### 9.2 9 Dec 2016

Endorsement for the:

- revision of nine current qualifications, replacing unit CPCCOHS1001A Work safely in the construction industry with the new equivalent unit CPCCWHS1001 Prepare to work safely in the construction industry:
  - CPC10111 Certificate I in Construction  
  - CPC40110 Certificate IV in Building and Construction (Building)  
  - CPC40308 Certificate IV in Building and Construction (Estimating)  
  - CPC40508 Certificate IV in Building and Construction (Site Management)  
  - CPC40611 Certificate IV in Building and Construction (Specialist Trades)

|   | • CPCCCO3055A Install topping slabs  
|   | • CPCCCO4001A Supervise concreting work  
|   | • addition of one revised non-equivalent unit and 14 new units of competency in the demolition sector:  
|   | • CPCCDE3016A Identify hazards on demolition sites and apply risk management strategies  
|   | • CPCCDE3017A Select and use hand tools and equipment for demolition tasks  
|   | • CPCCDE3018A Select and use small plant and equipment for demolition tasks  
|   | • CPCCDE3019A Demolish small buildings and structures using hand tools and small plant and equipment  
|   | • CPCCDE3020A Select and use tools and equipment for hot work in the demolition industry  
|   | • CPCCDE3021A Operate demolition material crushing plants  
|   | • CPCCDE3022A Manage demolition recyclable and waste materials using load shifting equipment  
|   | • CPCCDE3023A Operate skid steer loaders at ground level on demolition sites  
|   | • CPCCDE3024A Operate mobile plant on suspended floors on demolition sites  
|   | • CPCCDE3025A Operate remote-controlled plant on demolition sites  
|   | • CPCCDE3026A Operate excavators at ground level to demolish building elements  
|   | • CPCCDE4001A Plan and prepare for activities on demolition sites  
|   | • CPCCDE4002A Plan and supervise demolition work to minimise environmental and public health and safety impact  
|   | • CPCCDE4003A Supervise individual activities on
demolition sites
- CPCCDE4004A Finalise demolition activities and supervise property handover

addition of two revised non-equivalent and seven new stonemasonry units:
- CPCCST2006A Identify and use stone products
- CPCCST3015A Apply gilding to stone
- CPCCST3016A Build solid stonemasonry walls
- CPCCST3017A Construct stone arches
- CPCCST3018A Inlay lead to stone
- CPCCST3019A Lay stonemasonry stairs
- CPCCST3020A Produce reconstituted stone
- CPCCST3021A Renovate and restore stone work
- CPCCST3022A Carry out profile work

addition of four revised non-equivalent and three new units of competency in the fire services sector:
- CPCPFS3044A Install distribution and range pipes
- CPCPFS3045A Fit off sprinkler heads, controls and ancillary equipment
- CPCPFS3046A Test the integrity of water-based fire protection systems using pressure
- CPCPFS3047A Test and maintain automatic fire sprinklers
- CPCPFS3048A Install fixed fire pumpsets
- CPCPFS3049A Conduct preventive maintenance on fixed fire pumpsets
- CPCPFS4027A Commission fire sprinkler systems

addition of one revised non-equivalent gas services unit:
- CPCPGS3061A Install and commission Type A gas appliances (replacing CPCPGS3058A)

addition of four new sustainability units:
- CPCSUS4002A Use building science principles to construct energy efficient buildings
- CPCSUS4003A Maximise energy efficiency through applied trade skills
- CPCSUS5002A Develop action plans to retrofit existing buildings for energy efficiency
- CPCSUS5003A Manage energy efficient building methods and strategies

deletion from CPC08 of eight units of competency:
- CPCCCO3025A Resurface concrete
- CPCCDE2011A Use demolition tools and equipment
 isc upgrade to:

- make minor revisions to the following seven qualifications, while maintaining their equivalence:
  - CPC20211 Certificate II in Construction Pathways
  - CPC31912 Certificate III in Joinery
  - CPC40110 Certificate IV in Building and Construction (Building)
  - CPC40508 IV in Building and Construction (Site Management)
  - CPC40912 Certificate IV in Plumbing and Services
  - CPC50210 Diploma of Building and Construction (Building)
  - CPC50612 Diploma of Hydraulic Services Design
- minor editorial correction to CPC40912 Certificate IV in Plumbing and Services title
- make minor revisions to the following units of competency to reflect industry requirements captured as part of the continuous improvement process, as well as other minor editorial changes, resulting in the following revised equivalent units:
  - CPCCJN2002B Prepare for off-site manufacturing process
  - CPCPGS4011C Design and size consumer gas installations
  - CPCPGS4023B Install, commission and service Type B gas appliances
- make other minor editorial changes.

nssc endorsement for the:

- addition of two new qualifications:
  - CPC31712 Certificate III in Post-Tensioning
  - CPC32912 Certificate III in Construction Crane Operations
- deletion of four qualifications:
  - CPC20311 Certificate II in Steelfixing
  - CPC20411 Certificate II in Concreting
  - CPC20511 Certificate II in Stoneworking
  - CPC31711 Certificate III in Low Rise Structural Framing
- replacement of one or more core units in the following 16
CPC08 qualifications, resulting in an upgrade to year code and non-equivalent status:

- CPC20112 Certificate II in Construction
- CPC20712 Certificate II in Drainage
- CPC20812 Certificate II in Metal Roofing and Cladding
- CPC20912 Certificate II in Urban Irrigation
- CPC30812 Certificate III in Roof Tiling
- CPC31812 Certificate III in Shopfitting
- CPC31912 Certificate III in Joinery
- CPC32412 Certificate III in Plumbing
- CPC32512 Certificate III in Plumbing (Mechanical Services)
- CPC32612 Certificate III in Roof Plumbing
- CPC32712 Certificate III in Gas Fitting
- CPC32812 Certificate III in Fire Protection
- CPC40912 Certificate IV in Plumbing and Services
- CPC50412 Diploma of Plumbing and Services
- CPC50612 Diploma of Hydraulic Services Design
- CPC60212 Advanced Diploma of Building and Construction (Management)

- review of currency of native and imported units in CPC08 qualifications, resulting in upgrade of all but one of the remaining qualifications but no change to year code given equivalent status
- addition of four new units of competency:
  - CPCCSI3015A Produce airbrushed signage
  - CPCCSI3016A Produce digital signage using advanced software applications
  - CPCPGS3047A Install LPG systems in marine craft
  - CPCPWT3030A Install home fire sprinkler systems
- replacement of three construction units with the following non-equivalent units:
  - CPCCBC6018A Manage processes for complying with legal obligations of a building or construction contractor
  - CPCCCM1016A Identify requirements for safe tilt-up work
  - CPCCSH3006A Apply finishes
- revision of existing plumbing and services units of competency (CPCP) to reflect industry requirements and sustainability policy changes since their first release (see unit mapping table for list of units and their changes)
- replacement of 132 plumbing and services units with the following non-equivalent units:
<p>| | |</p>

- CPCPWT3027A Connect irrigation systems from drinking water supply
- CPCPWT3028A Install water service
- CPCPWT3029A Install water pipe systems
- CPCPWT4022A Commission and maintain backflow prevention devices
- CPCPWT4023A Commission and maintain hot and heated water temperature control devices
- deletion of two native CPC08 units of competency:
  - CPCPCM2011A Apply first aid in the workplace (replaced with HLTFA211A Provide basic emergency life support)
  - CPCPGS3017A Install gas detection devices.

**ISC upgrade to:**

- make minor revisions to the following qualifications, while maintaining their equivalence:
  - CPC1011: addition of unit to elective pool
  - CPC20211: changed packaging rules to increase qualification’s flexibility
  - CPC30711: addition of unit to elective pool
  - CPC32111: addition of units to elective pool
- CPC40611: addition of units to elective pool
- replace reference to the Building Code of Australia and Plumbing Code of Australia with the National Construction Code in those units new or revised in this version upgrade
- replace reference to ‘OHS’ with ‘WHS’ in plumbing and services units (except PSFS units) and qualifications
- include reference to photovoltaic (solar) panels in a number of construction and plumbing and services units (see unit mapping table)
- reformat skill items in required skills section of plumbing and services units (except PSFS units) to present standardised approach to skill grouping
- provide advice to users regarding licensing, legislative, regulatory and certification requirements in all plumbing and services units
- enhance user awareness of the need to consider unit prerequisite requirements when selecting units of competency by including a statement to that effect in the packaging rules of all qualifications
- make minor editorial changes to the unit mapping tables of:
  - Version 7 unit mapping entry for CPCCBC5014A, which did not replace CPCCBC4023A
  - Version 6 unit mapping added missing entry relating to replacement of CPCPWT4003A with CPCPWT4011A
- revise skill set ‘Manage complex building projects’:
  - add CPCCBC5001B Apply building codes and standards to the construction process for medium rise building projects to skill set requirement (prerequisite to CPCCBC5018A) to address its previous omission from the packaging rules, thereby increasing

Artibus Innovation
| **Removing imported units with prerequisite chains from construction qualifications** |
| **Updating imported units with most recent version in construction qualifications** |
| **Recoding units and qualifications as a result of implementing the above changes for construction qualifications (as detailed in qualification mapping table)** |
| **Reformatting for the purposes of clarity the information relating to the communications employability skill in the Employability Skills Qualification Summary for all Certificates I to III construction qualifications** |
| **Making minor corrections to some unit mapping information in CPC08 Version 1 unit mapping table of BCG03 General Construction to CPC08 Version 1** |

| **Amending packaging rules in construction qualifications not used for licensing, regulation or traditional trades to comply with NQC flexibility requirements** |
| **Removing most prerequisite requirements (other than the OHS units) from all plumbing and services units from Certificates II to IV** |

| **Repackaging the following plumbing qualifications to meet industry requirements:** |
| CPC32411 Certificate III in Plumbing: adding a new unit to the core to meet changing market demand and regulatory requirements |
| CPC32511 Certificate III in Plumbing (Mechanical Services): removing a unit from the core and endorsing a new unit in the elective pool |
| CPC32811 Certificate III in Fire Protection: adding new elective units and increasing the overall size of the qualification to meet industry and regulatory requirements |

| **Adding six new plumbing and services units of competency:** |
| CPCPFS3020A Conduct basic functional testing of water-based fire-suppression systems |
| CPCPFS3021A Inspect and test fire pumpsets |
| CPCPFS3022A Conduct annual functional testing of complex water-based fire-suppression systems |
| CPCPFS3023A Conduct functional water flow testing |
| CPCPMS3021A Install domestic solid fuel burning appliances |
| CPCPWT3010A Connect and install storage tanks to a domestic water supply |

**Release Date:** <5 August 2015>
Preliminary information

Important note to users
Training Packages are not static documents; they are amended periodically to reflect the latest industry practices and are version controlled. It is essential that the latest version is always used.

Check the version number before commencing training or assessment
This Training Package is Version 9.1 – check whether this is the latest version by going to the National Training Information Service (www.ntis.gov.au) and locating information about the Training Package. Alternatively, contact Construction and Property Services Industry Skills Council at www.cpsisc.com.au (www.cpsisc.com.au) to confirm the latest version number.

Explanation of version number conventions
The primary release Training Package is Version 1. When changes are made to a Training Package, sometimes the version number is changed and sometimes it is not, depending on the extent of the change. A significant change would mean assigning the version identifier ‘Version 2’ to the Training Package.

When a Training Package is reviewed it is considered to be a new Training Package for the purposes of version control (i.e. a new year identifier in the code is added, for example TDT02 becomes TDT07), then it is called Version 1.

Do not confuse the version number with the Training Package’s national code (which remains the same during its period of endorsement).

Explanation of the review date
The review date (shown on the title page and in the footer of each page) indicates when the Training Package is expected to be reviewed in the light of changes such as changing technologies and circumstances. The review date is not an expiry date. Training Packages and their components remain current until they are reviewed or replaced.

<td>Set up, operate and maintain CNC machining and processing centres</td>
</tr>
<tr>
<td>LMFFT4010B</td>
<td>Identify and calculate production costs</td>
</tr>
<tr>
<td>LMF GG2008B</td>
<td>Glaze/re-glaze residential windows and doors</td>
</tr>
<tr>
<td>MEM05010C</td>
<td>Apply fabrication, forming and shaping techniques</td>
</tr>
<tr>
<td>MEM05049B</td>
<td>Perform routine gas tungsten arc welding</td>
</tr>
<tr>
<td>MEM05050B</td>
<td>Perform routine gas metal arc welding</td>
</tr>
<tr>
<td>MEM10009B</td>
<td>Install refrigeration and air conditioning plant and equipment</td>
</tr>
<tr>
<td>MEM10010B</td>
<td>Install pipework and pipework assemblies</td>
</tr>
<tr>
<td>MEM18086B</td>
<td>Test, recover, evacuate and charge refrigeration systems</td>
</tr>
<tr>
<td>RIICCM210D</td>
<td>Install trench support</td>
</tr>
<tr>
<td>RIICFW302D</td>
<td>Install temporary and permanent rock anchors</td>
</tr>
<tr>
<td>RIICWD503D</td>
<td>Prepare work zone traffic management plan</td>
</tr>
<tr>
<td>RIIWHS202D</td>
<td>Enter and work in confined spaces</td>
</tr>
<tr>
<td>RIIWHS205D</td>
<td>Control traffic with stop-slow bat</td>
</tr>
<tr>
<td>RIIWHS302D</td>
<td>Implement traffic management plan</td>
</tr>
<tr>
<td>RIIWMG203D</td>
<td>Drain and dewater civil construction site</td>
</tr>
<tr>
<td>TAEDEL402</td>
<td>Plan, organise and facilitate learning in the workplace</td>
</tr>
<tr>
<td>TLIB3011A</td>
<td>Set up and rig crane for lift</td>
</tr>
<tr>
<td>TLIB3013A</td>
<td>Maintain mobile cranes</td>
</tr>
<tr>
<td>TLIB3015A</td>
<td>Undertake site inspection</td>
</tr>
<tr>
<td>TLIBF2006A</td>
<td>Apply accident-emergency procedures</td>
</tr>
<tr>
<td>TLIBF2010A</td>
<td>Apply fatigue management strategies</td>
</tr>
<tr>
<td>TLIBF3084A</td>
<td>Follow mobile crane safety procedures</td>
</tr>
<tr>

<td>Licence to operate a forklift truck</td>
</tr>
<tr>
<td>Code</td>
<td>Description</td>
</tr>
<tr>
<td>--------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>TLILIC2005</td>
<td>Licence to operate a boom-type elevating work platform (boom length 11 meters or more)</td>
</tr>
<tr>
<td>TLILIC2016 A</td>
<td>Licence to drive heavy rigid vehicle</td>
</tr>
<tr>
<td>TLILIC3006</td>
<td>Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity)</td>
</tr>
<tr>
<td>TLILIC3008</td>
<td>Licence to operate a slewing mobile crane (up to 20 tonnes)</td>
</tr>
<tr>
<td>TLILIC4009</td>
<td>Licence to operate a slewing mobile crane (up to 60 tonnes)</td>
</tr>
<tr>
<td>TLILIC4010</td>
<td>Licence to operate a slewing mobile crane (up to 100 tonnes)</td>
</tr>
<tr>
<td>TLILIC4011</td>
<td>Licence to operate a slewing mobile crane (over 100 tonnes)</td>
</tr>
<tr>
<td>UEEENEE10 1A</td>
<td>Apply Occupational Health and Safety regulations, codes and practices in the workplace</td>
</tr>
<tr>
<td>UEEENEE10 2A</td>
<td>Prepare and connect refrigerant tubing and fittings</td>
</tr>
<tr>
<td>UEEENEE10 5A</td>
<td>Position, assemble and start up single head split air conditioning and water heating heat pump systems</td>
</tr>
<tr>
<td>UEEENEE17 2A</td>
<td>Recover, pressure test, evacuate, charge and leak test refrigerants – split systems</td>
</tr>
</tbody>
</table>

CPC08 users should go to www.training.gov.au to download any required imported units.
## Mapping of CPC08v9 qualifications

## Mapping CPC08 Version 9.1 units to Version 9

Deletion of the following units associated with the qualification CPC50108 Diploma of Building Surveying

- CPCCSV5001A Assess the construction of domestic scale buildings
- CPCCSV5002A Evaluate materials for construction of domestic scale buildings
- CPCCSV5005A Apply footing and geomechanical design principles to domestic scale buildings
- CPCCSV5006A Assess construction faults in residential buildings
- CPCCSV5007A Undertake site surveys and set-out procedures for building projects
- CPCCSV5008A Apply building control legislation to building surveying
- CPCCSV5010A Interact with clients in a regulated environment
- CPCCSV5011A Apply building codes and standards to residential buildings
- CPCCSV5012A Assess timber-framed designs for one and two storey buildings
- CPCCSV5013A Apply principles of energy efficient design to buildings
- CPCCSV5014A Apply building surveying procedures to residential buildings
- CPCCSV5015A Assess structural requirements for domestic scale buildings

## Mapping Version 9 CPC08 units of competency to Version 8 CPC08

</table>

No further native units of competency were changed, added or removed as a result of the changes made in Version 8.
Mapping of CPC08v6 units of competency

Mapping of CPC08 Version 6.1 units of competency to Version 6

There were no changes made to the content of CPC08 Version 6 units of competency in this ISC upgrade and so a mapping table is not provided.

The following five units were assigned a different unit code (while retaining the same unit title) in response to stakeholder implementation advice with regard to the use of previous version unit codes:
- CPCPGS3011A was re-coded to CPCPGS3031A
- CPCPGS3012A was re-coded to CPCPGS3032A
- CPCPGS3013A was re-coded to CPCPGS3033A
- CPCPGS3014A was re-coded to CPCPGS3034A
- CPCPGS3015A was re-coded to CPCPGS3035A.

Minor editorial changes were made to unit code or title references in CPC08 Version 6 qualifications to ensure consistent listing of the unit code or title of:
- CPCPCM2028A Cut and join sheet metal
- CPCPCM2029A Cut using oxy-LPG-acetylene equipment
- CPCPCM2032A Weld using oxy-acetylene equipment
- CPCPWT3016A Fit off and commission heated and cold water services.

Overview

What is a Training Package?

A Training Package is an integrated set of nationally endorsed Competency Standards, Assessment Guidelines and Australian Qualifications Framework (AQF) qualifications for a specific industry, industry sector or enterprise.

Each Training Package:

- provides a consistent and reliable set of components for training, and recognising and assessing people’s skills, and may also have optional support materials
- enables nationally recognised qualifications to be awarded through direct assessment of workplace competencies
- encourages the development and delivery of flexible training that suits individual and industry requirements
- encourages learning and assessment in a work-related environment which leads to verifiable workplace outcomes.

How do Training Packages fit within the National Training Framework?

The National Training Framework is made up of the nationally agreed quality arrangements for the vocational education and training sector, the Standards for NVR Registered Training Organisations, and Training Packages endorsed by the National Skills Standards Council (NSSC).

How are Training Packages developed?

Training Packages are developed by Industry Skills Councils or enterprises to meet the identified training needs of specific industries or industry sectors. To gain national endorsement of Training Packages, developers must provide evidence of extensive research, consultation and support within the industry area or enterprise.

How do Training Packages encourage flexibility?

Training Packages describe the skills and knowledge needed to perform effectively in the workplace without prescribing how people should be trained.

Training Packages acknowledge that people can achieve vocational competency in many ways by emphasising what the learner can do, not how or where they learned to do it. For example, some experienced workers might be able to demonstrate competency against the units of competency and even gain a qualification without completing a formal training program.

With Training Packages, assessment and training may be conducted at the workplace, off the job, at a training organisation, during regular work, or through work experience, work placement, work simulation or any combination of these.

Who can deliver and assess using Training Packages?

Training and assessment using Training Packages must be conducted by a registered training organisation (RTO) that has the qualifications or specific units of competency on its scope of registration, or that works in partnership with another RTO as specified in the Standards for NVR Registered Training Organisations.

Training Package components

Training Packages are made up of mandatory components endorsed by the NSSC and optional support materials.

Training Package endorsed components
The nationally endorsed components include the Competency Standards, Assessment Guidelines and Qualifications Framework. These form the basis of training and assessment in the Training Package and, as such, they must be used.
Competency standards

Each unit of competency identifies a discrete workplace requirement and includes the knowledge and skills that underpin competency as well as language, literacy and numeracy; and occupational health and safety requirements. The units of competency must be adhered to in training and assessment to ensure consistency of outcomes.

Assessment guidelines

The Assessment Guidelines provide an industry framework to ensure all assessments meet industry needs and nationally agreed standards as expressed in the Training Package and the Standards for Registered Training Organisations. The Assessment Guidelines must be followed to ensure the integrity of assessment leading to nationally recognised qualifications.

Qualifications framework

Each Training Package provides details of those units of competency that must be achieved to award AQF qualifications. The rules around which units of competency can be combined to make up a valid AQF qualification in the Training Package are referred to as the ‘packaging rules’. The packaging rules must be followed to ensure the integrity of the nationally recognised qualifications issued.

Training Package support materials

The endorsed components of Training Packages are complemented and supported by optional support materials that provide for choice in the design of training and assessment to meet the needs of industry and learners.

Training Package support materials can relate to single or multiple units of competency, an industry sector, a qualification or the whole Training Package. They tend to fall into one or more of the categories illustrated below.
Training Package support materials are produced by a range of stakeholders such as RTOs, individual trainers and assessors, private and commercial developers and government agencies.

**Training Package, qualification and unit of competency codes**

There are agreed conventions for the national codes used for Training Packages and their components. Always use the correct codes, exactly as they appear in the Training Package, and with the title always following the code.

**Training Package codes**

Each Training Package has a unique five-character national code assigned when the Training Package is endorsed, for example CPC08. The first three characters are letters identifying the Training Package industry coverage and the last two characters are numbers identifying the year of endorsement.

**Qualification codes**

Within each Training Package, each qualification has a unique eight-character code, for example CPC20111. The first three letters identify the Training Package; the first number identifies the qualification level (noting that Arabic numbers are not used in qualification titles themselves); the next two numbers identify the position in the sequence of the qualification at that level; and the last two numbers identify the year in which the qualification was endorsed. (Where qualifications are added after the initial Training Package endorsement, the last two numbers may differ from other Training Package qualifications as they identify the year in which those particular qualifications were endorsed.)

**Unit of competency codes**

Within each Training Package, each unit of competency has a unique code. The unit of competency codes are assigned when the Training Package is endorsed, or when new units of competency are added to an existing endorsed Training Package.

A typical code is made up of 12 characters, normally a mixture of upper-case letters and numbers, as in CPCCJS3003A. The first three characters signify the Training Package (CPC in the above example) and up to eight characters, relating to an industry sector, function or skill area, follow. The last character is always a letter and identifies the unit of competency version. The 'A' in the example above indicates that this is the original unit of competency. An incremented version identifier usually means that minor changes have been made. Typically this would mean that wording has changed in the range statement or evidence guide, providing clearer intent. Where changes are made that alter the outcome, a new code is assigned and the title is changed.

**Training Package, qualification and unit of competency titles**

There are agreed conventions for titling Training Packages and their components. Always use the correct titles, exactly as they appear in the Training Package, and with the code always placed before the title.

**Training Package titles**

The title of each endorsed Training Package is unique and relates the Training Package's broad industry coverage.

**Qualification titles**

The title of each endorsed Training Package qualification is unique. Qualification titles use the following sequence:
firstly, the qualification is identified as either Certificate I, Certificate II, Certificate III, Certificate IV, Diploma or Advanced Diploma
this is followed by the words ‘in’ for Certificates I to IV and ‘of’ for Diploma and Advanced Diploma
then the industry descriptor follows, for example Telecommunications
if applicable, the occupational or functional stream follows in brackets, for example (Computer Systems).

For example:

- CPC30211 Certificate III in Carpentry
- CPC40912 Certificate IV in Plumbing and Services.

Unit of competency titles
Each unit of competency title is unique. Unit of competency titles describe the competency outcome concisely, and are written in sentence case.
For example:

- CPCCBC4028A Prepare design brief for construction works
- CPCPPS5024A Conduct a water audit and identify water-saving initiatives.
CPC08 Overview

Overview of Version 9

The changes to qualifications and units of competency in Version 9 are a result of feedback provided by stakeholders as part of CPSISC’s Training Package Continuous Improvement system.

The changes were overseen by the Construction Industry Advisory Committee (CIAC) as well as Project Steering Committees and subgroups.

Overview of Version 8

Version 8 addresses a number of continuous improvement issues, ranging from technical matters to specific industry requirements.

Some changes reflected in this version of CPC08 have resulted in the need to change the packaging rules for some qualifications.

This version has also seen the addition of two new qualifications, new units of competency and the updating of native and imported units in the Training Package. The other drivers for continuous improvement were the government policy initiatives in the areas of sustainability and flexibility.

In addition to those issues requiring National Skills Standards Council (NSSC) endorsement, a range of other issues that fall within the category of an ISC upgrade have also been implemented in this version of the Training Package.

Such issues include:

- the expansion of elective pools in existing endorsed CPC08 qualifications
- the expansion of unit descriptors and range statements
- minor editorial and formatting changes to add, correct or make content of units and qualifications consistent
- the updating of imported units.

In line with a directive from the CPSISC Construction Industry Advisory Committee (CIAC) to batch changes, this version of the Training Package incorporates both categories of changes.

Overview of Version 7

The model work health and safety (WHS) regulations require a licensed removalist to undertake the removal of asbestos where the area is greater than 10 square metres.
Licences apply to the removal of friable asbestos (Class A) and non-friable asbestos (Class B). All licensed asbestos removal work requires workers to have completed the specified unit of competency for the type of asbestos to be removed. Supervisors are required to complete a supervisory unit in addition to the unit of competency for the class of removal, Class A or Class B. Assessors must complete the assessor unit of competency ‘or equivalent’ qualification.

Although this project was undertaken to develop only a small number of units, the development is significant because of its role in the new national WHS licensing context. The project was undertaken following representations from, and commissioning by, Safe Work Australia (SWA), which has led the development of national licensing for the safe removal of asbestos containing materials (ACM).

When approached by SWA, Construction and Property Services Industry Skills Council (CPSISC) was pleased to lend its support to this project to identify and deliver units of competency that reflect the skills and knowledge required by regulators of practitioners. The requirements will be specified through four categories:

- a Class A asbestos removalist licence
- a Class B asbestos removalist licence
- regulated supervisors of the removalist process
- regulated asbestos assessors.

It is of particular importance to note that the four new units of competency added to CPC08 with this Version 7, will be referenced in the new national licensing regime that SWA has negotiated with state and territory regulators.

It should also be noted that although for licensing purposes more than one asbestos-related unit may appear as electives in CPC08 qualifications, individual units will be referenced in regulations. Candidates would select one or more units related to the function they are to perform and the associated regulatory requirement.

Overview of Version 6

CPC08 Version 1 was released in early 2009. Since then, there have been four subsequent endorsements of the Training Package. In three of these endorsements new qualifications and units were added to the Training Package, while the other endorsement addressed aligning specific qualifications to licensing requirements. This version is different in that it is primarily focussing on continuous improvement within the Training Package. As a result of the implementation of CPC08 in all states and territories a number of issues have been identified that will improve the Training Package. Version 6 responds to many of those issues. This version also includes significant changes to the packaging of two qualifications in response to changing industry needs. The other major category of changes includes significant work to explicitly embed sustainability into the plumbing and services units in the Training Package. Comprehensive mapping guides have been included for the changes to units of competency and qualifications.

Overview of Version 5

As part of the government’s recent Energy Efficient Homes Package, in particular the ceiling insulation program, the Department of Environment, Water, Heritage and the Arts (DEWHA) requested the development of nationally recognised training for ceiling insulation installers. CPSISC mapped available competencies and identified three relevant endorsed units:

- CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry
- CPCCCM1006A Work safely at heights
- CPCCPB3014A Install batt insulation products.

Components of a fourth unit, CPCCPB3015A Install acoustic and thermal environmental protection systems, were selected to fill a gap in installing other types of insulation. A further unit of competency was:
• CPCPB3027A Install ceiling insulation to address critical safety requirements in installing ceiling insulation.

Due to the lack of a national unit of competency to cover the work requirements to install ceiling insulation, CPSISC developed training support materials for registered training organisations (RTOs) to deliver the required units of competency (CPCCPB34014A and its prerequisite and co-requisite units CPCCOHS2001A and CPCCCM1006A). DEWHA’s Ceiling Insulation Program competency guidelines also included the acceptance of individual Statements of Attainment against CPCCPB3015A Install acoustic and thermal environmental protection systems as a competency requirement for supervisors of insulation installation.

Through industry consultation it was identified that individual competencies were not sufficient to ensure that supervisors had all the relevant skills and knowledge, especially in critical safety aspects. It was agreed that a new unit of competency which combined all critical functions of installing ceiling insulation should be developed to ensure consistency in training.

Overview of Version 4

The previous CPC40108 Certificate IV in Building and Construction (Building) and CPC50208 Diploma of Building and Construction (Building) qualifications in CPC08, then titled Construction, Plumbing and Services Integrated Framework Training Package, were initially designed to cover higher level building management skills and also to meet registration and licensing requirements for builders in Australian States and Territories. At the end of the 2007 review of the three Training Packages for the construction, plumbing and services industries, concerns were raised that the requirements for individual registration as a builder were not well aligned to the competency outcomes of these higher level construction qualifications. In some jurisdictions this resulted in the requirement to complete significant additional units of competency in the Diploma in order to meet Builder Registration requirements.

The matter could not be effectively dealt with in the re-development work undertaken during the review as it was only raised, with little detail of the issues, when the review consultation process was near completion. The concerns were not raised earlier because implementation of the qualification had only begun in 2007, so there was very limited industry or RTO experience in using them at the time of the review consultation.

In 2008, in response to further feedback from stakeholders, CPSISC initiated this Version 4 project to seek a better alignment of qualifications to licensing outcomes. Initial consultation with a variety of industry, regulator and RTO stakeholders indicated that the structure of the Certificate IV met the majority of, but not all, jurisdictional categories of limited building registration/licensing. However, it was found that the Diploma structure could be greatly improved by having the underpinning content of some Certificate IV units embedded in it to ensure that training covered the relevant progressive skills required for higher classes of builder registration.
Classes of builder licensing vary considerably across the country, with some jurisdictions having up to 30 classes or categories of licensing while one jurisdiction has a single class. Mutual recognition of licensing is in place and recognition requirements can be ascertained through the Licence Recognition website (http://www.licencerecognition.gov.au/Default.aspx). The site sets out the scope of building work covered by licence categories in each jurisdiction but does not provide details of competency and qualification requirements for licensing in each case. In response, CPSISC initiated the Version 4 continuous improvement project to progress the issue and seek a solution.

Overview of Version 3
In 2007 during the review of BCP03 Plumbing and Services Training Package various parties involved in hydraulic design consulting raised the issue of the training and recognition pathway for their workforce using the Training Package qualification pathway. This was set out in a discussion paper circulated by the national Association of Hydraulic Services Consultants Australia (AHSCA), where the main concern was that the Training Package hydraulic design units of competency were embedded in the plumbing services stream of the then Diploma qualification CPC50408 Diploma of Plumbing and Services. The stream of the Diploma had a prerequisite requirement of completion of the Certificate IV in Plumbing and Services, including the Plumbing and Services – Operations stream. The Certificate IV stream had, in turn, the requirement for prior completion of a relevant trade qualification or equivalent; generally interpreted to mean the completion of a Certificate III in Plumbing. The effect was that an hydraulic services design (HSD) specialisation pathway from the then plumbing and services qualification framework was limited to learners previously completing a trade outcome at Certificate III and then progressing through Certificate IV and Diploma, choosing particular streams in order to gain the range of higher level units of competency necessary to undertake the work. That pathway, still valued by the industry, remains within CPC08 Construction, Plumbing and Services Integrated Framework Training Package, despite the addition of this new Version 3 HSD material. However, people wanting a career in the field of hydraulic design consulting by entering directly into a Certificate IV specialist hydraulic design pathway and then a specialist Diploma qualification cannot do so under the current packaging rules and entry requirements. The HSD Version 3 additions offer an alternative pathway for hydraulic design consultants within the Training Package.

Members of the PSC involved in Version 3 were:

- Paul Naylor (Chair), Master Plumbers
- Carmel Coate, National Fire Industry Association
- Gary Cook, National Plumbing & Services Training Advisory Group (NPSTAG)
- Michael McGuiness, Australian New Zealand Reciprocity Association
- Stephen Movley, Institute of Plumbing
- Doug McClusky, CEPU – Plumbing Division
- Adrian Hart, Master Plumbers Australia
- John Mahoney, SkillsTech
- Vin Ebeger, Master Plumbers & Mechanical Services Association of Australia
- Murray Thomas, Master Plumbers Association
- Shayne LaCombre, Plumbing Industry Commission.
Overview of Version 2

The version 2 update of CPC08 came about as a result of the addition of the fire systems design (FSD) material, which itself was the result of CPSISC’s response to the long-held need of the fire sector to develop qualifications to support the designers of fire systems. This small, niche sector is of great importance, given the vital work fire systems designers do in ensuring public safety and the protection of built assets. Yet the design of fire systems was not covered by any formal competency-based qualifications.

The National Fire Industry Association (NFIA) and the Fire Protection Association Australia (FPAA) played a central and active role in the project steering committee and in the development of the FSD qualifications and units of competency. Members of the PSC involved in Version 2 were:

- Wayne Smith (Chair), Fire Protection Industry Board of Queensland Inc and NFIA
- Vince Ball, Executive Director, Construction Industry Training Council, ACT
- Luke Behncke, A/Manager, Curriculum Services Branch, Skills Victoria
- Michael Boyce, Chief Executive Officer, PEER VEET
- Carmel Coate, Executive Director, NFIA
- Paul Deipenau, Service Manager, Spectrum Fire Pty Ltd
- Graeme Hunt, Delegate of the Director of Building Control, Department of Justice, Tasmania
- Bill Lea, Managing Director, Prime Water Technologies and FPAA
- Doug McClusky, Training Manager, Communications Electrical Plumbing Union (CEPU) — Plumbing Division
- Roger Thomas, Director of Engineering, Asia Pacific, Tyco Fire Protection Services
- Terry Whitty, Senior Educator, Quality and Curriculum for Building Services, RMIT.

The FSD sector is subject to a range of regulatory and performance requirements arising from fire, plumbing, environmental agencies and Australian standards. The regulatory requirements also vary from and between the various commonwealth, state and territory jurisdictions. It is expected that this sector will be subject to increasing levels of regulatory coverage.

Overview of Version 1

The Training Package review encompassed three previously endorsed Training Packages:

- BCP03 Plumbing and Services Training Package, originally endorsed in October 2003
- BCF00 Off-Site Construction Training Package, originally endorsed in July 2000
To ensure that the general and off-site units of competency and qualifications integrate and meet industry needs and that plumbing and services qualifications were relevant to industry needs the review was much more than a technical scoping of the existing units of competency and packaging into qualifications. The reviewed Training Packages were restructured where necessary to provide flexible recognition points for the many specialist job roles that have grown in the industry as new building products are developed and technology and work organisation changes occur.

The review put forward and tested how an Integrated Framework of units of competency and qualifications might work across the breadth of the construction industry for the benefit of all stakeholders. In bringing the three Training Packages under a common umbrella it was not the intention to change the recognition and status of any specialist roles or trade streams of work, but to show how the skills used across the whole industry are complementary.

Under the general theme of A More Flexible and Responsive Training System COAG, in February 2006, introduced a set of measures to ensure Australia’s training and apprenticeship system offered more flexible pathways into work roles and trades where there are ongoing skill shortages. The Construction and Property Services Industry Skills Council was asked to develop additional, nationally portable qualifications for the General Construction Training Package. The primary intention was to better meet ongoing construction industry skill demands and shortages, provide skill recognition for existing workers and improve productivity and safety.

The result was a suite of six new qualifications; three at Certificate II and three at Certificate III that were endorsed by the National Quality Council in July and September 2006. The qualifications were:

- BCG20306 Certificate II in Steelfixing
- BCG20406 Certificate II in Concreting
- BCG20506 Certificate II in Stonemasonry
- BCG31606 Certificate III in Wall and Ceiling Lining (Plasterboard)
- BCG31506 Certificate III in Formwork/Falsework
- BCG31706 Certificate III in Low Rise Structural Framing.

These intermediate qualifications had significant focus during the review to ensure they were genuinely in demand and supported by industry. There has also been the addition of four further qualifications:

- CPC20208 Certificate II in Construction Pathways
- CPC31608 Certificate III in Paving
- CPC32008 Certificate III in Carpentry and Joinery
- CPC32108 Certificate III in Signage.

Two previous qualifications in the BCF00 Off-Site Construction Training Package have been merged with similar qualifications in the general construction area. These are:

- BCF10100 Certificate I in Construction (Off-Site), now CPC10108 Certificate I in General Construction
- BCF20100 Certificate II in Off-Site Construction, now CPC20108 Certificate II in General Construction and CPC20208 Certificate II in Construction Pathways.

Three previous qualifications in the BCF00 Off-Site Construction Training Package were amalgamated into the single new qualification CPC32108 Certificate III in Signage noted above. These qualifications were:
- BCF30700 Certificate III in Off-Site Construction (Sign Writing/Computer Operation)
- BCF30800 Certificate III in Off-Site Construction (Sign Manufacture)
- BCF30900 Certificate III in Off-Site Construction (Neon Manufacture).

Two other qualifications previously in BCF00 Off-Site Construction Training Package have been deleted and not replaced as they had no take-up over the past three years and no future demand expressed by stakeholders during consultation. Other Training Package qualifications have been identified as more suitable. The deleted qualifications are:
- BCF30400 Certificate III in Off-Site Construction (Pre-fabrication)
- BCF30500 Certificate III in Off-Site Construction (Machining).
- The review work was overseen by two specialist groups:

**The Review Steering Group:**
- Lindsay Fraser (Joint Chair), Assistant Secretary, Construction Forestry, Mining and Energy (CFMEU)
- Laurie Kruize (Joint Chair), Manager for Training and Professional Development, Housing Industry Association (HIA)
- Vince Ball, Executive Director, Construction Industry Training Council ACT
- Peter Brilliant, Director, Building Commission Victoria
- Tom Brown, CEO, Thomas Brown Shopfitters Pty Ltd and Australian Shop and Office Fitting Industry Association (ASOFIA)
- Richard Campbell, Manager, Training Products and Support, Queensland Training Authority
- Vin Ebejer, Training Manager, Master Plumbers Australia
- Carlo Garofali, President, Concrete Placers Association NSW
- Neil Gow, National Manager Training Policy, Master Builders Australia
- David Hay, Managing Director, Metal Plaque Pty Ltd and Australian Sign and Graphics Association (ASGA)
- Paul Lawrence, Technical Trainer, Master Builders Australia NSW
- Doug McClusky, Training Manager, Communications Electrical Plumbing Union (CEPU) – Plumbing Division
- Brian Moss, Apprenticeship Manager, Australand
- Barry Peddle, Director, Institute of TAFE South Western NSW, TAFE Directors Australia
- Terry Saunby, Principal Program Manager, Curriculum Centre for Manufacturing, Engineering, Construction and Transport (MECAT), NSW TAFE
- Alan Sparks, CEO, East Coast Apprenticeships
- Glenn Thompson, Training Manager, Australian Manufacturing Workers Union (AMWU)
- Robert Wagner, General Manager, J.H.Wagner & Sons
- Alan Waldron, General Manager, Construction Training Queensland
- Bill Watson, CEO, Connectors Pty Ltd and Master Plumbers Association of Queensland

**National Plumbing Review Reference Group:**
- Kerry Appelt, TAFE Queensland National Plumbing and Services Training Advisory Group (NPSTAG) Queensland
- Fred Baltetsch, TAFE Victoria National Plumbing and Services Training Advisory Group (NPSTAG) Victoria
- Carmel Coate, Executive Director, National Fire Industry Association (NFIA)
Introduction

In economic terms the construction industry is a major segment of the Australian economy, employing nearly 900,000 people with half of this workforce in the housing sector. The industry is characterised by contracting and with less than 3 persons per firm the norm is micro businesses with owners working directly in a trade area, rather than just business management. The trend toward contracting labour and increasingly labour hire rather than direct employment is more pronounced in the general construction industry than any other.

CPC08 Construction, Plumbing and Services Training Package covers occupations and job roles in general and off-site construction, plumbing and services from entry level to management. There are entry points at Certificate I and Certificate II that have pre-vocational outcomes suitable for entry into Australian Apprenticeships. Stakeholders strongly support achievement of full trade qualifications to help meet ongoing industry skill shortages.

Trade outcomes include shopfitting, joinery, stair building, stonemasonry (monumental/installation), signage, brick and blocklaying, carpentry, concreting, demolition, dogging, painting and decorating, segmental paving, rigging, roof tiling, scaffolding, solid plastering, steelfixing, wall and ceiling lining, wall and floor tiling and waterproofing.

Plumbing and services occupations include coverage of urban irrigation, drainage, metal roofing and cladding, plumbing, mechanical services, roof plumbing, gas fitting and fire protection services.

Certificate IV and Diploma qualifications cover building and plumbing licensing requirements with the Advanced Diploma meeting skills of construction managers. The specialist field of building surveying is included with Diploma and Advanced Diploma outcomes.

Building techniques used in the construction industry have undergone changes in recent years, with significant technological advances in prefabrication, energy efficiency and project management tools. These advancements have affected a wide range of fields, from materials (concrete, metal pre-casting and alternative wood products), management methods (subcontracting, prefabrication and project management) and innovations (robotics, computer aided design and electronically linked project management teams). Benefits of technological advancement are also seen in increased productivity, new capital equipment and the improved energy efficiency of buildings.
Qualifications Framework

The Australian Qualifications Framework

What is the Australian Qualifications Framework?
A brief overview of the Australian Qualifications Framework (AQF) follows. For a full explanation of the AQF, see the AQF Implementation Handbook on the Australian Qualifications Framework (AQF) website <www.aqf.edu.au>.

The AQF provides a comprehensive, nationally consistent framework for all qualifications in post-compulsory education and training in Australia. In the vocational education and training (VET) sector it assists national consistency for all trainees, learners, employers and providers by enabling national recognition of qualifications and Statements of Attainment.

Training Package qualifications in the VET sector must comply with the titles and guidelines of the AQF. Endorsed Training Packages provide a unique title for each AQF qualification which must always be reproduced accurately.

Qualifications
Training Packages can incorporate the following AQF qualifications.

- Certificate I in …
- Certificate II in …
- Certificate III in …
- Certificate IV in …
- Diploma of …
- Advanced Diploma of …
- Graduate Certificate in …
- Graduate Diploma of …

On completion of the requirements defined in the Training Package, a registered training organisation (RTO) should issue a nationally recognised AQF qualification. Issuance of AQF qualifications must comply with the advice provided in the current AQF Implementation Handbook and the Standards for NVR Registered Training Organisations.

Statement of Attainment
A Statement of Attainment is issued by a Registered Training Organisation when an individual has completed one or more units of competency from nationally recognised qualification(s)/course(s). Issuance of Statements of Attainment must comply with the advice provided in the current AQF Implementation Handbook and the Standards for NVR Registered Training Organisations.

Under the Standards for NVR Registered Training Organisations, RTOs must recognise the achievement of competencies as recorded on a qualification testamur or Statement of Attainment issued by other RTOs. Given this, recognised competencies can progressively build towards a full AQF qualification.

AQF Guidelines and Learning Outcomes
The AQF Implementation Handbook provides a comprehensive guideline for each AQF qualification.

Career pathways in the construction, plumbing and services industries
The diagram below represents the qualification pathways in CPC08 Construction, Plumbing and Services Training Package.
Career pathways in the construction, plumbing and services industries
Skill sets

Definition
Skill sets are defined as single units of competency, or combinations of units of competency from an endorsed Training Package, which link to a licence or regulatory requirement, or defined industry need.

Wording on Statements of Attainment
Skill sets are a way of publicly identifying logical groupings of units of competency which meet an identified need or industry outcome. Skill sets are not qualifications. Where skill sets are identified in a Training Package, the Statement of Attainment can set out the competencies a person has achieved in a way that is consistent and clear for employers and others. This is done by including the wording ‘these competencies meet [insert skill set title or identified industry area] need’ on the Statement of Attainment. This wording applies only to skill sets that are formally identified as such in the endorsed Training Package. See the AQF Implementation Handbook for advice on wording on Statements of Attainment by visiting the AQF website <www.aqf.edu.au>.

Skill sets in CPC08 Construction, Plumbing and Services Training Package
Skill sets are groups of units of competency that reflect a cohesive industry outcome, but one which is insufficient for a full Australian Qualifications Framework (AQF) award. Skill sets may also provide a bridge between qualifications, respond to regulatory needs or identify an emerging skill area.

Lead a building, construction or plumbing and services team

This skill set addresses the skills used by experienced tradespersons and operators who are moving into roles with additional responsibility and team leadership, typically in smaller businesses.

The skill set provides the team leadership and other skills to enable experienced site supervisors or builders to develop staff under their supervision.

The completion of this skill set provides a pathway to a range of Certificate IV qualifications in CPC08, including credit towards the Certificate IV in Plumbing and Services.

The suggested form of words for inclusion on a Statement of Attainment is: These units from CPC08 Construction, Plumbing and Services Training Package meet industry requirements for experienced tradespersons and operators working as building, construction or plumbing and services team leaders in the construction and plumbing and services industry.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this

Manage complex building projects

This skill set addresses the skills used by builders to manage complex and diverse building projects. The range and depth of skills required of builders is amplified by the size and complexity of the projects on which they work.

This skill set is a bridge for experienced builders already operating at the Certificate IV level who are preparing to undertake larger scale projects which may entail developing additional skills and also, possibly, seeking a higher level of builder’s licence in the relevant State or Territory. This skill set may be supported by continuing professional development programs which are increasingly required of builders.

The completion of this skill set provides a pathway to a Diploma qualification in CPC08.

The suggested form of words for inclusion on a Statement of Attainment is: These units from CPC08 Construction, Plumbing and Services Training Package meet industry requirements for experienced builders preparing to undertake complex building projects requiring additional administrative and technical skills and a higher level of builder’s licence in some jurisdictions.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

• acknowledging the need to learn in order to accommodate change

**Technology** that contributes to the effective carrying out of tasks

- having a range of basic IT skills
- applying IT as a management tool
- using IT to organise data
- being willing to learn new IT skills
- having the OHS knowledge to apply technology
- having the appropriate physical capacity

### Employability Skills Summary

An Employability Skills Summary exists for each qualification. Summaries provide a lens through which to view employability skills at the qualification level and capture the key aspects or facets of the employability skills that are important to the job roles covered by the qualification. Summaries are designed to assist trainers and assessors to identify and include important industry application of employability skills in learning and assessment strategies. The following is important information for trainers and assessors about Employability Skills Summaries.

Employability Skills Summaries provide examples of how each skill is applicable to the job roles covered by the qualification.

Employability Skills Summaries contain general information about the industry context which is further explained as measurable outcomes of performance in the units of competency in each qualification.

The detail in each Employability Skills Summary will vary depending on the range of job roles covered by the qualification.

Employability Skills Summaries are not exhaustive lists of qualification requirements or checklists of performance (which are separate assessment tools that should be designed by trainers and assessors after analysis at the unit level).

Employability Skills Summaries contain information that may also assist in building learners’ understanding of industry and workplace expectations.

### Industry requirements for employability skills

For more information on employability skills in the Construction and Property Services Industry Skills Council (CPSISC) Training Packages go to the CPSISC website at [www.cpsisc.com.au](http://www.cpsisc.com.au).

## Assessment Guidelines

### Introduction

These Assessment Guidelines provide the endorsed framework for assessment of units of competency in this Training Package. They are designed to ensure that assessment is consistent with the *Standards for NVR Registered Training Organisations*. Assessments against the units of competency in this Training Package must be carried out in accordance with these Assessment Guidelines.

### Assessment system overview
This section provides an overview of the requirements for assessment when using this Training Package.

**Benchmarks for assessment**

Assessment within the National Skills Framework is the process of collecting evidence and making judgements about whether competency has been achieved to confirm whether an individual can perform to the standards expected in the workplace, as expressed in the relevant endorsed unit of competency. In the areas of work covered by this Training Package, the endorsed units of competency are the benchmarks for assessment. As such, they provide the basis for nationally recognised Australian Qualifications Framework (AQF) qualifications and Statements of Attainment issued by Registered Training Organisations (RTOs).

**Australian Quality Training Framework assessment requirements**

Assessment leading to nationally recognised AQF qualifications and Statements of Attainment in the vocational education and training sector must meet the requirements of the Standards for NVR Registered Training Organisations as expressed in the essential conditions and standards for initial registration and continuing registration, which may be downloaded from <www.asqa.gov.au>.

These essential conditions and standards for initial registration and continuing registration of training organisations also provide information on:

- registration of training organisations
- quality training and assessment
- assessor competency requirements
- assessment requirements
- assessment strategies
- national recognition
- access and equity and client outcomes
- monitoring assessments
- recording assessment outcomes
- issuing AQF qualifications and Statement of Attainment (see also the Standards for NVR Registered Training Organisations and the AQF Implementation Handbook - available on the AQF website <www.aqf.edu.au>).

**Licensing requirements**

A number of occupations and job roles covered by the units of competency and qualifications in CPC08 Construction, Plumbing and Services Training Package may be subject to state and territory licensing requirements. These requirements vary significantly across jurisdictions. There are 13 specific units of competency agreed by all work health and safety (WHS) regulators and the Australian Safety and Compensation Council (ASCC) as meeting certain licensing categories. These units of competency include:

- The unit CPCCOHS1001A Work safely in the construction industry aligned at Certificate I meets the requirement for the National Code of Practice for Induction for Construction Work (ASCC 2007)
• 12 high risk work licensing units of competency that support the implementation of the National Standard for Licensing Persons Performing High Risk Work (ASCC, April 2006) and these are identified as licensing competencies in the unit code and unit descriptor.

* Note: CPSISC advises that references to OHS will be progressively updated in this and future versions of CPC08 content to reflect the legislated change in the term from occupational health and safety (OHS) to work health and safety (WHS).

Licensing units of competency may be packaged into a qualification, included in a skill set, or delivered and assessed as stand-alone units. The National Standard for licensing persons performing high risk work provides the overarching regulatory framework for the delivery and assessment of the licensing units of competency. State/territory WHS authorities have mandated the use of assessment instruments for the 12 high risk work licensing units of competency. The assessment instruments have been endorsed by the national body responsible for WHS matters. For further information contact your state/territory WHS authority. The high risk work licensing units of competency include:

<table>
<thead>
<tr>
<th>High risk work licensing unit</th>
<th>Aligned to qualification in CPC08</th>

<td>Elective</td>
</tr>
</tbody>
</table>

For further information on the implementation of these units and the National Standard for licensing persons performing high risk work visit:

Plumbing and services

The plumbing and services industry places a premium on skills and knowledge that can be demonstrated in a real workplace environment. Whilst assessment of some of the units of competency in CPC08 can be carried out in a simulated work environment, the industry strongly recommends that assessment is conducted in the workplace, wherever possible. When selecting a plumbing and services qualification, including choice of electives, reference should be made to the requirement identified by the Australian and New Zealand Reciprocity Association that the following units must be completed for the range of plumbing specialisations which are used within the States and Territories for licensing purposes:

**All streams**

Licensing authorities

Licensing authorities across Australia have actively participated in the development of this Training Package and it is envisaged that over time the state and territory licensing requirements in a number of occupations will be aligned with the units of competency and qualifications in this Training Package. There is no one 'national' licence for the sector or any of its functions. Certification responsibilities and systems are administered by state legislation and may differ between States and Territories.

The developers of this Training Package, together with the Department of Industry, consider that the licensing/registration requirements described in this section apply to RTOs, assessors or candidates with respect to this Training Package. While reasonable care has been taken in its preparation, the developers of this Training Package and the Department of Industry cannot guarantee that the list is definitive or accurate at the time of reading; the information in this section is provided in good faith on that basis.

In order to conduct assessments for statutory licensing or other industry registration conditions, assessors may need to meet additional requirements. While RTOs may have information on the licensing requirements for their particular State or Territory, these requirements may change over time and differ between State and Territory jurisdictions. Users of this Training Package are therefore advised to consult the relevant occupational licensing authority in their State or Territory to determine the specific licensing requirements.

The regulatory authorities for the building and construction and plumbing and services industries at the time of endorsement of this Training Package are:

### Requirements for Assessors

In order to deliver the qualifications contained in this Training Package, assessors delivering qualifications from this CPC08 Construction, Plumbing and Services Training Package should have the following minimum competency, recognition and experience:

- formal recognition of competency at least to the level being assessed
• relevant industry experience, that is, workplace experience within the last two years in the competency area being delivered
• relevant occupational registration or licensing in areas where this is a regulatory requirement to practise in the jurisdiction where the qualification is being assessed.

Assessing competence at higher AQF levels
In order to assess competence in qualifications within this Training Package at Certificate IV to Advanced Diploma level (excluding the Diploma and Advanced Diploma of Building Surveying), assessors or assessment team members collectively should have the following minimum competency, recognition and experience:

Certificate IV
Recommended construction industry requirements for assessors relative to vocational competencies:
• relevant vocational competencies and current industry experience at a professional or para-professional level in the construction industry.
This may be evidenced by registration on the National Building Professionals Register (at either levels 1 or 2) or registration on the National Building Technologists Register (at level 1).
Examples of appropriate employment include:
• principal or senior manager of a building practice constructing several complete houses a year
• project manager, contracts manager, site manager, quantity surveyor or general foreman on larger construction projects
• possession of a nationally recognised Statement of Attainment or qualification covering the units of competency being delivered and/or accepted by industry as a subject matter expert; where subject matter expertise can be evidenced by other credentials or confirmed experience equivalent to a nationally recognised AQF qualification in the subject area.
Examples of formal recognition are:
• proof of membership of a relevant professional body to at least Associate or Corporate (Chartered) level.

Diploma
Recommended construction industry requirements for assessors relative to vocational competencies:
• current industry experience at a professional or para-professional level in the construction industry.
This may be evidenced by registration on the National Building Professionals Register (at level 1).
Examples of appropriate employment include:
• principal or senior manager of a building practice working in the commercial construction sector and/or completing a significant number of residential or commercial projects each year, including a number of concurrent projects
• project manager, contracts manager or other senior manager for a building practice working in the commercial construction sector and/or completing a significant number of residential or commercial projects each year, including a number of concurrent projects
• possession of a nationally recognised Statement of Attainment or qualification covering the units of competency being delivered and/or accepted by industry as a subject matter expert; where subject matter expertise can be evidenced by other credentials or confirmed experience equivalent to a nationally recognised AQF qualification in the subject area.

Examples of formal recognition are:

• proof of membership of a relevant professional body to at least Corporate (Chartered) level.

**Advanced Diploma**

Recommended construction industry requirements for assessors relative to vocational competencies:

• current industry experience at a professional or para-professional level in the construction industry.

This may be evidenced by registration on the National Building Professionals Register (at level 1).

Examples of appropriate employment include:

• principal or senior manager of a building practice working in the commercial construction sector and/or completing a significant number of large scale and high rise projects each year, including a number of concurrent projects

• project manager, contracts manager or other senior manager for a building practice working in the commercial construction sector and/or completing a significant number of large scale and high rise projects each year, including a number of concurrent projects

• possession of a nationally recognised Statement of Attainment or qualification covering the units of competency being delivered and/or accepted by industry as a subject matter expert; where subject matter expertise can be evidenced by other credentials or confirmed experience equivalent to a nationally recognised AQF qualification in the subject area.

Examples of formal recognition are:

• proof of membership of a relevant professional body to at least Corporate (Chartered) level.

**RTO assessments**

The RTO’s assessments meet the requirements of the endorsed components of Training Packages and the outcomes specified in accredited courses within the scope of its registration. The RTO must ensure that assessments (including RPL):

• comply with the Assessment Guidelines included in the applicable nationally endorsed Training Packages or the assessment requirements specified in accredited courses

• lead to the issuing of a statement of attainment or qualification under the AQF when a person is assessed as competent against nationally endorsed unit(s) of competency in the applicable Training Package or modules specified in the applicable accredited course

• are valid, reliable, fair and flexible

• provide for applicants to be informed of the context and purpose of the assessment and the assessment process
where relevant, focus on the application of knowledge and skill to the standard of performance required in the workplace and cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.

involve the evaluation of sufficient evidence to enable judgements to be made about whether competency has been attained.

provide for feedback to the applicant about the outcomes of the assessment process and guidance on future options.

are equitable for all persons, taking account of individual needs relevant to assessment.

provide for reassessment on appeal.

The RTO must ensure that RPL is offered to all applicants on enrolment.

The RTO must have an RPL process that:

i. is structured to minimise the time and cost to applicants.

ii. provides adequate information, support and opportunities for participants to engage in the RPL process.

Pathways

The competencies in this Training Package may be attained in a number of ways including through:

- formal or informal education and training
- experiences in the workplace
- general life experience, and/or
- any combination of the above.

Assessment under this Training Package leading to an AQF qualification or Statement of Attainment may follow a learning and assessment pathway, an assessment-only or recognition pathway, or a combination of the two as illustrated in the following diagram.
Each of these assessment pathways leads to full recognition of competencies held – the critical issue is that the candidate is competent, not how the competency was acquired. Assessment, by any pathway, must comply with the assessment requirements set out in the Assessment Guidelines of the Training Package and the Standards for NVR Registered Training Organisations.

**Learning and assessment pathways**

Usually, learning and assessment are integrated, with assessment evidence being collected and feedback provided to the candidate at any time throughout the learning and assessment process. Learning and assessment pathways may include structured programs in a variety of contexts using a range of strategies to meet different learner needs. Structured learning and assessment programs could be: group-based, work-based, project-based, self-paced, action learning-based; conducted by distance or e-learning; and/or involve practice and experience in the workplace. Learning and assessment pathways to suit Australian Apprenticeships have a mix of formal structured training and structured workplace experience with formative assessment activities through which candidates can acquire and demonstrate skills and knowledge from the relevant units of competency.

**Assessment-only or recognition of prior learning pathway**

Competencies already held by individuals can be formally assessed against the units of competency in this Training Package, and should be recognised regardless of how, when or where they were achieved.

In an assessment-only or recognition of prior learning (RPL) pathway, the candidate provides current, quality evidence of their competency against the relevant unit of competency. This process may be directed by the candidate and verified by the assessor, such as in the compilation of portfolios; or directed by the assessor, such as through observation of workplace performance and skills application, and oral and/or written assessment. Where the outcomes of this process indicate that the candidate is competent, structured training is not required. The RPL requirements of the Standards for NVR Registered Training Organisations must be met.

As with all assessment, the assessor must be confident that the evidence indicates that the candidate is currently competent against the endorsed unit of competency. This evidence may take a variety of forms and might include certification, references from past employers, testimonials from clients, and work samples. The onus is on candidates to provide sufficient evidence to satisfy assessors that they currently hold the relevant competencies. In judging evidence, the assessor must ensure that the evidence of prior learning is:

- authentic (the candidate’s own work);
- valid (directly related to the current version of the relevant endorsed unit of competency);
- reliable (shows that the candidate consistently meets the endorsed unit of competency);
- current (reflects the candidate’s current capacity to perform the aspect of the work covered by the endorsed unit of competency); and
- sufficient (covers the full range of elements in the relevant unit of competency and addresses the four dimensions of competency, namely task skills, task management skills, contingency management skills, and job/role environment skills).

The assessment only or recognition of prior learning pathway is likely to be most appropriate in the following scenarios:
• candidates enrolling in qualifications who want recognition for prior learning or current competencies;
• existing workers;
• individuals with overseas qualifications;
• recent migrants with established work histories;
• people returning to the workplace; and
• people with disabilities or injuries requiring a change in career.

Combination of pathways
Where candidates for assessment have gained competencies through work and life experience and gaps in their competence are identified, or where they require training in new areas, a combination of pathways may be appropriate.

In such situations, the candidate may undertake an initial assessment to determine their current competency. Once current competency is identified, a structured learning and assessment program ensures that the candidate acquires the required additional competencies identified as gaps.

Assessor requirements
This section identifies the mandatory competencies for assessors, and clarifies how others may contribute to the assessment process where one person alone does not hold all the required competencies.

Assessor competencies
The Standards for NVR Registered Training Organisations specify mandatory competency requirements for assessors. For information, go to www.asqa.gov.au.

Reasonable adjustment
In accordance with the Disability Standards for Education (2005), reasonable adjustments are to be made to ensure equity in training and assessment of people with disabilities. This means that all ‘education providers are under a positive obligation to make changes to reasonably accommodate the needs of a student with a disability’.

Adjustments are considered ‘reasonable’ if they do not impose an unjustifiable hardship on a training provider or employer. When assessing people with disabilities, assessors are encouraged to apply good practice assessment methods with sensitivity and flexibility. This should include:

• checking their initial assumptions about the capacity to include people with various disabilities
• seeking advice from people with experience and expertise in training, assessing and otherwise supporting people with disabilities.

Designing assessment tools
This section provides an overview on the use and development of assessment tools.

Use of assessment tools
Assessment tools provide a means of collecting the evidence that assessors use in making judgements about whether candidates have achieved competency.
There is no set format or process for the design, production or development of assessment tools. Assessors may use prepared assessment tools, such as those specifically developed to support this Training Package, or they may develop their own.

**Developing assessment tools**

When developing their own assessment tools, assessors must ensure that the tools:

- are benchmarked against the relevant unit or units of competency;
- are reviewed as part of the validation of assessment strategies required under the Standards; and
- meet the assessment requirements expressed in the *Standards for NVR Registered Training Organisations*.

A key reference for assessors developing assessment tools is TAE10 Training and Education Training Package and the unit of competency *TAEASS502B Design and develop assessment tools*.

**Conducting assessment**

This section details the mandatory assessment requirements and provides information on equity in assessment including reasonable adjustment.

**Mandatory assessment requirements**

Assessments must meet the criteria set out in the *Standards for NVR Registered Training Organisations*.

For information, go to www.asqa.gov.au.

**Assessment of employability skills**

Employability skills are integral to workplace competency. As such, they must be considered in the design, customisation, delivery and assessment of vocational education and training programs in an integrated and holistic way.

Employability skills are embedded and explicit within each unit of competency. Training providers must use employability skills information in order to design valid and reliable training and assessment strategies. This analysis could include:

- reviewing units of competency to locate relevant employability skills and determine how they are applied within the unit
- analysing the Employability Skills Summary for the qualification in which the unit or units are packaged to help clarify relevant industry and workplace contexts and the application of employability skills at that qualification outcome
- designing training and assessment to address employability skills requirements.

For more information on employability skills in Construction and Property Services Industry Skills Council (CPSISC) Training Packages, go to the CPSISC website at www.cpsisc.com.au.

**Access and equity**
An individual’s access to the assessment process should not be adversely affected by restrictions placed on the location or context of assessment beyond the requirements specified in this Training Package: training and assessment must be bias-free.

Under the rules for their development, Training Packages must reflect and cater for the increasing diversity of Australia’s VET clients and Australia’s current and future workforce. The flexibilities offered by Training Packages should enhance opportunities and potential outcomes for all people so that we can all benefit from a wider national skills base and a shared contribution to Australia’s economic development and social and cultural life.

**Reasonable adjustments**

It is important that education providers take meaningful, transparent and reasonable steps to consult, consider and implement reasonable adjustments for students with disability. Under the *Disability Standards for Education 2005*, education providers must make reasonable adjustments for people with disability to the maximum extent that those adjustments do not cause that provider unjustifiable hardship. While ‘reasonable adjustment’ and ‘unjustifiable hardship’ are different concepts and involve different considerations, they both seek to strike a balance between the interests of education providers and the interests of students with and without disability.

An adjustment is any measure or action that a student requires because of their disability, and which has the effect of assisting the student to access and participate in education and training on the same basis as students without a disability. An adjustment is reasonable if it achieves this purpose while taking into account factors such as the nature of the student’s disability, the views of the student, the potential effect of the adjustment on the student and others who might be affected, and the costs and benefits of making the adjustment.

An education provider is also entitled to maintain the academic integrity of a course or program and to consider the requirements or components that are inherent or essential to its nature when assessing whether an adjustment is reasonable. There may be more than one adjustment that is reasonable in a given set of circumstances; education providers are required to make adjustments that are reasonable and that do not cause them unjustifiable hardship.

See the Training Package Development Handbook (http://www.deewr.gov.au/Skills/Overview/Policy/TPDH/Pages/main.aspx) for more information on reasonable adjustment, including examples of adjustments.

**Competency Standards**

**What is competency?**
The broad concept of industry competency concerns the ability to perform particular tasks and duties to the standard of performance expected in the workplace. Competency requires the application of specified skills, knowledge and attitudes relevant to effective participation in an industry, industry sector or enterprise.
Competency covers all aspects of workplace performance and involves performing individual tasks; managing a range of different tasks; responding to contingencies or breakdowns; and, dealing with the responsibilities of the workplace, including working with others. Workplace competency requires the ability to apply relevant skills, knowledge and attitudes consistently over time and in the required workplace situations and environments. In line with this concept of competency Training Packages focus on what is expected of a competent individual in the workplace as an outcome of learning, rather than focussing on the learning process itself. Competency standards in Training Packages are determined by industry to meet identified industry skill needs. Competency standards are made up of a number of units of competency each of which describes a key function or role in a particular job function or occupation. Each unit of competency within a Training Package is linked to one or more AQF qualifications.

Contextualisation of units of competency by RTOs

Registered Training Organisations (RTOs) may contextualise units of competency in this endorsed Training Package to reflect required local outcomes. Contextualisation could involve additions or amendments to the unit of competency to suit particular delivery methods, learner profiles, specific enterprise equipment requirements, or to otherwise meet local needs. However, the integrity of the overall intended outcome of the unit of competency must be maintained.

Any contextualisation of units of competency in this Training Package must be within the bounds of the following advice:

- RTOs must not remove or add to the number and content of elements and performance criteria.
- RTOs can include specific industry terminology in the range statement.
- Any amendments and additions to the range statement made by RTOs must not diminish the breadth of application of the competency, or reduce its portability.
- RTOs may add detail to the evidence guide in areas such as the critical aspects of evidence or required resources and infrastructure—but only where these expand the breadth of the competency and do not limit its use.

Construction, plumbing and services units of competency reflect the occupational requirements for each industry sector. This includes specific aspects of, and advice for, assessment that are critical to determining competency achievement.

Use of common units across all sectors of the Training Package has been maximised, however some skills that may appear generic are considered by industry stakeholders to require sector specialisation accommodated in individual units of competency.

Components of units of competency

The components of units of competency are summarised below, in the order in which they appear in each unit of competency.

Unit title

The unit title is a succinct statement of the outcome of the unit of competency. Each unit of competency title is unique, both within and across Training Packages.

Unit descriptor

The unit descriptor broadly communicates the content of the unit of competency and the skill area it addresses. Where units of competency have been contextualised from units of competency from other endorsed Training Packages, summary information is provided. There may also be a brief second paragraph that describes its relationship with other units of competency, and any licensing requirements.
Employability skills
This sub-section contains a statement that the unit contains Employability skills.

Prerequisite units (optional)
If there are any units of competency that must be completed before the unit, these will be listed.

Application of the unit
This sub-section fleshes out the unit of competency’s scope, purpose and operation in different contexts, for example, by showing how it applies in the workplace.

Competency field (optional)
The competency field either reflects the way the units of competency are categorised in the Training Package or denotes the industry sector, specialisation or function. It is an optional component of the unit of competency.

Sector (optional)
The industry sector is a further categorisation of the competency field and identifies the next classification, for example an elective or supervision field.

Elements of competency
The elements of competency are the basic building blocks of the unit of competency. They describe in terms of outcomes the significant functions and tasks that make up the competency.

Performance criteria
The performance criteria specify the required performance in relevant tasks, roles, skills and in the applied knowledge that enables competent performance. They are usually written in passive voice. Critical terms or phrases may be written in bold italics and then defined in range statement, in the order of their appearance in the performance criteria.

Required skills and knowledge
The essential skills and knowledge are either identified separately or combined. Knowledge identifies what a person needs to know to perform the work in an informed and effective manner. Skills describe the application of knowledge to situations where understanding is converted into a workplace outcome.

Range statement
The range statement provides a context for the unit of competency, describing essential operating conditions that may be present with training and assessment, depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts. As applicable, the meanings of key terms used in the performance criteria will also be explained in the range statement.

Evidence guide
The evidence guide is critical in assessment as it provides information to the registered training organisation (RTO) and assessor about how the described competency may be demonstrated. The evidence guide does this by providing a range of evidence for the assessor to make determinations, and by providing the assessment context. The evidence guide describes:

- conditions under which competency must be assessed including variables such as the assessment environment or necessary equipment;
- relationships with the assessment of any other units of competency;
- suitable methodologies for conducting assessment including the potential for workplace simulation;
- resource implications, for example access to particular equipment, infrastructure or situations;
how consistency in performance can be assessed over time, various contexts and with a range of evidence; and
- the required underpinning knowledge and skills

Employability skills in units of competency

The detail and application of employability skills facets will vary according to the job-role requirements of each industry. In developing Training Packages, industry stakeholders are consulted to identify appropriate facets of employability skills which are incorporated into the relevant units of competency and qualifications.

Employability skills are not a discrete requirement contained in units of competency (as was the case with Key Competencies). Employability skills are specifically expressed in the context of the work outcomes described in units of competency and will appear in elements, performance criteria, range statements and evidence guides. As a result, users of Training Packages are required to review the entire unit of competency in order to accurately determine employability skills requirements.

**Explicitly embedding employability skills in units of competency**

This Training Package seeks to ensure that industry-endorsed employability skills are explicitly embedded in units of competency. The application of each skill and the level of detail included in each part of the unit will vary according to industry requirements and the nature of the unit of competency.

Employability skills must be both explicit and embedded within units of competency. This means that employability skills will be:

- embedded in units of competency as part of the other performance requirements that make up the competency as a whole
- explicitly described within units of competency to enable Training Packages users to identify accurately the performance requirements of each unit with regards to employability skills.

This Training Package also seeks to ensure that employability skills are well-defined and written into units of competency so that they are apparent, clear and can be delivered and assessed as an essential component of unit work outcomes.

**Sample unit of competency components showing employability skills**

The following table shows the sequence of a unit of competency, and each cell contains text taken from a range of units. It provides examples of where and how various employability skills could be embedded in each component.

Please note that in the example, the bracketed employability skills are provided for clarification only and would not be present in units of competency within this Training Package.

<table>

</tbody>
</table>
Performance Criteria

Information is organised in a format suitable for analysis and dissemination in accordance with organisational requirements. (Planning and organising)

Range Statement

Software applications may include email, internet, word processing, spreadsheet, database or accounting packages. (technology)

Modify activities depending on differing workplace contexts, risk situations and environments. (Learning)

Required Skills and Knowledge

Work collaboratively with others during a fire emergency. (teamwork)

Instructions, procedures and other information relevant the maintenance of vessel and port security. (Communication)

Evidence Guide

Evidence of having worked constructively with a wide range of community groups and stakeholders to solve problems and adapt or design new solutions to meet identified needs in crime prevention. In particular, evidence must be obtained on the ability to:

- assess response options to identified crime-prevention needs and determine the optimal action to be implemented
- in consultation with relevant others, design an initiative to address identified issues. (Initiative and enterprise).

Employability Skills Summaries and units of competency

An Employability Skills Summary exists for each qualification. Summaries include broad advice on industry expectations with regard to employability skills at the qualification level. Summaries should be used by trainers and assessors to assist in identifying the employability skills requirements contained within units of competency.
CPC10111 Certificate I in Construction

Modification History
Revised qualification deemed equivalent to CPC10111
Addition of CPCCCM1016A to elective pool
Core and elective units revised resulting in a number of unit identifier changes
Version 3: Replace superseded core unit CPCCOHS1001A with equivalent current unit CPCCWHS1001

Description
This qualification provides an introduction to the construction industry, its culture, occupations, job roles and workplace expectations. The units of competency cover essential work health and safety requirements, the industrial and work organisation structure, communication skills, work planning, and basic use of tools and materials. The qualification is built around a basic construction project unit that integrates the skills and embeds the facets of employability skills in context.

The qualification is suited to VET in Schools programs or learners with no previous connection to the construction industry or relevant employment history.

There are no specific job outcomes to this qualification, but the skills achieved will assist in successfully undertaking a Certificate II pre-vocational program or job outcome qualification, or will facilitate entry into an Australian Apprenticeship.

The unit CPCCOHS1001A Work safely in the construction industry is designed to meet OHS regulatory authority requirements for OHS induction and must be achieved before access to any building and construction work site.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context. A substantial period of work placement is recommended to ensure the unit outcomes are met.

</tr>
</thead>
</table>
| **Problem solving** | • Examines tools and equipment prior to use for damage, missing components or other defects  
• Identifies typical faults and problems and takes necessary remedial action  
• Rectifies simple faults with tools and equipment |
| **Initiative and enterprise** | • Identifies opportunities to improve resource efficiency and makes suggestions as appropriate  
• Responds to change and workplace challenges  
• Puts ideas into action  
• Maximises use of resources by recycling, re-using or using appropriate disposal methods |
| **Planning and organising** | • Identifies hazards and implements appropriate hazard control measures  
• Selects and uses appropriate materials, tools and equipment  
• Identifies requirements, applies relevant resources and sequences tasks using time management techniques |
| **Self management** | • Completes daily work activities  
• Identifies own roles and responsibilities  
• Contributes to workplace responsibilities, such as current work site environmental/sustainability frameworks or management systems  
• Manages own performance to meet workplace standards  
• Seeks support to improve work performance  
• Cleans up work area |
| **Learning** | • Identifies own learning needs and seeks skill development as required  
• Is open to learning new ideas and techniques |
| **Technology** | • Uses calculators  
• Uses computers and relevant software  
• Uses and operates a range of tools and equipment correctly and safely |
Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 11 units of competency:
  - 8 core units
  - 3 elective units.

The elective units are to be chosen as follows:

- up to 3 units from the elective units below
- 1 unit from Certificate I or II qualifications in CPC08 or another current Training Package or state accredited course, provided the integrity of the AQF alignment is ensured, and they contribute to a valid, industry-supported vocational outcome.

Some units in this qualification have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

CPC20112 Certificate II in Construction

Modification History

Version Comment
1 Revised qualification deemed not equivalent to CPC20111
   Qualification packaging amended:
   • same total number of units, but core units required increased by one and elective
     units reduced with the move of CPCCCM2010B from elective to core
   • change in options regarding choice of elective units
   • elective unit grouping changed resulting in deletion of some elective units
   Core and elective units revised resulting in a number of unit identifier changes
2 Update superseded imported units from elective list with equivalent current unit for:
   • RIICCM210A to RIICCM210D
   • RIIOHS202A to RIIWHS202D
   • RIIWMG203A to RIIWMG203D
   • TLILIC2001A to TLILIC2001
   • RIIOHS205A to RIIWHS205D
   This version released with CPC08 Version 9.3.
Description

This qualification provides an occupational outcome and a range of support tasks applicable to a majority of construction work sites.

Occupational titles may include:

- builder's labourer.

The qualification has core units of competency that are required in many Certificate III qualifications. The elective options are structured to allow choice from a range of units aligned at Certificate III level and in total could provide meaningful credit in a construction industry Australian Apprenticeship.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

This version released with CPC08 Version 9.3.
Description

This qualification provides a pathway to the primary trades in the construction industry with the exception of plumbing. Trade outcomes are predominantly achieved through an Australian Apprenticeship and this Certificate II allows for inclusion of skills suited for entry to off-site occupations, such as joinery and shopfitting as well as carpentry, bricklaying and other occupations in general construction. This Certificate II is designed to introduce learners to the recognised trade callings in the construction industry and provide meaningful credit in a construction industry Australian Apprenticeship.

The qualification has core unit of competency requirements that are required in most Certificate III qualifications. The elective options are structured to allow choice from areas of trade skills as an introduction to a range of occupations.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Employability Skills Summary

**Communication**
- Communicates with clients, colleagues and others using effective and appropriate communication techniques, including:
  - Clear and direct communication
  - Active listening
  - Verbal and non-verbal language
  - Questioning to identify and confirm requirements
  - Language and concepts appropriate to cultural differences
- Follows instructions from supervisor and other relevant persons
- Understands, interprets and applies information as required from:
  - Environmental and work health and safety (WHS) requirements, including safety data sheets (SDS)
  - Plans, drawings and specifications
  - Schedules
  - Industry-specific resources, such as Moh's scale
  - Load tables
  - Safety signs and symbols
  - Organisational policies and procedures
- Understands relevant definitions, terminology, symbols, abbreviations and language
- Records relevant information using standard workplace documentation
- Applies measurements and calculations using appropriate equipment, formulas and records as required
- Reports and records hazards and risks

**Teamwork**
- Works as part of a team
- Provides assistance and encouragement to other team members
- Initiates and encourages improvements in team performance
- Identifies and uses the strengths of other team members
- Relates to people from diverse social, cultural and ethnic backgrounds and with varying physical and mental abilities
- Participates in on-site meetings

**Problem solving**
- Examines tools and equipment prior to use for damage, missing components or other defects
Employability skill

Industry/enterprise requirements for this qualification include:

- Identifies typical faults and problems and takes remedial action and/or reports to supervisor
- Rectifies simple faults with tools and equipment
- Identifies methods of prevention and control for water penetration

Initiative and enterprise

- Identifies opportunities to improve resource efficiency and makes suggestions as appropriate
- Responds to change and workplace challenges
- Puts ideas into action
- Maximises use of resources by recycling, re-using or using appropriate disposal methods

Planning and organising

- Identifies hazards and implements appropriate hazard control measures
- Selects and uses appropriate materials, tools and equipment
- Determines material quantity requirements and checks for conformity to requirements
- Prioritises and sequences tasks
- Applies time management skills to ensure work is completed to time requirements

Self management

- Evaluates own actions and makes judgements about performance and necessary improvements
- Contributes to workplace responsibilities, such as current work site environmental/sustainability frameworks or management systems
- Manages own performance to meet workplace standards
- Seeks support to improve work performance
- Cleans up work area, including tools and equipment

Learning

- Identifies own learning needs and seeks skill development as required
- Is open to learning new ideas and techniques

Technology

- Uses calculators
- Uses and operates a range of tools and equipment correctly and safely
- Properly starts up, operates and shuts down equipment
Employability skill

Industry/enterprise requirements for this qualification include:

- Carries out pre- and post-operational checks on equipment and machines
- Performs tool and equipment maintenance as required

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

12 units of competency:

- 6 core units
- 6 elective units.

The elective units are to be chosen as follows:

- no less than 4 units and up to 6 units from Groups A to G, with no less than 2 units from any individual group
- up to 2 units from Group H
- 1 unit may be chosen from Certificate I or II qualifications in CPC08 or another current Training Package or accredited course, provided the integrity of the AQF alignment is ensured, and they contribute to a valid, industry-supported vocational outcome.

The wide range of electives is drawn from Certificate III units of competency in CPC08 Construction, Plumbing and Services Training Package. Units of competency from Plumbing and Services qualifications are not available, as there are different plumbing and services pathways to Certificate III outcomes.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

Core units

CPCCCM1012A Work effectively and sustainably in the construction industry
CPCCCM1013A Plan and organise work
CPCCCM1014A Conduct workplace communication
CPCCCM1015A Carry out measurements and calculations
CPCCCM2001A Read and interpret plans and specifications
CPCCCOHS2001A  
Apply OHS requirements, policies and procedures in the construction industry

**Elective units**

**Group A: Brick and blocklaying**

CPCCBL2001A  
Handle and prepare bricklaying and blocklaying materials

CPCCBL2002A  
Use bricklaying and blocklaying tools and equipment

**Group B: Carpentry**

CPCCC2A2002B  
Use carpentry tools and equipment

CPCCC2A2003A  
Erect and dismantle formwork for footings and slabs on ground

CPCCC2A2011A  
Handle carpentry materials

**Group C: Solid plastering**

CPCCSP2001A  
Handle solid plastering materials

CPCCSP2002A  
Use solid plastering tools and equipment

CPCCSP2003A  
Prepare surfaces for plastering

**Group D: Wall and floor tiling**
CPCCWF2001A Handle wall and floor tiling materials
CPCCWF2002A Use wall and floor tiling tools and equipment
CPCCWF3001A Prepare surfaces for tiling application

**Group E: Waterproofing**

CPCCWP2001A Handle waterproofing materials
CPCCWP2002A Use waterproofing tools and equipment
CPCCWP2003A Prepare for construction waterproofing process
CPCCWP2004A Prepare surfaces for waterproofing application

**Group F: Joinery and shopfitting**

CPCCJN2001A Assemble components
CPCCJN2002B Prepare for off-site manufacturing process
CPCCSH2001A Prepare surfaces

**Group G: Stonemasonry**

CPCCST2001A Prepare for stonemasonry construction process
CPCCST2003A Finish stone
CPCCST2006A Identify and use stone products

**Group H: General elective units**

CPC20712 Certificate II in Drainage

Modification History
Revised qualification deemed not equivalent to CPC20711
Qualification packaging amended - same number of core and elective units required, but
changed core units:

- CPCPCM2050A moved from core to elective
- CPCPDR3021A moved from elective to core
- native CPC08 first aid unit (CPCPCM2011A) replaced with imported HLT07 unit
  (HLTFA211A)

A number of core and elective units replaced with updated versions

Description
This qualification provides an occupational outcome in draining.

Occupational titles may include:

- Drainer.

The qualification has core and elective units of competency that include units common to
other qualifications in the plumbing industry, as well as specialist drainage units of
competency.

The plumbing industry strongly affirms that training and assessment leading to recognition of
skills must be undertaken in a real or very closely simulated workplace environment and this
qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of
Practice for Induction Training for Construction Work (ASCC 2007) is required before
entering a construction work site. Achievement of unit CPCCOHS1001A covers this
requirement.

Employability skill | Industry/enterprise requirements for this qualification include:
--- | ---
Technology | - Installs, tests and maintains systems  
- Uses electricity and electrical equipment safely  
- Uses and operates a range of tools and equipment correctly and safely  
- Identifies technological trends that may affect the plumbing and services sector  
- Carries out pre- and post-operational checks on tools and equipment  
- Performs tool and equipment maintenance as required

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 22 units of competency:
  - 18 core units  
  - 4 elective units.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

CPC20812 Certificate II in Metal Roofing and Cladding

Modification History
Revised qualification deemed not equivalent to CPC20811
A number of core and elective units replaced with updated versions
Change to core units:
  • native CPC08 first aid unit (CPCPCM2011A) replaced with imported HLT07 unit (HLTFA211A)

Description
This qualification provides an occupational outcome in metal roofing and cladding.
Occupational titles may include:
  • Roofer.

The qualification has core and elective units of competency that include units common to other qualifications in the plumbing industry, as well as specialist metal roofing and cladding units of competency.

The plumbing industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Employability skill | Industry/enterprise requirements for this qualification include:
--- | ---
| • Seeks support to improve work performance

Learning | • Identifies own learning needs and seeks skill development as required
• Is open to learning new ideas and techniques
• Participates in workplace induction

Technology | • Uses electricity and electrical equipment safely
• Uses and operates a range of tools and equipment correctly and safely
• Properly starts up, operates and shuts down equipment
• Identifies technological trends that may affect the plumbing and services sector
• Carries out pre- and post-operational checks on tools and equipment
• Performs tool and equipment maintenance as required

Packaging Rules
To achieve this qualification, the candidate must demonstrate competency in:
• 24 units of competency:
  • 15 core units
  • 9 elective units.

The elective units are to be chosen as follows:
• up to 9 units from general elective units
• up to 4 units from Certificate II qualifications in CPC08 or another current Training Package or state accredited course, provided the integrity of the AQF alignment is ensured, and that they contribute to a valid, industry-supported vocational outcome.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

CPC30111 Certificate III in Bricklaying/Blocklaying

Modification History

Version  Comment
1      Revised qualification deemed equivalent to CPC30111
2      Core and elective units revised resulting in a number of unit identifier changes
3      Update superseded imported units from elective list with equivalent current unit for:
       • BBSMB301A to BBSMB301
       • BBSMB406A to BBSMB406
       This version released with CPC08 Version 9.3.

Description

This qualification provides a trade outcome in bricklaying and blocklaying.

Occupational titles may include:

• Bricklayer
• Blocklayer.

The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as two specialist fields of work.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

| **Problem solving** | • Examines tools and equipment prior to use for damage, missing components or other defects  
• Identifies typical faults and problems and takes remedial action and/or reports to supervisor  
• Rectifies simple faults with tools and equipment |
| **Initiative and enterprise** | • Identifies opportunities to improve resource efficiency and makes suggestions as appropriate  
• Responds to change and workplace challenges  
• Puts ideas into action  
• Maximises use of resources by recycling, re-using or using appropriate disposal methods |
| **Planning and organising** | • Identifies hazards and implements appropriate hazard control measures  
• Identifies and manages risks  
• Selects and uses appropriate materials, tools and equipment  
• Carries out inspections and checks  
• Determines material quantity requirements and conformity to requirements  
• Prioritises and sequences tasks  
• Applies time management skills to ensure work is completed to time requirements |
| **Self management** | • Evaluates own actions and makes judgements about performance and necessary improvements  
• Contributes to workplace responsibilities, such as current work site environmental/sustainability frameworks or management systems  
• Manages own performance to meet workplace standards  
• Seeks support to improve work performance  
• Cleans up work area, including tools and equipment |
| **Learning** | • Identifies own learning needs and seeks skill development as required  
• Is open to learning new ideas and techniques |
| **Technology** | • Uses calculators |
Employability skill | Industry/enterprise requirements for this qualification include:
--- | ---
 | • Uses and operates a range of tools and equipment correctly and safely
 | • Properly starts up, operates and shuts down equipment
 | • Carries out pre- and post-operational checks on equipment and machines
 | • Performs tool and equipment maintenance as required

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 27 units of competency:
  - 21 core units
  - 6 elective units.

The elective units are to be chosen as follows:

- from Groups A and B
- up to 2 units from Certificate III or IV qualifications in CPC08 or another current Training Package, provided the integrity of the AQF alignment is ensured, and they contribute to a valid, industry-supported vocational outcome.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

CPC30211 Certificate III in Carpentry

Modification History

Version Comment
1 Revised qualification deemed equivalent to CPC30211
2 Core and elective units revised resulting in a number of unit identifier changes
3 Update superseded imported units from elective list with equivalent current unit for:
   • BSBSMB301A to BSBSMB301
   • BSBSMB406A to BSBSMB406
   • RIICCM210A to RIICCM210D
   • RIIOHS202A to RIIWHS202D
   • RIIWMG203A to RIIWMG203D
This version released with CPC08 Version 9.3.

Description

This qualification provides a trade outcome in carpentry, covering work in residential and commercial applications.

Occupational titles may include:
• Carpenter
• Carpenter and joiner.

The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as a specialist field of work.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 30 units of competency:
  - 22 core units
  - 8 elective units.

A maximum of two of the eight required elective units may be substituted by selecting relevant units of competency from any Certificate III or IV construction qualification or qualification in another endorsed Training Package.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

CPC30313 Certificate III in Concreting

Modification History
Revised qualification deemed not equivalent to CPC30311

- qualification packaging amended:
  - total number of units required increased from 18 to 20 units
  - core units increased from 13 to 14
  - elective units increased from 5 to 6
  - core and elective units revised, including replacement with non-equivalent versions and addition of new units
- pathways information added
Description
This qualification is designed to meet the needs of concreters working in concreting operations on residential and commercial projects.
Occupational titles could include:
- Concreter
- Concrete pump operator.

The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as a specialist field of work.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Pathways Information
This qualification is suitable for an Australian Apprenticeship pathway.
Refer to CPSISC website for further career and pathway information:

Licensing/Regulatory Information
This is a licensed occupation. Check with relevant state and territory licensing and regulatory authorities. State and territory jurisdictions may have different regulatory requirements

Entry Requirements
There are no entry requirements

## Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 20 units of competency:
  - 14 core units  
  - 6 elective units.

The elective units must ensure the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome and are to be chosen as follows:

- a minimum of 3 elective units are to be specialist concreting units (coded ‘CO’) from the elective units listed below  
- the remaining elective units may be chosen from the elective units listed below or any Certificate III or Certificate IV qualifications in CPC08 or another current Training Package or accredited course.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

   - TLILIC2005A to TLILIC2005
   - RIIOHS205A to RIIWHS205D
   This version released with CPC08 Version 9.3.

Description

This qualification is designed to meet the needs of specialist demolition workers who dismantle and demolish public, residential, commercial and industrial buildings of all types, and process the resulting materials for salvage, recycling and waste disposal.

Occupational titles could include:
- Demolition worker
- Demolition plant operator
- Demolition leading hand.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Pathways information

This qualification is suitable for an Australian Apprenticeship pathway.
Pathways Information

Not applicable.
Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements apply to demolition work in different States and Territories. Candidates are advised to consult with the relevant regulatory authorities.

Entry Requirements

There are no entry requirements.

Employability Skills Summary

| Communication       | • Communicates with clients, colleagues and others using effective and appropriate communication techniques, including:  
|                     |   • Clear and direct communication  
|                     |   • Active listening  
|                     |   • Verbal and non-verbal language  
|                     |   • Questioning to identify and confirm requirements  
|                     |   • Language and concepts appropriate to cultural differences  
|                     | • Follows instructions from supervisor and other relevant persons  
|                     | • Understands, interprets and applies information as required from:  
|                     |   • Regulatory, legislative, licensing and organisational requirements  
|                     |   • Environmental and WHS requirements, including safe work method statements (SWMS) and safety data sheets (SDS)  
|                     |   • Codes and standards  
|                     |   • Plans, drawings and specifications  
|                     |   • Schedules  
|                     |   • Work orders  
|                     |   • Load tables  
|                     |   • Safety signs and symbols  
|                     |   • Organisational policies and procedures  
|                     | • Understands relevant definitions, terminology, symbols, abbreviations and language  
|                     | • Records relevant information using standard workplace documentation  
|                     | • Applies measurements and calculations using appropriate equipment, formulas and records as required  
|                     | • Reports and records hazards and risks |
| Teamwork                      | Problem solving                                                                 | Initiative and enterprise                                                                 | Planning and organising                                                                 | Self-management                                                                                     | Learning                                                                                           | Technology                                                                                         |
|-------------------------------|----------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| Works as part of a team       | Examines plant, tools and equipment prior to use for damage, missing components or other defects | Identifies opportunities to improve resource efficiency and makes suggestions as appropriate | Identifies hazards and implements appropriate hazard control measures                     | Evaluates own actions and makes judgements about performance and necessary improvements          | Identifies own learning needs and seeks skill development as required                               | Uses calculators                                                                                   |
| Provides assistance and encouragement to other team members | Identifies typical faults and problems and takes remedial action and/or reports to supervisor | Responds to change and workplace challenges                                                  | Identifies and manages risks                                                            | Contributes to workplace responsibilities, such as current work site environmental/sustainability frameworks or management systems | Is open to learning new ideas and techniques                                                        | Uses and operates a range of plant tools and equipment correctly and safely                           |
| Initiates and encourages improvements in team performance       | Rectifies simple faults with tools and equipment                                   | Puts ideas into action                                                                        | Selects and uses appropriate materials, tools and equipment                               | Manages own performance to meet workplace standards                                               |                                                                                                     | Properly starts up, operates and shuts down equipment                                                |
| Identifies and uses the strengths of other team members         |                                                                                   | Maximises use of resources by recycling, re-using or using appropriate disposal methods       | Determines material quantity requirements and conformity to requirements                 | Seeks support to improve work performance                                                        |                                                                                                     |                                                                                                     |
| Relates to people from diverse social, cultural and ethnic backgrounds and with varying physical and mental abilities |                                                                                   |                                                                                             | Carries out inspections and checks                                                         | Cleans up work area, including tools and equipment                                                 |                                                                                                     |                                                                                                     |
| Coordinates and actions tasks                           |                                                                                   |                                                                                             | Prioritises and sequences tasks                                                          |                                                                                                   |                                                                                                     |                                                                                                     |
| Participates in on-site meetings |                                                                                   |                                                                                             | Applies time management skills to ensure work is completed to time requirements           |                                                                                                   |                                                                                                     |                                                                                                     |
|                                                                                                           |                                                                                   |                                                                                             |                                                                                                     |                                                                                                   |                                                                                                     | Uses and operates a range of plant tools and equipment correctly and safely                           |
|                                                                                                           |                                                                                   |                                                                                             |                                                                                                     |                                                                                                   | Uses calculators                                                                                   |
|                                                                                                           |                                                                                   |                                                                                             |                                                                                                     |                                                                                                   |                                                                                                     |

Artibus Innovation
- Carries out pre- and post-operational checks on equipment and machines
- Performs tool and equipment maintenance as required
Packaging Rules

- To achieve this qualification, the candidate must demonstrate competency in:
  - 18 units of competency:
    - 8 core units
    - 10 elective units.

The elective units must ensure the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome and are to be chosen as follows:

- a minimum of 8 and up to 10 units from the elective units listed below
- up to 2 of the units may be chosen from other Certificate III or Certificate IV qualifications in CPC08 or another current Training Package or accredited course.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

CPC30511 Certificate III in Dogging

Modification History

Version  Comment
1     Revised qualification deemed equivalent to CPC30511
2     Elective units revised resulting in a number of unit identifier changes
       Elective imported units replaced with updated version
3     Update superseded imported units from elective list with equivalent current unit for:
       - BSBSMB301A to BSBSMB301
       - BSBSMB406A to BSBSMB406
       - RIIOHS302A to RIIWHS302D
       - TLILIC2001A to TLILIC2001

This version released with CPC08 Version 9.3.

Description

This qualification provides a trade outcome in dogging operations in the construction industry.

Occupational titles may include:

- Dogger.

The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as a specialist field of work.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Employability skill | Industry/enterprise requirements for this qualification include:
--- | ---
**Technology** | - Uses calculators
- Uses and operates a range of tools and equipment correctly and safely
- Properly starts up, operates and shuts down equipment
- Carries out pre- and post-operational checks on equipment and machines
- Performs tool and equipment maintenance as required

**Packaging Rules**

To achieve this qualification, the candidate must demonstrate competency in:

- 13 units of competency:
  - 9 core units
  - 4 elective units.

A maximum of one the four required elective units may be substituted by selecting relevant units of competency from any Certificate III or IV construction qualification or qualification in another endorsed Training Package.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

CPC30611 Certificate III in Painting and Decorating

Modification History

Version Comment

1 Revised qualification deemed equivalent to CPC30611
   Core and elective units revised resulting in a number of unit identifier changes

2 Update superseded imported units from elective list with equivalent current unit for:
   - BSBSMB301A to BSBSMB301
   - BSBSMB406A to BSBSMB406
   This version released with CPC08 Version 9.3.

Description

This qualification provides a trade outcome in painting and decorating for residential and commercial construction work.

Occupational titles may include:
- Painter and decorator.

The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as two specialist fields of work.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

<th>Comment</th>
</tr>
</thead>
</table>
| 1       | Revised qualification deemed equivalent to CPC30711  
Core and elective units revised resulting in a number of unit identifier changes  
Elective imported unit replaced with updated version |
| 2       | Change to elective unit lists:  
CPCCLDG3001A Licence to perform dogging added to elective unit list to correct its omission from the packaging rules, given its status as prerequisite to CPCCLRG3001A |
| 3       | Update superseded imported units from elective list with equivalent current unit for:  
- BSBSMB301A to BSBSMB301  
- BSBSMB406A to BSBSMB406  
- RIIOHS302A to RIIWHS302D  
- TLILIC2001A to TLILIC2001 |

This version released with CPC08 Version 9.3.

#### Description

This qualification provides a trade outcome in rigging in the construction industry.

Occupational titles may include:

- Rigger.

The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as a specialist field of work.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

• Manages own performance to meet workplace standards  
• Seeks support to improve work performance  
• Cleans up work area, including tools and equipment                                                                                                                                                                       |
| **Learning**             | • Identifies own learning needs and seeks skill development as required  
• Is open to learning new ideas and techniques                                                                                                                                                                                                             |
Employability skill | Industry/enterprise requirements for this qualification include:
--- | ---
Technology | • Uses calculators  
• Uses and operates a range of tools and equipment correctly and safely  
• Properly starts up, operates and shuts down equipment  
• Carries out pre- and post-operational checks on equipment and machines  
• Performs tool and equipment maintenance as required

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 15 units of competency:
  - 11 core units
  - 4 elective units.

A maximum of one of the four required elective units may be substituted by selecting relevant units of competency from any Certificate III or IV construction qualification or qualification in another endorsed Training Package.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

Description

This qualification provides a trade outcome in roof tiling for residential and commercial construction work.

Occupational titles may include:

- Roof tiler.

The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as a specialist field of work.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

|                     | • Initiates and encourages improvements in team performance  
|                     | • Identifies and utilises the strengths of other team members  
|                     | • Relates to people from diverse social, cultural and ethnic backgrounds and with varying physical and mental abilities  
|                     | • Coordinates and actions tasks  
|                     | • Participates in on-site meetings  
| **Problem solving** | • Examines tools and equipment prior to use for damage, missing components or other defects  
|                     | • Identifies typical faults and problems and takes remedial action  

### Employability skill

**Industry/enterprise requirements for this qualification include:**

- and/or reports to supervisor
- Rectifies simple faults with tools and equipment

### Initiative and enterprise

- Identifies opportunities to improve resource efficiency and makes suggestions as appropriate
- Responds to change and workplace challenges
- Puts ideas into action
- Maximises use of resources by recycling, re-using or using appropriate disposal methods

### Planning and organising

- Identifies hazards and implements appropriate hazard control measures
- Identifies and manages risks
- Carries out site inspection to identify requirements
- Selects and uses appropriate materials, tools and equipment
- Determines material quantity requirements and checks for conformity to requirements
- Prioritises and sequences tasks
- Applies time management skills to ensure work is completed to time requirements

### Self management

- Evaluates own actions and makes judgements about performance and necessary improvements
- Contributes to workplace responsibilities, such as current workplace environmental/sustainability frameworks or management systems
- Manages own performance to meet workplace standards
- Seeks support to improve work performance
- Cleans up work area, including tools and equipment

### Learning

- Identifies own learning needs and seeks skill development as required
- Is open to learning new ideas and techniques

### Technology

- Uses calculators
- Uses and operates a range of tools and equipment correctly and safely
- Carries out pre- and post-operational checks on equipment and

machines | Performs tool and equipment maintenance as required

Packaging Rules
To achieve this qualification, the candidate must demonstrate competency in:

- 20 units of competency:
  - 15 core units
  - 5 elective units.

A maximum of one of the five required elective units may be substituted by selecting relevant units of competency from any Certificate III or IV construction qualification or qualification in another endorsed Training Package.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

Description

This qualification provides a trade outcome in steelfixing in the construction industry.

Occupational titles may include:
- Steelfixer.

The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as a specialist field of work.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

CPC31311 Certificate III in Wall and Floor Tiling

Modification History

Version Comment
1 Revised qualification deemed equivalent to CPC31311
2 Core and elective units revised resulting in a number of unit identifier changes
3 Update superseded imported units from elective list with equivalent current unit for:
   • BSBSMB301A to BSBSMB301
   • BSBSMB406A to BSBSMB406
   This version released with CPC08 Version 9.3.

Description

This qualification provides a trade outcome in wall and floor tiling for residential and commercial construction work.

Occupational titles may include:
   • Tiler
   • Wall and floor tiler.

The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as a specialist field of work.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

• Performs tool and equipment maintenance as required

**Packaging Rules**

To achieve this qualification, the candidate must demonstrate competency in:

- 19 units of competency:
  - 16 core units
  - 3 elective units.

A maximum of one of the three required elective units may be substituted by selecting relevant units of competency from any Certificate III or IV construction qualification or qualification in another endorsed Training Package.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

CPC31611 Certificate III in Paving

Modification History

Version Comment
1 Revised qualification deemed equivalent to CPC31611
2 Core and elective units revised resulting in a number of unit identifier changes
3 Update superseded imported units from elective list with equivalent current unit for:
   - AHCLSC303A to AHCLSC303
   - BSBSMB301A to BSBSMB301
   - BSBSMB406A to BSBSMB406
   - RIIWMG203A to RIIWMG203D

This version released with CPC08 Version 9.3.

Description

This qualification provides a trade outcome in paving for domestic or commercial projects.

Occupational titles may include:
- Paver.

The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as four specialist fields of work.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

|                     |   • Soil class charts  
|                     |   • Designs  
|                     |   • Understands relevant definitions, terminology, symbols, abbreviations and language  
|                     |   • Records relevant information using standard workplace documentation  
|                     |   • Applies measurements and calculations using appropriate equipment, formulas and records as required  
|                     |   • Reports and records hazards and risks  
| **Teamwork**        | • Works as part of a team  
|                     | • Provides assistance and encouragement to other team members  
|                     | • Initiates and encourages improvements in team performance  
|                     | • Identifies and utilises the strengths of other team members  
|                     | • Relates to people from diverse social, cultural and ethnic backgrounds and with varying physical and mental abilities  
|                     | • Coordinates and actions tasks  
|                     | • Participates in on-site meetings  

### Employability skill | Industry/enterprise requirements for this qualification include:
--- | ---
**Problem solving** | • Examines tools and equipment prior to use for damage, missing components or other defects  
• Identifies typical faults and problems and takes necessary remedial action  
• Rectifies simple faults with tools and equipment  
• Perform routine maintenance as required  
• Checks materials and products for conformity to specifications  
**Initiative and enterprise** | • Identifies opportunities to improve resource efficiency and makes suggestions as appropriate  
• Responds to change and workplace challenges  
• Puts ideas into action  
• Maximises use of resources by recycling, re-using or using appropriate disposal methods  
**Planning and organising** | • Identifies hazards and implements appropriate hazard control measures  
• Selects and uses appropriate materials, tools and equipment  
• Determines material quantity requirements  
• Prioritises and sequences tasks  
• Applies time management skills to ensure work is completed to time requirements  
**Self management** | • Evaluates own actions and makes judgements about performance and necessary improvements  
• Contributes to workplace responsibilities, such as current work site environmental/sustainability frameworks or management systems  
• Manages own performance to meet workplace standards  
• Seeks support to improve work performance  
• Cleans up work area, including tools and equipment  
**Learning** | • Identifies own learning needs and seeks skill development as required  
• Is open to learning new ideas and techniques  
**Technology** | • Uses calculators  
• Uses and operates a range of tools and equipment correctly and

Packaging Rules

Packaging rules

To achieve this qualification, the candidate must demonstrate competency in:

- 21 units of competency:
  - 18 core units
  - 3 elective units.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

CPC31712 Certificate III in Post-Tensioning

Modification History

Version Comment
1 This version first released with CPC08 Version 8.
2 Update superseded imported units from elective list with equivalent current unit for:
   • RIICFW302A to RIICFW302D
   • RIIOHS202A to RIIWHS202D
This version released with CPC08 Version 9.3.

Description

This qualification provides a trade outcome in post-tensioning in the construction industry.

Occupational titles may include:
• post-tensioner.

The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as a specialist field of work.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 17 units of competency:
  - 12 core units
  - 5 elective units.

The elective units must ensure the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome and are to be chosen as follows:

- 5 units from the elective units listed below
- 1 of the units may be chosen from other Certificate III qualifications in CPC08 or another current Training Package or accredited course.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

**Packaging Rules**

To achieve this qualification, the candidate must demonstrate competency in:

- 30 units of competency:
  - 19 core units
  - 11 elective units.

A maximum of two of the required eleven elective units may be substituted by selecting relevant units of competency from any Certificate III or IV construction qualification or qualification in another endorsed Training Package.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

          - BSBSMB406A to BSBSMB406  
          This version released with CPC08 Version 9.3. |
Description

This qualification provides a trade outcome in joinery covering work for residential and commercial applications.

Occupational titles may include:

- Joiner.

The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as a specialist field of work.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Pathways Information

This qualification is suitable for an Australian Apprenticeship pathway.

Licensing/Regulatory Information

Check with relevant state and territory licensing and regulatory authorities. State and territory jurisdictions may have different regulatory requirements.

Entry Requirements

Not applicable.
Employability Skills Summary

Employability skill | Industry/enterprise requirements for this qualification include:

Communication

- Communicates with clients, colleagues and others using effective and appropriate communication techniques, including:
  - Clear and direct communication
  - Active listening
  - Verbal and non-verbal language
  - Questioning to identify and confirm requirements
  - Language and concepts appropriate to cultural differences
- Follows instructions from supervisor and other relevant persons
- Understands, interprets and applies information as required from:
  - Regulatory, legislative, licensing and organisational requirements
  - Environmental and WHS requirements, including safety data sheets (SDS)
  - Codes and standards
  - Plans and drawings
  - Specifications
  - Safety signs and symbols
  - Organisational policies and procedures
- Understands relevant definitions, terminology, symbols, abbreviations and language
- Records relevant information using standard workplace documentation
- Applies measurements and calculations using appropriate equipment, formulas and records as required
- Reports and records hazards and risks

Teamwork

- Works as part of a team
- Provides assistance and encouragement to other team members
- Initiates and encourages improvements in team performance
- Identifies and utilises the strengths of other team members
- Relates to people from diverse social, cultural and ethnic backgrounds and with varying physical and mental abilities
- Coordinates and actions tasks
- Participates in on-site meetings

Problem solving

- Examines tools and equipment prior to use for damage, missing components or other defects
- Identifies typical faults and problems and takes necessary remedial action
- Rectifies simple faults with tools and equipment
- Performs routine maintenance as required
- Checks materials and products for conformity to specifications
- Carries out data input adjustments

**Initiative and enterprise**
- Identifies opportunities to improve resource efficiency and makes suggestions as appropriate
- Responds to change and workplace challenges
- Puts ideas into action
- Maximises use of resources by recycling, re-using or using appropriate disposal methods

**Planning and organising**
- Identifies hazards and implements appropriate hazard control measures
- Selects and uses appropriate materials, tools and equipment
- Determines material quantity requirements
- Prioritises and sequences tasks
- Applies time management skills to ensure work is completed to time requirements

**Self management**
- Evaluates own actions and makes judgements about performance and necessary improvements
- Contributes to workplace responsibilities, such as current work site environmental/sustainability frameworks or management systems
- Manages own performance to meet workplace standards
- Seeks support to improve work performance
- Cleans up work area, including tools and equipment

**Learning**
- Identifies own learning needs and seeks skill development as required
- Is open to learning new ideas and techniques

**Technology**
- Uses calculators
- Uses and operates a range of tools and equipment correctly and safely including computer-controlled equipment
Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 30 units of competency:
  - 16 core units
  - 14 elective units.

A maximum of two of the required fourteen elective units may be substituted by selecting relevant units of competency from any Certificate III or IV construction qualification or qualification in another endorsed Training Package.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

This version released with CPC08 Version 9.3.

Description

This qualification provides a trade outcome in stair building and installation, covering work for residential and commercial applications.

Occupational titles may include:
- Stair builder.

The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as a specialist field of work.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 27 units of competency:
  - 18 core units
  - 9 elective units.

A maximum of two of the required nine elective units may be substituted by selecting relevant units of competency from any Certificate III or IV construction qualification or qualification in another endorsed Training Package.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

CPC32313 Certificate III in Stonemasonry
(Monumental/Installation)

Modification History

Version  Comment
1 Revised qualification deemed not equivalent to CPC32311
   Qualification packaging amended:
   • composition of core revised:
     • CPCCCM2005B Use construction tools and equipment added
     • CPCCST2001A Prepare for stonemasonry construction process deleted
     • CPCCST2002A revised resulting in non-equivalent CPCCST2006A Identify and use stone products
     • CPCCST3005A revised resulting in non-equivalent CPCCST3022A Carry out profile work
   • minor change to elective packaging wording, without changing intent
   • elective unit added:
     • CPCCCM2009A Carry out basic demolition
   • 7 new units rewritten and reinstated into elective pool from previous BCF and BCG Training Packages:
     • CPCCST3015A Apply gilding to stone
     • CPCCST3016A Build solid stonemasonry walls
     • CPCCST3017A Construct stone arches
     • CPCCST3018A Inlay lead to stone
     • CPCCST3019A Lay stonemasonry stairs
     • CPCCST3020A Produce reconstituted stone
     • CPCCST3021A Renovate and restore stone work
   • pathways information added
2 Update superseded imported units from elective list with equivalent current unit for:
   • BSBSMB301A to BSBSMB301
   • BSBSMB406A to BSBSMB406
This version released with CPC08 Version 9.3.
Description

This qualification is designed to meet the needs of stonemasons working with sandstone, limestone, marble and other types of stone and stone products to produce stone monuments, buildings and building components, such as walls, floors, arches, chimneys, stairs, windows, decorative mouldings, fireplaces and benchtops.

Occupational titles may include:
- Construction mason
- Finisher
- Stonemason.

The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as a specialist field of work.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Pathways Information

This qualification is suitable for an Australian Apprenticeship pathway. Refer to CPSISC website for further career and pathway information:

Licensing/Regulatory Information

Check with relevant state and territory licensing and regulatory authorities. State and Territory jurisdictions may have different regulatory requirements for work carried out on heritage structures.

Entry Requirements

Not applicable.
Employability Skills Summary

Employability skill | Industry/enterprise requirements for this qualification
--- | ---
Communication | - Communicates with clients, colleagues and others using effective and appropriate communication techniques, including:
  - Clear and direct communication
  - Active listening
  - Verbal and non-verbal language
  - Questioning to identify and confirm requirements
  - Language and concepts appropriate to cultural differences
- Follows instructions from supervisor and other relevant persons
- Understands, interprets and applies information as required from:
  - Codes and standards
  - Environmental and work health and safety (WHS) requirements, including safety data sheets (SDS)
  - Organisational policies and procedures
  - Plans and drawings
  - Regulatory, legislative, licensing and organisational requirements
  - Safety signs and symbols
  - Specifications
  - Understands relevant definitions, terminology, symbols, abbreviations and language
  - Records relevant information using standard workplace documentation
  - Applies measurements and calculations using appropriate equipment, formulas and records as required
  - Reports and records hazards and risks

Teamwork | - Works as part of a team
- Provides assistance and encouragement to other team members
- Initiates and encourages improvements in team performance
- Identifies and uses the strengths of other team members
- Relates to people from diverse social, cultural and ethnic backgrounds and with varying physical and mental abilities
- Coordinates and actions tasks
- Participates in on-site meetings
Problem solving

- Examines tools and equipment prior to use for damage, missing components or other defects
- Identifies typical faults and problems and takes necessary remedial action
- Rectifies simple faults with tools and equipment
- Performs routine maintenance as required
- Checks materials and products for conformity to specifications
- Carries out data input adjustments
- Manages own performance to meet workplace standards
- Seeks support to improve work performance
- Cleans up work area, including tools and equipment

Initiative and enterprise

- Identifies opportunities to improve resource efficiency and makes suggestions as appropriate
- Responds to change and workplace challenges
- Puts ideas into action
- Maximises use of resources by recycling, re-using or using appropriate disposal methods

Planning and organising

- Identifies hazards and implements appropriate hazard control measures
- Selects and uses appropriate materials, tools and equipment
- Determines material quantity requirements
- Prioritises and sequences tasks
- Applies time management skills to ensure work is completed to time requirements

Self-management

- Evaluates own actions and makes judgements about performance and necessary improvements
- Contributes to workplace responsibilities, such as current work site environmental/sustainability frameworks or management systems

Learning

- Identifies own learning needs and seeks skill development as required
- Is open to learning new ideas and techniques

Technology

- Uses calculators
- Uses and operates a range of tools and equipment correctly and safely
Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 30 units of competency:
  - 21 core units
  - 9 elective units.

The elective units must ensure the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome and are to be chosen as follows:

- 9 units from the elective units listed below
- 2 of the units may be chosen from other Certificate III qualifications in CPC08 or another current Training Package or accredited course.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

CPC32413 Certificate III in Plumbing

Modification History

Version Comment

1 Revised qualification deemed not equivalent to CPC32412
   Qualification packaging amended:
   - core gas unit CPCPGS3058A replaced with non-equivalent unit CPCPGS3061A
   - prerequisite unit to CPCCCM2008B (CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry) added to elective streams where CPCCCM2008B appears
   - Water stream elective unit CPCPFS3033A revised to non-equivalent unit CPCPFS3045A
   - imported units for the purpose of ARC licensing added to the Mechanical Services elective stream:
     - UENEEN101A Apply Occupational Health and Safety regulations, codes and practices in the workplace
     - UENEEN102A Prepare and connect refrigerant tubing and fittings
     - UENEEN105A Position, assemble and start up single head split air conditioning and water heating heat pump systems
     - UENEEN172A Recover, pressure test, evacuate, charge and leak test refrigerants – split systems
   - pathways information added

2 Update superseded imported units from elective list with equivalent current unit for:
   AHCIRG306A to AHCIRG306
   This version released with CPC08 Version 9.3.
Description

This qualification provides a trade outcome in plumbing.

Occupational titles may include:
- Plumber
- Plumber and drainer
- Plumber and gasfitter
- Gasfitter
- Roof plumber.

The qualification has core and elective unit of competency requirements that cover common and specialist skills for the plumbing industry in six specialist streams:
- Stream 1 Water
- Stream 2 Sanitary
- Stream 3 Drainage
- Stream 4 Mechanical services
- Stream 5 Roofing
- Stream 6 Gas services.

The plumbing industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.
Pathways Information
This qualification is suitable for an Australian Apprenticeship pathway.

Licensing/Regulatory Information
This is a licensed occupation. Check with relevant state and territory licensing and regulatory authorities. State and territory jurisdictions may have different regulatory requirements.

Entry Requirements
Not applicable.
Employability Skills Summary

Employability skill | Industry/enterprise requirements for this qualification
--- | ---
Communication | • Communicates with clients, colleagues and others using effective and appropriate communication techniques, including:
  • Clear and direct communication
  • Active listening
  • Verbal and non-verbal language
  • Questioning to identify and confirm requirements
  • Language and concepts appropriate to cultural differences
• Follows instructions from supervisor and other relevant persons
• Understands, interprets and applies information as required from:
  • Regulatory, legislative, licensing and organisational requirements
  • Environmental and WHS requirements, including safety data sheets (SDS)
  • Codes and standards
  • Plans, drawings and specifications
  • Schedules
  • Load tables
  • Designs
  • Safety signs and symbols
  • Organisational policies and procedures
• Understands relevant definitions, terminology, symbols, abbreviations and language
• Uses industry-accepted visual communications, including hand signals
• Reports and records routine workplace and regulatory information including test data
• Applies measurements and calculations using appropriate equipment, formulas and records as required
• Reports and records hazards and risks

Teamwork | • Works as part of a team
• Provides assistance and encouragement to other team members
• Initiates and encourages improvements in team performance
• Works with others to plan and sequence tasks
• Identifies and uses the strengths of other team members
Employability skill

Industry/enterprise requirements for this qualification

- Relates to people from diverse social, cultural and ethnic backgrounds and with varying physical and mental abilities
- Participates in workplace meetings

Problem solving

- Responds effectively to hazards, risks, emergencies and first aid situations
- Examines tools and equipment prior to use for damage, missing components or other defects
- Identifies typical faults and problems and takes remedial actions and/or reports to supervisor
- Performance tests penetration to ensure correct fit and remedies as required
- Rectifies simple faults with tools and equipment
- Locates and clears plumbing blockages
- Tests systems and services
- Calculates water flow rates, ventilation requirements and gas storage capacity
- Identifies typical faults and problems and takes remedial actions and/or reports to supervisor
- Performance tests penetration to ensure correct fit and remedies as required
- Rectifies simple faults with tools and equipment
- Locates and clears plumbing blockages
- Tests systems and services
- Calculates water flow rates, ventilation requirements and gas storage capacity
- Rectifies incorrect roofing installations
- Assesses roof work site safety
- Locates and repairs gas leaks

Initiative and enterprise

- Maximises use of resources by recycling, re-using or using appropriate disposal methods
- Responds to change and workplace challenges
- Designs domestic irrigation systems
- Designs and fabricates roof coverings
- Determines requirements for heating system installations, roof water storage, medical gas pipeline systems, appliance installations, flue installations, and gas piping system purging

Planning and organising

- Prepares work area
- Identifies and obtains necessary documentation
- Collects, analyses and organises workplace information
- Selects and uses appropriate materials, tools and equipment
- Carries out site inspections
- Determines material quantity requirements and conformity to requirements
- Coordinates delivery of materials
- Fabricates, sets out, installs and commissions components,
Employability skill

Industry/enterprise requirements for this qualification

- equipment and systems
- Plans drainage system layouts
- Prioritises and sequences tasks
- Applies time management skills to ensure work is completed to time requirements

Self management

- Recognises obligations and accepts responsibility for own work and safety
- Recognises quality requirements and completes work to expected standard
- Identifies personal career development needs and sets own and team work goals
- Participates in workplace induction
- Cleans up work area, including tools and equipment
- Seeks support to improve work performance

Learning

- Identifies own learning needs and seeks skill development as required
- Is open to learning new ideas and techniques
- Participates in workplace induction

Technology

- Uses electricity and electrical equipment safely
- Uses and operates a range of tools and equipment correctly and safely
- Properly starts up, operates and shuts down equipment
- Identifies technological trends that may affect the plumbing and services sector
- Carries out pre- and post-operational checks on tools and equipment
- Performs tools, equipment and systems maintenance as required
- Installs and adjusts a range of water service and gas controlling and regulating devices, as well as a variety of plumbing related pumps, systems, components and appliances
- Installs, tests and maintains fire protection installations and component assemblies, domestic sprinkler systems, heating ventilation, and air conditioning and air cooling systems
Packaging Rules

Units of competency from a minimum of four of the following six plumbing streams are required for award of this qualification.

Stream 1 Water and Stream 2 Sanitary are mandatory.

The following units of competency are required for award of this qualification:

Stream 1 Water (mandatory): 24 core units and 5 elective units from the water stream

and Stream 2 Sanitary (mandatory): 6 core units and 4 elective units from the sanitary stream.

Plus two of the following four streams:

Stream 3 Drainage: 9 core units and 3 elective units from the drainage stream

Stream 4 Mechanical services: 4 core units and 11 elective units from the mechanical services stream

Stream 5 Roofing: 8 core units and 4 elective units from the roofing stream

Stream 6 Gas services: 12 core units and 5 elective units from the gas services stream

NB: Units of competency achieved in one stream count as credit for the same unit in the core or elective requirements for any other stream.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

## Custom Content Section

Not applicable.
CPC32513 Certificate III in Plumbing (Mechanical Services)

Modification History

Version  Comment

1  Revised qualification deemed not equivalent to CPC32512
   Qualification packaging amended:
   • Water stream core requirements changed from 23 to 24 and Water stream elective requirements changed from 7 to 5 (to align to Water stream requirements in CPC32413)
   • Gas services stream core unit CPCPGS3058A revised to non-equivalent CPCPGS3061A Install and commission Type A gas appliances
   • CPCPWT3020A Connect and install storage tanks to a domestic water supply added as a core unit in Water stream
   • CPCPFS2021A Connect static storage tanks for fixed fire protection systems deleted from Water stream electives
   • Water stream elective unit CPCPFS3033A revised and recoded to CPCPFS3045A Fit sprinkler heads, controls and ancillary equipment
   • prerequisite unit to CPCCCM2008B (CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry) added to elective streams where CPCCCM2008B appears
   • imported units for the purpose of ARC licensing added to the Mechanical Services elective stream:
     • UEEENEEI101A Apply Occupational Health and Safety regulations, codes and practices in the workplace
     • UEEENEEJ102A Prepare and connect refrigerant tubing and fittings
     • UEEENEEJ105A Position, assemble and start up single head split air conditioning and water heating heat pump systems
     • UEEENEEJ172A Recover, pressure test, evacuate, charge and leak test refrigerants – split systems
     • pathways information added

2  Update superseded imported units from elective list with equivalent current unit for:
   • AHCIRG306A to AHCIRG306
   • RIICCM210A to RIICCM210D

This version released with CPC08 Version 9.3.
Description

This qualification provides a trade outcome in plumbing, specialising in mechanical services.

Occupational titles may include:
- Plumber.

The qualification has core and elective unit of competency requirements that cover mechanical services specialist skills and common and other specialist skills for the plumbing industry.

The qualification has options from six specialist streams:
- Stream 1 Mechanical services
- Stream 2 Water
- Stream 3 Sanitary
- Stream 4 Drainage
- Stream 5 Roofing
- Stream 6 Gas services.

The plumbing industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.
Pathways Information

This qualification is suitable for an Australian Apprenticeship pathway.

Licensing/Regulatory Information

This is a licensed occupation. Check with relevant state and territory licensing and regulatory authorities. State and territory jurisdictions may have different regulatory requirements.

Entry Requirements

Not applicable.
Employability Skills Summary

**Employability skill** | **Industry/enterprise requirements for this qualification**
--- | ---
**Communication** | - Communicates with clients, colleagues and others using effective and appropriate communication techniques, including:
  - Clear and direct communication
  - Active listening
  - Verbal and non-verbal language
  - Questioning to identify and confirm requirements
  - Language and concepts appropriate to cultural differences
- Follows instructions from supervisor and other relevant persons
- Understands, interprets and applies information as required from:
  - Regulatory, legislative, licensing and organisational requirements
  - Environmental and WHS requirements, including safety data sheets (SDS)
  - Codes and standards
  - Plans, drawings and specifications
  - Schedules
  - Load tables
  - Designs
  - Safety signs and symbols
  - Organisational policies and procedures
- Understands relevant definitions, terminology, symbols, abbreviations and language
- Uses industry-accepted visual communications, including hand signals
- Reports and records routine workplace and regulatory information including test data
- Applies measurements and calculations using appropriate equipment, formulas and records as required
- Reports and records hazards and risks

**Teamwork**
- Works as part of a team
- Provides assistance and encouragement to other team members
- Initiates and encourages improvements in team performance
- Works with others to plan and sequence tasks
- Identifies and uses the strengths of other team members
- Relates to people from diverse social, cultural and ethnic backgrounds and with varying physical and mental abilities
- Participates in workplace meetings

**Problem solving**
- Responds effectively to hazards, risks, emergencies and first aid situations
- Examines tools and equipment prior to use for damage, missing components or other defects
- Identifies typical faults and problems and takes remedial actions and/or reports to supervisor
- Performance tests penetration to ensure correct fit and remedies as required
- Rectifies simple faults with tools and equipment
- Locates and clears plumbing blockages
- Tests systems and services
- Calculates water flow rates, ventilation requirements and gas storage capacity
- Rectifies incorrect roofing installations
- Assesses roof work site safety
- Locates and repairs gas leaks

**Initiative and enterprise**
- Maximises use of resources by recycling, re-using or using appropriate disposal methods
- Responds to change and workplace challenges
- Designs domestic irrigation systems
- Designs and fabricates roof coverings
- Determines requirements for heating system installations, roof water storage, medical gas pipeline systems, appliance installations, flue installations and gas piping system purging

**Planning and organising**
- Prepares work area
- Identifies and obtains necessary documentation
- Collects, analyses and organises workplace information
- Selects and uses appropriate materials, tools and equipment
- Carries out site inspections
- Determines material quantity requirements and conformity to requirements
- Coordinates delivery of materials
- Fabricates, sets out, installs and commissions components, equipment and systems
- Plans drainage system layouts
- Prioritises and sequences tasks
- Applies time management skills to ensure work is completed to time requirements
Self management • Recognises obligations and accepts responsibility for own work and safety
• Recognises quality requirements and completes work to expected standard
• Identifies personal career development needs and sets own and team work goals
• Participates in workplace induction
• Cleans up work area, including tools and equipment
• Seeks support to improve work performance

Learning • Identifies own learning needs and seeks skill development as required
• Is open to learning new ideas and techniques
• Participates in workplace induction

Technology • Uses electricity and electrical equipment safely
• Uses and operates a range of tools and equipment correctly and safely
• Properly starts up, operates and shuts down equipment
• Identifies technological trends that may affect the plumbing and services sector
• Carries out pre- and post-operational checks on tools and equipment
• Performs tools, equipment and systems maintenance as required
• Installs and adjusts a range of water service and gas controlling and regulating devices, as well as a variety of plumbing related pumps, systems, components and appliances
• Installs, tests and maintains fire protection installations and component assemblies, domestic sprinkler systems, heating ventilation, and air conditioning and air cooling systems

Packaging Rules

Units of competency from a minimum of four of the following six plumbing streams are required for award of this qualification.
Stream 1 Mechanical services and Stream 2 Water are mandatory.
The following units of competency are required for award of this qualification:
Stream 1 Mechanical services (mandatory): 4 core units and 11 elective units from the mechanical services stream
and
Stream 2 Water (mandatory): 24 core units and 5 elective units from the water stream.

*Plus two of the following four streams:* Stream 3 Sanitary: 6 core units and 4 elective units from the sanitary stream
Stream 4 Drainage: 9 core units and 3 elective units from the drainage stream
Stream 5 Roofing: 8 core units and 4 elective units from the roofing stream
Stream 6 Gas services: 12 core units and 5 elective units from the gas services stream

NB: Units of competency achieved in one stream count as credit for the same unit in the core or elective requirements for any other stream.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

CPC32612 Certificate III in Roof Plumbing

Modification History

Version Comment
1 Revised qualification deemed not equivalent to CPC32611
   Change to core units:
   • a number of units replaced with updated versions
   • a number of units revised resulting in unit identifier changes
   • CPCPCM2011A replaced with imported unit HLTFA211A
   • Change to elective units:
     • a number of units replaced with updated versions

2 Update superseded imported units from elective list with equivalent current unit for:
   RIICCM210A to RIICCM210D
   This version released with CPC08 Version 9.3.
Description

This qualification provides a trade outcome in roof plumbing.

Occupational titles may include:

- Roof plumber.

The qualification has core and elective unit of competency requirements that cover some common skills for the plumbing industry, as well as roof plumbing specialist units of competency.

The plumbing industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

</table>
| **Problem solving** | • Responds effectively to hazards, risks, emergencies and first aid situations  
                          • Examines tools and equipment prior to use for damage, missing components or other defects  
                          • Identifies typical faults and problems and takes remedial actions and/or reports to supervisor  
                          • Rectifies simple faults with tools and equipment  
                          • Locates and clears plumbing blockages  
                          • Tests systems and components  
                          • Rectifies incorrect roofing installations  
                          • Assesses roof work site safety |
| **Initiative and enterprise** | • Maximises use of resources by recycling, re-using or using appropriate disposal methods  
                                 • Responds to change and workplace challenges  
                                 • Designs and fabricates roof coverings  
                                 • Determines requirements for roof water storage |
| **Planning and organising** | • Prepares work area  
                               • Identifies and obtains necessary documentation  
                               • Collects, analyses and organises workplace information  
                               • Selects and uses appropriate materials, tools and equipment  
                               • Carries out site inspections  
                               • Determines material quantity requirements and conformity to requirements  
                               • Coordinates delivery of materials  
                               • Determines installation requirements  
                               • Fabricates, sets outs and installs metal roofing and cladding components and systems and pipe systems  
                               • Installs and operates drainage systems  
                               • Prioritises and sequences tasks  
                               • Applies time management skills to ensure work is completed to time requirements |
| **Self management** | • Recognises obligations and accepts responsibility for own work and safety  
                          • Recognises quality requirements and completes work to expected standard |
Employability skill | Industry/enterprise requirements for this qualification include:
--- | ---
| • Identifies personal career development needs and sets own and team work goals  
• Participates in workplace induction  
• Cleans up work area, including tools and equipment  
• Seeks support to improve work performance
| Learning | • Identifies own learning needs and seeks skill development as required  
• Is open to learning new ideas and techniques  
• Participates in workplace induction
| Technology | • Uses electricity and electrical equipment safely  
• Uses and operates a range of tools and equipment correctly and safely  
• Properly starts up, operates and shuts down equipment  
• Identifies technological trends that may affect the plumbing and services sector  
• Carries out pre- and post-operational checks on tools and equipment  
• Performs tool and equipment maintenance as required

Packaging Rules
To achieve this qualification, the candidate must demonstrate competency in:
• 25 units of competency:  
  • 22 core units  
  • 3 elective units.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

CPC32713 Certificate III in Gas Fitting

Modification History

Version  Comment

1  Revised qualification deemed not equivalent to CPC32712
   - core unit CPCPGS3061A Install and commission Type A gas appliances revised, replacing non-equivalent CPCPGS3058A
   - prerequisite unit to CPCCCM2008B (CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry) added to elective list
   - pathways information added

2  Update superseded imported units from elective list with equivalent current unit for: RIICCM210A to RIICCM210D
   This version released with CPC08 Version 9.3.

Description

This qualification provides a trade outcome in gas fitting.

Occupational titles may include:

- Gas fitter.

The qualification has core and elective unit of competency requirements that cover some common skills for the plumbing industry, as well as gas fitting specialist units of competency.

The plumbing industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.
Pathways Information
This qualification is suitable for an Australian Apprenticeship pathway.

Licensing/Regulatory Information
This is a licensed occupation. Check with relevant state and territory licensing and regulatory authorities. State and territory jurisdictions may have different regulatory requirements.

Entry Requirements
Not applicable.
Employability Skills Summary

Employability skill | Industry/enterprise requirements for this qualification

Communication
- Communicates with clients, colleagues and others using effective and appropriate communication techniques, including:
  - Clear and direct communication
  - Active listening
  - Verbal and non-verbal language
  - Questioning to identify and confirm requirements
  - Language and concepts appropriate to cultural differences
- Follows instructions from supervisor and other relevant persons
- Understands, interprets and applies information as required from:
  - Regulatory, legislative, licensing and organisational requirements
  - Environmental and WHS requirements, including safety data sheets (SDS)
  - Codes and standards
  - Plans, drawings and specifications
  - Schedules
  - Load tables
  - Designs
  - Safety signs and symbols
  - Organisational policies and procedures
- Understands relevant definitions, terminology, symbols, abbreviations and language
- Uses industry-accepted visual communications, including hand signals
- Reports and records routine workplace and regulatory information including test data
- Applies measurements and calculations using appropriate equipment, formulas and records as required
- Reports and records hazards and risks
- Produces drawings and sketches

Teamwork
- Works as part of a team
- Provides assistance and encouragement to other team members
- Initiates and encourages improvements in team performance
- Works with others to plan and sequence tasks
• Identifies and uses the strengths of other team members
• Relates to people from diverse social, cultural and ethnic backgrounds and with varying physical and mental abilities
• Participates in workplace meetings

**Problem solving**

• Responds effectively to hazards, risks, emergencies and first aid situations
• Examines tools and equipment prior to use for damage, missing components or other defects
• Identifies typical faults and problems and takes remedial actions and/or reports to supervisor
• Rectifies simple faults with tools and equipment
• Tests systems and components
• Calculates ventilation requirements and gas storage capacity
• Locates and repairs gas leaks
• Assesses roof work site safety

**Initiative and enterprise**

• Maximises use of resources by recycling, re-using or using appropriate disposal methods
• Responds to change and workplace challenges
• Determines requirements for heating system installations, appliance installations, flue installations and gas piping system purging

**Planning and organising**

• Prepares work area
• Identifies and obtains necessary documentation
• Collects, analyses and organises workplace information
• Selects and uses appropriate materials, tools and equipment
• Carries out site inspections
• Determines material quantity requirements and conformity to requirements
• Coordinates delivery of materials
• Determines installation requirements
• Fabricates, sets out, installs and commissions components, equipment and systems
• Prioritises and sequences tasks
• Applies time management skills to ensure work is completed to time requirements

**Self management**

• Recognises obligations and accepts responsibility for own work and safety
• Recognises quality requirements and completes work to expected standard
• Identifies personal career development needs and sets own and team work goals
• Participates in workplace induction
• Cleans up work area, including tools and equipment
• Seeks support to improve work performance

**Learning**

• Identifies own learning needs and seeks skill development as required
• Is open to learning new ideas and techniques
• Participates in workplace induction

**Technology**

• Uses electricity and electrical equipment safely
• Uses and operates a range of tools and equipment correctly and safely
• Properly starts up, operates and shuts down equipment
• Identifies technological trends that may affect the plumbing and services sector
• Carries out pre- and post-operational checks on tools and equipment
• Performs tool and equipment maintenance as required
Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 32 units of competency:
  - 26 core units
  - 6 elective units.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

CPC32813 Certificate III in Fire Protection

Modification History

Version Comment

1 Revised qualification deemed not equivalent to CPC32812
   - four core units revised resulting in non-equivalence and changes to codes:
     - CPCPFS3044A Install distribution and range pipes
     - CPCPFS3045A Fit off sprinkler heads, controls and ancillary equipment
     - CPCPFS3046A Test the integrity of water-based fire protection systems using pressure
     - CPCPFS3047A Test and maintain automatic fire sprinklers
   - two new units added to elective pool:
     - CPCPFS3048A Install fixed fire pumpsets
     - CPCPFS3049A Conduct preventive maintenance on fixed fire pumpsets
   - pathways information added

2 Update superseded imported units from elective list with equivalent current unit for:
   RIICCM210A to RIICCM210D
   This version released with CPC08 Version 9.3.
Description

This qualification provides a trade outcome in installing, testing and maintaining fire protection systems.

Occupational titles may include:

- Fire protection systems technician.

The qualification has core and elective unit of competency requirements that cover some common skills for the plumbing industry, as well as fire protection specialist units of competency.

The plumbing industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Pathways Information

This qualification is suitable for an Australian Apprenticeship pathway.

Licensing/Regulatory Information

This is a licensed occupation. Check with relevant state and territory licensing and regulatory authorities. State and territory jurisdictions may have different regulatory requirements.

Entry Requirements

Not applicable.
Employability Skills Summary

Employability skill | Industry-enterprise requirements for this qualification

CPC32912 Certificate III in Construction Crane Operations

Modification History

<table>
<thead>
<tr>
<th>Version</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>This version first released with CPC08 Version 8.</td>
</tr>
<tr>
<td>2</td>
<td>Update superseded imported units from elective list with equivalent current unit for: TLILIC2005A to TLILIC2005. This version released with CPC08 Version 9.3.</td>
</tr>
</tbody>
</table>
Description

This qualification provides a trade outcome in mobile crane operations in the residential and commercial construction industry. Due to the high risk nature of the job role, the qualification provides a strong focus on safety requirements.

Occupational titles may include:
- licensed crane operator.

The qualification has core unit of competency requirements that cover common skills, as well as specialist skills for crane operators in two specialist streams:
- Stream 1 20 tonne (C2) licence
- Stream 2 60 tonne (C6) licence.

Additional licensing for rigging and elevated work platforms is available depending on the choice of elective units of competency.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Pathways Information

The following CPC08 qualifications provide a pathway into this qualification:
- CPC20112 Certificate II in Construction
- CPC30211 Certificate III in Carpentry
- CPC30511 Certificate III in Dogging
- CPC30711 Certificate III in Rigging.
Licensing/Regulatory Information

This qualification is recognised by the Crane Industry Council of Australia as entry-level national training for crane operators and is suitable for a traineeship.

This is a licensed occupation. Users should check requirements with their relevant licensing authority.

Entry Requirements

Not applicable.

CPC40110 Certificate IV in Building and Construction (Building)

Modification History

Version | Comment
--- | ---
1 | Nil
2 | Revised qualification deemed equivalent to CPC40110
   - two new sustainability elective units added:
     - CPCCUS4002A Use building science principles to construct energy efficient buildings
     - CPCCUS4003A Maximise energy efficiency through applied trade skills
3 | imported elective units updated
4 | minor editorial changes to elective packaging rules, without changing intent
5 | Version 5 of this qualification replaces superseded equivalent elective unit CPCCOHS1001A with CPCCWHS1001 Prepare to work safely in the construction industry
6 | Update superseded imported units from elective list with equivalent current unit for:
   - BSBITU201A to BSBITU201
   - BSBITU202A to BSBITU202
   - BSBITU301A to BSBITU301
   - BSBMG411A to BSBPMG411
   - BSBMG415A to BSBPMG415
   - BSBPMG522A to BSBPMG522
   - BSBMB403A to BSBMB403
   - BSBMB402A to BSBMB402
   - BSBMB404A to BSBMB404
   - BSBMB405B to BSBMB405
   - BSBWOR401A to SBBLDR402
   - BSBWOR402A to SBBLDR403
   - TAEDEL402A to TAEDEL402
   - TAEDEL402B to TAEDEL402
This version released with CPC08 Version 9.3.
7 | Modification to the version 6 modification comment, above, to fix typo. This version released with CPC08 Version 9.4.
Description

This qualification is designed to meet the needs of builders and managers of small to medium-sized building businesses.

The builder may also be the appropriately licensed person with responsibility under the relevant building licensing authority in the State or Territory. Builder licensing varies across States and Territories and additional requirements to attainment of this qualification may be required.

Occupational titles may include:
- Builder
- Construction manager.

The qualification has core unit of competency requirements that cover common skills for the construction industry.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Additional units of competency may be required to meet builder registration requirements in various States and Territories.

Pathways Information

This qualification is suitable for an Australian Apprenticeship pathway.

Licensing/Regulatory Information

Check with relevant state and territory licensing and regulatory authorities. State and territory jurisdictions may have different regulatory requirements.

Entry Requirements

Not applicable.
Employability Skills Summary

**Employability skill**

**Communication**

- Communicates work health and safety (WHS) policies and procedures
- Participates in ensuring compliance with standards, regulations and policies
- Communicates effectively with a range of relevant parties through a range of media
- Establishes on-site communication systems
- Facilitates site meetings
- Articulates complex ideas clearly
- Interprets a range of complex and technical documents, including relevant regulatory, legislative and licensing requirements, codes and standards, plans, drawings and specifications, schedules, site files, contracts, orders, development approvals and organisational policies and procedures
- Analyses and evaluates reports and reference materials
- Understands relevant definitions, terminology, symbols and language
- Maintains and checks logs, records and documents
- Prepares a range of documents, including construction contracts, plans, sketches and drawings and specifications, reports, tenders, schedules, building applications and submissions and file notes
- Reports and records hazards, risks and project costs
- Negotiates conflict and dispute resolution
- Analyses a range of data, including company and stakeholder resource consumption and waste product volumes

**Teamwork**

- Conducts briefings with team members
- Coordinates a range of team members and activities
- Keeps team informed of work practices, quality requirements and required actions
- Relates positively to fellow workers and the management team
- Relates to people from diverse social, cultural and ethnic backgrounds and with varying physical and mental abilities
- Seeks expert advice where appropriate
- Works collaboratively with relevant stakeholders
- Understands various stakeholders' roles
- Supervises and checks others' work, monitors work processes and ensures safe work practices

**Problem solving**

- Assesses structural integrity of residential and commercial low rise
- Performs various calculations relating to rise and fall amounts, estimating resource acquisition and costs; measuring levels, heights and gradients; structural analysis; drawing dimensions; setting out of construction projects; comparisons of alternative water management systems; waste management minimisation strategies; and thermal efficiency, rated capacity and working load limits
- Examines tools and equipment prior to use for damage, missing components or other defects
- Identifies and rectifies faults
- Responds effectively to hazards, risks and emergencies
- Analyses problems and applies appropriate remedial solutions
- Resolves business disputes
- Deals with customer complaints and disputes
- Deals with contract variations
- Takes action to minimise contract penalties
- Analyses rejected building applications and determines the likely success of an appeal or a resubmission
- Devises approaches, implements and reflects on environmental and water, energy and resource efficiency management policies and procedures relevant to work site to improve environmental sustainability, and shares alternative approaches as required

**Initiative and enterprise**

- Evaluates properties of construction materials and selects appropriate materials based on evaluation
- Develops compliant, alternative solutions to construction problems
- Assesses thermal efficiency of buildings and reviews design solutions for effectiveness and compliance
- Identifies opportunities for improved water management
- Evaluates effective strategies for insulating structures
- Develops waste management strategies and dispute resolution procedures
- Identifies environmental and resource efficiency improvements, applies knowledge about resource use to organisational activities and customer service, and develops resource efficiency tools

**Planning and organising**

- Plans and coordinates various work operations
- Prepares project schedules
- Participates in effective implementation of organisation's operational plans
- Plans and organises on-site activities and implements procedures associated with building and construction work
- Identifies and organises resource requirements and obtains supply
information
- Supervises various administrative and work processes, including claims and payments, insurance coverage, payroll systems and tax systems
- Collects, analyses and organises workplace information and data
- Plans and organises inspections
- Organises testing of construction materials to ensure suitability

Self management
- Manages own performance to ensure required levels of service standards, work quality and professional competence
- Manages work priorities and professional development
- Uses feedback to improve own performance
- Organises and completes daily work activities

Learning
- Is open to new ideas and techniques
- Seeks feedback on personal performance
- Uses information effectively to improve work performance
- Learns from colleagues as part of effective teamwork

Technology
- Operates office equipment
- Uses computer equipment and relevant software
- Uses cameras
- Assesses new and emerging technologies for application to construction processes
- Uses a range of tools and equipment, including technical instruments and surveying equipment
- Maintains tools and equipment as required
- Uses technology to improve efficiency and effectiveness of managing work

Packaging Rules
To achieve this qualification, the candidate must demonstrate competency in:
- 16 units of competency:
  - 13 core units
  - 3 elective units.

The elective units must be selected as follows:
- all three elective units may be selected from the electives listed below
- two of the three elective units may be selected from Certificate III, Certificate IV or Diploma from another endorsed Training Package or from CPC08, provided that at least one unit is from Certificate IV and the industry context is maintained.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

Core units

BSBSMB406A Manage small business finances
CPCCBC4001A Apply building codes and standards to the construction process for low rise building projects
CPCCBC4002A Manage occupational health and safety in the building and construction workplace
CPCCBC4003A Select and prepare a construction contract
CPCCBC4004A Identify and produce estimated costs for building and construction projects
CPCCBC4005A Produce labour and material schedules for ordering
CPCCBC4006B Select, procure and store construction materials for low rise projects
CPCCBC4007A Plan building or construction work
CPCCBC4008B Conduct on-site supervision of building and construction projects
CPCCBC4009B Apply legal requirements to building and construction projects
CPCCBC4010B Apply structural principles to residential low rise constructions
CPCCBC4011B Apply structural principles to commercial low rise constructions
CPCCBC4012B Read and interpret plans and specifications

### Employability skill

**Industry/enterprise requirements for this qualification include:**

- Takes action to minimise contract penalties
- Identifies and rectifies faults
- Responds effectively to hazards, risks and emergencies
- Analyses problems and applies remedial solutions
- Resolves business disputes
- Deals with contract variations
- Takes action to minimise contract penalties
- Analyses rejected building applications and determines the likely success of an appeal or a resubmission
- Devises approaches, implements and reflects on environmental and water, energy and resource efficiency management policies and procedures relevant to work site to improve environmental sustainability and shares alternative approaches as required

### Initiative and enterprise

- Acts with initiative and foresight to ensure legal requirements are applied accurately
- Develops compliant, alternative solutions to construction problems
- Evaluates properties of construction materials and selects appropriate materials based on evaluation
- Identifies opportunities for improved water management
- Evaluates effective strategies for insulating structures
- Develops waste management strategies and dispute resolution procedures
- Identifies environmental and resource efficiency improvements, applies knowledge about resource use to organisational activities and customer service and develops resource efficiency tools

### Planning and organising

- Plans and coordinates various work operations
- Prepares project schedule
- Participates in effective implementation of organisation’s operational plans
- Plans and organises on-site activities and implements procedures associated with building and construction work
- Identifies and organises resource requirements and obtains supply information
- Supervises various administrative and work processes, including payments
- Collects, analyses and organises workplace information and data
### Employability skill

**Industry/enterprise requirements for this qualification include:**

- Plans and organises inspections
- Organises testing of construction materials to ensure suitability

#### Self management

- Manages own performance to ensure required levels of service standards, work quality and professional competence
- Manages work priorities and professional development
- Uses feedback to improve own performance
- Organises and completes daily work activities

#### Learning

- Is open to new ideas and techniques
- Seeks feedback on personal performance
- Uses information effectively to improve work performance
- Learns from colleagues as part of effective teamwork

#### Technology

- Operates office equipment and computers
- Uses digital cameras
- Uses technology to improve efficiency and effectiveness of managing work

### Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 15 units of competency:
  - 9 core units
  - 6 elective units.

The electives may be selected as follows:

- all six elective units may be selected from the list below
- two of the six elective units may be selected from a Certificate IV qualification in another endorsed Training Package or within CPC08 Construction, Plumbing and Services Training Package, ensuring the industry context of the qualification is maintained
- one of the six elective units may be selected from either Certificate III or Diploma level.
Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

**Packaging Rules**

To achieve this qualification, the candidate must demonstrate competency in:

- 15 units of competency:
  - 8 core units
  - 7 elective units.
The elective units are to be chosen as follows:

- up to 7 units from general elective units
- up to 3 units from qualifications in CPC08 or another current Training Package or state accredited course, provided the integrity of the AQF alignment is ensured, they contribute to a valid, industry-supported vocational outcome, and that no more than:
  - 2 units are from a Certificate IV qualification
  - 1 unit is from a Certificate III or Diploma qualification.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

CPC40408 Certificate IV in Building and Construction (Sales)

Modification History

Version Comment

1 Revised qualification deemed equivalent to CPC40408

2 Core and elective units revised resulting in a number of unit identifier changes

3 Update superseded imported units from elective list with equivalent current unit for:
   - BSBCUS402B to BSBCUS402
   - BSBITU201A to BSBITU201
   - BSBITU202A to BSBITU202
   - BSBITU301A to BSBITU301
   - BSBMGT403A to BSBMGT403
   - BSBRES401A to BSBRES401
   - BSBSMB401A to BSBSMB401
   - BSBWRT401A to BSBWRT401

This version released with CPC08 Version 9.3.
Description

This qualification is designed to meet the needs of sales consultant in the building and construction industry.

Occupational titles may include:
- Building sales consultant.

The qualification has core unit of competency requirements that cover common skills for the construction industry.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Additional units of competency may be required to meet builder registration requirements in various States and Territories.

Description

This qualification is designed to meet the needs of site managers and supervisors in the building and construction industry.

Occupational titles may include:

- Building site manager
- Building site supervisor.

The qualification has core unit of competency requirements that cover common skills for the construction industry.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Additional units of competency may be required to meet builder registration requirements in various States and Territories.

Pathways information

This qualification is suitable for an Australian Apprenticeship pathway.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Check with relevant state and territory licensing and regulatory authorities. State and territory jurisdictions may have different regulatory requirements.

Entry Requirements

Not applicable.
## Employability Skills Summary

**Employability skill** | **Industry/enterprise requirements for this qualification include:**
--- | ---
**Communication** | • Communicates work health and safety (WHS) policies and procedures  
• Participates in ensuring compliance with standards, regulations and policies  
• Communicates effectively with a range of relevant parties through a range of media  
• Establishes on-site communication systems  
• Facilitates site meetings  
• Articulates complex ideas clearly  
• Interprets a range of complex and technical documents, including relevant regulatory, legislative, licensing and registration requirements, codes and standards, plans, drawings and specifications, contracts, schedules, site files, development approvals, and organisational policies and procedures  
• Analyses and evaluates reports and reference materials  
• Understands relevant definitions, terminology, symbols and language  
• Maintains and checks logs, records and documents  
• Prepares a range of documents, including construction contracts, plans, sketches and drawings and specifications, reports, tenders, schedules, building applications and submissions and file notes  
• Reports and records hazards and risks  
• Negotiates conflict and dispute resolution  
• Analyses a range of data, including company and stakeholder resource consumption and waste product volumes

**Teamwork** | • Conducts briefings with team members  
• Coordinates a range of team members and activities  
• Keeps team informed of work practices, quality requirements and required actions  
• Relates positively to fellow workers and the management team  
• Relates to people from diverse social, cultural and ethnic backgrounds and with varying physical and mental abilities  
• Seeks expert advice where appropriate  
• Works collaboratively with relevant stakeholders  
• Understands various stakeholders’ roles  
• Supervises and checks others’ work, monitors work processes and ensures safe work practices
Employability skill

Industry/enterprise requirements for this qualification include:

- Discusses ideas with team members

Problem solving

- Assesses structural integrity of residential and commercial low rise buildings
- Performs various calculations relating to estimating resource acquisition and costs, rise and fall amounts measurement of levels, heights and gradients, structural analysis, drawing dimensions, setting out of construction projects, comparisons of alternative water management systems, waste management minimisation strategies and thermal efficiency, rated capacity and working load limits and budgeting and forecasting
- Examines tools and equipment prior to use for damage, missing components or other defects
- Identifies and rectifies faults
- Responds effectively to hazards, risks and emergencies
- Analyses problems and applies appropriate remedial solutions
- Resolves business disputes
- Deals with customer complaints and disputes
- Analyses rejected building applications and determines the likely success of an appeal or a resubmission
- Devises approaches, implements and reflects on environmental and water, energy and resource efficiency management policies and procedures relevant to work site to improve environmental sustainability and shares alternative approaches as required

Initiative and enterprise

- Evaluates properties of construction materials and selects appropriate materials based on evaluation
- Develops compliant, alternative solutions to construction problems
- Assesses thermal efficiency of buildings and reviews design solutions for effectiveness and compliance
- Identifies risks and hazards
- Identifies opportunities for improved water management
- Evaluates effective strategies for insulating structures
- Develops waste management strategies and dispute resolution procedures
- Identifies environmental and resource efficiency improvements, applies knowledge about resource use to organisational activities and customer service and develops resource efficiency tools
Industry/enterprise requirements for this qualification include:

Planning and organising
- Plans and coordinates various work operations
- Prepares project schedules
- Participates in effective implementation of organisation's operational plans
- Plans and organises on-site activities and implements procedures associated with building and construction work
- Identifies and organises resource requirements and obtains supply information
- Supervises various administrative and work processes, including claims and payments, insurance coverage, payroll systems and tax systems
- Collects, analyses and organises workplace information and data
- Plans and organises inspections
- Organises testing of construction materials to ensure suitability

Self management
- Manages own performance to ensure required levels of service standards, work quality and professional competence
- Manages work priorities and professional development
- Uses feedback to improve own performance
- Organises and completes daily work activities

Learning
- Is open to new ideas and techniques
- Seeks feedback on personal performance
- Uses information effectively to improve work performance
- Learns from colleagues as part of effective teamwork

Technology
- Operates office equipment
- Uses computer equipment and relevant software
- Uses cameras
- Assesses new and emerging technologies for application to construction processes
- Uses a range of tools and equipment, including technical instruments and surveying equipment
- Maintains tools and equipment as required
- Uses technology to improve efficiency and effectiveness of managing work
Employability skill

Industry/enterprise requirements for this qualification include:

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 15 units of competency:
  - 9 core units
  - 6 elective units.

The elective units must ensure the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome and are to be chosen as follows:

- all six elective units may be selected from the elective units listed below
- two of the six elective units may be selected from a Certificate IV qualification in another endorsed Training Package or from CPC08 Construction, Plumbing and Services Training Package
- one of the six elective units may be selected from either Certificate III or Diploma level.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

CPC40611 Certificate IV in Building and Construction (Specialist Trades)

Modification History

Version  Comment
1 Revised qualification deemed equivalent to CPC40611
2 Core and elective units revised resulting in a number of unit identifier changes
3 Addition of the following units to elective unit list to correct their omission from the packaging rules, given their status as prerequisite to CPCCLRG4001A and CPCCLSF4001A respectively:
   - CPCCLRG3002A Licence to perform rigging intermediate level
   - CPCCLSF3001A Licence to erect, alter and dismantle scaffolding intermediate level
4 Version 4 of this qualification replaces superseded equivalent elective unit CPCCOHS1001A with CPCCWHIS1001 Prepare to work safely in the construction industry
5 Update superseded imported units from elective list with equivalent current unit for:
   - BSBCUS301B to BSBCUS301
   - BSBITU201A to BSBITU201
   - BSBITU202A to BSBITU202
   - BSBITU301A to BSBITU301
   - BSBMGT403A to BSBMGT403
   - BSBSMB401A to BSBSMB401
   - BSBWOR402A to BSBWOR402A
   - BSBWRT401A to BSBWRT401A
   - TLILIC3006A to TLILIC3006
   - TLILIC3008A to TLILIC3008
   - TLILIC4009A to TLILIC4009
   - TLILIC4010A to TLILIC4010
   - TLILIC4011A to TLILIC4011
This version released with CPC08 Version 9.3.
Description

This qualification is designed to meet the needs of experienced tradespersons seeking to expand their skills in a diverse range of technical areas. The qualification also reflects the needs of tradespersons responsible for managing projects.

Occupational titles may include:
- Building manager and supervisor
- Heritage restorer
- Crane operator
- Rigger.

The qualification has core unit of competency requirements that cover common skills for the construction industry. An entry requirement for the Heritage restoration stream is completion of one of the following Certificate III qualifications or their equivalent:
- Bricklaying/Blocklaying
- Carpentry or Carpentry and Joinery
- Painting and Decorating
- Solid Plastering
- Stonemasonry (Monumental/Installation).

An entry requirement for the Refractory bricklaying stream is completion of the Certificate III in Bricklaying/Blocklaying or equivalent.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Additional units of competency may be required to meet builder registration requirements in various States and Territories.

</tbody>
</table>

### Self management

- Manages own performance to ensure required levels of service standards, work quality and professional competence
- Manages work priorities and professional development
- Uses feedback to improve own performance
- Organises and completes daily work activities
- Manages ongoing compliance with codes and standards

### Learning

- Is open to new ideas and techniques
- Seeks feedback on personal performance
- Uses information effectively to improve work performance
- Learns from colleagues as part of effective teamwork
- Contributes to the learning of others by ensuring that workers are informed of required application of codes and standards

### Technology

- Uses and operates a range of tools and equipment correctly and safely
- Properly starts up, operates and shuts down equipment
- Carries out pre- and post-operational checks on equipment and machines
- Performs tools and equipment maintenance as required
- Operates office equipment
- Uses computer equipment and relevant software
- Uses cameras

---

### Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:
• 15 units of competency:
  • 4 common core units
  • all core units for one of the following streams:
    • heritage restoration (six units)
    • refractory bricklaying (two units)
    • crane operations (two units)
    • rigging (two units)
  • elective units (number to take the total number of units completed to 15).

The elective units may be selected as follows:
• all electives may be selected from the list below
• two of the required number of elective units may be selected from a Certificate III, IV or Diploma qualification in another endorsed Training Package or within CPC08 Construction, Plumbing and Services Training Package, ensuring the industry context of the qualification is maintained.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

CPC40708 Certificate IV in Building and Construction (Trade Contracting)

Modification History

Version  Comment
1  Revised qualification deemed equivalent to CPC40708
2  Core and elective units revised resulting in a number of unit identifier changes
4  Version 4 of this qualification replaces superseded equivalent elective unit CPCCOHS1001A with CPCCWHS1001 Prepare to work safely in the construction industry
5  Update superseded imported units from elective list with equivalent current unit for:
   - BSBITU201A to BSBITU201
   - BSBITU202A to BSBITU202
   - BSBITU301A to BSBITU301
   - BSBMGT403A to BSBMGT403
   - BSBPMG510A to BSBPMG522
   - BSBSMB401A to BSBSMB401
   - BSBSMB402A to BSBSMB402
   - BSBSMB404A to BSBSMB404
   - BSBSMB405B to BSBSMB405
   - BSBWOR402A to BSBWOR402
   - BSBWRT401A to BSBWRT401
   - TAEDEL402A to TAEDEL402

This version released with CPC08 Version 9.3.
Description

This qualification is designed to meet the needs of trade contractors who manage trade contracting businesses.

Occupational titles may include:
- Trade contractor.

The qualification has core unit of competency requirements that cover common skills for the construction industry.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Additional units of competency may be required to meet builder registration requirements in various States and Territories.

**Packaging Rules**

To achieve this qualification, the candidate must demonstrate competency in:

- 15 units of competency:
  - 10 core units
  - 5 elective units.

The elective units are to be chosen as follows:

- up to 5 units from general elective units
- up to 3 units from qualifications in CPC08 or another current Training Package or state accredited course, provided the integrity of the AQF alignment is ensured, they
contribute to a valid, industry-supported vocational outcome, and that no more than:

- 2 units are from a Certificate IV qualification
- 1 unit is from a Certificate III or Diploma qualification.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

Description

This qualification provides an outcome in trade contracting for swimming pool and spa construction.

Occupational titles may include:
- Swimming pool and spa builder.

The qualification has core unit of competency requirements that cover common supervision and planning skills for the construction industry, as well as elective units common to a range of Certificate IV in Building and Construction qualifications.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Additional units of competency may be required to meet registration requirements in various States and Territories.

<tr>
<td></td>
<td>• Seeks expert advice where appropriate</td>
</tr>
<tr>
<td><strong>Problem solving</strong></td>
<td>• Assesses the structural integrity of a range of swimming</td>
</tr>
<tr>
<td></td>
<td>pool and spa structures</td>
</tr>
<tr>
<td></td>
<td>• Performs various calculations relating to rise and fall</td>
</tr>
</tbody>
</table>
### Employability skill

**Industry/enterprise requirements for this qualification include:**

- Examines tools and equipment prior to use for damage, missing components or other defects
- Identifies and rectifies faults
- Responds effectively to hazards, risks and emergencies
- Analyses problems and applies appropriate remedial solutions
- Resolves business disputes
- Deals with customer complaints and disputes
- Devises approaches, implements and reflects on environmental and water, energy and resource efficiency management policies and procedures relevant to work site to improve environmental sustainability and shares alternative approaches as required

### Initiative and enterprise

- Evaluates properties of swimming pool and spa building materials and selects appropriate materials based on evaluation
- Develops compliant, alternative solutions to construction problems
- Assesses thermal efficiency of buildings and reviews design solutions for effectiveness and compliance
- Identifies opportunities for improved water management
- Evaluates effective strategies for insulating structures
- Develops waste management strategies and dispute resolution procedures
- Identifies environmental and resource efficiency improvements, applies knowledge about resource use to organisational activities and customer service, and develops resource efficiency tools

### Planning and organising

- Plans and coordinates various work operations
- Prepares project schedules
- Participates in effective implementation of organisation's operational plans
- Plans and organises on-site activities and implements
<table>

<tbody>
<tr>
<td></td>
<td>procedures associated with building and construction work</td>
</tr>
<tr>
<td></td>
<td>- Identifies and organises resource requirements and obtains supply information</td>
</tr>
<tr>
<td></td>
<td>- Supervises various administrative and work processes, including claims and payments, insurance coverage, payroll systems and tax systems</td>
</tr>
<tr>
<td></td>
<td>- Collects, analyses and organises workplace information and data</td>
</tr>
<tr>
<td></td>
<td>- Plans and organises inspections</td>
</tr>
<tr>
<td></td>
<td>- Organises testing of swimming pools and spa building materials to ensure suitability</td>
</tr>
<tr>
<td></td>
<td>- Identifies and uses mechanisms to inform workers of required application of codes and standards</td>
</tr>
<tr>
<td>Self management</td>
<td>- Manages own performance to ensure required levels of service standards, work quality and professional competence</td>
</tr>
<tr>
<td></td>
<td>- Manages work priorities and professional development</td>
</tr>
<tr>
<td></td>
<td>- Uses feedback to improve own performance</td>
</tr>
<tr>
<td></td>
<td>- Organises and completes daily work activities</td>
</tr>
<tr>
<td></td>
<td>- Manages ongoing compliance with codes and standards</td>
</tr>
<tr>
<td>Learning</td>
<td>- Is open to new ideas and techniques</td>
</tr>
<tr>
<td></td>
<td>- Seeks feedback on personal performance</td>
</tr>
<tr>
<td></td>
<td>- Uses information effectively to improve work performance</td>
</tr>
<tr>
<td></td>
<td>- Learns from colleagues as part of effective teamwork</td>
</tr>
<tr>
<td></td>
<td>- Contributes to the learning of others by ensuring that workers are informed of required application of codes and standards</td>
</tr>
<tr>
<td>Technology</td>
<td>- Operates office equipment</td>
</tr>
<tr>
<td></td>
<td>- Uses computer equipment and relevant software</td>
</tr>
<tr>
<td></td>
<td>- Uses cameras</td>
</tr>
<tr>
<td></td>
<td>- Uses a range appropriate tools and equipment, including technical instruments and surveying equipment</td>
</tr>
<tr>
<td></td>
<td>- Assesses new and emerging building technologies for their application to the construction process</td>
</tr>
<tr>
<td></td>
<td>- Uses a range of tools and equipment, including technical instruments and surveying equipment</td>
</tr>
</tbody>
</table>
Employability skill | Industry/enterprise requirements for this qualification include:
--- | ---
 | - Maintains tools and equipment as required
 | - Uses technology to improve efficiency and effectiveness of managing work

## Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 18 units of competency:
  - 17 core units
  - 1 elective unit.

The elective unit from a Certificate IV qualification in another endorsed Training Package or within CPC08 Construction, Plumbing and Services Training Package, ensuring the industry context of the qualification is maintained.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

This version released with CPC08 Version 9.3.
Description

This qualification provides an outcome for:

- experienced fire operators with responsibility for project design and supervision (Fire services stream)
- experienced plumbing service operators with responsibility for project design and supervision (Air conditioning and mechanical services stream)
- plumbers who manage a plumbing business (Plumbing and services – Management stream)
- specialist plumbing services tradespersons and operators seeking to deepen their technical skills (Plumbing and services – Operations stream)
- specialist hydraulic consultants (Hydraulic services design stream).

Occupational titles may include:

- Plumbing contractor
- Fire services supervisor
- Air conditioning technician
- Specialist hydraulic designer.

The qualification has core and elective unit of competency requirements that cover common skills for the plumbing industry, as well as the four specialist streams and a range of elective options.

The plumbing industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Pathways Information

No applicable.
Licensing/Regulatory Information

This is a licensed occupation. Check with relevant state and territory licensing and regulatory authorities. State and territory jurisdictions may have different regulatory requirements.

Entry Requirements

See Packaging rules for entry requirements related to various streams.
### Employability Skills Summary

<table>
<thead>
<tr>
<th>Employability Skill</th>
<th>Industry/Enterprise Requirements for this Qualification Include:</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Communication</strong></td>
<td>- Interprets a range of complex documents, including relevant regulatory, legislative, licensing and registration requirements; codes and standards; drawings and specifications; industry definitions and terminology; contracts; plans and diagrams; job specifications; manufacturer specifications and technical manuals; design specifications; and industrial relations policies</td>
</tr>
<tr>
<td></td>
<td>- Understands industry terminology</td>
</tr>
<tr>
<td></td>
<td>- Communicates effectively with a range of relevant parties through a range of media</td>
</tr>
<tr>
<td></td>
<td>- Prepares a range of documents, including reports, file notes, drawings and sketches, building applications and submissions; compressed air system specifications; testing and commissioning schedules; and operation and maintenance manuals</td>
</tr>
<tr>
<td></td>
<td>- Uses active listening skills to seek clarification where needed</td>
</tr>
<tr>
<td></td>
<td>- Facilitates site meetings</td>
</tr>
<tr>
<td></td>
<td>- Negotiates conflict and dispute resolution</td>
</tr>
<tr>
<td><strong>Teamwork</strong></td>
<td>- Seeks expert advice where appropriate</td>
</tr>
<tr>
<td></td>
<td>- Supervises others’ work and monitors work processes</td>
</tr>
<tr>
<td></td>
<td>- Plans and sequences work in conjunctions with others</td>
</tr>
<tr>
<td></td>
<td>- Participates in professional networks and associations</td>
</tr>
<tr>
<td><strong>Problem Solving</strong></td>
<td>- Performs various calculations and measurements relating to comparisons of alternative water management systems; waste management minimisation strategies; and materials and designs for compressed air systems</td>
</tr>
<tr>
<td></td>
<td>- Identifies and rectifies faults</td>
</tr>
<tr>
<td></td>
<td>- Deals with contract variations</td>
</tr>
<tr>
<td></td>
<td>- Coordinates a range of team members and activities</td>
</tr>
<tr>
<td></td>
<td>- Reviews design solutions for effectiveness and compliance</td>
</tr>
<tr>
<td></td>
<td>- Deals with customer complaints and disputes</td>
</tr>
<tr>
<td><strong>Initiative and Enterprise</strong></td>
<td>- Identifies building sites from location drawings</td>
</tr>
<tr>
<td></td>
<td>- Identifies typical faults and problems and takes necessary remedial action</td>
</tr>
<tr>
<td></td>
<td>- Uses creative design and drafting skills</td>
</tr>
<tr>
<td></td>
<td>- Identifies opportunities for improved water management</td>
</tr>
</tbody>
</table>
- Evaluates effective strategies for insulating structures
- Designs compressed air systems
- Develops waste management strategies and dispute resolution procedures

**Planning and organising**

- Gathers required tools and equipment
- Ensures coordinated development of drawings
- Supervises various administrative and work processes, including claims and payments, insurance coverage, payroll systems and tax systems
- Arranges resources and prepares for the building or construction project
- Plans and arranges building applications and approvals
- Ensures current building codes and standards are applied
- Plans and sets out work
- Plans waste management strategies
- Scopes extent of work required and plans and details relevant systems and layouts

**Self management**

- Manages own performance to ensure required levels of service standards, work quality and professional competence, and compliance with relevant codes and standards
- Manages work priorities and professional development
- Maintains required standard of personal fitness, hygiene and grooming
- Uses feedback to improve own performance

**Learning**

- Uses appropriate mechanisms to inform others of applicable standards and codes
- Applies training agreement provisions

**Technology**

- Uses information technology skills to operate office equipment and computers
- Uses digital cameras
- Uses CAD software to produce and manage architectural drawing and template files
- Uses relevant hydraulic design systems software
- Commissions fire alarm and detection systems and gas appliances
- Checks relevant tools and equipment for serviceability
- Understands basic electrical theory and the types,
characteristics, uses and limitations of electrical/electronic componentry and control systems
- Designs compressed air systems using computer software

Packaging Rules

Fire services stream
To achieve this qualification, the candidate must demonstrate competency in:
- 15 units of competency:
  - 8 core units
  - 7 elective units.

The units must be completed as follows:
- all four common core units
- all four core units shared between air conditioning and mechanical services stream and fire services
- seven elective units, ensuring that any licensing requirements are addressed.

Of these seven electives:
- at least four units must be selected from the pool of elective units in the fire services stream
- up to two units may be selected from a Certificate IV qualification in another endorsed Training Package or from the core or elective units of another stream within the Certificate IV in Plumbing and Services, ensuring both the integrity of the AQF alignment and the industry context of the qualification are maintained
- one unit may be selected from Certificate III or Diploma Plumbing and Services qualifications
- no more than three units may be selected from the common pool of elective units.

Air conditioning and mechanical services stream
To achieve this qualification, the candidate must demonstrate competency in:
- 15 units of competency:
  - 8 core units
  - 7 elective units.

The units must be completed as follows:
- all four common core units
- all four core units shared between air conditioning and mechanical services stream and fire services
seven elective units, ensuring that any licensing requirements are addressed.

Of these seven electives:

- at least four units must be selected from the pool of elective units in the air conditioning and mechanical services stream
- up to two of the seven units may be selected from a Certificate IV qualification in another endorsed Training Package or from the core or elective units of another stream within the Certificate IV in Plumbing and Services, ensuring both the integrity of the AQF alignment and the industry context of the qualification are maintained
- one of the seven units may be drawn from Certificate III or Diploma Plumbing and Services qualifications
- no more than three units may be selected from the common pool of elective units.

**Plumbing and services – Management stream**

Industry considers it appropriate for people seeking to complete Certificate IV in Plumbing and Services – Management stream to hold a relevant Certificate III qualification in the industry.

To achieve this qualification, the candidate must demonstrate competency in:

- 15 units of competency:
  - 10 core units
  - 5 elective units.

The units must be completed as follows:

- all four common core units
- all six core units (Plumbing and services – Management stream)
- five elective units, ensuring that any licensing requirements are addressed.

Of these five electives:

- up to five units may be selected from the pool of elective units in the Plumbing and services – Management stream
- two of the five units may be selected from a Certificate IV qualification in another endorsed Training Package or from the core or elective units of another stream within the Certificate IV in Plumbing and Services, ensuring both the integrity of the AQF alignment and the industry context of the qualification are maintained
- one of the five units may be drawn from Certificate III or Diploma Plumbing and Services qualifications
- no more than three units may be selected from the pool of elective units common to all streams.

**Plumbing and services – Operations stream**

This stream has an entry requirement of the completion of a relevant trade qualification or equivalent.

To achieve this qualification, the candidate must demonstrate competency in:
- 15 units of competency:
  - 12 core units
  - 3 elective units.

The units must be completed as follows:
- all four common core units
- all eight core units (Plumbing and services – Operations stream)
- three elective units, ensuring that any licensing requirements are addressed.

Of these three electives:
- up to three units may be selected from the pool of elective units in the Plumbing and services – Operations stream
- two of the three units may be selected from a Certificate IV qualification in another endorsed Training Package or from the core or elective units of another stream within the Certificate IV in Plumbing and Services, ensuring both the integrity of the AQF alignment and the industry context of the qualification are maintained
- one of the three units may be drawn from Certificate III or Diploma Plumbing and Services qualifications
- no more than three units may be selected from the pool of elective units common to all streams.

**Hydraulic services design stream**

To achieve this qualification, the candidate must demonstrate competency in:
- 15 units of competency:
  - 10 core units
  - 5 elective units.

The units must be completed as follows:
- all four common core units
- all six core units in the hydraulic services design stream
- five elective units.

Of these five electives:
- at least two units must be selected from the pool of elective units in the hydraulic services design stream
- one of the five units may be selected from a Certificate IV qualification in another endorsed Training Package, ensuring both the integrity of the AQF alignment and the industry context of the qualification are maintained
- one of the five units may be drawn from the Diploma of Hydraulic Services Design qualification
- no more than three units may be selected from the common pool of elective units.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with
prerequisite unit requirements available in this Training Package for this purpose.

CPC41013 Certificate IV in Demolition

Modification History

Version Comment
1 This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.
2 Version 2 of this qualification replaces superseded equivalent elective unit CPCCOHS1001A with CPCCWHS1001 Prepare to work safely in the construction industry
3 Update superseded imported units from elective list with equivalent current unit for:
   • RIICWD503A to RIICWD503D
   • RIIOHS302A to RIIWH302D
This version released with CPC08 Version 9.3.
Description

This qualification is designed to meet the needs of project engineers, project managers, demolition supervisors and leading hands responsible for the oversight of a team of demolition workers undertaking specialist demolition work on large public, commercial, industrial or residential buildings, structures and installations, including chemical processing plants which may exceed 15 metres in height.

Occupational titles could include:
- Demolition supervisor
- Site supervisor (Demolition).

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Pathways Information

The qualification is suitable for an Australian Apprenticeship pathway.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements apply to demolition work in different States and Territories. Candidates are advised to consult with the relevant regulatory authorities.

Entry Requirements

There are no entry requirements.

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 15 units of competency:
  - 8 core units
  - 7 elective units.

The elective units must ensure the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome and are to be chosen as follows:

- a minimum of 4 and up to 7 units from the elective units listed below
- up to 3 units may be chosen from other Certificate III and IV qualifications in CPC08 or another current Training Package or accredited course.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

Description

This qualification is designed to meet the needs of builders, including selecting contractors, overseeing the work and its quality, and liaising with clients. The builder may also be the appropriately licensed person with responsibility under the relevant building licensing authority in the State or Territory. Builder licensing varies across States and Territories and additional requirements to attainment of this qualification may be required.

Occupational title may include:
- Builder.

The qualification has core unit of competency requirements that cover common skills for the construction industry. The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all included units of competency to be delivered in this context. Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Additional units of competency may be required to meet builder registration requirements in various States and Territories.

Pathways Information

Employability Skills Summary

**Employability skill**

**Communication**
- Analyses, evaluates and interprets a range of complex and technical documents, including relevant regulatory, legislative, licensing requirements, codes and standards, plans, drawings and specifications, contracts, reports, reference materials, building approvals, awards and workplace agreements
- Maintains and reports records and information
- Understands relevant definitions, terminology, symbols and language
- Communicates effectively with a range of relevant parties and provides expert testimony
- Establishes site communication procedures
- Prepares complex business documents, including project expenditure schedules and reports, such as technical and legal reports, drawings and project briefs
- Advises others regarding their obligations as well as company procedures
- Negotiates dispute resolution
- Sketches service layouts
- Implements feedback systems

**Teamwork**
- Demonstrates leadership within work teams and business units
- Collaboratively and effectively develops and implements operational plans
- Supervises work processes and systems, and delegates to others as required
- Works with others to overcome problems and achieve outcomes
- Establishes and maintains effective working relationships
- Seeks advice from senior management as required
- Works collaboratively with relevant stakeholders
- Relates to people from diverse social, cultural and ethnic backgrounds and with varying physical and mental abilities

**Problem solving**
- Analyses construction, environmental management, and energy conservation problems and applies appropriate and compliant remedial solutions
- Assesses structural integrity of medium rise buildings
- Ensures processes that identify faults and required remedial action
- Develops strategies to address project delays
• Performs various complex calculations relating to cost-benefit analysis, rise and fall amounts, pessimistic overdraft requirements, statistical analysis, costs, set out of construction work, structural analysis and service installations
• Analyses reasons for cost variations and takes remedial action
• Establishes and implements dispute resolution procedures
• Maintains site safety and manages risks
• Provides advice on dispute resolution
• Uses and analyses data in decision making

Initiative and enterprise
• Develops and initiates strategies to use resources effectively
• Ensures effective systems' development
• Implements effective project quality management and continuous improvement processes
• Recommends improvements to environmental management and energy conservation plans
• Develops strategies that maximise resource effectiveness
• Develops and reviews workplace sustainability policy

Planning and organising
• Supervises planning processes and organisation of on-site building or construction work projects, including instituting procedures and systems
• Develops sound and safe practices in relation to structural procedures on site
• Coordinates and manages construction and demolition processes
• Monitors building or construction costing systems
• Manages preparation of project expenditure schedules
• Supervises materials' procurement systems
• Manages selection, engagement and performance of building and construction contractors
• Administers legal obligations of building or construction contracts
• Establishes construction work policies, practices and procedures
• Prepares and implements environmental management and energy conservation plans, including workplace sustainability policy
• Advises and coordinates design process and obtains planning approval

Self management
• Manages own performance to ensure required levels of service standards, work quality and professional competence
• Manages work priorities and professional development
• Uses feedback to improve own performance
• Takes responsibility as required by the work role
• Uses discretion and judgement when required in complex
environments
- Deals with contingencies

**Learning**
- Is open to new ideas and techniques
- Seeks feedback on personal performance
- Uses information effectively to improve work performance
- Learns from colleagues as part of effective teamwork
- Manages induction and pre-engagement training processes

**Technology**
- Operates office equipment
- Uses computer equipment and relevant software
- Understands building construction materials and technologies
- Understands construction equipment and its use
- Operates and tests levelling equipment
- Uses technology to improve efficiency and effectiveness of managing work

**Packaging Rules**

To achieve this qualification, the candidate must demonstrate competency in:
- 18 units of competency:
  - 13 core units
  - 5 elective units.

The elective units must be selected as follows:
- a minimum of 3 elective units must be from Group A units below
- a maximum of 2 further elective units may be from Group B units below
- 1 elective unit may be from Diploma level in from CPC08 or another endorsed Training Package, provided that the industry context of the qualification is maintained
- 2 elective units may be from any Certificate IV in CPC08
- 1 elective unit may be from any Advanced Diploma in CPC08.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

This version released with CPC08 Version 9.3.
Description

This qualification is designed to meet the needs of senior managers within building and construction firms.

Occupational titles may include:

- Project manager
- Construction manager
- Estimating manager
- Sales manager.

The qualification has core unit of competency requirements that cover common skills for the construction industry.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Additional units of competency may be required to meet builder registration requirements in various States and Territories.

</tbody>
</table>
| Self management | • Advises and coordinates the design process and obtains planning approval  
• Manages own performance to ensure required levels of service standards, work quality and professional competence  
• Manages work priorities and professional development  
• Uses feedback to improve own performance  
• Takes responsibility as required by the work role  
• Uses discretion and judgement when required in complex environments  
• Deals with contingencies |
| Learning | • Is open to new ideas and techniques  
• Seeks feedback on personal performance  
• Uses information effectively to improve work performance  
• Learns from colleagues as part of effective teamwork  
• Manages induction and pre-engagement training processes |
| Technology | • Operates office equipment  
• Uses computer equipment and relevant software  
• Understands building construction materials and technologies  
• Understands construction equipment and its use  
• Operates and tests levelling equipment  
• Uses technology to improve efficiency and effectiveness of managing work |

**Packaging Rules**

To achieve this qualification, the candidate must demonstrate competency in:
- 12 units of competency:
  - 5 core units
  - 7 elective units.
The elective units are to be chosen as follows:

- up to 7 units from general elective units
- up to 3 units from qualifications in CPC08 or another current Training Package or state accredited course, provided the integrity of the AQF alignment is ensured, they contribute to a valid, industry-supported vocational outcome, and that no more than:
  - 2 units from a Diploma qualification
  - 1 unit from a Certificate IV
  - 1 unit from an Advanced Diploma qualification.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

CPC50412 Diploma of Plumbing and Services

Modification History

Version Comment

1 Revise qualification deemed not equivalent to CPC50408
   A number of core and elective units updated and deemed not equivalent to previous version
   Elective units revised resulting in a number of unit identifier changes

2 Update superseded imported units from elective list with equivalent current unit for:
   - BSBCUS501C to BSBCUS501
   - BSBFIM501A to BSBFIM501
   - BSBMGT515A to BSBMGT517
   - BSBWOR502B to BSBWOR502
   This version released with CPC08 Version 9.3.
Description

This qualification provides an outcome for:

- specialist and senior plumbers, fire services professionals and air conditioning and mechanical services professionals with advanced technical skill requirements
- experienced professionals who are pursuing management roles within the plumbing and services industry.

Occupational titles may include:

- Senior plumber
- Fire services technician
- Air conditioning and mechanical services technician
- Plumbing manager.

The qualification has core and elective unit of competency requirements that cover common skills for the plumbing industry, as well as specialist streams:

The plumbing industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

## Employability Skills Summary

<table>
<thead>
<tr>
<th>Employability skill</th>
<th>Industry/enterprise requirements for this qualification include:</th>
</tr>
</thead>
</table>
| **Communication**   | • Interprets a range of complex documents, including plans and specifications, technical and hand drawings, charts, material safety data sheets, briefs, legislative and regulatory requirements, industry codes and standards, manufacturers' requirements, trade and technical manuals, and programs.  
• Drafts detailed system specifications, including material, jointing and installation requirements; testing and commissioning schedules; project expenditure schedules; operations and maintenance manuals; safety procedures; control requirements; local authority inspection requirements for hydraulic systems; compliance reports; final cost reports; water and energy audit reports; technical plumbing system reports; and various quality control check lists  
• Understands industry terminology, industry estimating and costing systems, and financial principles  
• Communicates effectively with a range of people, including suppliers, staff, clients, subcontractors, local authority personnel, and negotiates industrial relations issues  
• Researches documentation relevant to systems' design  
• Gives clear hand and voice signals  
• Negotiates and prepares sewer contracts, and varies and documents schedules as required |
| **Teamwork**        | • Works with others to plan, coordinate and complete tasks  
• Supervises sewerage system installation  
• Supervises staff in identifying building or construction costs  
• Works interactively with others to achieve a safe work site  
• Uses appropriate dispute resolution procedures |
| **Problem solving** | • Conducts cost-benefit analysis of material and design options  
• Performs complex financial calculations, including rise and fall calculations  
• Resolves problems relating to project delays  
• Performs various calculations relating to measuring sanitary plumbing and drainage systems, velocities and flow, pressures, water volumes, catchment areas and run off, sizing of water heaters, pipe sizes and storage capacities |

| **Learning**        | • Establishes safety induction processes  
                       • Uses appropriate mechanisms to inform others of applicable standards and codes |
| **Technology**      | • Uses computers to design and detail plumbing and drainage systems; cold water systems; stormwater and roof drainage systems; hot water systems; fire sprinkler systems; fire hydrant and hose reel systems; hydronic systems; gas bulk storage systems; industrial gas systems; gas reticulation systems; solar water heating systems; grey water use systems; rainwater collection, storage, distribution and re-use systems; irrigation systems; trade waste pre-treatment systems; pump systems; siphonic stormwater drainage systems; and vacuum sewerage systems  
                       • Understands technological principles in the design of hydraulic systems; cold water reticulation and hydrant/hose reel systems; sewer systems; hydronic systems; gas bulk storage systems; industrial gas systems; gas reticulation systems; solar water heating systems; grey water use systems; rainwater collection, storage, distribution and re-use systems; irrigation systems; trade waste pre-treatment systems; pump systems; siphonic stormwater drainage systems; vacuum sewerage systems; and trade waste pre-treatment systems  
                       • Uses calculators and two-way radios  
                       • Uses relevant tools and equipment |

**Packaging Rules**

To achieve this qualification, the candidate must demonstrate competency in 12 units of competency, which are to be chosen as follows:

- 2 common core units
- all units from one of the following three options:
  - Fire services:
- 4 Group A Fire services core units
- 6 elective units

- Plumbing and services management:
  - 5 Group B Plumbing and services management core units
  - 5 elective units

- Air conditioning and mechanical services:
  - 4 Group C Air conditioning and mechanical services core units
  - 6 elective units.

The elective units chosen:
- could include:
  - core units not already chosen from Groups A, B or C
  - Group D General electives
  - no more than 2 units from Group B Plumbing and services management electives
- may be from other qualifications in CPC08 or another current Training Package or state accredited course, provided no more than:
  - 1 unit is from a Diploma qualification
  - 1 unit is from a Certificate IV qualification
- should ensure the integrity of the AQF alignment, and contribute to a valid, industry-supported vocational outcome.

NB: The plumbing and services stream has an entry requirement of the Certificate IV in Plumbing and Services or an equivalent qualification.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

CPC50509 Diploma of Fire Systems Design

Modification History

Version Comment
1 Revised qualification deemed equivalent to CPC50509
2 A number of elective units updated and deemed not equivalent to previous version
   Elective units revised resulting in a number of unit identifier changes
3 Update superseded imported units from elective list with equivalent current unit for:
   • BSBAUD504B to BSBAUD504
   • BSBCUS402B to BSBCUS402
   • BSBCUS501C to BSBCUS501
   • BSBOHS504B to BSBWHS503
   • BSBPMG510A to BSBPMG522
   This version released with CPC08 Version 9.3.
Description

The Diploma of Fire Systems Design reflects and supports the role of fire systems designers who prepare detailed technical designs and documentation for water-based fire suppression systems and/or fire detection and occupant warning systems. The fire systems designs covered in this Diploma are those that meet the requirements of the Building Code of Australia or detailed designs prepared for alternative solutions designed or specified by a fire safety engineer. The Diploma of Fire Systems Design also includes a stream qualification for the annual certifier of fire systems.

Fire systems designers may enter the industry from a diverse range of occupations and sectors. They may choose to extend their careers by seeking to undertake subsequent higher education qualifications in related disciplines, including mechanical engineering and fire engineering.

The qualification has common core and elective unit of competency requirements that cover common skills for fire systems designers and certifiers, as well as specialist streams for:

- water-based systems
- detection and warning systems
- annual certifiers.

## Employability Skills Summary

<table>
<thead>
<tr>
<th>Employability skill</th>
<th>Industry/enterprise requirements for this qualification include:</th>
</tr>
</thead>
</table>
| Communication            | • Listening to, and communicating clearly with, colleagues, installers, maintainers, suppliers and contractors  
                          | • Participating in meetings, such as negotiations with fire engineering consultant, architect, builder or other service contractors  
                          | • Explaining the gravity of fire systems inspection findings  
                          | • Letter writing, especially to formalise recognition of errors and conflicts on other drawings and agreements with other services  
                          | • Writing reports  
                          | • Initiating and running meetings with lead contractor and other service contractors  
                          | • Drafting detailed system specifications, including material, installation requirements; testing and commissioning schedules; project expenditure schedules; operations and maintenance manuals; and various quality control checklists |
| Teamwork                 | • Developing constructive and cooperative working relationships with project team members, colleagues, suppliers, fitters and clients  
                          | • Working with others to plan, coordinate and complete tasks |
| Problem-solving          | • Negotiating solutions to design conflicts with other services  
                          | • Conducting cost-benefit analysis of design options  
                          | • Performing complex calculations, such as electrical and hydraulic calculations  
                          | • Identifying site health risks and installation constraints and producing design solutions |
| Initiative and enterprise| • Producing cost-effective and workable detailed designs for fire systems  
                          | • Proposing creative detailed design solutions to installation issues arising on-site  
                          | • Proposing creative solutions to aesthetic requirements for fire systems installation  
                          | • Developing personal methodologies for ensuring project quality and for incorporating process improvements  
                          | • Managing detailed input to concurrent fire systems design projects at different stages of the process and with diverse sets of regulatory requirements |
| Planning and organising  | • Defining the scope and hazard level of fire systems design projects  
                          | • Planning the layout of fire systems designs |
### Employability skill

<table>
<thead>
<tr>
<th>Industry/enterprise requirements for this qualification include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Setting up systems and checklists for ensuring a methodical approach to fire systems design projects</td>
</tr>
<tr>
<td>• Gathering documentation required for fire systems design projects, including plans, specifications, drawings, legislation, codes and standards</td>
</tr>
<tr>
<td>• Planning for the inspection of multiple fire systems (with different applicable standards) concurrently</td>
</tr>
</tbody>
</table>

### Self-management

| • Organising own work, including creating personal systems and checklists for planning, managing and checking work |
| • Maintaining a professional detached authority |

### Learning

| • Reading manuals and marketing information about new technologies, products and systems |
| • Researching relevant legislation, standards and codes |
| • Updating knowledge of products, software systems and technology |
| • Researching competing technologies in new products and systems |

### Technology

| • Reading and interpreting drawings, including architectural, structural, mechanical, hydraulic and electrical drawings |
| • Reading manuals and marketing information about new technologies, products and systems |
| • Using computer software to produce detailed designs for fire systems, manage project participation and conduct general personal business administration |
| • Applying the principles of fire science, organic and inorganic chemistry, thermodynamics, hydraulics, fluid mechanics and electric and electronic theory |
| • Using relevant tools and equipment, such as measuring tools and calculators |

---

### Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 12 units of competency:
  - 4 core units
  - between 3 and 8 Group A, B or C elective units
  - up to 5 other elective units.
The elective units are chosen as follows:

- all units from one of the following three options:
  - 8 units from Group A Water-based systems elective units
  - 5 units from Group B Detection and warning systems elective units
  - 4 units from Group C Annual certifier elective units

- provided the remaining elective units ensure the integrity of the AQF alignment; and contribute to a valid, industry-supported vocational outcome; they could include:
  - elective units not already chosen from Groups A, B or C
  - Group D general elective units:
    - 1 unit from a Diploma or higher qualification in CPC08 or another current Training Package or state accredited course
    - 1 unit from the Certificate IV in Plumbing and Services, Group A Fire Services units.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

CPC50612 Diploma of Hydraulic Services Design

Modification History
Revised qualification deemed equivalent to CPC50612
• elective unit CPCPGS4011C Design and size consumer gas installations updated to equivalent version

Description

This qualification provides an outcome for:
• specialist hydraulic design consultants who design plumbing and services systems for residential and commercial buildings.

Occupational titles may include:
• Hydraulic design consultant.

The qualification has core and elective unit of competency requirements that cover common administration and plumbing industry skills plus specialist design competencies.

This qualification does not meet the competency requirements for plumbing registration or licensing.

The plumbing industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

NB: Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Pathways Information
Not applicable.
Licensing/Regulatory Information

This qualification does not meet the competency requirements for plumbing registration or licensing.

Entry Requirements

This qualification has an entry requirement of CPC40912 Certificate IV in Plumbing and Services - Hydraulic services design stream, or an equivalent qualification.

Employability Skills Summary

<td>--------------------------</td>
<td>-------------------------</td>
</tr>
<tr>
<td>• Designs complex sanitary plumbing and drainage systems; cold water systems; stormwater and roof drainage systems; hot water systems; sewerage systems; rising mains systems; pump stations; fire compliant ducting systems and hydraulic services; water storage and sprinkler systems; smoke alarm systems; fire hydrant and hose reel systems; hydronic heating and cooling systems; gas bulk storage systems; industrial gas systems; gas reticulation systems; solar water heating systems; grey water use systems; rainwater collection, storage, distribution and re-use systems; irrigation systems; trade waste pre-treatment systems; pump systems; siphonic stormwater drainage systems; vacuum sewerage systems</td>
<td>• Scopes the extent of work required</td>
</tr>
<tr>
<td>• Identifies typical design faults and takes corrective action</td>
<td>• Monitors building or construction costs, including identifying critical phases of project expenditure and cash flows</td>
</tr>
</tbody>
</table>
storage systems; industrial gas systems; gas reticulation systems; solar water heating systems; grey water use systems; rainwater collection, storage, distribution and re-use systems; irrigation systems; trade waste pre-treatment systems; pump systems; siphonic stormwater drainage systems; vacuum sewerage systems; and trade waste pre-treatment systems

- Uses relevant hydraulic design systems software

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 34 units of competency:
  - 31 core units
  - 3 elective units.

One of the three elective units may be selected from a Diploma qualification from CPC08 or another current Training Package, or from the core or elective units of another stream within CPC50412 Diploma of Plumbing and Services, ensuring both the integrity of the Australian Qualification Framework (AQF) alignment and the industry context of the qualification are maintained.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

CPC60108 Advanced Diploma of Building Surveying

Modification History
Revised qualification deemed equivalent to CPC60108
Imported units updated to current version

Description
This qualification is designed to meet the needs of senior surveyors in the building and construction industry.

Occupational titles may include:
- Building surveyor
- Building certifier.

The qualification has core unit of competency requirements that cover specialist surveying skills for the construction industry. 24 core units in this qualification are also included in the CPC50108 Diploma of Building Surveying.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

</table>
| **Communication**   | • Communicates effectively with a range of people, including staff, contractors and clients  
                      • Conducts community consultation  
                      • Articulates complex ideas clearly  
                      • Attends court and presents information  
                      • Understands relevant definitions, terminology, symbols and language  
                      • Analyses and evaluates reports and reference materials  
                      • Communicates effects of planning and construction to others  
                      • Records building planning and construction information  
                      • Reports data, findings, recommendations and strategies  
                      • Prepares a range of documentation, including research journals for producing building drawings, notices and information materials  
                      • Interprets a range of complex and technical documents, including relevant:  
                        • Produces drawings  
                        • Carries out complex calculations and measurements  
                          • regulatory, legislative, licensing and organisational requirements  
                          • codes and standards  
                          • plans and specifications |
| **Teamwork**        | • Works collaboratively with relevant stakeholders  
                      • Works with others to action tasks  
                      • Works with diverse groups and individuals |
| **Problem solving** | • Applies problem solving strategies across a range of areas, including evaluating materials and determining alternative solutions to construction problems  
                      • Conducts tests and uses results to make decisions  
                      • Uses and analyses complex data in decision making  
                      • Analyses problems and applies appropriate remedial solutions  
                      • Identifies complex faults and problems and takes necessary remedial action  
                      • Reviews feedback and takes appropriate action |
## Employability skill

### Initiative and enterprise
- Validates community consultation procedures
- Provides a leadership role in community consultation
- Makes recommendations and strategies
- Develops compliant, alternative solutions to construction problems
- Identifies and evaluates environmental issues and impacts
- Identifies and implements appropriate and diverse strategies for interacting with diverse communities.
- Applies managerial principles, including quality assurance

### Planning and organising
- Develops project scheduling
- Collects, analyses and organises information
- Schedules and conducts consultations
- Manages time and priorities
- Plans and organises resources
- Coordinates activities with subcontractors

### Self management
- Articulates own ideas and vision
- Organises and completes daily work activities
- Takes responsibility as required by work role, ensuring all legislative and organisational policies and procedures are followed
- Manages own performance to ensure required levels of service standards, work quality and professional competence
- Seeks and acts on feedback from stakeholders
- Manages work priorities

### Learning
- Uses information effectively to improve work performance
- Identifies and assesses legislative, organisational and environmental requirements that impact on work system
- Maintains knowledge of products and services

### Technology
- Works with technology safely and according to workplace standards
- Uses testing technology
Employability skill | Industry/enterprise requirements for this qualification include:
--- | ---
| Uses computers and relevant software for information gathering and analysis and completion of drawings, documentation and calculations
| Uses and operates a range of tools and equipment correctly and safely
| Uses technology, such as videos and computer simulations to present information
| Uses technology to improve efficiency and effectiveness of managing work
| Uses calculators

**Packaging Rules**

To achieve this qualification, the candidate must demonstrate competency in 43 units of competency.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

CPC60212 Advanced Diploma of Building and Construction (Management)

Modification History

Version Comment
1 Revised qualification deemed not equivalent to CPC60208
   Change to core unit CPCCBC6004A deleted and replaced with CPCCBC6018A
   Core and elective units revised resulting in a number of unit identifier changes
2 Update superseded imported units from elective list with equivalent current unit for:
   • BSBMGT617A to BSBMGT617
   • BSBMKG609A to BSBMKG609
   • BSBRSK501B to BSBRSK501
   This version released with CPC08 Version 9.3.

Description

This qualification is designed to meet the needs of builders, including selecting contractors, overseeing the work and its quality, and liaising with the client. The builder may also be the appropriately licensed person with responsibility under the relevant building licensing authority in the State or Territory.

The qualification also meets the needs of senior managers within building, construction and services firms typically working in larger organisations and managing more complex projects and processes.

Occupational titles may include:
• Construction manager.

The qualification has core unit of competency requirements that cover common skills for the construction industry.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all included units of competency to be delivered
in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Additional units of competency may be required to meet builder registration requirements in various States and Territories.

<tr>
<td>--------------------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
</tbody>
</table>
| **Problem solving**      | • Analyses construction problems and applies appropriate and compliant remedial solutions  
• Assesses structural integrity of large, high rise and complex buildings  
• Performs various complex calculations relating to costings and returns, building designs' structural requirements and loads, effects of force and movement on structural elements, analysis of behaviours and properties of structural materials, quantitative analysis of market data and sensitivity analysis  
• Uses strategic level skills to conceptualise solutions to unique problems  
• Takes remedial action to address non-compliance issues  
• Addresses and resolves industrial relations issues  
• Deals effectively with procurement problems and delays  
• Conducts risk assessment of facilities management outcomes |
| **Initiative and enterprise** | • Develops effective and compliant design solutions and quality assurance processes  
• Generates and directs development of new projects  
• Identifies potential projects and develops feasibility studies  
• Demonstrates strong and decisive leadership  
• Facilitates implementation of various new management systems  
• Implements energy conservation strategies and cost saving practices  
• Develops and reviews workplace sustainability policy  
• Establishes and implements costing and construction documentation quality control systems  
• Formulates investment scenarios |
| **Planning and organising** | • Establishes processes to coordinate others’ work  
• Manages project commissioning  
• Delegates and directs work activities  
• Selects and deploys resources to enable new project development  
• Establishes, maintains and reviews contract administration procedures and frameworks  
• Develops strategic plans for the development of contracts administration and facilities/asset management |
### Employability skill

<table>
<thead>
<tr>
<th>Industry/enterprise requirements for this qualification include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Manages processes for legal obligations of a building or construction contract, including ensuring required licences are obtained and regulatory compliance is administered</td>
</tr>
<tr>
<td>• Manages processes associated with tender development for major projects and resource procurement and acquisition for building or construction projects</td>
</tr>
<tr>
<td>• Develops, plans and implements systems designed to manage environmental practices and processes, including workplace sustainability policy</td>
</tr>
<tr>
<td>• Develops and implements estimating and tendering systems, building or construction planning processes</td>

</tr>
</tbody>
</table>

### Self management

| • Understands organisational and professional procedures, ethical practices and business standards |
| • Recognises limitations of own work role, responsibilities and professional abilities |

### Learning

| • Ensures staff receive appropriate training and instruction in matters relating to insurance and taxation and are made aware of their responsibilities |
| • Ensures staff are trained and managed to ensure that quality assurance practices and energy conservation and management practices are applied |

### Technology

| • Operates office equipment, computers and electronic communication systems |
| • Understands and applies new technologies in concrete |
Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 10 units of competency:
  - 4 core units
  - 6 elective units.

The elective units are to be chosen as follows:

- up to 6 units from general elective units
- up to 2 units from qualifications in CPC08 or another current Training Package or state accredited course, provided the integrity of the AQF alignment is ensured, they contribute to a valid, industry-supported vocational outcome, and that no more than:
  - 1 unit is from a Diploma qualification
  - 1 unit is from an Advanced Diploma qualification.

Some units in this qualification may have prerequisite requirements, which must be met when packaging the qualification. Users are referred to the list of CPC08 units with prerequisite unit requirements available in this Training Package for this purpose.

CPCSS00001 Lead a building, construction or plumbing and services team

Modification History
ISC update of formatting. No content changes.

Description
This skill set addresses the skills used by experienced tradespersons and operators who are moving into roles with additional responsibility and team leadership, typically in smaller businesses.

The skill set provides the team leadership and other skills to enable experienced site supervisors or builders to develop staff under their supervision.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Pathways Information
The completion of this skill set provides a pathway to a range of Certificate IV qualifications in CPC08, including credit towards the Certificate IV in Plumbing and Services.

<tr>
<td>BSBWOR402A</td>
<td>Promote team effectiveness</td>
</tr>
</tbody>
</table>

Target Group

The skill set provides the team leadership and other skills to enable experienced site supervisors or builders to develop staff under their supervision.

Suggested words for Statement of Attainment

The suggested form of words for inclusion on a Statement of Attainment is: These units from CPC08 Construction, Plumbing and Services Training Package meet industry requirements for experienced tradespersons and operators working as building, construction or plumbing and services team leaders in the construction and plumbing and services industry.
CPCSS00002 Manage complex building projects

Modification History
Addition of CPCCBC5001B Apply building codes and standards to the construction process for medium rise building projects to skill set requirement (prerequisite to CPCCBC5018A) to address its previous omission from the packaging rules, thereby increasing skill set requirement from three to four units

Units updated to current equivalent version

Description
This skill set addresses the skills used by builders to manage complex and diverse building projects. The range and depth of skills required of builders is amplified by the size and complexity of the projects on which they work.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Pathways Information
The completion of this skill set provides a pathway to a Diploma qualification in CPC08.

<td>Administer the legal obligations of a building or construction contractor</td>
</tr>
<tr>
<td>CPCCBC5018A</td>
<td>Apply structural principles to the construction of medium rise buildings</td>
</tr>
</tbody>
</table>

Target Group

This skill set is a bridge for experienced builders already operating at the Certificate IV level who are preparing to undertake larger scale projects which may entail developing additional skills and also, possibly, seeking a higher level of builder’s licence in the relevant State or Territory. This skill set may be supported by continuing professional development programs which are increasingly required of builders.

Suggested words for Statement of Attainment

The suggested form of words for inclusion on a Statement of Attainment is: These units from CPC08 Construction, Plumbing and Services Training Package meet industry requirements for experienced builders preparing to undertake complex building projects requiring additional administrative and technical skills and a higher level of builder’s licence in some jurisdictions.
CPCSS00003 Undertake trade contracting

Modification History
Units updated to current equivalent version

Description
This skill set addresses the skills used by experienced tradespersons operating as sole traders or with limited staff who contract their services to builders. They may be in the early stages of developing and growing their newly established businesses.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Pathways Information
The completion of this skill set provides a pathway to a range of Certificate IV qualifications in CPC08.

Application
This unit of competency describes the skills and knowledge required to troubleshoot faults and blockages in irrigation systems.

It applies to individuals who take responsibility for own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit
Nil.

Unit Sector
Irrigation (IRG)
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance criteria</th>

</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. **Locate and identify faulty components and blockages**
   - 1.1 Determine irrigation system and component function
   - 1.2 Check and review monitoring and maintenance records
   - 1.3 Carry out operational tests
   - 1.4 Identify and document faulty components and blockages

2. **Shut down and isolate component**
   - 2.1 Apply shut down sequence and isolation procedures
   - 2.2 Verify safe shutdown or isolation
   - 2.3 Install safety or security lock off devices and signage

3. **Replace faulty components and clear blockages**
   - 3.1 Organise access to faulty components and blockages
   - 3.2 Remove faulty components and repair or dispose of
   - 3.3 Select and install replacement components
   - 3.4 Replace faulty components and clear blockages
   - 3.5 Clear blockages or replace blocked sections

4. **Return system to normal operating status**
   - 4.1 Return isolated or shutdown components to service
   - 4.2 Carry out operational tests
   - 4.3 Return system to normal operational set-up
   - 4.4 Report and record repair activities

## Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

## Unit Mapping Information

This unit is equivalent to AHCIRG306A Troubleshoot irrigation systems.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:

- carry out operational tests
- identify adverse environmental impacts of irrigation activities and appropriate remedial action
- operate, maintain and repair irrigation systems
- shut down and isolate components

Knowledge Evidence

The candidate must demonstrate knowledge of:

- characteristics and operation of replaceable components of irrigation systems
- environmental impacts of irrigation using water from any ground or underground source
- isolation procedures
- purchasing procedures
- system malfunctions and their likely causes

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to construct brick structures and features or block structures and features, or both as a component of a landscaping project.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

| 1. Plan and prepare work | 1.1 Interpret plans and specifications  
1.2 Check the quantity and quality of materials  
1.3 Select tools and equipment and check for serviceability  
1.4 Identify hazards, assess risks and implement controls accordingly  
1.5 Identify and ameliorate the potential environmental impacts of proposed brick and block construction works  
1.6 Select and use suitable personal protective equipment (PPE) |
| 2. Set out and prepare the site | 2.1 Determine and locate services  
2.2 Mark out the position of the structure or feature according to site plans  
2.3 Establish profiles to conform to the nominated tolerances  
2.4 Prepare subsoil by removing all debris, vegetable matter and topsoil to provide a solid foundation for construction  
2.5 Install drainage systems according to site plans and specifications  
2.6 Place and compact sub-base to material the required finished levels |
| 3. Construct structure or feature | 3.1 Mix mortar to determined ratio and add bonding and colouring agents and other appropriate admixes, in accordance with specifications  
3.2 Lay damp proofing and base course of brick or block work  
3.3 Lay courses of brick or block work using designated bond(s) in a manner that will ensure the viability and stability of the structure  
3.4 Apply finishes to brick or block work |
| 4. Check quality of work and clean-up site | 4.1 Inspect the quality of finished works to ensure the standard of the finished structure or feature has been achieved  
4.2 Clean down brick or block work surfaces in an environmentally safe and sensitive manner  
4.3 Clean, store and maintain all tools and equipment |

## Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.
Range of Conditions

Unit Mapping Information
This unit is equivalent to AHCLSC303A Construct brick and block structures and features.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- interpret site plans and specifications
- measure and construct profiles using mathematical techniques
- construct brick or block structure or feature
- establish levels using levelling equipment
- check quality of work and cleaning up of site

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of brick and block construction
- components of mortar, including bonding and colouring agents
- environmental impacts of bricks and block construction works

Assessment Conditions

Assessors must satisfy current standards for RTOs.

</table>

Application

This unit describes the skills and knowledge required to report on the outcomes of a quality audit and to take appropriate follow up action. It covers compiling audit results; preparing a report for the auditee/client; negotiating follow up action with the auditee/client; and monitoring and reviewing the auditing system and activities. The types of quality audit that may be covered by this unit include an external or internal systems audit or process or product/service audit.

It applies to individuals with a well-established theoretical knowledge base in quality auditing who are proficient in using a wide range of specialised quality auditing and managerial techniques to carry out their own work and to supervise the quality audit team. It addresses the function performed by either an auditor having sole responsibility for the audit or a lead auditor of a quality audit team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Regulation, Licensing and Risk – Quality Auditing
### Elements and Performance Criteria

</tr>
</tbody>
</table>
| 1 Compile audit results | 1.1 Compare results of the audit evaluation against audit objectives and criteria plan  
1.2 Analyse audit results |
| 2 Prepare report | 2.1 Provide objective evidence relating to the need for reduction, elimination and prevention of non-conformance as the basis for the audit report  
2.2 Produce audit report according to specified audit requirements  
2.3 Present audit report to auditee and other stakeholders |
| 3 Negotiate follow up process with auditee | 3.1 Determine and initiate any corrective action required to deal with non-conformance, in consultation with auditee  
3.2 Provide suggestions for improvements where applicable  
3.3 Ensure timelines are agreed on for completion of corrective action activities  
3.4 Ensure corrective action follow-up procedures are agreed with auditee |
| 4 Monitor and review audit system and activities | 4.1 Evaluate effectiveness and suitability in achieving audit objectives  
4.2 Investigate possible improvements in audit methods, economy and efficiency |
## Foundation Skills

</table>

Performance Evidence

Evidence of the ability to:

- interpret audit results and produce a detailed audit report containing detailed analysis according to specified requirements
- negotiate follow-up actions with auditees/clients
- determine future improvements in auditing methods
- use terminology relating to quality auditing in written or oral communications.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe quality auditing principles, methods and techniques
- outline the requirements of auditing regulations and standards
- identify current audit practices
- identify software applications relevant to conducting quality auditing activities.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the regulation, licensing and risk – quality auditing field of work and include access to:

- workplace documentation including quality audit reports, checklists, risk management plans and audit plans.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- use communication skills to establish rapport and build relationships with customers in accordance with organisational requirements
- identify customer needs using appropriate questioning and active listening skills
- provide customer service in accordance with organisational requirements
- respond to and record customer feedback and action taken according to organisational standards, policies and procedures
- produce a report which identifies and recommends ways to improve service delivery.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise key provisions of relevant legislation from all levels of government that may affect aspects of business operations
- explain organisational policy and procedures for customer service, including handling customer complaints
- provide examples of verifiable evidence that could be used to review customer satisfaction
- outline the interpersonal skills needed for serving customers, including customers with specific needs.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the customer service field of work and include access to:

- office equipment and technology
- workplace documents, organisational policies and procedures for customer service
- examples of customer complaints and feedback
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to manage an ongoing relationship with a customer over a period of time. This includes helping customers articulate their needs and managing networks to ensure customer needs are addressed.

It applies to individuals who are expected to have detailed product knowledge in order to recommend customised solutions. In this role, individuals would be expected to apply organisational procedures and be aware of, and apply as appropriate, broader factors involving ethics, industry practice and relevant government policies and regulations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

Evidence of the ability to:

- communicate effectively with customers including
  - helping customers to articulate their needs and evaluate options
  - explaining products/services and how they match customer needs
  - establishing regular communication
  - explaining customer rights and responsibilities
- address customer’s needs
- use organisational procedures to document customer satisfaction
- develop and maintain networks to support meeting customer needs
- identify potential difficulties in meeting customer needs and taking appropriate action.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.
Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain organisational procedures and standards for establishing and maintaining customer service relationships
- describe informed consent
- explain consumer rights and responsibilities
- describe ways to establish effective regular communication with customers
- outline details of products or services including with reference to:
  - possible alternative products and services
  - variations within a limited product and service range.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the customer service field of work and include access to:

- office equipment and resources
- business technology
- organisational policies, procedures, quality systems, manuals and guidelines for customer management
- examples of products/services and promotional strategies
- case studies and, where possible, real situations
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of the ability to:

- develop and manage organisational systems for quality customer service
- develop and review plans, policies and procedures for delivering and monitoring quality customer service
- implement policies and procedures to ensure quality customer service
- solve complex customer complaints and system problems that lead to poor customer service
- monitor and assist teams to meet customer service requirements
- develop, procure and use human and physical resources to support quality customer service delivery.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.
Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the legislative and regulatory context of the organisation relevant to customer service
- describe organisational policy and procedures for customer service including handling customer complaints
- identify service standards and best practice models
- summarise public relations and product promotion
- outline techniques for dealing with customers including customers with specific needs
- explain techniques for solving complaints including the principles and techniques involved in the management and organisation of:
  - customer behaviour
  - customer needs research
  - customer relations
  - ongoing product and/or service quality
  - problem identification and resolution
  - quality customer service delivery
  - record keeping and management methods
  - strategies for monitoring, managing and introducing ways to improve customer service relationships
  - strategies to obtain customer feedback.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the customer service field of work and include access to:

- legislation, regulations and codes of practice related to customer service
- business technology
- workplace documentation and resources
- complex customer complaints
- case studies and, where possible, real situations
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to undertake financial management within a work team in an organisation. It includes planning and implementing financial management approaches, supporting team members whose role involves aspects of financial operations, monitoring and controlling finances and reviewing and evaluating effectiveness of financial management processes.

It applies to managers in a wide range of organisations and sectors who have responsibility for ensuring that work team financial resources are used effectively and are managed in line with financial objectives of the team and organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Finance - Financial Management
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>
| 1 Plan financial management approaches | 1.1 Access budget/financial plans for the work team  
1.2 Clarify budget/financial plans with relevant personnel within the organisation to ensure that documented outcomes are achievable, accurate and comprehensible  
1.3 Negotiate any changes required to be made to budget/financial plans with relevant personnel within the organisation  
1.4 Prepare contingency plans in the event that initial plans need to be varied |
| 2 Implement financial management approaches | 2.1 Disseminate relevant details of the agreed budget/financial plans to team members  
2.2 Provide support to ensure that team members can competently perform required roles associated with the management of finances  
2.3 Determine and access resources and systems to manage financial management processes within the work team |
| 3 Monitor and control finances | 3.1 Implement processes to monitor actual expenditure and to control costs across the work team  
3.2 Monitor expenditure and costs on an agreed cyclical basis to identify cost variations and expenditure overruns  
3.3 Implement, monitor and modify contingency plans as required to maintain financial objectives  
3.4 Report on budget and expenditure in accordance with organisational protocols |
| 4 Review and evaluate financial management processes | 4.1 Collect and collate for analysis, data and information on the effectiveness of financial management processes within the work team  
4.2 Analyse data and information on the effectiveness of financial management processes within the work team and identify, document and recommend any improvements to existing processes  
4.3 Implement and monitor agreed improvements in line with financial objectives of the work team and the organisation |
## Foundation Skills

Performance Evidence

Evidence of the ability to:

- use financial skills to work with and interpret budgets, ageing summaries, cash flow, petty cash, Goods and Services Tax (GST), and profit and loss statements
- communicate with relevant people to clarify budget/financial plans, negotiate changes and disseminate information
- prepare, implement and modify financial contingency plans
- monitor expenditure and control costs
- support and monitor team members
- report on budget and expenditure
- review and make recommendations for improvements to financial processes
- meet record keeping requirements for the Australian Taxation Office (ATO) and for auditing purposes.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.
Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe basic accounting principles
- identify and explain the relevant legislation and current requirements of the Australian Taxation Office, including the Goods and Services Tax (GST)
- explain the key requirements for financial record keeping and auditing
- describe the principles and techniques involved in managing:
  - budgeting
  - cash flows
  - electronic spreadsheets
  - GST
  - ledgers and financial statements
  - profit and loss statements.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the financial management field of work and include access to:

- resources and documentation used in the workplace
- workplace policies and procedures
- workplace budgets and financial plans
- business technology
- case studies and, where available, real situations.

Assessors must satisfy NVR/AQTF assessor requirements.

### 1 Analyse claims

1.1 Ensure that the organisation has and maintains a current Workers' Compensation insurance policy (or equivalent) as required by the applicable legislation

1.2 Process claims in accordance with organisational policies and legal and insurance requirements

1.3 Dispute claims where insurer or organisational requirements are not met

1.4 Notify rehabilitation provider in accordance with organisational procedures

1.5 Advise claimants as to whether their claim has been accepted

1.6 Analyse claims to identify the nature of the illness/injury and prepare report/s

1.7 Identify projected period of absence and where rehabilitation assistance is required and ensure arrangements are made in the work team to deal with absence

### 2 Establish rehabilitation/return to work program

2.1 Ensure consultation occurs between rehabilitation provider and treating doctor

2.2 Ensure consultation occurs between rehabilitation provider, relevant managers and employee

2.3 Consider job redesign, reduced hours and alternative duties in the light of medical advice

2.4 Design a rehabilitation/return to work program to achieve a successful return to work

2.5 Obtain approval for return to work program by relevant managers

2.6 Establish rehabilitation program with employee

2.7 Undertake risk analysis in relation to proposed program and mitigate risk where appropriate

2.8 Commence program as close to the time of the accident/illness as possible

### 3 Monitor/evaluate rehabilitation/return to work program

3.1 Encourage regular feedback/communication between provider, supervising manager and employee

3.2 Organise regular contact and support between provider and

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Reading</strong></td>
<td>1.2, 1.3, 1.6, 1.7, 2.3, 2.4, 2.7, 3.6</td>
<td>• Evaluates and integrates facts and ideas to construct meaning from a range of text types</td>
</tr>
</tbody>
</table>
| **Writing**                | 1.2, 1.3, 1.4, 1.5, 1.6, 1.7, 2.3, 2.4, 2.5, 2.6, 2.7, 3.3, 3.4, 3.5, 3.6 | • Records results of analysis in required formats  
• Prepares correspondence to a range of individual in required format  
• Uses vocabulary, grammatical structure and appropriate organisational conventions to ensure rehabilitation and return to work programs are effectively documented |
| **Oral Communication**    | 1.3, 1.4, 1.5, 1.7, 2.1, 2.2, 2.5, 2.6, 3.3, 3.4 | • Uses appropriate vocabulary and non-verbal features in discussions with employees, insurance companies and rehabilitation providers when dealing with claims                                                                                                                                 |
| **Numeracy**              | 2.3, 2.4, 2.7, 3.6  | • Uses basic numeracy skills to determine the appropriate amount of hours for a return to work program  
• Selects and uses appropriate mathematical problem-solving strategies to undertake risk analysis and to evaluate the rehabilitation program                                                                                                                                 |
| **Navigate the world of work** | 1.1-1.4 | • Ensures knowledge of legislative requirements and products is kept up to date in order to provide accurate information  
• Takes full responsibility for following policies, procedures and legislative requirements and identifies organisational implications of new legislation or regulation  
• Seeks to improve policies and procedures to better meet organisational goals                                                                                                                                 |
| **Interact with others**  | 1.5, 1.7, 2.1, 2.2, 2.5, 2.6, 3.1, 3.2, 3.4, 3.6 | • Uses appropriate protocols and practices to communicate with a range of stakeholders  
• Implements strategies to discuss health matters sensitively with a range of people  
• Encourages collaboration between relevant stakeholders                                                                                                                                                                                                 |
| **Get the work done**     | 1.1-1.4, 1.6, 1.7, 2.1-2.4, 2.6-2.8, 3.3-3.6 | • Plans and organises complex tasks to ensure that claims are properly processed and to keep the claimant informed  
• Monitors progress of plans and schedules and reviews                                                                                                                                                                                                 |
and changes them to meet new demands and priorities

- Makes critical decisions in complex situations, taking a range of variables into consideration
- Evaluates and analyses results of decisions to identify opportunities for improvement

Performance Evidence

Evidence of the ability to:

- process and analyse workers compensation claims
- process and analyse sick leave claims
- establish, implement, monitor and review a rehabilitation needs and return to work program including
  - identifying breaches
  - liaising between the claimant, workers compensation authority, rehabilitation provider, doctor and workplace
  - determining the extent to which the program meets its objective in respect to timeframes, success rates, cost and impact on the organisation
- conduct a risk analysis of a return to work program and mitigate identified risks including
  - assessing the likelihood of a negative event preventing the program meeting its objectives and the likely consequences of such an event
  - action taken to reduce or eliminate identified risk
- assess the strengths and weaknesses of the organisation’s approach to rehabilitation return to work programs
- apply relevant legislation to return to work programs.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain rehabilitation concepts and return to work procedures
- identify and describe relevant legislation from all levels of government that affects rehabilitation and return to work programs
- outline the role of workers compensation authorities and tribunal procedures.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the workforce development – human resource development field of work and include access to:

- documentation and resources normally used in the workplace
- case studies and, where possible, real situations
- workplace policies and procedures
- relevant legislation, regulations and codes of practice.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- apply practices that promote innovation within a team including:
  - modelling open and respectful communications
  - contributing to the make-up and rules of the team
  - planning and scheduling of activities
  - reflecting on activities, feedback and challenges to identify improvement options
- encourage others to contribute to innovation in the team
- implement improvements and communicate about them.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain what innovation is, the different types of innovation and the benefits of innovation
- describe the internal and external factors that contribute to a team becoming and remaining innovative including:
  - team characteristics
  - the role of group dynamics and diversity
  - broader environmental factors
- explain how activities can encourage or hinder innovation in a team including:
  - allocation of time and activities
  - modelling behaviour
  - rewards and recognition
  - communications
  - feedback.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the creativity and innovation and include access to:

- workplace documents
- case studies and, where possible, real situations
- office equipment and resources
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to create an environment that enables and supports the application of innovative practice focusing on a holistic approach to the integration of innovation across all areas of work practice.

It applies to individuals working in leadership or management roles in any industry or community context. The individual could be employed by the organisation, but may also be an external contractor, the leader of a cross organisation team or of a self-formed team of individuals. The work group could be permanent or temporary in nature.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Creativity and Innovation – Innovation
<table>

| 1 Lead innovation by example | 1.1 Make innovation an integral part of leadership and management activities  
1.2 Demonstrate positive reception of ideas from others and provide constructive advice  
1.3 Establish and maintain relationships based on mutual respect and trust  
1.4 Take considered risks to open up opportunities for innovation  
1.5 Regularly evaluate own approaches for consistency with the wider organisational or project context |
| 2 Establish work practices that support innovation | 2.1 Consult on and establish working conditions that reflect and encourage innovative practice  
2.2 Introduce and maintain workplace procedures that foster innovation and allow for rigorous evaluation of innovative ideas  
2.3 Facilitate and participate in collaborative work arrangements to foster innovation  
2.4 Build and lead teams to work in ways that maximise opportunities for innovation |
| 3 Promote innovation | 3.1 Acknowledge suggestions, improvements and innovations from all colleagues  
3.2 Find appropriate ways of celebrating and promoting innovation  
3.3 Promote and reinforce the value of innovation according to the vision and objectives of the organisation or project  
3.4 Promote and support the evaluation of innovative ideas within the wider organisational or project context |
| 4 Create a physical environment which supports innovation | 4.1 Evaluate the impact of the physical environment in relation to innovation  
4.2 Collaborate with colleagues about ideas for enhancing the physical work environment before taking action  
4.3 Consider potential for supporting innovation when selecting physical resources and equipment  
4.4 Design, fit-out and decorate workspaces to encourage creative mindsets, collaborative working and the development of positive |

Performance Evidence

Evidence of the ability to maximise opportunities for innovation by:

- establishing procedures and practices that foster innovation including:
  - collaborative work arrangements
  - building team capacity to contribute to innovation
  - providing formal and informal learning opportunities
  - evaluating ideas
  - celebration and promotion of innovation
  - consultation
  - respectful communications and sharing of ideas and feedback
- reinforcing the value of innovation to the vision and objectives of the organisation,
- modelling behaviour including being receptive to ideas, giving constructive advice, evaluating own work, establishing and maintaining relationships based on mutual respect and trust, taking considered risks that provide opportunities for innovation
- evaluating how the physical environment can be enhanced to support innovation and collaboration and collaborating on ideas to make improvements including in the selection of physical resources and equipment, and the design, fit-out and decoration of the workspaces
- making changes to a workspace that will encourage innovation in at least one of
  - design
  - fit-out
  - decoration.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.
Knowledge Evidence
To complete the unit requirements safely and effectively, the individual must:

- explain the concepts and theories of innovation and how these link to innovation in practice
- explain the context for innovation in the workplace including core business values, overall objectives, broader environmental context and the need to ensure the value and benefit of innovative ideas and projects
- discuss the factors and tools that can motivate individuals to use creative thinking and apply innovative work practices
- research the legislative framework that impacts on operations in the relevant workplace context
- explain how different approaches to management and leadership can support or hinder innovation
- discuss typical challenges and barriers to innovation within teams and organisations and ways of overcoming these including rewarding and celebrating innovation, coaching and learning, modelling behaviour and managing the physical environment.

Assessment Conditions
Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the creativity and innovation and include access to:

- workplace documents
- case studies and, where possible, real situations
- office equipment and resources
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to design and develop a database (including queries, forms and reports) to meet a defined need using existing data.

It applies to individuals who may work independently or within an administrative support role, with the responsibility to use databases to store and retrieve data using commercially available database software.

No licensing, legislation or certification requirements apply to this unit at the time of publication.

Unit Sector

Information and Communications Technology – IT Analysis and Design
Elements and Performance Criteria

Performance Evidence

Evidence of the ability to:

- produce a database, containing a minimum of THREE tables, which uses queries, reports and forms
- communicate with relevant personnel to check database design against requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe how the advanced functions of database software applications are to be applied
- describe the impact of formatting and design on the presentation and readability of data.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the information and communications technology – IT analysis and design field of work and include access to:

- office equipment and resources
- sample data.

Assessors must satisfy NVR/AQTF assessor requirements.

### 1. Prepare to produce documents

1.1 Use safe work practices to ensure ergonomic, work organisation, energy and resource conservation requirements are met

1.2 Identify document purpose, audience and presentation requirements, and clarify with relevant personnel as required

1.3 Identify organisational and task requirements for document layout and design

### 2. Produce documents

2.1 Format document using appropriate software functions to adjust page layout to meet information requirements, in accordance with organisational style and presentation requirements

2.2 Use system features to identify and manipulate screen display options and controls

2.3 Use manuals, user documentation and online help to overcome problems with document presentation and production

### 3. Finalise documents

3.1 Ensure final document is previewed, checked, adjusted and printed in accordance with organisational and task requirements

3.2 Ensure document is prepared within designated timelines and organisational requirements

3.3 Name and store document in accordance with organisational requirements and exit application without information loss/damage
Foundation Skills

Performance Evidence

Evidence of the ability to:
- produce documents following correct ergonomic, conservation requirements and organisational policies and procedures
- adhere to organisational style manual when formatting documents
- refer to help function and user documentation to rectify document problems
- use system features
- follow designated timelines when preparing documents.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- identify basic formatting styles and their effect on formatting, readability and appearance of documents
- describe purpose, use and function of word processing software
- outline organisational requirements for ergonomics, work periods and breaks, and conservation techniques
- describe what is contained in an organisational style guide.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the information and communications technology – IT use field of work and include access to:

- industry software packages
- computer user information
- relevant legislation and codes of practice
- organisational policies and procedures
- relevant workplace documentation and resources including a style guide and user manuals.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<tbody>
<tr>
<td><strong>Elements describe the essential outcomes.</strong></td>
<td><strong>Performance criteria describe the performance needed to demonstrate achievement of the element.</strong></td>
</tr>
</tbody>
</table>

### 1. Select and prepare resources

1.1 Adjust workspace, furniture and equipment to suit own ergonomic, work organisation and work health and safety (WHS) requirements

1.2 Use energy and resource conservation techniques to minimise wastage in accordance with organisational and statutory requirements

1.3 Identify spreadsheet task requirements and clarify with relevant personnel as required

### 2. Create simple spreadsheets

2.1 Ensure data is entered, checked and amended in accordance with organisational and task requirements, to maintain consistency of design and layout

2.2 Format spreadsheet using software functions; to adjust page and cell layout to meet information requirements, in accordance with organisational style and presentation requirements

2.3 Ensure formulae are used and tested to confirm output meets task requirements, in consultation with appropriate personnel as required

2.4 Use manuals, user documentation and online help to overcome problems with spreadsheet design and production

### 3. Produce simple charts

3.1 Select chart type and design that enables valid representation of numerical data and meets organisational and task requirements

3.2 Create chart using appropriate data range in spreadsheet

3.3 Modify chart type and layout using formatting features

### 4. Finalise spreadsheets

4.1 Ensure spreadsheet and any accompanying charts are previewed, adjusted and printed in accordance with organisational and task requirements

4.2 Ensure data input meets designated timelines and organisational requirements for speed and accuracy

4.3 Name and store spreadsheet in accordance with organisational requirements and exit application without data loss/damage
Foundation Skills

Performance Evidence

Evidence of the ability to:
- produce documents following correct ergonomic, conservation, organisational and statutory requirements
- consult with appropriate personnel as required
- adhere to organisational style and presentation requirements
- refer to online help function and user documentation to rectify document problems
- create and modify simple charts
- follow designated timelines and ensure high accuracy when preparing documents
- demonstrate ability to prevent data loss and damage.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- demonstrate knowledge of how to format workplace documents
- describe organisational requirements for ergonomic standards, work periods and breaks, and conservation techniques
- outline organisational guidelines on spreadsheet manipulation and processing
- explain purpose and range of use of spreadsheet functions.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the information and communications technology – IT use field of work and include access to:

- industry technology
- organisational policies and procedures
- relevant legislation
- user manuals
- relevant workplace documentation and resources
- industry software packages.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to create simple two-table relational databases with reports and queries, for storage and retrieval of information.

It applies to individuals that may provide administrative support within an enterprise, or may be independently responsible for storage and retrieval of data relating to their own work roles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Information and communications Technology – IT use
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Create a simple database** | 1.1 Design a simple database, with at least two tables, using a database application, basic design principles, software functions and simple formulae  
1.2 Develop a table with fields and attributes according to database usage, as well as data considerations and user requirements  
1.3 Create a primary key for each table  
1.4 Modify table layout and field attributes as required  
1.5 Create a relationship between the two tables  
1.6 Check and amend data entered, in accordance with organisational and task requirements |
| **2. Create reports and queries** | 2.1 Determine information output, database tables to be used and report layout to meet task requirements  
2.2 Determine data groupings, search and sort criteria to meet task requirements  
2.3 Run reports and queries to check results and formulae provide the required data  
2.4 Modify reports to include or exclude additional requirements |
| **3. Use database** | 3.1 Ensure data input meets designated timelines and organisational requirements for speed and accuracy  
3.2 Use manuals, user documentation and online help to overcome problems with database design and production  
3.3 Preview, adjust and print database reports or forms in accordance with organisational and task requirements  
3.4 Name and store databases, in accordance with organisational requirements, and exit application without data loss or damage  
3.5 Prepare and distribute reports to appropriate person in a suitable format |
Foundation Skills

Performance Evidence

Evidence of the ability to:
- adhere to organisational requirements when inputting, amending and storing data including:
  - correct naming conventions
- adhere closely to task requirements including:
  - following designated timelines
  - achieving speed and accuracy
- create simple databases including:
  - reports and queries
  - follow designated timelines
  - correctly name and store data
  - distribute reports to appropriate personnel.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- outline key provisions of relevant legislation, standards and codes that may affect aspects of business operations
- describe organisational requirements relating to data entry, storage and presentation.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the information and communications technology – IT use field of work and include access to:

- business technology
- workplace documentation and resources
- industry database software applications.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- follow organisational and safe work practices including:
  - ergonomic requirements
  - energy and resource conservation techniques
- adhere to organisational requirements for:
  - ensuring consistency of style, design and layout
  - saving and printing documents within designated timelines
  - naming and storing documents
- adhere to identified or task requirements when producing documents including:
  - editing macros and automating some tasks
  - using appropriate templates
  - creating graphs to represent data
- resolve issues by referring to user documentation and online help
- use appropriate data storage options
- evaluate tasks to improve efficiency
- apply knowledge of functions and features of contemporary computer applications
- communicate with relevant personnel.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain advanced functions of spreadsheet software applications
- describe impact of formatting and design on presentation and readability of data
- explain organisational requirements for ergonomics, work periods and breaks, and conservation techniques.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the information and communications technology – IT use field of work and include access to:

- organisational policies and procedures
- relevant workplace documentation and resources
- industry software packages and user instructions.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit defines skills, knowledge and outcomes required to use leadership to promote team cohesion. It includes motivating, mentoring, coaching and developing the team and forming the bridge between the management of the organisation and team members.

This unit applies to team leaders, supervisors and new or emerging managers where leadership plays a role in developing and maintaining effective workplace relationships. It applies in any industry or community context.

At this level work will normally be carried out within routine and non-routine methods and procedures, which require planning and evaluation and leadership and guidance of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

Evidence of the ability to:
- access and analyse information to achieve planned outcomes
- apply techniques for resolving problems and conflicts and dealing with poor performance within organisational and legislative requirements
- review and improve workplace outcomes in consultation with relevant personnel
- adjust interpersonal style and communications to respond to cultural and social diversity
- apply relationship management and communication skills with a range of people that:
  - demonstrate integrity, respect, empathy and cultural sensitivity and promote trust
  - forge effective relationships with internal and/or external people and help to maintain these networks
  - encourage participation and foster contribution of and respect for ideas and feedback
  - provide support to colleagues to resolve difficulties.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.
Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- give examples of how work relationships, and the cultural and social environment, can support or hinder achieving planned outcomes
- explain techniques for developing positive work relationships and building trust and confidence in a team including interpersonal styles, communications, consultation, cultural and social sensitivity, networking
- explain the impact of legislation and organisational policies on workplace relationships
- describe a range of methods and techniques for communicating information and ideas to a range of stakeholders
- outline problems solving methods
- explain methods to resolve workplace conflict
- explain methods to manage poor work performance
- explain how to monitor, analyse and introduce ways to improve work relationships.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the management and leadership field of work and include access to:

- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

 Application

 This unit defines skills, knowledge and outcomes required to plan and supervise the performance of the team and develop team cohesion.

 It applies to team leaders, supervisors and new emerging managers who have an important leadership role in the development of efficient and effective work teams.

 Leaders at this level also provide leadership for the team and bridge the gap between the management of the organisation and the team members. As such they must 'manage up' as well as manage their team/s.

 No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

Evidence of the ability to:

- apply knowledge of organisational goals, objectives and plans
- develop a team work plan including documentation of how it was generated and how it will be monitored
- identify and incorporate innovation and productivity measures into a team work plan
- communicate with team members and management to identify and establish the team purpose, roles, responsibilities, goals plans and objectives and resolve problems
- use techniques to consult, encourage, support and provide feedback to team members
- model team leadership behaviours and approaches
- liaise with management to develop the teamwork plan, resolve issues and ensure follow-up action is taken.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must explain principles and techniques associated with:

- delegation and work allocation
- goal setting
- group dynamics and processes
- individual behaviour and difference
- leadership styles
- motivation
- negotiation
- problem solving
- planning
- workplace innovation
- workplace productivity.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the management and leadership field of work and include access to:

- information about the organisation, including organisational structure, goals, objectives and plans
- case studies, and where possible, real situations
- workplace equipment and resources
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to determine individual and team development needs and to facilitate the development of the workgroup.

It applies to individuals with a broad knowledge of learning and development who apply their skills in addressing development needs to meet team objectives. They may have responsibility to provide guidance or to delegate aspects of tasks to others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Workforce Development – Learning and Development
## Elements and Performance Criteria

</tbody>
</table>
| 1. Determine development needs | 1.1 Systematically identify and implement learning and development needs in line with organisational requirements  
1.2 Ensure that a learning plan to meet individual and group training and development needs is collaboratively developed, agreed to and implemented  
1.3 Encourage individuals to self-evaluate performance and identify areas for improvement  
1.4 Collect feedback on performance of team members from relevant sources and compare with established team learning needs |
| 2. Develop individuals and teams | 2.1 Identify learning and development program goals and objectives, ensuring a match to the specific knowledge and skill requirements of competency standards relevant to the industry  
2.2 Ensure that learning delivery methods are appropriate to the learning goals, the learning style of participants, and availability of equipment and resources  
2.3 Provide workplace learning opportunities, and coaching and mentoring assistance to facilitate individual and team achievement of competencies  
2.4 Create development opportunities that incorporate a range of activities and support materials appropriate to the achievement of identified competencies  
2.5 Identify and approve resources and time lines required for learning activities in accordance with organisational requirements |
| 3. Monitor and evaluate workplace learning | 3.1 Use feedback from individuals or teams to identify and implement improvements in future learning arrangements  
3.2 Assess and record outcomes and performance of individuals/teams to determine the effectiveness of development programs and the extent of additional development support  
3.3 Negotiate modifications to learning plans to improve the efficiency and effectiveness of learning  
3.4 Document and maintain records and reports of competency according to organisational requirements |
## Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Performance Evidence

Evidence of the ability to:

- systematically identify and implement learning opportunities for others
- collect feedback on team and individual performance
- give and receive feedback from team members to encourage participation in and effectiveness of the team
- collaboratively develop learning plans to match skill needs of individuals and groups
- provide mentoring and coaching assistance to teams and individuals
- monitor and review workplace learning.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe facilitation techniques to encourage team development and improvement
- outline organisational policies, plans and procedures for developing teams
- identify career paths and competency standards relevant to the industry.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the workforce learning and development field of work and include access to:

- office equipment and resources
- learning and development plans, policies and procedures
- case studies and, where available, real situations
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with BSB Business Services Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to manage programs with a health and wellbeing focus. The unit addresses management of the range of programs that would typically be associated with health and wellbeing such as stress management, smoking cessation, exercise, and Employee Assistance Programs (EAPs).

It applies to individuals who take responsibility for managing staff health and wellbeing programs or activities.

It also has particular relevance for managers of human resources or diversity programs, frontline managers and specialist consultants responsible for promoting a balance between work demands and personal life. It is not assumed the individual will be directly involved in delivering the programs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

Evidence of the ability to:

- collaboratively plan and implement a health and wellbeing program
- develop an overall program management plan
- provide feedback to stakeholders on:
  - program responsibilities
  - program milestones
  - evaluation outcomes
- prepare policy documents
- provide appropriate support to relevant personal
- monitor and review program
- incorporate outcomes into organisational strategies.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify a range of employee health issues and options for improving health outcomes
- locate and name relevant industry consultants
- outline steps to create a program management plan
- explain why it is important to monitor program progress.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the workforce learning and development field of work and include access to:

- relevant workplace documentation, equipment and resources
- case studies and, where available, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to implement the organisation’s continuous improvement systems and processes. It covers using systems and strategies to actively encourage the team to participate in the process, monitoring and reviewing performance, and identifying opportunities for further improvements.

It applies to managers who have an active role in implementing the continuous improvement process to achieve the organisation's objectives. Their position is closely associated with the creation and delivery of products and services which means that they have an important role in influencing the ongoing development of the organisation.

At this level, work will normally be carried out within routine and non-routine methods and procedures, which require planning, evaluation, leadership and guidance of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Management and Leadership – Management
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

### 1. Implement continuous improvement systems and processes

1.1 Implement systems to ensure that individuals and teams are actively encouraged and supported to participate in decision making processes, assume responsibility and exercise initiative

1.2 Communicate the organisation’s continuous improvement processes to individuals and teams, and obtain feedback

1.3 Ensure effective mentoring and coaching allows individuals and teams to implement the organisation’s continuous improvement processes

### 2. Monitor and review performance

2.1 Use the organisation’s systems and technology to monitor and review progress and to identify ways in which planning and operations could be improved

2.2 Improve customer service through continuous improvement techniques and processes

2.3 Formulate and communicate recommendations for adjustments to those who have a role in their development and implementation

### 3. Provide opportunities for further improvement

3.1 Implement processes to ensure that team members are informed of savings and productivity/service improvements in achieving the business plan

3.2 Document work performance to aid the identification of further opportunities for improvement

3.3 Manage records, reports and recommendations for improvement within the organisation’s systems and processes
## Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

Performance Evidence

Evidence of the ability to:

- implement continuous improvement systems and provide mentoring and coaching support to enable individuals and teams to participate in decisions, take responsibility, show initiative and implement improvement processes
- implement processes to inform team members about savings and productivity/service improvements achievements
- communicate effectively to support the continuous improvement system and implementation of improvements
- apply continuous improvement to customer services including internal and external customers
- implement, monitor and adjust improvement plans, processes and procedures to improve performance
- document performance to identify further opportunities for improvement
- manage records and reports within the organisation’s systems and procedures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- give examples of continuous improvement processes
- list typical areas of need for coaching and mentoring to support continuous improvement
- explain how change management techniques can support continuous improvement and initiative
- identify the organisation’s systems and data that can be used for benchmarking and monitoring performance for continuous improvement.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the management and leadership field of work and include access to:

- relevant workplace documentation and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to manage the performance of staff who report to them directly. Development of key result areas and key performance indicators and standards, coupled with regular and timely coaching and feedback, provide the basis for performance management.

It applies to individuals who manage people. It covers work allocation and the methods to review performance, reward excellence and provide feedback where there is a need for improvement.

The unit makes the link between performance management and performance development, and reinforces both functions as a key requirement for effective managers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

Evidence of the ability to:

- consult with relevant stakeholders to identify work requirements, performance standards and agreed performance indicators
- develop work plans and allocate work to achieve outcomes efficiently and within organisational and legal requirements
- monitor, evaluate and provide feedback on performance and provide coaching or training, as needed
- reinforce excellence in performance through recognition and continuous feedback
- seek assistance from human resources specialists where appropriate
- keep records and documentation in accordance with the organisational performance management system.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline relevant legislative and regulatory requirements
- outline relevant awards and certified agreements
- explain performance measurement systems utilised within the organisation
- explain unlawful dismissal rules and due process
- describe staff development options and information.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the management and leadership field of work and include access to:

- relevant legislation
- workplace documentation and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to develop and monitor implementation of the operational plan to provide efficient and effective workplace practices within the organisation’s productivity and profitability plans.

Management at a strategic level requires systems and procedures to be developed and implemented to facilitate the organisation’s operational plan.

This unit applies to individuals who manage the work of others and operate within the parameters of a broader strategic and/or business plan.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

| **1. Develop operational plan** | 1.1 Research, analyse and document resource requirements and develop an operational plan in consultation with relevant personnel, colleagues and specialist resource managers  
1.2 Develop and/or implement consultation processes as an integral part of the operational planning process  
1.3 Ensure the operational plan includes key performance indicators to measure organisational performance  
1.4 Develop and implement contingency plans for the operational plan  
1.5 Ensure the development and presentation of proposals for resource requirements is supported by a variety of information sources and seek specialist advice as required  
1.6 Obtain approval for the plan from relevant parties and explain the plan to relevant work teams |
| **2. Plan and manage resource acquisition** | 2.1 Develop and implement strategies to ensure that employees are recruited and/or inducted within the organisation’s human resources management policies, practices and procedures  
2.2 Develop and implement strategies to ensure that physical resources and services are acquired in accordance with the organisation’s policies, practices and procedures  
2.3 Recognise and incorporate requirements for intellectual property rights and responsibilities in recruitment and acquisition of resources and services |
| **3. Monitor and review operational performance** | 3.1 Develop, monitor and review performance systems and processes to assess progress in achieving profit and productivity plans and targets  
3.2 Analyse and interpret budget and actual financial information to monitor and review profit and productivity performance  
3.3 Identify areas of under-performance, recommend solutions and take prompt action to rectify the situation  
3.4 Plan and implement systems to ensure that mentoring and coaching are provided to support individuals and teams to effectively, economically and safely use resources  
3.5 Negotiate recommendations for variations to operational plans |

## Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

<table>
<thead>
<tr>
<th>Skill</th>
<th>Performance Criteria</th>
<th>Description</th>
</tr>
</thead>
</table>
| **Reading**       | 1.1, 1.5, 2.1, 2.2, 3.1, 3.2, 3.3, 3.4, 3.6 | • Identifies and extracts relevant information from a range of complex texts  
• Gathers, interprets and analyses workplace documentation to determine requirements for the operational plan |
| **Writing**       | 1.1-1.5, 2.1, 2.2, 3.1-3.6 | • Develops and documents a range of detailed texts relating to the management of an operational plan according to organisational requirements  
• Ensures the vocabulary, grammatical structures and conventions are appropriate for the context and target audience |
| **Oral Communication** | 1.1, 1.2, 1.5, 1.6, 3.4, 3.5 | • Presents information to a range of audiences using appropriate register, vocabulary and paralinguistic features  
• Listens and comprehends information from a variety of spoken exchanges with clients, co-workers and other stakeholders  
• Confirms understanding through questioning and active listening |
| **Numeracy**      | 1.1, 1.3, 1.4, 3.1-3.4 | • Selects and uses mathematical problem-solving strategies to organise resource requirements, performance benchmarks and financial viability of the operational plan |
| **Navigate the world of work** | 2.1, 2.2, 3.4, 3.6 | • Monitors adherence to organisational policies, procedures and considers own role in terms of its contribution to broader goals of the work environment  
• Appreciates the implications of legal responsibilities with specific reference to health and safety |
| **Interact with others** | 1.1, 1.2, 1.5, 1.6, 3.5 | • Identifies and uses appropriate conventions and protocols when communicating with colleagues and external stakeholders  
• Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction, influencing direction and taking a leadership role on occasion |
| **Get the work done** | 1.1-1.5, 2.1, 2.2, 3.1, 3.3, 3.4, 3.6 | • Takes responsibility for developing and implementing systems and processes to achieve organisational objectives, seeking advice, feedback and support as |
required to assist in the development and planning phase

- Sequences and schedules complex activities, monitors implementation, and manages relevant communication
- Uses systematic analytical processes to aid decision making, identify potential problems and generate contingency plans or solutions

Performance Evidence

Evidence of the ability to:

- develop and implement an operational plan using a variety of information sources and consultation (including using specialist advice if required) which includes:
  - resource requirements
  - key performance indicators
  - monitoring processes
  - contingency plans
- communicate effectively with relevant stakeholders to explain the plan and supporting information, seek approvals, negotiate variations and engage work teams
- develop and implement strategies to achieve the operational plan within the organisation’s policies, practices and procedures including:
  - recruiting, inducting and developing personnel
  - acquiring physical resources and services
  - protecting intellectual property
  - making variations to the plan
  - monitoring and documenting performance.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.
Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe models and methods for operational plans
- explain the role of an operational plan in achieving the organisation’s objectives
- explain budgeting processes
- list alternative approaches to developing key performance indicators to meet business objectives
- outline the legislative and regulatory context relevant to the operational plan of the organisation
- outline the organisation’s policies, practices and procedures that directly relate to the operational plan.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the management and leadership field of work and include access to:

- relevant legislation and regulations
- workplace documentation and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- analyse and research business vision, mission, values, objectives, goals, competitors, financial targets, management arrangements, marketing approaches and strategic, business and operational plans
- write a business plan which includes a description of the business, products and services, financial, physical and human resource requirements, permit and licence requirements, marketing activity, financial indicators, productivity and performance targets for key result areas
- implement a business plan including ensuring skilled labour is available, and that training is provided where appropriate
- monitor and respond to business performance including evaluation of performance against key results indicators including profit and loss, community awareness or branding, environmental impact, governance, quality, sales, triple bottom line and the workforce
- consult, communicate with and report to key stakeholders including business partners, financiers, customers, staff and technical advisers
- provide an analysis of the strengths and weaknesses of a business plan.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline processes for developing business plans
- describe performance objectives and measures including key performance indicators
- identify key stakeholders.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the management and leadership field of work and include access to:

- appropriate documentation and resources normally used in the workplace
- strategic, business and operational plans
- business information and data
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to research, develop and present a marketing plan for an organisation.

It applies to individuals working in senior marketing positions who are responsible for formulating a marketing plan by developing specific marketing strategies and tactics in accordance with the organisation’s overall marketing objectives.

Individuals operating at this level may receive input from people working under their supervision who collect information required to devise specific marketing strategies and tactics.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

Evidence of the ability to identify organisational objectives and:

- devise, document and present a marketing plan including:
  - evaluation of marketing opportunity options
  - marketing strategies that utilise existing strengths and opportunities and develop resources and expertise as needed to meet objectives
  - marketing tactics that are legal, ethical, achievable and can be reviewed
  - costs, scheduling, responsibilities and accountabilities for tactics
  - strategic use of marketing approaches and marketing mix
  - rationale for objectives and chosen strategies and tactics
  - adjust marketing plan in response to feedback from key stakeholders and disseminate for implementation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.
Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise organisational structure, products and services and overall strategic and marketing objectives
- outline common marketing opportunity options including:
  - strategic alliances and cooperative business models
  - new products or services to target specific markets
  - greater market penetration with existing products or services
  - take-overs
  - new businesses and franchising
  - other options relevant to the organisation
- outline common marketing strategies and marketing approaches
- explain processes to ensure marketing strategies, approaches and marketing mix align to organisation’s objectives and are legal, ethical and achievable
- outline the legislative and regulatory context of the organisation as relevant to the marketing plan.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the business development – marketing field of work and include access to:

- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- work in a team environment to plan and develop quality management and continuous improvement parameters
- apply quality management techniques in a project relevant to the organisation and industry context
- maintain accurate quality records
- contribute to project continuous improvement process.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss implementation of quality-assurance processes and requirements
- discuss implementation of quality-control processes and requirements
- describe quality criteria relevant to industry
- explain application of quality management tools and methodologies relevant to industry and organisation
- describe and explain quality standards and their place in the project life cycle.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the management and leadership – project management field of work and include access to:

- project documentation used for quality management purposes
- project records
- case studies and, where possible, real situations.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- assist others in identifying and prioritising potential risks and developing risk-management strategies, plans and reporting mechanisms
- apply, monitor and review risk-control measures, including contingency measures to mitigate risks
- evaluate, review and report on risk-management processes and make recommendations for future improvements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify tools to help determine potential risks for a specific project
- explain strategies for managing project risks and their application in different situations
- explain the importance of risk-contingency measures.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the management and leadership – project management field of work and include access to:

- project management documentation for risk management
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to undertake a straightforward project or a section of a larger project. It covers developing a project plan, administering and monitoring the project, finalising the project and reviewing the project to identify lessons learned for application to future projects.

This unit applies to individuals who play a significant role in ensuring a project meets timelines, quality standards, budgetary limits and other requirements set for the project.

The unit does not apply to specialist project managers. For specialist project managers, the other units of competency in the project management field (BSBPMG) will be applicable.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Management and Leadership – Project Management
Elements and Performance Criteria

<table>

1. Define project
   1.1 Access project scope and other relevant documentation
   1.2 Define project stakeholders
   1.3 Seek clarification from delegating authority of issues related to project and project parameters
   1.4 Identify limits of own responsibility and reporting requirements
   1.5 Clarify relationship of project to other projects and to the organisation's objectives
   1.6 Determine and access available resources to undertake project

2. Develop project plan
   2.1 Develop project plan in line with the project parameters
   2.2 Identify and access appropriate project management tools
   2.3 Formulate risk management plan for project, including Work Health and Safety (WHS)
   2.4 Develop and approve project budget
   2.5 Consult team members and take their views into account in planning the project
   2.6 Finalise project plan and gain necessary approvals to commence project according to documented plan

3. Administer and monitor project
   3.1 Take action to ensure project team members are clear about their responsibilities and the project requirements
   3.2 Provide support for project team members, especially with regard to specific needs, to ensure that the quality of the expected outcomes of the project and documented time lines are met
   3.3 Establish and maintain required recordkeeping systems throughout the project
   3.4 Implement and monitor plans for managing project finances, resources and quality
   3.5 Complete and forward project reports as required to stakeholders
   3.6 Undertake risk management as required to ensure project outcomes are met
   3.7 Achieve project deliverables

4. Finalise project
   4.1 Complete financial recordkeeping associated with project and

Performance Evidence

Evidence of the ability to:

- define the parameters of the project including:
  - project scope
  - project stakeholders, including own responsibilities
  - relationship of project to organisational objectives and other projects
  - reporting requirements
  - resource requirements
- use project management tools to develop and implement a project plan including:
  - deliverables
  - work breakdown
  - budget and allocation of resources
  - timelines
  - risk management
  - recordkeeping and reporting
- consult and communicate with relevant stakeholders to generate input and engagement in planning, implementing and reviewing the project
- provide support to team members to enable them to achieve deliverables and to transition them as appropriate at completion of the project
- finalise the project including documentation, sign-offs and reporting
- review and document the project outcomes.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.
Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- give examples of project management tools and how they contribute to a project
- outline types of documents and other sources of information commonly used in defining the parameters of a project
- explain processes for identifying and managing risk in a project
- outline the organisation's mission, goals, objectives and operations and how the project relates to them
- explain the organisation's procedures and processes that are relevant to managing a project including:
  - lines of authority and approvals
  - quality assurance
  - human resources
  - budgets and finance
  - recordkeeping
  - reporting
- outline the legislative and regulatory context of the organisation in relation to project work, including work health and safety (WHS) requirements.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the management and leadership – project management field of work and include access to:

- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to gather, organise, analyse and present workplace information using available systems. This includes identifying research requirements and sources of information, applying information to a set of facts, evaluating the quality of the information, and preparing and producing reports.

It applies to individuals who are required to apply their broad knowledge of the work environment to analysis and research tasks, evaluate information from a variety of sources and apply solutions to a range of unpredictable problems.

No licensing, legislation or certification requirements apply to this unit at the time of publication.

Unit Sector

Knowledge Management – Research
### Elements and Performance Criteria

</tr>
</thead>
<tbody>
<tr>
<td><strong>Elements describe the essential outcomes.</strong></td>
<td><strong>Performance criteria describe the performance needed to demonstrate achievement of the element.</strong></td>
</tr>
</tbody>
</table>

#### 1. Gather and organise information

1.1 Gather and organise information in a format suitable for analysis, interpretation and dissemination in accordance with organisational requirements

1.2 Access information held by the organisation ensuring accuracy and relevance in line with established organisational requirements

1.3 Ensure that methods of collecting information are reliable and make efficient use of resources in accordance with organisational requirements

1.4 Identify research requirements for combining online research with non-electronic sources of information

1.5 Use business technology to access, organise and monitor information in accordance with organisational requirements

1.6 Update, modify, maintain and store information, in accordance with organisational requirements

#### 2. Research and analyse information

2.1 Clearly define objectives of research ensuring consistency with organisational requirements

2.2 Ensure that data and research strategies used are valid and relevant to the requirements of the research and make efficient use of available resources

2.3 Identify key words and phrases for use as part of any online search strategy, including the use of Boolean operators and other search tools

2.4 Use reliable methods of data analysis that are suitable to research purposes

2.5 Ensure that assumptions and conclusions used in analyses are clear, justified, supported by evidence and consistent with research and business objectives

#### 3. Present information

3.1 Present recommendations and issues in an appropriate format, style and structure using suitable business technology

3.2 Structure and format reports in a clear manner that conforms to organisational requirements

3.3 Report and distribute research findings in accordance with organisational requirements

3.4 Obtain feedback and comments on suitability and sufficiency

Performance Evidence

Evidence of the ability to:
- identify or confirm research requirements and objectives
- gather, organise and present workplace information and data
- update, modify, maintain and store information
- maintain and handle data and documents systematically and securely
- prepare and produce reports including:
  - recommendations based on the analysis of information
  - clear and justified assumptions and conclusions
  - use of efficient, valid and reliable methods
- use Boolean operators and other search tools
- analyse, evaluate and interpret data to support organisational activities.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- explain organisational systems for recordkeeping/filing, including security procedures
- identify organisational policies and procedures and legal and ethical obligations relating to workplace information
- explain concepts related to research and analysis including reliability and validity
- give examples of techniques for data analysis and how they are applied
- explain research processes and strategies to identify new sources (online and print) of information and to use them most efficiently and effectively.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the knowledge management – research field of work and include access to:

- workplace information systems, equipment and resources
- workplace policies and procedures
- case studies and, where possible, real situations.

Assessors must satisfy NVR/AQTF assessor requirements.

</tr>
</tbody>
</table>
| 1. Establish risk context | 1.1 Review organisational processes, procedures and requirements for undertaking risk management in accordance with current risk management standards  
1.2 Determine scope for risk management process  
1.3 Identify internal and external stakeholders and their issues  
1.4 Review political, economic, social, legal, technological and policy context  
1.5 Review strengths and weaknesses of existing arrangements  
1.6 Document critical success factors, goals or objectives for area included in scope  
1.7 Obtain support for risk management activities  
1.8 Communicate with relevant parties about the risk management process and invite participation |
| 2. Identify risks | 2.1 Invite relevant parties to assist in the identification of risks  
2.2 Research risks that may apply to scope  
2.3 Use tools and techniques to generate a list of risks that apply to the scope, in consultation with relevant parties |
| 3. Analyse risks | 3.1 Assess likelihood of risks occurring  
3.2 Assess impact or consequence if risks occur  
3.3 Evaluate and prioritise risks for treatment |
| 4. Select and implement treatments | 4.1 Determine and select most appropriate options for treating risks  
4.2 Develop an action plan for implementing risk treatment  
4.3 Communicate risk management processes to relevant parties  
4.4 Ensure all documentation is in order and appropriately stored  
4.5 Implement and monitor action plan  
4.6 Evaluate risk management process |
## Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

Performance Evidence

Evidence of the ability to:
- analyse information from a range of sources to identify the scope and context of the risk management process including:
  - stakeholder analysis
  - political, economic, social, legal, technological and policy context
  - current arrangements
  - objectives and critical success factors for the area included in scope
  - risks that may apply to scope
- consult and communicate with relevant stakeholders to identify and assess risks, determine appropriate risk treatment actions and priorities and explain the risk management processes
- develop and implement an action plan to treat risks
- monitor and evaluate the action plan and risk management process
- maintain documentation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- outline the purpose and key elements of current risk management standards
- outline the legislative and regulatory context of the organisation in relation to risk management
- outline organisational policies, procedures and processes for risk management.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the regulation, licensing and risk - risk management field of work and include access to:

- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- plan sales operations and resources required to attain sales objectives including:
  - structure and size of sales team
  - compensation methods and levels
  - sales territories
  - targets and performance standards
- recruit and induct personnel and provide support including:
  - training, coaching and mentoring
  - strategies for motivation, encouragement, recognition and reward
  - modelling client-focused sales tactics
  - providing constructive feedback
- establish team work structures, targets and performance standards
- allocate resources in accordance with organisational policies and procedures to support attainment of sales targets
- establish systems to monitor and evaluate performance including:
  - sales volume, conversion rate data and cross-selling ratios
  - legal, ethical and social conduct
- analyse performance data and take corrective action or adjust sales plans as appropriate.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.
Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain organisation’s procedures that relate to budgets and resource allocation
- explain the relevance of sales volume, conversion rate data and cross-selling ratios
- outline human resource management strategies
- outline the legislative and regulatory context of the organisation in relation to management of a sales team
- explain challenges in structuring a sales team and managing sales territories and possible strategies to address them.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the business development – sales field of work and include access to:

- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- research and analyse information from a range of sources to investigate a business opportunity, including:
  - financial considerations
  - digital technologies
  - market size, potential and trends
  - ethical and cultural requirements of the market
  - resource availability
- review data for potential impact on the market, products, services and customers
- match products and services to the business opportunity.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- locate and outline legislation and regulation relevant to specific micro business opportunities being investigated
- identify sources of specialist advice on trends in new and emerging markets and decline and risk factors
- summarise benefits and challenges of digital technologies relevant to micro business opportunities
- describe appropriate business research methods and data collection tools and software.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the Management and Leadership – Small and Micro Business field of work and include access to:

- internet access for research
- data collection tools and software
- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies, or where possible, real situations
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

| Release 2 | This version released with BSB Business Services Training Package Version 2.0.  
            | Version created to clarify intent of unit |
| Release 1 | This version first released with BSB Business Services Training Package Version 1.0. |

Performance Evidence

Evidence of the ability to:

- demonstrate a systematic approach to identifying, managing and meeting legal and regulatory requirements, specifically in regard to WHS, business registration and environmental requirements
- ensure compliance, by:
  - following taxation and industrial relations principles
  - updating and maintaining legal documents
  - investigating areas of non-compliance
  - monitoring provision of products and services
  - taking corrective action where necessary
- negotiate and arrange contracts, including:
  - seeking legal advice
  - investigating procurement rights
  - identifying options of leasing or ownership of business premises.
- Identify, assess and treat risks specific to the business including
  - prioritising risks with highest probability of occurrence and greatest negative impact on the business
  - identifying insurance requirements

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.
Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline business registration and licensing requirements
- identify all government legislative requirements relating to the specific business operation
- explain creation and termination of relevant legal contracts
- summarise relevant cultural differences and legal implications
- describe legal rights and obligations of alternative ownership structures
- outline necessary record keeping to meet minimum legal and taxation requirements
- summarise relevant consumer legislation and industry codes of practice
- outline the key steps in the risk management process
- explain relevant insurance requirements and products.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the Management and Leadership – Small and Micro Business field of work and include access to:

- office equipment and resources
- business technology including internet access
- specialist software for analysis of data
- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies, or where possible, real situations
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

### 1. Identify costs, calculate prices and prepare profit statement

1.1 Identify and document costs associated with production and delivery of business products and services

1.2 Calculate prices based on costs and profit margin, as an hourly charge-out rate for labour or unit price for products

1.3 Calculate break-even sales point to establish business viability and profit margins

1.4 Identify appropriate pricing strategies in relation to market conditions to meet business profit targets

1.5 Prepare projected profit statement to supplement the business plan

### 2. Develop a financial plan

2.1 Set profit targets or goals to reflect owner’s desired returns

2.2 Identify working capital requirements necessary to attain profit projections

2.3 Identify non-current asset requirements and consider alternative asset management strategies

2.4 Prepare cash flow projections to enable business operation in accordance with business plan and legal requirements

2.5 Identify capital investment requirements accurately for each operational period

2.6 Select budget targets to enable ongoing monitoring of financial performance

### 3. Acquire finance

3.1 Identify start-up and ongoing financial requirements according to financial plan/budget

3.2 Identify sources of finance, including potential financial backers, to provide required liquidity for the business to complement business goals and objectives

3.3 Investigate cost of securing finance on optimal terms

3.4 Identify strategies to obtain finance as required to ensure financial viability of the business
Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Performance Evidence

Evidence of the ability to:

- develop a financial plan which identifies financial requirements of the business, including cash flow projections and a projected profit statement
- follow the financial plan, including:
  - demonstrating an awareness of appropriate legal requirements
  - implementing strategies to monitor financial performance
- identify sources and investigate costs of securing appropriate financial assistance.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.
Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain break-even analysis
- clarify costing for the business, including margin or mark-up, hourly charge-out rates and unit costs
- summarise financial decision-making relevant to the business
- outline methods and relative costs of obtaining finance
- summarise principles for preparing balance sheets
- provide a detailed explanation of:
  - principles for preparation of cash flow forecasts
  - principles for preparation of profit and loss statements
  - purpose of financial reports
- explain relevant accounting terminology
- describe working capital cycles.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the Management and Leadership – Small and Micro Business field of work and include access to:

- software for financial calculations
- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies or where possible, real situations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of the ability to:

- develop a business plan which provides for finance, marketing and provision of products or services to facilitate all business goals and objectives
- identify and plan all work health and safety (WHS) and duty of care responsibilities
- identify and assess internal and external risks to the business
- develop risk management strategies including a contingency plan for non-conformance.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.
Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss all government legislative requirements relating to business operation, especially in regard to WHS and environmental issues, equal employment opportunity, industrial relations and anti-discrimination
- explain methods of evaluation
- summarise WHS responsibilities and procedures for identifying hazards relevant to the business
- outline planning processes
- describe preparation of a business plan
- identify principles of risk management relevant to small business planning
- outline common risks particular to the small business type or industry
- explain reasons for, and benefits of, business planning
- clarify relevant industry codes of practice
- outline setting goals and objectives
- explain types of business planning – feasibility studies; strategic, operational, financial and marketing planning.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the Management and Leadership – Small and Micro Business field of work and include access to:

- business equipment and resources
- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies or where possible, real situations
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Version created to correct mapping table information |
| Release 1 | This version first released with BSB Business Services Training Package Version 1.0. |

Performance Evidence

Evidence of the ability to:

- develop strategies and procedures to successfully manage business operations, including:
  - developing an action plan
  - identifying risk management procedures
  - developing a quality system
  - implementing performance measures
  - utilising technologies to optimise business performance
- implement and monitor strategies and procedures developed, including:
  - analysing and correcting business problems
  - reviewing and adjusting the business plan
  - record and research business improvements
  - make appropriate adjustments to business operations as required.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.
Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise relevant industry codes of practice
- explain methods for implementing operation and revenue control systems
- summarise methods for monitoring performance and implementing improvements
- outline work health and safety (WHS) responsibilities and procedures for managing hazards
- identify relevant principles of risk management, including risk assessment
- clarify quality system principles and methods
- summarise relevant performance measures
- discuss role of innovation
- outline systems to manage staff, stock, expenditure, services and customer service
- identify technical or specialist skills relevant to business operations.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the Management and Leadership – Small and Micro Business field of work and include access to:

- business equipment and resources
- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies or possible, real situations
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

| Release 2    | This version released with BSB Business Services Training Package Version 2.0.  
|              | Version created to clarify intent of unit                                 |
| Release 1    | This version first released with BSB Business Services Training Package Version 1.0. |

Performance Evidence

Evidence of the ability to:
- operate the business according to the business plan, including:
  - adhering to legal requirements
  - meeting requirements of financial backers
  - defining strategies for debt collection and contingencies for debtors
  - managing cash flow
  - defining key performance indicators
  - communicating with relevant people
- monitor the business against financial plan and make changes as required.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- discuss benchmarking
- explain financial decision-making relevant to the business
- summarise significant financial indicators
- outline purposes of financial reports
- clarify preparation and interpretation of budget/actual reports
- identify principles for preparing balance sheets and their interpretation
- outline debt collection procedures or strategies
- characterise principles for preparing profit and loss statements and their interpretation
- discuss stock records and stock control relevant to the business.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the Management and Leadership – Small and Micro Business field of work and include access to:

- business equipment and resources
- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies or where possible, real situations
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to select, induct, train and develop staff members to enhance business operations within the parameters of all relevant legislative requirements.

It applies to individuals who operate a small business that stands alone, or is part of a department within a larger organisation. Individuals in this role have a good knowledge of industrial relations and team management and use effective, responsive and supportive communication in workplace interactions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

Evidence of the ability to:

- use the business plan to:
  - determine staffing requirements
  - coordinate skill-gap training where required
  - develop human resource policies and procedures
- develop job descriptions and selection criteria
- determine induction processes
- implement staff development program
- adhere to legal requirements and codes of practice
- develop staff records system
- conduct ongoing performance measures
- communicate effectively with staff members
- develop contingency plans
- develop strategies to review team performance
- monitor and review staff.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.
Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss all government legislative requirements relating to staffing the business operation
- explain work health and safety (WHS) responsibilities and procedures for managing hazards
- summarise relevant industry awards or enterprise agreements
- outline staff development pathways
- identify training course options for staff development
- summarise staff counselling, grievance and disciplinary procedures
- identify unfair dismissal legislation and procedures.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the Management and Leadership – Small and Micro Business field of work and include access to:

- business equipment and resources
- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies or where possible, real situations
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with BSB Business Services Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to contribute to the systematic management of work health and safety (WHS) risk.

It applies to individuals who provide specialised knowledge, systematic approaches and guidance to a range of personnel.

NOTE: The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Regulation, Licensing and Risk – Work Health and Safety

<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with BSB Business Services Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- identify, interpret and apply information from a range of sources to contribute to the development, implementation, monitoring and evaluation of a systematic approach to work health and safety (WHS) risk management
- apply WHS Acts, regulations, codes of practice and standards, including the Safe Work Australia model Code of Practice: How to Manage Work Health and Safety Risks
- identify duty holders
- explain the differences between a hazard and a risk and identify hazards and risks in the organisation
- prepare an action plan to implement a systematic approach to WHS risk management
- prepare positive performance indicators for evaluation of a systematic approach to WHS risk management
- consult effectively with relevant stakeholders.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.
Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe formal and informal communication and consultation processes, and key personnel related to communication, including duty holders
- explain how the characteristics and composition of the workforce impact on WHS risk and the management of WHS with reference to:
  - communication skills
  - cultural background/diversity
  - gender
  - labour market changes
  - language, literacy and numeracy
  - structure and organisation of the workforce, for example part time, casual and contract workers, shift rosters, geographical location
  - workers with specific needs and limitations
  - workplace culture towards alcohol and other drug use
- describe internal and external sources of WHS information and data, and explain how to access these sources
- outline the limitations of generic hazard identification and risk assessment checklists, and risk ranking processes
- describe the nature of workplace processes including work flow, planning and control and hazards relevant to the workplace
- describe organisational behaviour and culture as it impacts on WHS, change and the work team
- describe the key features of organisational WHS policies, procedures, processes and systems
- identify other functional areas in the organisation that impact on the management of WHS
- outline the key features of relevant commonwealth and state/territory WHS Acts, regulations, codes of practice, standards and guidance material
- describe the key principles and/or practices of:
  - a systematic approach to managing WHS
  - duty of care including concepts of causation, foreseeability and prevention
  - incident causation and injury processes
- describe risk analysis and assessment techniques and tools, and their application and limitations
- explain risk, as the effect of uncertainty, on objectives
- explain the duty of persons conducting businesses or undertakings (PCBUs) in regard to risk management under WHS legislation
- describe the sources of occupational disease and their prevention
- describe standard industry controls for hazards
- describe techniques, tools and processes for identifying and controlling health and safety hazards and risks including:
  - hazard and risk checklists
  - hazard hunts
  - job safety analysis
  - manifests and registers including dangerous goods, hazardous chemicals and plant
  - safe work method statements
- surveys using questionnaires, interviews and other survey techniques
- workplace inspections and walk throughs
- describe the key features of the toxicology of hazardous chemicals and potential health effects in the workplace.

**Assessment Conditions**

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced by individuals carrying out work health and safety duties in the workplace and include access to:

- relevant WHS legislation, standards, codes of practice and guidelines
- workplace policies and procedures and documentation
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to create systems and process to organise information and prioritise tasks.

It applies to individuals working in managerial positions who have excellent organisational skills. The work ethic of individuals in this role has a significant impact on the work culture and patterns of behaviour of others as managers at this level are role models in their work environment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Performance Evidence

Evidence of the ability to:

- use business technology to create and use systems and processes to organise and prioritise tasks and commitments
- measure and maintain personal work performance including assessing competency against competency standards and seeking feedback
- maintain an appropriate work-life balance to manage personal health and stress
- participate in networks
- develop a personal development plan which includes career objectives and an action plan
- develop new skills.

Note: if a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain principles and techniques involved in the management and organisation of:
  - performance measurement
  - personal behaviour, self-awareness and personality traits identification
  - a personal development plan
  - personal goal setting
  - time
- discuss management development opportunities and options for self
- describe methods for achieving a healthy work-life balance
- outline organisation’s policies, plans and procedures
- explain types of learning style/s and how they relate to the individual
- describe types of work methods and practices that can improve personal performance.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the industry capability - workplace effectiveness field of work and include access to:

- workplace equipment and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to lead teams in the workplace and to actively engage with the management of the organisation.

It applies to individuals working at a managerial level who facilitate work teams and build a positive culture within their work teams. At this level, work will normally be carried out using complex and diverse methods and procedures requiring the exercise of considerable discretion and judgement, using a range of problem solving and decision making strategies.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Establish team performance plan
   1.1 Consult team members to establish a common understanding of team purpose, roles, responsibilities and accountabilities in accordance with organisational goals, plans and objectives
   1.2 Develop performance plans to establish expected outcomes, outputs, key performance indicators (KPIs) and goals for work team
   1.3 Support team members in meeting expected performance outcomes

2. Develop and facilitate team cohesion
   2.1 Develop strategies to ensure team members have input into planning, decision making and operational aspects of work team
   2.2 Develop policies and procedures to ensure team members take responsibility for own work and assist others to undertake required roles and responsibilities
   2.3 Provide feedback to team members to encourage, value and reward individual and team efforts and contributions
   2.4 Develop processes to ensure that issues, concerns and problems identified by team members are recognised and addressed

3. Facilitate teamwork
   3.1 Encourage team members and individuals to participate in and to take responsibility for team activities, including communication processes
   3.2 Support the team in identifying and resolving work performance problems
   3.3 Ensure own contribution to work team serves as a role model for others and enhances the organisation’s image for all stakeholders

4. Liaise with stakeholders
   4.1 Establish and maintain open communication processes with all stakeholders
   4.2 Communicate information from line manager/management to the team
   4.3 Communicate unresolved issues, concerns and problems raised by team members and follow-up with line manager/management and other relevant stakeholders
   4.4 Evaluate and take necessary corrective action regarding

Performance Evidence

Evidence of the ability to:

- use leadership techniques and strategies to facilitate team cohesion and work outcomes including:
  - encouraging and fostering shared understanding of purpose, roles and responsibilities
  - identifying and resolving problems
  - providing feedback to encourage, value and reward others
  - modelling desired behaviour and practices
- develop policies and procedures to ensure team members take responsibility for own work and assist others to undertake required roles and responsibilities
- establish processes to address issues and resolve performance issues
- support team to meet expected performance outcomes including providing formal and informal learning opportunities as needed
- develop performance plans with key performance indicators (KPIs), outputs and goals for individuals or the team which incorporate input from stakeholders
- communicate effectively with a range of stakeholders about team performance plans and team performance
- facilitate two-way flow of information between team and management relevant to team performance
- evaluate and take necessary corrective action regarding unresolved issues, concerns and problems raised by internal or external stakeholders.

Note: if a specific volume or frequency is not stated, then evidence must be provided at least once.
Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain how group dynamics can support or hinder team performance
- outline strategies that can support team cohesion, participation and performance
- explain strategies for gaining consensus
- explain issue resolution strategies.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the industry capability - workplace effectiveness field of work and include access to:

- workplace documents
- case studies and, where possible, real situations
- office equipment and resources
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to plan documents, draft text, prepare final text and produce documents of some complexity.

It applies to individuals who work in a range of business environments and are skilled in the creation of reports, information and general promotion documents that are more complex than basic correspondence, memos or forms and that require review and analysis of a range of information sources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

| 1 Plan documents | 1.1 Determine the purposes of documents  
1.2 Choose appropriate formats for documents  
1.3 Establish means of communication  
1.4 Determine requirements of documents  
1.5 Determine categories and logical sequences of data, information and knowledge to achieve document objectives  
1.6 Develop overview of structure and content of documents |
| 2 Draft text | 2.1 Review and organise available data, information and knowledge according to proposed structure and content  
2.2 Ensure data, information and knowledge is aggregated, interpreted and summarised to prepare text that satisfies document purposes and objectives  
2.3 Include graphics as appropriate  
2.4 Identify gaps in required data and information, and collect additional material from relevant enterprise personnel  
2.5 Draft text according to document requirements and genre  
2.6 Use language appropriate to the audience |
| 3 Prepare final text | 3.1 Review draft text to ensure document objectives are achieved and requirements are met  
3.2 Check grammar, spelling and style for accuracy and punctuation  
3.3 Ensure draft text is approved by relevant enterprise personnel  
3.4 Incorporate revisions in final copy |
| 4 Produce document | 4.1 Choose basic design elements for documents appropriate to audience and purpose  
4.2 Use word processing software to apply basic design elements to text  
4.3 Check documents to ensure all requirements are met |
### Foundation Skills

Performance Evidence

Evidence of the ability to:

- plan, draft and finalise complex documents that require review and analysis of a range of information sources
- use business technology to apply formatting, and incorporate graphics
- edit the draft text to ensure accuracy and clarity of information, obtain feedback on the draft and revise the draft
- apply the enterprise style guide/house style.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify the enterprise style guide/house style
- outline formatting styles and their impact on formatting, readability and appearance of documents
- explain rules and conventions for written English, as defined by general and specialist sources.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the communication – writing field of work and include access to:

- office equipment and resources
- organisational policies and procedures
- organisational style guides.

Assessors must satisfy NVR/AQTF assessor requirements.

Employability Skills Information

Employability Skills  This unit contains Employability Skills

Elements and Performance Criteria Pre-Content

Elements define the essential outcomes of a unit of competency.

The Performance Criteria specify the level of performance required to demonstrate achievement of the Element. Terms in italics are elaborated in the Range Statement.
Elements and Performance Criteria

ELEMENT

1. Contribute to the development of effective communication strategies

PERFORMANCE CRITERIA

1.1 Develop, promote, implement and review strategies for internal and external dissemination of information as required to maximise individual and organisation effectiveness

1.2 In developing and implementing strategies, address special communication needs to avoid discrimination in the workplace

1.3 Establish channels of communication and review regularly to ensure staff are informed of relevant information in a timely way

1.4 Provide coaching in effective communication to staff as required

1.5 Use negotiation and conflict resolution strategies where required to promote effective operation of the organisation

1.6 Negotiate issues with key stakeholders, clients and staff to facilitate mutually acceptable outcomes

1.7 Maintain relevant work-related networks and relationships to meet client needs and organisation objectives

1.8 Ensure all communication with clients and colleagues is appropriate to individual needs and the situation and promotes achievement of organisation objectives
2. **Represent the organisation to a range of groups**

2.1 Present relevant, appropriately researched material in internal and external forums, in a manner that promotes the organisation and is adjusted as required to meet *audience needs*.

2.2 Ensure presentations are clear and sequential and delivered within a predetermined time, and utilise appropriate media to enhance the presentation and address audience needs.

2.3 Respond to questions from the audience in a manner consistent with organisation standards.

2.4 Respect and consider differences in views in a way that values and encourages contributions of others.

3. **Facilitate group discussions**

3.1 Define and implement mechanisms that enhance effective group interactions.

3.2 Routinely use strategies that encourage all group members to participate, including seeking and acknowledging contributions from all members.

3.3 Routinely set and follow objectives and agendas for meetings and discussions.

3.4 Provide relevant information to groups as appropriate to facilitate outcomes.

3.5 Evaluate group communication strategies to promote ongoing participation of all parties.

3.6 Identify and address the specific communication needs of individuals.

4. **Facilitate work group interaction**

4.1 When conducting meetings, clarify purpose, agree procedures, negotiate roles and responsibilities, adhere to agreed timeframes and maintain equality of participation and input by group members.

4.2 Seek feedback on operation of group processes, encourage suggestions for change and implement appropriate action.

4.3 Provide feedback in a supportive manner appropriate to individuals and the group.
ELEMENT

5. Use specific communication techniques to assist in resolving conflict

PERFORMANCE CRITERIA

5.1 Use strategies to facilitate conflict resolution
5.2 Use communication skills and processes to identify and address barriers to communication and explore issues and background to the conflict
5.3 Use effective skills in listening, reframing providing feedback and negotiation to support exploration and clarification of issues
5.4 Seek agreement on processes to be followed to resolve conflict within scope of own abilities, skills and work role
5.5 Make referral for conflict resolution and mediation as appropriate

6. Produce quality written materials

6.1 Ensure writing is succinct and clear and presented in a logical and sequential way to match audience needs and the purpose of the document
6.2 Ensure all written documentation produced addresses organisation guidelines and current accepted standards of writing in line with purpose
6.3 Prepare and provide appropriate and timely advice to management and clients as required
6.4 Where individual skill levels do not match workplace requirements, take appropriate remedial action, including seeking assistance and additional training
ELEMENT  

7. Conduct interviews

PERFORMANCE CRITERIA

7.1 In conducting interviews and formal discussions, make an effort to ensure that appropriate structures, timeframes and protocols are mutually agreed and adhered to.

7.2 Use effective questioning, speaking, listening and non-verbal communication techniques during discussions and interviews, to ensure the required information is accessed or message communicated.

7.3 Give feedback and advice in a way which reflects current identified good practice.

7.4 Conduct interviews and formal discussions with due regard to individual differences, needs and rights.

7.5 Use appropriate complaints management, grievance and counselling procedures to deal with serious problems.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Essential knowledge:

The candidate must be able to demonstrate essential knowledge required to effectively do the task outlined in elements and performance criteria of this unit, manage the task and manage contingencies in the context of the identified work role.

These include knowledge of:

- Knowledge of different communication styles and techniques
- Different interview techniques
- Effective interpersonal, written and oral communication
- Negotiation techniques
- Group development processes
- Conflict resolution strategies and techniques
- Research techniques, including for social research
REQUIRED SKILLS AND KNOWLEDGE

Essential skills:

It is critical that the candidate demonstrate the ability to:

- Establish and maintain an appropriate network of clients
- Incorporate the requirements of specific groups in all client service work
- Communicate professionally with other professionals

In addition, the candidate must be able to effectively do the task outlined in elements and performance criteria of this unit, manage the task and manage contingencies in the context of the identified work role. These include the ability to:

- Work effectively with clients and service providers
- Assess cultural communication protocols
- Demonstrate application of skills in:
  - Self-reflection
  - Principles and practices of client service delivery
  - Effective workplace writing
  - Effective presentation techniques
  - Effective communication techniques
  - Effective interviewing
  - Effective group management processes
  - Conflict resolution and negotiation
- Use relevant information technology effectively in line with occupational health and safety (OHS) guidelines

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.
EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate this unit of competency:

- The individual being assessed must provide evidence of specified essential knowledge as well as skills
- This unit will be most appropriately assessed in the workplace or in a simulated workplace and under the normal range of workplace conditions
- Assessment is recommended to be conducted over more than one occasion and include communications with individuals and groups

Access and equity considerations:

- All workers in community services should be aware of access, equity and human rights issues in relation to their own area of work
- All workers should develop their ability to work in a culturally diverse environment
- In recognition of particular issues facing Aboriginal and Torres Strait Islander communities, workers should be aware of cultural, historical and current issues impacting on Aboriginal and Torres Strait Islander people
- Assessors and trainers must take into account relevant access and equity issues, in particular relating to factors impacting on Aboriginal and/or Torres Strait Islander clients and communities

Context of and specific resources for assessment:

- This unit can be assessed independently, however holistic assessment practice with other community services units of competency is encouraged
- Resources required for assessment include access to relevant workplace or simulated realistic workplace setting where assessment may take place

Method of assessment:

- Assessment may include observations, questioning or evidence gathered from the workplace, including testimonials from clients and colleagues etc
Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Oral, written and non-verbal communication in the organisation can occur with:

- Clients and stakeholders
- Representatives of client groups or organisations
- Members of the public
- Managers and staff in own and other organisations
- Private organisations and consultants
- Academic institutions, public sector and community organisations
- Colleagues in different locations e.g. regional/central offices

Audience needs may require adjustments, such as:

- Alternative format for written materials such as large print, braille, audio or in another language
- Assistive technology such as audio loops
- Interpreters including signers

Written communication can involve both handwriting and operation of word processing equipment

It may take the form of:

- Case notes and reports
- Minutes of meetings
- Routine as well as complex reports
- Proposals, project plans and spreadsheets
- General internal and external correspondence
- Speeches, journal articles and marketing materials
- Instructions, procedures and policies
- Submission writing
RANGE STATEMENT

Oral communication can take the form of:

- Seeking and conveying information
- Consulting and advising
- Formal and informal presentations to different audiences
- Structured interviewing for selection or counselling purposes
- Leading discussions and briefings
- Negotiating
- Chairing and participating in meetings
- Conflict resolution
- Coaching
- Advocacy
- On the job training

Clients are defined by the work of the organisation and can include:

- Individual members of the public
- Other organisations, community groups and individuals
- Other work areas of the organisation

Unit Sector(s)

Not Applicable
CPCCBC4001A Apply building codes and standards to the construction process for low rise building projects

Modification History
Not Applicable

Unit Descriptor
Unit descriptor  This unit of competency specifies the outcomes required to access, interpret and apply relevant building codes and standards applicable to the construction processes of residential and low rise commercial buildings (low rise' licensing classification with reference to Class 1 and 10 construction and Classes 2 to 9 with a gross floor area not exceeding 2000 square metres, not including Type A or Type B construction).

To successfully construct low rise buildings requires a thorough knowledge of the purpose and content of the Building Code of Australia (BCA), coupled with the ability to interpret other codes and standards related to a specific building.

Application of the Unit
Application of the unit  This unit of competency supports builders, site managers and related construction industry professionals responsible for ensuring compliance with building codes and standards in the residential and commercial construction industry.

Licensing/Regulatory Information
Refer to Unit Descriptor
Pre-Requisites
Prerequisite units  Nil

Employability Skills Information
Employability skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Access and interpret relevant code and standard requirements. | 1.1. Relevant performance requirements from the BCA that apply to individual projects (described as *low rise*) are identified.  
1.2. Requirements of relevant BCA deemed-to-satisfy (DTS) provisions are determined.  
1.3. Requirements of relevant Australian standards referenced in the BCA are accessed and interpreted accordingly. |
| 2. Classify buildings. | 2.1. Nature of a building is determined according to its use and arrangement.  
2.2. BCA criteria to determine the defined classification are applied.  
2.3. BCA requirements for multiple classification are identified and interpreted. |
| 3. Analyse and apply a range of solutions to a construction problem for compliance with the BCA. | 3.1. Range of criteria that will ensure that construction methods comply with BCA performance requirements is determined.  
3.2. Alternative solutions to a design or construction problem that will comply with BCA requirements are discussed and proposed in accordance with company policies and procedures.  
3.3. Performance-based solutions are identified and documented in accordance with BCA requirements.  
3.4. *Assessment methods* referenced in the BCA to determine whether a building solution complies with *performance requirements* or DTS provision of the BCA are analysed and applied.  
3.5. Relevant documentation is identified and completed in accordance with BCA requirements. |
| 4. Apply fire protection requirements. | 4.1. Passive and active fire control elements for low rise building required by the BCA and other legislation are identified and applied.  
4.2. Level of fire resistance required for the construction of various low rise buildings is determined.  
4.3. Check of existing buildings for compliance with passive and active fire protection requirements is carried out in accordance with BCA requirements. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- analysis and interpretation skills relating to documentation from a wide range of sources, including BCA and referenced documents
- application of design concepts and principles in accordance with BCA, namely:
  - Class 1 and 10
  - Classes 2 to 9 with a gross floor area not exceeding 2000 square metres, not including Type A or Type B construction
- attention to detail in applying building codes and standards
- communication skills to:
  - discuss and propose alternative solutions
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- read and interpret:
  - documentation from a variety of sources, including BCA and referenced documents
  - drawings and specifications
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- written skills to complete documentation in accordance with BCA requirements
- numeracy skills to interpret and apply mathematical information included in building codes and standards.

Required knowledge

Required knowledge for this unit is:

- basic design principles and the behaviour of structures under stress, strain, compression, bending or combined actions
- BCA performance hierarchy
- definitions and common technical terms or usage specified under general provisions of BCA
- general nature of materials and the effects of performance
- relevant Australian standards
- relevant legislative and OHS requirements, codes and practices
- types of working drawings and specifications
- understanding of the BCA relating to:
  - Class 1 and 10
REQUIRED SKILLS AND KNOWLEDGE

- Classes 2 to 9 with a gross floor area not exceeding 2000 square metres, not including Type A or Type B construction.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the application of design principles and solutions specified in BCA performance requirements or DTS provisions applicable to a building project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with organisational quality procedures and processes
- apply and interpret relevant documentation and codes
- accurately apply BCA performance requirements relating to the design and construction of a building
- understand assessment methods available to determine compliance with the BCA
- identify faults and problems and proposed action to rectify.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- access to BCA and relevant documents referenced in the BCA
**EVIDENCE GUIDE**

- access to relevant legislation
- project documentation, including design brief, design drawings, specifications, construction schedules and other supporting documents
- research resources, including product information and data
- relevant computer software package and suitable hardware.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Low rise is described as falling within the BCA classes:

- Class 1 and 10
- Classes 2 to 9 with a gross floor area not exceeding 2000 square metres, not including Type A or Type B construction.

Assessment methods include:

- comparison with BCA DTS provisions
- evidence of suitability as described in the BCA
- expert judgement as defined in the BCA
- verification method as defined in the BCA.

Performance requirements include:

- performance requirements contained within other legislation applicable to a specific project
- performance requirements of the BCA determined to be relevant to a specific project
- performance-based contractual requirements that must be fulfilled by any party.

| 1. Determine areas of potential risk in the building and construction workplace. | 1.1. *Specific risks* for the range of occupations in the workplace are identified and prioritised.  
1.2. Construction site safety is evaluated and construction hazards and potential risk areas are identified in accordance with *legislative requirements* for OHS and company policies.  
1.3. Hazards are identified and prioritised and required approaches to remediation are documented. |
| 2. Inspect and report on areas of specific risk. | 2.1. Inspection of the workplace is conducted to identify specific risks for the range of identified occupations.  
2.2. Expert advice, including advice from workplace personnel, is sought as appropriate.  
2.3. *Inspection report* is completed in accordance with best practice and statutory obligations. |
| 3. Advise on implementation of control measures at the building and construction workplace. | 3.1. Recommendations are made from findings of inspection report.  
3.2. *Relevant parties* are consulted regarding compliance issues relating to statutory requirements.  
3.3. Agreed control measures are implemented in conjunction with relevant *workplace personnel*.  
3.4. Effectiveness of control measures are monitored and reviewed. |
| 4. Establish and review communications and educational programs. | 4.1. Effective strategies for communicating OHS policy and practice are determined in consultation with appropriate personnel.  
4.2. *Communication strategies* and *educational programs* specific to the building and construction industry and in accordance with statutory requirements and best practice are established.  
4.3. Effectiveness of the communication and educational programs is reviewed. |

## Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.
REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- application of regulatory requirements, including safe work method statements and plans such as site safety plans
- appropriate literacy and numeracy skills
- attention to detail in applying building codes and standards
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - seek expert advice and consult with relevant parties and workplace personnel on a variety of issues
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
  - written communication skills to complete inspection reports and maintain records
  - conducting OHS legislation and documentation research
  - construction site inspection techniques for OHS compliance
  - interpretation and application of construction documentation
  - interviewing skills
  - knowledge of the technical and trade skills in building and construction processes
  - maintaining records and documents
  - negotiation and conflict resolution skills
  - OHS auditing skills
  - OHS compliance investigation skills.

Required knowledge

Required knowledge for this unit is:

- building and construction industry contracts
- current workplace and OHS legislation and advisory standards applicable to each State and Territory, such as:
  - Asbestos Advisory Standards
  - Concrete Pumping Supplement
  - Construction Workplace Advisory Standard
  - Demolition Advisory Standard
  - Excavation Advisory Standard
  - Falling Objects Advisory Standard
  - Falls from Heights Advisory Standard
  - Formwork Advisory Standard
REQUIRED SKILLS AND KNOWLEDGE

- Manual Handling in the Building Industry Advisory Standard
- Noise Advisory Standard
- Plant Advisory Standard
- Scaffolding Advisory Standard
- Steel Construction Advisory Standard
- Work on Roofs Advisory Standard
- other relevant state or territory building and construction codes, standards and government regulations.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by conducting an OHS inspection and developing an OHS risk analysis for a building project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with organisational quality procedures and processes
- apply and interpret relevant documentation and codes
- accurately apply national and State and Territory OHS requirements relating to construction workplace
- identify faults and problems impacting on OHS and proposed action to rectify.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- current copy of relevant state OHS legislation, regulation and advisory standard for first aid
- samples of workplace incident data and incident reports
- other relevant codes, standards and
EVIDENCE GUIDE

government regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.
EVIDENCE GUIDE

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Specific risks for various occupations within the building and construction industry relate to:

- commonly used construction equipment, including:
  - concrete mixers
  - manually operated power tools
  - handheld tools
  - wheelbarrows
  - mechanical trowels
- commonly used high risk construction equipment, including:
  - lasers
  - explosive powered tools
  - compressed air nailing tools
  - ladders
  - high pressure jetting systems
  - material conveyors
  - cranes, hoists and lifting gear
  - demolition, including:
    - abrasive blasting
RANGE STATEMENT

- asbestos removal
- civil construction work, including excavation and trenching work
- Class 1 electrical work
- concrete pumping
- environmental conditions
- exposure to ultraviolet light (UVL)
- masonry and concrete cutting
- pre-cast concrete product installation
- pre-stressing and post-tensioning operations
- protruding objects
- spray painting
- stacking and storing materials
- steel construction
- steel fixing
- working at heights
- working on roofs
- fall protection and access equipment
- falling objects
- falls from height
- formwork
- pressure equipment
- scaffolding
- welding, cutting and gouging processes in the construction industry in particular, oxy-acetylene.

Legislative requirements for OHS may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- environmental requirements to cover water quality management
- may include waste management, stormwater protection and clean-up protection
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as disability are a factor
- legislative requirements to be adhered to in all planning and implementation stages, which may require the development and use of site
RANGE STATEMENT

safety plans and safe work methods statements
hazard control
- hazardous materials and substances
- organisational first aid
- personal protective equipment (PPE)
  prescribed under legislation, regulations and
  workplace policies and practices
- safe operating procedures, including the
  conduct of operational risk assessment and
  treatments associated with:
  - machines
  - surrounding structures and facilities
  - traffic control
  - underground services
  - working in confined spaces
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and
  safety.

Inspection report may include:
- checklists
- company safety procedure forms
- hazard sheets
- prescribed self assessment tools identified by a
  relevant state or territory authority (relevant
  legislation must be applied).

Relevant parties include:
- designers
- employers
- manufacturers and importers
- members of site safety committees
- persons in control of workplaces
- principal contractors
- self-employed persons and subcontractors
- suppliers of plant
- workers.

Workplace personnel include:
- employers
RANGE STATEMENT

- members of site safety committees
- persons in control of workplaces
- principal contractors
- self-employed persons and subcontractors
- workers.

Communication strategies include:

- issued site specific instructions and signage
- verbal communications
- written communications, including memos and emails.

Educational programs include:

- general and site-specific induction training,
  noting that OHS induction training provided must meet the requirements of the jurisdiction in which the construction work is undertaken
- other forms of specialist and targeted training.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

### ELEMENT |

### PERFORMANCE CRITERIA

1. Identify and analyse the essential elements, sections and clauses of a business contract.

1.1. Various types of **building and construction contracts** are identified and the appropriate application of each type is analysed.

1.2. Essential terms and elements of a valid contract are identified and analysed.

1.3. Importance of identifying an intention to create legal relations is analysed.

1.4. Rights and liabilities of parties under a contract are identified and analysed.

1.5. Common building contract terms and procedures are identified and applied.

1.6. Circumstances that bring about a breach of contract are identified and analysed.

1.7. Legislative requirements are identified and applied.

2. Select an appropriate contract for the works to be undertaken.

2.1. A contract, appropriate for the type of construction, is accurately selected.

2.2. **Range of documents** that collectively make up a contract is accurately identified and prepared.

2.3. Requirements associated with an offer and acceptance of a contract are accurately identified and applied.

2.4. Capacity of the parties to form a binding agreement in the form of a contract is confirmed.

2.5. Factors associated with the parties' consent to a contract are identified and applied.

3. Prepare the contract.

3.1. Expert advice is sought as required in the preparation of the contract.

3.2. Factors leading to the **termination of a contract** are defined, analysed and assessed during the preparation of the contract.

3.3. Contract rise and fall amounts are accurately calculated during the preparation of the contract.

3.4. Schedule of progress payments is assessed and included in the preparation of the contract.

3.5. Processes for applying for extensions of time are included in the preparation of the contract.

3.6. Final contract is prepared in consultation with relevant personnel and in accordance with the accepted processes of the organisation and legal requirements.
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - facilitate effective communication by phone, facsimile, email or in writing, with members of the organisation and external parties, including clients and subcontractors
  - facilitate drafting detailed responses to queries relating to the finer points of contracts
  - read and interpret:
    - complex legal text
    - construction schedules
    - contracts
    - reports
    - specifications
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
  - written skills to prepare a construction contract, including completing memos, schedules and evaluative reports and communicating complex ideas and alternatives
  - contractual arrangement problem solving
  - negotiation with construction clients
  - numeracy skills to apply calculations, including rise and fall amounts applicable to changed contract circumstances.

Required knowledge

Required knowledge for this unit is:

- definitions and interpretations commonly applied to contracts
- legal meanings of terms and clauses in building and construction contracts
- relationships between the organisation and its clients
- various contract types and the circumstances they cover.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the selection and development of appropriate contracts, which meet organisational and industry standards and relate to low rise building structures.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the relevant aspects of contract selection and insertion of appropriate clauses, including rise and fall and progress payments.

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select the right contract for the particular project
- select appropriate clauses and conditions within the contract
- identify causes of a breach of contract
- specify requirements for the offer and acceptance of a contract
- specify requirements for the termination of a contract
- accurately calculate rise and fall amounts
- specify schedule for progress payments
- specify requirements for extensions of time
- include all related documentation
- refer to all relevant legislation.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge
EVIDENCE GUIDE

will usually be conducted in an off-site context. Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- documentation that should normally be available in either a building or construction office
- relevant codes, standards and government regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturer's product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
EVIDENCE GUIDE

- Competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace.
- Where the assessment is part of a structured learning experience, the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.
- All assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Building and construction contracts** relevant to the sector and organisational needs may include:
- Australian standard contracts (including the AS2124 and AS4000 series)
- Construction Industry Contract (CIC) suite
- Contracts required or supplied by regulatory...
RANGE STATEMENT

- authorities or state or territory legislation
- individual organisational contracts
- Joint Contracts Committee (JCC) suite
- Master Builders Association (MBA) and Housing Industry Association (HIA) or other standard industry contracts
- Simple Building Works (SBW), including series 1 and series 2 (SBW2 Lump Sum).

Range of documents includes:

- equipment, site accommodation and services information
- human resource projections
- materials lists
- plans, drawings and specifications
- project timelines
- schedules.

Termination of a contract includes definitions and applications of:

- abandonment of a contract
- conditions for completion at the cost of the contractor
- effect of ousting the contractor from the building or construction
- relevant legislation and contract provisions
- repudiation of a contract by one party and its agreed definition
- unreasonable or vexatious notice.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret drawings and specifications
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
  - contractual arrangement problem solving
  - estimate labour and materials costs from written information
  - numeracy skills to calculate labour hours and costs, material quantities and costs
  - use appropriate costing software programs.

Required knowledge

Required knowledge for this unit is:

- how to access and interpret:
  - national codes, including Building Code of Australia (BCA) and the Plumbing Code of Australia
  - Australian standards relevant to the industry sector
  - includes state or territory and local government building and construction codes, standards and government regulations relevant to the form of building or construction being undertaken (e.g. WorkCover and EPA)
  - types of building and construction drawings and specifications
  - types, scope and usage of labour through the employee and subcontractor systems
  - operation and structure of the organisation's costing and contracting system.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the preparation of a detailed estimate of labour, materials and other project costs as part of the preparation of a tender or bill for a residential or commercial construction project relevant to the specific trade or sector.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify materials required for a project
- gather information about material supply
- interpret measurements and calculate quantities and costs
- plan and allocate human resources
- identify and cost other related costs, such as those required to meet statutory and planning approval processes
- produce documentation that meets the timeframes and quality standards established by the organisation
- communicate effectively, both verbally and in writing.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.
EVIDENCE GUIDE

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and government regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers’ product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
EVIDENCE GUIDE

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Plans and specifications** include:
- building codes
- materials lists and quantity schedules
- materials specifications
- sketches or drawings
- statements of requirements.

**Plant or equipment requirements** include:
- communications equipment
- conveyors
RANGE STATEMENT

- heavy equipment, such as wheeled and tracked earthmoving equipment, trucks and articulated vehicles
- hoists
- mobile and tower cranes
- on-site equipment, such as:
  - compressors
  - pumps
  - generators
  - portable lighting
  - lifting equipment
  - portable compaction equipment.

*Unit costs* may include the cost of:

- construction cost per square metre
- installation of pipes per metre
- installation of sanitary ware per unit
- laying of foundation per metre
- laying of slabs per square metre
- laying of steel tray roofing per square metre
- masonry walls per square metre
- painting per square metre
- tiling per square metre.

*Project costs* include:

- building or construction materials
- communications costs
- cost of meeting statutory requirements, e.g. EPA
- fuels, lubricants and consumables
- organisational and subcontract labour hours
- overheads
- project administration costs
- site facilities, such as:
  - offices
  - toilets
  - lunch rooms
- waste removal fees.

5.2. Changes to standard plans, specifications and cost files are included in site files. |

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
REQUIRED SKILLS AND KNOWLEDGE

- communicate information effectively within the organisation and to external agencies and the client
- read and interpret:
  - contracts
  - drawings and specifications
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- written skills to:
  - prepare and maintain site files
  - produce schedules and orders
- identify and analyse relevant information
- numeracy skills to apply calculations.

Required knowledge

Required knowledge for this unit is:

- operation and structure of the organisation's costing and contracting system
- state or territory building and construction codes, standards and regulations relevant to the form of building or construction being undertaken
- types of building or construction drawings and specifications commonly used in the industry
- types, scope and usage of labour through the employee and contractor systems.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the preparation of schedules for materials and labour for a building project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify materials required for the project and gather supply information effectively
- plan and allocate human and physical resources
- produce documentation that meets the timeframes and quality standards established by the organisation
- communicate information effectively within the organisation and to external agencies and the client, as required.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation that should normally be available in a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators,
EVIDENCE GUIDE

photocopiers and telephone systems

- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability
EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Local government and regulatory bodies include:
- electricity regulatory authorities
- environmental authorities
- health departments
- shire or municipal councils
- water corporations.

Plans and specifications include:
- building codes
- colour selections
- contract requirements
- material and labour schedules
- materials specifications
- plans, sketches and drawings
- statements of requirements.

Project costs include:
- building or construction materials
- communications costs
RANGE STATEMENT

- fuels, lubricants and other consumables
- organisational and subcontract labour costs
- overheads
- professional indemnity and other insurance costs
- project administration costs
- site facilities, such as toilets and storage sheds.

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to supervise the systems through which materials are typically selected, acquired and stored on site for projects described by the Building Code of Australia (BCA) as low rise building or construction work (low rise' licensing classification with reference to Class 1 and 10 construction and Class 2 to 9 with a gross floor area not exceeding 2000 square metres, not including Type A or Type B construction).

It ensures the delivery to the site of materials that meet contract specifications and service requirements for low rise projects.

Application of the Unit

Application of the unit

This unit of competency supports builders, related construction industry professionals and managers within building and construction firms responsible for supervising and applying quality standards to the selection of construction materials. To achieve the outcomes for this unit, knowledge of relevant building construction materials and technologies, environmental effects on materials and evaluation procedures is required.

Licensing/Regulatory Information

| 1. Identify and evaluate the properties of building materials. | 1.1. Suitability of *materials* commonly used in the region for *low rise buildings* is identified for a given building system.  
1.2. Properties of materials, their quality and the compatibility and non-compatibility of different materials are *identified*.  
1.3. Environmental impacts of different materials are identified.  
1.4. Impact of allowable tolerances on the conversion of naturally occurring materials is identified.  
1.5. Tolerances for installing and assembling materials are identified and checked in regard to the nature of the work being performed and the requirements of relevant construction industry Australian standards. |
| 2. Ensure suitable building materials are selected for application. | 2.1. Materials that are structurally adequate and appropriate for the building system specified in the contract are *selected*.  
2.2. Materials are selected for their safety; required fire resistance rating; suitability to the application, durability, serviceability and cost effectiveness; and compliance with Australian standards.  
2.3. Short and long-term degradation of materials are considered in relation to the building’s proposed lifecycle.  
2.4. Alternative materials are evaluated and selected if specified materials are unavailable or unsuitable.  
2.5. Selection of materials for use is finalised in accordance with contractual requirements and in consultation with relevant professionals and the client. |
| 3. Supervise the acceptance, safe handling and storage of materials on site. | 3.1. Limitations and effects of transportation on materials and components are determined and action is taken in the case of potentially damaging circumstances.  
3.2. *Materials are handled correctly and safely* on site using appropriate equipment and safe work practices.  
3.3. Materials are stored in accordance with manufacturer specifications and in compliance with relevant Australian standards.  
3.4. Processes are implemented for inspecting all materials delivered on site for naturally occurring and/or manufactured defects before installation. |
ELEMENT | PERFORMANCE CRITERIA
---|---
3.5. Personnel are aware of actions to be taken in the case of defects caused by incorrect installation, application or placement.
3.6. Timber is preserved and ferrous and non-ferrous metals used in the construction process are protected, using established methods.

Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- analysis and report preparation
- application of safe work practices and materials handling
- apply numeracy skills to workplace requirements
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - communicate with manufacturers and suppliers of materials
  - provide advice and information to regulatory authorities
  - read and interpret:
    - contracts
    - drawings and specifications
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
  - development and management of standardised processes
- supervision of small teams.

**Required knowledge**

Required knowledge for this unit is:

- alternative materials that can be specified in construction projects
- building and construction materials and technologies
- Building Code of Australia (Class 1 and 10 and Class 2 to 9 with a gross floor area not exceeding 2000 square metres, but not including Type A or Type B construction)
REQUIRED SKILLS AND KNOWLEDGE

- construction supply processes
- construction and contracting equipment and its use
- environmental effects on various building and construction materials
- relevant state or territory building and construction codes, standards and regulations
- testing procedures for construction materials
- workplace safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the effective supervision and application of quality standards to the identification, selection and storage of the range of relevant construction materials in the range statement.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify suitable building and construction materials specified by the project or contract
- use effective verbal and written communication with manufacturers and suppliers of materials
- effectively and efficiently test materials to maintain quality standards on site
- maintain effective sampling and record-keeping processes
- safely handle and store materials
- comply with organisational and legislative requirements.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation that should normally be
EVIDENCE GUIDE

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances
EVIDENCE GUIDE

Assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- All assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Materials** commonly used in low rise buildings include:

- cements
- ceramics
- concrete
- engineered timber products
- flooring
- framing
- glass
- masonry units
- mortars
- paints and coatings
RANGE STATEMENT

- plasterboard
- plasterglass
- roofing
- structural steel.

Low rise buildings are described within the BCA as:
- Class 1 and 10
- Class 2 to 9 with a gross floor area not exceeding 2000 square metres, not including Type A or Type B construction.

Material suitability is identified by a range of processes, including:
- analysing reports, manufacturer specifications or other reference material regarding the suitability of new and environmentally efficient and sustainable building material technologies with reference to the BCA requirements
- arranging industry standard, external quality tests or inspections and provision of results as necessary
- arranging relevant, industry standard, on-site quality tests for products to be used in low rise buildings
- referencing external reports and manufacturer specifications
- refusing to accept substandard or out of specification materials
- seeking expert appraisal from relevant industry professionals, including architects, designers and engineers.

Selected includes:
- arranging for expert advice as necessary to confirm or refute material options
- identifying materials from specifications and drawings
- identifying specifications and standards described in contract documents
- selecting and ordering materials that meet those requirements.

Materials are handled correctly and safely by:
- allocation of space for on-site storage of materials
- confirming products or materials are as ordered and signing off delivery documentation
- ensuring safe unloading and handling of construction materials
- ensuring safe use of hazardous materials and
RANGE STATEMENT

- complying with statutory or regulatory requirements
- ensuring correct materials are delivered to correct site
- providing adequate on-site security of materials
- undertaking quality checks within the competence of the individual.

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and
    confirm requirements, share information, listen and understand
  - communicate by telephone, facsimile, email and in writing
  - identify availability of subcontractors
  - liaise with suppliers
  - read and interpret:
    - contract documentation
    - organisational policies
    - other relevant workplace documentation
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
  - written skills to:
    - document required resources
    - prepare documentation for authorities
    - prepare reports
    - record site deliveries
  - numeracy skills to apply calculations.

**Required knowledge**

Required knowledge for this unit is:
REQUIRED SKILLS AND KNOWLEDGE

- application of project management and critical path techniques to the organisation of materials, plant and people
- building and construction industry subcontractor system
- building, construction or civil construction practices in on-site project management
- internal documentation systems
- processes and timeframes for regulatory approvals
- relevant state or territory building and construction codes, standards and government regulations
- types of building and construction industry contracts
- types of plant and equipment employed in the undertaking of the organisation's projects.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by preparing a project schedule and the associated documentation for a construction project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify supplier alternatives and gather supply information effectively
- plan and allocate human resources effectively
- produce documentation that meets the timeframes and quality standards established by the organisation
- communicate information effectively within the organisation and to external agencies and the client, as required
- identify and communicate with the appropriate regulatory authorities to gain the necessary approvals.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
EVIDENCE GUIDE

- relevant codes, standards and government regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and
EVIDENCE GUIDE

separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Contract documentation** relevant to the sector and organisation may include:

- Australian standard contracts, including the AS2124 and AS4000 series
- Construction Industry Contract (CIC) suite
- individual organisational contracts
- Joint Contracts Committee (JCC) suite
- Master Builders Association (MBA) and Housing Industry Association (HIA) contracts
- Simple Building Works (SBW), including series 1 and series 2 (SBW2 Lump Sum).

**Documentation** includes:

- applications for permits and service connections
RANGE STATEMENT

- copies of plans, drawings and specifications
- environmental applications
- parking restriction applications.

Organisational strategies include:
- advertising for tradespersons and other employees
- appointing project managers and construction supervisors
- briefing organisational personnel
- calling for tenders for subcontract operations
- purchasing processes for building supplies or construction materials
- refining project critical path information.

Project schedule includes:
- human resource schedules
- materials delivery schedules
- project critical path
- project timeframes
- schedules of plant and equipment.

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- application of contract terms and conditions
- application of quality processes
- communication skills to:
  - communicate request and requirements
  - communicate with the client and regulatory authorities
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - facilitate on-site meetings and dispute resolution
REQUIRED SKILLS AND KNOWLEDGE

- read and interpret:
  - quality control procedures
  - regulatory and organisational requirements
  - other relevant workplace documentation
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
- written skills to:
  - complete site reports
  - develop and maintain site records
- interpersonal skills relevant to the supervision and monitoring of work processes
- numeracy skills to apply calculations.

Required knowledge

Required knowledge for this unit is:

- building and construction industry contract payment system and obligations
- building and construction industry standards
- certification requirements arising from work performed under regulations or local authority requirements
- contract variation procedures and associated documentation requirements
- contracts employed in the building and construction industry.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the supervision of administration processes relating to a residential or commercial construction project, including the administration of payments, supervision of on-site communications, compliance with quality control and record keeping processes.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully
EVIDENCE GUIDE

replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- administer claims, variations, and drawings for work done and materials supplied in accordance with relevant regulatory and organisational requirements
- establish functional on-site communication systems that include the systematic gathering of information on site events
- implement a site safety policy
- maintain and monitor on-site quality processes
- assess work against construction quality standards and ensure that rework is carried out
- administer on-site project completion procedures and inform client as required.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
