
 - open-bodied truck, including hook lift, pump and vacuum
 - rigid truck.

In doing this, the candidate must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the compliance requirements of the relevant Australian Standards, Building Code of Australia (BCA), model codes of practice, environmental and work health and safety (WHS) legislation

- compliance requirements for handling and transporting materials, which include dangerous goods and hazardous substances
- driving procedures for different types of load shifting equipment, including:
 - licence requirements
 - map reading
 - road laws
- hazards and risks associated with handling and transporting materials and management strategies:
 - emergency response procedures
 - hierarchy of control
- manual and mechanical loading and unloading methods
- types of loading equipment, including equipment load weight requirements.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment.

Assessors are responsible for ensuring that the candidate has access to:

- worksite/s and specifications for managing demolition recyclable and waste materials using load shifting equipment
- appropriate documents, materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- requirements of workplace policies, procedures and demolition plans.

CPCCE3023 Operate skid steer loaders at ground level on demolition sites

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE3023A Operate skid steer loaders at ground level on demolition sites. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to operate a skid steer loader at ground level in the demolition industry. It includes planning and preparing; conducting machine pre-operational checks; preparing a site for the demolition process; removing demolition debris; selecting, removing and fitting loader attachments; removing demolition materials and waste; relocating skid steer loaders; and carrying out machine operator maintenance.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to demolition work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-requisite Unit

Nil.

Unit Sector

Demolition.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare for work.
 - 1.1 Interpret and apply compliance requirements to skid steer loader operations.
 - 1.2 Complete tasks according to manufacturer specifications and regulatory, legislative and workplace policies and requirements.
 - 1.3 Obtain work instructions, confirm with team members and other relevant personnel, and apply to planning and preparation.
 - 1.4 Identify and apply work health and safety (WHS) requirements to task planning.
 - 1.5 Identify environmental requirements for the project according to environmental plans.
 - 1.6 Identify, select and fit personal protective equipment (PPE).
 - 1.7 Check maintenance tools and equipment for serviceability and rectify and report faults.
 - 1.8 Conduct skid steer loader pre-start, start-up, park and shutdown operational checks.
 - 1.9 Check skid steer loader controls and functions for serviceability and rectify and report faults.

- 2 Select, check and fit attachments.
 - 2.1 Select skid steer loader attachments to carry out tasks consistent with job requirements.
 - 2.2 Check attachments and connections for excessive wear and replace and report these as required.
 - 2.3 Fit attachments securely according to safe work method, and fit safety pins or clips.
 - 2.4 Check hydraulic components and rectify faults or replace components and report these as necessary.
 - 2.5 Test operation of hydraulic system before applying load.
 - 2.6 Test attachment operation by raising and lowering attachment and ensure attachment is locked in raised position for travel.

- 2.7 Remove, clean and store attachments.
- 3 Prepare demolition site.
 - 3.1 Determine and discuss requirements of site demolition plan with team members.
 - 3.2 Conduct site inspection to determine condition of worksite and surrounds before work begins and amend and approve safe work method statement (SWMS) as required.
 - 3.3 Obtain confirmation from supervisor and regulatory authorities that all existing above and below ground services have been disconnected.
 - 3.4 Identify hazardous material for separate handling according to workplace requirements and instructions.
 - 3.5 Position mechanical equipment and plant in operating locations and arrange appropriate exclusion zone and traffic control.
- 4 Operate skid steer loader for demolition process.
 - 4.1 Identify and apply skid steer loader general operating techniques to achieve optimum output while achieving specified tolerances.
 - 4.2 Identify site hazards associated with skid steer loader demolition operations and follow safe operating techniques to minimise risks.
 - 4.3 Move skid steer loader safely between work locations, observing codes and traffic management requirements.
 - 4.4 Implement control measures to manage hazards arising from demolition process according to the demolition plan, safe work methods and regulatory requirements.
 - 4.5 Assess demolition tasks immediately prior to starting and review SWMS to incorporate management of previously undiscovered hazards.
 - 4.6 Operate skid steer loader at ground level to remove demolition debris using suitable attachments according to approved demolition plan and current safe work method.
 - 4.7 Maintain communication with team members during the

- demolition process.
- 4.8 Monitor worksite conditions and progress in consultation with team members and stop work or adjust techniques as required.
- 5 Carry out machine operator inspection and maintenance tasks.
- 5.1 Park and shut down skid steer loader safely and remove attachments.
 - 5.2 Inspect skid steer loader for faults and remove and replace defective parts.
 - 5.3 Conduct regular programmed operator maintenance tasks.
- 6 Clean up work area.
- 6.1 Clear work area and sort materials and waste and position for removal, as required, and according to site demolition project environmental management plan.
 - 6.2 Clean, check, maintain and store maintenance tools and equipment.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCE3023A Operate skid steer loaders at ground level on demolition sites.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCE3023 Operate skid steer loaders at ground level on demolition sites

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE3023A Operate skid steer loaders at ground level on demolition sites. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must operate a skid steer loader from ground level to complete the following demolition tasks:

- demolish 30 square metres of minor non-structural material
- separate, sort, lift, transfer and load for transport a minimum of 10 cubic metres of recyclable and waste material.

In doing this, the candidate must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the compliance requirements of the relevant Australian Standards, Building Code of Australia (BCA), model codes of practice, environmental and work health and safety (WHS) legislation
- general construction terminology
- hazards associated with the operation of skid steer loaders from ground level on residential, commercial and industrial demolition sites
- methods for materials storage and disposal, including environmentally friendly waste management
- method of operation, and maintenance requirements, of skid steer loader and attachments
- types, characteristics, uses and limitations of skid steer loaders in the demolition industry
- workplace and equipment safety requirements.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment.

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

- worksite/s and specifications for operating skid steer loaders at ground level on demolition sites
- appropriate documents, materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- requirements of workplace policies, procedures and demolition plans.

CPCCE3024 Operate mobile plant on suspended floors on demolition sites

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Performance Criteria numbering rectified in Elements 3 and 6.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE3024A Operate mobile plant on suspended floors on demolition sites. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to operate mobile plant on suspended floors to demolish building elements on or above the same suspended floor. It includes planning and preparing; conducting machine pre-operational checks; preparing a site for the demolition process; following demolition procedures for different building elements; selecting, removing and fitting attachments; removing demolition materials and waste; relocating plant; and carrying out machine operator maintenance.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to demolition work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-requisite Unit

Nil.

Unit Sector

Demolition.

 - 2.5 Test operation of hydraulic system before applying load.
 - 2.6 Test attachment operation by raising and lowering attachment and check attachment is locked in position for travel.
 - 2.7 Remove, maintain and store attachments.
- 3 Prepare demolition site.
- 3.1 Determine requirements of site demolition plan and discuss these with team members.
 - 3.2 Conduct site inspection of property or dilapidation survey to determine condition of work site and surrounds before work begins and amend and see approval of safe work method statement as required.
 - 3.3 Obtain confirmation from supervisor and regulatory authorities that specified services, above and below ground, have been disconnected and identifies and protects any remaining live services.
 - 3.4 Identify hazardous material for separate handling.
 - 3.5 Position mechanical equipment and plant in operating locations and arrange appropriate exclusion zone and traffic control.
- 4 Operate mobile plant for demolition process.
- 4.1 Identify and apply mobile plant general operating techniques to achieve safe, effective and efficient output while achieving specified tolerances.
 - 4.2 Identify site hazards associated with mobile plant demolition operations and follow safe operating techniques to minimise risks.
 - 4.3 Monitor and control placement of mobile plant and allowable weight of demolition debris loads on suspended floors throughout the demolition process.

- 4.4 Move mobile plant safely between work locations and observe codes and traffic management requirements.
 - 4.5 Implement control measures to manage hazards arising from demolition process according to the demolition plan, safe work methods and regulatory requirements.
 - 4.6 Assess demolition tasks immediately prior to starting and review safe work method statement (SWMS) to incorporate management of previously undiscovered hazards.
 - 4.7 Operate mobile plant on suspended floors to demolish building elements or remove demolition debris using suitable attachments according to approved demolition plan, structural engineering advice, and current safe work method.
 - 4.8 Maintain communication with team members during the demolition process.
 - 4.9 Monitor worksite conditions and progress in consultation with team members and stop work or adjust techniques as required.
- 5 Carry out machine operator inspection and maintenance tasks.
 - 5.1 Park and shut down mobile plant safely and remove and store attachments.
 - 5.2 Inspect mobile plant for faults and remove and replace defective parts.
 - 5.3 Conduct regular programmed operator maintenance tasks and complete log sheets.
- 6 Clean up work area.
 - 6.1 Clear work area and sort materials and waste and position for removal, as required, according to site demolition project environmental management plan.
 - 6.2 Clean, check, maintain and store maintenance tools and equipment.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCE3024A Operate mobile plant on suspended floors on demolition sites.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCE3024 Operate mobile plant on suspended floors on demolition sites

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Performance Criteria numbering rectified in Elements 3 and 6.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE3024A Operate mobile plant on suspended floors on demolition sites. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must operate mobile plant on a suspended floor to complete the following demolition tasks:

- demolish 10 square metres of roof and wall structure
- break up 10 square metres of concrete floor using a hydraulic hammer attachment
- separate, sort, and load for transport a minimum of 10 cubic metres of recyclable and waste material.

In doing this, the candidate must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the compliance requirements of the relevant Australian Standards, Building Code of Australia (BCA), model codes of practice, environmental and work health and safety (WHS) legislation
- basic principles of structural engineering relating to:
 - placement of loads on suspended floors during demolition of the same floor
 - propping requirements
 - stability of buildings and structures throughout the demolition process
- risks associated with:
 - pre-tensioning
 - post-tensioning
 - pre-cast slabs

- general construction terminology
- hazards associated with the operation of mobile plant on suspended floors on residential, commercial and industrial demolition sites
- hazards associated with inappropriate demolition methodology, including structural collapse or the premature failure of floors or other structural elements
- methods for materials storage and disposal, including environmentally friendly waste management
- method of operation and maintenance requirements of mobile plant and attachments
- types, characteristics, uses and limitations of mobile plant in the demolition industry
- workplace and equipment safety requirements.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment.

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

- worksite/s and specifications for operating mobile plant on suspended floors on demolition sites
- appropriate documents, materials, tools, equipment and personal protective equipment currently used in industry
- requirements of workplace policies, procedures and demolition plans.

CPCCE3025 Operate remote-controlled plant on demolition sites

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Rectified naming of Element 5.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCE3025A Operate remote-controlled plant on demolition sites. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to operate remote-controlled plant to conduct high risk demolition operations, such as overhead cutting, sawing and jack hammering, and to operate remote-controlled plant work in restricted spaces, such as tunnels. Remote-controlled plant may be operated at ground level, below ground or on suspended floors.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to demolition work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-requisite Unit

Nil.

Unit Sector

Demolition.

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Plan and prepare for work.
 - 1.1 Interpret and apply compliance requirements for remote-controlled plant demolition operations.
 - 1.2 Complete tasks according to manufacturer specifications and regulatory, legislative and workplace policies and requirements.
 - 1.3 Obtain work instructions from relevant information, confirm with team members and other relevant personnel, and apply to planning and preparation.
 - 1.4 Follow instructions and advice from structural engineer regarding load bearing capacities and demolition techniques on suspended floors.
 - 1.5 Identify and apply work health and safety (WHS) requirements to task planning according to safety plans.
 - 1.6 Identify environmental requirements for the project according to environmental plans.
 - 1.7 Identify, select and fit personal protective equipment (PPE).
 - 1.8 Check maintenance tools and equipment for serviceability and rectify and report faults.
 - 1.9 Conduct remote-controlled plant pre-start, start-up, park and shutdown operational checks.
 - 1.10 Check remote-controlled plant controls and functions, including brakes and manoeuvrability, for serviceability, and rectify and report faults.
 - 2 Select, check and fit attachments.
 - 2.1 Select remote-controlled plant attachments to carry out tasks consistent with job requirements.
 - 2.2 Check attachments, arms and connections for excessive wear, and replace and report as required.
 - 2.3 Fit attachments securely according to safe work method and fit safety pins or clips.
 - 2.4 Check hydraulic components and rectify or replace faulty components and report actions.

- 2.5 Test operation of hydraulic system before applying load.
 - 2.6 Test attachment operation by raising and lowering attachment and lock attachment in raised position for travel.
 - 2.7 Remove, clean and store attachments.
- 3 Prepare demolition site.
 - 3.1 Determine requirements of site demolition plan and discuss these with team members.
 - 3.2 Conduct site inspection of property or dilapidation survey to determine condition of worksite and surrounds before work begins and amend and seek approval of safe work method statement (SWMS) as required.
 - 3.3 Obtain confirmation from supervisor and regulatory authorities that all existing services have been disconnected.
 - 3.4 Identify hazardous material for separate handling.
 - 3.5 Position mechanical equipment and plant in operating locations and arrange appropriate exclusion zone and traffic control.
- 4 Operate remote-controlled plant loader for demolition process.
 - 4.1 Identify and apply remote-controlled plant operating techniques to achieve optimum output while achieving specified tolerances.
 - 4.2 Identify site hazards associated with remote-controlled plant demolition operations, including position of operator and personnel in relation to plant, equipment and environment and follow safe operating techniques to minimise risks.
 - 4.3 Move remote-controlled plant safely between work locations and observe relevant codes and traffic management requirements.
 - 4.4 Implement control measures to manage hazards arising from demolition process according to the demolition plan, safe work methods and regulatory requirements.
 - 4.5 Assess demolition tasks immediately prior to starting and review SWMS to incorporate management of previously

- unpredicted hazards.
- 4.6 Operate remote-controlled plant at a safe distance to demolish building elements using suitable attachments according to approved demolition plan and current safe work method.
 - 4.7 Maintain communication with team members during the demolition process.
 - 4.8 Monitor worksite conditions and progress in consultation with team members and stop work or adjust techniques as required.
- 5 Carry out machine operator inspection and maintenance tasks.
 - 5.1 Carry out machine operator inspection and maintenance tasks.
 - 5.2 Carry out machine operator inspection and maintenance tasks.
 - 5.3 Carry out machine operator inspection and maintenance tasks.
- 6 Clean up work area.
 - 6.1 Clear work area and sort materials and waste and position for removal, as required, according to site demolition project environmental management plan.
 - 6.2 Clean, check, maintain and store maintenance tools and equipment.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCE3025A Operate remote-controlled plant on demolition sites.

Assessment Requirements for CPCCE3025 Operate remote-controlled plant on demolition sites

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Rectified naming of Element 5.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCE3025A Operate remote-controlled plant on demolition sites. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must operate remote-controlled plant to complete the following demolition tasks:

- demolish 10 square metres of in-situ building material on each of three different types of buildings or structures
- break up 10 square metres of concrete floor or structure using a hydraulic hammer attachment.

In doing this, the candidate must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the compliance requirements of the relevant Australian Standards, Building Code of Australia (BCA), model codes of practice, environmental and work health and safety (WHS) legislation
- basic principles of structural engineering regarding loads on suspended floors
- general construction terminology
- hazards associated with the operation of remote-controlled plant on residential, commercial and industrial demolition sites:
 - plant
 - personnel
 - operator
- methods for materials storage and disposal, including environmentally friendly waste management

- method of operation and maintenance requirements of remote-controlled plant and attachments
- types, characteristics, uses and limitations of remote-controlled plant in the demolition industry
- workplace and equipment safety requirements.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment.

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

- worksite/s and specifications for operating remote-controlled plant on demolition sites
- appropriate documents, materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- requirements of workplace policies, procedures and demolition plans.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCE3026 Operate excavators at ground level to demolish building elements

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Minor typographical errors rectified.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE3026A Operate excavators at ground level to demolish building elements. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to operate an excavator at ground level in the demolition industry. The unit covers planning and preparing; conducting machine pre-operational checks; preparing a site for the demolition process; following demolition procedures for different building elements; selecting, removing and fitting attachments; removing demolition materials and waste; relocating excavators; and carrying out machine operator maintenance.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to demolition work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-requisite Unit

Nil.

Unit Sector

Demolition.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|------------------------------------|-----|--|
| 1 | Plan and prepare for work. | 1.1 | Interpret and apply compliance requirements to excavator operation. |
| | | 1.2 | Complete tasks according to manufacturer specifications and regulatory, legislative and workplace policies and requirements. |
| | | 1.3 | Obtain work instructions from required information, confirm with team members and other relevant personnel, and apply to planning and preparation. |
| | | 1.4 | Identify and apply work health and safety (WHS) requirements to task planning. |
| | | 1.5 | Identify environmental requirements for the project according to environmental plans. |
| | | 1.6 | Identify, select and fit personal protective equipment (PPE). |
| | | 1.7 | Check tools and equipment, complete pre-start checks and operator maintenance tasks for serviceability and rectify and report faults. |
| | | 1.8 | Conduct excavator pre-start, start-up, park and shutdown operational checks. |
| | | 1.9 | Check excavator controls and for serviceability and rectify and report faults. |
| 2 | Select, check and fit attachments. | 2.1 | Select excavator attachments to carry out tasks consistent with job requirements. |
| | | 2.2 | Check attachments and connections for excessive wear and replace and report actions as required. |
| | | 2.3 | Fit attachments securely according to safe work method, and use an applicable safety retaining device. |
| | | 2.4 | Check hydraulic components and rectify or replace components and report actions as necessary. |
| | | 2.5 | Test operation of hydraulic system before applying load. |

- 2.6 Test attachment operation by raising and lowering attachment and lock attachment securely in position for travel.
 - 2.7 Remove, maintain and store attachments.
- 3 Prepare demolition site.
 - 3.1 Determine requirements of site demolition plan and discuss these with team members.
 - 3.2 Conduct site inspection of property or dilapidation survey to determine condition of worksite and surrounds before work begins and amend and seek approval of safe work method statement (SWMS) as required.
 - 3.3 Confirm with supervisor or regulatory authorities that specified services, above and below ground, have been disconnected and identify and protect any remaining live services.
 - 3.4 Identify hazardous material for separate handling.
 - 3.5 Position mechanical equipment and plant in operating locations and arrange appropriate exclusion zone and traffic control and overhead service line protection.
- 4 Operate excavator for demolition process.
 - 4.1 Identify and apply excavator general operating techniques to achieve safe, effective and efficient output according to manufacturer's design specifications while achieving specified tolerances.
 - 4.2 Identify site hazards associated with excavator demolition operations and follow safe operating techniques to minimise risks.
 - 4.3 Move excavator safely between work locations.
 - 4.4 Implement control measures to manage hazards arising from demolition process according to the demolition plan, safe work methods and regulatory requirements.
 - 4.5 Assess demolition tasks immediately prior to starting, and review SWMS to incorporate management of undiscovered hazards.
 - 4.6 Operates excavator at ground level to demolish building elements using suitable attachments according to

- approved demolition plan and current safe work method.
- 4.7 Maintain communication with team members during the demolition process.
- 4.8 Monitor worksite conditions and progress in consultation with team members and stop work or adjust techniques as required.
- 5 Carry out machine operator inspection and maintenance tasks.
- 5.1 Park and shut down excavator safely and remove and store attachments.
- 5.2 Inspect excavator for faults and remove and replace defective parts.
- 5.3 Conduct regular programmed operator maintenance tasks and complete log sheets.
- 6 Clean up work area.
- 6.1 Clear work area and sort materials and waste and position for removal, as required, according to site demolition project environmental management plan.
- 6.2 Clean, check, maintain and store maintenance tools and equipment.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCE3026A Operate excavators at ground level to demolish building elements.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCDE3026 Operate excavators at ground level to demolish building elements

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Minor typographical errors rectified.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCDE3026A Operate excavators at ground level to demolish building elements. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must operate an excavator from ground level to complete the following demolition tasks:

- demolish 30 square metres of structure
- separate, sort, lift, transfer and load for transport a minimum of 10 tonnes of recyclable and waste material.

In doing this, the candidate must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the compliance requirements of the relevant Australian Standards, Building Code of Australia (BCA), model codes of practice, environmental and work health and safety (WHS) legislation
- general construction terminology
- hazards associated with the operation of excavators from ground level on residential, commercial and industrial demolition sites
- methods for materials storage and disposal, including environmentally friendly waste management
- method of operation and maintenance requirements of excavator and attachments
- types, characteristics, uses and limitations of excavators in the demolition industry
- workplace and equipment safety requirements.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment.

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

- worksite/s and specifications for operate excavators at ground level to demolish building elements
- appropriate documents, materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- requirements of workplace policies, procedures and demolition plans.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCE3027 Read and interpret demolition site plans and drawings

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit

Application

This unit specifies the skills and knowledge required to read and interpret demolition site plans and drawings relevant to demolition operations.

It includes identifying and interpreting types of demolition site plans and their functions, recognising commonly used symbols and abbreviations, identifying key features and specifications on a demolition site plan and drawings and comprehending job specifications.

It applies to workers in the demolition industry. It involves working under supervision in a team environment.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to demolition work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-requisite Unit

Nil.

Unit Sector

Demolition.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | |
|--|-----|--|
| 1 Identify and confirm demolition site work plan and currency. | 1.1 | Identify the key features and functions of each of the main types of site plans used in the demolition industry and their purpose. |
| | 1.2 | Locate and explain the purpose of the legend on site work plans and drawings used in the demolition industry. |
| | 1.3 | Explain and confirm the meaning of symbols and abbreviations used on demolition work plans and drawings with relevant persons. |
| | 1.4 | Check amendments to demolition work plans to ensure currency of information, and report to relevant persons as required. |
| 2 Locate key features on a demolition site plan. | 2.1 | Orientate the demolition site plan with the site. |
| | 2.2 | Locate key features of the demolition site from the site plan. |
| 3 Identify demolition project requirements from site plan. | 3.1 | Identify demolition project dimensions and nominated locations from drawings. |
| | 3.2 | Identify demolition options from site plans and drawings. |
| | 3.3 | Identify environmental requirements, controls and locations from environmental plan and demolition site plan. |
| | 3.4 | Identify standards of work and tolerances from demolition site plan and specifications. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCDE3027 Read and interpret demolition site plans and drawings

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit

Performance Evidence

A candidate who demonstrates competency in this unit must read and interpret two different residential demolition site plans and two different commercial demolition site plans.

In doing this, the candidate must meet the requirements of the performance criteria.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the relevant Australian Standards, Building Code of Australia (BCA), model codes of practice, environmental and work health and safety (WHS) legislation
- features and functions of different types of demolition site plans:
 - drawings
 - cross-sectional plans
 - demolition work method statement
 - demolition management plan
 - traffic management plan
 - dilapidation report
 - hazardous materials audit
 - engineering reports and assessments
 - demolition site instructions
 - demolition project specifications
 - structural detail and specification providing illustrations and dimensions
 - legends, symbols and abbreviations used on demolition work plans
- processes for:
 - checking amendments to plans
 - orientating demolition site plans against sites
 - locating site demolition locations from site plans

- key features of demolition site plans:
 - characteristics
 - compatibility
 - construction
 - location
 - pattern dimension
 - quantities
 - sizes
- environmental requirements:
 - clean-up management
 - waste management
 - hazardous materials
- key features of specifications:
 - detail relating to materials and quality of work, quality assurance, nominated subcontractors, and provision of demolition site access/facilities
- details relating to performance:
 - characteristics
 - material types
 - standards of work
 - tolerances
 - treatments and finishes.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment.

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

- plans and specifications for a demolition project and access to a demolition site
- reference material and equipment to read and interpret plans and specifications for demolition projects.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCE4001 Plan and prepare for activities on demolition sites

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE4001A Plan and prepare for activities on demolition sites. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to assess the size and scope of large demolition projects, including structures or installations above 15 metres, on different types of sites and identify the resources required to complete the project on time and within budget. It includes communication of project requirements to team members in preparation for demolition work to commence.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to demolition work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-requisite Unit

Nil.

Unit Sector

Demolition.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|---|-----|---|
| 1 | Assess demolition site and scope of work. | 1.1 | Interpret demolition plan and inspect site to evaluate size and complexity of demolition tasks. |
|---|---|-----|---|

- 1.2 Assess concurrent work of other construction teams and establish or confirm communication channels.
 - 1.3 Assess site access and egress and traffic management plan and negotiate additional provisions or changes as required.
 - 1.4 Assess provisions for site storage and amenities and arrange additional provisions or changes as required.
 - 1.5 Confirm and apply general site work health and safety (WHS) and environmental requirements to planning.
 - 1.6 Confirm and apply regulatory compliance requirements to planning.
 - 1.7 Arrange HAZMAT audits prior to demolition work start date and apply findings to planning.
- 2 Schedule demolition activities.
- 2.1 Analyse demolition plan and prioritise individual demolition tasks according to WHS, site and resource requirements.
 - 2.2 Plan and sequence concurrent tasks to maximise efficient use of resources.
 - 2.3 Estimate resource hours required for individual demolition tasks with allowances for contingencies.
 - 2.4 Calculate timelines for different project stages, compare these to demolition plan, and adjust as required.
 - 2.5 Prepare project schedule, organise review by required personnel, make amendments as required and process schedule according to workplace requirements.
- 3 Prepare safe work method statements (SWMS) for individual demolition activities.
- 3.1 Inspect site and identify hazards and risks associated with demolition tasks, discuss findings with WHS and site personnel, and evaluate impact on sequencing of tasks.
 - 3.2 Analyse risk management strategies according to the hierarchy of control in consultation with WHS and site personnel.

- 3.3 Prepare SWMS for demolition tasks.
- 3.4 Review SWMS immediately before work starts to re-assess worksite conditions.
- 4 Arrange resources for demolition activities.
 - 4.1 Confirm resource requirements for demolition tasks and calculate requirements for concurrent tasks according to project schedule.
 - 4.2 Arrange delivery of required plant, tools and equipment according to project schedule.
 - 4.3 Determine specialised skill requirements for different project stages and assess skills of available team members to identify skill shortages.
 - 4.4 Conduct and complete recruitment of additional team members within required timeframe.
 - 4.5 Allocate team members to tasks and check and confirm human resource requirements for all project stages as complete.
- 5 Conduct site induction and team briefing for demolition project.
 - 5.1 Arrange and conduct site tour and site induction.
 - 5.2 Explain and discuss details of task allocations and scheduling, and confirm team understanding of work requirements.
 - 5.3 Explain concurrent work of other construction teams, and interactions and communication channels, and confirm understanding of team members.
 - 5.4 Explain provisions for dealing with risks, hazards and contingencies, and confirm understanding of team members.
 - 5.5 Encourage team members to ask questions for clarification at all stages of the work and to provide suggestions for improvements in processes.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCE4001A Plan and prepare for activities on demolition sites.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCE4001 Plan and prepare for activities on demolition sites

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE4001A Plan and prepare for activities on demolition sites. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must plan and prepare for activities on two different large demolition projects, one of which must involve a structure above 15 metres in height.

In doing this, the candidate must:

- assess demolition site and scope of work
- schedule demolition activities
- prepare safe work method statements (SWMS) for demolition activities
- arrange resources for demolition activities
- conduct site induction and team briefing for demolition project.

In doing this, the candidate must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the compliance requirements of the relevant Australian Standards, Building Code of Australia (BCA), model codes of practice, environmental and work health and safety (WHS) legislation
- contract management strategies
- customer service strategies
- demolition procedures, techniques and safety requirements
- demolition site inspection procedures
- hazards and risks existing or arising on demolition sites and relevant risk management strategies
- legislation, regulations, codes and standards relating to different stages of the demolition process
- plant, tools and equipment required for demolition tasks:

- permits and licences required
- safe operating procedures
- project management strategies
- quality management strategies
- team leadership strategies.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

- worksite/s and specifications for planning and preparing for activities on demolition sites
- appropriate documents, materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- requirements of workplace policies, procedures and demolition plans.

CPCCE4002 Plan demolition work to minimise risk to health, safety and environment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE4002A Plan and supervise demolition work to minimise environmental and public health and safety impact. Minor title change. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to plan large demolition projects, including but not limited to structures or installations above 15 metres, to minimise environmental, public health and safety impact. It includes interpreting and meeting relevant compliance requirements and developing and implementing proactive measures to exceed them where possible.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to demolition work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-requisite Unit

Nil.

Unit Sector

Demolition.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Assess potential impacts of demolition

1.1 Determine environmental and public health and safety compliance requirements for the demolition site and

- tasks. geographic locality.
- 1.2 Determine potential impacts on public health and safety.
- 2 Implement measures to minimise impacts of demolition work on the environment.
- 2.1 Investigate, select and incorporate strategies into procedures to minimise impacts on air quality.
- 2.2 Investigate, select and incorporate strategies into procedures to minimise water wastage and impacts on stormwater.
- 2.3 Investigate, select and incorporate strategies into procedures to minimise energy wastage and employ renewable energy technologies.
- 2.4 Investigate, select and incorporate strategies into procedures to minimise material wastage and to ensure safe disposal of hazardous and waste materials.
- 3 Identify measures to minimise impacts of demolition work on the public.
- 3.1 Interpret and amend strategies regarding site containment, exclusion and signage strategies to minimise impacts on the public and to maximise employee awareness.
- 3.2 Interpret and amend strategies regarding pedestrian and traffic management plan for site and site perimeter to minimise risks to the public.
- 3.3 Interpret and amend strategies regarding fall prevention for both personnel and materials to minimise risks to site personnel and the public.
- 3.4 Interpret and amend strategies regarding noise, air pollution and vibration management to minimise impact on the public.
- 4 Develop demolition work plans.
- 4.1 Interpret documentation to develop demolition work plans.
- 4.2 Confirm personnel and staff availability are sufficient for work plans.

- | | | |
|--|-----|--|
| 5 Brief team and supervise implementation of impact minimisation strategies. | 5.1 | Consult with demolition teams to confirm strategies for minimising impact of demolition work on the environment and on public health and safety. |
| | 5.2 | Distribute amended safe work method statements (SWMS) and invite and respond to questions, as required. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCE4002A Plan and supervise demolition work to minimise environmental and public health and safety impact.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCE4002 Plan demolition work to minimise risk to health, safety and environment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE4002A Plan and supervise demolition work to minimise environmental and public health and safety impact. Minor title change. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must plan and supervise demolition work to minimise environmental and public health and safety impact on two demolition projects, one of which must involve a structure above 15 metres in height. The candidate must:

- assess the potential impacts of the demolition tasks
- identify measures to minimise the impacts of the demolition work on the environment
- identify measures to minimise the impacts of the demolition work on the public
- review strategies and demolition work plan
- brief and consult with the demolition team.

In doing this, the candidate must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the compliance requirements of the relevant Australian Standards, Building Code of Australia (BCA), model codes of practice, environmental and work health and safety (WHS) legislation
- demolition procedures, techniques and safety requirements
- demolition site inspection procedures
- environmental and public health and safety hazards and risks existing or arising on demolition sites, and relevant risk management strategies
- legislation, regulations, codes and standards relating to environmental and public health and safety on demolition sites
- plant, tools and equipment required for demolition tasks:
 - permits and licences required
 - safe operating procedures
- project management strategies

- quality management strategies
- strategies to minimise environmental and public health and safety risks on and around demolition sites
- team leadership strategies.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment.

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

- worksite/s and specifications for planning and documenting demolition work
- appropriate documents, materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- requirements of workplace policies, procedures and demolition plans.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCE4003 Supervise operational activities on demolition sites

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE4003A Supervise individual activities on demolition sites. Minor title change. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to monitor and direct demolition activities on large demolition projects, including structures or installations including but not limited to those above 15 metres on different types of sites to ensure that projects are completed within required timeframe and to specifications. It includes overseeing preparation for demolition work; reviewing safe work methods prior to task commencement; controlling, monitoring and directing team members throughout task completion; and overseeing site clean-up activities.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to demolition work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-requisite Unit

Nil.

Unit Sector

Demolition.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Supervise preparation 1.1 Process permit applications for different tasks and

- for demolition work. confirm as compliant prior to starting work.
- 1.2 Communicate to team members work instructions for individual demolition tasks and invite and address questions.
 - 1.3 Confirm team member understanding of work health and safety (WHS) and environmental requirements.
 - 1.4 Confirm team members' selection of plant, tools and equipment is consistent with job requirements.
 - 1.5 Process reported plant, tool and equipment faults according to workplace and WHS requirements and source replacements as required.
 - 1.6 Monitor and direct team members' manual handling and placement of plant, tools and equipment at the site to ensure safety and efficiency.
- 2 Monitor and manage tasks and procedures.
- 2.1 Inspect worksites for individual demolition tasks, and review risks and hazards in conjunction with team members.
 - 2.2 Review safe work method statements (SWMS) for individual tasks with team members, observe site conditions and make adjustments according to issues raised, in consultation with WHS personnel as required.
 - 2.3 Monitor weather conditions and contingencies and direct resources as required to ensure safety, quality and timeliness of demolition task completion.
 - 2.4 Monitor and direct progress of work and procedures used by team members to minimise risks on site and impacts on public health and safety and the environment.
 - 2.5 Stop work when previously undiscovered hazards arise, clear work site, and re-assess site and safe work method in consultation with relevant personnel.
 - 2.6 Check completed work for compliance with work plans and specification, identify discrepancies, and direct resources to make adjustments as required.
- 3 Supervise site
- 3.1 Monitor and direct removal and storage or disposal of

- clean-up.
- plant, tools, equipment materials and waste to ensure compliance with workplace, safety and environmental requirements.
- 3.2 Debrief team members and identify and action opportunities for learning as required.
- 3.3 Complete and process project documentation according to workplace and project requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCE4003A Supervise individual activities on demolition sites.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCE4003 Supervise operational activities on demolition sites

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE4003A Supervise individual activities on demolition sites. Minor title change. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must supervise operational activities for two demolition projects on different sites, one of which must involve a structure or installation above 15 metres in height.

In doing this, the candidate must meet the requirements of the unit's elements and associated performance criteria by:

- supervising preparation for demolition tasks
- monitoring and managing completion of demolition tasks
- supervising clean-up and finalisation of demolition tasks.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the compliance requirements of the relevant Australian Standards, Building Code of Australia (BCA), model codes of practice, environmental and work health and safety (WHS) legislation
- contract management strategies
- customer service strategies
- demolition procedures, techniques and safety requirements
- demolition site inspection procedures
- hazards and risks existing or arising on demolition sites and relevant risk management strategies
- legislation, regulations, codes and standards relating to demolition
- plant, tools and equipment required for demolition tasks, including:
 - permits and licences required
 - safe operating procedures
- project management strategies
- quality management strategies

- team leadership strategies.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment.

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

- worksite/s and specifications
- appropriate documents, materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- requirements of workplace policies, procedures and demolition plans.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCE4004 Finalise demolition activities and supervise property handover

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE4004A Finalise demolition activities and supervise property handover. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to ensure that large demolition projects, including but not limited to structures or installations above 15 metres in height and on different types of sites, are completed within the required timeframe and to specifications, with agreed alterations to specified work clearly recorded. It includes ensuring that the property is handed over to the owner or their nominated representative within projected timeframes and that relevant documentation is completed and processed.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to demolition work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-requisite Unit

Nil.

Unit Sector

Demolition.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan handover of property.
 - 1.1 Interpret and confirm information relating to demolition contract, including timelines for completion and site handover specifications.
 - 1.2 Complete tasks according to regulatory, legislative and workplace policies and requirements.
 - 1.3 Confirm and schedule handover process with stakeholders and negotiate and record required amendments to timeframes or handover specifications.
 - 1.4 Confirm and schedule demolition finalisation tasks and assess and arrange resources.
 - 1.5 Determine and apply work health and safety (WHS) requirements to task planning.
 - 1.6 Identify environmental requirements for the project according to environmental plans.
 - 1.7 Brief demolition team, allocate demolition finalisation tasks and confirm these are understood by team members.

- 2 Monitor quality and timeliness of job completion.
 - 2.1 Conduct audit of property to determine condition of worksite and surrounds before initiating demolition finalisation tasks and adjust safe work method statements (SWMS) in consultation with relevant personnel, as required.
 - 2.2 Start scheduled tasks within required timeframes and monitor progress to completion to ensure deadlines are met.
 - 2.3 Monitor hazard control and regulatory compliance throughout the finalisation process and direct team members to use specific procedures or techniques, as necessary.
 - 2.4 Assess completed tasks against specifications and note, resolve and record discrepancies in required documentation.
 - 2.5 Inspect and check property against finalisation schedule and quality requirements and identify, resolve and record discrepancies in required documentation.

- | | | | |
|---|---|-----|--|
| 3 | Conduct handover site inspection with stakeholders. | 3.1 | Confirm handover site inspection appointment with property owner or authorised representatives and other relevant personnel, as required. |
| | | 3.2 | Confirm procedures and required documentation for handover site inspection with stakeholders. |
| | | 3.3 | Interpret records relating to completed demolition work and record and confirm agreed variations to initial specifications in completion documentation. |
| | | 3.4 | Conduct site safety inspection and arrange or deliver site safety induction to stakeholders prior to handover site inspection. |
| | | 3.5 | Inspect sections of site according to handover site inspection schedule and sign off as complete or discuss discrepancies and negotiate and record solutions. |
| 4 | Finalise work and complete handover documentation. | 4.1 | Implement solutions to discrepancies discovered on handover site inspection according to negotiated schedule and monitor and check completion is to required standard. |
| | | 4.2 | Supervise site clearance and check to ensure all plant, tools, equipment, materials and waste are removed and that ground is prepared according to agreed standard. |
| | | 4.3 | Prepare and process final documentation. |
| | | 4.4 | Secure site according to project requirements. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCE4004A Finalise demolition activities and supervise property handover.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCCE4004 Finalise demolition activities and supervise property handover

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCE4004A Finalise demolition activities and supervise property handover. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must finalise demolition activities and supervise property handover for two large demolition projects, one of which must involve a structure or installation above 15 metres in height.

In doing this, the candidate must meet the requirements of the unit's elements and associated performance criteria by:

- planning finalisation of demolition activities and handover of property
- monitoring quality and timeliness of demolition project completion
- conducting handover site inspection with stakeholders
- finalising project and completing handover documentation.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the compliance requirements of the relevant Australian Standards, Building Code of Australia (BCA), model codes of practice, environmental and work health and safety (WHS) legislation
- contract management strategies
- customer service strategies
- demolition procedures, techniques and safety requirements
- demolition site audit procedures
- hazards and risks existing or arising on demolition sites and relevant risk management strategies
- legislation, regulations, codes and standards relating to relating to the finalisation of demolition tasks and handing over the property
- plant, tools and equipment required for demolition tasks:
 - permits and licences required
 - safe operating procedures

- project management strategies
- quality management strategies
- team leadership strategies.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment.

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

- worksite/s and specifications
- appropriate documents, materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- requirements of workplace policies, procedures and demolition plans.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCE4005 Apply structural principles to the planning of the demolition of a structure

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Application

This unit of competency specifies the skills and knowledge required to apply structural principles when planning demolition, using conventional methods, of structures.

This unit of competency supports the needs of site managers, forepersons and other managers in the building and construction or demolition industry responsible for effecting a demolition plan.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to demolition work in different states and territories. Candidates are advised to consult with the relevant regulatory authority.

Pre-requisite Unit

Nil.

Unit Sector

Demolition.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Analyse the structural integrity of demolition | 1.1 Analyse integrity of structure from project plans and specifications, building standards and codes. |
|--|---|

- project.
- 1.2 Conduct pre-commencement site inspection to confirm analysis.
 - 1.3 Assess project for compliance with workplace safety and environmental requirements.
 - 1.4 Confirm analysis with relevant industry professionals.
- 2 Apply structural principles to the planning of demolition project.
- 2.1 Identify main structural principles that apply to the intended demolition.
 - 2.2 In conjunction with related industry professionals, confirm the structural performance characteristics of slabs, beams, columns and retaining walls and apply these to the planning of the demolition project.
 - 2.3 Confirm properties and behaviours of structural components and then possible reactions to demolition, using standard industry formulas and performance comparisons.
- 3 Evaluate worksite prior to demolition.
- 3.1 Implement processes to analyse stability of soils and capacity of the site to support the demolition loads.
 - 3.2 Establish processes for demolishing wall systems and wall cladding systems in compliance with relevant Australian Standards and codes.
 - 3.3 Evaluate structural integrity of the roof and roof cladding system in preparation for demolition.
 - 3.4 Complete relevant documentation in accordance with workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCE4005 Apply structural principles to the planning of the demolition of a structure

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by applying structural principles to the demolition planning of two different structures on two different demolition projects.

Performance must include:

- analysing the structural integrity of structures
- applying structural principles to the planning of demolition projects
- evaluating worksites prior to demolition.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the compliance requirements of the relevant Australian Standards, Building Code of Australia (BCA), model codes of practice, environmental and work health and safety (WHS) legislation
- applications of structural principles in buildings
- design principles and behaviour of structural members undergoing stress, strain, compression, bending or combined actions
- interpretation and analysis of work drawings and specifications
- nature of materials and effect of performance during demolition of structures
- structural principles
- materials
- industry professionals
- documentation
- structural floor systems
- structural wall systems
- wall cladding systems
- relevant services
- structural roof systems
- roof cladding systems.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment.

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

- documentation, including design brief drawings, specifications, codes, design concepts, construction schedules and other necessary supporting documents
- research resources, access to relevant legislation, regulations and codes of practice
- relevant computer software and hardware.

Links

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCE4006 Demolish stressed panel structure and pre-cast panel structure

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Application

This unit of competency specifies the skills and knowledge required to plan and carry out the demolition of stressed and pre-cast structures in accordance with specifications.

It includes planning and preparation for the work, inspecting bars, components and defining the work area.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to demolition work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-requisite Unit

CPCWHS20 Apply WHS requirements, policies and procedures in the construction
01 industry

Unit Sector

Demolition.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare for 1.1 Obtain, confirm and apply work instructions, including

- work.
- plans, specifications, quality requirements and operational details from relevant information to the scope of work performed.
- 1.2 Plan all work tasks according to manufacturer specifications and regulatory, legislative and workplace policies and requirements.
 - 1.3 Obtain and interpret building, construction and structural drawings of original buildings to be demolished, where possible.
 - 1.4 Engage structural engineer to complete an assessment of the structure, including suspended slabs or beams for the preparation of a demolition work plan.
 - 1.5 Follow safety requirements in accordance with safety plans and policies.
 - 1.6 Complete safe work method statement (SWMS) where structural elements are to be demolished.
 - 1.7 Select tools and equipment to carry out tasks which are consistent with engineer advice and the requirements of the job, check for serviceability and rectify and report any faults prior to commencement.
 - 1.8 Calculate materials quantity requirements in accordance with engineer advice, plans, specifications and quality requirements.
 - 1.9 Identify, prepare and safely handle materials and position ready for use.
 - 1.10 Identify environmental requirements for the project.
 - 1.11 Identify and explain the key elements, hazards and differences between pre-and post-tensioning to relevant personnel.
- 2 Define the work area.
- 2.1 Define safe working area.
 - 2.2 Erect barricades and signage where required to isolate safe work areas.
- 3 Examine stressed
- 3.1 Drill holes or cut and hammer out small sections of slabs

- panel elements.
- or beams throughout the structure for inspection by engineer and project manager for existing tensioning members within the structure.
- 3.2 Seek advice from engineer regarding the demolition work plan sequence and procedure for demolition of the structure.
- 3.3 Identify loads carried, anchorage points and number of tendons using relevant plans, photographs and workplace documentation, under the direct supervision of a structural engineer.
- 3.4 Conduct visual inspection to confirm loads and deviations from original plans and specifications, under the direct supervision of a structural engineer.
- 4 Examine pre-cast elements.
- 4.1 Review structural engineer's assessment of the structure, including connections to slabs or beams, for the preparation of a demolition work plan.
- 4.2 Confirm how pre-cast elements are connected to the main building structure and the methods that were used to install them.
- 5 Demolish structure.
- 5.1 Conduct visual inspection to confirm loads and connections from original plans and specifications, under the direct supervision of a structural engineer and communicate with demolition team.
- 5.2 Erect public protection outside buildings above one story in height, as required.
- 5.3 Cut or break out sections of concrete panel to substantiate how the connections to the structure were made.
- 5.4 Prepare the work area for removal of panels.
- 5.5 Install temporary propping to panels adjacent to those planned for removal, as required by engineer instructions.
- 5.6 Use required tools and equipment to cut through the joints between panels and separate panels.

- 5.7 Break out concrete at the top and bottom of the panel or cut connections in preparation for removal.
 - 5.8 Lift and remove panel using a crane or machine with the appropriate connections or mechanically demolish using a hydraulic attachment.
 - 5.9 Pull panel into site and remove connections to structure.
 - 5.10 Repeat process to remove remaining panels.
- 6 Clean up work area.
- 6.1 Clear work area and dispose, reuse or recycle materials.
 - 6.2 Clean, check, maintain and store plant, tools and equipment.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCE4006 Demolish stressed panel structure and pre-cast panel structure

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Performance Evidence

To demonstrate competency in this unit the candidate must demolish one stressed panel structure and one pre-cast panel structure.

After identifying and controlling hazards, the candidate, working as a part of a team, must demolish one stressed panel structure of not less than four metres high, not less than three metres wide and not less than two tonnes in weight and one pre-cast panel structure of not less than four metres high, not less than three metres wide and not less than two tonnes in weight.

In doing this, the candidate must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the compliance requirements of the relevant Australian Standards, Building Code of Australia (BCA), model codes of practice, environmental and work health and safety (WHS) legislation
- basic theory related to cable stressing as a reinforcement technology
- calibration procedures related to stressing techniques and equipment
- construction and steelfixing tensioning terminology
- factors affecting concrete bonding, curing and strength
- grouting equipment and procedures
- job safety analysis (JSA)
- safe work method statements (SWMS)
- safety data sheets (SDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- requirements and processes for recording stressing operations
- plans containing position of cables, height of chairs, cable specifications, number of strands per cable and the stressing loads

- types of structural elements, including slabs, beams, columns and ground anchors
- types of structures, including buildings, bridges, towers, tanks, silos, stayed structures, offshore platforms, and underground and submerged structures
- safe de-tensioning procedures and techniques
- workplace and equipment safety requirements
- public protection:
 - demolition rated scaffolding.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment.

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

- demolition worksite/s specifications for demolishing stressed panel and pre-cast panel structures
- appropriate documents, materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- requirements of workplace policies, procedures and demolition plans.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCE4007 Manage waste streams

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Application

This unit of competency specifies the skills and knowledge required to implement waste recovery practices in the demolition industry.

It includes planning and preparing for work, identifying the types of waste to be recovered, locating and engaging cyclers or reprocessors and completing clean-up activities.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to demolition work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-requisite Unit

Nil.

Unit Sector

Demolition.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare for work.

1.1 Obtain, confirm and apply work instructions, including plans, specifications, quality requirements and operational details from required information.

1.2 Complete tasks according to manufacturer specifications and regulatory, legislative and workplace policies and

- requirements.
- 1.3 Follow safety requirements in accordance with safety plans and policies.
 - 1.4 Identify and implement signage and barricades.
 - 1.5 Select tools and equipment to carry out tasks that are consistent with the requirements of the job, check for serviceability and rectify and report any faults prior to commencement.
 - 1.6 Identify, prepare and safely handle materials appropriate to the work application and position ready for use.
 - 1.7 Identify environmental requirements for the project.
 - 1.8 Identify the different possible waste streams for the project.
 - 1.9 Identify appropriate disposal locations for each identified waste stream.
- 2 Select and use appropriate demolition practices.
- 2.1 Determine and use demolition practices to increase the recovery of materials for recycling and reuse.
 - 2.2 Adjust timelines to take into account additional time required for salvage operations.
- 3 Identify and sort waste to be recovered.
- 3.1 Determine waste products to be re-used, recycled or recovered.
 - 3.2 Confirm worksite procedures for segregating and locating recyclable and waste demolition materials with relevant personnel.
 - 3.3 Identify and handle hazardous, dangerous and non-conforming waste.
 - 3.4 Segregate waste into categories according to waste characteristics and reprocessor requirements.
 - 3.5 Set aside waste in a safe, secure and accessible location to await collection or processing.

- | | |
|---|---|
| 4 Identify and engage waste recyclers and reprocessors. | 4.1 Determine reprocessing site or contractor. |
| | 4.2 Engage reprocessor, as required. |
| | 4.3 Coordinate collection of materials to be recycled or reprocessed. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCDE4007 Manage waste streams

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Performance Evidence

To demonstrate competency in this unit, a candidate must identify the different waste streams for a demolition project and supervise the segregation and disposal of the different waste streams. The candidate must provide evidence of:

- the initial audit/identification process
- the waste management tracking system, including the identified end use location of each waste stream.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the compliance requirements of the relevant Australian Standards, Building Code of Australia (BCA), model codes of practice, environmental and work health and safety (WHS) legislation
- Australian and New Zealand Government Framework for Sustainable Procurement
- demolition methods:
 - impacts on recovery methods
 - impacts on recovery costs
 - types
- workplace hazards:
 - asbestos
 - chemicals
 - fuel
 - falling objects
 - flying debris
 - structural composition hazards
 - services hazards
 - fire or explosion risk
 - traffic

- materials for recovery:
 - clay
 - ferrous metals
 - glass
 - masonry:
 - bricks
 - concrete
 - natural aggregate
 - non-ferrous metals
 - paper and cardboard
 - plasterboard
 - plastic
 - steel
 - textiles
 - timber
- salvage:
 - process
 - effect on project timelines
- requirements under relevant state or territory legislation
- types of loads:
 - mixed loads
 - source separated.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment.

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

- worksite/s specifications
- appropriate documents, materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- requirements of workplace policies, procedures and demolition plans.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCE4008 Supervise asbestos removal

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4051A Supervise asbestos removal.
Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the outcomes required to supervise the removal process for friable and non-friable asbestos containing material (ACM). The unit includes planning for and supervising the removal process, including preparing the work area and the worksite, using safe and compliant removal practices, maintaining safety procedures, and supervising the decontamination and removal processes.

Ensuring compliance with the asbestos removal control plan (ARCP) is central to the effective performance of the role. This includes ensuring and documenting that required air monitoring and other testing and certification processes are conducted by licensed asbestos assessors according to legislation.

Site locations include domestic, commercial, demolition and construction, ships, soils and fences.

Occupational licenses are required nationally. Work must be completed according to relevant legislation, the Code of Practice for the Safe Removal of Asbestos, industry guidelines, customer and organisational requirements, including work health and safety (WHS) policies and procedures, and regulatory requirements.

This unit is required for all supervisors of the ACM removal process. Candidates wishing to supervise friable ACM removal must complete CPCCCE3015 Remove friable asbestos. Candidates wishing to supervise non-friable ACM removal must complete CPCCCE3014 Remove non-friable asbestos.

Candidates are advised to check for regulatory requirements relating to relevant industry experience for licensing purposes.

Pre-requisite Unit

CPCCCE3014 Remove non-friable asbestos

CPCCCE3015 Remove friable asbestos

Unit Sector

Demolition.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|---------------------------------------|------|---|
| 1 | Plan supervision of asbestos removal. | 1.1 | Obtain and interpret work instructions, client's brief, asbestos register, if available, and relevant information to ensure a compliant removal process. |
| | | 1.2 | Develop asbestos removal control plan (ARCP) and safe work method statements (SWMS). |
| | | 1.3 | Inspect worksite to identify scope of job and conduct initial preparations according to ARCP and SWMS. |
| | | 1.4 | Identify and notify regulator and all parties affected by removal of ACM. |
| | | 1.5 | Confirm staffing and competency requirements for the job. |
| | | 1.6 | Confirm health monitoring of workers is being undertaken. |
| | | 1.7 | Calculate quantity of ACM to be removed and materials and equipment required for the job. |
| | | 1.8 | Identify licensed asbestos disposal facility for transport and disposal of asbestos according to environmental regulatory obligations and record in ARCP. |
| | | 1.9 | Prepare and plan for air monitoring and a clearance inspection by a licensed asbestos assessor (friable) or competent person (non-friable). |
| | | 1.10 | Identify, source and ensure serviceability of plant, tools, equipment and personal protective equipment (PPE). |
| | | 1.11 | Plan work schedules to ensure compliant supervision of the asbestos removal job. |
| 2 | Oversee the | 2.1 | Maintain required on-site records. |

- preparation for asbestos removal.
- 2.2 Induct workers and provide the ARCP for safe and compliant operation of the job.
 - 2.3 Ensure PPE for workers is provided and stored on site.
 - 2.4 Ensure signage and barricades are erected to delineate the asbestos work area from the worksite in accordance with the ARCP.
 - 2.5 Manage the serviceability checks for equipment and tools conforming with manufacturer specifications for use.
 - 2.6 Ensure that utilities are deactivated and secured, and relevant persons are notified prior to commencing work.
 - 2.7 Identify asbestos waste storage and waste transit route according to site-specific ARCP.
- 3 Supervise compliant testing.
- 3.1 Communicate with the licensed asbestos assessor to ensure compliance with legislative requirements for air monitoring and enclosure integrity.
 - 3.2 Check conformity of air monitoring test result in consultation with licensed asbestos assessor and apply relevant action in accordance with regulatory requirements.
 - 3.3 Notify health and safety regulator if air monitoring levels are above 0.02 fibres/millilitre.
 - 3.4 Post daily air monitoring readings on the worksite according to legislative requirements.
- 4 Supervise removal and decontamination processes.
- 4.1 Manage ongoing serviceability checks for equipment and tools conforming with manufacturer specifications for use.
 - 4.2 Supervise removal of asbestos according to the ARCP and SWMS.
 - 4.3 Organise removal of ACM waste from site according to environmental regulatory obligations and ARCP.
 - 4.4 Supervise facilities and processes to ensure compliant decontamination of workers, work area and worksite,

- including plant, tools and equipment.
- 4.5 Secure site until clearance inspection is undertaken and clearance certificate has been received.
 - 4.6 Upon receiving clearance certificate ensure decontaminated plant, tools and equipment are removed from the work area.
 - 4.7 Supervise the dismantling of enclosures and relevant equipment (friable) and clean up.

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria:

- technology skills to:
 - use communication tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access, extract information and develop relevant documentation.

Unit Mapping Information

Supersedes and is equivalent to CPCBC4051A Supervise asbestos removal.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCE4008 Supervise asbestos removal

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC4051A Supervise asbestos removal.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by supervising two different asbestos removal occasions.

In doing so, the candidate must:

- adhere to the asbestos removal control plan (ARCP), regulatory and environmental legislation.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the compliance requirements of the relevant Australian Standards, Building Code of Australia (BCA), model codes of practice, environmental and work health and safety (WHS) legislation
- relevant government building legislation, codes and standards
- rationale for, and principles underpinning, the ARCP and related legislation
- implementing the ARCP with control monitoring, clearance inspections and certifications
- using the certified work health and safety (WHS) management system and emergency plan
- hazards relating to friable ACM
- processes, procedures and techniques of asbestos removal
- workplace safety requirement
- plans, drawings and specifications, asbestos registers and documentation relating to asbestos removal
- organisation's quality assurance requirements
- environmental requirements and sustainability principles
- duties and obligations of the supervisory role
- contingency planning
- locations of friable and non-friable asbestos.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or simulated workplace environment.

Candidates must be provided with:

- access to a worksite or simulated work environment
- relevant government building legislation, codes and standards
- environmental requirements and sustainability principles
- organisational policies and procedures
- project plans and specifications
- appropriate documents, materials, tools, equipment and personal protective equipment (PPE) currently approved for use in industry, as per codes of practice, Australian Standards, requirements of legislation, regulations and requirements of workplace policies and procedures as required by Commonwealth, state and territory regulators.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCE5001 Conduct air monitoring and clearance inspections for asbestos removal work

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5014A Conduct asbestos assessment associated with removal. Title change. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the outcomes required to visually inspect and use a range of measuring devices to undertake the monitoring of airborne asbestos fibres in the workplace as an integral part of identifying hazards, assessing risks, monitoring the effectiveness of controls, and ensuring that the workplace is free of visible asbestos fibres and air monitoring results are at acceptable levels prior to reoccupation.

The unit includes the planning of the monitoring process, the selection and use of processes and air-monitoring equipment, the conduct of the assessment process, and the proper handling and interpretation of results.

Asbestos assessment and air monitoring are required during all friable (Class A) asbestos removal and for non-friable (Class B) asbestos removal where a risk assessment indicates that airborne asbestos fibres may result from the removal activity.

Licenses are required in most states and territories. Work must be completed according to relevant legislative, code of practice, industry, customer and organisational requirements, including work health and safety (WHS) policies and procedures. Analysis of samples must conform to National Association of Testing Authorities (NATA) or other accredited laboratory requirements and standards.

The model WHS regulations and the Code of Practice: How to safely remove asbestos (2018) outlines regulatory requirements for clearance inspections, air monitoring (the Membrane Filter Method for Estimating Airborne Asbestos Fibres) and certification.

Candidates are advised to check for specific jurisdictional regulatory requirements.

Pre-requisite Unit

Nil.

Unit Sector

Demolition.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|--|------|--|
| 1 | Plan for assessment of asbestos removal. | 1.1 | Confirm scope, timelines and budget for the project with the client and asbestos removalist. |
| | | 1.2 | Identify type of asbestos containing material (ACM), its location, friability and condition by reference to the asbestos register and consultation with workplace personnel and client. |
| | | 1.3 | Research and confirm legislation, regulations, code of practice and standards to inform the planning process, risk identification and to ensure a compliant and independent assessment process. |
| | | 1.4 | Prepare required reports in a timely manner and according to the requirements of the specific audience and the legislation, regulations, code of practice and standards. |
| | | 1.5 | Research and confirm characteristics of and health impacts from exposure to ACM and the rationale for air monitoring processes. |
| | | 1.6 | Identify accreditation framework and roles and responsibilities of personnel involved. |
| | | 1.7 | Identify processes used in the compliant removal of friable and non-friable asbestos using enclosures and leak testing, decontamination units, personal respirators and negative pressure equipment. |
| | | 1.8 | Collect, review and use worksite documentation to inform the planning process. |
| | | 1.9 | Define areas within the worksite where measurements are to be taken. |
| | | 1.10 | Select measuring equipment specific to the hazard and condition of the ACM, the environment, the activities being carried out and level of risk. |

- 1.11 Recognise limits of own expertise and available equipment and seek expert advice and equipment as appropriate.
 - 1.12 Undertake risk assessment and select suitable control measures.
 - 1.13 Identify and source equipment, including personal protective equipment (PPE), required to carry out the job.
 - 1.14 Document confirmed planning with the client, asbestos removalist and supervisor.
- 2 Collect site measurements and other data.
 - 2.1 Arrange with and advise workers on-site of the requirement to collect information and data to facilitate the measurement and monitoring process.
 - 2.2 Conduct site visit and complete a visual inspection in consultation with client and stakeholders and according to legislation, regulations, code of practice and standards.
 - 2.3 Establish sampling schedule and strategy.
 - 2.4 Identify and record effective air monitoring locations for each asbestos removal task.
 - 2.5 Conduct sampling process in consultation with relevant site personnel and as stated in the standards specified for membrane filter method for estimating airborne asbestos fibres.
 - 2.6 Revise sampling schedule and strategy after site inspection and in consultation with asbestos removalist and worksite manager or supervisor.
 - 2.7 Develop and provide air monitoring program consisting of locations and schedule to asbestos removalist and supervisor.
 - 2.8 Check operability of monitoring equipment according to manufacturer specifications, organisational procedures and professional standards.
- 3 Use measuring devices to collect site
 - 3.1 Select air-monitoring equipment, check calibration records, calibrate equipment and determine appropriate flow rate according to accredited laboratory requirements

- information and data.
- 3.2 Use and maintain equipment correctly to accurately collect data.
 - 3.3 Follow workplace safety procedures during the collection process.
 - 3.4 Collect required volumes of air samples according to the membrane filter method, label and replace the filter holders according to the sampling schedule and plan.
 - 3.5 Collect information and data and record results noting where samples were taken and ensuring compliance with chain of custody protocols.
 - 3.6 Put in place processes and make checks to ensure all data is collected under the control of a NATA or other accredited laboratory and according to industry standards and legislative requirements.
 - 3.7 Dismantle, decontaminate and dispose of parts or equipment according to regulations, code of practice and workplace procedures.
 - 3.8 Store equipment correctly or make ready for re-use.
 - 3.9 Service and maintain sampling equipment according to professional standards and manufacturer specifications.
 - 3.10 Complete a visual inspection within enclosure and undertake air monitoring within the enclosure for areas where friable asbestos has been removed.
 - 3.11 Complete a visual inspection of work area where non-friable asbestos has been removed.
- 4 Complete the monitoring process.
- 4.1 Label and prepare filter for despatch to the laboratory, ensuring correct handling procedures for filters and chain of custody requirements.
 - 4.2 Seek confirmation of the exact nature of fibres where necessary.
 - 4.3 Retain and store samples in labelled containers.
 - 4.4 Assess site set-up, removal, breakdown and decontamination procedures according to legislative and

- code of practice requirements.
- 4.5 Implement documentation and processes to ensure the compliant transportation of samples.
- 5 Document results.
- 5.1 Interpret and evaluate results received from the NATA or other accredited laboratory against the recognised standard.
- 5.2 Perform further calculations as required on the technical data received from the NATA or other accredited laboratory.
- 5.3 Document outcomes from the technical analysis and make recommendations regarding exposure and control monitoring processes.
- 5.4 Liaise with asbestos removalist immediately if air monitoring results are above action levels.
- 5.5 Prepare concise, logical and accurate report that addresses regulatory requirements and is in the form required by audience.
- 5.6 Visually inspect worksite to ensure compliance with procedures prior to issuing a clearance certificate.
- 5.7 Complete and issue clearance certificate according to legislative, regulatory and code of practice requirements.
- 5.8 Retain and store results and records in a readily retrievable format according to regulatory requirements and standards.

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria:

- technology skills to:
 - use mobile and communication tools and devices to communicate and collaborate effectively with others
 - use equipment and programs to access, extract information and develop relevant documentation
- mathematical skills to:

- undertake complex calculations.

Unit Mapping Information

Supersedes and equivalent to CPCCE5014A Conduct asbestos assessment associated with removal.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCE5001 Conduct air monitoring and clearance inspections for asbestos removal work

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCBC5014A Conduct asbestos assessment associated with removal. Title change. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by conducting two asbestos assessments.

This must include a friable asbestos removal environment where air monitoring is normally undertaken with the use of the membrane filter method as a minimum.

In doing this, the candidate must:

- apply scientific and technical principles that underpin the asbestos containing material (ACM) removal assessment process
- collect and handle samples in a manner that ensures the integrity of the sample complies with the protocols for the chain of custody
- collect, compile, interpret and analyse measurements, information and data related to the removal process and produce a report
- conduct site inspections, prepare advice to clients, complete clearance inspections and provide clearance certification relating to removal of ACM that complies with the requirements of relevant legislation, regulations, codes of practice and standards.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the compliance requirements of the relevant Australian Standards, Building Code of Australia (BCA), model codes of practice, environmental and work health and safety (WHS) legislation
- range of materials manufactured using asbestos, the type and characteristics of asbestos used in each material, and the usual applications associated with the material
- legislation, regulations, codes of practice and standards
- project plans, specifications, quality documentation and manufacturer's instructions
- environmental requirements and sustainability principles
- characteristics and health impacts of exposure to ACM

- application, methodologies and techniques of compliant removal of asbestos
- determining factors in area in which measurements are to be taken
- scientific techniques for measuring, testing, evaluating air monitoring results and reports
- requirements for professional indemnity and other insurances required by legislation and to mitigate business risk
- general construction terminology
- risk assessment and contingency planning relating to asbestos removal
- operational and functional features of plant, equipment and tools.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment.

Candidates must be provided with:

- government building legislation codes and standards
- Code of Practice: *How to safely remove asbestos (2018)* and *How to manage and control asbestos in the workplace (2018)* and the *Guidance Note on the Membrane Filter Method for Estimating Airborne Asbestos Fibres 2nd Edition*
- manufacturer's specification and installation instructions
- organisational policies and procedures
- project plans and specifications
- sufficient equipment and materials and testing instruments to conduct asbestos assessment associated with removal.

CPCDDO2011 Handle and position dogging tools and equipment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCDDO2011A Handle and use dogging tools and equipment. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to handle and locate dogging tools and equipment. It includes selecting, moving, locating, positioning and storing dogging tools and equipment.

It applies to those who work under the direction of more experienced workers to support dogging activities.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Dogging

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare to handle, move and

1.1 Read work order and associated documentation and clarify work tasks with relevant persons.

- | | | |
|---|-----|--|
| locate dogging tools and equipment. | 1.2 | Plan all work to comply with relevant legislation, regulations, standards, codes, work health and safety (WHS), environmental and workplace requirements. |
| | 1.3 | Select dogging tools and equipment, check for serviceability and rectify or report identified faults. |
| | 1.4 | Select and fit personal protective equipment (PPE) appropriate for work activities. |
| 2 Handle, move, sort and stack dogging tools and equipment. | 2.1 | Move dogging tools and equipment manually using safe manual handling techniques. |
| | 2.2 | Stack or band dogging tools and equipment for mechanical handling in accordance with the type of material and the plant or equipment to be used. |
| | 2.3 | Load, unload, move or locate dogging tools and equipment at specified location, assist mechanical handling equipment operator and ensure safe handling. |
| | 2.4 | Sort dogging tools and equipment to suit load type and size, and stack for ease of identification and retrieval in accordance with task sequence and job location. |
| | 2.5 | Protect dogging equipment and associated tools against physical and water damage, and store clear of access ways for ease of identification, retrieval and distribution. |
| 3 Store dogging tools and equipment. | 3.1 | Use safe handling techniques to manually or mechanically handle and move dogging tools and equipment to storage area after concluding dogging task. |
| | 3.2 | Clean, check, maintain and store tools and equipment in accordance with manufacturer and workplace requirements. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCDDO2011A Handle and use dogging tools and equipment.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCDDO2011 Handle and position dogging tools and equipment

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCDDO2011A Handle and use dogging tools and equipment. Updated to meet the Standards for Training Packages 1012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by handling and positioning dogging tools and equipment for three different dogging tasks.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace and regulatory requirements for handling and positioning dogging tools and equipment under applicable Commonwealth, state or territory work health and safety (WHS) legislation and codes of practice:
 - job safety and environmental analyses (JSEAs)
 - safe work method statements (SWMSs)
 - signage
 - environmental and worksite safety plans
 - reporting problems
- interpreting task plans and specifications relating to safely handling and locating dogging tools and equipment
- types, characteristics, uses and limitations of dogging tools and equipment:
 - single leg slings
 - four leg slings
 - chain slings
 - synthetic webbing slings
 - two leg slings
 - brick cages
 - chocks and wedges
 - flexible steel wire rope (FSWR)
 - kibbles

- natural ropes
- packers
- personnel box
- rigging screws
- shackles and eye bolts
- spreader beams
- turn buckles
- processes for assisting mechanical handling equipment operator, including signalling methods
- requirements for cleaning up work area, maintaining and storing tools, equipment and materials, and for environmentally friendly waste management.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or in a simulated workplace environment using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- industry-standard equipment required to perform the tasks specified in the Performance Evidence
- appropriate workplace information and records, including policies, procedures and legislative requirements.

CPCDDO3011 Perform dogging

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCDDO3011A Perform dogging. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to undertake basic dogging work for the purpose of shifting loads mechanically both in sight and out of sight of the crane operator. The unit includes selecting sling types and sizes and maintaining the stability of the load.

It applies to workers using dogging tools and equipment, who would be expected to take responsibility for organising and completing work tasks with a high degree of self direction.

Completion of the general construction induction training program, specified in the Safe Work Australia model Code of Practice: Construction Work, is required by anyone carrying out construction work. Achievement of CPCWHS1001 Prepare to work safely in the construction industry meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Dogging

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare to perform dogging.

1.1 Interpret work order and associated documentation and clarify requirements with relevant persons.

- 1.2 Plan all work to comply with relevant legislation, regulations, standards, codes, work health and safety, environmental and workplace requirements.
 - 1.3 Select tools and equipment required for work tasks, check for serviceability and rectify or report identified faults.
 - 1.4 Confirm task sequencing schedule with relevant persons to ensure coordination.
 - 1.5 Calculate load mass and confirm using load charts and standard calculations.
 - 1.6 Calculate loads in slings and equipment to suit task requirements.
- 2 Sling load.
- 2.1 Erect required safety signage and barricades and select and fit personal protective equipment (PPE).
 - 2.2 Assemble lifting devices and erect for load movement.
 - 2.3 Sling load to lifting device ready for lifting, using appropriate load slinging method.
- 3 Shift load.
- 3.1 Shift load to ensure stability, in compliance with safe work method statement (SWMS).
 - 3.2 Direct load to landing position using appropriate communications in accordance with relevant Australian Standards and workplace requirements.
 - 3.3 Land load in required position on packing or bearers.
- 4 Remove dogging equipment from load.
- 4.1 Dismantle load shifting equipment and inspect for wear. Complete required logbook and site records in accordance with workplace requirements.
 - 4.2 Dismantle load shifting equipment and inspect for wear. Complete required logbook and site records in accordance with workplace requirements.

- 5 Clean up.
 - 5.1 Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
 - 5.2 Clean, check, maintain and store tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- communication skills to interpret non-verbal communication such as hand signals.

Unit Mapping Information

Supersedes and is equivalent to CPCDDO3011A Perform dogging.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCDDO3011 Perform dogging

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCDDO3011A Perform dogging. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by performing dogging to sling, load, direct and land three loads including:

- one flexible load with a minimum of three lifting points
- one load out of sight of the lifting device operator.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace and regulatory requirements for performing dogging under applicable Commonwealth, state or territory work health and safety (WHS) legislation, Australian Standards and codes of practice:
 - job safety and environmental analyses (JSEAs)
 - safe work method statements (SWMSs)
 - safety data sheets (SDSs)
 - safety manuals and instructions for plant, tools and equipment
 - signage and barricades
 - personal protective equipment (PPE)
 - environmental and worksite safety plans
 - reporting problems
- mathematical processes for calculating load mass
- assessment of weather and ground conditions relating to performing dogging
- types, characteristics, uses and limitations of dogging and lifting equipment
- load-slinging techniques
- dogging techniques
- safe working load tags
- lifting equipment operations and limitations
- signalling methods
- safe working at heights requirements and fall arrest systems

- processes for completion of logbooks and site records
- requirements for cleaning up work area, maintaining and storing tools, equipment and materials, and for environmentally friendly waste management.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- industry-standard equipment required to perform the tasks specified in the Performance Evidence
- appropriate workplace information and records, including policies, procedures and legislative requirements.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCCDO3012 Perform crane scheduling

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCDO3012A Perform crane scheduling. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to schedule dogging operations to ensure safe, efficient and effective use of cranes within the overall daily site plan and operations on a construction site or other worksite where dogging operations are used.

It includes coordinating and organising loads in order to meet the requirements of various construction elements of a project.

It applies to workers performing crane scheduling activities who would be expected to take responsibility for organising and completing work tasks with a high degree of self direction.

Completion of the general construction induction training program, specified in the Safe Work Australia model Code of Practice: Construction Work, is required by anyone carrying out construction work. Achievement of CPCCWHS1001 Prepare to work safely in the construction industry meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Dogging

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Prepare crane task schedule.
 - 1.1 Review work instructions and associated documentation to clarify crane task scheduling requirements.
 - 1.2 Assess each task to calculate time required for task completion and most efficient order for crane tasks to coordinate with other site activities.
 - 1.3 Prepare crane task sequencing schedule so that it enhances the safe work method statement

- 2 Implement crane task schedule.
 - 2.1 Provide and clarify crane task sequencing schedule with relevant persons.
 - 2.2 Discuss and clarify crane task sequencing schedule and contingency plans with relevant persons.
 - 2.3 Coordinate and modify crane task sequencing schedule as other onsite activities progress or are modified, and advise relevant persons of changes.
 - 2.4 Coordinate and modify crane task sequencing schedule when a change is required, and advise relevant persons of changes.
 - 2.5 Apply work completion procedures when scheduled crane tasks are completed in accordance with workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCDDO3012A Perform crane scheduling.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCDDO3012 Perform crane scheduling

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCDDO3012A Perform crane scheduling.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by scheduling the correct sequence of lifts for a minimum of three crane lifts.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace and regulatory requirements for performing crane scheduling under applicable Commonwealth, state or territory work health and safety (WHS) legislation, Australian Standards and codes of practice:
 - job safety and environmental analyses (JSEAs)
 - safe work method statements (SWMSs)
 - safety manuals and instructions for plant, tools and equipment
 - signage and barricades
 - personal protective equipment (PPE)
 - environmental and worksite safety plans
 - reporting problems
- techniques for performing crane task sequencing scheduling:
 - assessing lifting tasks for time required for completion
 - determining most efficient order for lifting tasks to coordinate with other site activities and to use resources efficiently
 - documenting schedules
 - modifying schedules
 - communicating schedules and changes to schedules to relevant persons
 - implementing work completion procedures.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- industry-standard equipment required to perform the tasks specified in the Performance Evidence
- appropriate workplace information and records, including policies, procedures and legislative requirements.

Links

CPCCJN2001 Assemble components

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCJN2001A Assemble components.
Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to assemble manufactured components to form a completed constructed unit, meeting all relevant requirements of Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare. 1.1 Read and interpret work instructions and plan sequence

- of work.
- 1.2 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Assemble and hold components in place.
- 2.1 Select component parts for assembly and prepare hardware.
 - 2.2 Select and use packing material for protection of surfaces during assembly.
 - 2.3 Apply adhesive according to specifications.
 - 2.4 Locate and hold components in their designed assembled positions.
- 3 Secure assembled components.
- 3.1 Secure frame or unit using appropriate assembly methods.
 - 3.2 Secure fastened joints by fasteners or hardware.
- 4 Finish assembly and clean up.
- 4.1 Dismantle assembly and holding system.
 - 4.2 Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling.
 - 4.3 Check, maintain and store tools and equipment and

report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCJN2001A Assemble components.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCJN2001 Assemble components

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCJN2001A Assemble components.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by assembling components to complete three of the following assembled units:

- door frame
- window frame
- door
- louvres
- fitments, including cupboards, counters, shelving and robes
- shopfront
- stairs
- window sash.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of Australian Standards relevant to assembling components
- workplace quality policies and standards for assembling components
- safety requirements for assembling components
- types and uses of tools and equipment for assembling components
- processes for assembling constructed units:
 - door frames
 - window frames
 - doors
 - louvres
 - fitments, including cupboards, counters, shelving and robes
 - shopfronts
 - stairs
 - window sashes

- assembly methods using the following:
 - clamps
 - cramps
 - packers and wedges
 - presses.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCJN2003 Package manufactured products for transport

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCJN2003A Package manufactured products for transport. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to use packaging systems to protect finished products from damage during transportation, meeting all relevant requirements of work health and safety (WHS) and Commonwealth and state or territory legislation.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|---|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions and plan sequence of work. |
|---------------------|---|

- 1.2 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.
- 2 Select packaging.
- 2.1 Select packaging materials following specifications.
 - 2.2 Select wrapping, enclosing and packaging techniques.
 - 2.3 Select special packaging required for bulk, finished or valuable products.
- 3 Pack, cover and secure items for transport.
- 3.1 Use packaging processes to enclose and protect products for handling and transportation.
 - 3.2 Select and use loose packaging such as cover sheets, packing blankets and packaging cushions.
 - 3.3 Cover, pack and secure packaged products for transportation.
- 4 Clean up.
- 4.1 Clean up, meeting all legislative and workplace requirements for materials handling, safety, packaging reuse and recycling, and waste disposal.
 - 4.2 Check, maintain and store tools and equipment and report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCJN2003A Package manufactured products for transport.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCJN2003 Package manufactured products for transport

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCJN2003A Package manufactured products for transport. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by packaging a range of products and loading them for transportation using:

- three of the following packaging materials:
 - packing blankets
 - corrugated paper
 - bubble wrap
 - pallet wrapping
 - polystyrene foam moulding
 - shrink packaging
 - stretch wrap
 - timber
 - banding
- two of the following packaging processes:
 - banding applied to stacks and bundles to maintain stack stability
 - boxes and crates constructed to enclose and protect products
 - separation packing applied to stacked and bundled products.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of Commonwealth and state or territory legislation relevant to packaging manufactured products for transport
- workplace quality policies and standards for packaging manufactured products for transport
- safety requirements for packaging manufactured products for transport
- recycling and reuse of packaging materials
- types and uses of tools and equipment for packaging manufactured products for transport

- packaging materials:
 - corrugated paper
 - bubble wrap
 - pallet wrapping
 - polystyrene foam moulding
 - shrink packaging
 - stretch wrap
 - timber
 - banding
- packaging processes:
 - banding applied to stacks and bundles to maintain stack stability
 - boxes and crates constructed to enclose and protect products
 - separation packing applied to stacked and bundled products
- basic packaging techniques
- protection requirements for packaging manufactured products for transport
- measurement and calculations for packaging manufactured products for transport.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCJN3002 Use computer-controlled machinery

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Typographical error in Mapping corrected for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCJN3002A Use computer-controlled machinery. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to program, load and operate computer-controlled machinery for the production of components, meeting all relevant requirements of Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

The unit includes using computer-controlled machinery for multiple production processes or designed finishes with manufacturing applications in shopfitting, joinery and stair-building work.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|---|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions and plan sequence of work. |
| | 1.2 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications. |
| | 1.3 Select tools and equipment, check for serviceability and report any faults. |
| | 1.4 Select and use personal protective equipment (PPE) for each part of the task. |
| | 1.5 Inspect work site, assess hazards and apply risk controls, including required signage and barricades. |
| | 1.6 Select materials required for task, handle safely and prepare and position ready for use. |
| 2 Input data and adjustments into computer numerical control (CNC) machinery. | 2.1 Determine programming methods for task requirements and machine specifications. |
| | 2.2 Edit computer program to produce straight and circular tool movements, compensating for tool profiles. |
| 3 Transfer program into machine memory and operate machine. | 3.1 Determine methods of transferring program into machine memory. |
| | 3.2 Load program into machine memory using acceptable method. |
| | 3.3 Test program operations through dry-run/simulation mode. |
| | 3.4 Produce specified work piece using automatic mode. |
| 4 Clean up. | 4.1 Clean up, meeting all legislative and workplace |

requirements for safety, waste disposal and materials handling.

- 4.2 Check, maintain and store plant, tools and equipment and report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCJN3002A Use computer-controlled machinery.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCJN3002 Use computer-controlled machinery

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Typographical error in Mapping corrected for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCJN3002A Use computer-controlled machinery. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by producing two different components using computer-controlled machinery:

- from at least two of the following materials:
 - acrylics
 - aluminium
 - medium density fibreboard (MDF)
 - particle board
 - melamine-faced material
 - plywood
 - timber
- using at least two of the following program operations:
 - boring
 - cutting
 - forming and shaping
 - milling
 - sculpting.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of Australian Standards relevant to using computer-controlled machinery
- workplace quality policies and standards relevant to using computer-controlled machinery

- safety requirements for using computer-controlled machinery
- type, range and characteristics of materials used with computer-controlled machinery:
 - acrylics
 - aluminium
 - medium density fibreboard (MDF)
 - particle board
 - melamine-faced material
 - plywood
 - timber
- application of software used to operate specific computer-controlled machinery:
 - boring
 - cutting
 - cutting and polishing
 - forming and shaping
 - milling
 - sculpting
- measuring techniques used in computer-controlled machinery
- types and uses of computer-controlled machinery.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions and standards, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCJN3003 Manufacture components for doors, windows and frames

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Performance Evidence formatted for clarity.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCJN3003A Manufacture components for doors, windows and frames. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to manufacture components for doors, windows and frames, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Plan and prepare.
 - 1.1 Read and interpret work instructions and plan sequence of work.
 - 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.5 Inspect workplace, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
 - 2 Dress materials.
 - 2.1 Check machines and cutting tools for safe and effective operation.
 - 2.2 Adjust machine settings for task requirements.
 - 2.3 Position and cut material, check for quality and rectify faults.
 - 3 Shape materials.
 - 3.1 Check spindles, cutting tools and jigs for safe and effective operation.
 - 3.2 Adjust spindle machine settings for task requirements.
 - 3.3 Feed material into machine and operate machine to shape material.
 - 4 Join materials and produce components.
 - 4.1 Set out materials for joining.
 - 4.2 Check joining machines, cutting tools and jigs for safe and effective operation.

- 4.3 Adjust joining machine settings for task requirements.
 - 4.4 Operate machine to produce joints.
- 5 Finish components and prepare for assembly.
 - 5.1 Check finishing and sanding machines for safe and effective operation and adjust for task requirements.
 - 5.2 Dry-assemble components, check for quality and consistency, and rectify faults.
 - 5.3 Sand and finish components, check for quality and consistency, and rectify faults.
- 6 Clean up.
 - 6.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling.
 - 6.2 Clean, check, maintain and store machines, tools and equipment and report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCJN3003A Manufacture components for doors, windows and frames.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCJN3003 Manufacture components for doors, windows and frames

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Performance Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCJN3003A Manufacture components for doors, windows and frames. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by machining, dry-assembling and finishing components for:

- a four-panelled door and door frame
- a four-light operable sash and frame.

In performing these tasks, the candidate must:

- prepare and assemble the following components:
 - door stops
 - jambs
 - mullion
 - panels
 - sills/threshold
 - styles
 - top, bottom and mid rail
 - glazing bars
- use the following machines:
 - band saws
 - docking saws
 - rip saws
 - panel saw
 - planing machines:
 - surface planer

- thicknesser
- shaping machines
- joining machines:
 - mortising
 - tenoning
- sanding machines:
 - finisher
 - wide belt/stroke.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code (NCC) and Australian Standards relevant to manufacturing door and window components
- workplace quality policies and standards relevant to manufacturing door and window components
- safety requirements for manufacturing door and window components
- processes and techniques used to manufacture door and window components, including to:
 - set out door and window components:
 - door stops
 - jambs
 - mullion
 - panels
 - sills/threshold
 - styles
 - top, bottom and mid rail
 - glazing bars
 - produce cutting lists
- material identification marking systems used when manufacturing door and window components
- properties, performance and limitations of different types of timber available for manufacturing doors and window components:
 - plastic covered timber-cored material
 - raw timber
- range, type and characteristics of materials used to manufacture door and window components
- types and uses of machines, tools and equipment required to manufacture door and window components:
 - band saws
 - docking saws

- rip saws
- panel saw
- planing machines:
 - surface planer
 - thicknesser
- shaping machines
- multi-head moulding machines
- joining machines:
 - mortising
 - tenoning
 - horizontal borer
- sanding machines:
 - disk sander
 - finisher
 - wide belt/stroke
- processes for operating machines:
 - setting up processes
 - safety checking, fault finding and rectification
 - monitoring machine processes
 - cleaning and maintaining machines in accordance with manufacturers' specifications.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCJN3004 Manufacture and assemble joinery components

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.1.
- Rectified PC 3.1 from 'components in their assembled positions' to Check components for accuracy, quality and suitability by dry-assembling components in their assembled positions'
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCCJN3004A Manufacture joinery components. Title change. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to carry out machining and manufacturing and assembling joinery components, meeting all relevant requirements of Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Plan and prepare.
 - 1.1 Read and interpret work instructions and plan sequence of work.
 - 1.2 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.5 Inspect workplace, assess hazards and apply risk controls.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
 - 2 Manufacture components.
 - 2.1 Determine types of component parts from working drawings and specifications.
 - 2.2 Select processes for manufacture, joining techniques and components.
 - 2.3 Select machines to be used and plan sequence of machining.
 - 2.4 Check safety requirements for each machine for compliance with WHS requirements and AS 1473 Guarding and safe use of woodworking machinery.
 - 2.5 Determine space requirements for manufacture of components.
 - 2.6 Use machine to manufacture components to working drawings and specifications.
 - 3 Assemble components.
 - 3.1 Check components for accuracy, quality and suitability by dry-assembling components in their assembled positions.

- 3.2 Assemble and secure components using adhesive and mechanical fasteners to specification.
 - 3.3 Check assembled units for square, free of wind and with adhesive removed.
- 4 Check and assembled units and prepare for packaging.
 - 4.1 Inspect assembled units for faults and take appropriate remedial action.
 - 4.2 Make units ready for packaging by protecting material edges and surfaces and stacking.
- 5 Clean up.
 - 5.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal, recycling and re-use and materials handling.
 - 5.2 Check, maintain and store tools and equipment and report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCJN3004A Manufacture joinery components.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCJN3004 Manufacture and assemble joinery components

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.1.
- Rectified PC 3.1 from ‘components in their assembled positions’ to Check components for accuracy, quality and suitability by dry-assembling components in their assembled positions.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCCJN3004A Manufacture joinery components. Title change. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by manufacturing and assembling joinery components for two of the following:

- an opening sash and window frame
- a multi panelled door and frame
- a carcass unit or similar including door/s and drawer/s.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of Australian Standards relating to all aspects of manufacturing and assembling joinery components, including AS 1473 Guarding and safe use of woodworking machinery
- workplace quality policies and standards for manufacturing and assembling joinery components
- job safety analyses (JSAs), safe work method statements (SWMSs) and safety data sheets (SDSs)
- safety requirements for manufacturing and assembling joinery components
- environmental requirements for manufacturing and assembling joinery components
- types and uses of machines, tools and equipment required for manufacturing and assembling joinery components
- types of knock-down fittings and traditional joints.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

CPCCJN3005 Cut and install glass

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCJN3005A Cut and install glass. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to manually cut glass in a straight line to form simple shapes and install glass in joinery structures, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|---|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions and plan sequence of work. |
| | 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian |

- Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
- 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Cut glass to a straight line.
- 2.1 Select type, size and thickness of glass for application (thickness less than 6.38mm) and determine location from drawings, specifications and glazing schedule and in accordance with AS 1288 Glass in building - Selection and installation.
 - 2.2 Inspect openings to receive glass for obstructions and clearances.
 - 2.3 Select cutting process in accordance with AS 4667 Quality requirements for cut to size and processed glass and cut glass to specification on a line using straight edge and scoring and breaking to run cut to tolerance of AS 4667.
 - 2.4 Cut glass sheets to the most economical layout, identifying cutting defects and taking corrective action in accordance with AS 4667.
- 3 Cut glass to simple shapes.
- 3.1 Select type, size and thickness of glass for application and mark and prepare template to designed shape and requirements of AS 1288.
 - 3.2 Use template and marker to transfer outline onto glass.
 - 3.3 Cut glass to shape and size to specification and remove glass offcuts safely in accordance with AS 4667.

- 3.4 Cut glass sheets to the most economical layout, identifying cutting defects and taking corrective action in accordance with AS 4667.
- 4 Install glass to joinery.
 - 4.1 Prepare frame for installation of glass.
 - 4.2 Confirm dimensions of frame are adequate for installation of glass.
 - 4.3 Install glass to frame.
 - 4.4 Clean glass surface and surrounding frame and remove waste material.
- 5 Clean up.
 - 5.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling, including handling glass.
 - 5.2 Check, maintain and store tools and equipment and report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCJN3005A Cut and install glass.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCJN3005 Cut and install glass

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCJN3005A Cut and install glass. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- cutting glass for installation in a joinery structure, including cutting glass in a straight line to form a simple shape
- installing the cut glass in the joinery structure.
-

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards relevant to cutting and installing glass, including AS 4667 Quality requirements for cut to size and processed glass and AS 1288 Glass in buildings - Selection and installation
- workplace quality policies and standards for cutting and installing glass
- safety requirements for cutting and installing glass
- types and uses of tools and equipment for cutting and installing glass
- methods of securing and sealing glass in frames
- material handling processes for glass
- measuring and setting out processes for glass cutting
- types of glass and their characteristics.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCJN3100 Process materials to produce components using static machines

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and equivalent to CPCCJN3001 Process materials to produce components using static machines. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to use static machines for manufacturing processes of components, meeting all relevant requirements of Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|---|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions and plan sequence of work. |
|---------------------|---|

- 1.2 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.3 Select tools and equipment, check for serviceability and rectify or report any faults.
 - 1.4 Select and use personal protective equipment (PPE) for each part of the task and as required for using each machine.
 - 1.5 Inspect workplace, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Select static machines and determine operation and safety requirements.
- 2.1 Select types and functions of static machines for use in task.
 - 2.2 Determine methods of operation of machines from manufacturers' operating manuals and safe operating procedures.
 - 2.3 Locate cut-off switches and implement WHS requirements for guard attachment and cut-off switches in accordance with Australian Standards.
 - 2.4 Implement WHS requirements for personal protective equipment (PPE) associated with using machines.
- 3 Prepare machines for use.
- 3.1 Determine and follow guarding and safety requirements for preparing and using each static machine.
 - 3.2 Set up machines for required operating process and setting with fences and guides locked in position in accordance with Australian Standards.
- 4 Operate machines.
- 4.1 Follow machine start-up procedures to manufacturers' recommendations and safe operating procedures.

- 4.2 Feed material to machines following manufacturers' recommendations, safe handling procedures and safe operating procedures, including use of push blocks and sticks.
 - 4.3 Set up and hold material in place, ensuring correct hand position, for moving table operations following manufacturers' recommendations.
 - 4.4 Operate machines safely in accordance with designed capacity and purposes.
 - 4.5 Follow machine workplace shut-down procedures following manufacturers' recommendations.
- 5 Maintain machine and attachments.
- 5.1 Maintain machines by regular servicing to manufacturers' recommendations.
 - 5.2 Report faults to supervisor.
 - 5.3 Assist with fitting and securing cutters, blades and attachments, and recalibration following manufacturers' recommendations.
- 6 Clean up.
- 6.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling.
 - 6.2 Clean, check and store cutters, blades and attachments following manufacturers' recommendations.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Supersedes and equivalent to CPCCJN3001 Process materials to produce components using static machines. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by using at least five of the following static machines in the production of a minimum of three different components:

- band saws
- buzzers (jointer/surface planer)
- spindle moulders
- tenon machine
- docking saws
- grinders
- mortisers
- multi-drill machine
- rip saws
- table sanders
- thicknessers
- panel saws
- vertical and horizontal drills.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards relevant to processing materials to produce components
- workplace quality policies and standards relevant to processing materials to produce components
- safety requirements for processing materials to produce components
- types and uses of static machines:
 - band saws

- buzzers (jointer/surface planer)
- spindle moulders
- tenon machine
- docking saws
- grinders
- mortisers
- multi-drill machine
- rip saws
- table sanders
- thicknessers
- panel saws
- vertical and horizontal drills
- types of tools and equipment required when using static machines
- common materials processed using static machines to produce components
- basic maintenance of static machines.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCJS3002 Manufacture stair components for straight flighted stairs

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCCJS3002A Manufacture stair components for straight flighted stairs. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to manufacture components for straight-flight stairs, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

The unit includes manufacturing cut and closed stringers, newels, balusters, risers, treads, handrails, landing joists, glue blocks and wedges.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare.
 - 1.1 Read and interpret work instructions and plan sequence of work.
 - 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Prepare stringers.
 - 2.1 Set-out stringers for treads and risers with nosing marked accurately and housings cut to set-out and depth.
 - 2.2 Apply grooves or mortises to receive balusters to set-out.
 - 2.3 Cut stringers to set-out shape and mark to accommodate treads and risers and junction with newels or landing.
- 3 Prepare newel posts.
 - 3.1 Cut and make housings to newel post set-out and required depth.
 - 3.2 Cut mortises to set-out and required depth, and mark newel posts for identification.
- 4 Prepare treads, risers and wedges.
 - 4.1 Cut treads to specified length and shape.
 - 4.2 Cut risers to designed length, shape and quantity, and apply markings for junctions, stringers and wedges.
 - 4.3 Cut wedges to specified pitch.

- | | | | |
|---|---------------------------------------|-----|---|
| 5 | Prepare balustrade. | 5.1 | Manufacture handrail with groove run for balusters. |
| | | 5.2 | Set-out mortises for balusters in handrail. |
| | | 5.3 | Cut balusters to specification. |
| | | 5.4 | Cut manufactured handrail to length and mark sections. |
| | | | |
| 6 | Finish surface and preassemble stair. | 6.1 | Sand exposed surfaces of components to specification for finish. |
| | | 6.2 | Preassemble components to ensure stair will assemble correctly. |
| | | 6.3 | Disassemble components and prepare/store for transport. |
| | | | |
| 7 | Clean up. | 7.1 | Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling. |
| | | 7.2 | Check, maintain and store tools and equipment and report any faults. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCJS3002A Manufacture stair components for straight flighted stairs.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCJS3002 Manufacture stair components for straight flighted stairs

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCJS3002A Manufacture stair components for straight flighted stairs. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by manufacturing the following components for a set of straight-flight stairs with a minimum height of one metre, one side with a cut stringer and one side with a closed stringer:

- balusters
- glue blocks
- newel posts
- nosings
- risers
- stringers
- treads
- wedges

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards relevant to manufacturing components for straight-flight stairs
- workplace quality policies and standards for manufacturing components for straight-flight stairs
- safety requirements for manufacturing components for straight-flight stairs
- principles of stair design for straight flight stairs:
 - characteristics of common types of straight flight stairs
 - range of components required for straight flight stairs
 - stair construction and joining methods
- processes to read and interpret drawings and specifications for components required for straight flight stairs
- components of straight-flight stairs:

- balusters
- glue blocks
- newel posts
- nosings
- risers
- stringers
- treads
- wedges
- materials identification marking systems for manufacturing components for straight-flight stairs
- measuring and setting out processes applicable to stair construction
- types and uses of static machines, tools and equipment for manufacturing components for straight-flight stairs
- types of materials and their characteristics applicable to stair construction.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions and standards, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCJS3003 Assemble and install stairs

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCJS3003A Assemble and install stairs.
Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to set out, assemble and install prepared components of straight flight stairs, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------|---|
| 1 Plan and prepare. | 1.1 Read and interpret work instructions and plan sequence of work. |
| | 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian |

- Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
- 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Measure stairwell, check against drawings and make adjustments or report issues.
 - 1.7 Check stair components to identify, rectify and/or report imperfections and variances from specifications.
- 2 Assemble and fix stringers and newel posts.
 - 2.1 Assemble and fix or temporarily support all stringers in position.
 - 2.2 Assemble and fix newel posts in position.
 - 2.3 Brace assembled stringers and newel posts temporarily in a vertical position.
- 3 Install treads and risers.
 - 3.1 Cut manufactured treads and risers to length, fit and fix to assembly, and check top flight to be true and square.
 - 3.2 Fit and wedge intermediate treads and risers to fit tight to housings.
- 4 Assemble and install landings.
 - 4.1 Fit and fix landing joists to level.
 - 4.2 Fit and fix nosing and flooring to specified finish and fit, and fix fascia to landing.
- 5 Install balustrade.
 - 5.1 Fit balusters and check for plumb.

- 5.2 Put newel posts in position, check for plumb, and fix.
- 5.3 Fit and check height of handrails, and fix.
- 6 Finish stair installation and clean up.
 - 6.1 Check assembled stairs for quality.
 - 6.2 Clear area and remove waste material.
 - 6.3 Fit glue blocks to treads and risers.
 - 6.4 Display signs to prevent use of stairs until adhesives have dried.
 - 6.5 Clean, maintain and store tools and equipment.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCJS3003A Assemble and install stairs.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCJS3003 Assemble and install stairs

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCJS3003A Assemble and install stairs.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by assembling and installing:

- one staircase, minimum six risers to be fixed to a wall, incorporating:
 - stringers
 - one landing
 - winders
 - a closed stringer and a cut stringer
 - a balustrade comprising handrail, balusters and newel posts.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards relevant to assembling and installing stairs
- workplace quality policies and standards for assembling and installing stairs
- safety requirements for assembling and installing stairs
- components of stairs:
 - balusters
 - flooring
 - handrails
 - landing joists
 - newel posts
 - nosing
 - risers
 - stringers
 - treads

- winders
- different stair types and implications for on-site installation
- processes to interpret drawings and specifications for assembly and installation of stairs
- levelling techniques used when installing stairs on site
- procedures for assembling stairs in correct sequence
- processes for taking accurate measurements and setting out stairs
- types and uses of tools and equipment required to assemble and install stairs
- stair construction and joining methods for different types of stair designs
- use, characteristics and limitations of adhesives, fixings and fasteners for installing stairs
- checks for assembled stairs:
 - joints are secure and clean
 - no creaks in timber
 - no pencil or construction markings
 - treads and riser distances are equal size and compliant.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions and standards, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCJS3004 Manufacture and install continuous handrailing and special stair components

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCJS3004A Manufacture and install continuous handrailing and special stair components. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to manufacture, join and install continuous handrailing and special stair components, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

The unit includes wreaths, scrolls, bullnose steps and decorative features connecting straight lengths of handrail to wreaths or scrolls, with the use of handrail fittings or bolts to form a continuous handrail system.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare.
 - 1.1 Read and interpret work instructions and plan sequence of work.
 - 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.

- 2 Prepare wreath for continuous handrailing.
 - 2.1 Determine pitch of stair and change of direction of handrail from stair design.
 - 2.2 Set out wreath and assess total area required to determine thickness of material to be prepared.
 - 2.3 Prepare material, cut square to wreath length, and set-out to shape for dressing.
 - 2.4 Form wreath to square section with designated twist, and free of bumps.

- 3 Join and mould wreath to straight sections.
 - 3.1 Mould wreath to handrail shape and fine sand to smooth finish.
 - 3.2 Measure straight sections of handrail and cut to length with ends square to join wreath with tight joints.
 - 3.3 Pre-fit handrail in lengths, disassemble and rejoin in location.

- | | | |
|---|-----|---|
| 4 Manufacture scroll and wreath, and join to handrail. | 4.1 | Set out and prepare scroll and wreath to designed shape. |
| | 4.2 | Prepare materials to scroll and wreath dimensions, apply set out patterns and form scroll and wreath to basic shapes. |
| | 4.3 | Mould scroll and wreath to handrail shape and fine sand to smooth finish. |
| | 4.4 | Join scroll and wreath to handrail with tight joints. |
| 5 Manufacture and install bullnose treads. | 5.1 | Review design and method of constructing bullnose tread. |
| | 5.2 | Manufacture bullnose tread and riser and fix block support. |
| | 5.3 | Cut and dress tread with nosing to shape. |
| | 5.4 | Fit bullnose tread, riser and to stairs and secure in location. |
| 6 Manufacture and install brackets and decorative features. | 6.1 | Fix brackets and scotia and fix into place using the cut and mitred string method. |
| | 6.2 | Fix decorative features and sand surfaces to smooth finish to requirements. |
| 7 Clean-up. | 7.1 | Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling. |
| | 7.2 | Check, maintain and store tools and equipment and report any faults. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCS3004A Manufacture and install continuous handrailing and special stair components.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for CPCCJS3004 Manufacture and install continuous handrailing and special stair components

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCJS3004A Manufacture and install continuous handrailing and special stair components. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- manufacturing the following special stair components:
 - wreath
 - bullnose tread
 - common stair brackets
 - decorative scroll with wreath
 - scotia
- joining the scroll and wreath to a straight handrail to produce one continuous handrail.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- requirements of the National Construction Code and Australian Standards relevant to manufacturing and installing continuous handrailing and special stair components
- workplace quality policies and standards for manufacturing and installing continuous handrailing and special stair components
- safety requirements for manufacturing and installing continuous handrailing and special stair components
- commonly used stair construction and joining methods for manufacturing and installing continuous handrailing and special stair components
- processes to interpret drawings and specifications for manufacturing and installing continuous handrailing and special stair components
- measuring and setting out processes for manufacturing and installing continuous handrailing and special stair components
- methods of forming and constructing handrails including using wreaths and ramps
- special feature components of stair construction

- timber carving and moulding techniques for manufacturing and installing continuous handrailing and special stair components
- types and uses of static machines, tools and equipment for manufacturing and installing continuous handrailing and special stair components
- types and characteristics of different stairs
- types and use of adhesives, fixings and fasteners applicable to stair construction
- types of materials and their characteristics applicable to the manufacture and installation of continuous handrailing and special stair components.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions and standards, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion Volume implementation guides are found in VETNet -

CPCCJS3005 Manufacture stair components for curved and geometric stairs

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCJS3005A Manufacture stair components for curved and geometric stairs. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to prepare, cut, join and install stair components for curved and geometric stairs to a specified design and finish, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

The unit includes manufacture, finishing and preassembly of stringers, stair posts, newel posts, treads, risers and balustrades.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare.
 - 1.1 Read and interpret work instructions and plan sequence of work.
 - 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Manufacture stringers for geometric curves.
 - 2.1 Prepare material to designed structural requirements.
 - 2.2 Construct curved wall or profile to curve design of stair.
 - 2.3 Set out developed pitch to curved wall or profile location.
 - 2.4 Manufacture and set out stringer to curved wall measurements and specifications.
- 3 Prepare stringers for assembly.
 - 3.1 Set out closed stringer for treads and risers with nosing marked accurately, housings cut to set out and depth.
 - 3.2 Prepare grooves or mortises to receive balusters.
 - 3.3 Prepare cut stringer to set-out shape and mark to accommodate treads and risers and junction with newel posts or landing.
- 4 Set out and
 - 4.1 Set out spiral stairs to specifications.

manufacture post for spiral stairs.	4.2	Manufacture or dress post to designed shape and set out to designed requirements of stair.
	4.3	Cut and make housings accurately to set-out and required depth.
5 Prepare newel posts for assembly.	5.1	Cut and make housings to newel set out and required depth.
	5.2	Cut and make mortises to set out and required depth, and mark newel posts for identification.
6 Cut treads, risers and wedges to length and shape.	6.1	Cut treads to designed length and shape.
	6.2	Cut risers to designed shape, length and requirement for junction with stringer.
	6.3	Mark wedges to design and cut to shape and quantity.
7 Prepare balustrade components.	7.1	Manufacture handrail with groove run and mortises for balusters made to set out.
	7.2	Cut balusters to designed length.
	7.3	Cut handrail length and mark sections for identification.
8 Finish surface and preassemble stair.	8.1	Sand exposed surfaces of components to specification and check components for fit.
	8.2	Preassemble components to ensure stair will assemble appropriately.
	8.3	Disassemble components and stack for transportation.
9 Clean up.	9.1	Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling.
	9.2	Check, maintain and store tools and equipment and report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCJS3005A Manufacture stair components for curved and geometric stairs.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for CPCCJS3005 Manufacture stair components for curved and geometric stairs

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCJS3005A Manufacture stair components for curved and geometric stairs. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by manufacturing:

- components for a set of geometric stairs, one side with a cut stringer and one side with a closed stringer, with a minimum height of one metre and including:
 - balusters
 - glue blocks
 - newel posts
 - nosings
 - risers
 - stringers
 - treads
 - wedges
- a central post for a spiral stair.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards relevant to manufacturing components for curved and geometric stairs
- workplace quality policies and standards for manufacturing components for curved and geometric stairs
- safety requirements for manufacturing components for curved and geometric stairs
- commonly-used stair construction and joining methods
- processes for interpreting drawings and specifications for manufacturing components for curved and geometric stairs
- material identification marking systems for manufacturing components for curved and geometric stairs

- processes for measuring and setting out applicable to curved stair construction
- types and characteristics of different curved stair designs:
 - curved
 - spiral
 - geometric
 - cut and closed stringers
 - open and closed risers
- types of materials and their characteristics relating to stair construction
- range, types and limitations of different static machines used in the manufacture of components for curved and geometric stairs
- types and uses of tools and equipment for manufacturing components for curved and geometric stairs.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions and standards, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCJS3006 Construct, assemble and install composite external stairs

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCJS3006A Construct fabricated stairs.
Title change. Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to construct and install stairs with one or more flights incorporating composite components, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

It includes installing treads, stringers, handrails and balustrades fabricated from composite (non-timber) materials.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare.	1.1 Read and interpret work instructions and plan sequence
---------------------	--

of work.

- 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) for each part of the task.
 - 1.5 Inspect work site, locate services, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
- 2 Set out stair components.
- 2.1 Determine exit and ground finish levels from drawings and site location.
 - 2.2 Calculate rise, going and pitch of stair and check for compliance with requirements.
 - 2.3 Make full-size set out of stairs to determine rise, going and pitch of stairs to actual location of landings, stringers, treads and newel posts.
 - 2.4 Determine location of stair and newel posts from drawings and pitch of stairs and full-size set out.
 - 2.5 Mark location of footings to layout of designed stairs to meet drawings and specifications and full-size set out.
 - 2.6 Select material for stringers and check against set out.
 - 2.7 Select components for newel posts set-out to design of stairs, storey rods and drawings and full-size set out.
 - 2.8 Assemble newel posts and check to provide tight fit for stringers and bearers.
 - 2.9 Check material for treads against set out and square to length.

- | | | |
|--|-----|---|
| 3 Assemble and install stairs. | 3.1 | Prepare footings with post support. |
| | 3.2 | Attach tread supports to stringers to set-out. |
| | 3.3 | Erect newel posts and temporarily brace to plumb. |
| | 3.4 | Attach stringers to building using fixings and fasteners to maintain stair width. |
| | 3.5 | Fix treads and decking to location and bracing and lateral ties to newel posts. |
| 4 Fit and fix hand railing and balustrade. | 4.1 | Check material for hand railing and balustrade to length. |
| | 4.2 | Fit and fix hand railing into place above nosing line of a flight and above a landing deck. |
| | 4.3 | Fit and fix balustrade into place. |
| 5 Finish stairs. | 5.1 | Remove sharp edges and finish to specification. |
| | 5.2 | Adhere non-slip surface to treads. |
| 6 Clean up. | 6.1 | Clean up, meeting all legislative and workplace requirements for safety, waste disposal and materials handling. |
| | 6.2 | Check, maintain and store tools and equipment and report any faults. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCJS3006A Construct fabricated stairs

Assessment Requirements for CPCCJS3006 Construct, assemble and install composite external stairs

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCJS3006A Construct fabricated stairs.
Title change. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by constructing and installing one flight of composite external stairs from ground level to a minimum height of one metre, including a landing, handrail and balustrade to the open side of the flight and landing.

The handrail, balustrade, stringers and treads must be constructed of three or more composite materials.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards relevant to constructing and installing composite stairs
- workplace quality policies and standards for constructing and installing composite stairs
- safety requirements for constructing and installing composite stairs
- application of and requirements for line, level and plumb when constructing and installing stairs
- terminology used in the construction and installation of composite stairs
- processes for reading and interpreting plans, specifications and drawings for constructing and installing composite stairs
- types and uses of tools and equipment used to construct and install composite stairs
- processes for measuring and calculating material lengths and quantities for constructing and installing composite stairs
- stair construction techniques, including different methods of joining and fixing components
- range and characteristics of different stair types
- techniques used in the construction of composite stairs
- types and uses of materials used in composite stair construction:
 - metals

- concrete
- glass
- plastic composites
- timber
- types and uses of fixings and fastening used in fabricated stair construction.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions and standards, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCJS3011 Design and set out stairs

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCJS3011A Design and set out stairs.
Updated to meet the Standards for Training Packages 2012.

Application

This unit of competency specifies the skills and knowledge required to design and set-out materials for the manufacturing of stairs, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

The unit includes the design and set-out of components for straight flighted stairs with cut or closed stringers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Carpentry and Joinery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare.

1.1 Read and interpret work instructions and plan sequence of work.

- 1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.3 Select tools and equipment, check for serviceability and report any faults.
 - 1.4 Select and use personal protective equipment (PPE) for each part of the task.
- 2 Prepare stair design.
 - 2.1 Determine rise and going for steps and calculate lengths of stringers in compliance with NCC requirements and total rise of the stair.
 - 2.2 Calculate number of treads from number of rises and other requirements.
 - 2.3 Take and record landing measurements and requirements.
 - 2.4 Determine specifications for winders and incorporate into stair design.
 - 2.5 Design and draw stair and stair components and check for accuracy and completeness.
- 3 Prepare materials for setting out.
 - 3.1 Document material requirements for stair components and prepare detailed cutting list.
 - 3.2 Select, check and prepare materials for set out.
 - 3.3 Set out joins for laminated sections.
- 4 Set out stringers for a stair.
 - 4.1 Prepare steel square or pitch board to stair pitch set-out.
 - 4.2 Set out stringers and mark for junctions, newel posts, treads and risers.
- 5 Set out newel posts.
 - 5.1 Mark floor to landing height relationships with

- allowances for floor discrepancies on newel posts.
- 5.2 Set out newel posts to show positions of stringers, treads, flooring, joists, bearers and handrails.
 - 5.3 Mark locations for housings on newel posts.
- 6 Set out component parts.
- 6.1 Determine lengths and bevels from stringer and newel post set-outs.
 - 6.2 Set out component parts to respective lengths and bevels.
- 7 Clean up.
- 7.1 Clean up, meeting all legislative and workplace requirements for safety, waste disposal, materials handling and protection of the environment.
 - 7.2 Check, maintain and store tools and equipment and report any faults.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCJS3011A Design and set out stairs.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCJS3011 Design and set out stairs

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCJS3011A Design and set out stairs.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by designing and setting out the following two types of stairs:

- one straight flight staircase, minimum one metre in height
- one staircase, minimum one metre in height incorporating a quarter space landing and three winders.

One of the staircases must use a cut stringer and one must use a closed stringer.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the National Construction Code and Australian Standards relevant to designing and setting out stairs
- workplace quality policies and standards relevant to designing and setting out stairs
- safety requirements for designing and setting out stairs
- types and uses of tools and equipment required for designing and setting-out stairs
- stair components:
 - balusters
 - bullnose tread
 - handrails
 - landing and landing joists
 - newels
 - risers
 - stringers
 - treads
 - winders
- materials for stairs, including:

- medium density fibreboard (MDF)
- plastics
- plywood
- steel
- timber
- methods for calculating lineal measurements used in stair design
- processes for measuring and setting out stairs
- processes for sketching stair drawings and required specifications
- range, types and limitations of materials used in stair construction
- types of stair design, their component parts and methods of joining components.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions and standards, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCLDG3001 Licence to perform dogging

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Minor edits to formatting.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCLDG3001A Licence to perform dogging.
Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to safely perform dogging work. Dogging consists of the application of slinging techniques to move a load, including the selection and inspection of lifting gear, and the directing of a plant operator in the movement of a load when the load is out of sight of the operator.

Dogging work is conducted in the construction industry and other industries where loads are lifted and moved using cranes or hoists.

Completion of the general construction induction training program, specified in the Safe Work Australia model Code of Practice: Construction Work, is required by anyone carrying out construction work. Achievement of CPCCWHS1001 Prepare to work safely in the construction industry meets this requirement.

Competence in this unit does not in itself result in a licence. A licence is obtained after competence is assessed under applicable Commonwealth, state or territory work health and safety (WHS) regulations.

Pre-requisite Unit

Nil.

Unit Sector

Licencing

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

- essential outcomes. demonstrate achievement of the element.
- 1 Plan task.
 - 1.1 Review task instructions, consult with relevant persons to seek clarification as required, and obtain relevant workplace information.
 - 1.2 Obtain and interpret information, including safe work method statements (SWMSs), required to ensure that activities are performed in compliance with workplace-specific and safe work requirements.
 - 1.3 Obtain and interpret information required to ensure that equipment inspection, use, maintenance and storage complies with manufacturer requirements.
 - 1.4 Identify workplace and task-specific hazards and determine required risk controls and safety measures and equipment, including signs and barricades, personal protective equipment (PPE), and fall prevention and fall arrest equipment.
 - 1.5 Calculate load weight, dimensions and centre of gravity.
 - 1.6 Determine lifting and slinging points.
 - 1.7 Calculate derated working load limit (WLL) of lifting equipment resulting from selected slinging techniques.
 - 1.8 Establish required communication methods with plant operator.
 - 2 Select and inspect equipment.
 - 2.1 Select risk controls and equipment, including fall prevention and fall arrest equipment, and check that it is working and fit for purpose.
 - 2.2 Select and check PPE.
 - 2.3 Select lifting equipment and gear, inspect for defects, and isolate, tag out, report and record defective items.
 - 2.4 Select communication equipment and check that it is working and fit for use.
 - 3 Set up task.
 - 3.1 Establish and maintain communication with relevant persons to ensure lift plan and risk controls are communicated clearly, including any impact on other

- workplace activities.
- 3.2 Ensure risk controls and safety measures and equipment have been put in place.
 - 3.3 Prepare lifting equipment and gear for safe use.
 - 3.4 Consult with relevant persons to ensure that the load destination is stable, able to bear the load and prepared for safe access and landing.
 - 3.5 Attach and secure lifting equipment and gear to the plant-designated lifting point.
- 4 Perform task.
- 4.1 Direct plant designated lifting point/hook, over the load's centre of gravity.
 - 4.2 Attach and secure lifting equipment and gear to the load using slinging techniques.
 - 4.3 Attach and secure tag line as required to guide the load.
 - 4.4 Use signals and radio communication methods to direct the load movement, both in and out of sight of the plant operator.
 - 4.5 Conduct test lift to check the security of the slings and the stability of the load, lifting equipment and gear.
 - 4.6 Direct the movement of the load in accordance with lift plan, including lowering and landing.
 - 4.7 Disconnect lifting gear from the load and direct the positioning of crane or hoist for next task.
- 5 Pack up and clean up.
- 5.1 Remove excess materials from work area.
 - 5.2 Inspect lifting equipment and gear for defects, and isolate, label and report defective items.
 - 5.3 Store lifting equipment and gear in accordance with workplace requirements.
 - 5.4 Remove risk controls and safety measures and equipment.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCLDG3001A Licence to perform dogging.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCLDG3001 Licence to perform dogging

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Minor edits to formatting.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCLDG3001A Licence to perform dogging.
Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by slinging and directing the movement of at least five loads of differing shapes, sizes and weights.

The loads must be moved by a slewing mobile crane of a maximum rated capacity of at least seven tonnes.

The candidate must:

- check relevant workplace information, including safe work method statements (SWMSs), and equipment service and maintenance records and checklists
- perform all activities in compliance with safe work practices and workplace-specific procedures and policies, and check, use, maintain and store equipment in compliance with manufacturer requirements
- identify hazards and use appropriate risk controls and safety measures and equipment
- determine load weight and travel path in consultation with crane operator
- select and inspect appropriate lifting gear and apply slinging techniques appropriate to the type of load, its mass and centre of gravity
- identify the working load limit (WLL) tags of the lifting equipment and gear and calculate the deration of the WLL resulting from the slinging techniques applied
- make temporary connections to loads using fibre or synthetic ropes
- use radio communication and hand and whistle signals to guide the crane operator, including when the load is out of sight of the crane operator.

The candidate must use the following bends and hitches when slinging and directing the movement of loads:

- single sheet bend
- clove hitch

- rolling hitch
- bowline.

Load types must include:

- stillage containing at least ten scaffolding standards or loose steel pipes of 200 kg or more
- ten loose steel pipes, of at least 2 m length, that need wrapping
- an uneven load of at least two tonnes requiring slinging
- steel plate of at least 1.5 m x 2 m x 25 mm
- a round load with a minimum diameter of 300 mm and minimum length of 3 m.

The candidate must direct each load through at least 180 degrees of the crane's slewing radius.

Each of the following must be used at least once:

- flexible steel wire rope (FSWR) sling
- synthetic sling
- chain sling (including shortener)
- spreader bar or lifting beam
- tag line
- shackles
- eyebolts
- plate clamps.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safe work requirements for dogging under Commonwealth and state or territory work health and safety (WHS) legislation, standards and codes of practice
- workplace information, including legislative requirements covered by:
 - SWMSs
 - permits and certifications
 - information about equipment:
 - service and maintenance checklists and records
 - manufacturer specifications and manuals
 - workplace procedures, including emergency plans and incident reporting
- hazard identification and mitigation strategies, including the hierarchy of control:
 - elimination
 - substitution
 - isolation
 - engineering controls
 - administrative controls
 - use of personal protective equipment (PPE)
- hazards commonly encountered in dogging:

- instability of landing surfaces
- overhead and underground hazards
- insufficient lighting
- traffic
- weather
- pedestrian traffic
- work at heights
- risk controls and equipment:
 - traffic management plan
 - traffic barricades and control
 - exclusion zones
 - pedestrian barricades
 - PPE
 - lights
 - fall prevention and fall arrest equipment
- PPE:
 - hard hat
 - safety boots
 - gloves
 - high-visibility clothing
 - breathing, hearing, sight and skin and sun protection
- hand, whistle and two-way radio communication, including signals for:
 - stop
 - hoist up and down
 - luff boom up and down
 - telescope in and out
 - slew left and right
- selection, inspection, care, handling, application, limitations and storage of dogging equipment and gear:
 - (FSWR sling
 - synthetic sling
 - chain sling (including shortener)
 - spreader bar or lifting beam
 - tag line
 - shackles
 - eyebolts
 - plate clamps
- slinging techniques
- load destination stability, load capacity and safe access for walking and unpacking the load:

- ground
- loading platforms
- suspended floors
- vehicles
- mathematical processes for calculating deration of WLL of lifting equipment and gear due to slinging techniques
- methods of making temporary connections to loads using fibre and synthetic ropes:
 - single sheet bend
 - clove hitch
 - rolling hitch
 - bowline.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Only assessors who are accredited in the licence class by the appropriate WHS regulator for the jurisdiction governing the licence are permitted to conduct the final high-risk work licence assessment. The final licence assessment will only be undertaken with candidates who have completed training and been formally assessed against all elements in this unit.

Assessment must be conducted in the workplace or in a simulated workplace environment using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations, including:

- the use of full-scale, industry-standard equipment, not simulators
- performance of tasks within the timelines expected in a workplace.

Candidates must have access to:

- a slewing mobile crane of at least seven tonnes maximum rated capacity, and lifting equipment and gear in a safe and compliant condition
- loads and equipment required to perform the tasks specified in the Performance Evidence
- a licensed crane operator to undertake lifting activity
- workplace information and records, including:
 - equipment and maintenance checklists
 - record system for service and maintenance history
 - incident reports
 - workplace procedures, including emergency plan
 - equipment manuals and manufacturer specifications.

CPCCLHS3001 Licence to operate a personnel and materials hoist

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCLHS3001A Licence to operate a personnel and materials hoist. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to safely operate a personnel and materials hoist, that is, a cantilever or tower hoist or several winches configured to operate as a hoist intended to carry goods, materials or people.

Completion of the general construction induction training program, specified in the Safe Work Australia model Code of Practice: Construction Work, is required by anyone carrying out construction work. Achievement of CPCCWHS1001 Prepare to work safely in the construction industry meets this requirement.

Competence in this unit does not in itself result in a licence. A licence is obtained after competence is assessed under applicable Commonwealth, state or territory work health and safety (WHS) regulations.

Pre-requisite Unit

Nil.

Unit Sector

Licensing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan task.

1.1 Review task instructions, consult with relevant persons to seek clarification as required, and obtain relevant workplace information.

- 1.2 Obtain and interpret information, including safe work method statements (SWMSs), required to ensure that activities are performed in compliance with workplace-specific and safe work requirements.
 - 1.3 Obtain and interpret information required to ensure that equipment inspection, use, maintenance and storage complies with manufacturer requirements.
 - 1.4 Identify workplace and task-specific hazards and determine required risk controls and safety measures and equipment.
 - 1.5 Calculate load weight, check that it is within the working load limit (WLL) of the hoist and distribute it in accordance with manufacturer requirements.
 - 1.6 Establish required communication methods with relevant persons.
 - 1.7 Review emergency procedures in consultation with relevant persons.
- 2 Select and prepare equipment.
- 2.1 Put risk controls and safety measures and equipment in place in consultation with relevant persons.
 - 2.2 Access hoist safely.
 - 2.3 Visually check hoist for damage and defects.
 - 2.4 Carry out pre-start checks, including checking the hoist logbook and controls.
 - 2.5 Carry out operational checks, including testing hoist safety devices and checking for fire extinguisher and other emergency equipment.
 - 2.6 Ensure hoist is operating correctly and is free of obstructions.
 - 2.7 Check communication equipment, lighting and alarm systems to make sure they are working and fit for use.
 - 2.8 Conduct test run of hoist, check for abnormal noises and shut down, tag and report identified abnormalities as required.

- 2.9 Isolate, report, tag out and record defective equipment.
- 3 Conduct hoist operations.
 - 3.1 Maintain communication with relevant persons during hoist operations and emergency situations.
 - 3.2 Operate loaded hoist in accordance with manufacturer requirements.
 - 3.3 Use and interpret communication signals.
 - 3.4 Conduct emergency lowering in accordance with manufacturer requirements.
- 4 Shut down and secure hoist.
 - 4.1 Shut down hoist in accordance with manufacturer requirements.
 - 4.2 Carry out shut-down checks.
 - 4.3 Isolate and secure power against unauthorised access.
 - 4.4 Report, tag out, isolate and record damages and defects.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCLHS3001A Licence to operate a personnel and materials hoist.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCLHS3001 Licence to operate a personnel and materials hoist

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCLHS3001A Licence to operate a personnel and materials hoist. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by operating a personnel and materials hoist, and conducting three lifts carrying loads of different weights. The hoist must be stopped at three different levels, including at least one floor.

The candidate must:

- check relevant workplace information, including safe work method statements (SWMSs), and equipment service and maintenance records and checklists
- perform all activities in compliance with safe work practices and workplace-specific procedures and policies
- check, use, maintain and store equipment in compliance with manufacturer requirements
- identify hazards and use appropriate risk controls and safety measures and equipment
- calculate load weights and confirm that they are within the capacity of the hoist
- check and use safety devices
- move load
- implement shut-down procedures.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safe work requirements for operating a personnel and materials hoist crane under Australian Standards, and Commonwealth and state or territory work health and safety (WHS) legislation and codes of practice
- workplace information, including legislative requirements covered by:
 - SWMSs
 - safety data sheets (SDSs)
 - permits and certifications
 - information about equipment:
 - service and maintenance checklists and records

- manufacturer specifications and manuals
- workplace procedures, including emergency plans and incident reporting
- hazard identification and mitigation strategies, including the hierarchy of control:
 - elimination
 - substitution
 - isolation
 - engineering controls
 - administrative controls
 - use of personal protective equipment (PPE)
- hazards commonly encountered in hoist operations:
 - ground instability
 - obstructions
 - impact of other tasks being performed in the workplace
 - other plant
 - hoist overload
 - hazardous chemicals and dangerous goods
 - electrical hazards
 - insufficient lighting
 - hazardous manual tasks
 - damaged or poor-quality equipment
 - pedestrian traffic
 - wind and other adverse weather conditions
 - falling objects
 - falls from heights
- risk controls and equipment:
 - firefighting equipment
 - safety tags on electrical switches and isolators
 - traffic barricades and controls
 - pedestrian barricades and controls
 - hoist safety devices, including:
 - hoist safety gates and guards
 - hoist safety interlocks
 - adequate illumination
- testing and tagging requirements and electrical hazards associated with power supply for hoists
- processes to prevent interference to and from radio equipment being used near a personnel and materials hoist
- PPE:
 - hard hat
 - safety boots

- gloves
- high-visibility clothing
- breathing, hearing, sight, skin and sun protection
- relevant persons:
 - other hoist operators
 - riggers
 - maintenance personnel
 - supervisors
- communication equipment:
 - two-way radios
 - intercoms
 - bells
 - lights
- pre-start operational checks to ensure:
 - safe access and egress, including ground conditions
 - security and safe distance between tower ties
 - earth leakage protection of power supply
 - power leads are secured above ground level and not attached to scaffolds or building structure
 - tower guides are clean and free of rust and damage
 - signage is clearly displayed and legible
 - brakes and drive mechanism are in good working order
 - overhead protection
 - intercom and signalling systems are in good working order
 - barriers, fencing and gates are in place
 - lubrication has been applied where required
 - hoist rope, where used, is safe
 - sheaves and anchorage points are accessible
 - obstructions have been removed
 - loose gear and equipment have been removed
- processes for determining the weight of the load from labels, markings and load paperwork
- processes for identifying and interpreting the working load limit (WLL) of hoists
- routine problems encountered in the operation of a hoist, and inspection techniques and adjustments required for correction
- processes for responding to unplanned and unsafe situations, including equipment failure or loss of control and adverse weather conditions
- emergency and evacuation procedures, including fire procedures
- shut-down procedures:
 - position platform at designated parking level
 - isolate power from control panel

- isolate and secure mains power supply
- remove key from control panel
- secure landing gates to prevent unauthorised access
- secure fencing and barriers around base to prevent unauthorised access
- hoist characteristics, capabilities and operation to suit loads of different shapes, sizes and weights.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Only assessors who are accredited in the licence class by the appropriate WHS regulator for the jurisdiction where the licence is obtained are permitted to conduct the final high-risk work licence assessment. The final licence assessment will only be undertaken with candidates who have completed training and been formally assessed against all elements in this unit.

Assessment must be conducted in the workplace or in a simulated workplace environment using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations, including:

- the use of full-scale, industry-standard equipment, not simulators
- performance of tasks within the timelines expected in a workplace.

Candidates must have access to:

- all personnel and equipment required to perform the tasks specified in the Performance Evidence
- a personnel and materials hoist capable of carrying loads of different weights and able to be stopped at three different levels, including at least one floor
- workplace information and records, including:
 - equipment and maintenance checklists
 - record system for service and maintenance history
 - incident reports
 - workplace procedures, including SWMSs, SDSs and emergency plans
 - equipment manuals and manufacturer specifications
 - relevant plant supplier information.

CPCCLHS3002 Licence to operate a materials hoist

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCLHS3002A Licence to operate a materials hoist. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to safely operate a materials hoist, that is, a hoist consisting of a car, bucket or platform cantilevered from and travelling up and down the external face of the support of a structure, which is used for hoisting goods and materials but not persons.

Completion of the general construction induction training program, specified in the Safe Work Australia model Code of Practice: Construction Work, is required by anyone carrying out construction work. Achievement of CPCCWHS1001 Prepare to work safely in the construction industry meets this requirement.

Competence in this unit does not in itself result in a licence. A licence is obtained after competence is assessed under applicable Commonwealth, state or territory work health and safety (WHS) regulations.

Pre-requisite Unit

Nil.

Unit Sector

Licensing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan task.

1.1 Review task instructions, consult with relevant persons to seek clarification as required, and obtain relevant workplace information.

1.2 Obtain and interpret information, including safe work

- method statements (SWMSs), required to ensure that activities are performed in compliance with workplace-specific and safe work requirements.
- 1.3 Obtain and interpret information required to ensure that equipment inspection, use, maintenance and storage complies with manufacturer requirements.
 - 1.4 Identify workplace and task-specific hazards and determine required risk controls and safety measures and equipment.
 - 1.5 Calculate load weight, check that it is within the working load limit (WLL) of the hoist and distribute it in accordance with manufacturer requirements.
 - 1.6 Establish required communication methods with relevant persons.
 - 1.7 Review emergency procedures in consultation with relevant persons.
- 2 Select and prepare equipment.
- 2.1 Put risk controls and safety measures and equipment in place in consultation with relevant persons.
 - 2.2 Access hoist safely.
 - 2.3 Visually check hoist for damage and defects.
 - 2.4 Carry out pre-start checks, including checking the hoist logbook and controls.
 - 2.5 Carry out operational checks, including testing hoist safety devices and checking for fire extinguisher and other emergency equipment.
 - 2.6 Ensure hoist is operating correctly and is free of obstructions.
 - 2.7 Check communication equipment, lighting and alarm systems to make sure they are working and fit for use.
 - 2.8 Conduct test run of hoist, check for abnormal noises and shut down, tag and report identified abnormalities as required.
 - 2.9 Isolate, report, tag out and record defective equipment.

- | | | | |
|---|-----------------------------|-----|--|
| 3 | Conduct hoist operations. | 3.1 | Maintain communication with relevant persons during hoist operations and emergency situations. |
| | | 3.2 | Operate loaded hoist in accordance with manufacturer requirements. |
| | | 3.3 | Use and interpret communication signals. |
| | | 3.4 | Conduct emergency lowering in accordance with manufacturer requirements. |
| 4 | Shut down and secure hoist. | 4.1 | Shut down hoist in accordance with manufacturer requirements. |
| | | 4.2 | Carry out shut-down checks. |
| | | 4.3 | Isolate and secure power against unauthorised access. |
| | | 4.4 | Report, tag out, isolate and record damages and defects. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCLHS3002A Licence to operate a materials hoist.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCLHS3002 Licence to operate a materials hoist

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCLHS3002A Licence to operate a materials hoist. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by operating a materials hoist and conducting three lifts carrying loads of different weights. The hoist must be stopped at three different levels, including at least one floor.

The candidate must:

- check relevant workplace information, including safe work method statements (SWMSs) and equipment service and maintenance records and checklists
- perform all activities in compliance with safe work practices and workplace-specific procedures and policies
- check, use, maintain and store equipment in compliance with manufacturer requirements
- identify hazards and use appropriate risk controls and safety measures and equipment
- calculate load weights and confirm that they are within the capacity of the hoist
- check and use safety devices
- move load
- implement shut-down procedures.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safe work requirements for operating a materials hoist crane under Australian Standards, and Commonwealth and state or territory work health and safety (WHS) legislation and codes of practice
- workplace information, including legislative requirements covered by:
 - SWMSs
 - safety data sheets (SDSs)
 - permits and certifications
 - information about equipment:
 - service and maintenance checklists and records

- manufacturer specifications and manuals
- workplace procedures, including emergency plans and incident reporting
- hazard identification and mitigation strategies, including the hierarchy of control:
 - elimination
 - substitution
 - isolation
 - engineering controls
 - administrative controls
 - use of personal protective equipment (PPE)
- hazards commonly encountered in hoist operations:
 - ground instability
 - obstructions
 - impact of other tasks being performed in the workplace
 - other plant
 - hoist overload
 - hazardous chemicals and dangerous goods
 - electrical hazards
 - insufficient lighting
 - hazardous manual tasks
 - damaged or poor-quality equipment
 - pedestrian traffic
 - wind and other adverse weather conditions
 - falling objects
 - falls from heights
- risk controls and equipment:
 - firefighting equipment
 - safety tags on electrical switches and isolators
 - traffic barricades and controls
 - pedestrian barricades and controls
 - hoist safety devices:
 - hoist safety gates and guards
 - hoist safety interlocks
 - adequate illumination
- testing and tagging requirements, and electrical hazards associated with power supply for hoists
- processes to prevent interference to and from radio equipment being used near a materials hoist
- PPE:
 - hard hat
 - safety boots

- gloves
- high-visibility clothing
- breathing, hearing, sight, skin and sun protection
- relevant persons:
 - other hoist operators
 - riggers
 - maintenance personnel
 - supervisors
- communication equipment:
 - two-way radios
 - intercoms
 - bells
 - lights
- pre-start operational checks to ensure:
 - safe access and egress, including ground conditions
 - security and safe distance between tower ties
 - earth leakage protection of power supply
 - power leads are secured above ground level and not attached to scaffolds or building structure
 - tower guides are clean and free of rust and damage
 - signage is clearly displayed and legible
 - brakes and drive mechanism are in good working order
 - overhead protection
 - intercom and signalling systems are in good working order
 - barriers, fencing and gates are in place
 - lubrication has been applied where required
 - hoist rope, where used, is safe
 - sheaves and anchorage points are accessible
 - obstructions have been removed
 - loose gear and equipment have been removed
- processes for determining the weight of the load from labels, markings and load paperwork
- processes for identifying and interpreting the working load limit (WLL) of hoists
- routine problems encountered in the operation of a hoist, and inspection techniques and adjustments required for correction
- processes for responding to unplanned and unsafe situations, including equipment failure or loss of control and adverse weather conditions
- emergency and evacuation procedures, including fire procedures
- shut-down procedures:
 - position platform at designated parking level
 - isolate power from control panel

- isolate and secure mains power supply
- remove key from control panel
- secure landing gates to prevent unauthorised access
- secure fencing and barriers around base to prevent unauthorised access
- hoist characteristics, capabilities and operation to suit loads of different shapes, sizes and weights.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Only assessors who are accredited in the licence class by the appropriate WHS regulator for the jurisdiction where the licence is obtained are permitted to conduct the final high-risk work licence assessment. The final licence assessment will only be undertaken with candidates who have completed training and been formally assessed against all elements in this unit.

Assessment must be conducted in the workplace or in a simulated workplace environment using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations, including:

- the use of full-scale, industry-standard equipment, not simulators
- performance of tasks within the timelines expected in a workplace.

Candidates must have access to:

- a materials hoist capable of carrying loads of different weights and able to be stopped at three different levels, including at least one floor
- all personnel and equipment required to perform the tasks specified in the Performance Evidence
- workplace information and records, including:
 - equipment and maintenance checklists
 - record system for service and maintenance history
 - incident reports
 - workplace procedures, including SWMSs, SDS and emergency plans
 - equipment manuals and manufacturer specifications
 - relevant plant supplier information.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCLRG3001 Licence to perform rigging basic level

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCLRG3001A Licence to perform rigging basic level. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to safely perform basic rigging work.

Riggers use mechanical load shifting equipment and associated gear to move, place or secure loads, including plant, equipment or members of a structure. Riggers ensure the stability of those members and set up and dismantle hoists.

This unit applies to rigging work involving:

- structural steel erection
- hoists
- pre-cast concrete members of a structure
- safety nets and static lines
- mast climbing work platforms
- perimeter safety screens and shutters
- cantilevered crane loading platforms.

Rigging work is undertaken in construction and other industries where load shifting equipment is used to move, place or secure loads.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of CPCCWHS1001 *Prepare to work safely in the construction industry* meets this requirement.

Competence in this unit does not in itself result in a licence. A licence is obtained after competence is assessed under applicable Commonwealth, state or territory work health and safety (WHS) regulations.

Pre-requisite Unit

CPCCLDG3001 Licence to perform dogging

Unit Sector

Licencing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------|--|
| 1 Plan task. | 1.1 Review task instructions, consult with relevant persons to seek clarification as required, and obtain relevant workplace information. |
| | 1.2 Obtain and interpret information, including safe work method statements (SWMSs), required to ensure that activities are performed in compliance with workplace-specific and safe work requirements. |
| | 1.3 Obtain and interpret information required to ensure that equipment inspection, use, maintenance and storage complies with manufacturer requirements. |
| | 1.4 Identify workplace and task-specific hazards and determine required risk controls and safety measures and equipment, including signs and barricades, personal protective equipment (PPE), and fall prevention and fall arrest equipment. |
| | 1.5 Identify methods of moving and placing tools, equipment and materials to minimise the risk of falling objects, to avoid inappropriate carrying on ladders and to minimise hazardous manual tasks. |
| | 1.6 Identify required rigging equipment and associated gear. |
| | 1.7 Calculate loads associated with mechanical load shifting equipment and associated gear required to erect and dismantle structures and plant. |
| | 1.8 Establish required communication methods with relevant persons. |
| 2 Select and inspect equipment. | 2.1 Select risk controls and equipment, including fall prevention and fall arrest equipment, and check that it is working and fit for purpose. |
| | 2.2 Select and check PPE. |

- 2.3 Select rigging equipment and associated gear, inspect for defects, and isolate, tag out, report and record defective items.
 - 2.4 Select communication equipment and check that it is working and fit for use.
- 3 Set up task.
 - 3.1 Establish and maintain communication with relevant persons to ensure task plan and risk controls are communicated clearly, including any impact on other workplace activities.
 - 3.2 Ensure risk controls and safety measures and equipment have been put in place, including the fitting, adjusting and anchoring of fall protection equipment.
 - 3.3 Consult with relevant persons to ensure that ground and foundation have been assessed as suitable for task.
 - 3.4 Consult with relevant persons to ensure that the structure has been assessed as suitable for load bearing task.
- 4 Undertake basic rigging activities.
 - 4.1 Erect and dismantle all structures and plant while maintaining stability, in accordance with workplace and manufacturer requirements.
 - 4.2 Erect structural steel.
 - 4.3 Erect pre-cast concrete members of a structure, or lift and install a series of scenery panels.
 - 4.4 Erect and dismantle a safety net and static line.
 - 4.5 Erect and dismantle a hoist or mast climbing work platform.
 - 4.6 Install and dismantle a perimeter safety screen or shutter.
 - 4.7 Install and dismantle a cantilevered crane loading platform.
- 5 Complete task.
 - 5.1 Remove excess materials from work area.
 - 5.2 Inspect structures, plant, equipment and gear for defects,

and isolate, tag out and report defective items.

- 5.3 Store plant, equipment and gear in accordance with workplace requirements.
- 5.4 Remove risk controls and safety measures and equipment.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCLRG3001A Licence to perform rigging basic level.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCLRG3001 Licence to perform rigging basic level

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCLRG3001A Licence to perform rigging basic level. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by safely performing rigging tasks at a basic level, including:

- erecting and dismantling a portal frame of structural steel consisting of columns (150 UC 29.8 kg/m), beams (minimum 200 UB 29.8 kg/m) and braces in accordance with engineering detail. It must include:
 - appropriate structural bolts, nuts, washers, purlins and girts
 - beams installed at a height of at least 4 m
 - suitable access and working platform (e.g. elevated work platform, mobile scaffold, scissor lift, portable industrial grade ladder)

It must be packed and plumbed and include temporary bracing during erection and dismantling. Hand tools and working at height safety equipment, including harness, lanyard and inertia reel, must be used

- installing and removing a series of three retaining wall panels, each panel being not less than 4 m high by 2 m wide and not less than 1.5 tonnes. One panel must be set at a 90-degree angle to one of the other panels - candidates must identify any defective lifting equipment
- installing and removing a safety (catch) net with minimum dimensions of 3 m x 4 m in accordance with manufacturer specification and engineering detail on portal frame - candidates must identify any defective nets
- installing, using and removing a static line at least 2.1 m above the beams on portal frame, in accordance with manufacturer specifications and engineering detail – candidates must identify any defective static lines and associated equipment
- installing and removing a cantilevered materials hoist (1 or 2 barrow) or a mast climbing work platform of at least three mast sections and tied in accordance with specifications
- installing and dismantling a perimeter safety screen or shutter of at least 4 m x 2 m in accordance with manufacturer specifications and engineering detail
- installing and dismantling a cantilevered crane loading platform at a height of at least 4 m with secure gates and handrails in accordance with manufacturer specifications and engineering detail

- setting up and operating a powered winch to move a load of at least 1 tonne
- using the following splice and hitch techniques:
 - eye splice
 - becket hitch.

The candidate must:

- check relevant workplace information, including safe work method statements (SWMSs) and equipment service and maintenance records and checklists
- perform all activities in compliance with workplace-specific, safe work and manufacturer requirements
- use the following associated gear:
 - beam clamps or pipe clamps or plate clamps
 - tag lines
 - flexible steel wire rope (FSWR)
 - chains
 - wire and synthetic slings
 - shackles
 - wedge sockets
 - eye bolts
 - rope grips
 - turnbuckles
 - chain blocks
 - sheave blocks
 - spreader bars or lifting beam
 - levers/podgers
 - skates/rollers
 - wedges
 - props
 - powered winches
 - snatch blocks
 - wire rope winches
 - lever pull (e.g. come-alongs)
- identify hazards and use appropriate risk controls and safety measures and equipment
- safely erect and dismantle structures and plant.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safe work requirements for rigging under Australian Standards and Commonwealth and state or territory work health and safety (WHS) legislation, regulations, standards and codes of practice
- workplace information, including legislative requirements covered by:

- SWMSs
- permits and certifications
- information about equipment:
 - service and maintenance checklists and records
 - manufacturer and supplier specifications and manuals
- workplace procedures, including emergency plans and incident reporting
- hazard identification and mitigation strategies, including the hierarchy of control:
 - elimination
 - substitution
 - isolation
 - engineering controls
 - administrative controls
 - use of personal protective equipment (PPE)
- hazards commonly encountered in rigging basic level:
 - instability of work areas
 - damaged or poor-quality equipment
 - overhead and underground hazards
 - electrical items
 - mobile plant
 - insufficient lighting
 - wind and other adverse weather conditions
 - traffic
 - pedestrian traffic
 - hazardous manual tasks
 - falling objects
 - falls from heights
- minimum clearance distance from powerlines or electrical equipment specific to mobile plant and scaffolding and other structures as determined by relevant state or territory authority or electrical supply authority
- risk controls and equipment:
 - traffic control
 - pedestrian barricades
 - PPE
 - adequate illumination
 - safety structures and screens
- inspection, handling and storage of rigging structures and equipment, associated gear, and other required equipment:
 - rigging structures and equipment:
 - elevated work platforms
 - cantilevered crane loading platforms

- portal frames
- hoists
- pre-cast concrete members
- mast climbing work platform
- safety screens and shutters
- safety nets
- associated gear:
 - power and manually operated lifting gear
 - lifting clutches
 - tag lines
 - FSWR
 - chains
 - wire and synthetic slings
 - shackles
 - terminations
 - wedge sockets
 - eye bolts
 - beam clamps
 - pipe clamps
 - plate clamps
 - rope grips
 - turnbuckles
 - chain blocks
 - lever blocks
 - lever-action winches
 - sheaves
 - spreader bars
 - lifting beams
 - jacks
 - levers
 - skates
 - wedges
 - rollers
 - beam trolley
 - props
- safety equipment:
 - full-body safety harness
 - energy absorber
 - lanyard
 - inertia reel (fall arrester)

- static safety lines
- PPE:
 - hard hat
 - safety boots
 - gloves
 - high-visibility clothing
 - breathing, hearing, sight, skin and sun protection
- communication equipment:
 - two-way radios
 - whistles
- relevant persons:
 - doggers
 - riggers
 - crane operators
 - engineers
 - supervisors
- ground and foundation suitability:
 - rough, uneven ground
 - backfilled ground
 - soft soils
 - hard compacted soil
 - rock
 - bitumen
 - concrete
 - suspended concrete floors
 - building roofs
 - landings
 - ground bearing pressure
- mathematical processes for estimating and measuring loads for basic rigging
- techniques for making temporary connections.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Only assessors who are accredited in the licence class by the appropriate WHS regulator for the jurisdiction where the licence is obtained are permitted to conduct the final high-risk work licence assessment. The final licence assessment will only be undertaken with candidates who have completed training and been formally assessed against all elements in this unit.

Assessment must be conducted in the workplace or in a simulated workplace environment using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations, including:

- the use of full-scale, industry-standard equipment, not simulators
- performance of tasks within the timelines expected in a workplace
- participation of the candidate in activities within a team of three to five members.

Candidates must have access to:

- all personnel and equipment required to perform the tasks specified in the Performance Evidence
- workplace information and records, including:
 - equipment and maintenance checklists
 - record system for service and maintenance history
 - incident reports
 - workplace procedures, including SWMSs and emergency plans
 - equipment manuals and manufacturer specifications
 - relevant plant supplier information.

CPCCLRG3002 Licence to perform rigging intermediate level

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCLRG3002A Licence to perform rigging intermediate level. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to safely perform intermediate rigging work.

Riggers use mechanical load shifting equipment and associated gear to move, place or secure loads, including plant, equipment or members of a building or structure. Riggers ensure the stability of those members and set up and dismantle cranes and hoists.

This unit includes rigging work involving:

- hoists with jibs and self-climbing hoists
- cranes, conveyors, dredges and excavators
- tilt slabs
- demolition of structures or plant
- multiple lifts.

Rigging work is undertaken in construction and other industries where load shifting equipment is used to move, place or secure loads.

Completion of the general construction induction training program, specified in the Safe Work Australia model Code of Practice: Construction Work, is required by anyone carrying out construction work. Achievement of CPCWHS1001 Prepare to work safely in the construction industry meets this requirement.

Competence in this unit does not in itself result in a licence. A licence is obtained after competence is assessed under applicable Commonwealth, state or territory work health and safety (WHS) regulations.

Pre-requisite Unit

CPCCLRG3001 Licence to perform rigging basic level

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------|--|
| 1 Plan task. | 1.1 Review task instructions, consult with relevant persons to seek clarification as required, and obtain relevant workplace information. |
| | 1.2 Obtain and interpret information, including safe work method statements (SWMSs), required to ensure that activities are performed in compliance with workplace-specific and safe work requirements. |
| | 1.3 Obtain and interpret information required to ensure that equipment inspection, use, maintenance and storage complies with manufacturer requirements. |
| | 1.4 Identify workplace and task-specific hazards and determine required risk controls and safety measures and equipment, including signs and barricades, personal protective equipment (PPE), and fall prevention and fall arrest equipment. |
| | 1.5 Identify methods of moving and placing tools, equipment and materials to minimise the risk of falling objects, to avoid inappropriate carrying on ladders and to minimise hazardous manual tasks. |
| | 1.6 Identify required rigging equipment and associated gear. |
| | 1.7 Calculate loads associated with mechanical load shifting equipment and associated gear required to erect and dismantle structures and plant. |
| | 1.8 Establish required communication methods with relevant persons. |
| 2 Select and inspect equipment. | 2.1 Select risk controls and equipment, including fall prevention and fall arrest equipment, and check that it is working and fit for purpose. |
| | 2.2 Select and check PPE. |
| | 2.3 Select rigging equipment and associated gear, inspect for defects, and isolate, tag out, report and record defective items. |

- 2.4 Select communication equipment and check that it is working and fit for use.
- 3 Set up task.
 - 3.1 Establish and maintain communication with relevant persons to ensure task plan and risk controls are communicated clearly, including any impact on other workplace activities.
 - 3.2 Ensure risk controls and safety measures and equipment have been put in place, including the fitting, adjusting and anchoring of fall protection equipment.
 - 3.3 Consult with relevant persons to ensure that ground and foundation have been assessed as suitable for task.
 - 3.4 Consult with relevant persons to ensure that the structure has been assessed as suitable for load bearing task.
- 4 Undertake intermediate rigging activities.
 - 4.1 Erect and dismantle all structures and operate plant while maintaining stability, in accordance with workplace and manufacturer requirements.
 - 4.2 Conduct a multiple-crane lift.
 - 4.3 Erect and dismantle a tower crane section or a crane lattice boom section.
 - 4.4 Lift and install a series of tilt-up concrete panels.
 - 4.5 Remove a concrete-encased structural steel column and beam.
- 5 Complete task.
 - 5.1 Remove excess materials from work area.
 - 5.2 Inspect structures, plant, equipment and gear for defects, and isolate, tag out and report defective items.
 - 5.3 Store plant, equipment and gear in accordance with workplace requirements.
 - 5.4 Remove risk controls and safety measures and equipment.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCCLRG3002 Licence to perform rigging intermediate level

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCLRG3002A Licence to perform rigging intermediate level. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by safely performing rigging tasks at an intermediate level, including:

- undertaking a multiple-crane lift of a load of at least 1 tonne and at least 4 m long
- one of the following:
 - adding and removing a tower crane section, or
 - adding and removing a crane lattice boom section, or
 - adding and removing a fly jib on a slewing mobile crane, or
 - erecting and dismantling a non-guyed tower
- installing and removing a three-panel structure, with each panel being at least 4 m high, at least 2 m wide and at least 1.5 tonnes
- using the following bends and hitches:
 - round turn
 - two half-hitches.

The candidate must:

- check relevant workplace information, including safe work method statements (SWMSs) and equipment service and maintenance records and checklists
- perform all activities in compliance with workplace-specific, safe work and manufacturer requirements
- identify hazards and use appropriate risk controls and safety measures and equipment
- use the following associated gear:
 - tag lines
 - flexible steel wire rope (FSWR)
 - chains
 - wire and synthetic slings
 - shackles
 - wedge sockets

- eye bolts
- rope grips
- turnbuckles
- chain blocks
- sheaves
- spreader bars or lifting beams
- snatch blocks
- lifting clutches
- safely erect and dismantle structures and plant.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safe work requirements for rigging under Australian Standards, and Commonwealth and state or territory work health and safety (WHS) legislation, regulations, standards and codes of practice
- workplace information, including legislative requirements covered by:
 - SWMSs
 - permits and certifications
 - information about equipment:
 - service and maintenance checklists and records
 - manufacturer and supplier specifications and manuals
 - workplace procedures, including emergency plans and incident reporting
- hazard identification and mitigation strategies, including the hierarchy of control:
 - elimination
 - substitution
 - isolation
 - engineering controls
 - administrative controls
 - use of personal protective equipment (PPE)
- hazards commonly encountered in rigging intermediate level:
 - instability of work areas
 - damaged or poor-quality equipment
 - overhead and underground hazards
 - electrical items
 - mobile plant
 - insufficient lighting
 - wind and other adverse weather conditions
 - traffic
 - pedestrian traffic

- hazardous manual tasks
- falling objects
- falls from heights
- minimum clearance distance from powerlines or electrical equipment specific to mobile plant and scaffolding as determined by relevant state or territory authority or electrical supply authority
- risk controls and equipment:
 - traffic barricades and control
 - pedestrian barricades
 - PPE
 - adequate illumination
 - safety structures and screens
 - exclusion zones
- inspection, handling and storage of rigging structures and equipment, associated gear, and other required equipment:
 - rigging structures and equipment:
 - concrete tilt-up panels
 - non-guyed light towers
 - scaffolds
 - elevated work platforms
 - personnel box
 - cantilevered crane loading platforms
 - mast climbers
 - safety screens and shutters
 - cranes
 - associated gear:
 - power and manually operated lifting gear
 - lifting clutches
 - snatch blocks
 - tag lines
 - FSWR
 - chains
 - wire and synthetic slings
 - shackles
 - terminations
 - wedge sockets
 - eye bolts
 - beam clamps
 - pipe clamps
 - plate clamps

- wire rope grips
- turnbuckles
- rigging screws
- chain blocks
- lever blocks
- lever-action winches
- sheaves
- spreader bars
- lifting beams
- jacks
- levers
- skates
- wedges
- rollers
- beam trolley
- safety equipment:
 - safety harness
 - energy absorber
 - lanyard
 - inertia reel
 - static safety lines
- PPE:
 - hard hat
 - safety boots
 - gloves
 - high-visibility clothing
 - breathing, hearing, sight, skin and sun protection
- communication equipment:
 - two-way radios
 - whistles
- relevant persons:
 - doggers
 - riggers
 - load-shifting plant operators
 - engineers

CPCCLRG4001 Licence to perform rigging advanced level

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCLRG4001A Licence to perform rigging advanced level. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to safely perform advanced rigging work.

Riggers use mechanical load shifting equipment and associated gear to move, place or secure loads, including plant, equipment or members of a building or structure. Riggers ensure the stability of those members and set up and dismantle cranes and hoists.

This unit applies to rigging work involving:

- gin poles and shear legs
- flying foxes and cable ways
- guyed derricks and structures
- suspended scaffolds and fabricated hung scaffolds.

Rigging work is undertaken in construction and other industries where load shifting equipment is used to move, place or secure loads.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Competence in this unit does not in itself result in a licence. A licence is obtained after competence is assessed under applicable Commonwealth, state or territory work health and safety (WHS) regulations.

Pre-requisite Unit

| | 1.6 Identify required rigging equipment and associated gear. |
| | 1.7 Calculate loads associated with mechanical load shifting equipment and associated gear required to erect and dismantle structures and plant. |
| | 1.8 Establish communication methods with associated personnel. |
| 2 Select and inspect equipment. | 2.1 Select risk controls and equipment, including fall prevention and fall arrest equipment, and check that it is working and fit for purpose. |
| | 2.2 Select and check PPE. |
| | 2.3 Select rigging equipment and associated gear, inspect for defects, and isolate, tag out, report and record defective items. |

- 2.4 Select communication equipment and check that it is working and fit for use.
- 3 Set up task.
 - 3.1 Establish and maintain communication with relevant persons to ensure task plan and risk controls are communicated clearly, including any impact on other workplace activities.
 - 3.2 Ensure risk controls and safety measures and equipment have been put in place, including the fitting, adjusting and anchoring of fall protection equipment.
 - 3.3 Consult with relevant persons to ensure that ground and foundation have been assessed as suitable for task.
 - 3.4 Consult with relevant persons to ensure that the structure has been assessed as suitable for load bearing task.
- 4 Undertake advanced rigging activities.
 - 4.1 Erect, operate and dismantle all structures and plant while maintaining stability, in accordance with workplace and manufacturer requirements.
 - 4.2 Erect gin poles or sheer legs, operate winch to move load, and dismantle.
 - 4.3 Erect flying fox or cable way, operate to move a load, and dismantle.
 - 4.4 Erect guyed derrick, operate to move a load, and dismantle.
 - 4.5 Erect, operate and dismantle suspended scaffold.
 - 4.6 Install and remove fabricated hung scaffold.
- 5 Complete task.
 - 5.1 Remove excess materials from work area.
 - 5.2 Inspect structures, plant, equipment and gear for defects, and isolate, tag out and report defective items.
 - 5.3 Store plant, equipment and gear in accordance with workplace requirements.
 - 5.4 Remove risk controls safety measures and equipment.

- 5.5 Complete handover certificates, and attach scaffolding tags for suspended scaffold and hung scaffold.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCLRG4001A Licence to perform rigging advanced level.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCLRG4001 Licence to perform rigging advanced level

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCLRG4001A Licence to perform rigging advanced level. Updated to meet the Standards for Training Packages 2012

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by erecting, using and dismantling the following:

- gin pole or shear leg of a height of 8 m or more and a working load limit of 400 kg or more. The winch must be powered with at least one diversion sheave
- a flying fox or cable way of a height of at least 4 m and a span distance of at least 10 m and able to support at least 200 kg - the rope span may be supported from fixed anchorages, poles, or both
- guyed derricks and structures of a minimum height of 8 m
- a suspended scaffold of a height of at least 4 m with a minimum capacity of at least 200 kg attached by a dual needle system using counterweights and powered winch
- a fabricated hung scaffold of at least 4 m height and 3.4 m length, and consisting of one continuous platform of heavy-duty capacity.

The candidate must:

- check relevant workplace information, including safe work method statements (SWMSs) and equipment service and maintenance records and checklists
- perform all activities in compliance with workplace-specific, safe work and manufacturer requirements, including the completion of required handover certificates
- identify hazards and use appropriate risk controls and safety measures and equipment
- use all the associated gear listed under Knowledge Evidence
- safely erect, use and dismantle structures and plant.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safe work requirements for rigging under Australian Standards, and Commonwealth and state or territory work health and safety (WHS) legislation, regulations and codes of practice
- workplace information, including legislative requirements covered by:

- SWMSs
- permits and certifications
- information about equipment:
 - service and maintenance checklists and records
 - manufacturer and supplier specifications and manuals
- workplace procedures, including emergency plans and incident reporting
- hazard identification and mitigation strategies, including the hierarchy of control:
 - elimination
 - substitution
 - isolation
 - engineering controls
 - administrative controls
 - use of personal protective equipment (PPE)
- hazards commonly encountered in rigging advanced level:
 - instability of work areas
 - damaged or poor-quality equipment
 - overhead and underground hazards
 - electrical items
 - mobile plant
 - insufficient lighting
 - wind and other adverse weather conditions
 - traffic
 - pedestrian traffic
 - hazardous manual tasks
 - falling objects
 - falls from heights
- minimum clearance distance from powerlines or electrical equipment specific to mobile plant and scaffolding as determined by relevant state or territory authority or electrical supply authority
- risk controls and equipment:
 - traffic barricades and control
 - pedestrian barricades
 - PPE:
 - hard hat
 - safety boots
 - gloves
 - high-visibility clothing
 - breathing, hearing, sight, skin and sun protection
 - adequate illumination
 - safety structures and screens

- inspection, handling and storage of rigging structures and equipment, associated gear, and other required equipment:
 - rigging structures and equipment:
 - gin poles
 - flying foxes
 - shear legs
 - cable ways
 - guyed derricks
 - suspended scaffolds
 - fabricated hung scaffolds
 - associated gear:
 - power and manually operated lifting gear
 - tag lines
 - flexible steel wire rope (FSWR)
 - chains
 - wire and synthetic slings
 - shackles
 - terminations
 - eye bolts
 - beam clamps
 - rope grips
 - turnbuckles
 - rigging screws
 - lever blocks
 - lever-action winches
 - sheaves
 - scaffold and rigging tools
 - jacks
 - levers
 - skates
 - wedges
 - rollers
 - girder trolley
 - safety equipment:
 - safety harness
 - energy absorber
 - lanyard
 - inertia reel
 - static safety lines
 - communication equipment:

- two-way radios
- whistles
- associated personnel:
 - doggers
 - riggers
 - crane operators
 - engineers
 - supervisors
- ground and foundation suitability:
 - rough, uneven ground
 - backfilled ground
 - soft soils
 - hard compacted soil
 - rock
 - bitumen
 - concrete
 - suspended concrete floors
 - building roofs
 - landings
 - ground bearing pressure
- supporting beams or structures load bearing capacity
- mathematical processes for calculating loads for advanced rigging.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Only assessors who are accredited in the licence class by the appropriate WHS regulator for the jurisdiction where the licence is obtained are permitted to conduct the final high-risk work licence assessment. The final licence assessment will only be undertaken with candidates who have completed training and been formally assessed against all elements in this unit.

Assessment must be conducted in the workplace or in a simulated workplace environment using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations, including:

- the use of full-scale, industry-standard equipment, not simulators
- performance of tasks within the timelines expected in a workplace.
- participation of the candidate in activities within a team of three to five members.

Candidates must have access to:

- all personnel and equipment required to perform the tasks specified in the Performance Evidence
- workplace information and records, including:

- equipment and maintenance checklists
- record system for service and maintenance history
- incident reports
- workplace procedures, including SWMSs and emergency plans
- equipment manuals and manufacturer specifications
- relevant plant supplier information.

CPCCLSF2001 Licence to erect, alter and dismantle scaffolding basic level

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Minor edits to formatting.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCLSF2001A Licence to erect, alter and dismantle scaffolding basic level. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to safely perform basic scaffolding work.

Scaffolding work involves erecting, altering or dismantling a temporary structure to support a platform from which a person or object could fall more than four metres.

This unit applies to scaffolding work involving:

- modular or pre-fabricated scaffolds
- cantilevered materials hoists with a maximum working load of 500 kg
- ropes
- gin wheels
- safety nets and static lines
- bracket scaffolds (tank and formwork).

Scaffolding work is undertaken in construction and other industries where temporary structures are erected, altered and dismantled.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Competence in this unit does not in itself result in a licence. A licence is obtained after competence is assessed under applicable Commonwealth, state or territory work health and safety (WHS) regulations.

Pre-requisite Unit

Nil.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|----------------------|--|
| 1 Plan task. | 1.1 Review task instructions, consult with relevant persons to seek clarification as required, and obtain relevant workplace information. |
| | 1.2 Obtain and read information, including safe work method statements (SWMSs), required to ensure that activities are performed in compliance with workplace-specific and safe work requirements. |
| | 1.3 Obtain and read information required to ensure that equipment inspection, use, maintenance and storage complies with manufacturer requirements. |
| | 1.4 Identify workplace and task-specific hazards and determine required risk controls and safety measures and equipment, including signs and barricades, personal protective equipment (PPE), and fall prevention and fall arrest equipment. |
| | 1.5 Identify methods of moving and placing tools, equipment and materials to minimise the risk of falling objects, to avoid inappropriate carrying on ladders and to minimise hazardous manual tasks. |
| | 1.6 Identify required scaffold and associated equipment. |
| | 1.7 Calculate loads exerted on and by the scaffold and scaffolding equipment. |
| | 1.8 Establish required communication methods with relevant persons. |
| 2 Select and inspect | 2.1 Select risk controls and equipment and fall protection, |

- plant and equipment. and check that it is working and fit for purpose.
- 2.2 Select and check PPE.
 - 2.3 Inspect scaffold and associated equipment for defects, and isolate, tag out, report and record defective items.
 - 2.4 Select communication equipment and check that it is working and fit for use.
- 3 Set up task.
- 3.1 Establish and maintain communication with relevant persons to ensure task plan and risk controls are communicated clearly, including any impact on other workplace activities.
 - 3.2 Ensure risk controls and safety measures and equipment have been put in place, including the fitting, adjusting and anchoring of fall protection equipment.
 - 3.3 Consult with relevant persons to ensure that ground and foundation have been assessed as suitable for task.
 - 3.4 Prepare footings to support scaffold and scaffold equipment.
 - 3.5 Prepare scaffold and scaffold equipment, and place in a stable position ready for erection.
- 4 Undertake basic scaffolding activities.
- 4.1 Erect and dismantle scaffold and equipment while maintaining stability, in accordance with workplace and manufacturer requirements.
 - 4.2 Erect and dismantle modular or pre-fabricated scaffold.
 - 4.3 Erect and dismantle cantilevered materials hoists.
 - 4.4 Apply methods for making temporary connections using fibre ropes.
 - 4.5 Erect, operate and dismantle gin wheels.
 - 4.6 Erect and dismantle safety nets and static lines.
 - 4.7 Erect and dismantle bracket scaffolds (tank and formwork).

- 5 Complete task.
 - 5.1 Remove excess materials from work area.
 - 5.2 Inspect completed scaffolding task for compliance with task requirements, complete handover certificate and forward to relevant persons, and complete and attach scaffold tag.
 - 5.3 Inspect all plant and equipment for defects, and isolate, tag out and report defective items.
 - 5.4 Store all plant and equipment in accordance with workplace requirements.
 - 5.5 Remove risk controls and safety measures and equipment.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCLSF2001A Licence to erect, alter and dismantle scaffolding basic level.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCLSF2001 Licence to erect, alter and dismantle scaffolding basic level

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Minor edits to formatting.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCLSF2001A Licence to erect, alter and dismantle scaffolding basic level. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by erecting, altering and dismantling the following:

- a modular scaffold of a minimum of three bays with a return (tied in), ladder and stair access, bay extension platform (hop-up brackets) incorporating a safety screen and a platform height of more than 4 m
- a bracket scaffold (including tank, formwork and top-plate hung bracket)
- a mobile scaffold of above 4 m height
- a gin wheel
- a cantilever materials hoist with a maximum working load of 500 kg
- a safety net and static line.

The candidate must use the following bends, hitches and splices:

- short splice
- sheet bend
- clove hitch
- timber hitch.

The candidate must:

- check relevant workplace information, including safe work method statements (SWMSs), and equipment service and maintenance records and checklists
- perform all activities in compliance with workplace-specific, safe work and manufacturer requirements, including the completion of any required handover certificates and scaffold tags
- identify hazards and use appropriate risk controls and safety measures and equipment

- use the following associated gear and stability equipment:
 - flexible steel wire rope (FSWR) and fittings
 - ladders
 - tie tubes and fittings
 - fibre rope
 - stairways and screening
 - tape measures
 - scaffold belts
 - hand tools
 - sole plates and boards
 - screw jacks
 - levels
 - props
 - bracing.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safe work requirements for scaffolding under Australian Standards, and Commonwealth and state or territory WHS legislation, regulations and codes of practice, and local government regulations
- workplace information, including legislative requirements, covered by:
 - SWMSs
 - permits and certifications
 - information about equipment:
 - service and maintenance checklists and records
 - manufacturer and supplier specifications and manuals
 - workplace procedures, including emergency plans and incident reporting
- hazard identification and mitigation strategies, including the hierarchy of control:
 - elimination
 - substitution
 - isolation
 - engineering controls
 - administrative controls
 - use of personal protective equipment (PPE)
- hazards commonly encountered in scaffolding activities:
 - instability of work areas
 - damaged or poor-quality equipment
 - overhead and underground hazards
 - electrical items

- mobile plant
- insufficient lighting
- wind and other adverse weather conditions
- traffic
- pedestrian traffic
- hazardous manual tasks
- falling objects
- falls from heights
- minimum clearance distance for scaffolding work from powerlines and electrical equipment as determined by the relevant state or territory authority or electrical supply authority
- risk controls and equipment:
 - establishment of safe and adequate access and egress
 - adequate illumination
 - traffic barricades and control
 - pedestrian barricades
 - safety harness
 - energy absorber
 - lanyard
 - inertia reel
- PPE:
 - hard hat
 - safety boots
 - gloves
 - high-visibility clothing
 - breathing, hearing, sight, skin and sun protection
- application, limitation, operation, load capabilities and safety requirements of:
 - modular and prefabricated scaffolds
 - cantilevered materials hoists with a maximum working load of 500 kg
 - ropes
 - gin wheels
 - safety nets and static lines
 - bracket scaffolds (tank and formwork)
- dimensions of scaffold, maximum capacities and types of loads:
 - static loads
 - live loads
 - dead loads
 - dynamic loads
 - load capacities and minimum dimensions for light duty, medium duty, heavy duty and special duty scaffolds

- engineering and supplier specifications
- mathematical processes for estimating and measuring loads for scaffolds
- types and functions of associated equipment, including selection, inspection, care, handling, application, storage and limitations of:
 - scaffolding components and equipment
 - FSWR and fittings
 - ladders
 - tie tubes and fittings
 - fibre rope
 - stairways and screening
 - box spanners
 - spirit levels
 - tape measures
 - scaffold belts
 - podgers
 - hammers
 - wire nips
 - wrenches
 - torpedo levels
 - spanners
 - cutters
 - hammer drills
 - materials hoists
 - gin wheels
 - safety nets
 - static lines and fittings
- stability equipment and processes:
 - sole plates and boards
 - screw jacks
 - levelling
 - ties
 - bracing and propping
- relevant persons:
 - other scaffolders
 - supervisors
- ground and foundation suitability:
 - ground bearing pressure
 - rough and uneven ground
 - backfilled ground
 - soft soils

- hard compacted soil
- rock
- bitumen
- concrete
- scaffolding erection, alteration and dismantling techniques
- workplace policies and procedures for scaffolding:
 - erecting, altering and dismantling scaffolds
 - erecting and stabilising cantilever hoists and scaffolds
 - manufacturer requirements for scaffolding
 - working safely at heights
 - setting up fall prevention and fall arrest systems, including safety nets
 - understanding structural charts and structural plans.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Only assessors who are accredited in the licence class by the appropriate WHS regulator for the jurisdiction where the licence is obtained are permitted to conduct the final high-risk work licence assessment. The final licence assessment will only be undertaken with candidates who have completed training and been formally assessed against all elements in this unit.

Assessment must be conducted in the workplace or in a simulated workplace environment using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations, including:

- the use of full-scale, industry-standard equipment, not simulators
- performance of tasks within the timelines expected in a workplace.
- participation of the candidate in activities within a team of three to five members.

Candidates must have access to:

- all personnel and equipment required to perform the tasks specified in the Performance Evidence
- workplace information and records, including:
 - equipment and maintenance checklists
 - record system for service and maintenance history
 - reporting procedures
 - workplace procedures, including SWMSs and emergency plans
 - equipment manuals and manufacturer specifications
 - relevant plant supplier information.

CPCCLSF3001 Licence to erect, alter and dismantle scaffolding intermediate level

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCLSF3001A Licence to erect, alter and dismantle scaffolding intermediate level. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to safely perform intermediate scaffolding work.

Scaffolding work involves erecting, altering or dismantling a temporary structure to support a platform from which a person or object could fall more than four metres.

This unit applies to scaffolding work involving:

- cantilevered crane loading platforms
- cantilevered scaffolds
- spur scaffolds
- barrow ramps and sloping platforms
- scaffolding associated with perimeter safety screens and shutters
- mast climbing work platforms
- tube and coupler scaffolds (including tube and coupler covered ways and gantries).

Scaffolding work is undertaken in construction and other industries where temporary structures are erected, altered and dismantled.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Competence in this unit does not in itself result in a licence. A licence is obtained after competence is assessed under applicable Commonwealth, state or territory work health and safety (WHS) regulations.

Assessment Requirements for CPCCLSF3001 Licence to erect, alter and dismantle scaffolding intermediate level

Modification History

- | | |
|--------------|--|
| Release
1 | This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCLSF3001A Licence to erect, alter and dismantle scaffolding intermediate level. Updated to meet the Standards for Training Packages 2012. |
|--------------|--|

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by safely erecting, altering and dismantling the following:

- cantilevered and spurred scaffold
- barrow ramp or sloping platform
- tube and coupler scaffold of at least four medium duty bays long and two lifts high with a working platform of at least 4 m in height with a ladder access. It must have a cantilevered platform at the rear of the scaffold and include a ramp constructed with steel tube from the rear of the scaffold to a height of 1 m and a width of at least 675 mm, and include handrails, toe boards and mid rails; all planks must be secured
- cantilevered crane-loading platform
- mast climbing work platform.

The candidate must also produce a tube and coupler scaffold plan in accordance with Australian Standards, demonstrating the following:

- diagonal staggering of standards
- staggering of ledgers
- joints of ledgers within 300 mm of standards
- joints of standards within 300 mm of ledgers
- positioning of ledgers.

The candidate must:

- check relevant workplace information, including safe work method statements (SWMSs) and equipment service and maintenance records and checklists
- perform all activities in compliance with workplace-specific requirements, safe work requirements and manufacturer requirements, including the completion of any required handover certificates and scaffold tags
- identify hazards and use appropriate risk controls and safety measures and equipment
- use the following associated gear and stability equipment:

- planks
- flexible steel wire rope (FSWR) and fittings
- ladders
- tie tubes and fittings
- fibre rope
- tape measures
- scaffold belts
- hand tools
- levels
- sole plates and boards
- screw jacks
- props
- bracing.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safe work requirements for scaffolding under Australian Standards, Commonwealth and state or territory work health and safety (WHS) legislation, regulations and codes of practice, and local government regulations
- workplace information, including legislative requirements covered by:
 - SWMSs
 - permits and certifications
 - information about equipment:
 - service and maintenance checklists and records
 - manufacturer and supplier specifications and manuals
 - workplace procedures, including emergency plans and incident reporting
- hazard identification and mitigation strategies, including the hierarchy of control:
 - elimination
 - substitution
 - isolation
 - engineering controls
 - administrative controls
 - use of personal protective equipment (PPE)
- hazards commonly encountered in scaffolding activities:
 - instability of work areas
 - damaged or poor-quality equipment
 - overhead and underground hazards
 - electrical items
 - mobile plant

- insufficient lighting
- wind and other adverse weather conditions
- traffic
- pedestrian traffic
- hazardous manual tasks
- falling objects
- falls from heights
- minimum clearance distance for scaffolding work from powerlines and electrical equipment as determined by the relevant state or territory authority or electrical supply authority
- risk controls and equipment:
 - establishment of safe and adequate access and egress
 - adequate illumination
 - traffic barricades and control
 - pedestrian barricades
 - safety harness
 - energy absorber
 - lanyard
 - inertia reel
- PPE:
 - hard hat
 - safety boots
 - gloves
 - high-visibility clothing
 - breathing, hearing, sight and skin (sun) protection
- application, limitation, operation, load capabilities and safety requirements of:
 - cantilevered crane loading platforms
 - cantilevered scaffolds
 - spur scaffolds
 - barrow ramps and sloping platforms
 - scaffolding associated with perimeter safety screens and shutters

CPCCLSF4001 Licence to erect, alter and dismantle scaffolding advanced level

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Minor edits to formatting.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCLSF4001A Licence to erect, alter and dismantle scaffolding advanced level. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to safely perform advanced scaffolding work.

Scaffolding work involves erecting, altering or dismantling a temporary structure to support a platform from which a person or object could fall more than four metres.

This unit applies to scaffolding work involving:

- cantilevered hoists
- hung scaffolds, including scaffolds hung from tubes, wire ropes or chains
- suspended scaffolds.

Scaffolding work is undertaken in construction and other industries where temporary structures are erected, altered and dismantled.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Competence in this unit does not in itself result in a licence. A licence is obtained after competence is assessed under applicable Commonwealth, state or territory work health and safety (WHS) regulations.

Pre-requisite Unit

CPCCLSF3001 Licence to erect, alter and dismantle scaffolding intermediate level

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|--|
| 1 Plan task. | 1.1 Review task instructions, consult with relevant persons to seek clarification as required, and obtain relevant workplace information. |
| | 1.2 Obtain and interpret information, including safe work method statements (SWMSs), required to ensure that activities are performed in compliance with workplace-specific and safe work requirements. |
| | 1.3 Obtain and interpret information required to ensure that equipment inspection, use, maintenance and storage complies with manufacturer requirements. |
| | 1.4 Identify workplace and task-specific hazards and determine required risk controls and safety measures and equipment, including signs and barricades, personal protective equipment (PPE), and fall prevention and fall arrest equipment. |
| | 1.5 Identify methods of moving and placing tools, equipment and materials to minimise the risk of falling objects, to avoid inappropriate carrying on ladders and to minimise hazardous manual tasks. |
| | 1.6 Identify required scaffold and associated equipment. |
| | 1.7 Calculate loads exerted on and by the scaffold and scaffolding equipment. |
| | 1.8 Establish required communication methods with relevant persons. |
| 2 Select and inspect plant and equipment. | 2.1 Select risk controls and equipment, including fall prevention and fall arrest equipment, and check that it is working and fit for purpose. |
| | 2.2 Select and check PPE. |

- 2.3 Inspect scaffold and associated equipment for defects, and isolate, tag out, report and record defective items.
 - 2.4 Select communication equipment and check that it is working and fit for use.
 - 3 Set up task.
 - 3.1 Establish and maintain communication with relevant persons to ensure task plan and risk controls are communicated clearly, including any impact on other workplace activities.
 - 3.2 Ensure risk controls and safety measures and equipment have been put in place, including the fitting, adjusting and anchoring of fall protection equipment.
 - 3.3 Consult with relevant persons to ensure that ground and foundation have been assessed as suitable for task.
 - 3.4 Prepare footings to support scaffold and scaffold equipment.
 - 3.5 Prepare scaffold and scaffold equipment, and place in a stable position ready for erection.
 - 4 Undertake advanced scaffolding activities.
 - 4.1 Erect and dismantle scaffold and equipment while maintaining stability, in accordance with workplace and manufacturer requirements.
 - 4.2 Erect and dismantle a cantilevered hoist.
 - 4.3 Erect and dismantle a hung scaffold that is hung from chains, flexible steel wire rope (FSWR) or tubes.
 - 4.4 Erect and dismantle a suspended scaffold attached by a dual needle system using counterweights and powered winch.
 - 5 Complete task.
 - 5.1 Remove excess materials from work area.
 - 5.2 Inspect completed scaffolding task for compliance with task requirements, complete handover certificate and forward to relevant persons, and complete and attach scaffold tag.

- 5.3 Inspect scaffold and scaffold equipment for defects, and isolate, tag out and report defective items.
- 5.4 Store scaffold and scaffold equipment in accordance with workplace requirements.
- 5.5 Remove risk controls and safety measures and equipment.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCLSF4001A Licence to erect, alter and dismantle scaffolding advanced level.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCLSF4001 Licence to erect, alter and dismantle scaffolding advanced level

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Minor edits to formatting.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCLSF4001A Licence to erect, alter and dismantle scaffolding advanced level. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency of this unit, a candidate must meet the elements and performance criteria by safely erecting, altering and dismantling:

- a cantilevered hoist consisting of at least three mast sections tied in accordance with the specifications, on at least one occasion
- a tube and coupler hung scaffold of at least 4 m height and 3.6 m length and consisting of one continuous platform of heavy-duty capacity which is hung from chains, flexible steel wire rope (FSWR) or tubes
- a suspended scaffold of at least 4 m height and at least 200 kg minimum capacity attached by a dual needle system using counterweights and powered winch.

The candidate must:

- check relevant workplace information, including safe work method statements (SWMSs) and equipment service and maintenance records and checklists
- perform all activities in compliance with workplace-specific, safe work and manufacturer requirements, including the completion of any required handover certificates
- identify hazards and use appropriate risk controls and safety measures and equipment
- use the following associated gear and stability equipment:
 - counterweights
 - prefabricated needles
 - swinging stages
 - winches
 - FSWR and fittings
 - ladders
 - tie tubes and fittings

- fibre rope
- hand tools
- levels
- tape measures
- ties.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safe work requirements for scaffolding under Australian Standards, Commonwealth and state or territory work health and safety (WHS) legislation, regulations and codes of practice, and local government regulations
- workplace information, including legislative requirements covered by:
 - SWMSs
 - permits and certifications
 - information about equipment:
 - service and maintenance checklists and records
 - manufacturer and supplier specifications and manuals
 - workplace procedures, including emergency plans and incident reporting
- hazard identification and mitigation strategies, including the hierarchy of control:
 - elimination
 - substitution
 - isolation
 - engineering controls
 - administrative controls
 - use of personal protective equipment (PPE)
- hazards commonly encountered in scaffolding activities:
 - instability of work areas
 - damaged or poor-quality equipment
 - overhead and underground hazards
 - electrical items
 - mobile plant
 - insufficient lighting
 - wind and other adverse weather conditions
 - traffic
 - pedestrian traffic
 - hazardous manual tasks
 - falling objects
 - falls from heights

- minimum clearance distance for scaffolding work from powerlines and electrical equipment as determined by the relevant state or territory authority or electrical supply authority
- risk controls and equipment:
 - establishment of safe and adequate access and egress
 - adequate illumination
 - traffic barricades and control
 - pedestrian barricades
 - safety harness
 - energy absorber
 - lanyard
 - inertia reel
- PPE:
 - hard hat
 - safety boots
 - gloves
 - high-visibility clothing
 - breathing, hearing, sight, skin and sun protection
- application, limitation, operation, load capabilities and safety requirements of:
 - cantilevered hoists
 - hung scaffolds, including scaffolds hung from tubes, wire ropes or chains
 - suspended scaffolds
- dimensions of scaffold, maximum capacities and types of loads:
 - static loads
 - live loads
 - dead loads
 - dynamic loads
 - load capacities and minimum dimensions for light duty, medium duty, heavy duty and special duty scaffolds
 - engineering and supplier specifications
- mathematical processes for estimating and measuring loads for scaffolds
- design of tube and coupler scaffolding
- types and functions of associated equipment, including selection, inspection, care, handling, application, storage and limitations of:
 - scaffold components and equipment
 - counterweights
 - prefabricated needles
 - swinging stages
 - winches
 - FSWR and fittings
 - ladders

- tie tubes and fittings
- fibre rope
- stairways and screening
- box spanners
- hammers
- spirit levels
- tape measures
- scaffold belts
- podgers
- wire nips
- wrenches
- torpedo levels
- spanners
- cutters
- hammer drills
- stability equipment and processes:
 - sole plates and boards
 - screw jacks
 - levelling
 - ties
 - bracing and propping
- relevant persons:
 - other scaffolders
 - doggers and riggers
 - engineers and designers
 - supervisors
- load bearing capacity of supporting beams or structures
- workplace policies and procedures for scaffolding:
 - erecting, altering and dismantling scaffolds and equipment
 - manufacturer requirements for scaffolding
 - working safely at heights
 - setting up fall prevention and fall arrest systems, including safety nets
 - interpreting structural charts and structural plans.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Only assessors who are accredited in the licence class by the appropriate WHS regulator for the jurisdiction where the licence is obtained are permitted to conduct the final high-risk work licence assessment. The final licence assessment will only be undertaken with candidates who have completed training and been formally assessed against all elements in this unit.

Assessment must be conducted in the workplace or in a simulated workplace environment using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations, including:

- the use of full-scale, industry-standard equipment, not simulators
- performance of tasks within the timelines expected in a workplace
- participation of the candidate in activities within a team of three to five members.

Candidates must have access to:

- all personnel and equipment required to perform the tasks specified in the Performance Evidence
- workplace information and records, including:
 - equipment and maintenance checklists
 - record system for service and maintenance history
 - reporting procedures
 - workplace procedures, including SWMSs and emergency plans
 - equipment manuals and manufacturer specifications
 - relevant plant supplier information.

CPCCLTC4001 Licence to operate a tower crane

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Minor edits to formatting.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCLTC4001A Licence to operate a tower crane. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to safely operate a tower crane.

Tower crane work involves a boom crane or a jib crane (with horizontal or luffing jib) mounted on a demountable or permanent tower structure.

Self-erecting tower cranes are not included in this unit of competency.

Completion of the general construction induction training program, specified in the Safe Work Australia model Code of Practice: Construction Work, is required by anyone carrying out construction work. Achievement of CPCCWHS1001 Prepare to work safely in the construction industry meets this requirement.

Competence in this unit does not in itself result in a licence. A licence is obtained after competence is assessed under applicable Commonwealth, state or territory work health and safety (WHS) regulations.

Pre-requisite Unit

Nil.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan task.
 - 1.1 Review task instructions, consult with relevant persons to seek clarification as required, and obtain relevant workplace information.
 - 1.2 Obtain and interpret information, including safe work method statements (SWMSs), required to ensure that activities are performed in compliance with workplace-specific and safe work requirements.
 - 1.3 Obtain and interpret information required to ensure that equipment inspection, use, maintenance and storage complies with manufacturer requirements.
 - 1.4 Identify workplace and task-specific hazards, including hazards associated with working at heights, and determine required risk controls and safety measures and equipment, including fall prevention and fall arrest equipment, as required.
 - 1.5 Identify methods of moving and placing tools, equipment and materials to minimise the risk of falling objects.
 - 1.6 Calculate load weight in consultation with licensed dogger.
 - 1.7 Consult with licensed dogger to confirm that load weight is within the rated capacity of the crane and the working load limit (WLL) of the lifting gear.
 - 1.8 Determine and inspect crane and load movement paths.
 - 1.9 Confirm implementation of and compliance with traffic management plan.
 - 1.10 Establish required communication methods with relevant persons.
 - 1.11 Establish and maintain communication with relevant persons to ensure lift plan and risk controls are communicated clearly, including any impact on other workplace activities.
- 2 Prepare for task.
 - 2.1 Check signs and labels to ensure visibility and legibility.
 - 2.2 Assess wind and other adverse weather conditions and determine whether their impact on the crane and loads is within the manufacturer requirements for safe operation.

- 2.3 Access crane safely.
 - 2.4 Test crane safety devices in accordance with workplace requirements.
 - 2.5 Carry out pre-start crane checks and report, record and take action on identified damage or defects, in accordance with safe work practices, workplace-specific procedures and policies, and manufacturer requirements.
 - 2.6 Check that crane logbook has been completed and signed, that it is correct for crane type and current compliance, and that any rectifications have been signed off.
 - 2.7 Start crane, carry out operational checks, check for abnormal noises, smoke or fumes and shut down, tag out, report and record identified abnormalities in accordance with safe work practices, workplace-specific procedures and policies, and manufacturer requirements.
- 3 Transfer load.
- 3.1 Position boom or jib and hook block over the load as directed by licensed dogger.
 - 3.2 Carry out test lift to allow for checks and adjustments to slinging to be made by licensed dogger.
 - 3.3 Under the direction of the licensed dogger, transfer loads using appropriate crane movements.
 - 3.4 Use radio and interpret hand and whistle signals to communicate with licensed dogger.
 - 3.5 Lower and land load, allowing lifting gear to be disconnected.
- 4 Shut down and secure crane.
- 4.1 Apply hoist, luffing, trolley and travel brakes.
 - 4.2 Shut down crane and place in weather-vane position in accordance with manufacturer requirements.
 - 4.3 Carry out routine shutdown checks, and secure crane and equipment, including cabin, against unauthorised access.
 - 4.4 Exit the crane safely.

4.5 Report and record any damage or defects.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCLTC4001A Licence to operate a tower crane.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCLTC4001 Licence to operate a tower crane

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Minor edits to formatting.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCLTC4001A Licence to operate a tower crane. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by safely operating from the cabin, a tower crane with a minimum tower height of 20 m and a maximum rated capacity of at least 3000 kg. The candidate must move four loads of different shapes, sizes and weights in conjunction with a licensed dogger.

For all loads, the candidate must:

- check relevant workplace information, including safe work method statements (SWMSs), and equipment service and maintenance records and checklists
- perform all activities in compliance with safe work practices and workplace-specific procedures and policies
- check, use, maintain and store equipment in compliance with manufacturer requirements
- identify hazards and implement appropriate risk controls and safety measures and equipment
- confirm that load weight is within the rated capacity of the crane
- locate and interpret signs and labels
- check and use safety devices
- lift and move loads using the main hook through an obstacle course including a 90-degree minimum slew, with the load in full view of the candidate and using all crane operational controls:
 - luffing/trolleying levers
 - hoisting and lowering levers
 - slewing levers
 - foot pedals
 - engine speed control

- use two-way radio and interpret hand and whistle signals to communicate with licensed dogger
- implement shutdown procedures.

Movements must include:

- luffing or trolleying
- slewing
- hoisting and lowering.

Loads must include:

- a load of more than 50% of the configured capacity of the crane
- stillage containing at least ten scaffolding standards or loose steel pipes of 200 kg or more that requires a licensed dogger to sling
- an uneven load that requires a licensed dogger to sling
- a round load with a minimum diameter of 300 mm and minimum length of 3 m that requires a licensed dogger to sling.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safe work requirements for operating a tower crane under Australian Standards, and Commonwealth and state or territory work health and safety (WHS) legislation and codes of practice
- workplace information, including legislative requirements covered by:
 - SWMSs
 - permits and certifications
 - information about equipment:
 - service and maintenance checklists and records
 - manufacturer specifications and manuals
 - workplace procedures, including emergency plans and incident reporting
- hazard identification and mitigation strategies, including the hierarchy of control:
 - elimination
 - substitution
 - isolation
 - engineering controls
 - administrative controls
 - use of personal protective equipment (PPE)
- hazards commonly encountered in tower crane operations:
 - overhead and underground hazards, including powerlines
 - other cranes and booms
 - other plant
 - obstructions
 - combustible substances, including fuel

- electrical hazards
- insufficient lighting
- traffic
- wind and other adverse weather conditions
- pedestrian traffic
- work required at heights
- risk controls and safety measures and equipment:
 - safety tags on electrical switches and isolators
 - insulated powerlines
 - safety observer
 - exclusion zone
 - disconnected power
 - traffic barricades and controls
 - pedestrian controls
 - movement of obstructions
 - evacuation procedures
 - adequate illumination
 - firefighting equipment, including a fire extinguisher of adequate capacity near the operator's position
 - appropriate earthing for the conditions, such as static electricity build up due to electromagnetic radiation (EMR) or wind
 - fall prevention and fall arrest equipment
- PPE:
 - hard hat
 - safety boots
 - gloves
 - high-visibility clothing
 - breathing, hearing, sight, skin and sun protection
- hand and whistle communication signals:
 - stop
 - hoist up and down
 - luff boom up and down
 - trolley in and out
 - slew left and right
- signs and labels:
 - crane data plates and labels
 - load charts
 - crane decals
 - operational control lever labels
- tower crane safety devices:

- audible and visual devices
- aviation lights
- illumination
- motion limits
- overload limits
- anti-collision devices
- crane controls:
 - luffing levers
 - hoisting and lowering levers
 - slewing levers
 - trolleying levers
 - slew and boom brake and locks
 - foot pedals
 - emergency stop control
 - engine speed control
- crane movements:
 - luffing
 - slewing
 - hoisting and lowering
 - trolleying
- multiple crane communication systems
- processes for responding to unplanned and unsafe situations, including equipment failure or loss of control
- emergency and evacuation procedures, including fire procedures
- shutdown procedures as applicable:
 - raise boom or jib to shutdown position
 - park trolley in shutdown position
 - retract hoist rope and hook block
 - idle engine to stabilise temperature
 - turn off engine
 - place in weather vane mode
 - remove key from ignition
 - isolate electrical supply
 - isolate fuel
 - lock and secure cabin
 - lock and secure platform access hatch
- tower crane characteristics, capabilities and operation to suit loads of different shapes, sizes and weights
- use and interpretation of crane manufacturer specifications, including load charts to enable the crane to be configured within its rated capacity.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Only assessors who are accredited in the licence class by the appropriate WHS regulator for the jurisdiction where the licence is obtained are permitted to conduct the final high-risk work licence assessment. The final licence assessment will only be undertaken with candidates who have completed training and been formally assessed against all elements in this unit.

Assessment must be conducted in the workplace or in a simulated workplace environment using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations, including:

- the use of full-scale, industry-standard equipment, not simulators
- performance of tasks within the timelines expected in a workplace.

Candidates must have access to:

- a cabin-operated tower crane with a minimum tower height of 20 m and a maximum rated capacity of at least 3000 kg, which is in a safe and compliant condition
- lifting and other equipment required for operating a tower crane
- risk controls and safety measures and equipment, including a fire extinguisher of adequate capacity near the operator's position
- communication equipment, including whistle and two-way radios
- loads as specified in the Performance Evidence
- licensed dogger to sling and direct loads
- workplace information and records, including:
 - record system for service and maintenance history
 - incident reports
 - workplace procedures, including emergency plans
 - equipment manuals and manufacturer specifications.

CPCCLTC4002 Licence to operate a self-erecting tower crane

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Missing text in Element and Performance Criteria Point 2 corrected.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCLTC4002A Licence to operate a self-erecting tower crane. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to safely operate a self-erecting tower crane.

Self-erecting cranes are common on small to medium-sized construction sites. They usually have a horizontal boom that folds out during erection and are usually operated by remote control rather than from a cabin. For licencing purposes, self-erecting tower cranes are a separate category to other types of tower crane.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Competence in this unit does not in itself result in a licence. A licence is obtained after competence is assessed under applicable Commonwealth, state or territory work health and safety (WHS) regulations.

Assessment Requirements for CPCCLTC4002 Licence to operate a self-erecting tower crane

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Missing text in Element and Performance Criteria Point 2 corrected.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCLTC4002A Licence to operate a self-erecting tower crane. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by safely operating a self-erecting tower crane with a maximum rated capacity of at least 2000 kg to move at least four loads of different shapes, sizes and weights in conjunction with a licensed dogger slinging and guiding loads.

For all loads, the candidate must:

- check relevant workplace information, including safe work method statements (SWMSs) and equipment service and maintenance records and checklists
- perform all activities in compliance with safe work practices and workplace-specific procedures and policies
- check, use, maintain and store equipment in compliance with manufacturer requirements
- identify hazards and implement appropriate risk controls and safety measures and equipment
- confirm that load weight is within the rated capacity of the crane
- locate and interpret signs and labels
- check and use safety devices
- lift and move loads using the main hook through an obstacle course, including a 90-degree minimum slew, using all crane operational controls:
 - trolleying levers
 - hoisting and lowering levers
 - slewing levers
- use two-way radio and interpret hand and whistle signals to communicate with licensed dogger
- implement shutdown procedures.

Movements must include:

- luffing, as applicable, or trolleying
- slewing
- hoisting and lowering.

Loads must include:

- a load of more than 50% of the configured capacity of the crane
- stillage containing at least ten scaffolding standards or loose steel pipes of 200 kg or more that requires a licensed dogger to sling
- an uneven load that requires slinging
- a round load with a minimum diameter of 300 mm and minimum length of 3 m that requires slinging.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safe work requirements for operating a self-erecting tower crane under Australian Standards, and Commonwealth and state or territory work health and safety (WHS) legislation and codes of practice
- workplace information, including legislative requirements covered by:
 - SWMSs
 - permits and certifications
 - information about equipment:
 - service and maintenance checklists and records
 - manufacturer specifications and manuals
 - workplace procedures, including emergency plans and incident reporting
- hazard identification and mitigation strategies, including the hierarchy of control:
 - elimination
 - substitution
 - isolation
 - engineering controls
 - administrative controls
 - use of personal protective equipment (PPE)
- hazards commonly encountered in self-erecting tower crane operations:
 - overhead and underground hazards, including powerlines
 - other cranes and booms
 - other plant
 - obstructions
 - combustible substances, including fuel
 - electrical hazards
 - insufficient lighting

- traffic
- wind and other adverse weather conditions
- pedestrian traffic
- work required at heights
- risk controls and safety measures and equipment:
 - safety tags on electrical switches and isolators
 - insulated powerlines
 - safety observer
 - exclusion zone
 - disconnected power
 - traffic barricades and controls
 - pedestrian controls
 - movement of obstructions
 - evacuation procedures
 - adequate illumination
 - firefighting equipment
 - appropriate earthing for the conditions such as static electricity build up due to electromagnetic radiation (EMR) or wind
 - fall prevention and fall arrest equipment
- PPE:
 - hard hat
 - safety boots
 - gloves
 - high-visibility clothing
 - breathing, hearing, sight, skin and sun protection
- hand and whistle communication signals:
 - stop
 - hoist up and down
 - trolley in and out
 - slew left and right
- signs and labels:
 - crane data plates and labels
 - load charts
 - crane decals
 - operational control lever labels
- self-erecting tower crane safety devices:
 - audible and visual devices
 - aviation lights
 - illumination
 - motion limits

- overload limits
- radios
- anti-collision devices
- crane controls:
 - hoisting and lowering levers
 - slewing levers
 - slew brake and locks
 - trolleying levers
 - emergency stop control
- crane movements:
 - slewing
 - hoisting and lowering
 - trolleying
- multiple crane communication systems
- processes for responding to unplanned and unsafe situations, including equipment failure or loss of control
- emergency and evacuation procedures, including fire procedures
- shutdown procedures:
 - raise boom or jib to shut-down position
 - park trolley in shut-down position
 - retract hoist rope and hook block
 - place in weather vane mode
 - turn off and secure remote to prevent unauthorised access
 - isolate electrical supply
 - lock and secure against access
- self-erecting tower crane characteristics, capabilities and operation to suit loads of different shapes, sizes and weights
- use and interpretation of crane manufacturer specifications, including load charts to enable the crane to be configured within its rated capacity.

Assessment Conditions

Assessors must meet the requirements for assessors outlined in the Standards for Registered Training Organisations.

Only assessors who are accredited in the licence class by the appropriate WHS regulator for the jurisdiction where the licence is obtained are permitted to conduct the final high-risk work licence assessment. The final licence assessment will only be undertaken with candidates who have completed training and been formally assessed against all elements in this unit.

Assessment must be conducted in the workplace or in a simulated workplace environment using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations, including:

- the use of full-scale, industry-standard equipment, not simulators
- performance of tasks within the timelines expected in a workplace.

Candidates must have access to:

- a self-erecting tower crane with a maximum rated capacity of at least 2000 kg, which is in a safe and compliant condition
- lifting and other equipment required for self-erecting tower crane operations
- risk controls and safety measures and equipment
- communication equipment, including whistle and two-way radios
- loads as specified in the Performance Evidence
- a licensed dogger to sling and direct loads
- workplace information and records, including:
 - equipment and maintenance checklists
 - record system for service and maintenance history
 - incident reports
 - workplace procedures, including emergency plans
 - equipment manuals and manufacturer specifications.

CPCCOM1012 Work effectively and sustainably in the construction industry

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Rectified to reflect endorsed version.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCCM1012 Work effectively and sustainably in the construction industry. Updated to reflect current industry terminology, tools and equipment.

Application

This unit of competency specifies the skills and knowledge required to work effectively and sustainably in the construction industry.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Common

Elements and Performance Criteria

Elements describe the Performance criteria describe what needs to be done to

essential outcomes.	demonstrate achievement of the element.
1 Work effectively in a team.	1.1 Participate in planning work tasks with team members.
	1.2 Work with team members to review team purpose, roles, responsibilities, goals, plans and objectives.
	1.3 Work with team members following guidelines, directions and instructions to complete work tasks.
	1.4 Work with team members to resolve problems that impede the team's performance.
2 Investigate construction industry employment pathways.	2.1 Describe the process for becoming a tradesperson or skilled operator in the construction industry.
	2.2 Identify own existing skills and the additional skills required for a tradesperson or skilled operator role in the construction industry.
3 Identify and follow environmental and resource efficiency requirements.	3.1 Identify environmental and resource efficiency requirements that apply to entry level roles in the construction industry.
	3.2 Follow requirements to identify and report environmental hazards.
	3.3 Follow requirements to identify and report resource efficiency issues.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCM1012 Work effectively and sustainably in the construction industry.

Assessment Requirements for CPCCOM1012 Work effectively and sustainably in the construction industry

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Rectified to reflect endorsed version.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCM1012 Work effectively and sustainably in the construction industry. Updated to reflect current industry terminology, tools and equipment.

Performance Evidence

To demonstrate competency, a candidate must satisfy all the elements, performance criteria and foundation skills of this unit by:

- working effectively as a member of a team to plan and perform a construction task
- working with members of a team to review the team's purpose, roles, responsibilities, goals, plans and objectives
- listing own existing skills and the additional skills required for a selected tradesperson or skilled operator role in the construction industry
- identifying environmental and resource efficiency requirements that apply to entry level roles in the construction industry
- preparing basic reports on each of an environmental hazard and a resource efficiency issue.

All work must be performed to the standard required in the workplace.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- skills and knowledge required to work effectively in the construction industry
- construction job roles and employment opportunities in the construction industry
- techniques for working effectively in a construction team environment
- techniques for determining own skills and skills required for career opportunities
- environment and resource efficiency requirements in the construction industry.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed while undertaking workplace tasks in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1	Determine and plan	1.1	Determine work task outcomes and other requirements.
---	--------------------	-----	--

- | | | |
|-----------------------------|--|---|
| basic work task activities. | 1.2 | Break the work task into its component tasks. |
| | 1.3 | Assess the component tasks to determine what needs to be done and how it is to be done. |
| | 1.4 | Estimate the time and the number of personnel required to complete each component task. |
| | 1.5 | Identify the tools and equipment required, including personal protective equipment (PPE) for each stage of the task |
| | 1.6 | Plan the sequence of the component tasks in a logical order and to maximise efficient use of resources. |
| | 1.7 | Prepare a written work plan and a list of resources required to complete the overall work task. |
| | 2 Organise performance of basic work task. | 2.1 |
| | 2.2 | Confirm availability of required tools and equipment, including PPE. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCM1013 Plan and organise work.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCOM1013 Plan and organise work

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Rectified to reflect endorsed version.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCM1013 Plan and organise work.

Updated to reflect current industry terminology, tools and equipment.

Performance Evidence

To demonstrate competency, a candidate must satisfy all the elements, performance criteria and foundation skills of this unit by planning and organising a basic work task on a construction site that includes a minimum of ten component tasks and a team of at least three people.

All work must be performed to the standard required in the workplace and must comply with appropriate work health and safety (WHS) and environmental requirements, workplace requirements, drawings and specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- policies and standards for planning and organising work
- environmental and workplace requirements for basic work tasks
- drawings and specifications relevant to basic work tasks
- processes for:
 - determining task requirements
 - undertaking all aspects of planning and organising work tasks
 - estimating requirements for work time, personnel, tools and equipment
 - planning of component tasks to complete work tasks
 - organising the implementation of work task planning
 - recording work task planning and organising activities
 - processes for working with team members to review a work plan, schedule the work, allocate roles and responsibilities, and review work health and safety requirements.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed while undertaking workplace tasks:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCOM1014 Conduct workplace communication

Modification History

- Release 3 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2.
Correction to unit mapping metadata.
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Rectified to reflect endorsed version.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCCM1014 Conduct workplace communication. Updated to reflect current industry terminology, tools and equipment.

Application

This unit of competency specifies the skills and knowledge required to communicate effectively with other workers in a construction workplace environment.

The unit includes gathering, conveying and receiving information through verbal and written forms of communication.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Supersedes and is equivalent to CPCCCM1014 Conduct workplace communication. Updated to reflect current industry terminology, tools and equipment.

Performance Evidence

To demonstrate competency, a candidate must satisfy all the elements, performance criteria and foundation skills of this unit by:

- conveying and receiving information and instructions to and from others
- accessing, interpreting and sequencing information
- presenting information in verbal and written reports
- entering information into workplace records and documents
- participating in simple meeting processes.

All work must be performed to the standard required in the workplace.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of techniques for:

- conveying and receiving information and instructions
- effective listening, questioning and speaking skills to confirm understanding
- accessing and interpreting basic information from a range of sources
- selecting and sequencing basic information
- preparing and presenting basic written reports
- preparing and presenting basic verbal reports

- participating effectively in simple meeting processes
- entering information into basic workplace records and documents.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed while undertaking workplace tasks:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCOM1015 Carry out measurements and calculations

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Rectified to reflect endorsed version.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCM1015 Carry out measurements and calculations. Updated to reflect current industry terminology, tools and equipment.

Application

This unit of competency specifies the skills and knowledge required to undertake basic measurements and calculations to determine task and material requirements in a construction work environment.

A person working at this level would be expected to complete tasks assigned to them, under supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Common

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|-----------------------------|-----|--|
| 1 | Obtain measurements. | 1.1 | Select most appropriate equipment and method for obtaining the measurement. |
| | | 1.2 | Use a ruler or tape to obtain linear measurements accurate to 1 mm. |
| 2 | Perform basic calculations. | 2.1 | Take basic measurements and calculate quantities of materials in a construction environment, using basic formulae for each of: weight, area, volume, perimeter, circumference, ratio and percentage. |
| | | 2.2 | Convert measurements in metres to millimetres and measurements in millimetres to metres. |
| | | 2.3 | Check calculations for accuracy and record calculation workings and results. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCM1015 Carry out measurements and calculations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCOM1015 Carry out measurements and calculations

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Rectified to reflect endorsed version.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCM1015 Carry out measurements and calculations. Updated to reflect current industry terminology, tools and equipment.

Performance Evidence

To demonstrate competency, a candidate must satisfy all the elements, performance criteria and foundation skills of this unit by:

- taking basic measurements and performing basic calculations to determine quantities of materials for construction work using each of the following:
 - weight
 - area
 - volume
 - perimeter
 - circumference
 - ratio
 - percentage
- demonstrating converting measurements in metres to millimetres and measurements in millimetres to metres.

All work must be performed to the standard required in the workplace.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- types of equipment required for planning and performing basic measurements and calculations and their characteristics, uses and limitations, including:
 - rulers
 - tape measures

- digital measuring and calculating devices
- methods of calculating the area and volume of the following in a construction environment:
 - rectangles
 - squares
 - circles
 - triangles
 - trapeziums
 - cubes
 - cylinders.
 -

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCOM1016 Identify requirements for safe precast and tilt-up work

Modification History

Release 1	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0. Supersedes but is not equivalent to CPCCCM1016 Identify requirements for safe tilt-up work.
-----------	---

Application

This unit of competency specifies the skills and knowledge required to identify requirements for safe precast and tilt-up work in construction. It includes requirements for safe handling of prefabricated concrete elements such as precast wall panels, beams, columns and slabs.

A person working at this level is expected to complete tasks assigned to them under supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Concreting

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Identify precast or tilt-up construction and risk management	1.1 Identify sequence of tasks and activities for each stage of planned precast or tilt-up construction process, and typical faults, problems and hazards.
--	--

- processes.
- 1.2 Identify basic principles of risk management and responsibilities of duty holders for planned precast or tilt-up construction process.
 - 1.3 Identify methods and procedures used to control precast or tilt-up construction hazards, including the content of a job safety analysis, work plan and/or work health and safety management plan, and safe work method statement.
 - 1.4 Identify procedures for responding to, rectifying and reporting faults, problems, and hazards.
- 2 Identify own role and responsibilities in the precast or tilt-up construction process.
- 2.1 Identify own role and responsibilities and those of others relevant to the precast or tilt-up construction process.
 - 2.2 Identify regulatory requirements relevant to own role and responsibilities in the precast or tilt-up construction process.
 - 2.3 Identify general work procedures, documentation, drawings and plans for carrying out precast or tilt-up construction process relevant to own role and responsibilities.
 - 2.4 Identify general safety requirements for equipment and tools used in the precast or tilt-up construction process relevant to own role and responsibilities.
 - 2.5 Communicate with relevant persons to establish that key safety requirements have been met before undertaking own work associated with the precast or tilt-up construction process.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes but is not equivalent to CPCCCM1016 Identify requirements for safe tilt-up work.

Links

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCOM1016 Identify requirements for safe precast and tilt-up work

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes but is not equivalent to CPCCOM1016 Identify requirements for safe tilt-up work.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by identifying requirements for safe precast or tilt-up work at one workplace where the precast or tilt-up construction process is used.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- basic principles of risk management relevant to precast and tilt-up construction
- general safety requirements for equipment and tools used in precast and tilt-up construction:
 - cranes
 - elevated work platforms
 - manual tools
 - mobile scaffolding
 - portable electric and pneumatic tools
 - braces and props
 - rigging equipment and gear
 - safety net and static lines
- work health and safety and regulatory requirements relevant to the precast and tilt-up construction process:
 - Australian Standard (AS) 3850 *Prefabricated concrete elements*
 - duty holder responsibilities
 - emergency procedures
 - job safety analyses
 - personal protective equipment
 - safe work method statements
 - work plans and/or work health and safety management plans

- working around mobile plant and machinery, and general site hazards
- stages of the precast and tilt-up construction processes and their interrelationships:
 - design and manufacture
 - handling, storage and transportation
 - craning and erection
 - temporary bracing, stabilisation and incorporation of concrete panels
 - demolition
- typical faults, problems and hazards that may occur when design and safety requirements are not met in the precast and tilt-up construction process.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to full documentation relating to jurisdictional requirements for safe precast and tilt-up work.

CPCCOM1017 Prepare simple construction sketches

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Application

This unit specifies the skills and knowledge required to produce simple preliminary sketches for basic construction work. These sketches, often sketched freehand and in pencil, are used to illustrate the size and form of a simple design solution or brief.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit CPCCWHS1001 *Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit.

Pre-requisite Unit

Nil.

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Prepare to create simple construction sketches.	1.1	Determine key features of simple design solution or brief to be sketched.
	1.2	Review standard drawing conventions for simple sketches.
	1.3	Select suitable two and three dimensional views for simple sketches.

- 2 Create simple construction sketches.
 - 2.1 Create simple two and three dimensional construction sketches of simple design solutions or briefs.
 - 2.2 Label and date sketches.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCOM1017 Prepare simple construction sketches

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Performance Evidence

To demonstrate competency, a candidate must satisfy all the elements, performance criteria and foundation skills of this unit by creating simple two and three dimensional construction sketches of three simple design solutions or briefs.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- drawing conventions for simple preliminary construction sketches
- types of simple sketches, including:
 - floor plans
 - building elevation sketches
 - land boundaries and footprint of building
 - sectional sketches
 - three dimensional sketches
- tools, materials and equipment used for creating drawings.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCOM2001 Read and interpret plans and specifications

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCM2001 Read and interpret plans and specifications. Updated to reflect current industry terminology, tools and equipment

Application

This unit of competency specifies the skills and knowledge required to read and interpret plans and specifications relevant to construction operations at a basic level.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of unit CPCCWHS1001 Prepare *to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Explain features and 1.1 Explain the key features and functions of each of the

functions of plans /drawings and specifications.	main types of plans/drawings used in the construction industry.
1.2	Locate and explain the purpose of the legend on <i>plans/drawings</i> used in the construction industry.
1.3	Explain the meaning of construction symbols and abbreviations used on plans/drawings in the construction industry.
1.4	Check title panels on plans/drawings and specifications to verify latest amendments are included, and report inconsistencies.
2 Locate key features on a site from site plan/drawings.	<p data-bbox="655 790 1321 862">2.1 Select and use personal protective equipment (PPE) required to enter a proposed construction site.</p> <p data-bbox="655 898 1107 927">2.2 Orientate the site plan with the site.</p> <p data-bbox="655 963 1377 1037">2.3 Locate existing services, key features and boundaries of the site from the site plan and associated drawings.</p>
3 Identify project requirements from plans/drawings and specifications.	<p data-bbox="655 1140 1337 1245">3.1 Identify construction types, project dimensions and nominated locations from project plans/drawings and specifications.</p> <p data-bbox="655 1281 1299 1386">3.2 Identify environmental requirements, controls and locations from environmental plans, project plans/drawings and specifications.</p> <p data-bbox="655 1422 1377 1496">3.3 Identify standards of work, finishes and tolerances from project plans/drawings and specifications.</p> <p data-bbox="655 1532 1366 1599">3.4 Identify required materials from project plans/drawings and specifications.</p>

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCM2001 Read and interpret plans and specifications

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCCOM2001 Read and interpret plans and specifications

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Knowledge Evidence formatted for clarity.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCM2001 Read and interpret plans and specifications. Updated to reflect current industry terminology, tools and equipment

Performance Evidence

To demonstrate competency, a candidate must satisfy all the elements, performance criteria and foundation skills of this unit by reading, interpreting and describing, at a basic level, the requirements for a proposed construction project from a set of plans/drawings and specifications.

All work must be performed to the standard required in the workplace and must comply with work health and safety (WHS) requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- features and functions of different types of plans, drawings and specifications at a basic level, including:
 - construction plans
 - cross-sectional plans
 - dimensions and notes
 - illustrations
 - project specifications including structural detail and specification providing illustrations and dimensions
 - site plans
 - engineering plans
 - legends, symbols and abbreviations used on construction plans and drawings
 - title panels

- processes for:
 - checking amendments to plans, drawings and specifications at a basic level
 - orientating site plans to sites
 - determining information from site plans, drawings and specifications, including:
 - site locations
 - key features
 - construction types
 - project dimensions,
 - environmental requirements
 - materials types.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed while undertaking workplace tasks:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures
- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.

CPCCOM3001 Perform construction calculations to determine carpentry material requirements

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Application

This unit of competency specifies the skills and knowledge required to plan and perform calculations to determine material requirements for a construction project.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001* Prepare to work safely in the construction industry meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare.

1.1 Review drawings, specifications and workplace requirements for a construction project.

1.2 Plan all work to comply with laws and regulations, the National Construction Code (NCC), Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and

specifications.

- | | | | |
|---|--|-----|---|
| 2 | Calculate area and volume of construction materials for the project. | 2.1 | Review drawings and specifications to determine dimensions of each type of construction material for the project. |
| | | 2.2 | Calculate the area of each type of lining material. |
| | | 2.3 | Calculate the total area of the building wrap and of each type of external cladding material. |
| | | 2.4 | Calculate the total area of each type of roofing material. |
| | | 2.5 | Calculate the quantity of materials that are measured by volume. |
| 3 | Calculate the requirements for construction for the project. | 3.1 | Calculate the quantity of wall and roof framing materials. |
| | | 3.2 | Calculate the dimensions and quantity of sheets of each type of flooring and lining material, ensuring that the most economical layout is employed. |
| | | 3.3 | 3Calculate the length of linear flooring and lining material, ensuring that the most economical layout is employed. |
| | | 3.4 | Calculate the dimensions and quantity of sheets of external cladding material, ensuring that the most economical layout is employed. |
| | | 3.5 | Calculate the length of linear external cladding material, ensuring that the most economical layout is employed. |
| | | 3.6 | Calculate the dimensions and quantity of sheets or units of roofing material, ensuring that the most economical layout is employed and allowing for overlaps. |
| 4 | Check and record results. | 4.1 | Record workings and review calculations for accuracy. |
| | | 4.2 | Record results of calculations as required for costing and ordering materials. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCOM3001 Perform construction calculations to determine carpentry material requirements

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by analysing the drawings and specifications for a building with a minimum of 6 rooms, including a kitchen and bathroom and linear external lining, and preparing a detailed list of materials and calculated quantities of each material for:

- wall and roof framing
- internal lining and flooring
- external cladding and roofing.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- types of equipment required for planning and performing measurements and calculations and their characteristics, uses and limitations, including calculators
- methods of using formulas to calculate the area/volume of the following in a construction environment:
 - rectangles
 - squares
 - circles
 - triangles
 - trapeziums
 - cubes
 - cylinders
- methods of converting measurements in metres to millimetres and measurements in millimetres to metres
- methods of accurately determining dimensions of materials for construction projects by scaling requirements from drawings and specifications.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCOM3006 Carry out levelling operations

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCM3006 Carry out levelling operations. Updated to reflect current industry terminology, tools and equipment.

Application

This unit of competency specifies the skills and knowledge required to carry out levelling operations to establish correct and accurate set-out of buildings and components, meeting all relevant requirements of the National Construction Code (NCC), Australian Standards, work health and safety (WHS), and Commonwealth and state or territory legislation.

It includes:

- using the rise and fall and height of collimation methods
- setting up, testing and using levelling devices
- undertaking closed and open traverses using a range of levelling equipment
- calculating distances using stadia lines.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare.
 - 1.1 Read and interpret work instructions and plan sequence of work.
 - 1.2 Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
 - 1.3 Select tools and equipment, including personal protective equipment (PPE), check for serviceability and report any faults.
 - 1.4 Fit PPE correctly.
 - 1.5 Inspect work site, assess hazards and services, and apply risk controls, including required signage and barricades.
 - 1.6 Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.
 - 1.7 Confirm team roles and verbal and non-verbal communication signals.
- 2 Carry out levelling procedures using rise and fall method.
 - 2.1 Set up and test instrument for operational effectiveness and accuracy.
 - 2.2 Set up or locate datum point.
 - 2.3 Take and record readings from the datum and at nominated or selected stations following project specifications.
 - 2.4 Identify backsights, intermediate sights and foresights, and book levels.
 - 2.5 Transfer instrument to another location, repeat process, and record change station and record readings.
 - 2.6 Calculate reduced levels for all stations using rise and fall method, and check accuracy of recordings using the three-check method.
- 3 Carry out levelling procedures using
 - 3.1 Set up and test instrument for operational effectiveness and accuracy, and check tolerances.

height of collimation method.	3.2	Set up or locate datum point.
	3.3	Take and record readings to datum and establish the height of collimation.
	3.4	Take readings at nominated or selected stations following project specifications, and record in field book.
	3.5	Transfer instrument to another location, establish new height of collimation, and record change station in field book.
	3.6	Calculate reduced levels using height of instrument method.
	3.7	Calculate reduced levels for all stations and record heights and levels in field book.
	3.8	Check accuracy of readings using height of collimation method of calculation and three check method.
	4 Calculate distances using stadia lines.	4.1
4.2		Record readings and distances.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCOM3006 Carry out levelling operations.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCOM3006 Carry out levelling operations

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCM3006 Carry out levelling operations. Updated to reflect current industry terminology, tools and equipment.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by carrying out levelling operations over a minimum of two change points to:

- identify site hazards
- establish approximate distances and transfer of reduced levels
- measure and record:
 - ground levels at respective critical set-out points
 - heights or levels for building components
 - heights or levels of ceilings and floors
 - slab or pad levels for placement of steel columns or masonry piers
- determine shooting levels for:
 - concrete slabs
 - excavation or footings
- transfer levels or heights for construction projects
- calculate rise and fall and height from collimation.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of the Australian Standards relevant to carrying out levelling operations
- workplace quality policies and standards relevant to carrying out levelling operations
- safety requirements for carrying out levelling operations
- basic construction and levelling processes
- construction plans, symbols and construction terminology relevant to carrying out levelling operations
- processes for interpreting engineering drawings and sketches for carrying out levelling operations

- processes for setting out construction tasks for levelling operations
- project quality requirements for carrying out levelling operations
- site isolation and traffic control responsibilities and authorities
- levelling techniques commonly used in construction work
- levelling activities:
 - establishing approximate distances and transfer of reduced levels
 - locating site hazards and services
 - measuring and recording ground levels at respective critical set-out points
 - measuring and recording heights or levels for installing building components
 - measuring and recording heights or levels of ceilings and floors
 - measuring and recording slab or pad levels for placement of steel columns or masonry piers
 - taking levels for concrete slabs
 - taking levels for excavation or footings
 - calculating rise and fall and height from collimation
- types of tools and equipment used for carrying out levelling operations:
 - spirit levels
 - straight edge
 - automatic/optical levelling devices
 - laser levels
 - water level
- processes for checking operation and tolerances:
 - two peg test for automatic level
 - reverse readings for spirit level
- types of level readings:
 - negative readings
 - datum
 - backsight
 - foresight
 - intermediate sight
 - plumb
- maintenance of levelling devices:
 - authorised operator servicing and minor replacements
 - cleaning
 - monitoring, recording and reporting faults.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCON2021 Handle concreting materials and components

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0
- Supersedes and is equivalent to CPCCCO2021 Handle concreting materials.

Application

This unit of competency specifies the skills and knowledge required to safely handle concreting materials and components in preparation for concreting work. It includes checking materials and components for conformity to schedules, plans and specifications, and using manual-handling techniques to sort and stack materials and components for work. It requires identifying and safely handling hazardous materials and waste in accordance with safety data sheets (SDS) and cleaning up on completion of work tasks.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Concreting

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare for work.
 - 1.1 Read work instructions and clarify requirements for handling concreting materials and components with relevant persons.
 - 1.2 Plan work tasks to comply with relevant legislation and regulations, and manufacturer, work health and safety (WHS), environmental and workplace requirements.
 - 1.3 Select and fit required personal protective equipment (PPE).
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select tools and equipment, check for serviceability and rectify or report any faults.

- 2 Identify, move and stack concreting materials and components.
 - 2.1 Check types and quantities of materials and components against material schedule, plans and specifications and report problems.
 - 2.2 Identify handling characteristics of concreting materials from SDS and regulatory requirements.
 - 2.3 Use safe and effective manual-handling techniques to move concreting materials and components to specified location.
 - 2.4 Stack concreting materials and components to facilitate identification and retrieval and clear of access ways to protect against damage.
 - 2.5 Position concreting components ready for installation in accordance with plans, work instructions and manufacturer requirements.

- 3 Remove concreting materials and components on completion of task.
 - 3.1 Identify hazardous concreting materials and apply waste management procedures in accordance with relevant SDS and regulatory requirements.
 - 3.2 Remove surplus concreting materials and components using safe manual-handling techniques.
 - 3.3 Use dust suppression procedures to minimise health risk to people in the work environment.

- 4 Clean up.
 - 4.1 Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
 - 4.2 Clean, check, maintain and store tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCO2021 Handle concreting materials.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCON2021 Handle concreting materials and components

Modification History

Release 1	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0 Supersedes and is equivalent to CPCCCO2021 Handle concreting materials.
-----------	--

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by handling concreting materials and components in preparation for concreting tasks at three different placement sites.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of legislation and regulations relevant to concreting material and component handling tasks:
 - environmental protection and waste disposal
 - work health and safety (WHS):
 - hazard identification and risk control
 - personal protective equipment (PPE)
 - safe manual handling techniques
 - safety data sheets (SDS) and hazardous materials handling
 - safety manuals and instructions for tools and equipment used to handle materials and components
 - safe work method statements
 - signage and barricades
- health risks associated with silica dust exposure
- tools and equipment used when handling concreting materials and components
- types and purpose of components used in concreting:
 - bar chairs
 - bar steel
 - bracing
 - decking
 - key joints

- plastic membrane
- push-pull props
- reinforcement bars
- reinforcement mesh
- spacers
- steel and timber formwork
- support props
- waffle pods
- types and purpose of materials used in concreting:
 - additives
 - aggregates
 - cement
 - curing compounds
 - form release agents
 - general non-toxic concreting materials
 - oxides
 - sand
 - water
- workplace requirements for handling concreting materials and components:
 - cleaning up the work area
 - maintaining and storing tools, equipment, materials and components
 - reporting problems
 - safety requirements.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to documentation, instructions, concreting materials and components, tools and equipment required to achieve the performance evidence.

CPCCON3035 Determine concrete supply requirements

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCCCO3035 Assess and specify concrete supply requirements.

Application

This unit of competency specifies the skills and knowledge required to determine concrete supply requirements for different areas and features of planned concreting work. It includes identifying required concrete properties, volumes and costs from site and project documentation, and scheduling delivery.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

| 1 | Assess site to identify | 1.1 | Review site information to determine general size and |
|---|-------------------------|-----|---|

concrete supply requirements.		nature of planned concreting work.
	1.2	Read project documentation to identify required concrete materials for each concreting area and feature.
	1.3	Identify delivery method for concrete supply at different locations and heights and implications for required concrete material properties.
2 Identify and itemise required concrete properties.	2.1	Identify strength grade designation of concrete supply for different areas or features of concrete work from project documentation and consultation with relevant persons.
	2.2	Identify variable components of, and additives to concrete mix for different areas or features of concrete work from project documentation and consultation with relevant persons.
	2.3	Identify concrete specifications to be met at on-site delivery from project documentation and consultation with relevant personnel.
	2.4	Itemise concrete supply requirements for each area and feature in accordance with specifications for concreting work, relevant Australian Standards and workplace requirements.
3 Calculate and document concrete volumes and supply costs.	3.1	Identify dimensions of each area and feature of concreting work from site drawings and specifications.
	3.2	Calculate and document required concrete volumes for each area and feature in accordance with specifications for concreting work and workplace requirements.
	3.3	Calculate and document total volumes of concrete supply for areas and features requiring identical properties.
	3.4	Estimate and document total cost of concrete supply in accordance with workplace requirements.
4 Schedule concrete delivery.	4.1	Identify concrete delivery locations and site access and egress details in consultation with relevant persons.
	4.2	Review project timelines and sequencing of work and

- calculate and document concrete delivery schedule to ensure continuous and timely supply.
- 4.3 Prepare supplier specifications for volumes of different concrete mixes.
 - 4.4 Confirm delivery schedule with relevant persons, document and finalise for inclusion with concrete specifications.
- 5 Finalise specifications for concrete supply.
- 5.1 Check specifications for concrete supply to confirm accuracy of concrete mix details for different areas or features.
 - 5.2 Check individual area, feature dimensions and concrete supply volume calculations to confirm accuracy.
 - 5.3 Check total volumes of concrete supply for areas and features requiring identical properties and confirm accuracy.
 - 5.4 Consult with relevant persons to obtain feedback on specifications and make required adjustments in accordance with workplace requirements.
 - 5.5 Complete supplier specifications in accordance with workplace requirements.
 - 5.6 Place concrete order with supplier including precise detail of delivery schedule and confirm order acceptance in accordance with workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCO3035 Assess and specify concrete supply requirements.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCCON3035 Determine concrete supply requirements

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCCCO3035 Assess and specify concrete supply requirements.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by determining concrete supply requirements for three different concreting projects.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- concrete composition including types and application of cement, aggregate and additives
- concrete delivery methods and their effects on concrete material properties
- concrete delivery scheduling considerations:
 - additives
 - consideration for drying shrinkage requirements
 - megapascals (MPa)
 - site access point
 - time of delivery
 - volume
- content of concrete supply specifications
- processes for ordering correct slump for application
- processes for reviewing project plans and specifications to identify concrete supply requirements
- requirements of Australian Standards and the National Construction Code (NCC) relevant to concrete supply specifications
- types of concrete materials:
 - normal class with strength grades in the range N20 to N50
 - special class with strength grades in the range S20 to S100
- workplace requirements for determining concrete supply requirements:
 - documenting and checking supply requirements
 - quality

- reporting problems
- scheduling deliveries and placing orders.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to documentation, specifications and equipment required to achieve the performance evidence.

CPCCON3036 Plan concrete work and brief team

Modification History

Release 1	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0. Supersedes and is equivalent to CPCCCO3036 Plan concrete work and brief team.
-----------	---

Application

This unit of competency specifies the skills and knowledge required to plan concrete work and brief team members. It includes determining the size and scope of concreting tasks and planning and scheduling activities to comply with work health and safety (WHS) requirements. It also includes identifying and sourcing resources required to complete tasks on time and within budget and communicating requirements to team members in preparation for work to commence.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Concreting

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Determine size and scope of concreting tasks.
 - 1.1 Review site and work documentation to determine size and complexity of concreting tasks.
 - 1.2 Review traffic management plan and site access and egress information and arrange additional required provisions or changes in consultation with relevant persons.
 - 1.3 Identify site amenities and provisions for storage and arrange additional required provisions or changes.

- 2 Assess and schedule concreting tasks.
 - 2.1 Assess specifications for concreting work and identify and sequence work stages to meet timelines for completion.
 - 2.2 Assess concurrent work of other construction teams and establish required communication channels.
 - 2.3 Schedule concreting tasks based on assessed concrete type and estimated curing time in predicted weather conditions for each placement.
 - 2.4 Plan work tasks to comply with relevant legislation, regulations, standards, codes, WHS and environmental and workplace requirements.
 - 2.5 Develop or adapt safe work method statement for individual tasks in accordance with WHS and workplace requirements.

- 3 Determine and source resources for concreting tasks.
 - 3.1 Calculate dimensions of each concrete pour from relevant documentation.
 - 3.2 Calculate, document and source required materials in preparation for work to commence on time and on budget.
 - 3.3 Identify, document and source plant, tools and equipment required for each work stage in line with task schedule to ensure availability on site.
 - 3.4 Identify specialised skill requirements for different task stages and check against available personnel to identify skill shortages.

- 3.5 Source additional personnel with necessary skills within required timeframe to ensure prompt start to work.
 - 3.6 Allocate personnel to tasks and record human resource requirements against all task stages.
- 4 Brief team members about concreting tasks.
- 4.1 Arrange team member site tour and induction to comply with WHS, environmental and workplace requirements.
 - 4.2 Explain and discuss details of task allocations and scheduling, and confirm team understanding of work requirements.
 - 4.3 Explain concurrent work of other construction teams and communication channels to team members and use questioning to confirm their understanding.
 - 4.4 Explain risk controls and provisions for dealing with risks, hazards, and contingencies to team members and use questioning to confirm their understanding.
 - 4.5 Encourage team members to clarify work requirements and to suggest process improvements at all stages.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCO3036 Plan concrete work and brief team.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCON3036 Plan concrete work and brief team

Modification History

Release 1	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0. Supersedes and is equivalent to CPCCCO3036 Plan concrete work and brief team.
-----------	---

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by planning concrete work and briefing team members for three separate concreting tasks, each measuring a minimum of 100 square metres or for three separate pours for precast work.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of legislation, regulations, codes and Australian Standards relevant to the planned concreting work:
 - environmental protection:
 - clean-up and waste management
 - stormwater management
 - material specifications
 - work health and safety (WHS)
- health risks associated with silica dust exposure
- plant, tools, equipment and materials used for concreting work
- project management principles and strategies used to plan concreting work
- project stages for concreting work:
 - work preparation:
 - fitting personal protective equipment (PPE)
 - selecting and checking plant, tools and equipment
 - site preparation:
 - excavation
 - formwork
 - subgrade
 - delivery

- placement
- compaction
- levelling
- finishing
- curing
- site clean-up
- specialised skill requirements for concreting work:
 - concrete repair and rectification
 - cutting and coring
 - decorative concreting
- types of concrete, applications and curing times in different weather conditions for planned concrete work
- workplace requirements for planning concrete work and briefing team members:
 - sourcing and allocating resources for concrete work
 - documentation
 - quality
 - reporting problems
 - safety:
 - dust and noise control
 - PPE
 - vibration management.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to documentation, specifications and resources required to achieve the performance evidence.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCON3041 Place concrete

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCCO3041 Place concrete.

Application

This unit of competency specifies the skills and knowledge required to place concrete into prepared formwork or foundations. It includes receiving and checking concrete against specifications, calculating the required volume of concrete, moving concrete from the truck to the pour location, and placing and screeding concrete.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Concreting

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---------------------------------------|---|
| 1 Plan and prepare to place concrete. | 1.1 Interpret specifications for concrete placement and clarify requirements with relevant persons. |
|---------------------------------------|---|

- 1.2 Assess work site to check scope of work against specifications.
 - 1.3 Plan work tasks to comply with relevant legislation, regulations, standards, codes, work health and safety (WHS), environmental and workplace requirements.
 - 1.4 Calculate required material quantities including volume of concrete to meet specifications.
 - 1.5 Estimate and record required time for concrete pour based on size of area to be concreted, volume of concrete, weather conditions and other relevant site factors.
 - 1.6 Select plant, tools and equipment, check for serviceability and rectify or report any faults.
 - 1.7 Select and fit required personal protective equipment (PPE).
- 2 Prepare location for concrete placement.
- 2.1 Inspect work site, assess hazards and apply risk controls including required signage and barricades around pour location.
 - 2.2 Determine location for concrete placement from specifications.
 - 2.3 Discuss implications for concrete placement near existing structures with relevant persons and define separation or connection requirements.
 - 2.4 Check that location for placement is free of debris and waste.
 - 2.5 Ensure site access is clear to allow concrete to be received.
- 3 Receive concrete.
- 3.1 Check concrete delivery docket for accuracy against order.
 - 3.2 Direct concrete delivery vehicle to location of discharge.
 - 3.3 Identify slump tolerance against specifications and relevant standards for minimum grade.

- 3.4 Monitor concrete discharged via chute into appropriate receptacle and communicate with relevant persons to maintain safety and quality in accordance with workplace requirements.
- 4 Carry out concrete placement activities.
 - 4.1 Use required plant, tools and equipment to place concrete in horizontal layers into location in accordance with indicated levels.
 - 4.2 Ensure vertical drop of concrete is less than two metres to avoid segregation of concrete materials.
 - 4.3 Consolidate poured concrete using required compaction or vibration method.
 - 4.4 Carry out measurements and calculations throughout pour to ensure sufficient concrete is delivered to fill placement area, and place order for any shortfall in accordance with workplace requirements.
 - 4.5 Check finished levels against datum using levelling device and rectify incorrect levels.
 - 4.6 Screed concrete to required levels and grades in accordance with specifications.
- 5 Clean up.
 - 5.1 Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
 - 5.2 Clean, check, maintain and store plant, tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCO3041 Place concrete.

Links

Companion volumes to this training package are available at the VETNet website -

Assessment Requirements for CPCCON3041 Place concrete

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCCCO3041 Place concrete.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by placing concrete in either a non-precast work environment or a precast work environment:

- for the non-precast work environment, placing concrete at five different sites:
 - each site must measure at least 100 square metres
 - one site must include a fall of at least 25 millimetres over 1 metre in distance
- for the precast work environment, on five different occasions, placing concrete for a minimum of three panels involving more than one truck load of concrete.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- basic science of concrete involving cement chemical reaction (hydration) dependent on water content, temperature and time:
 - effect on plastic state performance:
 - benefits and non-benefits of admixture types and doses
 - plastic shrinkage cracking risk
 - effect on hardened state performance:
 - early age and later age strength development
 - drying shrinkage and cracking
- compliance requirements of legislation, regulations, codes and Australian Standards relevant to concrete placement tasks:
 - damp proofing
 - environmental protection and waste disposal
 - material specifications and placement tolerances
 - minimum and maximum temperature limits for pouring concrete
 - work health and safety (WHS)
- concrete placement techniques:
 - horizontal layering

- controlling vertical drop
- cold joints and how to manage them effectively
- consolidation
- concrete reinforcement
- levelling
- screeding
- correct positioning of reinforcement for different concrete products to ensure reinforcement is free from movement and has the correct cover within tolerance
- correct concrete compaction and vibration techniques and risks associated with improper vibration
- effects of temperature, wind and low humidity on the properties of concrete:
 - detrimental effect of water addition to concrete properties
 - precautions that should be taken to minimise any potential adverse effects when placing concrete
- health risks associated with silica dust exposure
- preparation requirements of concrete placement locations:
 - single slab
 - multi-level slab
 - set down and wet areas
 - temporary formwork
- processes for calculating material requirements at various times throughout a concrete pour
- processes for determining levels indicated by:
 - level pegs
 - lines
 - markers
- purpose and importance of slump testing and the impact to concrete strength and durability of adding water on site:
 - drying shrinkage
 - early age strength
 - density
 - cracking
 - discolouration
- specifications used to interpret concrete placement requirements:
 - methods for calculating concrete quantities
 - methods for checking minimum strength and mix specifications
 - types and applications of concrete materials
- types and purpose of concrete additives
- types, characteristics, uses and limitations of plant, tools, equipment and materials used when placing concrete
- workplace requirements for placing concrete:

- cleaning up the work area
- maintaining and storing plant, tools and equipment
- placing orders for shortfalls in materials
- quality
- reporting problems
- safety requirements including personal protective equipment (PPE).

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to documentation, specifications, work sites, materials, plant, tools and equipment required to achieve the performance evidence.

CPCCON3042 Finish concrete

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCCCO3042 Finish concrete.

Application

This unit of competency specifies the skills and knowledge required to finish placed and screeded concrete surfaces to specification. It requires using manual and mechanical finishing techniques including edge finishing.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Plan and prepare to finish concrete. | 1.1 Interpret specifications for concrete finishing and clarify requirements with relevant persons. |
|--|---|

- 1.2 Plan work tasks to comply with relevant legislation, regulations, standards, codes, work health and safety (WHS), environmental and workplace requirements.
 - 1.3 Select and fit required personal protective equipment (PPE).
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select plant, tools and equipment, check for serviceability and rectify or report any faults.
- 2 Apply concrete finishing techniques.
- 2.1 Leave concrete untouched until bleed water has come to the surface and evaporated.
 - 2.2 Assess concrete surface during curing process and maintain level surface to allow manual and mechanical trowelling to be applied.
 - 2.3 Assess strength of setting concrete using basic thumb test to ensure weight of mechanical trowel and operator can be accommodated.
 - 2.4 Apply mechanical trowelling in multiple overlapping lines to consolidate and densify the setting concrete surface.
 - 2.5 Install jointing system, finish edges, and trowel concrete to specifications.
 - 2.6 Finish concrete and check compliance with specifications and workplace requirements.
- 3 Clean up.
- 3.1 Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
 - 3.2 Clean, check, maintain and store tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCO3042 Finish concrete.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCON3042 Finish concrete

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCCCO3042 Finish concrete.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by finishing concrete in either a non-precast work environment or a precast work environment:

- for the non-precast work environment, finishing five different concrete surfaces with each surface measuring at least 100 square metres
- for the precast work environment, on five different occasions, finishing a minimum of three concrete panels involving more than one truck load of concrete.

Finishing techniques must include textured or non-slip and one other technique selected from the list below:

- edging and jointing system
- steel trowel.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of legislation, regulations, codes and Australian Standards relevant to concrete finishing tasks:
 - environmental protection and waste disposal
 - work health and safety (WHS)
- concrete finishing techniques:
 - edging and jointing systems
 - steel trowel
 - textured or non-slip
- effects of temperature, wind and low humidity on the properties of concrete:
 - detrimental effect of water addition to concrete properties
 - precautions that should be taken to minimise any potential adverse effects when finishing concrete
- health risks associated with silica dust exposure
- methods for assessing the strength of setting concrete using the basic thumb test

- properties of concrete to be able to correctly identify when finishing techniques should be applied to minimise waste, delay and faults in finished concrete
- purpose and importance of construction, contraction, control and expansion joints:
 - doweling systems
 - installation methods
 - role in the long-term serviceability of concrete pavements
- types, characteristics, uses and limitations of plant, tools and equipment used to finish concrete
- types of drawings and specifications used to interpret concrete finishing requirements
- workplace requirements for finishing concrete:
 - cleaning up the work area
 - maintaining and storing plant, tools and equipment
 - reporting problems
 - quality
 - safety requirements including personal protective equipment (PPE).

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to documentation, specifications, concrete surfaces, plant, tools and equipment required to achieve the performance evidence.

CPCCON3043 Cure concrete

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCCO3043 Cure concrete

Application

This unit of competency specifies the skills and knowledge required to carry out the initial curing process to poured concrete in order to control moisture evaporation from finished concrete. It includes using curing agents and techniques in accordance with engineering specifications.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Concreting

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--------------------------------------|---|
| 1 Plan and prepare to cure concrete. | 1.1 Interpret specifications to confirm concrete curing methods and clarify requirements with relevant persons. |
|--------------------------------------|---|

- 1.2 Plan work tasks to comply with relevant legislation, regulations, standards, codes, work health and safety (WHS), environmental and workplace requirements.
 - 1.3 Identify necessary preventative barriers to comply with regulatory and workplace requirements.
 - 1.4 Select and fit required personal protective equipment (PPE).
 - 1.5 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Select tools and equipment, check for serviceability and rectify or report any faults.
 - 1.7 Calculate and acquire required material quantities for specified curing methods and safely locate materials ready for use.
- 2 Carry out concrete curing activities.
- 2.1 Install and maintain preventative barriers to stop curing agents from affecting the surrounding environment.
 - 2.2 Assess weather and climatic conditions, calculate curing duration and make any adjustments necessary to achieve required curing outcome.
 - 2.3 Apply and maintain curing method on concrete surface in accordance with manufacturer and workplace requirements.
 - 2.4 Protect concrete during curing process in accordance with workplace requirements.
- 3 Clean up.
- 3.1 Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
 - 3.2 Clean, check, maintain and store materials, tools and equipment in accordance with manufacturer, regulatory and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Assessment Requirements for CPCCON3043 Cure concrete

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCCCO3043 Cure concrete

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by curing concrete in either a non-precast work environment or a precast work environment:

- for the non-precast work environment, curing concrete at five different sites, each measuring at least 100 square metres
- for the precast work environment, curing a minimum of three panels on five different occasions.

A total of two curing techniques must be used:

- curing compound
- another technique selected from the following:
 - covering
 - flooding or ponding
 - fogging
 - steaming.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- basic science of concrete involving cement chemical reaction (hydration) dependent on water content, temperature and time:
 - effect on plastic state performance
 - benefits and non-benefits of admixture types and doses
 - plastic shrinkage cracking risk
 - effect on hardened state performance:
 - early age and later age strength development
 - drying shrinkage and cracking
- compatibilities of curing compounds with different floor finishes including vinyl, timber and natural stone products

- compliance requirements of legislation, regulations, codes and Australian Standards relevant to concrete curing tasks:
 - environmental protection and waste disposal
 - work health and safety (WHS)
- concrete curing techniques:
 - covering
 - curing compound
 - flooding or ponding
 - fogging
 - steaming
- effects of temperature, wind and low humidity on the properties of concrete:
 - detrimental effect of water addition to concrete properties
 - precautions that should be taken to minimise any potential adverse effects when curing concrete
- health risks associated with silica dust exposure
- methods for calculating curing duration
- specifications used to interpret material quantities and concrete curing requirements
- types and applications of materials and compounds used when curing concrete
- types, characteristics, uses and limitations of tools and equipment used when curing concrete
- ways to minimise moisture loss during curing using different curing methods
- workplace requirements for curing concrete:
 - cleaning up the work area
 - maintaining and storing materials, tools and equipment
 - quality
 - reporting problems
 - safety requirements including personal protective equipment (PPE).

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to documentation, specifications, materials, tools and equipment required to achieve the performance evidence.

CPCCON3044 Apply decorative finishes to concrete

Modification History

Release 1	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0. Supersedes and is equivalent to CPCCCO3044 Apply decorative finishes to concrete.
-----------	---

Application

This unit of competency specifies the skills and knowledge required to apply decorative finishes to concrete surfaces providing a distinct feature face finish for areas such as driveways, patios and paths. Decorative finishes involve using specialist techniques such as stencilling, pattern paving/stamping, colours, exposed aggregate or polishing.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Assessment Requirements for CPCCON3044 Apply decorative finishes to concrete

Modification History

Release 1	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0. Supersedes and is equivalent to CPCCCO3044 Apply decorative finishes to concrete.
-----------	---

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by applying a finish selected from the list below to a minimum of twenty square metres of concrete on two different occasions:

- coloured concrete
- exposed aggregate
- pattern paving/stamping
- polished concrete
- stencilling.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of legislation, regulations and Australian Standards relevant to the application of decorative finishes to concrete:
 - environmental protection:
 - wash-off and preventing contamination to drains and stormwater
 - waste disposal
 - finish specifications
 - work health and safety (WHS)
- health risks associated with silica dust exposure
- techniques, equipment, tools and materials used to apply the following decorative finishes to concrete:
 - coloured concrete
 - exposed aggregate
 - pattern paving/stamping
 - polished concrete
 - stencilling

- purpose of construction, contraction, control and expansion joints:
 - doweling systems
 - installation methods
- types of drawings and specifications used to interpret material quantities and finish requirements
- workplace requirements for applying decorative finishes to concrete:
 - cleaning up the work area
 - maintaining and storing materials, tools and equipment
 - quality
 - reporting problems
 - safety requirements including personal protective equipment (PPE).

CPCCON3046 Repair and rectify concrete

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CCCCCO3046 Repair and rectify concrete.

Application

This unit of competency specifies the skills and knowledge required to repair and rectify defects in concrete. Repairs and rectifications include patching, refinishing, sealing or recolouring to improve aesthetic appearance, as well as more significant repairs and rectifications such as cutting and replacing sections of concrete and repairing cracks in accordance with engineer or manufacturer specifications.

The unit does not cover structural defects requiring underpinning concrete or specialist works involving highly engineered solutions.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing work tasks with a high degree of self-direction.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

Assessment Requirements for CPCCON3046 Repair and rectify concrete

Modification History

Release 1	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0. Supersedes and is equivalent to CPCCCO3046 Repair and rectify concrete.
-----------	---

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by following manufacturer or engineer specifications to repair and rectify defects in a minimum of one square metre of concrete for each of the following:

- three types of defects selected from the list below:
 - cracks less than 2 millimetres (mm) in width
 - broken edge off concrete
 - effects of dusting
 - damaged or blistered horizontal concrete
 - damage to vertical elements requiring feather coat to repair
 - floor that has been screeded out of tolerance and requires self-levelling compound to repair
- one type of defect selected from the list below:
 - a live or dormant crack of between 2 mm and 10 mm in width
 - damaged concrete that needs to be cut out and replaced.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of legislation, regulations and Australian Standards relevant to concrete repair and rectification tasks:
 - environmental protection and waste disposal
 - specified tolerances
 - work health and safety (WHS)
- common defects in concrete and associated repair or rectification techniques and materials:
 - bonded toppings failure
 - cracks including wet, live and dormant

- damaged or blistered concrete
- effects of dusting
- existing concrete toppings failure
- levelling failure
- non-bonding of new to old interfaces
- non-compliant surfaces
- oversized or undersized slabs
- subsidence
- correct techniques for vibrating concrete including correct mixes for vertical elements
- correct positioning of reinforcement where applicable for different repair products including repair material bond to substrate, bonding to reinforcement and cover
- dust suppression methods to be used when repairing or rectifying concrete
- health risks associated with silica dust exposure
- possible causes of defects in concrete including chemical and physical influences:
 - cement hydration process
 - climate effects
 - concrete placement, finishing and curing
- types and purpose of concrete additives
- types, characteristics, uses and limitations of tools, equipment and materials used when repairing and rectifying concrete
- workplace requirements for repairing and rectifying concrete:
 - cleaning up the work area
 - documentation and reporting
 - maintaining and storing tools and equipment
 - quality
 - safety requirements including personal protective equipment (PPE).

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to documentation, specifications, work sites, materials, tools and equipment required to achieve the performance evidence.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPCCON3047 Cut concrete

Modification History

Release 1	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0. Supersedes and is not equivalent to CPCCCO3047 Cut and core concrete.
-----------	---

Application

This unit of competency specifies the skills and knowledge required to safely cut concrete. It requires using concrete and masonry saws to cut concrete to specification.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Concreting

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | | | |
|---|-----------------------------------|-----|---|
| 1 | Plan and prepare to cut concrete. | 1.1 | Interpret specifications for concrete cutting and clarify requirements with relevant persons. |
|---|-----------------------------------|-----|---|

- 1.2 Assess work site to determine concrete type, thickness, reinforcement and base type impacting cutting requirements.
 - 1.3 Plan work tasks to comply with relevant legislation, regulations, standards and codes, and manufacturer, work health and safety (WHS), environmental and workplace requirements.
 - 1.4 Select and fit required personal protective equipment (PPE).
 - 1.5 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Select tools and equipment, check for serviceability and rectify or report any faults.
- 2 Carry out concrete cutting activities.
- 2.1 Inspect concrete to assess its readiness for cutting and to prevent raveling, cracking and saw damage.
 - 2.2 Conduct required measurements and calculations and mark cutting positions according to specifications.
 - 2.3 Use tools and equipment safely to perform trial cuts according to manufacturer and workplace requirements.
 - 2.4 Cut concrete according to specifications and quality requirements.
 - 2.5 Control dust from concrete cutting activities according to workplace requirements.
- 3 Clean up.
- 3.1 Clear work area and dispose of, reuse or recycle materials according to regulatory and workplace requirements.
 - 3.2 Clean, check, maintain and store tools and equipment according to manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is not equivalent to CPCCCO3047 Cut and core concrete.

Assessment Requirements for CPCCON3047 Cut concrete

Modification History

Release 1	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0. Supersedes and is not equivalent to CPCCCO3047 Cut and core concrete.
-----------	---

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by cutting concrete on two different occasions involving, on each occasion:

- saw-cutting one joint to a horizontal concrete surface to a minimum of five metres straight or to the set line.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of legislation, regulations and Australian Standards relevant to concrete cutting tasks:
 - environmental protection and waste disposal
 - specified tolerances
 - work health and safety (WHS)
- concrete cutting processes and techniques:
 - soft cutting
 - expansion cutting
- cutting methods that can cause excessive blade wear, raveling and cracking
- factors to consider when assessing the readiness of concrete for cutting to avoid raveling, cracks and saw damage including the effects of weather and climate
- health risks associated with silica dust exposure
- purpose and importance of construction, contraction, control and expansion joints:
 - doweling systems
 - installation methods
 - role in the long-term serviceability of concrete pavements
- typical hazards associated with concrete cutting using concrete and masonry saws, and risk control methods for each:
 - blade fracture
 - electrocution

- saw kick-back, push-back and pull-in
- silica dust
- toxic fumes
- uses, maintenance and limitations of tools and equipment used to cut concrete
- workplace requirements for cutting concrete:
 - cleaning up the work area
 - maintaining and storing tools and equipment
 - quality
 - reporting problems
 - safety requirements including dust suppression and personal protective equipment (PPE).

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to documentation, specifications, concrete, tools and equipment required to achieve the performance evidence.

CPCCON3048 Construct tilt panels on site

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCCCO3048 Construct tilt panels on site.

Application

This unit of competency specifies the skills and knowledge required to work in a team to set up, pour and place concrete tilt panels to form internal and external walls for building structures. It includes on-site and prefabricated methods of panel construction.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Plan and prepare to construct tilt panels on | 1.1 Interpret tilt panel design specifications and drawings and clarify construction requirements with relevant |
|--|---|

- site.
- persons.
- 1.2 Plan work tasks to comply with relevant legislation, regulations, standards, codes, work health and safety (WHS), environmental and workplace requirements.
 - 1.3 Select and fit required personal protective equipment (PPE).
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select plant, tools and equipment, check for serviceability and rectify or report any faults.
 - 1.6 Calculate and acquire material quantities to meet task specifications and safely locate materials ready for use.
- 2 Set out and construct temporary casting bed.
- 2.1 Select suitable area to construct casting bed in accordance with work instructions.
 - 2.2 Prepare ground to a flat surface in readiness for casting bed.
 - 2.3 Place and finish casting bed to meet work instructions.
 - 2.4 Coat casting bed with bond breaker in accordance with product specifications.
- 3 Set out work and prepare formwork for panel.
- 3.1 Set out location and size of tilt panel in accordance with drawings and specifications.
 - 3.2 Prepare, place and fix tilt panel edge formwork, and plumb and align to specifications.
 - 3.3 Apply bond breaker to casting bed face or casting form face of previous panel to ensure ease of panel separation, in accordance with manufacturer requirements for dose and quantity.
 - 3.4 Apply form release agent to formwork in accordance with specifications.
- 4 Place and tie
- 4.1 Check reinforcement, accessories and cast-in fittings for

reinforcement and cast-in fittings		conformity with design and engineering specifications.
	4.2	Position reinforcement, accessories and cast-in fittings in accordance with engineering drawings and specifications.
	4.3	Tie reinforcement in correct placement in accordance with engineering drawings and specifications.
5 Place, finish and cure concrete.	5.1	Place concrete evenly and consolidate to specification using approved vibration method.
	5.2	Screed and finish concrete surface to specification ensuring cast-in fittings are clear.
	5.3	Apply required curing process.
	5.4	Strip edge formwork after final panel is cast, ensuring no damage to panels.
6 Clean up.	6.1	Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
	6.2	Clean, check, maintain and store plant, tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCO3048 Construct tilt panels on site.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCON3048 Construct tilt panels on site

Modification History

Release 1	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0. Supersedes and is equivalent to CPCCO3048 Construct tilt panels on site.
-----------	--

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by constructing tilt panels on site involving:

- constructing a casting bed for one tilt panel measuring at least 20 square metres
- constructing a formwork box for one tilt panel measuring at least 20 square metres
- constructing one tilt panel using a casting bed
- constructing one tilt panel using a formwork box.

The constructed tilt panels must include two of the following:

- blockouts
- door and window penetrations
- raking edges
- waterproofing and decorative rebates.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of legislation, regulations and Australian Standards relevant to tilt panel construction tasks:
 - environmental protection and waste disposal
 - work health and safety (WHS)
- drawings and specifications used to interpret requirements for constructing tilt panels on site
- effects of weather and climatic conditions on the properties of concrete:
 - detrimental effect of water addition to concrete properties
 - precautions that should be taken to minimise any potential adverse effects when placing and curing concrete
- formwork and reinforcing techniques and componentry for tilt panels
- health risks associated with silica dust exposure

- processes for placing, finishing and curing concrete:
 - approved vibration methods
 - concreting levelling techniques
- techniques and processes for lifting inserts and positioning ferrules
- tensile strength of concrete panels
- tilt panel construction materials and techniques
- types, characteristics, uses and limitations of plant, tools and equipment used when constructing tilt panels on site
- workplace requirements for constructing tilt panels on site:
 - cleaning up the work area
 - maintaining and storing materials, plant, tools and equipment
 - quality
 - reporting problems
 - safety requirements including personal protective equipment (PPE).

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to documentation, specifications, work sites, materials, plant, tools and equipment required to achieve the performance evidence.

CPCCON3049 Apply and finish sprayed concrete

Modification History

Release 1	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0. Supersedes and is equivalent to CPCCCO3049 Apply and finish sprayed concrete.
-----------	---

Application

This unit of competency specifies the skills and knowledge required to apply and finish pre-mixed concrete using wet and dry spraying methods. Sprayed concrete has application where conventional concreting methods cannot be used such as for barrel vaulting, caissons, canal linings, diaphragm walls, drainage channels, irrigation systems, piled wall facings, reservoirs, shell roofs and domes, silo structures, tunnel linings, walls and water towers. The unit does not cover the application of sprayed concrete to shape and finish swimming pool and spa shells.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing work tasks with a high degree of self-direction.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

3 Clean up.	<p>3.1 Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.</p> <p>3.2 Clean, check, maintain and store plant, tools and equipment in accordance with manufacturer and workplace requirements.</p>

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCO3049 Apply and finish sprayed concrete.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCON3049 Apply and finish sprayed concrete

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCCCO3049 Apply and finish sprayed concrete.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by applying and finishing sprayed concrete in two different projects:

- each project must involve a minimum of 10 square metres of concrete
- wet and dry spraying concreting methods must be used across the two projects.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- basic science of concrete involving cement chemical reaction (hydration) dependent on water content, temperature and time:
 - effect on plastic state performance:
 - benefits and non-benefits of admixture types and doses
 - plastic shrinkage cracking risk
 - effect on hardened state performance:
 - early age and later age strength development
 - drying shrinkage and cracking
- compliance requirements of legislation, regulations and Australian Standards relevant to concrete spraying tasks:
 - environmental protection and waste disposal
 - material specifications and tolerances
 - work health and safety (WHS)
- effects of temperature, wind and low humidity on the properties of concrete:
 - detrimental effect of water addition to concrete properties
 - precautions that should be taken to minimise any potential adverse effects when applying and finishing sprayed concrete
- health risks associated with silica dust exposure
- methods for checking that material properties meet specifications:

- slump
- water to cement ratios
- processes for applying and finishing sprayed concrete using wet and dry spraying methods:
 - dense flow process
 - mixing, transporting and placing sprayed concrete
 - thin flow process
- types, characteristics, uses and limitations of plant, tools, equipment and materials used to apply and finish sprayed concrete
- typical uses and applications of sprayed concrete
- workplace requirements for applying and finishing sprayed concrete:
 - cleaning up the work area
 - maintaining and storing materials, plant, tools and equipment
 - quality
 - reporting problems
 - safety requirements including personal protective equipment (PPE).

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to documentation, specifications, work sites, materials, plant, tools and equipment required to achieve the performance evidence.

CPCCON3050 Carry out high-performance concreting

Modification History

Release 1	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0. Supersedes and is equivalent to CPCCCO3050 Carry out high performance concreting.
-----------	---

Application

This unit of competency specifies the skills and knowledge required to place high-performance concrete onto structures requiring high-strength attributes and durability. It applies to concrete work on structures such as bridges, airport runways, dams, cooling towers, foundation supports for high-rise facilities, roadways and tunnels.

A person who has achieved this unit of competency is expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Licensing, legislative, regulatory or certification requirements may apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Concreting

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare to	1.1 Interpret specifications for high-performance concreting
-----------------------	--

- carry out high-performance concreting.
- 1.2 tasks and clarify requirements with relevant persons.
 - 1.2 Plan work tasks to comply with relevant legislation, regulations, standards, codes, work health and safety (WHS), environmental and workplace requirements.
 - 1.3 Select and fit required personal protective equipment (PPE).
 - 1.4 Inspect worksite, identify hazards, assess risks and apply risk controls, including required signage and barricades.
 - 1.5 Select plant, tools and equipment, check for serviceability and rectify or report any faults.
 - 1.6 Calculate and acquire material quantities to meet task specifications and safely locate materials ready for use.
- 2 Place, finish and cure high-performance concrete.
- 2.1 Carry out tests to check required properties of high-performance concrete in accordance with specifications and relevant standards.
 - 2.2 Use appropriate mechanical or manual handling techniques and processes to discharge high-performance concrete into formwork.
 - 2.3 Use required technique to ensure high-performance concrete is placed in a timely manner to avoid material segregation in accordance with specifications.
 - 2.4 Compact or vibrate high-performance concrete and screed into designated formwork in accordance with specifications and supporting drawings.
 - 2.5 Finish high-performance concrete to specified thickness and height.
 - 2.6 Apply and document high-performance concrete curing regime in accordance with specifications.
 - 2.7 Use plastic membrane to protect concrete from damage and pollution during construction.
- 3 Clean up.
- 3.1 Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.

- 3.2 Clean, check, maintain and store plant, tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCON3050 Carry out high-performance concreting

Modification History

Release 1	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0. Supersedes and is equivalent to CPCCCO3050 Carry out high performance concreting.
-----------	---

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by placing, finishing and curing five different surfaces using high early strength concrete with chemical additives, each surface measuring at least 10 square metres.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of legislation, regulations and Australian Standards relevant to high-performance concreting tasks:
 - environmental protection and waste disposal
 - testing required to check concrete properties
 - work health and safety (WHS)
- health risks associated with silica dust exposure
- importance of correct placement of concrete to ensure concrete durability, strength, class of finish and self-compacting properties are not impacted
- processes for placing, finishing and curing high-performance concrete using:
 - approved vibration methods
 - high-performance concrete with a range of compressive strengths, including 100 megapascals (MPa)
- types, characteristics, uses and limitations of plant, tools, equipment and materials used to carry out high-performance concreting
- typical uses and applications for high-performance concreting
- workplace requirements for carrying out high-performance concreting:
 - cleaning up the work area
 - maintaining and storing plant, tools and equipment
 - quality
 - reporting problems

- safety requirements, including personal protective equipment (PPE).

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to documentation, specifications, sites, materials, plant, tools and equipment required to achieve the performance criteria and performance evidence.

CPCCON3051 Conduct off-form vertical concrete operations

Modification History

Release 1	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0. Supersedes and is equivalent to CPCCCO3051 Conduct off-form vertical concrete operations.
-----------	---

Application

This unit of competency specifies the skills and knowledge required to prepare and apply concrete to slip-form or jump-form structures in the construction of multi storey buildings. It includes sequencing, placing and compacting concrete in formwork.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Plan and prepare to conduct off-form	1.1 Interpret drawings and specifications for off-form vertical concrete operations and clarify requirements
--	--

- vertical concrete operations.
- with relevant persons.
- 1.2 Plan work tasks to comply with relevant legislation, regulations, standards, codes, work health and safety (WHS), environmental and workplace requirements.
 - 1.3 Select and fit required personal protective equipment (PPE).
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select plant, tools and equipment, check for serviceability and rectify or report any faults.
 - 1.6 Calculate and acquire material quantities to meet task specifications and safely locate materials ready for use.
- 2 Set out and prepare slip-form or jump-form location.
- 2.1 Set out location and size of pour in accordance with drawings and specifications.
 - 2.2 Prepare equipment specifically associated with slip-formwork or jump-formwork installation.
 - 2.3 Prepare, place and fix edge formwork with plumb and align to specifications.
 - 2.4 Use required equipment to apply form release agent to slip -formwork or jump-formwork in accordance with specifications.
- 3 Place and tie reinforcement and cast-in fittings.
- 3.1 Check reinforcement, accessories and cast-in fittings for conformity with drawings and specifications.
 - 3.2 Position reinforcement and accessories in accordance with engineering drawings and specifications.
 - 3.3 Tie reinforcement in correct placement in accordance with engineering drawings and specifications.
- 4 Place, finish and cure concrete.
- 4.1 Determine sequencing of concrete from specifications.
 - 4.2 Place concrete evenly into formwork in layers and consolidate to specification, avoiding material

- segregation and using approved compaction method.
- 4.3 Screed and finish concrete surface to specification ensuring cast-in fittings are clear.
 - 4.4 Add curing compound in accordance with specifications.
 - 4.5 Continue placement cycle after slip-form or jump-form formwork is progressed by riggers, avoiding cold joint.
- 5 Clean up.
- 5.1 Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
 - 5.2 Clean, check, maintain and store tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCO3051 Conduct off-form vertical concrete operations.

Assessment Requirements for CPCCON3051 Conduct off-form vertical concrete operations

Modification History

Release 1	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0. Supersedes and is equivalent to CPCCCO3051 Conduct off-form vertical concrete operations.
-----------	---

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by conducting two different off-form vertical concrete operations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of legislation, regulations and Australian Standards relevant to off-form vertical concrete operations
 - environmental protection and waste disposal
 - material specifications and tolerances
 - work health and safety (WHS)
- health risks associated with silica dust exposure
- processes for conducting off-form vertical concrete operations in conjunction with other personnel involved in the slip-form or jump-form process:
 - carpenters
 - electricians
 - other concreters
 - riggers
 - steel fixers
- processes for placing, finishing and curing concrete including approved compaction methods
- types, characteristics, uses and limitations of plant, tools, equipment and materials required for off-form vertical concrete operations
- types, purpose and application of release agents used in vertical concrete operations
- typical uses of slip-form and jump-form formwork in vertical concrete operations
- workplace requirements for conducting off-form vertical concrete operations:
 - cleaning up the work area

- maintaining and storing materials, plant, tools and equipment
- quality
- reporting problems
- safety requirements including personal protective equipment (PPE).

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to documentation, drawings, specifications, work sites, materials, tools and equipment required to achieve the performance evidence.

CPCCON3052 Conduct concrete boom delivery operations

Modification History

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCO3052 Conduct concrete boom delivery operations

Application

This unit of competency specifies the skills and knowledge required to support construction projects by conducting concrete boom delivery operations using a vehicle-borne pumping system. It covers systems with a minimum of two boom stages.

It includes:

- conducting operational checks
- safe and effective operation of the vehicle and pumping system
- safe establishment, use and monitoring of the boom distribution system
- conducting operator maintenance and work finalisation activities.

This unit of competency supports the role of those who deliver concrete placing booms to residential, commercial or civil construction sites, and who would be expected to take responsibility for organising and completing these tasks with a high degree of self direction.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry meets this requirement.*

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Plan and prepare to conduct concrete boom delivery operations.	1.1 Interpret work instructions, plans and specifications for concrete boom delivery operations and clarify requirements with relevant persons.
	1.2 Plan all work to comply with relevant legislation, regulations, standards, codes, work health and safety, environmental and workplace requirements.
	1.3 Select and fit personal protective equipment appropriate for work activities.
	1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
	1.5 Select plant, tools and equipment, check for serviceability and rectify or report any faults.
2 Conduct concrete boom delivery system pre-operational checks.	2.1 Carry out pre-start, start-up, park and shut-down including emergency shut-down procedures on vehicle and pump in accordance with manufacturer and site requirements.
	2.2 Check vehicle controls and functions for serviceability and rectify or report faults.
	2.3 Check distribution system components prior to use in accordance with workplace requirements.
	2.4 Clean and service hoppers prior to use in accordance with workplace requirements.
3 Operate concrete boom delivery vehicle.	3.1 Identify hazards associated with vehicle positioning and operations and use safe operating techniques to minimise risk.
	3.2 Manage engine power to ensure efficiency of concrete pump vehicle platform movements and to minimise damage to engine and gears.

- 3.3 Coordinate engine power with gear selection ensuring smooth transition and operation within torque range.
 - 3.4 Operate vehicle in accordance with work instructions and workplace requirements.
 - 3.5 Monitor road and traffic conditions accounting for traffic flow, distance and load, and ensuring no injury to people or damage to property, equipment or load.
 - 3.6 Bring truck to a halt smoothly using engine retarder, gears and brakes to minimise vehicle wear and tear.
- 4 Deliver concrete with concrete boom delivery system.
 - 4.1 Identify and assess hazards associated with positioning and operating boom delivery components and use safe operating procedures to minimise risk.
 - 4.2 Position boom delivery vehicle at site to best service delivery task and provide access to concrete-supply vehicle.
 - 4.3 Prepare, deploy and check delivery platform stabilisers to manufacturer requirements for operation and safety.
 - 4.4 Check and position delivery system components securely and safely, in accordance with manufacturer requirements.
 - 4.5 Test-run pumping systems and prepare for use in accordance with manufacturer requirements.
 - 4.6 Coordinate safe supply of bulk concrete mix to the hopper with supply vehicle operator.
 - 4.7 Operate boom delivery system and vary its positioning to maintain concrete delivery to the required destination.
 - 4.8 Withdraw boom delivery system safely at completion of delivery task.
- 5 Carry out operator maintenance of concrete boom delivery vehicle.
 - 5.1 Park boom delivery vehicle safely, prepare for maintenance and shut down in accordance with manufacturer and workplace requirements.
 - 5.2 Carry out basic diagnostic procedures on vehicle, pump and boom system components in accordance with

- manufacturer requirements, and record outcomes in accordance with workplace requirements.
- 5.3 Remove and replace defective parts safely and effectively in accordance with manufacturer and workplace requirements.
 - 5.4 Carry out regular scheduled maintenance tasks in accordance with manufacturer and workplace requirements.
- 6 Clean up.
- 6.1 Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
 - 6.2 Clean, check, maintain and store vehicle, plant, tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- communication skills to interpret non-verbal communication such as hand signals.

Unit Mapping Information

Supersedes and is equivalent to CPCCCO3052 Conduct concrete boom delivery operations

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCON3052 Conduct concrete boom delivery operations

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCCCO3052 Conduct concrete boom delivery operations

Performance Evidence

To demonstrate competency in this unit, a candidate must meet the elements and performance criteria by conducting concrete boom delivery operations at two different sites.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- workplace and regulatory requirements for conducting concrete boom delivery operations under applicable Commonwealth, state or territory work health and safety (WHS) legislation, Australian Standards and codes of practice:
 - job safety and environmental analyses (JSEAs)
 - safe work method statements (SWMSs)
 - safety data sheets (SDSs)
 - safety manuals and instructions for plant, tools and equipment
 - signage
 - environmental and work site safety plans
 - workplace and equipment safety requirements, including hazard reporting requirements and correct handling of equipment faults
 - reporting problems
- plans and specifications used to interpret requirements for conducting concrete boom delivery operations
- characteristics, technical capabilities and limitations of concrete boom delivery vehicle systems:
 - adaptors
 - boom components
 - hoses
 - boom-mounted conveyors
 - lines

- concrete boom delivery vehicle systems processes:
 - operational, maintenance and basic diagnostic procedures and use of hand tools
 - pumps and pumping system operations
 - safe operating techniques in all terrain
 - boom and line establishment techniques and operation of delivery system
 - construction activity sequences relating to bulk concreting operations
- concrete mixes:
 - block-fill
 - pool-mix
 - topping
 - slab
 - footing
 - curb and guttering
- site and equipment safety requirements:
 - knowing when and how to activate emergency shut-down procedures
 - overhead safety requirements relating to boom operations
 - site isolation and traffic control responsibilities and authorities
 - requirements for shut down, inspection, minor maintenance and repairs, and regular scheduled maintenance in accordance with manufacturer requirements
- requirements for cleaning up the work area, vehicle, plant, tools and equipment, and materials storage and environmentally friendly waste management.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- industry-standard equipment required to perform the tasks specified in performance evidence
- appropriate workplace information and records, including policies, procedures and legislative requirements.

CPCCON3053 Slump-test concrete

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCCCO3053 Slump test concrete.

Application

This unit of competency specifies the skills and knowledge required to slump-test concrete to ensure that the mix is workable and complies with the delivery docket and specified order. It includes sampling and slump-testing supplied concrete.

A person who has achieved this unit of competency is expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Licensing, legislative, regulatory or certification requirements may apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Concreting

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Plan and prepare to slump-test concrete. | 1.1 Interpret concrete specifications and clarify slump requirements in consultation with relevant persons. |
|--|---|

- 1.2 Plan work tasks to comply with relevant legislation, regulations, standards, codes, work health and safety (WHS), environmental and workplace requirements.
 - 1.3 Select tools and equipment for slump-testing, check for serviceability and rectify or report any faults.
 - 1.4 Select and fit required personal protective equipment (PPE).
 - 1.5 Inspect worksite, identify hazards, assess risks and apply risk controls, including required signage and barricades.
 - 1.6 Clean slumping cone in preparation for slump testing.
- 2 Conduct slump test.
- 2.1 Take sample of concrete in accordance with relevant Australian Standard and test for consistency, directly from the delivery truck and after discharge of initial 0.2 cubic metres.
 - 2.2 Level off slumping cone and clear surplus concrete from steel plate and slumping cone.
 - 2.3 Raise slumping cone without moving sample.
 - 2.4 Measure sample for conformity with tolerance levels and carry out re-sampling when sample is outside tolerance.
 - 2.5 Record collapsed or sheared samples and communicate results to relevant persons.
- 3 Clean up.
- 3.1 Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
 - 3.2 Clean, check, maintain and store tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCO3053 Slump test concrete.

Links

Assessment Requirements for CPCCON3053 Slump-test concrete

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCCCO3053 Slump test concrete.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by slump-testing two different concrete samples to determine if the mix is workable and complies with the delivery docket and specified order:

- 80 slump plus or minus 15
- 100 slump plus or minus 20.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of legislation, regulations, codes and Australian Standards relevant to slump-testing:
 - environmental protection and waste disposal
 - methods of testing concrete in accordance with the current Australian Standard for determining properties related to the consistency of concrete – slump flow, T500 and J-ring test
 - work health and safety (WHS)
- health risks associated with silica dust exposure
- purpose and importance of slump-testing and the impact to concrete strength and durability of adding water on site:
 - drying, shrinkage
 - early age strength
 - density
 - cracking
 - discolouration
- specifications used to interpret slump tolerance levels and conformance
- techniques for conducting slump tests
- tools and equipment used for slump-testing concrete:
 - bullet-nosed rod (600 mm x 16 mm)
 - sampling scoops

- standard slump cones
- steel rule
- steel slump plate (500 mm x 500 mm)
- steel rod
- workplace requirements for slump-testing concrete:
 - cleaning up the work area
 - maintaining and storing tools and equipment
 - quality
 - reporting problems
 - safety requirements, including personal protective equipment (PPE).

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to documentation, specifications, materials, tools and equipment required to achieve the performance criteria and performance evidence.

CPCCON3054 Operate concrete agitator trucks

Modification History

- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
- Supersedes and is equivalent to CPCCCO3054 Operate concrete agitator trucks.

Application

This unit of competency specifies the skills and knowledge required to operate concrete agitator trucks. It includes safely operating, positioning and manoeuvring the truck to load, transport and discharge concrete mix at the work site. It requires conducting pre-operational checks and driver maintenance.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency. Candidates must hold a current, nationally recognised licence required to operate the concrete agitator truck. For further information, check with the relevant regulatory authority.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Concreting

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare to operate concrete agitator truck.
 - 1.1 Interpret work instructions for concrete agitator truck operation and clarify requirements with relevant persons.
 - 1.2 Plan work tasks to comply with relevant legislation, regulations, work health and safety (WHS), environmental and workplace requirements.
 - 1.3 Identify hazards associated with planned concrete agitator truck operation and apply risk controls in accordance with regulatory and workplace requirements.
 - 1.4 Select hand tools and maintenance equipment associated with truck, check for serviceability and rectify or report any faults.
 - 1.5 Select and fit required personal protective equipment (PPE).

- 2 Conduct concrete agitator truck pre-operational checks.
 - 2.1 Carry out truck pre-start, start-up, park and shut-down procedures including emergency shut-down in accordance with manufacturer and site requirements.
 - 2.2 Check truck controls and functions for serviceability and rectify or report faults.
 - 2.3 Check agitator controls and functions for serviceability and rectify or report faults.

- 3 Operate concrete agitator truck.
 - 3.1 Manage engine power to ensure efficient truck movements and to minimise damage to engine and gears.
 - 3.2 Coordinate engine power with gear selection ensuring smooth transition and operation within torque range.
 - 3.3 Drive truck safely in accordance with regulatory and workplace requirements.
 - 3.4 Monitor road and traffic conditions and adjust truck operation as required to ensure safety.
 - 3.5 Bring truck to a halt smoothly using engine retarder, gears and brakes to minimise truck wear and tear.

- | | | | |
|---|---|-----|---|
| 4 | Load, transport and discharge concrete. | 4.1 | Position truck at load and discharge points with minimum manoeuvres. |
| | | 4.2 | Load truck with concrete mix specified for the job, and with volume or weight of load within authorised carrying capacity of agitator. |
| | | 4.3 | Move truck from loading to discharge point safely and smoothly avoiding surge and sway. |
| | | 4.4 | Discharge concrete in accordance with work instructions. |
| | | 4.5 | Monitor and maintain discharge systems including chutes and adaptors throughout operations. |
| 5 | Carry out operator maintenance. | 5.1 | Park truck safely, prepare for maintenance, and shut down in accordance with manufacturer and workplace requirements. |
| | | 5.2 | Carry out basic diagnostic procedures on truck and agitator components and record results in accordance with manufacturer and workplace requirements. |
| | | 5.3 | Remove and replace defective parts safely and effectively in accordance with manufacturer and workplace requirements. |
| | | 5.4 | Carry out regular scheduled maintenance tasks in accordance with manufacturer and workplace requirements. |
| 6 | Clean up. | 6.1 | Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements. |
| | | 6.2 | Clean, check, maintain and store truck, bowl, tools and equipment in accordance with manufacturer and workplace requirements. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCO3054 Operate concrete agitator trucks.

Assessment Requirements for CPCCON3054 Operate concrete agitator trucks

Modification History

Release 1	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0. Supersedes and is equivalent to CPCCCO3054 Operate concrete agitator trucks.
-----------	--

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by operating a concrete agitator truck over three shifts involving two different work sites.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- characteristics of concrete carried in concrete agitator trucks
- compliance requirements of legislation, regulations and codes relevant to concrete agitator truck operation:
 - environmental protection and waste disposal
 - licensing for truck operation
 - work health and safety (WHS)
- operational and maintenance requirements of concrete agitator truck:
 - basic diagnostic procedures
 - how and when to activate emergency shut-down procedures
 - key components and controls and their functions
 - operator maintenance procedures
 - pre-start, start-up, park and shut-down
 - techniques for positioning truck at load and discharge points
- processes for loading, transporting and discharging concrete:
 - authorised carrying capacity of agitator
 - methods for avoiding surge and sway
- workplace requirements for operating concrete agitator truck:
 - cleaning up the work area
 - maintaining and storing tools and equipment
 - reporting problems

- safety requirements including personal protective equipment (PPE).

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to documentation, specifications, concrete agitator truck and associated tools and equipment required to achieve the performance evidence.

CPCCON3055 Install topping slabs

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Performance Evidence and Knowledge Evidence corrected.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
Supersedes and is equivalent to CPCCCO3055 Install topping slabs.

Application

This unit of competency specifies the skills and knowledge required to install bonded and unbonded topping slabs to existing concrete. It includes grinding and scabbling preparation techniques.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Concreting

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare to install topping slab.
 - 1.1 Interpret specifications for topping slab installation and clarify requirements with relevant persons.
 - 1.2 Plan work tasks to comply with relevant legislation, regulations, standards, codes, work health and safety (WHS), environmental and workplace requirements.
 - 1.3 Select and fit required personal protective equipment (PPE).
 - 1.4 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.5 Select plant, tools and equipment, check for serviceability and rectify or report any faults.
 - 1.6 Calculate and acquire material quantities to meet task specifications and safely locate materials ready for use.

- 2 Prepare concrete for topping slab.
 - 2.1 Consult with relevant persons to determine need for concrete reinforcement and install any required reinforcement in accordance with specifications.
 - 2.2 Select and check equipment required to prepare concrete for topping slab.
 - 2.3 Scarify existing concrete using appropriate preparation techniques in accordance with specifications.
 - 2.4 Clear loose particles and debris from surface to be topped.
 - 2.5 Check existing joints in substrate to ensure they are carried through and reflected in proposed topping.

- 3 Pour topping slab.
 - 3.1 Prepare existing concrete surface for topping slab with bonded topping or separation material in accordance with specifications.
 - 3.2 Pour topping slab onto existing concrete surface and screed to specifications.

- 4 Cure and seal topping
 - 4.1 Use setting and apply curing agents and techniques to

- slab. topping slab in accordance with specifications.
- 4.2 Maintain curing and sealing for period stated in specifications.
- 5 Clean up.
- 5.1 Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
- 5.2 Clean, check, maintain and store plant, tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPCCCO3055 Install topping slabs.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

Assessment Requirements for CPCCON3055 Install topping slabs

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Performance Evidence and Knowledge Evidence corrected.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

Supersedes and is equivalent to CPCCCO3055 Install topping slabs.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by installing:

- bonded topping slabs to two concrete slabs, each measuring at least 10 square metres
- unbonded topping slabs to two concrete slabs, each measuring at least 10 square metres.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of legislation, regulations and Australian Standards relevant to topping slab installation:
 - environmental protection and waste disposal
 - material specifications and tolerances
 - work health and safety (WHS)
- concrete resurfacing materials and techniques:
 - curing duration and effect on ultimate strength
 - role of abrasive blasting when installing bonded topping slabs
 - properties of concrete to be able to minimise waste, delay and faults in installed topping slabs
- health risks associated with silica dust exposure
- processes for installing bonded and unbonded topping slabs
- types and applications of concrete materials used when installing topping slabs
- types, characteristics, uses and limitations of plant, tools and equipment used when installing topping slabs
- workplace requirements for installing topping slabs:
 - cleaning up the work area

- maintaining and storing materials, plant, tools and equipment
- quality
- reporting problems
- safety requirements including personal protective equipment (PPE).

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to documentation, specifications, work sites, materials, plant, tools and equipment required to achieve the performance evidence.

CPCCON3056 Conduct concrete pump delivery operations

Modification History

- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.
Performance Criteria 3.1 rectified.
- Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.
New unit.

Application

This unit of competency specifies the skills and knowledge required to support construction projects by conducting concrete pump delivery operations using a vehicle-borne pumping system. It includes operating the concrete pump delivery vehicle, delivering concrete using the pump system and carrying out required operator checks and maintenance.

This unit covers work usually done by the line or hose-hand and does not include boom operations requiring a licence to conduct high-risk work.

A person who has achieved this unit of competency is expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency. Candidates must hold a current, nationally recognised licence required to operate the concrete pump delivery vehicle. For further information, check with the relevant regulatory authority.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Concreting

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Plan and prepare to conduct concrete pump delivery operations.	1.1 Interpret work instructions and specifications for concrete pump delivery operations and clarify requirements with relevant persons.
	1.2 Plan work tasks to comply with relevant legislation, regulations, standards, codes, work health and safety (WHS), environmental and workplace requirements.
	1.3 Select and fit required personal protective equipment (PPE).
	1.4 Inspect worksite, identify hazards, assess risks and apply risk controls, including required signage and barricades.
	1.5 Select plant, tools and equipment, check for serviceability and rectify or report any faults.
2 Conduct concrete pump delivery system pre-operational checks.	2.1 Carry out pre-start, start-up, park and shut-down procedures, including emergency shutdown on vehicle and pump in accordance with manufacturer and site requirements.
	2.2 Check vehicle controls and functions for serviceability and rectify or report faults.
	2.3 Check distribution system components prior to use in accordance with workplace requirements.
	2.4 Clean and service hoppers prior to use in accordance with workplace requirements.
3 Operate concrete pump delivery vehicle.	3.1 Identify hazards and assess risks associated with vehicle positioning and operations and use safe operating techniques to minimise risk.
	3.2 Manage engine power to ensure efficiency of concrete pump vehicle platform movements and to minimise damage to engine and gears.
	3.3 Coordinate engine power with gear selection ensuring smooth transition and operation within torque range.

- 3.4 Operate vehicle in accordance with work instructions and workplace requirements.
 - 3.5 Monitor road and traffic conditions accounting for traffic flow, distance and load, and ensuring no injury to people or damage to property, equipment or load.
 - 3.6 Bring vehicle to a halt smoothly using engine retarder, gears and brakes to minimise vehicle wear and tear.
- 4 Deliver concrete with concrete pump system.
 - 4.1 Identify hazards and assess risks associated with positioning and operating pump delivery components and use safe operating procedures to minimise risk.
 - 4.2 Position pump delivery vehicle at site to best service delivery task and provide access to concrete-supply vehicle.
 - 4.3 Prepare, deploy and check delivery platform stabilisers in accordance with manufacturer requirements for operation and safety.
 - 4.4 Check and position delivery system components securely and safely, in accordance with manufacturer requirements.
 - 4.5 Test-run pumping systems and prepare for use in accordance with manufacturer requirements.
 - 4.6 Coordinate with supply vehicle operator, safe supply of bulk concrete mix to hopper.
 - 4.7 Operate pump delivery system and vary positioning to maintain concrete delivery to required destination.
 - 4.8 Withdraw pump delivery system safely at completion of delivery task.
- 5 Carry out operator maintenance.
 - 5.1 Park vehicle safely, prepare for maintenance and shutdown in accordance with manufacturer and workplace requirements.
 - 5.2 Carry out basic diagnostic procedures on vehicle and pump system components in accordance with manufacturer requirements and record outcomes.

- 5.3 Remove and replace defective parts safely and effectively in accordance with manufacturer and workplace requirements.
 - 5.4 Carry out regular scheduled maintenance tasks in accordance with manufacturer and workplace requirements.
- 6 Clean up.
- 6.1 Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
 - 6.2 Clean, check, maintain and store vehicle, bowl, tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

New unit.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by conducting concrete pump delivery operations at two different sites.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- characteristics, technical capabilities and limitations of concrete pump delivery vehicle systems:
 - adaptors
 - construction activity sequences relating to bulk concreting operations
 - line establishment techniques and operation of delivery system
 - pumps and pumping system operations
 - hoses
 - lines
- compliance requirements of legislation, regulations, codes and Australian Standards relevant to concrete pump delivery operations:
 - environmental protection and waste disposal
 - work health and safety (WHS)
- concrete mixes:
 - block-fill
 - pool-mix
 - topping
 - slab
 - footing

- curb and guttering
- health risks associated with silica dust exposure
- operational and maintenance requirements of concrete pump delivery systems:
- basic diagnostic procedures
 - how and when to activate emergency shut-down procedures
 - key components and controls and their functions
 - operator maintenance procedures
 - pre-start, start-up, park and shut-down
 - techniques for positioning pumping system to best deliver concrete
- plans and specifications used to interpret requirements for concrete pump delivery
- workplace requirements for conducting concrete pump delivery operations:
 - cleaning up the work area
 - maintaining and storing materials, plant, tools and equipment
 - quality
 - reporting problems
 - safety requirements, including personal protective equipment (PPE).

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to documentation, specifications, vehicle, concrete pump delivery system, materials, tools and equipment required to achieve the performance criteria and performance evidence.

CPCCON3057 Core concrete

Modification History

Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1.

Minor edits to formatting.

Release 1 This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0.

New unit.

Application

This unit of competency specifies the skills and knowledge required to safely core concrete. It requires setting up and using core drilling systems to drill holes in concrete to specification.

A person who has achieved this unit of competency would be expected to take responsibility for organising and completing these tasks with a high degree of self-direction.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Pre-requisite Unit

CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Unit Sector

Concreting

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and prepare to core concrete.
 - 1.1 Interpret plans and specifications for concrete coring and clarify requirements with relevant persons.
 - 1.2 Assess work site to determine concrete type, thickness, reinforcement and base type impacting coring requirements.
 - 1.3 Plan work tasks to comply with relevant legislation, regulations, standards and codes, and manufacturer, work health and safety (WHS), environmental and workplace requirements.
 - 1.4 Select and fit required personal protective equipment (PPE).
 - 1.5 Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
 - 1.6 Select and set up core drilling system appropriate to the task, check for serviceability and rectify or report any faults.
 - 1.7 Select and attach drill motor and drill bit appropriate to the task according to manufacturer and workplace requirements.

- 2 Carry out concrete coring activities.
 - 2.1 Conduct measurements and calculations to correctly set out and mark up drill hole according to specifications.
 - 2.2 Identify core plug removal and securing method according to workplace requirements.
 - 2.3 Drill hole in concrete according to specifications, manufacturer and workplace requirements.
 - 2.4 Monitor drilling system to ensure correct and safe operation according to manufacturer and workplace requirements.
 - 2.5 Remove core plug safely according to workplace requirements.

- 3 Clean up.
