Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety requirements** must comply with state and territory legislation and regulations and project
• assistance of others or the use of manual or mechanical lifting devices with handling activities where size, weight or other issues, such as disability, are a factor
• availability of SDS for substances to be used
• emergency procedures, including extinguishing fires,
safety plan, and may include:

- organisational first aid requirements, and evacuation procedures
- hazard control
- hazardous materials and substances
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - signage and restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working outdoors in warm climates
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Information may include:

- instructions issued by authorised organisational and external personnel
- memos
- regulatory and legislative requirements relating to finishing concrete, including Australian standards
- safe work procedures relating to finishing concrete
- safety data sheets for substances to be used
- signage
- verbal, written and diagrammatic instructions, including manufacturer specifications and instructions where specified
- work bulletins
- work schedules, plans and specifications.

Planning and preparation must include:

- assessing conditions and hazards
- calculating time required to complete task
- determining work requirements and safety plans and procedures
- identifying and rectifying equipment defects
- inspecting the work site.
Tools and equipment:
- must include:
  - bull floats
  - power, hand or wooden floats
  - magnesium trowels
  - power trowels
  - steel trowels
- may include:
  - brooms
  - channel trowels
  - edging tools
  - hoses
  - step readers
  - stipple plates.

Quality requirements:
- must include:
  - internal organisational quality policy and standards
  - manufacturer specifications where specified
  - regulations and Australian standards relating to finishing concrete
  - workplace operations and procedures.

Environmental requirements:
- may include:
  - clean-up management
  - dust and noise control
  - stormwater management
  - vibration management
  - waste management.

Edge finishing:
- types:
  - fine
  - rounded
  - straight edge.

Finished:
- may include:
  - broom finished
  - brushed
  - bull floated
  - hand floated (wooden, magnesium or composition)
  - slip resistant
  - sprayed and brushed to expose aggregate
  - steel trowelled
  - use of a mechanical trowelling machine
  - wood floated.

CPCCCO3043A Cure concrete

Modification History
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

- Changes to descriptor, elements and performance criteria, range statement, critical aspects for assessment, and methods of assessment
- Range of other minor editorial changes

Not equivalent to CPCCCO3023A Cure concrete

Unit Descriptor
This unit of competency specifies the outcomes required to carry out the initial curing process to poured concrete in order to control moisture evaporation from finished concrete. The unit includes using curing agents and curing techniques according to engineering specifications. It may also include working with others and as a member of a team.

Application of the Unit
This unit of competency supports the role of concreters working on residential, commercial or civil construction sites.

Licensing/Regulatory Information
Licensing, legislative, regulatory or certification requirements apply to concreting work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare.
   1.1 Work instructions, **work health and safety (WHS) requirements** and other **information** relevant to the work are identified, confirmed and applied to **planning and preparation**.

   1.2 Plant, **tools and equipment** consistent with the requirements of the job are selected and checked for serviceability, and faults are rectified and reported before work begins.

   1.3 Material quantity requirements are identified and calculated according to plans, specifications and **quality requirements**.

   1.4 **Materials** appropriate to the work application are obtained, prepared, safely handled and located ready for use.

   1.5 **Environmental requirements** are identified for the project according to environmental plans and regulatory requirements.

2 Apply curing technique to concrete.
   2.1 Preventive barriers are installed and maintained to prevent curing agents from affecting surrounding environment.

   2.2 **Curing compound** and **curing method** are applied and maintained on concrete surface to project specifications.

   2.3 **Concrete is protected** during curing process.
3 Clean up.  

3.1 Work area is cleared and materials disposed of, reused or recycled according to regulations, codes of practice and job specification.

3.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - evaluate own actions and make judgments about performance and necessary improvements
  - respond to change, such as differences in work site, and environmental and quality requirements

- numeracy skills to calculate and confirm correct quantities of materials for work tasks

- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report work site hazards to appropriate personnel, including faults in tools, equipment or materials
  - use language and concepts appropriate to cultural differences

- reading skills to:
  - interpret documentation, including drawings and specifications
  - interpret manufacturer instructions for safely handling tools, equipment and materials
  - understand written instructions, procedures and signage

- writing skills to complete equipment fault forms

Required knowledge

- concrete curing techniques, including curing duration and effect on ultimate strength
- processes for material storage and environmentally friendly waste management
- processes for calculating material requirements
- properties of concrete to be able to minimise waste, delay and faults in curing concrete
- quality requirements relevant to curing concrete
- types and applications of concrete materials used in the curing process
- types, characteristics, uses and limitations of plant, tools and equipment relevant to curing concrete
- types, location and use of relevant safety resources and information:
  - job safety analyses (JSA) and safe work method statements (SWMS)
  - safety data sheets (SDS)
  - signage and barricades
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by undertaking a range of tasks in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to apply curing compound and methods to a minimum of five projects each measuring a minimum of 100 square metres of finished concrete according to project specifications, using at least two of the compounds and methods specified in the range statement.

The evidence provided should demonstrate the ability to:

- locate, interpret and apply information, standards and specifications relating to curing concrete
- comply with site safety plans and procedures
- comply with organisational policies and procedures relating to curing concrete while maintaining quality requirements outlined in job specifications
- safely and effectively operate and use plant, tools and equipment required to cure concrete
- communicate and work effectively and safely with others.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the mandatory task requirements
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to curing concrete
- workplace instructions relating to safe work practices and addressing hazards and emergencies
Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:

- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function for example:

- CPCCCO2022A Use and maintain concreting plant, tools and equipment.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Work health and safety requirements must comply with according to state and territory legislation and regulations and project safety plan, and may include:

- assistance of others or the use of manual or mechanical lifting devices with handling activities where size, weight or other issues, such as disability, are a factor
- emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
- hazard control
- hazardous materials and substances
• personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
• safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  • earth leakage boxes
  • lighting
  • power cables, including overhead service trays, cables and conduits
  • signage and restricted access barriers
  • surrounding structures
  • traffic control
  • trip hazards
  • work site visitors and the public
  • working at heights
  • working in confined spaces
  • working in proximity to others
  • working outdoors in warm climates
• use of firefighting equipment
• use of tools and equipment
• workplace environmental requirements and safety.

Information may include:

• instructions issued by authorised organisational and external personnel
• memos
• regulatory and legislative requirements relating to curing concrete, including relevant Australian standards
• safe work procedures relating to curing concrete
• safety data sheets
• signage
• verbal, written and diagrammatic instructions, including manufacturer specifications and instructions where specified
• work bulletins
• work schedules, plans and specifications.

Planning and preparation must include:

• assessing conditions and hazards
• calculating time required to complete task
• determining work requirements, safety plans and procedures
• identifying and rectifying equipment defects
• inspecting the work site.

Tools and equipment may include:

• hoses and sprinklers
• rollers
• spray applicators
• tarpaulins and covers.
Quality requirements must include:
- internal organisational quality policy and standards
- manufacturer specifications where specified
- relevant regulations and Australian standards
- workplace operations and procedures.

Materials may include:
- curing compounds
- evaporation retardants
- objects to hold plastic film in place
- plastic film
- steam
- water.

Environmental requirements may include:
- clean-up management
- dust and noise control
- stormwater management
- vibration management
- waste management.

Curing compounds may include:
- chlorinated compounds
- hydrocarbon compounds
- polyvinyl alcohol (PVA) compounds
- silicate compounds
- solvent-based acrylic compounds
- water
- water-based acrylic compounds
- wax-based compounds.

Curing methods may include:
- curing compounds
- fogging
- hessian overlays
- hosing
- impervious plastic membranes
- misting
- ponding
- sprinklers
- steam.

Protecting concrete must include:
- isolating and/or barricading the area
- using plastic membrane where required.

CPCCCO3044A Carry out decorative finishes to concrete

Modification History
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

- Changes to elements and performance criteria, required skills and knowledge, range statement, critical aspects for assessment, and methods of assessment
- Range of other minor editorial changes

Not equivalent to CPCCCO3024A Carry out decorative finishes to concrete

Unit Descriptor
This unit of competency specifies the outcomes required to apply decorative finishes to concrete surfaces. The finish includes the use of stamps, stencils, colours, exposed aggregate and textured finishes. It may include working with others and as a member of a team.

Application of the Unit
This unit of competency supports the attainment of the understanding and skills to provide a distinct featured face finish for driveways, patios, paths or other areas requiring a decorative finish.

Licensing/Regulatory Information
Licensing, legislative, regulatory or certification requirements apply to concreting work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare.  
   1.1 Work instructions, **work health and safety (WHS) requirements** and other **information** relevant to the work are identified, confirmed and applied for **planning and preparation** purposes.

   1.2 Plant, **tools and equipment** consistent with job requirements are selected and checked for serviceability, and faults are rectified and reported before work begins.

   1.3 Material quantity requirements are identified and calculated according to plans, specifications and **quality requirements**.

   1.4 **Materials** appropriate to the work application are obtained, prepared, safely handled and located ready for use.

   1.5 **Environmental requirements** are identified for the project according to environmental plans and regulatory requirements.

2 Carry out stencil finishes with dry topping on wet concrete.  
   2.1 **Stencil finish** is prepared so that any lapping maintains alignment and bond.

   2.2 Stencil is laid on to screeded surface to specifications ensuring alignment, bond and flat.

   2.3 Dry topping mix of colour, stone dust and cement is prepared and applied to specifications.

   2.4 Surface is finished with wood or magnesium float or steel trowel to a consistent texture according to
2.5 Stencil is lifted according to setting time in manufacturer recommendations.

2.6 Control joints are inserted to specifications during placement and/or cut into applied finish after setting.

3 Carry out stencil finishes with wet topping mix on dry concrete.

3.1 Existing concrete surface is cleaned of loose particles and debris.

3.2 Stencil finish is prepared so that any lapping maintains alignment and bond.

3.3 Stencil is laid carefully on to dry surface according to specifications ensuring alignment, bond and flat.

3.4 Powdered mix is mixed consistently according to manufacturer specifications, loaded into hopper gun while wet, and sprayed under pressure on to dry stencil surface.

3.5 Stencil is lifted according to setting time in manufacturer recommendations.

4 Carry out stamp finishes.

4.1 Method of applying pattern is determined according to designed finish and specifications.

4.2 Stamped finish pattern equipment is checked for cleanliness and serviceability.

4.3 Design layout is planned and initial starting point determined to specifications and design.

4.4 Base colour and topping dust are prepared and applied to wet concrete according to specifications.

4.5 Colours are applied as specified at random locations to create desired effect.

4.6 Release agent is prepared and applied to specifications.

4.7 Stamp is used to create designed pattern and surface effect according to specifications.

4.8 Control joints are inserted during placement and/or cut into applied finish after setting, according to

 specifications.
4.9 Concrete is cleaned of release agent and other debris and an appropriate sealant is applied according to job specifications.

5 Carry out exposed aggregate finishes.

5.1 Selected aggregates are incorporated into concrete mix to specifications.

5.2 Concrete is laid to ensure exposed stone is uniform.

5.3 Surface matrix is removed to expose aggregate.

5.4 Chemical retardant is applied to surface to allow ease of matrix removal and exposure of aggregate.

5.5 *Exposed aggregate* is left clean and free to designed effect and specifications.

5.6 Control joints are inserted during placement and/or cut into applied finish after setting, according to specifications.

5.7 Sealant is applied to surface according to manufacturer specifications.

6 Carry out textured finishes.

6.1 Method of applying *texture* is determined according to designed finish and specifications.

6.2 Topping dust is prepared and applied according to specifications.

6.3 Base colour is floated into surface according to specifications.

6.4 Colours are randomly applied, where specified, on to surface to create decorative type colourings.

6.5 Finish is applied with trowel or other tools to create designed pattern and surface effect according to specifications.

6.6 Control joints are inserted during placement and/or cut into applied finish after setting, according to specifications.
7 Clean up. 7.1 Work area is cleared and materials disposed of, reused or recycled according to regulations, codes of practice and job specification.

7.2 Plant, tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - evaluate own actions and make judgments about performance and necessary improvements
  - respond to change, such as differences in work site, and environmental and quality requirements
- numeracy skills to calculate and confirm correct quantities of materials for work tasks
- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report work site hazards to appropriate personnel, including faults in tools, equipment or materials
  - use language and concepts appropriate to cultural differences
- reading skills to:
  - interpret documentation, including drawings and specifications
  - understand written instructions, procedures and signage
  - interpret manufacturer instructions for safely handling tools and equipment
- writing skills to complete pre-operational checklists and equipment fault forms

Required knowledge

- application and methods of applying control joints
- principles and practices relating to carrying out decorative finishes to concrete:
  - concrete decorative finishing techniques
  - decorative concrete finishing materials
- types, location and use of relevant safety information:
  - job safety analyses (JSA) and safe work method statements (SWMS)
  - safety data sheets (SDS)
  - safety manuals and instructions for plant, tools and equipment
  - signage
  - environmental and work site safety plans
- processes for material storage and environmentally friendly waste management
- processes for calculating material requirements
- types, characteristics, uses and limitations of plant, tools and equipment used to provide decorative finishes to concrete
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by undertaking a range of tasks under observation in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- complete decorative finishes to a minimum of 20 square metres of concrete, using three out of the following five decorative techniques:
  - exposed aggregate finish
  - stamp finish
  - stencil finish with dry topping on wet concrete
  - stencil finish with wet topping mix on dry concrete
  - textured finish specified in range statement to job specifications

- locate, interpret and apply relevant information to achieve desired decorative finishes, including:
  - job specifications
  - manufacturer requirements relating to materials and use of tools

- comply with site safety plans and procedures

- comply with organisational policies and procedures relating to carrying out decorative finishes to concrete while maintaining quality requirements outlined in job specifications

- safely and effectively operate and use plant, tools and equipment required to carry out decorative concreting

- communicate and work effectively and safely with others.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment

- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills

- must meet relevant compliance requirements.
Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- safety data sheets.

Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:

- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety**

- assistance of others or the use of manual or mechanical lifting

**requirements** must comply with state and territory legislation and regulations and project safety plan, and may include:

- devices with handling activities where size, weight or other issues, such as disability, are a factor
- emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
- hazard control
- hazardous materials and substances
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Information** may include:

- instructions issued by authorised organisational and external personnel
- memos
- regulatory and legislative requirements relating to decorative concreting
- Australian standards relating to decorative concreting
- safe work procedures relating to decorative concreting
- safety data sheets
- signage
- verbal, written and diagrammatic instructions, including manufacturer specifications and instructions where specified
- work bulletins
- work schedules, plans and specifications.

**Planning and preparation** must include:

- assessing conditions and hazards
- determining work requirements and safety plans and policies
- identifying and rectifying equipment defects
- inspecting work sites.

**Tools and equipment:**
- must include:
  - floats
  - hand tools
  - hoses
  - shovels
  - trowels
- may include:
  - brooms
  - power trowels
  - rollers
  - spray attachments
  - spray bottles
  - stamps
  - stipple devices
  - wheelbarrows.

**Quality requirements** must include:
- internal organisational quality policy and standards
- manufacturer specifications where specified
- relevant regulations and Australian standards
- workplace operations and procedures.

**Materials** may include:
- colourants
- mortar additives
- release agents
- river gravel aggregates
- sealants
- stencils.

**Environmental requirements** may include:
- clean-up management
- dust and noise control
- vibration management
- waste management.

**Stencil finishes:**
- can be applied with a decorative designed pre-prepared cut roll of material specified to customer requirements
- can be floated into the surface of the concrete
- involve the application of colour.

**Control joints:**
- are cut using:
  - hand held power saw
  - walk behind power saw
- are included in the concrete surface to control cracking according to engineer's drawings and specifications.

**Form release agents** must
- release agent powder.
include:

*Textured* finishes may include:
- application of colour
- polished finish
- rough textured finish (non-slip) applied with a trowel
- stipple device.

CPCCCO3046A Repair and rectify concrete

Modification History
This version first released CPC08 Construction, Plumbing and Services Training Package Version 9.
- Changes to unit title, performance criteria, required skills and knowledge, range statement, critical aspects for assessment, and methods of assessment
- Range of other minor editorial changes
Not equivalent to CPCCCO3026A Carry out repair and rectification of concrete

Unit Descriptor
This unit of competency specifies the outcomes required to repair and rectify minor and major defects in concrete work in order to fix damaged areas.
The unit includes patching, refinishing, sealing and colouring concrete. It may also include working with others and as a member of a team.

Application of the Unit
This unit of competency supports the role of concreters working on residential, commercial or civil construction sites to repair damaged concrete on surfaces that could include driveways, foundations and footpaths.

Licensing/Regulatory Information
Licensing, legislative, regulatory or certification requirements apply to concreting work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare. 1.1 Work instructions, work health and safety (WHS) requirements and other information relevant to the work are identified, confirmed and applied for planning and preparation purposes.

1.2 Plant, tools and equipment consistent with job requirements are selected and checked for serviceability, and faults are rectified and reported before work begins.

1.3 Material quantity requirements are identified and calculated according to plans, specifications and quality requirements.

1.4 Materials appropriate to the work application are obtained, prepared, safely handled and located ready for use.

1.5 Environmental requirements are identified for the project according to environmental plans and regulatory requirements.

2 Carry out minor repairs. 2.1 Types of surfaces that may require repair are identified and repair work is categorised as major repairs or minor repairs.

2.2 Colour variations are repaired by applying a concrete staining agent.

2.3 Effects of dusting are repaired by applying an appropriate surface hardener/dust inhibiting agent or removing the weak top layer.
2.4 *Damaged or blistered concrete* is repaired either by grinding or topping.

2.5 Repair mortars and self-levelling floor compounds are applied according to manufacturer specifications.

2.6 Sealers and coloured paints are applied to concrete surfaces according to manufacturer specifications.

3 Repair cracks and other major defects.

3.1 Root cause of defect is determined and rectified.

3.2 Concrete is prepared and flexible epoxy resins are applied to manufacturer specification.

3.3 Toppings are applied to concrete using correct materials and techniques.

3.4 Acid etching and cleaning are applied safely according to manufacturer requirements.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to regulations, codes of practice and job specification.

4.2 Plant, tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- learning skills to:
  - evaluate own actions and make judgments about performance and necessary improvements
  - respond to change, such as differences in work site, and environmental and quality requirements

- numeracy skills to:
  - calculate and confirm correct quantities of materials for work tasks
  - estimate time required for repair and rectification of concrete

- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report work site hazards to appropriate personnel, including faults in tools, equipment or materials
  - use language and concepts appropriate to cultural differences

- reading skills to:
  - interpret documentation, including drawings and specifications
  - understand written instructions, procedures and signage
  - interpret manufacturer instructions for safely handling tools, equipment and materials

- writing skills to complete equipment fault forms

**Required knowledge**

- types, location and use of relevant safety resources and information:
  - job safety analyses (JSA) and safe work method statements (SWMS)
  - safety data sheets (SDS)
  - signage and barricades

- principles and processes for general concreting work:
  - materials and techniques for repairing concrete
  - preparation and placement of formwork and reinforcement
  - use of control joints
  - levelling techniques
  - mortar mix composition and additives
  - placing and finishing of concrete to ensure timely completion of job within quality
requirements and specifications

- general construction terminology
- processes for material storage and environmentally friendly waste management
- processes for calculating material requirements
- quality requirements relevant to the repair and rectification of concrete
- types, characteristics, uses and limitations of concreting plant, tools and equipment:
  - safe operating procedures
  - operational, maintenance and basic diagnostic procedures
  - workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by undertaking a range of tasks in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- identify and apply the correct repair method and top coat to a minimum of one square metre of affected area for three minor repairs and one major repair listed in the range statement
- remove a section or whole defective area of concrete, cleaning and preparing the affected area and applying the necessary bonding
- locate, interpret and apply relevant information, standards and specifications relating to repairing and rectifying concrete
- comply with site safety plans and procedures
- comply with organisational policies and procedures relating to repairing and rectifying concrete while maintaining quality requirements
- safely and effectively operate and use plant, tools and equipment required to repair and rectify concrete
- communicate and work effectively and safely with others at each stage of the process to repair concrete.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the mandatory task requirements
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
workplace instructions relating to safe work practices and addressing hazards and emergencies

safety data sheets.

Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:

- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety (WHS)requirements**

must comply with state and territory legislation and regulations and project safety plan, and may include:

- assistance of others or the use of manual or mechanical lifting devices with handling activities where size, weight or other issues, such as disability, are a factor
- emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
- hazard control
- hazardous materials and substances
- personal protective equipment (PPE) prescribed under
legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of
  operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working outdoors in warm climates
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

**Information** may include:
- instructions issued by authorised organisational and external personnel
- memos
- regulatory and legislative requirements relating to repairing concrete
- relevant Australian standards
- safe work procedures relating to repairing concrete
- safety data sheets
- signage
- verbal, written and diagrammatical instructions, including
  manufacturer specifications and instructions where specified
- work bulletins
- work schedules, plans and specifications.

**Planning and preparation** must include:
- assessing conditions and hazards
- determining work requirements and safety plans and procedures
- identifying equipment defects
- inspecting work sites.

**Tools and equipment** may include:
- brooms
- concrete mixers
- floaters
- grinders
- hoses
- polishers
- rollers
- screeds
- shovels
- trowels, including power trowels
- water blasters
- wheelbarrows.

**Quality requirements** must include:
- internal organisational quality policy and standards
- manufacturer specifications where specified
- relevant regulations and Australian standards
- workplace operations and procedures.

**Materials**:
- must include concrete
- may include:
  - bonding agents
  - acrylic co-polymers
  - resin based compounds
  - silicate compounds
  - curing compounds
  - retardants.

**Environmental requirements** may include:
- clean-up management
- dust and noise control
- stormwater management
- vibration management
- waste management.

**Types of surfaces that may require repair** may include:
- beams
- columns
- concrete aprons
- pathways
- ramps
- slabs
- stairs
- walls.

**Repair work** may include:
- dowelling
- drilling
- formwork
- patching
- replacing concrete
- resurfacing
- self-levelling compounds.

**Major repairs** may include:
- cracks (wet, live and dormant)
- non-bonding of new to old interfaces
include:

- non-compliant surfaces
- subsidence.

*Minor repairs* may involve:

- acid etching and cleaning
- bonded toppings
- levelling compounds
- mortars
- slippery surfaces
- topping existing concrete
- unbonded toppings.

*Damaged or blistered concrete* may include:

- blow holes
- dusting
- rain damage
- spalling
- stamped concrete defects
- stencilled concrete defects
- wavy or uneven surfaces.

**Unit Sector(s)**

Not applicable.
CPCCCO3047A Cut and core concrete

Modification History
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

- Changes to performance criteria, required skills and knowledge, range statement, and methods of assessment
- Range of other minor editorial changes

Not equivalent to CPCCCO3027A Cut and core concrete.

Unit Descriptor
This unit of competency specifies the outcomes required to cut and core concrete, and plan and prepare the work.
The unit includes the use of sawing and drilling equipment. It may also include working with others and as a member of a team.

Application of the Unit
This unit applies to cutting and coring concrete to provide service holes, core samples and construction joints, and for joining new components.

Licensing/Regulatory Information
Licensing, legislative, regulatory or certification requirements apply to concreting work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare.  

1.1 Work instructions, work health and safety (WHS) requirements and other information relevant to the work are identified, confirmed and applied for planning and preparation purposes.

1.2 Plant, tools and equipment consistent with job requirements are selected and checked for serviceability, and faults are rectified and reported before work begins.

1.3 Material quantity requirements are identified and calculated according to plans, specifications and quality requirements.

1.4 Materials appropriate to the work application are obtained, prepared, safely handled and located ready for use.

1.5 Environmental requirements are identified for the project according to environmental plans and regulatory obligations.

2 Undertake cutting and coring activities.  

2.1 Cutting and coring requirements are identified.

2.2 Equipment for sawing and drilling is selected according to the task.

2.3 Sawn joint is cut to specifications and job requirements.

2.4 Cored hole is drilled to specifications and job requirements.
3 Clean up.

3.1 Work area is cleared and materials disposed of, reused or recycled according to regulations, codes of practice and job specification.

3.2 Plant, tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- learning skills to:
  - evaluate own actions and make judgments about performance and necessary improvements
  - respond to change, such as differences in work site, and environmental and quality requirements
- numeracy skills to:
  - check levels of lubricants in tools
  - calculate and confirm correct quantities of materials for work tasks
- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report work site hazards to appropriate personnel, including faults in tools, equipment or materials
  - use language and concepts appropriate to cultural differences
- reading skills to:
  - interpret documentation, including drawings and specifications
  - understand written instructions, procedures and signage
  - interpret manufacturer instructions for safely handling tools and equipment
- writing skills to complete pre-operational checklists and equipment fault forms

**Required knowledge**

- types, characteristics, uses and limitations of plant, tools and equipment used in cutting and coring concrete
- types, location and usage of relevant safety information:
  - job safety analyses (JSA) and safe work method statements (SWMS)
  - safety data sheets (SDS)
  - safety manuals and instructions for plant, tools and equipment
  - signage
  - environmental and work site safety plans
- principles of concreting:
  - substructure construction
  - concrete cutting and coring techniques
purpose and placement of control joints
- general construction terminology
- processes for material storage and environmentally friendly waste management
- processes for calculating joint requirements
- quality requirements relating to cutting and coring concrete
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by undertaking a range of tasks in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- complete saw cutting of a construction joint to a minimum of 5 metres straight or to the set line, according to job specifications
- core a hole in a designated surface, clear through a minimum of 100mm in depth, according to job specifications
- locate, interpret and apply relevant information, standards and specifications relating to cutting and coring concrete
- comply with site safety plans and procedures
- comply with organisational policies and procedures relating to cutting and coring concrete while maintaining quality requirements as outlined in job specifications
- safely and effectively operate and use plant, tools and equipment required to cut and core concrete
- communicate and work effectively and safely with others.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the mandatory task requirements
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:

- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety requirements** must comply with state and territory legislation and regulations and project safety plan, and may include:

- safety data sheets.
operational risk assessment and treatments associated with:
- earth leakage boxes
- lighting
- power cables, including overhead service trays, cables and conduits
- restricted access barriers
- surrounding structures
- traffic control
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Information** may include:
- instructions issued by authorised organisational and external personnel
- memos
- regulatory and legislative requirements relating to coring concrete
- relevant Australian standards
- safe work procedures relating to coring concrete
- safety data sheets
- signage
- verbal, written and diagrammatic instructions, including manufacturer specifications and instructions where specified
- work bulletins
- work schedules, plans and specifications.

**Planning and preparation** must include:
- assessing conditions and hazards
- determining work requirements and safety plans and procedures
- identifying and rectifying equipment defects
- inspecting work sites.

**Tools and equipment**: must include:
- concrete drilling equipment
- concrete saws
- coring equipment
- diamond tip drill bits
- may include:
  - bolt cutters
hoses
measuring tapes
nips.

**Quality requirements**

must include:

- internal organisational quality policy and standards
- manufacturer specifications where specified
- relevant regulations and Australian standards
- workplace operations and procedures.

**Materials:**

must include water as a cooling agent
may include other specialist cooling agents.

**Environmental requirements**

may include:

- clean-up management
- dust and noise control
- stormwater management
- vibration management
- waste management.

**Cutting and coring**

activities apply to:

- columns
- commercial buildings
- driveways
- foundations
- gutters
- hardstands
- kerbs
- pathways
- pits
- plinths
- residential buildings
- slabs
- walls.

**Cutting** concrete may include:

- anti-cracking joints
- articulation joints
- construction joints
- control joints
- expansion and contraction joints
- joining new concrete components
- structural joints.

**Coring** of concrete may include:

- providing for fixtures
- providing holes to accommodate services
- testing core samples.

**Saw** types may include:

- hand held
- walk behind.

CPCCO3048A Construct tilt panels on site

Modification History
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

- Changes to unit title, elements and performance criteria, required skills and knowledge, range statement, critical aspects for assessment, and methods of assessment
- Range of other minor editorial changes

Not equivalent to CPCCCO3028A Carry out tilt panel construction

Unit Descriptor
This unit of competency specifies the outcomes required to work in a team to set up, pour and place concrete tilt panels to form internal and external walls for building structures. The unit includes on-site and prefabricated methods of panel construction. It may also include working with others and as a member of a team.

Application of the Unit
This unit of competency supports the role of concreters responsible for constructing concrete tilt panels on residential, commercial or civil construction sites. Tilt panels can be used to construct internal and external walls of structures.

Licensing/Regulatory Information
Licensing, legislative, regulatory or certification requirements apply to concreting work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare.  
1.1 Work instructions, *work health and safety (WHS) requirements* and other *information* relevant to the work are identified, confirmed and applied for *planning and preparation* purposes.

1.2 Plant, *tools and equipment* consistent with job requirements are selected and checked for serviceability, and faults are rectified and reported before work begins.

1.3 Material quantity requirements are identified and calculated according to plans, specifications and *quality requirements*.

1.4 *Materials* appropriate to the work application are obtained, prepared, safely handled and located ready for use.

1.5 *Environmental requirements* are identified for the project according to environmental plans and regulatory obligations.

2 Set out and construct temporary casting bed.  
2.1 Appropriate area is selected to construct casting bed according to project requirements.

2.2 Ground is prepared to a flat surface in preparation for the casting bed.

2.3 Casting bed is placed and finished to project requirements.

2.4 Casting bed is coated with bond breaker according to product specifications.
3 Set out and prepare formwork for panel.

3.1 Location and size of tilt panel are set out to requirements of job drawings and specifications.

3.2 Tilt panel edge formwork is prepared, placed and fixed plumb and aligned to specification.

3.3 Bond breaker is applied to casting bed face or casting form face of previous panel to ensure ease of panel separation, according to manufacturer dose and quantity recommendations.

3.4 Form release agent is applied to formwork according to specifications.

4 Place and tie reinforcement and cast-in fittings.

4.1 Reinforcement, accessories and cast-in fittings are checked for conformity with design and engineering specifications.

4.2 Reinforcement, accessories and cast-in fittings are positioned exactly to engineer’s drawings and engineering specifications.

4.3 Reinforcement is tied and/or welded in correct placement according to engineer’s drawings and specifications.

5 Place, finish and cure concrete.

5.1 Concrete is evenly placed and consolidated to specification using approved vibration method.

5.2 Concrete surface is screeded and finished to specification ensuring cast-in fittings are clear.

5.3 Curing process is applied according to specification.

5.4 Bond breaker is applied to casting bed face of previous panel to ensure ease of panel separation.

6 Clean up.

6.1 Clean-up procedures are undertaken on a daily basis according to work site policies and procedures.

6.2 Edge formwork is stripped after the final panel is cast, ensuring no damage to panels.

6.3 Work area is cleared and materials disposed of, reused
or recycled according to regulations, codes of practice and job specification.

6.4 Plant, tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - evaluate own actions and make judgments about performance and necessary improvements
  - respond to change, such as differences in work site, and environmental and quality requirements
- numeracy skills to check levels of lubricants in tools
- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report work site hazards to appropriate personnel, including faults in tools, equipment or materials
- use language and concepts appropriate to cultural differences
- reading skills to:
  - interpret documentation, including drawings and specifications
  - understand written instructions, procedures and signage
  - interpret manufacturer instructions for safely handling tools and equipment
- writing skills to complete equipment fault forms

Required knowledge

- concreting levelling techniques
- types, location and usage of relevant safety information:
  - job safety analyses (JSA) and safe work method statements (SWMS)
  - safety data sheets (SDS)
  - safety manuals and instructions for plant, tools and equipment
  - signage
  - environmental and work site safety plans
- formwork and reinforcing techniques and componentry
- general construction terminology
- processes for material storage and environmentally friendly waste management
- processes for placing, finishing and curing concrete
- processes for calculating material requirements
- techniques and processes for lifting inserts and ferrules positioning
- tensile strength of concrete panels
- tilt panel construction materials and techniques
- types, characteristics, uses and limitations of plant, tools and equipment used in constructing tilt panels on site
- workplace and equipment safety requirements that apply to setting up, pouring and placing concrete tilt panels
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by undertaking a range of tasks in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- construct casting bed and formwork box for a minimum of six tilt panels measuring an average of 20 square metres each
- construct a minimum of six tilt panels, including a minimum of two of the following tilt panels:
  - blockouts
  - door and window penetrations
  - raking edges
  - water proofing and decorative rebates
- comply with engineering specifications, organisational policies and procedures, and quality requirements during construction of tilt panels
- locate, interpret and apply relevant information, standards and specifications relating to constructing tilt panels on site
- comply with site safety plans and procedures
- safely and effectively operate and use plant, tools and equipment required to construct tilt panels on site
- communicate and work effectively and safely with others during each stage of the tilt panel construction process.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the mandatory task requirements
- tools and equipment appropriate to applying safe work
practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- safety data sheets.

Method of assessment
Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:
- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment
This unit could be assessed on its own or in combination with other units relevant to the job function.
Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.
Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety requirements** must comply with state and territory legislation and regulations and project safety plan, and may include:
- assistance of others or the use of manual or mechanical lifting devices with handling activities where size, weight or other issues, such as disability, are a factor
- emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
- hazard control
• hazardous materials and substances
• personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
• safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  • earth leakage boxes
  • lighting
  • power cables, including overhead service trays, cables and conduits
  • signage and restricted access barriers
  • surrounding structures
  • traffic control
  • trip hazards
  • work site visitors and the public
  • working at heights
  • working in confined spaces
  • working in proximity to others
  • working outdoors in warm climates
• use of firefighting equipment
• use of tools and equipment
• workplace environmental requirements and safety.

**Information may include:**
• instructions issued by authorised organisational and external personnel
• memos
• regulatory and legislative requirements relating to tilt panel construction
• relevant Australian standards
• safe work procedures relating to tilt panel construction
• safety data sheets
• signage
• verbal, written and diagrammatic instructions, including manufacturer specifications and instructions where specified
• work bulletins
• work schedules, plans and specifications.

**Planning and preparation must include:**
• assessing conditions and hazards
• determining work requirements and safety plans and procedures
• identifying and rectifying equipment defects
• inspecting work sites.

**Tools and equipment:**
• must include:
  • edging tools
  • formwork
• hammers
• measuring tapes and rules
• power drills
• power leads
• screed boards
• shovels
• spanners
• spirit levels
• squares
• trowels, including power trowels
• vibrators
• may include:
  • air compressors and hoses
  • mechanical screeds
  • nail guns
  • power saws
  • rakes
  • saw stools
  • wheelbarrows.

**Quality requirements** must include:
• internal organisational quality policy and standards
• manufacturer specifications where specified
• relevant regulations and Australian standards
• workplace operations and procedures.

**Materials** may include:
• bond breaker and curing compound
• concrete
• ferrules
• form release agents
• lifters
• steel bars
• steel mesh.

**Environmental requirements** may include:
• clean-up management
• dust and noise control
• vibration management
• waste management.

**Tilt panels** may include:
• blockouts
• door and window penetrations
• raking edges
• water proofing and decorative rebates.

**Formwork** must include:
• bracing
• edge form timber
Reinforcement components must include:
- plywood.
- ligatures
- mesh
- reinforcement bars and rods.

Cast-in fittings may include:
- panel lifters
- services and fixtures tied to the reinforcement
- structural steel ferrules.

Placing methods for concrete may include:
- kibble
- pumping equipment
- shovelling
- tremies
- truck-placed
- vibrating
- wheelbarrows.

Finishing techniques for concrete may include:
- broom finished
- brushed
- bull float
- mechanical trowelling machine
- steel trowel
- wood float.

Curing may include:
- applied moisture
- coating with a membrane
- curing compound
- flooding
- plastic sheeting
- steam.

CPCCCO3049A Apply and finish sprayed concrete

Modification History
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.
- Changes to performance criteria, required skills and knowledge, range statement, and methods of assessment
- Range of other minor editorial changes
Not equivalent to CPCCCO3029A Apply and finish sprayed concrete

Unit Descriptor
This unit of competency specifies the outcomes required to apply and finish concrete using dry or wet spray to a variety of surfaces to develop retaining structures. The unit includes pumping concrete at high velocity to a given structure. It may also include working with others and as a member of a team.

Application of the Unit
This unit of competency applies to applying and finishing sprayed concrete to a variety of surfaces where conventional concreting methods may not be applied.

Licensing/Regulatory Information
Licensing, legislative, regulatory or certification requirements apply to concreting work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare.  

1.1 Work instructions, *work health and safety (WHS) requirements* and other *information* relevant to the work are identified, confirmed and applied for *planning and preparation* purposes.

1.2 Plant, *tools and equipment* consistent with job requirements are selected and checked for serviceability, and faults are rectified and reported before work begins.

1.3 Material quantity requirements are identified and calculated according to plans, specifications and *quality requirements*.

1.4 *Materials* appropriate to the work application are obtained, prepared, safely handled and located ready for use.

1.5 *Environmental requirements* are identified for the project according to environmental plans and regulatory requirements.

2 Apply concrete using dry and wet spray process.  

2.1 *Dry pumping and wet pumping* equipment is prepared for delivery of concrete mix to spray nozzle.

2.2 Constituent materials for spraying are selected and prepared.

2.3 Reinforcement is checked to ensure it is away from structure where concrete is to be applied.

2.4 Concrete is applied to the surface using *wet spray method or dry spray method* within specified tolerances.
2.5 *Sprayed concrete* is shaped and finished to the form required according to specifications.

3 Clean up.

3.1 Work area is cleared and materials disposed of, reused or recycled according to regulations, codes of practice and job specification.

3.2 Plant, tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - evaluate own actions and make judgments about performance and necessary improvements
  - respond to change, such as differences in work site, and environmental and quality requirements
- numeracy skills to:
  - check levels of lubricants in tools
  - calculate and confirm correct quantities of materials for work tasks
- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report work site hazards to appropriate personnel, including faults in tools, equipment or materials
  - use language and concepts appropriate to cultural differences
- reading skills to:
  - interpret documentation, including drawings and specifications
  - understand written instructions, procedures and signage
  - interpret manufacturer instructions for safely handling tools and equipment
- writing skills to complete equipment fault forms

Required knowledge

- types, characteristics, uses and limitations of plant, tools and equipment used when applying and finishing sprayed concrete
- types, location and usage of relevant safety information:
  - job safety analyses (JSA) and safe work method statements (SWMS)
  - safety data sheets (SDS)
  - safety manuals and instructions for plant, tools and equipment
  - signage
  - environmental and work site safety plans
- principles of concreting, including:
  - concrete placement
  - concrete spray finishing techniques
  - curing practices and durations
- general construction terminology
- processes for material storage and environmentally friendly waste management
• processes for calculating material requirements
• quality requirements, including specified finishes
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by performing a range of tasks in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- apply and finish wet and dry spraying concreting methods to at least two projects for a minimum of 10 square metres each, to job specifications
- locate, interpret and apply relevant information, standards and specifications relating to applying and finishing sprayed concrete
- comply with site safety plans and procedures
- comply with organisational policies and procedures relating to applying and finishing sprayed concrete while maintaining quality requirements outlined in job specifications
- safely and effectively operate and use plant, tools and equipment required to apply and finish sprayed concrete
- communicate and work effectively and safely with others.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- safety data sheets.
Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:

- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety requirements** must comply with state and territory legislation and regulations and project safety plan, and may include:

- assistance of others or the use of manual or mechanical lifting devices with handling activities where size, weight or other issues, such as disability, are a factor
- emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
- hazard control
- hazardous materials and substances
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and
Conduits

- restricted access barriers
- surrounding structures
- traffic control
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- working outdoors in warm climates
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Information may include:**

- instructions issued by authorised organisational and external personnel
- memos
- regulatory and legislative requirements relating to spray finished concreting
- relevant Australian standards
- safe work procedures relating to spray finished concreting
- safety data sheets
- signage
- verbal, written and diagrammatic instructions, including manufacturer specifications and instructions where specified
- work bulletins
- work schedules, plans and specifications.

**Planning and preparation must include:**

- assessing conditions and hazards
- determining work requirements and safety plans and procedures
- identifying and rectifying equipment defects
- inspecting work sites.

**Tools and equipment may include:**

- compressed air delivery systems
- normal concreting tools
- portable water supply
- pumps
- steel floats
- transport pipes
- wood floats.

**Quality requirements must include:**

- internal organisational quality policy and standards
- manufacturer specifications where specified
- relevant regulations and Australian standards
Materials may include:
- workplace operations and procedures.
- additives
- aggregates
- cements
- curing compounds
- fibres or steel reinforcement
- pre-bagged materials
- ready mix materials to a specific design application
- site batching.

Environmental requirements may include:
- clean-up management
- dust and noise control
- stormwater management
- vibration management
- waste management.

Wet spray method may include:
- large scale projects
- vertical sections devoid of formwork shuttering.

Dry spray method may include:
- dense compact repairs
- intricate work
- overhead repairs.

Concrete surfaces where spray methods may be applied include:
- barrel vaulting
- caissons
- canal linings
- diaphragm walls
- drainage channels
- irrigation
- piled wall facings
- reservoirs
- shell roofs and domes
- silo structures
- swimming pools
- tunnel linings
- walls
- water towers.

Sprayed concrete may be installed to formwork or non-rigid formwork to maximise adhesion, such as:
- expanded metal reinforcement
- hessian
- other backgrounds.

CPCCCO3050A Carry out high performance concreting

Modification History
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.
- Changes to performance criteria, required skills and knowledge, range statement, and methods of assessment
- Range of other minor editorial changes
Not equivalent to CPCCCO3030A Carry out high performance concreting

Unit Descriptor
This unit of competency specifies the outcomes required to plan, prepare and place high performance concrete onto structures requiring high strength attributes and durability. The unit includes the finish of high performance concrete. It may also include working with others and as a member of a team.

Application of the Unit
This unit of competency applies to a variety of structures, such as bridges, airport runways, dams, cooling towers, foundation supports for high rise facilities, roadways and tunnels.

Licensing/Regulatory Information
Licensing, legislative, regulatory or certification requirements apply to concreting work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

and to avoid material segregation.

2.4 High performance concrete is compacted/vibrated and *screeded* to the nominated criteria into designated formwork according to specifications and supporting drawings.

2.5 High performance concrete is *finished* to specified thickness and height.

2.6 High performance concrete curing regime is applied as per specifications to include a selection of curing methods, which are then documented.

2.7 Concrete is protected from damage and pollution during construction using a plastic membrane.

3 Clean up.

3.1 Work area is cleared and materials disposed of, reused or recycled according to regulations, codes of practice and job specification.

3.2 Plant, tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - evaluate own actions and make judgments about performance and necessary improvements
  - respond to change, such as differences in work site, and environmental and quality requirements
- numeracy skills to:
  - check levels of lubricants in tools
  - calculate and confirm correct quantities of materials for work tasks
- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report work site hazards to appropriate personnel, including faults in tools, equipment or materials
  - use language and concepts appropriate to cultural differences
- reading skills to:
  - interpret documentation, including drawings and specifications
  - understand written instructions, procedures and signage
  - interpret manufacturer instructions for safely handling tools and equipment
- writing skills to complete pre-operational checklists and equipment fault forms

Required knowledge

- general construction terminology
- processes for calculating material requirements
- properties, strength and performance of concrete:
  - placement, finishing and curing techniques
  - concrete testing techniques
  - high performance concrete materials and techniques
- quality requirements:
  - internal organisational quality policy and standards
  - manufacturer specifications where specified
  - relevant regulations and Australian standards
  - workplace operations and procedures
• substructure construction
• processes for material storage and environmentally friendly waste management
• types, characteristics, uses and limitations of plant, tools and equipment used in carrying out high performance concreting
• types, location and use of relevant safety information:
  • job safety analyses (JSA) and safe work method statements (SWMS)
  • safety data sheets (SDS)
  • safety manuals and instructions for plant, tools and equipment
  • signage
  • environmental and work site safety plans
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by undertaking a range of tasks in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- complete planning, preparation, placement, finishing and curing of 10 square metres of high performance concrete to engineer’s specifications
- locate, interpret and apply relevant information, standards and specifications relating to carrying out high performance concreting
- comply with site safety plans and procedures
- comply with organisational policies and procedures relating to carrying out high performance concreting while maintaining quality requirements outlined in job specifications
- safely and effectively operate and use plant, tools and equipment required to carry out high performance concreting
- communicate and work effectively and safely with others.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the mandatory task requirements
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- research resources and industry-related systems information
• safety data sheets.

**Method of assessment**

Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:

• direct observation of tasks in real or simulated work conditions
• questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Guidance information for assessment**

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety requirements** must comply with state and territory legislation and regulations and project safety plan, and may include:

• assistance of others or the use of manual or mechanical lifting devices with handling activities where size, weight or other issues, such as disability, are a factor
• emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
• hazard control
• hazardous materials and substances
• personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
• safe operating procedures, including the conduct of
operational risk assessment and treatments associated with:
  • earth leakage boxes
  • lighting
  • power cables, including overhead service trays, cables and conduits
  • restricted access barriers
  • surrounding structures
  • traffic control
  • trip hazards
  • work site visitors and the public
  • working at heights
  • working in confined spaces
  • working in proximity to others
  • working outdoors in warm climates
  • use of firefighting equipment
  • use of tools and equipment
  • workplace environmental requirements and safety.

Information may include:
  • instructions issued by authorised organisational and external personnel
  • memos
  • regulatory and legislative requirements relating to carrying out high performance concreting, including relevant Australian standards
  • safe work procedures relating to carrying out high performance concreting
  • safety data sheets
  • signage
  • verbal, written and diagrammatical instructions, including manufacturer specifications and instructions where specified
  • work bulletins
  • work schedules, plans and specifications.

Planning and preparation must include:
  • determining work requirements and safety plans and procedures
  • identifying and rectifying equipment defects
  • inspecting work sites.

Tools and equipment:
  • must include:
    • bull floats
    • composite floats
    • immersion vibrators
    • magnesium floats
- power floats
- rakes
- screed boards
- shovels
- steel trowels
- vibrating screeds
- may include:
  - bolt cutters
  - brooms
  - concrete kibbles
  - curing compounds applicators
  - edging tools
  - measuring tapes
  - nips
  - tarpaulins and covers
  - tremmies
  - wheelbarrows
  - wooden floats.

**Quality requirements**

must include:

- internal organisational quality policy and standards
- manufacturer specifications where specified
- relevant regulations and Australian standards
- workplace operations and procedures.

**Materials:**

must include high performance concrete

may include:

- curing compounds
- a range of specialist additives.

**Environmental requirements** may include:

- clean-up management
- dust and noise control
- vibration management
- waste management.

**High performance concrete** includes the following applications:

- airport runways
- bridges
- columns
- cooling towers
- dams
- foundation supports for high rise facilities
- foundations
- gutters
- hardstands
- kerbs
- pathways
- pits
- plinths
- roadways
- slabs
- stairs
- tunnels
- walls.

Concrete placing methods may include:
- kibble
- pumping equipment
- shovelling
- tremmies
- truck-placed
- vibrating
- wheelbarrows.

Screeding:
- must include a hand screed
- may include:
  - a mechanical vibrating screed
  - magic screeds.

Finishing techniques may include:
- broom finished
- brushed
- bull float
- mechanical trowelling machine
- steel trowel
- wood float.

CPCCCO3051A Conduct off-form vertical concrete operations

Modification History
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.
- Changes to performance criteria, required skills and knowledge, range statement, and methods of assessment
- Range of other minor editorial changes
Not equivalent to CPCCCO3031A Conduct off-form vertical concrete operations

Unit Descriptor
This unit of competency specifies the outcomes required to prepare and apply concrete to a slip or jump formwork structure. The unit covers sequencing, placing and compacting concrete in formwork. It may include working with others and as a member of a team.

Application of the Unit
This unit of competency supports the role of those working with concrete on residential, commercial or civil construction sites in the construction of multi-storey buildings.

Licensing/Regulatory Information
Licensing, legislative, regulatory or certification requirements apply to concreting work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare.
   1.1 Work instructions, work health and safety (WHS) requirements and other information relevant to the work are identified, confirmed and applied for planning and preparation purposes.
   1.2 Plant, tools and equipment consistent with job requirements are selected and checked for serviceability, and faults are rectified and reported before work begins.
   1.3 Material quantity requirements are identified and calculated according to plans, specifications and quality requirements.
   1.4 Materials appropriate to the work application are obtained, prepared, safely handled and located ready for use.
   1.5 Environmental requirements are identified and applied for the project according to environmental plans and regulatory obligations.

2 Set out and prepare slip or jump form location.
   2.1 Location and size of pour are set out to requirements of job drawings and specifications.
   2.2 Equipment associated with the installation of slip or jump formwork concrete projects is prepared.
   2.3 Edge formwork is prepared, placed and fixed with plumb and alignment to specification requirements, and is set out.
   2.4 Form release agent is applied to slip or jump formwork
with appliance or machine to specifications.

3 Place and tie reinforcement and cast-in fittings.

3.1 Reinforcement, accessories and cast-in fittings are checked for conformity with design and specifications.

3.2 Reinforcement and accessories are positioned to engineer’s drawings and specifications.

3.3 Reinforcement is tied and/or welded in correct placement according to engineer’s drawings and specifications.

4 Place, finish and cure concrete.

4.1 Sequencing of concrete placement is determined according to specifications.

4.2 Once transported, concrete is evenly placed into formwork in layers and consolidated to specification, avoiding material segregation and using approved compaction method.

4.3 Concrete surface is screeded and finished to specification ensuring cast-in fittings are clear.

4.4 Curing process is applied according to specification.

4.5 Slip or jump formwork is progressed by riggers and placement cycle is continued, avoiding cold joint.

5 Clean up.

5.1 Work area is cleared and materials disposed of, reused or recycled according to regulations, codes of practice and job specification.

5.2 Plant, tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - evaluate own actions and make judgments about performance and necessary improvements
  - respond to change, such as differences in work site, and environmental and quality requirements
- numeracy skills to:
  - check levels of lubricants in tools
  - calculate and confirm correct quantities of materials for work tasks
- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report work site hazards to appropriate personnel, including faults in tools, equipment or materials
  - use language and concepts appropriate to cultural differences
- reading skills to:
  - interpret documentation, including drawings and specifications
  - understand written instructions, procedures and signage
  - interpret manufacturer instructions for safely handling tools and equipment
- writing skills to complete pre-operational checklists and equipment fault forms

Required knowledge

- general construction terminology
- principles of concreting, including:
  - techniques for placing, finishing and curing concrete
  - levelling techniques
- principles of slip or jump formwork systems, including:
  - slip or jump formwork vertical concrete materials and techniques
  - slip or jump formwork and reinforcing componentry
- processes for calculating material requirements
- quality requirements relating to each stage of conducting off-form vertical concrete operations
- processes for material storage and environmentally friendly waste management
- sequencing and cold joints use requirements
• types, characteristics, uses and limitations of plant, tools and equipment used in conducting off-form vertical operations
• types, location and usage of relevant safety information such as:
  • job safety analyses (JSA) and safe work method statements (SWMS)
  • safety data sheets (SDS)
  • safety manuals and instructions for plant, tools and equipment
  • signage
  • environmental and work site safety plans
• workplace and equipment safety requirements, including hazard reporting requirements and correct handling of equipment faults
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by undertaking a range of tasks in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- complete planning, preparation, reinforcement placement and installation of block out; install cast-in fittings; and sequence, place, finish and cure concrete, minimising cold joint and undertaking compaction of concrete for one slip or jump form to engineer’s specifications
- locate, interpret and apply relevant information, standards and specifications relating to conducting off-form vertical concrete operations
- comply with site safety plans and procedures
- comply with organisational policies and procedures relating to conducting off-form vertical concrete operations while maintaining quality requirements outlined in job specifications
- safely and effectively operate and use plant, tools and equipment required to conduct off-form vertical concrete operations
- communicate and work effectively and safely with others during each stage of the work task.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the mandatory task requirements
- tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• research resources and industry-related systems information
• safety data sheets.

**Method of assessment**

Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:

• direct observation of tasks in real or simulated work conditions
• questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Guidance information for assessment**

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety requirements** must comply with state and territory legislation and regulations and project safety plan, and may include:

• assistance of others or the use of manual or mechanical lifting devices with handling activities where size, weight or other issues, such as disability, are a factor
• emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
• hazard control
hazardous materials and substances
personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Information may include:

- instructions issued by authorised organisational and external personnel
- memos
- regulatory and legislative requirements relating to off-form vertical concreting
- relevant Australian standards
- safe work procedures relating to off-form vertical concreting
- safety data sheets
- signage
- verbal, written and diagrammatical instructions, including manufacturer specifications and instructions where specified
- work bulletins
- work schedules, plans and specifications.

Planning and preparation must include:

- assessing conditions and hazards
- determining work requirements and safety plans and procedures
- identifying and rectifying equipment defects
- inspecting work sites.

Tools and equipment:

- must include:
  - hydraulic accessories
  - measuring tapes and rules
  - nips
- shovels
- slip or jump formwork
- spanners
- steel fixing reels
- vibrators

may include:
- air compressors and hoses
- hammers
- nail guns
- power drills
- power leads
- power saws
- rakes
- saw stools
- scaffolding
- screed boards
- spirit levels
- squares
- wheelbarrows.

**Quality requirements**

must include:
- internal organisational quality policy and standards
- manufacturer specifications where specified
- relevant regulations and Australian standards
- workplace operations and procedures.

**Materials**

may include:
- cast-in fittings
- concrete
- foam
- release agents
- steel mesh.

**Environmental requirements**

may include:
- clean-up management
- dust and noise control
- stormwater management
- vibration management
- waste management.

**Slip or jump formwork concreting**

is conducted:
- in conjunction with other team members involved in the slip or jump form process, including concreters, carpenters, riggers, steel fixers and electricians.

**Formwork**

may include:
- steel or timber slip or jump construction.

**Reinforcement components**

may include:
- ligatures
- mesh
- reinforcement bars and rods.
**Sequencing** must include:
- minimising cold joint
- timing and placement of concrete
- vibrating to specified compaction.

**Placing** methods for concrete may include:
- kibble
- pumping equipment
- shovelling
- tremmies
- truck-placed
- vibrating.

**Curing** must include:
- applied moisture
- coating with a membrane
- curing compounds
- flooding
- plastic sheeting
- steam.

CPCCCO3052A Conduct concrete boom delivery operations

Modification History
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.
- Changes to performance criteria, required skills and knowledge, range statement, and methods of assessment
- Range of other minor editorial changes
Not equivalent to CPCCCO3032A Conduct concrete boom delivery operations

Unit Descriptor
This unit of competency specifies the outcomes required to conduct concrete boom delivery operations, using a vehicle-borne pumping system, in support of construction projects. It covers systems with a minimum of two boom stages.
The unit covers planning and preparing for work; conducting operational checks; the safe and effective operation of the vehicle and pumping system; the safe establishment, use and monitoring of the boom distribution system; and conducting operator maintenance and work finalisation activities.
The unit may include working with others and as a member of a team.

Application of the Unit
This unit of competency supports the role of those who deliver concrete placing booms to residential, commercial or civil construction sites.

Licensing/Regulatory Information
Licensing, legislative, regulatory or certification requirements apply to concreting work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.
Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare.  

1.1 Work instructions, work health and safety (WHS) requirements and other information relevant to the work are identified, confirmed and applied for planning and preparation purposes.

1.2 Tools and equipment consistent with job requirements are selected and checked for serviceability, and faults are rectified and reported before work begins.

1.3 Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.

1.4 Environmental requirements are identified for the project according to environmental plans, local council requirements and regulatory obligations.
2 Conduct boom delivery system pre-operational checks.

2.1 Pre-start, start-up, park and shut-down procedures, including emergency shut-down procedures, are carried out on the vehicle and pump according to manufacturer and/or site-specific requirements.

2.2 Vehicle controls and functions are checked for serviceability and faults are rectified and reported in vehicle log book.

2.3 Distribution system components are checked before use.

2.4 Hoppers are cleaned and serviced prior to use.

3 Operate concrete boom delivery vehicle.

3.1 Hazards associated with vehicle positioning and operations are identified and safe operating techniques are used to minimise risk.

3.2 Engine power is managed to ensure efficiency of concrete pump vehicle platform movements and to minimise damage to engine and gears.

3.3 Engine power is coordinated with gear selection ensuring smooth transition and operation within torque range.

3.4 Truck is operated to work instructions according to company operating procedures.

3.5 Road and traffic conditions are monitored, taking into account road standards, traffic flow, distance and load, and ensuring no injury to people or damage to property, equipment, loads and facilities.

3.6 Truck is brought to a halt smoothly, using the engine retarder, gears and brakes, and minimising wear and tear on vehicle.

4 Deliver concrete.

4.1 Hazards associated with positioning and operating boom delivery components are identified and analysed, and safe operating techniques are used to minimise risk.

4.2 Boom delivery vehicle is positioned at site where it can best service the delivery task and provide access to concrete supply vehicles.
4.3 Delivery platform stabilisers are prepared, deployed and checked to manufacturer requirements for operation and safety.

4.4 **Delivery system components** are positioned securely and safely, according to manufacturer specifications, and checked prior to use.

4.5 Pumping systems are test run and prepared for use according to equipment specifications.

4.6 Supply of bulk *concrete mix* to the hopper is coordinated safely with supply vehicle operators.

4.7 Boom delivery system is operated and its positioning is varied to maintain concrete delivery to the required destination.

4.8 Boom delivery system is safely withdrawn at completion of delivery task.

5 **Carry out operator maintenance.**

5.1 Boom delivery vehicle is safely parked, prepared for *maintenance* and shut down as per manufacturer manual and organisational requirements.

5.2 Inspection and fault finding on the vehicle, pump and boom system components are conducted according to manufacturer specifications, with outcomes recorded according to workplace procedures.

5.3 Defective parts are removed and replaced safely and effectively according to manufacturer manual and organisational requirements.

5.4 Regular programmed maintenance tasks are carried out according to manufacturer and organisational requirements.

6 **Clean up.**

6.1 Work area is cleared and materials disposed of, reused or recycled according to project environmental management plan.

6.2 Vehicle, tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - evaluate own actions and make judgments about performance and necessary improvements
  - respond to change, such as differences in work site, and environmental and quality requirements
  - numeracy skills to check levels of lubricants in tools

- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report work site hazards to appropriate personnel, including faults in tools, equipment or materials
  - use language and concepts appropriate to cultural differences

- reading skills to:
  - interpret documentation, including drawings and specifications
  - understand written instructions, procedures and signage
  - interpret manufacturer instructions for safely handling tools and equipment

- writing skills to complete pre-operational checklists and equipment fault forms

Required knowledge

- boom and line establishment techniques
- characteristics, technical capabilities and limitations of concrete boom delivery vehicle systems:
  - operational, maintenance and basic diagnostic procedures
  - pumps and pumping system operations
  - safe operating techniques in all terrain
- construction activity sequences relating to bulk concreting operations
- general construction terminology
- quality requirements relating to concrete boom delivery operations
- requirements and methods for safe materials handling
- site and equipment safety requirements:
  - knowing when and how to activate emergency shut-down procedures
  - overhead safety requirements relating to boom operations
- site isolation and traffic control responsibilities and authorities
- state or territory regulatory requirements relating to boom delivery system operations
- types, location and usage of relevant safety information:
  - job safety analyses (JSA) and safe work method statements (SWMS)
  - safety data sheets (SDS)
  - safety manuals and instructions for plant, tools and equipment
  - signage
  - environmental and work site safety plans
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by undertaking a range of tasks in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- conduct concrete boom delivery truck system operations over not less than three shifts at two different sites, which will include demonstration of:
  - positioning of the vehicle
  - preparation and positioning of the booms and lines
  - preparation of the pump and hopper
  - coordination of maintenance of hopper levels
  - delivery of concrete to required location on work site
  - variation of boom delivery system positioning to meet changing requirements
  - withdrawal of the boom delivery system
  - application of emergency procedures
  - authorised operator maintenance
- locate, interpret and apply relevant information, standards and specifications relating to concrete boom delivery operations
- comply with site safety plans and procedures
- comply with organisational policies and procedures, relating to concrete boom delivery operations, including quality requirements
- communicate and work effectively and safely with others during each stage of the concrete boom delivery operation.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:
• an induction procedure
• realistic tasks or simulated tasks covering the mandatory task requirements
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• safety data sheets.

Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:

• direct observation of tasks in real or simulated work conditions
• questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

*Work health and safety requirements* must comply with state and territory legislation and

• assistance of others or the use of manual or mechanical lifting devices with handling activities where size, weight or other issues, such as disability, are a factor
• emergency procedures, including extinguishing fires,
regulations and project safety plan, and may include:

- organisational first aid requirements, and evacuation procedures
- hazard control
- hazardous materials and substances
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - signage and restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working outdoors in warm climates
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Information may include:

- diagrams or sketches
- instructions issued by authorised organisational and external personnel
- memos
- regulatory and legislative requirements relating to concrete boom delivery
- relevant Australian standards
- safe work procedures relating to concrete boom delivery
- safety data sheets
- signage
- vehicle systems operations and the environment
- verbal, written and graphical instructions, including manufacturer specifications and instructions where specified
- work bulletins
- work schedules, plans and specifications.

Planning and preparation must include:

- assessing conditions and hazards
- determining work requirements and safety plans and procedures
identifying and rectifying equipment defects
inspecting work sites.

**Environmental requirements** may include:
- designation of a pump washout area
- clean-up management
- dust suppression, noise and fume abatement
- stormwater management
- vibration management
- waste management.

**Functions** must include:
- brakes
- manoeuvrability
- steering.

**System components** must include:
- adaptors
- boom components
- hoses
- lines.

**Hazards associated with vehicle positioning and operations** may include:
- interruption of concrete flow
- mechanical failure of vehicle or parts
- positioning hazards:
  - insufficient clearance space between trucks and equipment
  - placing vehicle and pump on sloping or unstable ground
  - proximity of vehicle to trenches
  - traffic-related hazards.

**Hazards associated with positioning and operating boom** may include:
- mechanical failure of the boom
- proximity to overhead power lines or electrical equipment
- traffic-related hazards.

**Concrete delivery systems**:
- must include:
  - boom-mounted conveyors
  - lines
- may include adaptors.

**Concrete mixes** vary in water content and, in order from wet to dry, include:
- block-fill
- pool-mix
- topping
- slab
- footing
- curb and guttering.

**Operator maintenance**:
- must include:
  - authorised servicing
  - cleaning
  - monitoring, recording and reporting faults
may include:
- conducting authorised minor replacements
- providing assistance to maintenance personnel during maintenance and repair activities.

CPCCCO3053A Slump test concrete

Modification History
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.
- Changes to performance criteria, required skills and knowledge, range statement, critical aspects for assessment, and methods of assessment
- Range of other minor editorial changes
Not equivalent to CPCCCO3033A Slump test concrete

Unit Descriptor
This unit of competency specifies the outcomes required to slump test concrete to ensure the mix is workable and complies with the delivery docket and specified order. The unit includes sampling and slump testing to a set range or tolerance. It may also include working with others and as a member of a team.

Application of the Unit
This unit of competency supports the role of those who slump test concrete designated for use on residential, commercial or civil construction sites. The results of slump tests are used to confirm the appropriateness of the concrete for the concrete work planned.

Licensing/Regulatory Information
Licensing, legislative, regulatory or certification requirements apply to concreting work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare.

1.1 Work instructions, work health and safety (WHS) requirements and other information relevant to the work are identified, confirmed and applied for planning and preparation purposes.

1.2 Tools and equipment consistent with the job are selected, checked for serviceability, and faults are rectified and reported before work begins.

1.3 Material quantity requirements are identified, calculated and confirmed according to plans, specifications and quality requirements.

1.4 Environmental requirements are identified for the project according to environmental plans and regulatory obligations.

1.5 Standard slumping cone is cleaned in preparation for slump testing.

2 Test concrete slump measurement.

2.1 Sample of concrete is taken, using the correct sampling procedure, directly from the delivery truck’s initial discharge.

2.2 Slumping cone is filled and compacted according to standard slump testing procedures.

2.3 Slumping cone is levelled off and surplus concrete is cleared from steel plate and slumping cone.

2.4 Slumping cone is raised without moving the sample.

2.5 Sample is measured for conformity with tolerance levels
and resampling is conducted if sample is outside tolerance.

2.6 Collapsed or sheared samples are recorded.

3 Clean up.

3.1 Work area is cleared and materials disposed of, reused or recycled according to regulations, codes of practice and job specification.

3.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices.

3.3 Work completion procedures are applied and relevant personnel notified that work is finished.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- learning skills to:
  - evaluate own actions and make judgments about performance and necessary improvements
  - respond to change, such as differences in work site, and environmental and quality requirements
- numeracy skills to confirm correct slump of concrete
- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report work site hazards to appropriate personnel, including faults in tools, equipment or materials
- use language and concepts appropriate to cultural differences
- reading skills to:
  - interpret documentation, including drawings and specifications
  - interpret manufacturer instructions for safely handling tools, equipment and materials
  - understand written instructions, procedures and signage
- writing skills to complete pre-operational checklists and simple equipment fault forms

**Required knowledge**

- application of relevant Acts, regulations, Australian standards relating to the specification and supply of concrete
- environmentally friendly waste management practices applicable to the task
- general construction terminology
- processes for the accurate calculation of material requirements
- properties of concrete, including its strength, durability, workability and cohesiveness
- quality requirements relating to each stage of the concreting process
- processes for material storage
- slump testing techniques
- types, uses, characteristics and limitations of slump testing tools and equipment
- types, location and usage of relevant safety information:
  - job safety analyses (JSA) and safe work method statements (SWMS)
  - safety data sheets (SDS)
  - safety manuals and instructions for plant, tools and equipment
• signage
• environmental and work site safety plans
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by observation in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- conduct three slump tests from different batches of concrete, to determine if the mix is workable and complies with the delivery docket and specified order
- determine when slump test fails and steps to take to communicate test outcomes to relevant personnel
- locate, interpret and apply relevant information, standards and specifications relating to slump testing
- comply with site safety plans and procedures
- comply with organisational policies and procedures relating to conducting slump tests
- safely and effectively operate and use plant, tools and equipment required to slump test concrete
- communicate and work effectively and safely with others.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the mandatory task requirements
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- safety data sheets.
Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:

- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety requirements** must comply with state and territory legislation and regulations and project safety plan, and may include:

- assistance of others or the use of manual or mechanical lifting devices with handling activities where size, weight or other issues, such as disability, are a factor
- emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
- hazard control
- hazardous materials and substances
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
• earth leakage boxes
• lighting
• power cables, including overhead service trays, cables and conduits
• signage and restricted access barriers
• surrounding structures
• traffic control
• trip hazards
• work site visitors and the public
• working at heights
• working in confined spaces
• working in proximity to others
• working outdoors in warm climates
• use of firefighting equipment
• use of tools and equipment
• workplace environmental requirements and safety.

Information may include:
• diagrams or sketches
• instructions issued by authorised organisational and external personnel
• memos
• regulatory and legislative requirements relating to slump testing concrete
• relevant Australian standards
• safe work procedures relating to slump testing concrete
• safety data sheets
• signage
• verbal, written and graphical instructions, including manufacturer specifications and instructions where specified
• work bulletins
• work schedules, plans and specifications.

Planning and preparation must include:
• assessing conditions and hazards
• determining work requirements and safety plans and procedures
• identifying and rectifying equipment defects
• inspecting work sites.

Tools and equipment:
• must include:
  • bullet nosed rod (600mm x 16mm)
  • sampling scoops
  • standard slump cones
  • steel rule
  • steel slump plate (500mm x 500mm)
- steel rod
- may include:
  - brushes
  - buckets
  - sponges
  - trowels, including steel trowels
  - wooden floats.

**Quality requirements**

must include:

- internal organisational quality policy and standards
- manufacturer specifications, where specified
- relevant regulations and Australian standards
- workplace operations and procedures.

**Environmental requirements**

may include:

- clean-up management
- dust and noise control
- vibration management
- waste management.

**Sampling:**

- must include that taken at initial discharge after 0.2 square metre of the load has been placed
- may include routine samples taken at three places during the load
- requires a standard slumping cone 200mm in diameter at the base, 100mm in diameter at the top and 300mm tall, with foot pieces for standing on while the sample is added.

**Slump testing**

must include:

- use of a steel tray and steel rod
- appropriate frequency of rodding to ensure penetration of concrete layers.

CPCCCO3054A Operate concrete agitator trucks

Modification History
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.
- Changes to unit title, performance criteria, required skills and knowledge, range statement, and methods of assessment
- Range of other minor editorial changes
Not equivalent to CPCCCO3034A Conduct concrete agitator truck operations

Unit Descriptor
This unit of competency specifies the outcomes required to operate concrete agitator trucks in support of construction projects. The unit covers planning and preparing for work, conducting operational checks, safely and effectively operating a concrete agitator truck and associated equipment for a range of mandatory tasks, and conducting operator maintenance and work finalisation activities. The unit may include working with others and as a member of a team.

Application of the Unit
This unit of competency supports the role of those who operate concrete agitator trucks used to supply concrete for residential, commercial or civil construction sites.

Licensing/Regulatory Information
Licensing, legislative, regulatory or certification requirements apply to concreting work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1  Plan and prepare.  
   1.1 Work instructions, *work health and safety (WHS) requirements* and other *information* relevant to the work are identified, confirmed and applied for *planning and preparation* purposes.
   1.2 *Tools and equipment* consistent with job requirements are selected and checked for serviceability, and faults are rectified and reported before work begins.
   1.3 Materials appropriate to the work application are obtained, prepared, safely handled and located ready for use.
   1.4 *Environmental requirements* are identified for the project according to environmental plans and regulatory obligations.

2  Conduct machine pre-operational checks.
   2.1 Pre-start, start-up, park and shut-down procedures, including emergency shut-down procedures, are carried out according to manufacturer and site-specific requirements.
   2.2 Vehicle controls and *functions* are checked for serviceability and faults are rectified and reported.
   2.3 *Agitator controls* and functions are checked for serviceability, and faults are rectified and reported.
3 Operate the agitator truck.

3.1 Site hazards associated with truck operations are identified and safe operating techniques are used to minimise risk.

3.2 Engine power is managed to ensure efficiency of concrete agitator truck movements and to minimise damage to the engine and gears.

3.3 Engine power is coordinated with gear selection ensuring smooth transition and operation within torque range.

3.4 Truck is operated to work instructions according to company operating procedures.

3.5 Road and traffic conditions are monitored taking into account road standards, traffic flow, distance and load, and ensuring no injury to people or damage to property, equipment, loads and facilities.

3.6 Truck is brought to a halt smoothly, using the engine retarder, gears and brakes and minimising the wear and tear on vehicle.

4 Load, transport and discharge concrete.

4.1 Concrete agitator truck is positioned at load and discharge points with a minimum of manoeuvres.

4.2 Concrete agitator truck is loaded to within authorised carrying capacity of concrete mixes to suit the site and task conditions.

4.3 Concrete agitator truck is moved from loading to discharge point safely and smoothly avoiding surge and sway.

4.4 Concrete is discharged according to task specifications.

4.5 Discharge systems, including chutes and adaptors, are monitored and maintained throughout the operations.

5 Carry out driver maintenance.

5.1 Concrete agitator truck is safely parked, prepared for maintenance and shut down as per manufacturer manual and organisational requirements.

5.2 Inspection and fault finding are conducted according to
manufacturer specifications and recorded according to organisational procedures.

5.3 Defective parts are removed and replaced safely and effectively according to manufacturer instructions.

5.4 Regular programmed maintenance tasks are carried out according to manufacturer and organisational requirements.

6 Clean up.

6.1 Work area is cleared and materials disposed of, reused or recycled according to project environmental management plan.

6.2 Vehicle, bowl, tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - evaluate own actions and make judgments about performance and necessary improvements
  - respond to change, such as differences in work site, and environmental and quality requirements
- numeracy skills to calculate and confirm correct quantities of materials for work tasks
- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report work site hazards to appropriate personnel, including faults in tools, equipment or materials
  - use language and concepts appropriate to cultural differences
- reading skills to:
  - interpret documentation, including drawings and specifications
  - understand written instructions, procedures and signage
  - interpret manufacturer instructions for safely handling tools and equipment
- writing skills to complete pre-operational checklists and equipment fault forms

Required knowledge

- characteristics, technical capabilities and limitations of concrete agitator truck systems:
  - operational, maintenance and basic diagnostic procedures
  - safe operating techniques in all terrain
- construction activity sequences relating to concreting operations
- general construction terminology
- types, location and usage of relevant safety information:
  - job safety analyses (JSA) and safe work method statements (SWMS)
  - safety data sheets (SDS)
  - safety manuals and instructions for plant, tools and equipment
  - signage
  - environmental and work site safety plans
- quality requirements relating to the operation of a concrete agitator truck
- requirements for safe handling of materials
- site and equipment safety requirements, including site isolation and traffic control
responsibilities and authorities

- state or territory regulatory requirements relating to concrete agitator truck operations
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment
This unit of competency could be assessed by observation in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
A person should demonstrate the ability to:

- conduct concrete agitator truck operations, over not less than three shifts and two different sites, including the safe and effective:
  - positioning of the vehicle at the load point
  - loading and transporting of concrete
  - discharging of concrete at work site to specification
  - discharging directly to site
  - discharging to wheelbarrow and hopper
  - applying emergency procedures
- conduct authorised operator maintenance
- locate, interpret and apply relevant information, standards and specifications relating to concrete agitator truck operations
- comply with site safety plans and procedures
- comply with organisational policies and procedures, relating to concrete agitator truck operations, including quality requirements
- communicate and work effectively and safely with others during each stage of the concrete agitator truck operation.

Context of and specific resources for assessment
Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the mandatory task requirements
tools and equipment appropriate to applying safe work practices
support materials appropriate to activity
workplace instructions relating to safe work practices and addressing hazards and emergencies
safety data sheets.

**Method of assessment**
Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:
- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Guidance information for assessment**
This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

**Range Statement**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety requirements** must comply with state and territory legislation and regulations and project safety plan, and may
- assistance of others or the use of manual or mechanical lifting devices with handling activities where size, weight or other issues, such as disability, are a factor
- emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures.
include:

- hazard control
- hazardous materials and substances
- hazards and risks, including uneven or unstable terrain, trees, fires, overhead services, bridges, buildings, excavations, traffic, embankments, structures and hazardous materials
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - signage and restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working outdoors in warm climates
- safe parking practices, including ensuring access ways are clear; and that equipment and machinery are clear of overhangs and refuelling sites, a safe distance from excavations, and secured from unauthorised access or movement
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Information** may include:

- instructions issued by authorised organisational and external personnel
- memos
- regulatory and legislative requirements relating to operation of concrete agitator trucks on construction sites
- relevant Australian standards
- safe work procedures relating to operation of concrete agitator trucks on construction sites
- safety data sheets
- signage
- verbal, written and diagrammatic instructions, including manufacturer specifications and instructions where specified
- work bulletins
Planning and preparation must include:
- work schedules, plans and specifications.
- assessing conditions and hazards
- determining work requirements and safety plans and procedures
- identifying and rectifying equipment defects
- inspecting work sites.

Tools and equipment must include:
- hand tools and maintenance equipment associated with the particular concrete agitator truck.

Environmental requirements may include:
- clean-up management
- dust and noise control
- stormwater management
- vibration management
- waste management.

Functions must include:
- brakes
- manoeuverability
- steering.

Agitator controls:
- relate to speed, revolutions, forward and return
- may be air, mechanical or electrically actuated.

Discharge points:
- must include:
  - directly to site
  - into a wheelbarrow and hopper
  - may include into a kibble.

Concrete mixes:
- may be relatively dry or increasingly wet
- will include block-fill, pool mix, topping, slab, footing and kerb and guttering.

Maintenance:
- must include:
  - authorised servicing
  - cleaning
  - monitoring, recording and reporting faults
- may include:
  - conducting authorised minor replacements
  - providing assistance to maintenance personnel during maintenance and repair activities.

CPCCC03055A Install topping slabs

Modification History
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

- Changes to unit title, descriptor, elements and performance criteria, required skills and knowledge, range statement, critical aspects for assessment, and methods of assessment
- Range of other minor editorial changes

Not equivalent to CPCCC03025A Resurface concrete

Unit Descriptor
This unit of competency specifies the outcomes required to install bonded or unbonded topping slabs to existing concrete.
The unit includes grinding and scabbling preparation techniques. It may also include working with others and as a member of a team.

Application of the Unit
This unit of competency supports the role of concreters working on residential, commercial or civil construction sites.

Licensing/Regulatory Information
Licensing, legislative, regulatory or certification requirements apply to concreting work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare.

1.1 Work instructions, work health and safety (WHS) requirements and other information relevant to the work are identified, confirmed and applied for planning and preparation purposes.

1.2 Plant, tools and equipment consistent with job requirements are selected and checked for serviceability, and faults are rectified and reported before work begins.

1.3 Material quantity requirements are identified and calculated according to plans, specifications and quality requirements.

1.4 Materials appropriate to the work application are obtained, prepared, safely handled and located ready for use.

1.5 Environmental requirements are identified for the project according to environmental plans and regulatory obligations.

2 Prepare concrete for topping slab.

2.1 Need for concrete reinforcement is determined through consultation with relevant personnel and reinforcement is installed as required according to specifications.

2.2 Preparation equipment is selected for the process.

2.3 Existing concrete is scarified using appropriate preparation techniques according to specifications.

2.4 Surface area to be topped is cleared of loose particles and debris.
2.5 Existing control joints in substrate are checked to ensure they are carried through and reflected in the proposed topping.

3 Pour concrete slab. 3.1 Existing concrete surface is prepared for topping slab with bonded topping or separation material according to specifications.

3.2 Topping slab is poured on to existing concrete surface and screeded to specifications.

4 Cure and seal concrete. 4.1 Following setting, curing agents and curing techniques are applied to concrete according to specifications.

4.2 Curing and sealing are maintained for period specified according to specifications.

5 Clean up. 5.1 Work area is cleared and materials disposed of, reused or recycled according to regulations, codes of practice and job specification.

5.2 Plant, tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - evaluate own actions and make judgments about performance and necessary improvements
  - respond to change, such as differences in work site, and environmental and quality requirements
- numeracy skills to:
  - calculate and apply correct timings required for curing and sealing
  - calculate and confirm correct quantities of materials for work tasks
- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report work site hazards to appropriate personnel, including faults in tools, equipment or materials
  - use language and concepts appropriate to cultural differences
- reading skills to:
  - interpret documentation, including drawings and specifications
  - interpret manufacturer instructions for safely handling tools, equipment and materials
  - understand written instructions, procedures and signage
- writing skills to complete pre-operational checklists and simple equipment fault forms

Required knowledge

- application and use of control joints
- concrete resurfacing materials and techniques, including:
  - curing duration and effect on ultimate strength
  - role of abrasive blasting when installing bonded topping slabs
  - general construction terminology
  - mortar mix composition and additives relevant to topping slabs
- processes for calculating material requirements
- properties of concrete to be able to minimise waste, delay and faults in installing topping slabs
- quality requirements of the task, including:
  - internal organisational quality policy and standards
  - manufacturer specifications
- workplace operations and procedures
- processes for material storage and environmentally friendly waste management
- types and applications of concrete materials used when installing topping slabs
- types, characteristics, uses and limitations of plant, tools and equipment relevant to installing topping slabs and resurfacing existing concrete
- types, location and use of relevant safety resources and information such as:
  - job safety analyses (JSA) and safe work method statements (SWMS)
  - safety data sheets (SDS)
  - signage and barricades
- workplace and equipment safety requirements, including procedures for identifying, recording and rectifying equipment faults
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by undertaking a range of tasks in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- prepare the surfaces of at least four existing concrete slabs each measuring at least 10 square metres; two slabs must be prepared for bonded topping slabs and two for unbonded topping slabs
- install bonded and unbonded topping slabs to prepared surfaces
- cure and finish the topping slabs to specifications
- locate, interpret and apply relevant information, standards and specifications relating to installing topping slabs
- comply with site safety plans and procedures
- comply with organisational policies and procedures relating to installing topping slabs while maintaining quality requirements outlined in job requirements
- safely and effectively operate and use plant, tools and equipment required to install topping slabs
- communicate and work effectively and safely with others.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• safety data sheets.

Method of assessment
Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:
• direct observation of tasks in real or simulated work conditions
• questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment
This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety requirements** must comply with state and territory legislation and regulations and project safety plan, and may include:
• assistance of others or the use of manual or mechanical lifting devices with handling activities where size, weight or other issues, such as disability, are a factor
• emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
• hazard control
• hazardous materials and substances
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working outdoors in warm climates
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

**Information may include:**
- instructions issued by authorised organisational and external personnel
- memos
- regulatory and legislative requirements relating to resurfacing concrete
- relevant Australian standards
- safe work procedures relating to resurfacing concrete
- safety data sheets
- signage
- verbal, written and diagrammatic instructions, including manufacturer specifications and instructions where specified
- work bulletins
- work schedules, plans and specifications.

**Planning and preparation must include:**
- assessing conditions and hazards
- determining work requirements and safety plans and policies
- identifying and rectifying equipment defects
- inspecting work sites.

**Tools and equipment:**
- must include:
  - brooms
  - floats
  - hoses
- scabblers
- screeds
- shovels
- trowels
- wheelbarrows
- may include:
  - concrete mixers
  - grinders
  - power trowels
  - rollers
  - sand and water blasters.

**Quality requirements** must include:
- internal organisational quality policy and standards
- manufacturer specifications where specified
- relevant regulations and Australian standards
- workplace operations and procedures.

**Materials**:
- must include concrete
- may include:
  - acid solutions for cleaning and etching
  - bonding agents
  - curing compounds.

**Environmental requirements** may include:
- clean-up management
- dust and noise control
- stormwater management
- vibration management
- waste management.

**Relevant personnel** may include:
- engineer
- site manager.

**Preparation techniques** may include:
- abrasive blasting (sand or grit)
- acid etching
- grinding
- scabbling.

**Curing agents** may include:
- water-based curing compounds
- hessian
- polythene sheets
- water.

**Curing techniques** may include:
- applying curing agents
- applying plastic film
- hosing
- ponding
- using sprinklers.

Concreting

Custom Content Section
Not applicable.
CPCCCO4001A Supervise concreting work

Modification History

New unit.
This version first released with CPC08 Construction and Property Services Training Package Version 9.

Unit Descriptor

This unit of competency specifies the outcomes required to oversee site preparation for concreting work, initiate or direct concreting operations, and monitor concreting procedures to ensure timely completion of concreting works to the required quality standards.
The unit involves team leadership and the coordination and monitoring of concreting procedures.

Application of the Unit

This unit of competency applies to concreting work in residential, commercial and industrial projects.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements apply to concreting work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites

CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information

This unit contains employability skills.
**Elements and Performance Criteria Pre-Content**

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

**Elements and Performance Criteria**

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Supervise preparation for concreting work.</td>
</tr>
<tr>
<td></td>
<td>1.1 Work instructions are communicated to team members and questions are invited and addressed.</td>
</tr>
<tr>
<td></td>
<td>1.2 Team members’ understanding of work health and safety (WHS) and environmental requirements is confirmed.</td>
</tr>
<tr>
<td></td>
<td>1.3 Team members’ selection of materials, tools and equipment is confirmed as consistent with job requirements.</td>
</tr>
<tr>
<td></td>
<td>1.4 Reported tool and equipment faults are processed according to WHS requirements and replacements are sourced as required.</td>
</tr>
<tr>
<td></td>
<td>1.5 Team members’ manual handling and placement of materials, tools and equipment at the site are monitored and directed to ensure safety and efficiency.</td>
</tr>
<tr>
<td>2</td>
<td>Supervise preparation of site for concrete pour.</td>
</tr>
<tr>
<td></td>
<td>2.1 Site excavation and preparation of sub-grade are monitored and directed to ensure safety, quality and timeliness.</td>
</tr>
<tr>
<td></td>
<td>2.2 Formwork installation is monitored and directed to ensure compliance with work plans and specifications.</td>
</tr>
<tr>
<td></td>
<td>2.3 Levelling procedures are conducted or monitored and directed to ensure levels are set according to work plans and specifications.</td>
</tr>
<tr>
<td></td>
<td>2.4 Site is inspected to ensure compliance with plans and specifications and readiness for timely start of concrete</td>
</tr>
</tbody>
</table>
3 Monitor and manage concrete material delivery.

3.1 Quantities and specifications for concrete are confirmed with supplier according to order placed.

3.2 Schedule of concrete delivery and delivery location and method are confirmed with supplier according to order placed.

3.3 Concrete delivery documentation is checked to ensure correct concrete properties, and manufacturer’s specialist is consulted if required to ensure accuracy of concrete supply mix.

3.4 Concrete delivery is monitored and managed to ensure continuous and timely concrete supply for the project.

3.5 Progress of concrete pour is monitored to assess potential shortfall or over-supply, and additional quantities of concrete essential for project completion are calculated and ordered as required, or order is reduced.

4 Monitor and manage concreting on-site work.

4.1 Concrete pour, compacting and levelling procedures are monitored and directed to ensure compliance with safety and environmental requirements and work plans and specifications.

4.2 Finishing techniques and procedures are monitored and directed to ensure compliance with safety and environmental requirements and work plans and specifications.

4.3 Weather conditions and contingencies are monitored and resources directed as required to ensure safety, quality and timeliness of project completion.

4.4 Completed work is checked for compliance with work specifications and team members are coordinated to address areas of non-compliance as required.
5 Supervise site clean-up.

5.1 Removal and storage or disposal of tools, equipment materials and waste are directed and monitored to ensure compliance with workplace, safety and environmental requirements.

5.2 Team members are debriefed and opportunities for learning are identified and actioned as required.

5.3 Project documentation is completed and processed according to workplace and project requirements.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- learning skills to develop and build understanding of:
  - types of concrete materials and supply volumes required for different types of concreting work
  - effects of weather conditions on progress of concrete work
  - numeracy skills to assess and calculate resources required for different stages of concrete work in various weather conditions
  - oral communication skills to lead and motivate team members
  - reading skills to interpret plans, specifications and concrete manufacturer information
  - writing skills to complete equipment fault forms

**Required knowledge**

- concreting procedures for different types of projects and safe work methods for different conditions
- principles of task management
- regulations, standards and codes of practice relevant to concreting work
- team leadership strategies
- tools, equipment and materials required for concreting work and safe operating and maintenance procedures
- types, properties and limitations of different types of concrete
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by performing a range of tasks in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- supervise team members conducting a minimum of three concreting projects in a residential, commercial or industrial setting, ensuring timely completion of each project to required quality standards and specifications
- locate, interpret and apply relevant information, standards and specifications to supervised concreting work
- communicate to team members and comply with:
  - site safety plan and WHS requirements, regulations and codes of practice applicable to workplace operations
  - organisational policies and procedures relating to supervising concreting work while maintaining quality requirements outlined in job specifications
- monitor and direct team members to:
  - safely and effectively operate and use plant, tools and equipment
  - safely handle concreting materials and components.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the mandatory task requirements
- specifications and work instructions relating to supervising concrete work
- tools and equipment appropriate to applying safe work
practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- safety data sheets (SDS).

**Method of assessment**

Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:
- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Guidance information for assessment**

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety requirements** must include:
- assistance of others or the use of manual or mechanical lifting devices with handling activities where size, weight or other issues, such as disability, are a factor
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- personal protective equipment (PPE) prescribed under
legislation, regulations and workplace policies and practices

- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - signage and restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working outdoors in warm climates
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

**Environmental requirements** may include:

- clean-up management
- dust suppression
- noise management
- stormwater management
- vibration management
- waste management.

**Materials, tools and equipment** must include combinations of the following relevant to the particular type of project:

- agitators
- brooms
- floats
- grinders
- hoses
- rollers
- screeds
- shovels
- PPE
- trowels, including power trowels
- water blasters
- wheelbarrows.

**Ensuring the accuracy of concrete supply** must include:

- composition
- slump test measurement
- temperature.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
REQUIRED SKILLS AND KNOWLEDGE

- use a range of mobile technology, such as two-way radio and mobile phones
- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- general construction terminology
- hazards associated with the conduct of manual demolition tasks
- job safety analysis (JSA) and safe work method statements
- manual demolition processes and techniques
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- measurement and calculation
- method of operation and maintenance requirements of demolition tools and equipment
- plans, drawings and specifications
- quality requirements
- techniques associated with the conduct of manual demolition processes
- types, characteristics, uses and limitations of tools and equipment involved in the conduct of manual demolition processes
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, given a site demolition plan and instructions, remove fixtures and fittings, a pitched metal/tiled roof, trusses, ceiling, external and internal walls, floor and floor support system of a two storey house and clean up, disposing or salvaging materials, ensuring:
  - correct identification of requirement and conduct of the demolition
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements.
EVIDENCE GUIDE

and environmental constraints.
Assessment of essential underpinning knowledge will usually be conducted in an off-site context.
Assessment is to comply with relevant regulatory or Australian standards’ requirements.
Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.
Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment
Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
EVIDENCE GUIDE

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions,
RANGE STATEMENT

where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to conduct of manual demolition processes
- relevant Australian standards
- safe work procedures relating to conduct of manual demolition processes
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including asbestos, lead-based paints, dust, pesticide residue, animal residue and the safe handling or quarantining procedures for each
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
RANGE STATEMENT

- traffic control
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment:

- include:
  - angle grinders
  - barricades
  - bars (crow and pinch)
  - bolt cutters
  - brooms
  - chisels
  - compressors
  - concrete saws
  - electric testers
  - elevated work platforms
  - hacksaws
  - hammers
  - handsaws
  - picks and mattocks
  - pliers
  - pneumatic tools
  - power drills and saws
  - quick cut saws
  - safety and fall prevention equipment
  - scaffolds
  - shovels and spades
  - signs
  - sledge hammers
  - spanners and wrenches
  - water hoses and attachments
  - wheelbarrows.

Environmental requirements

- clean-up management
RANGE STATEMENT

include:
- dust and noise
- sedimentation control
- vibration
- waste management.

Site demolition plan:
- documents the demolition process and safe work practices.

Manual demolition processes include:
- dismantling or demolishing and removing materials and component parts of a building using only hand tools and small plant and equipment.

Demolition tasks may be performed:
- at ground level
- at height
- in a confined space
- on a new construction site or an existing structure being renovated or extended which involves the complete or partial removal of components
- over water
- under water
- underground.

Audit and preparation of work areas include:
- assessment of condition of property and surrounds
- communication with those who may be affected by demolition task
- erection of scaffolding
- identification of hazardous materials
- identification of positions of hoses and cables clear of hazards
- installation of supports and bracing
- location of signage and barricades
- provision for site safety.

Services include:
- computer and communication
- electricity
- gas
- telephone
- water.

Building components include:
- concrete and masonry areas:
  - edge strips
  - pads
  - paths
  - retaining walls and fences
RANGE STATEMENT

- slabs
- external sections of buildings:
  - attached structures, carports and sheds
  - non-load bearing walls
  - patios and decks
- fixtures and fittings
- internal sections of buildings:
  - built-in components
  - ceilings
  - cladding
  - flooring
  - load bearing and non-load bearing partition walling
  - wet area components.

Functional area

Functional area
CPCCDE3014A Remove non-friable asbestos

Modification History
New to CPC08
Replaces unit CPCCDE3012A Encapsulate and remove asbestos
Not equivalent

Unit Descriptor
This unit of competency specifies the outcomes required to remove non-friable asbestos containing material (ACM). The unit includes preparing, containing and removing non-friable ACM, and includes knowledge of decontamination and disposal requirements.

Application of the Unit
Site location for work may be either domestic or commercial, and may be a demolition site, a new work site or an existing structure being renovated, extended, restored or maintained. Project sites may be construction sites and may also include ships, soils in relation to the non-friable asbestos removal process, and fences.

Licensing/Regulatory Information
Occupational licenses are required nationally.
Work must be completed according to relevant legislative, industry, customer and organisational requirements, including work health and safety (WHS) policies and procedures.
Regulatory mechanisms apply to this unit. This unit is required for all ACM removal workers engaged in the removal of non-friable ACM. Candidates are advised to check for regulatory requirements.

Pre-Requisites
CPCCOHS1001A Work safely in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria

1. Prepare for asbestos removal.
   1.1 Work instructions and asbestos removal control plan (ARCP) are obtained and confirmed for preparation purposes.
   1.2 Safety requirements and data gathered from an on-site assessment, an asbestos register where available, and other information sources are used to prepare for a safe and compliant removal process.
   1.3 Tools, equipment and personal protective equipment (PPE) consistent with job requirements are selected to carry out tasks and checked for serviceability; and faults are rectified or reported prior to commencement.
   1.4 ARCP is accessed according to legislative and company requirements, and understood.

2. Prepare asbestos removal area and removal site.
   2.1 Non-friable asbestos containing materials to be removed are identified, referring to the asbestos register or following clarification by an approved competent person as required and according to workplace procedures.
   2.2 Signage and barricade requirements are identified and implemented to delineate the work area.
   2.3 Decontamination procedure is tested according to workplace procedures.
   2.4 Materials and equipment required for removal of ACM from project sites are identified, checked and prepared for operation.
   2.5 Processes are undertaken to ensure the safety of the site, including deactivating or securing utilities where
necessary prior to commencing work.

<table>

</tbody>
</table>
6 Clean up work site.

6.1 Work area is cleared and materials disposed of according to legislation, regulations, codes of practice and job specification.

6.2 Plant, tools and equipment are cleaned, decontaminated, checked, maintained, removed from the work area, and stored according to manufacturer recommendations and regulatory requirements.

7 Contribute to and use documentation in line with regulatory requirements.

7.1 Contribution is made within limits of own responsibility to the preparation and use of documentation for regulatory notification processes according to legislative and company requirements.

7.2 Steps are taken within limits of own responsibility to ensure clearance inspection requirements are met and clearance certificate is gained from a competent person or licensed asbestos assessor.

7.3 Contribution is made within limits of own responsibility to the preparation and use of an emergency plan according to legislative and company requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication and appropriate level of language skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and apply:
    - documentation from a variety of sources
    - drawings and specifications
  - use language and concepts appropriate to cultural differences
- initiative and enterprise skills to:
  - evaluate own actions and make judgements about performance and necessary improvements
  - identify and report faults in tools, equipment and materials to appropriate personnel
- planning and organising skills to:
  - set out work
  - recognise procedures, follow instructions and contribute to workplace responsibilities, such as current environmental and safety systems and the ARCP
- teamwork skills to:
  - coordinate own work with others to action tasks
  - relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- self-management skills to:
  - work independently and in teams to read and interpret relevant documentation and to prepare for non-friable asbestos removal tasks according to the recommended safe work method and ARCP
  - set up the asbestos removal area and removal site according to the safe work method and ARCP
  - check, fit and use PPE, and hand and power tools safely
  - apply general WHS procedures for construction work, including:
    - identifying, avoiding and eliminating electrical hazards
    - working safely at heights and in confined spaces
    - applying safe work practices to the use of tools appropriate to ACM removal
    - handling hazardous materials safely
    - applying safe work methods for the removal of non-friable asbestos
• follow correct cleaning, decontamination and disposal procedures

**Required knowledge**

• range of materials manufactured using asbestos, the type of asbestos used in each material, and the usual applications associated with the material, together with an understanding of:
  • health effects caused by exposure to ACM and requirement for safe handling and removal
  • health impacts on the community and requirement for safe handling and disposal
  • general WHS procedures for construction work as required, including identifying and mitigating risks
  • health hazards associated with friable ACM and circumstances that may change the nature of ACM from non-friable to friable, such as:
    • weathering
    • wear and tear
    • application of tools and equipment
    • accidental damage
  • licensing requirements for the use of specific equipment, such as excavators
  • safe work methods for the removal of non-friable asbestos
  • requirements of current legislation and standards relating to asbestos safety, and the decontamination, transport and disposal of asbestos waste
  • general construction terminology
  • handling requirements of differing types of asbestos materials
  • hazards associated with removal processes
  • work area procedures
  • job safety analysis (JSA) and safe work method statements (SWMS) if required for construction
  • safety data sheets (SDS)
  • materials storage and hazardous waste management
  • method of operation, and cleaning, use and maintenance requirements of equipment
  • plans, drawings and specifications, asbestos registers and register amendments
  • quality requirements relating to the removal of non-friable asbestos
  • risk assessment processes and contingency planning relating to the removal of non-friable asbestos
  • techniques associated with enclosing and removing asbestos
  • types, characteristics, uses and limitations of plant and equipment involved in enclosing and removing asbestos
  • workplace and equipment safety requirements
  • purpose and application of documentation for notification; and use of ARCP and clearance inspections
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, providing that simulated or project-based assessment techniques fully replicate workplace conditions, materials, activities, responsibilities and procedures.</th>
</tr>
</thead>
</table>
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | A person should demonstrate the ability to:  
- obtain and apply work instructions for the safe and correct removal of non-friable asbestos  
- set up the work area and test equipment for use in the removal process of non-friable asbestos  
- isolate the site prior to removal, complying with regulatory requirements  
- remove non-friable asbestos safely and comply with regulatory requirements  
- contain the ACM and ensure its handling and disposal are safe and comply with requirements  
- decontaminate self, work equipment, and the work site safely and correctly  
- complete documentation that supports the removal process within limits of own responsibility. |
| Context of and specific resources for assessment | This unit is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.  
Assessment of essential underpinning knowledge will usually be conducted in an off-site context.  
Assessment is to comply with relevant regulatory or Australian standards’ requirements.  
Resource implications for assessment include:  
- an induction procedure and requirement  
- realistic tasks or simulated tasks covering the mandatory task requirements  
- relevant specifications and work instructions  
- tools and equipment appropriate to applying safe work practices  
- support materials appropriate to activity  
- workplace instructions relating to safe work practices and addressing hazards and emergencies  
- research resources, including industry-related systems |
<table>
<thead>
<tr>
<th>Method of assessment</th>
<th>Assessment methods must:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package</td>
</tr>
<tr>
<td></td>
<td>• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application</td>
</tr>
<tr>
<td></td>
<td>• reinforce the integration of employability skills with workplace tasks and job roles</td>
</tr>
<tr>
<td></td>
<td>• confirm that competency is verified and able to be transferred to other circumstances and environments.</td>
</tr>
</tbody>
</table>

Validity and sufficiency of evidence requires that:

• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Safety requirements will be specified from a range of sources that include: | • asbestos removal control plan  
• company policies and procedures, including:  
  • accessing toilets and other amenities  
  • managing work hours to minimise risk from tiredness  
  • working in heat and avoiding heat stress  
  • JSA  
  • legislation and regulations, including the Code of Practice for the Safe Removal of Asbestos  
  • operating manuals and specifications for materials and equipment  
  • SWMS  
  • asbestos register. |
|---|---|
| Tools and equipment may require separate licensing for use and may include: | • high efficiency particulate air (HEPA) vacuum cleaners to comply with AS3544-1988 and AS4260-1997 as amended from time to time  
• atomiser and water spray bottles (not pressurised)  
• hoses and spray fittings  
• barricades, including tape, para-webbing and fencing  
• bars (crow and pinch)  
• bolt cutters  
• buckets  
• cold chisels  
• excavators  
• hand drills (manual and low-speed only)  
• fire extinguishers  
• hammers  
• hand tools (full kit)  
• ladders conforming to construction regulations  
• scaffolds  
• scrapers  
• shovels and spades  
• staple guns. |
| Personal protective equipment will be specified to the requirements of the job and must include: | • protective clothing, such as:  
  • disposable coveralls with fitted hood and cuffs  
  • safety footwear (pull-on, not lace-up)  
  • protective eyewear |
**Materials may include:**
- approved and branded plastic bags, including heavy-duty polythene bags (200 μm minimum thickness)
- duct tape
- foam infill spray
- acrylic paint to seal ACM
- polyvinyl alcohol (PVA) adhesive as spray to seal ACM
- rags or other material wipes (used once)
- signs
- 200 μm unused (not recycled) plastic sheeting or drop sheet.

**Non-friable asbestos containing materials may include:**
- asbestos cement
- asbestos cement moulded guttering
- asbestos cement sheets
- asbestos tiles
- bitumastic felts and materials
- adhesives and glues
- compressed asbestos cement panels
- floor vinyl covering
- mortar
- resinous backing board
- sealant mastic
- tape.

**Workplace procedures may include:**
- environmental requirements, such as:
  - clean-up management
  - dust and noise management
  - notification to occupants, neighbours and other affected parties
  - sedimentation control
  - vibration management
  - waste management, including the safe disposal of ACM
- quality requirements, such as:
  - internal company quality policy and standards
  - manufacturer specifications
  - relevant regulations, including Australian standards
  - workplace operations and procedures.
| **Project sites** may include: | • residential, commercial, industrial and public buildings  
| | • plant, equipment and fire boards (e.g. friction plant and gaskets)  
| | • demolition sites  
| | • electricity supply authority or work site  
| | • fences  
| | • ships and other forms of transport  
| | • sites for new building development.  
|  
| **Utilities** may include: | • air conditioning  
| | • electricity  
| | • water services.  
|  
| **Requirements to isolate the removal site:** | • will reflect the nature of the site  
| | • must comply with legislative requirements and the ARCP  
| | • may include:  
| | • using barriers  
| | • using signage  
| | • ensuring occupants are aware of the need to stay away from the removal site  
| | • ensuring isolation has occurred by a licensed electrician and that this is documented.  
|  
| **Asbestos is removed** in a manner that complies with legislative and company requirements, and may include: | • wet method (most preferred):  
| | • saturate material by gently spraying with water and surfactant mixture (PVA in water ratio of 5:1)  
| | • remove materials in sections with the minimum amount of cutting and separation and using hand tools as appropriate  
| | • place removed sections in appropriate containers or packaging  
| | • Note: The application of the wet asbestos removal method requires the disconnection of the building’s power supply and use of a temporary power source fitted with earth leakage and residual current device (RCD)  
| | • dry method (least preferred):  
| | • to be used only where conditions prohibit use of the wet spray method, i.e. in the vicinity of electrical conductors  
| | • fully encapsulate the work area with plastic sheeting  
| | • use air respirators appropriate to the job  
| | • ensure removal methods minimise the production of airborne material, for example the use of asbestos vacuum cleaners for shadow vacuuming (Note: domestic vacuum cleaners even fitted with a HEPA filter are unsuitable)  
| | • place removed material immediately in appropriate containers and dampen with sprayed mist.  

**Asbestos is contained** and sealed using a range of techniques, including:

- double-bagging
- using heavy-duty polythene bags (200 μm minimum thickness) labelled with an appropriate warning
- using drums or bins in good condition with well-fitting lids labelled with appropriate warning signage or labels.

**Note:** If too large for a bin or bag, a skip or vehicle tray may be used provided it is double-lined with heavy-duty thick plastic sheeting. When ACMs are loaded on a truck tray, the ACMs must be wetted down and then fully wrapped and sealed with a layer of 200 μm sheeting or bagged. Labelling must occur.

**Decontamination of asbestos removal workers is carried out:**

- using a range of techniques, including:
  - ‘buddy’ vacuuming
  - decontamination unit for large non-friable removals in certain circumstances
  - wet wiping.

**Documentation may include:**

- air-monitoring results, where necessary
- asbestos register
- notification to regulator of asbestos removal work
- clearance certificates
- asbestos removal control plans
- procedures for the WHS management system and the emergency plan
- equipment test reports
- health-monitoring program
- RPE face fits
- competency training certificates.

---

**Unit Sector(s)**

Construction
CPCCDE3015A Remove friable asbestos

Modification History
New to CPC08
Replaces unit CPCCDE3012A Encapsulate and remove asbestos
Not equivalent

Unit Descriptor
This unit of competency specifies the outcomes required to remove friable asbestos containing material (ACM). The unit includes preparing, enclosing and removing friable ACM, and includes knowledge of decontamination and disposal requirements.

Application of the Unit
Site location for work may be either domestic or commercial, and may be a demolition site, a new work site or an existing structure being renovated, extended, restored or maintained. Project sites may be construction sites and may also include ships, soils in relation to the friable asbestos removal process, and fences.

Licensing/Regulatory Information
Occupational licenses are required nationally.
Work must be completed according to relevant legislative, industry, customer and organisational requirements, including work health and safety (WHS) policies and procedures.
Regulatory mechanisms apply to this unit. This unit is required for all ACM removal workers engaged in the removal of friable ACM. Candidates are advised to check for regulatory requirements.

Pre-Requisites
CPCCOHS1001A Work safely in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for asbestos removal.

1.1 Work instructions and asbestos removal control plan (ARCP) are obtained and information is confirmed and applied for preparation purposes.

1.2 Safety requirements and data gathered from an on-site assessment, an asbestos register where available, and other information sources are used to prepare for a safe and compliant removal process.

1.3 Required quantity of materials is calculated according to plans, specifications and quality requirements.

1.4 Environmental requirements are identified for the project according to environmental plans, and regulatory obligations are applied.

1.5 Processes required to meet health surveillance requirements are undertaken and contributions to air monitoring are made in line with level of authority and responsibility.

1.6 Preparation for the removal process is finalised and authorised obtained according to legislative and company requirements and the ARCP.

1.7 Plant, equipment and personal protective equipment (PPE) consistent with job requirements are selected to carry out tasks, checked for serviceability, and faults are rectified or reported prior to commencement.
2 Prepare asbestos removal area and removal site.

2.1 *Friable asbestos containing materials* to be removed are identified, asbestos register is checked, and clarification sought from supervisor as required according to workplace procedures.

2.2 Signage and barricade requirements are identified and implemented to delineate the work area from the site area.

2.3 Decontamination unit is positioned and assembled to manufacturer requirements.

2.4 Services are connected to decontamination unit according to regulatory requirements and codes of practice.

2.5 Decontamination procedure is tested within scope of own responsibility and according to workplace procedures and the ARCP.

2.6 Materials and equipment required for removal of ACM from *project sites* are identified, checked and prepared for operation.

2.7 Processes are undertaken to ensure the safety of the site, including ensuring where necessary that *utilities* are deactivated, contained, diverted or secured prior to commencing work.

2.8 Occupants, neighbours and other affected parties are notified according to legislation and the code of practice and within scope of own responsibility.

3 Enclose removal site.

3.1 *Requirements to enclose the removal site* safely to prevent the further release of fibres are followed according to the ARCP and legislative and company requirements.

3.2 Types of enclosures, impact of the size of the removal on the methodology selected, and types and use of *removal processes* are identified.

3.3 Contribution is made within limits of responsibility to ensure negative air pressure is maintained within the enclosure in line with legislative requirements, and enclosure is inspected and smoke tested for air tightness.
3.4 Notification of proposed asbestos removal is provided to the licensed assessor within required timeframe and limits of own responsibility.

4 Carry out asbestos removal process.

4.1 Asbestos is removed from work site and work area using safe work methods and according to ARCP, regulatory requirements and codes of practice.

4.2 Removed asbestos is contained and placed into double-lined removal bags or bins, sealed, labelled and removed from site according to regulatory requirements and the ARCP.

4.3 Manual-handling principles for bagged and sealed ACM are used wherever possible to prevent breakages of plastic.

5 Carry out decontamination process.

5.1 Decontamination unit is used according to manufacturer and regulatory requirements and codes of practice.

5.2 Decontamination of the work area is carried out according to workplace procedures, ARCP and regulatory requirements.

5.3 Decontamination of asbestos removal workers is carried out according to workplace procedures, ARCP and regulatory requirements.

5.4 Approval to dismantle asbestos removal and decontamination equipment is gained according to regulatory requirements and codes of practice.

5.5 Asbestos removal and decontamination equipment is removed from the area according to the ARCP and regulatory requirements, and following clearance from the licensed asbestos assessor.

6 Clean up work site.

6.1 Work area is cleared and materials disposed of according to legislation, regulations, codes of practice and job specification.

6.2 Plant, tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices.
6.3 Work area is inspected for asbestos dust and debris to ensure compliance prior to a clearance inspection.

7 Contribute to and use documentation in line with regulatory requirements.

7.1 Contribution is made within limits of own responsibility to the preparation and use of documentation for regulatory notification processes, according to legislative and company requirements.

7.2 Steps are taken within limits of own responsibility to ensure clearance inspection requirements are met and clearance certificate is gained.

7.3 Contribution is made within limits of own responsibility to the preparation and use of an emergency plan and according to legislative and company requirements.

7.4 Contribution is made within limits of own responsibility to the preparation and use of a certified safety management systems (SMS) according to legislative and company requirements.
Required Skills and Knowledge
This section describes the skills and knowledge required for this unit.

Required skills
- communication and appropriate level of language skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and apply:
    - documentation from a variety of sources
    - drawings and specifications
  - use language and concepts appropriate to cultural differences
- initiative and enterprise skills to:
  - evaluate own actions and make judgements about performance and necessary improvements
  - identify and report faults in tools, equipment and materials
- planning and organising skills to:
  - plan and set out work
  - recognise procedures, follow instructions and contribute to workplace responsibilities, such as current environmental and safety systems and the ARCP
- teamwork skills to:
  - coordinate own work with others to action tasks
  - relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- self-management skills to:
  - work independently and in teams to read and interpret relevant documentation and to plan friable asbestos removal tasks according to the recommended safe work method
  - set up the asbestos removal area according to the safe work method
  - apply general WHS requirements and construction safety requirements, including applying safe work methods for the removal of friable asbestos
  - follow correct cleaning, decontamination and disposal procedures
  - use, fit and maintain PPE, decontamination equipment, and hand and power tools safely

Required knowledge
- range of materials manufactured using asbestos, the type and characteristics of asbestos used in each material, the usual applications associated with the material
• methods and purpose for assessing hazards relating to friable ACM, together with an understanding of:
  • health effects caused by exposure to ACM and requirement for safe handling and removal
  • health impacts on the community and requirement for safe handling and disposal
  • decontamination techniques
  • general WHS procedures for construction work
  • health hazards associated with friable ACM, such as:
    • weathering
    • wear and tear
    • application of tools and equipment
    • accidental damage
  • licensing requirements for the use of specific equipment, such as excavators
  • hazards associated with using enclosures and removing friable asbestos
  • requirements of current legislation and standards relating to asbestos safety, and the decontamination and disposal of asbestos waste
  • general construction terminology
  • handling requirements of differing types of asbestos materials
  • work site and work area procedures
  • job safety analysis (JSA) and safe work method statements (SWMS) if required for construction
  • safety data sheets (SDS)
  • materials storage and hazardous waste management
  • method of operation, and cleaning, use and maintenance requirements of equipment
  • demolition plant and equipment as applicable to asbestos removal only
  • plans, drawings and specifications, asbestos registers and register amendments
  • quality requirements relating to the removal of friable asbestos
  • risk assessment processes and contingency planning relating to the removal of friable asbestos
  • techniques associated with enclosing and removing asbestos, including:
    • use of large and small-scale enclosures for different sites
    • use of negative pressure exhaust units
    • encapsulation methods prior to removal
  • types, characteristics, uses and limitations of plant and equipment involved in removing asbestos
  • workplace and equipment safety requirements
  • application of the documentation for notification; and use of ARCP, clearance inspections, visual and air-monitoring processes and clearance certificates
  • use of certified WHS management system and emergency plan
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, providing that simulated or project-based assessment techniques fully replicate workplace conditions, materials, activities, responsibilities and procedures.</th>
</tr>
</thead>
</table>
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | A person should demonstrate the ability to:  
  * obtain and apply work instructions for the safe and correct removal of friable asbestos  
  * set up the work area and test equipment for use in the removal process of friable asbestos  
  * isolate the site prior to removal, complying with regulatory requirements  
  * remove friable asbestos safely, complying with regulatory requirements  
  * contain the asbestos containing material and ensure its handling and disposal are safe and comply with requirements  
  * decontaminate self, work equipment and work site safely and correctly  
  * complete documentation that supports the removal process within limits of own responsibility. |

Context of and specific resources for assessment

This unit is to be assessed using standard and authorised work practices, safety requirements and environmental constraints. Assessment of essential underpinning knowledge will usually be conducted in an off-site context. Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:  
  * an induction procedure and requirement  
  * realistic tasks or simulated tasks covering the mandatory task requirements  
  * relevant specifications and work instructions  
  * tools and equipment appropriate to applying safe work practices  
  * support materials appropriate to activity  
  * workplace instructions relating to safe work practices and addressing hazards and emergencies  
  * research resources, including industry-related systems
Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

<table>
<thead>
<tr>
<th>Method of assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Assessment methods must:</td>
</tr>
<tr>
<td>• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package</td>
</tr>
<tr>
<td>• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application</td>
</tr>
<tr>
<td>• reinforce the integration of employability skills with workplace tasks and job roles</td>
</tr>
<tr>
<td>• confirm that competency is verified and able to be transferred to other circumstances and environments.</td>
</tr>
</tbody>
</table>

Validity and sufficiency of evidence requires that:

• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace |
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge |
• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence. |

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>
<tr>
<th>Information to ensure the safe and correct completion of the job may include:</th>
<th>Safety procedures are to be according to state and territory legislation and regulations and project safety plan, and may include:</th>
</tr>
</thead>
</table>
| • ARCP  
• licensed asbestos assessor’s report  
• asbestos register  
• company policies and procedures, including:  
  • accessing toilets and other amenities  
  • managing work hours to minimise risk from tiredness  
  • working in heat and avoiding heat stress  
• operating manuals and specifications for materials and equipment  
• SWMS or JSA for construction as required  
• diagrams or sketches  
• instructions issued by authorised organisational or external personnel  
• manufacturer specifications and instructions, where specified  
• SDS  
• regulatory and legislative requirements for enclosing and removing asbestos  
• relevant Australian standards and codes  
• safe work procedures relating to enclosing and removing asbestos  
• memos, verbal and written instructions, and diagrams  
• work bulletins  
• work schedules, plans and specifications.  
• emergency procedures, including extinguishing fires and evacuation  
• handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability, are a factor  
• hazard control  
• hazardous materials and substances  
• organisational first aid requirements  
• PPE prescribed under legislation, regulations and workplace policies and practices  
• safe operating procedures according to WHS management system, including the conduct of operational risk assessment and treatments associated with: |
- deactivating or securing utilities, including electrical, air conditioning and water services
- earth leakage boxes
- falling objects
- lighting
- plant movement
- power cables, including overhead service trays, cables and conduits
- restricted access barriers
- surrounding structures
- traffic control
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Materials** may include:
- acrylic paint to seal ACM
- approved and branded or labelled plastic bags
- duct tape
- foam infill spray
- gaffer tape
- plastic sheeting
- polyvinyl alcohol (PVA) adhesive as spray / spray tack glue
- rags or other material wipes
- heavy-duty polythene bags (200 μm minimum thickness)
- 200 μm unused (not recycled) plastic sheeting or drop sheet
- signs
- timber frames, nails, aluminium poles and other materials required for enclosures
- glove bag material.

**Quality requirements** may include:
- internal company quality policy and standards
- manufacturer specifications
- relevant regulations, including Australian standards
- workplace operations and procedures.

**Environmental requirements** must fully reflect legislation and the Code of Practice for the
- clean-up management
- dust and noise management
- sedimentation control
- vibration management
<table>
<thead>
<tr>
<th>Safe Removal of Asbestos, including:</th>
<th>waste management, including the safe disposal of asbestos containing materials, including waste water from decontamination unit (DCU).</th>
</tr>
</thead>
</table>
| **Preparation** may include:        | assessing conditions and hazards  
|                                     | determining work requirements, and safety plans and policies  
|                                     | identifying equipment defects  
|                                     | identifying, preparing for enclosing, and removing asbestos from a work site according to an ARCP work site inspection. |
| **Plant and equipment** may require separate licensing for use and may include: | high efficiency particulate air (HEPA) vacuum cleaners to comply with AS3544-1988 and AS4260-1997 as amended from time to time  
|                                     | anchorage points for the enclosure  
|                                     | negative air pressure enclosures or bubbles  
|                                     | enclosure equipment  
|                                     | atomiser and water bottles (not pressurised)  
|                                     | barricades, including barricade tape, para-webbing, hoarding or fencing  
|                                     | bars (crow and pinch)  
|                                     | decontamination unit and remote decontamination unit  
|                                     | decontamination facilities  
|                                     | excavators  
|                                     | hammers  
|                                     | ladders to comply with construction regulations if required  
|                                     | hoses and spray fittings  
|                                     | flame retardant polythene  
|                                     | hardboard / corex  
|                                     | scaffolds  
|                                     | scrapers  
|                                     | shovels and spades  
|                                     | smoke-testing equipment  
|                                     | static lines. |
| **Personal protective equipment** will be specified to the requirements of the job and may include: | protective clothing, such as:  
|                                     | disposable coveralls with fitted hood and cuffs  
|                                     | safety footwear (pull-on, not lace-up)  
|                                     | protective eye wear, such as safety glasses  
|                                     | full body safety harness  
|                                     | disposable protective gloves  
|                                     | correct respiratory protection class P3, full face respirators and airline respirators for negative air enclosures  
|                                     | correct face fitting and use of respiratory protective equipment (RPE)  
|                                     | spare sets of PPE. |
Friable asbestos containing materials are easily crumbled or reduced to powder by hand, and may include:

- asbestos backing on vinyl flooring
- material in degraded condition that has rendered the material friable, including:
  - asbestos cement
  - asbestos cement moulded guttering
  - asbestos cement sheets
  - corrugated asbestos cement roofing sheets in degraded condition
  - asbestos in matrix of sprayed vermiculite
  - low density board
  - sprayed on fireproofing, soundproofing and thermal insulation
  - acoustic plaster soundproofing
  - thermal insulation
  - gaskets that have become friable
  - sealants that have become friable
  - pipe lagging
  - woven textiles, ropes, tapes and braids
  - decorative coatings.

Project sites may include:

- residential, commercial, industrial and public buildings
- plant, equipment and fire boards (e.g. friction plant and gaskets)
- demolition sites
- fences
- ships and other forms of transport
- sites for new building development.

Utilities may include:

- air conditioning
- electricity
- water services.

Requirements to enclose the removal site:

- will reflect the nature of the site and must comply with legislative and company requirements
- may include the use of:
  - negative pressure exhaust units to prevent the escape of asbestos fibres from contained asbestos work areas
  - enclosures for large-scale asbestos removal work, including:
    - design and installation considerations
    - testing of enclosures
    - decontamination
  - mini-enclosures for small-scale asbestos removal work
  - glove bag and wrap and cut removal method
  - decontamination unit
**Removal processes** may include the following methods:

- dry
- wet
- saturation.

**Asbestos is removed from work site** in a manner that complies with legislative and company requirements, and may include:

- wet method, including:
  - saturate material by gently spraying with water and surfactant mixture (PVA in water ratio of 5:1)
  - remove materials in sections with the minimum amount of cutting and separation, using hand tools as appropriate
  - place removed sections in appropriate containers or packaging
- **Note:** The application of the wet asbestos removal method requires the disconnection of the building’s power supply and use of a temporary power source fitted with earth leakage and residual current device (RCD)
- dry method if required due to electrical safety issue
- saturation method.

**Safe work methods** may include:

- compliant set-up of the asbestos work area, including set-up of negative air, lighting, water and emergency supplies
- placing adequate signage around friable asbestos work site
- fire and emergency system requirements
- enclosure of the asbestos removal area and the plant, equipment and fixtures remaining in the area
- testing the asbestos enclosure in the work area
- procedures for entering and leaving the enclosure in the asbestos work area
- safe techniques for removing friable asbestos
- packaging and removing contaminated plant, tools and equipment
- cleaning and decontaminating tools, equipment and the asbestos work area
- decontaminating and demolising the asbestos work site
- final decontamination of personnel
- disposing of asbestos waste.

**Asbestos is contained** and sealed before removing from the work area and work site using a range of techniques, including:

- double-bagging
- using heavy-duty polythene bags (200 μm minimum thickness) labelled with an appropriate warning
- using drums or bins in good condition with well-fitting lids labelled with appropriate warning signs or labels
- mini enclosures, such as glove bag and wrap and cut methods (suitable for friable ACM removal from small areas).
**Notes:**
- For larger-scale disposal, the supplier of a waste removal bin must be informed of the usage to ensure appropriate and legal disposal.
- If too large for a bin or bag, a skip or vehicle tray may be used provided it is double-lined with heavy-duty thick plastic sheeting. When ACMs are loaded on a truck tray the ACMs must be wetted down and then fully wrapped and sealed with a layer of 200 μm sheeting or bagged. Labelling must occur.

**Decontamination of asbestos removal workers is carried out using:**
- ’buddy’ vacuuming
- decontamination unit for large non-friable removals in certain circumstances
- wet wiping.

**Documentation may include:**
- ARCP
- air-monitoring plans for control air monitoring
- air-monitoring results
- asbestos register
- notification of asbestos removal work to the regulator
- clearance certificates
- knowledge of the procedures in the certified SMS
- emergency plan development
- equipment test certificates
- health-monitoring program
- RPE face fits
- competency training certificates.

CPCCDE3016A Identify hazards on demolition sites and apply risk management strategies

Modification History

New unit.
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

Unit Descriptor

This unit of competency specifies the outcomes required to identify hazards common to demolition work, as well as undiscovered hazards that may arise during the course of work on demolition sites; and to assess risks and apply risk management strategies according to compliance and workplace requirements.
Demolition hazards include those relating to:
• demolition work health and safety (WHS)
• public health and safety
• contamination of the environment.

Application of the Unit

This unit of competency supports the induction procedure for specialist demolition workers before beginning work on site. Specialist demolition workers dismantle and demolish public, residential, commercial and industrial buildings and structures of all types, including chemical processing plants, and process the resulting materials for salvage, recycling and waste disposal.
This unit does not replace requirements for completion of construction work health and safety units.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements apply to demolition work in different States and Territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites

CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Review site characteristics and work plans.
   1.1 Issues relating to the age and integrity of buildings and structures, and construction methods and materials used, are identified and applied to review of potential risks.
   1.2 Approved demolition plan and safe work method statements (SWMS) are reviewed and information relating to hazards and risk management strategies is applied to participation in job briefing according to work role requirements.
   1.3 Job roles and responsibilities for people involved in the project are identified and clarified according to workplace procedures.

2 Apply WHS risk management strategies to work activities on demolition sites.
   2.1 **Hazards that may cause trips, falls or falling objects** are identified and risk management strategies applied according to compliance, site and workplace requirements.
   2.2 Hazards relating to **hazardous substances** are identified and risk management strategies applied according to compliance, site and workplace requirements.
   2.3 Hazards relating to **structural composition and integrity of structures** are identified and risk management strategies applied according to compliance, site and workplace requirements.
2.4 Hazards relating to services are identified and risk management strategies applied according to compliance, site and workplace requirements.

2.5 Hazards relating to the use of mobile and static plant, tools and equipment are identified and risk management strategies applied according to compliance, site and workplace requirements.

2.6 Hazards relating to the use of high reach excavators are identified and risk management strategies applied according to compliance, site and workplace requirements.

2.7 Hazards relating to noise, dust and vibrations are identified and risk management strategies applied according to compliance, site and workplace requirements.

2.8 Hazards that may cause fire or explosions are identified and risk management strategies applied according to compliance, site and workplace requirements.

2.9 Work site is monitored during demolition process for signs of undiscovered hazards and risk management strategies are applied according to compliance, site and workplace requirements.

2.10 WHS hazards and incidents are reported according to compliance, site and workplace requirements.

3 Apply public health and safety risk management strategies on demolition sites.

3.1 Site boundaries and exclusion zones are identified and strategies to prevent access by unauthorised persons are implemented according to compliance, site and workplace requirements.

3.2 Site traffic access and egress points and pedestrian and vehicle routes are identified and traffic management plan is applied according to compliance, site and workplace requirements.

3.3 Demolition activities with potential to cause dust, noise and vibrations are identified and risk management strategies are applied according to compliance, site and workplace requirements.

3.4 Demolition activities resulting in falling structures or flying debris or with potential to affect structural
integrity of adjoining buildings are identified and risk management strategies applied according to compliance, site and workplace requirements.

3.5 Public health and safety hazards and incidents are reported according to compliance, site and workplace requirements.

4 Apply environmental risk management strategies on demolition sites.

4.1 Opportunities to maximise environmentally sound use of energy and water are identified and strategies applied according to environmental compliance, site and workplace requirements.

4.2 Potential risks to air quality resulting from demolition work are identified and risk management strategies applied according to environmental compliance, site and workplace requirements.

4.3 Potential risks associated with stormwater management are identified and risk management strategies applied according to environmental compliance, site and workplace requirements.

4.4 Potential risks to groundwater and groundwater monitoring wells are identified and risk management strategies applied according to environmental compliance, site and workplace requirements.

4.5 Potential risks to the environment resulting from removing and handling hazardous substances and waste materials are identified and risk management strategies applied according to environmental compliance, site and workplace requirements.

4.6 Environmental hazards and incidents are reported according to environmental compliance, site and workplace requirements.

5 Contribute to improvement of demolition risk management strategies.

5.1 Demolition methods, procedures and risk management strategies are reviewed and discussed with team members to develop ideas for improvements in risk management according to workplace procedures.

5.2 Industry professional development activities relating to demolition risk management are undertaken as required, according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - evaluate own actions and make judgements about performance and necessary improvements
  - recognise signs indicating undiscovered or unpredicted hazards on a demolition site, for example buried asbestos
  - respond to change, such as differences in work site environmental and sustainability requirements
- numeracy skills to:
  - interpret scales on demolition plans and drawings
  - measure site boundaries and exclusion zones
- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report risks and hazards on the work site, including faults in tools, equipment and materials
  - use language and concepts appropriate to cultural differences
- reading skills to:
  - interpret documentation, including drawings and specifications
  - understand written instructions, procedures and signage
- writing skills to complete simple equipment fault forms

Required knowledge

- demolition methods and procedures
- general construction terminology
- hazards occurring and risk management strategies used on demolition sites
- types of plant, tools and equipment applicable to demolition tasks, and:
  - applications of each tool or piece of equipment
  - maintenance requirements
  - safe methods of operation for different demolition tasks
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace by observation of the identification of hazards on demolition sites and the application of risk management strategies.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- locate, interpret and apply information, standards and specifications relevant to the identification of hazards and application of risk management strategies on demolition sites
- comply with site safety plan and the requirements of WHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures and quality requirements
- communicate and work effectively and safely with others
- follow work instructions, operating procedures and inspection practices to identify hazards and apply risk management strategies on demolition sites.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- must meet relevant compliance requirements.

Resource implications for assessment include:

- realistic tasks covering the mandatory task requirements
- relevant specifications and work instructions
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- information relevant to each task, such as safety data sheets.

Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:

- direct observation of tasks in real work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.
Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Hazards that may cause trips, falls or falling objects** must include:

- equipment failure
- movement of loads
- partial demolition of building elements
- pits
- plant, tools and equipment and associated cables, hoses and lines
- penetrations:
  - floor
  - roof
  - wall
- stacked or stored debris, materials and waste
- structural instability of building
- uncleared rubble and accumulated loads on suspended slabs
- working at heights.

**Hazardous substances** must include:

- asbestos
- flammable or toxic residues in pipework and storage tanks
- lead-based paints
- ozone depleting substances
- polychlorinated biphenyls (PCBs)
- silica.

**Structural composition and integrity of**

- effect of fire on hazardous materials
- fire-damaged structures
structures must include:

- load-bearing ability of structural elements due to build-up of demolition debris
- partially demolished building elements with sharp protrusions
- pre- and post-tensioned concrete structures
- precast components
- ruinous structures
- severely corroded, deteriorated or degraded structures
- special structures
- termite damaged structures.

Services:

- must include:
  - air
  - chemical product (fuel)
  - electricity
  - electrical distribution assets
  - gas
  - hydraulic
  - services specific to manufacturing processes
  - steam
  - telecommunications
  - wastewater
  - water
- may be:
  - overhead
  - underground
  - disconnected
  - live:
    - services adjacent to demolition site
    - services required during demolition process
    - located within structural elements
    - temporary
    - undocumented:
      - extensions
      - relocations.

Hazards that may cause fire or explosions are:

- chemical-containing drums
- dust, including coal, flour, wheat and sugar
- hot work
- flammable residues in pipework and storage tanks
- pressurised containers:
  - fire extinguishers
  - gas cylinders
undiscovered hazards may include but are not limited to:

- hydraulic accumulators
- underground storage tanks.
- asbestos
- biological waste, including animal faeces
- chemicals
- contaminated soils
- process waste
- syringes
- termite damage
- underground storage tanks.

stormwater management may include:

- contamination
- discharge from site
- sediment control.

demolition

custom content section

not applicable.
CPCCDE3017A Select and use hand tools and equipment for demolition tasks

Modification History
New unit.
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

Unit Descriptor
This unit of competency specifies the outcomes required to select and use hand tools and equipment safely and effectively to complete individual demolition tasks.

Application of the Unit
This unit of competency supports demolition workers who perform demolition tasks, such as removing fixtures and fittings, ceilings, walls, floors and floor support systems of all types of buildings using hand tools and equipment.

Licensing/Regulatory Information
Licensing, legislative, regulatory or certification requirements apply to demolition work in different States and Territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare. 1.1 Work instructions are obtained using relevant information, confirmed with colleagues or supervisor, and applied to planning and preparation.

1.2 Work health and safety (WHS) requirements are identified and applied to task planning according to safety plans and policies and work site requirements.

1.3 Environmental requirements are identified and applied according to environmental plans and regulatory obligations.

2 Identify and check tools and equipment.

2.1 Hand tools and equipment to be used in the demolition process are identified and checked for serviceability, and faults are rectified and reported.

2.2 Functions and methods of operation of demolition tools and equipment are identified from specifications, standards and manufacturer instructions.

2.3 Specific WHS requirements for the selected tools and equipment are identified and applied.

3 Complete demolition tasks.

3.1 Work site inspection is conducted and hazards associated with individual demolition tasks are assessed immediately prior to commencing work according to workplace procedures.

3.2 Safe demolition work method is amended if required and confirmed with colleagues or supervisor.
3.3 Work area is prepared for the use of demolition tools and equipment.

3.4 Tools and equipment that meet the requirements of the demolition task are selected.

3.5 Pre-operational checks are completed according to manufacturer recommendations.

3.6 Tools and equipment are used for their intended purpose in demolition tasks according to regulations, standards, codes of practice and workplace requirements.

3.7 Work progress and hazards or issues arising during work tasks are communicated with work team according to workplace requirements.

3.8 Tools and equipment are placed in safe locations when not in immediate use.

4 Clean up.

4.1 Work area is cleared and materials are sorted for reuse or recycling and removed, and waste is disposed of using safe manual handling techniques and according to workplace procedures, regulations, codes of practice, and job specifications.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - evaluate own actions and make judgements about performance and necessary improvements
  - recognise signs indicating undiscovered hazards on a demolition site, for example presence of termites
  - respond to change, such as differences in current work site environmental and sustainability requirements

- numeracy skills to:
  - check levels of lubricants in equipment
  - perform measurements and calculations associated with work, such as when determining specified length of wall to be removed

- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report hazards on the work site, including faults in tools, equipment and materials
  - use language and concepts appropriate to cultural differences

- reading skills to:
  - interpret documentation, including drawings and specifications
  - understand written instructions, procedures and signage

- writing skills to complete pre-operational checklists and simple equipment fault forms

Required knowledge

- general construction terminology
- hazards that may exist or arise on demolition sites, including those associated with the use of demolition tools and equipment
- procedures for:
  - environmentally friendly waste management
  - managing risks and hazards on demolition sites
  - sorting and storing reusable and recyclable materials
- types of information required to plan and prepare for safe and effective completion of demolition tasks
- types of portable power tools, hand tools and equipment applicable to demolition tasks, including:
- applications of each tool or piece of equipment
- maintenance requirements
- safe methods of operation for different demolition tasks

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace by observation of the selection and use of hand tools and equipment and completion of on-site demolition tasks as part of a team.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- complete five on-site demolition tasks safely and effectively, using appropriate combinations of tools and equipment, to perform at least one of each of the following tasks:
  - knocking down structures
  - loading out rubbish
  - pulling apart equipment
  - removing fixtures and fittings
- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and requirements of WHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- communicate and work effectively and safely with others
- follow work instructions, operating procedures and inspection practices to safely and effectively use demolition tools and equipment for their appropriate application, ensuring:
  - there is no damage to tools or equipment
  - work is completed to specification
  - compliance with regulations, standards and organisational quality procedures and processes.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- must meet relevant compliance requirements.
Resource implications for assessment include:

- an induction procedure
- realistic tasks covering the mandatory task requirements
- relevant specifications and work instructions
- hand tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- information relevant to each task, such as safety data sheets.

**Method of assessment**

Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:

- direct observation of tasks in real work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Guidance information for assessment**

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information may include:**

- advice and guidelines relating to regulatory and legislative requirements for using demolition tools and equipment
- current Australian standards relating to using demolition hand tools
tools and equipment
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- job safety analyses (JSA)
- memos
- plans, drawings and specifications
- procedures relating to the use of demolition tools and equipment
- quality requirements
- safe work method statements (SWMS)
- safety data sheets (SDS)
- signage
- verbal, written and graphical instructions, including manufacturer specifications and instructions where specified
- work bulletins
- work schedules, plans and specifications.

Emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures

Manual handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor

Hazard control

Identification of hazardous materials and substances and relevant safe handling or quarantining procedures for each, including:
- animal residue
- asbestos
- dust
- lead
- lead-based paints
- pesticide residue

Personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices

Use of safe operating procedures, including operational risk assessment and treatments associated with:
- equipment tagging
- fall protection
- identification and preparation of access and egress points
- identification of equipment guarding and cut-off switches
- lighting
• power cables, including overhead service trays, cables and conduits
• restricted access barriers
• surrounding structures
• traffic control
• trip hazards
• work site visitors and the public
• working at heights
• working in confined spaces
• working in proximity to others.

**Environmental requirements** may include:

• management of:
  • clean-up
  • dust
  • energy use
  • noise
  • vibration
  • waste
  • water use
  • sedimentation control
  • stormwater quality.

**Hand tools and equipment** may include:

• bars:
  • crow
  • pinch
• bolt cutters
• hacksaws
• hammers
• handsaws
• jack hammers, electric and pneumatic
• picks and mattocks
• pliers
• power drills and saws
• shovels and spades
• sledge hammers
• spanners
• wrenches
• equipment, such as:
  • brooms
  • exhaust fans
  • pallet trolleys
- safety equipment, including:
  - barricades
  - fall prevention
  - PPE
  - scaffolds
  - signs
- props, such as:
  - acrows
  - trishores
- vacuums
- wheelbarrows.

**Hazards associated with individual demolition tasks** may include:
- hazards identified in project demolition plan
- unpredicted hazards uncovered as a result of prior work completed on site, such as:
  - buried asbestos waste
  - fire damage
  - termite damage
  - undocumented new or relocated services, including electrical wiring.

**Demolition tasks:**
- must include:
  - knocking down structures
  - loading out rubbish
  - dismantling equipment
  - removing fixtures and fittings
- may be performed:
  - at ground level
  - at heights
  - in confined spaces
  - on new construction sites
  - on existing structures being removed, renovated or extended, which involves the complete or partial removal of components
  - over water
  - under water
  - underground.

**Pre-operational checks** may include:
- hydraulic fluid
- levels of lubricants
- water.

**Communication with work team** may include:
- non-verbal communication, including immediate stop work flags or notices in the case of uncovered hazards that must be
re-assessed
  • verbal communication
  • use of technological equipment.

Unit Sector(s)
Demolition

Custom Content Section
Not applicable.
CPCCDE3018A Select and use small plant and equipment for demolition tasks

Modification History

New unit.
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

Unit Descriptor

This unit of competency specifies the outcomes required to select and use small plant and equipment safely and effectively to complete individual demolition tasks, such as breaking concrete, stripping out interior of buildings, pulling down walls and separating waste for recycling.

Application of the Unit

This unit of competency supports demolition workers who perform demolition tasks, such as removing fixtures and fittings, ceilings, walls, floors and floor support systems of all types of buildings, using small plant and equipment.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements apply to demolition work in different States and Territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites

CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare.  
1.1 Work instructions are obtained using relevant information, confirmed with colleagues or supervisor, and applied to planning and preparation.

1.2 Work health and safety (WHS) requirements are identified and applied to task planning according to safety plans and policies and work site requirements.

1.3 Environmental requirements are identified and applied according to environmental plans and regulatory obligations.

2 Identify and check small plant and equipment.  
2.1 Small plant and equipment to be used in the demolition process are identified and checked for serviceability, and faults are rectified and reported.

2.2 Functions and methods of operation of demolition small plant and equipment are identified from specifications, standards and manufacturer instructions.

2.3 Specific WHS requirements for the selected small plant and equipment are identified and applied.

3 Complete demolition tasks.  
3.1 Confirmation is obtained from supervisor and regulatory authorities that existing services have been disconnected.

3.2 Work site inspection is conducted and hazards associated with individual demolition tasks are assessed immediately prior to commencing work according to workplace procedures.
3.3 Safe demolition work method is amended if required and confirmed with colleagues or supervisor.

3.4 *Work area is prepared* for the use of demolition small plant and equipment.

3.5 Small plant and equipment that meet the requirements of the *demolition task* are selected.

3.6 *Pre-operational checks* are completed according to manufacturer recommendations.

3.7 Small plant and equipment are used for their intended purpose in demolition tasks according to regulations, standards, codes of practice and workplace requirements.

3.8 Work progress and hazards or issues arising during work tasks are *communicated with work team* according to workplace requirements.

3.9 Small plant and equipment are placed in safe locations when not in immediate use.

4 Clean up.

4.1 Work area is cleared and materials are sorted for reuse or recycling and removed, and waste is disposed of using safe manual handling techniques and according to workplace procedures, regulations, codes of practice and job specifications.

4.2 Small plant and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - recognise signs indicating undiscovered hazards on a demolition site, for example presence of termites
  - respond to change, such as differences in current work site environmental and sustainability requirements

- numeracy skills to:
  - check levels of lubricants in equipment
  - perform measurements and calculations associated with work, such as when determining specified length of wall to be removed

- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report hazards on the work site to appropriate personnel, including faults in small plant, equipment or materials
  - use language and concepts appropriate to cultural differences

- reading skills to:
  - interpret documentation, including drawings and specifications
  - understand written instructions, procedures and signage

- writing skills to complete pre-operational checklists and simple equipment fault forms

Required knowledge

- general construction terminology
- hazards that may exist or arise on demolition sites, including those associated with the use of demolition small plant and equipment
- procedures for:
  - environmentally friendly waste management
  - managing risks and hazards on demolition sites
  - sorting and storing reusable and recyclable materials
- types of information required to plan and prepare for safe and effective completion of demolition tasks
- types of small plant and equipment applicable to demolition tasks, including:
  - applications of each type of small plant or piece of equipment
  - maintenance requirements
• safe methods of operation for different demolition tasks
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace by observation of the selection and use of small plant and equipment, and completion of on-site demolition tasks as part of a team.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- complete five different types of on-site demolition tasks safely and effectively, using appropriate combinations of small plant and equipment, to perform at least one of each of the following tasks:
  - breaking concrete
  - dismantling warehouse purlins and wall or roof sheeting
  - loading trucks
  - pulling down walls
  - removing wall and floor toppings
  - separating waste for recycling
  - stripping out interiors of buildings
- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and requirements of WHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- communicate and work effectively and safely with others
- follow work instructions, operating procedures and inspection practices to safely and effectively use demolition tools and equipment for their appropriate application, ensuring:
  - there is no damage to small plant or equipment
  - work is completed to specification
  - compliance with regulations, standards and organisational quality procedures and processes.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks covering the mandatory task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• information relevant to each task, such as safety data sheets.

Method of assessment
Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:

• direct observation of tasks in real work conditions
• questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment
This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information may include:**

• advice and guidelines relating to regulatory and legislative requirements for using demolition tools and equipment
• current Australian standards relating to using small plant and equipment for demolition tasks
• diagrams or sketches
• instructions issued by authorised organisational or external personnel
• job safety analyses (JSA)
• memos
• plans, drawings and specifications
• procedures relating to the use of demolition plant and equipment
• quality requirements relating to the use of demolition tools and equipment
• safe work method statements (SWMS)
• safety data sheets (SDS)
• signage
• verbal, written and graphical instructions, including manufacturer specifications and instructions where specified
• work bulletins
• work schedules, plans and specifications.
• emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
• manual handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
• hazard control
• identification of hazardous materials and substances and relevant safe handling or quarantining procedures for each, including:
  • animal residue
  • asbestos
  • dust
  • lead
  • lead-based paints
  • pesticide residue
• personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
• use of safe operating procedures, including operational risk assessment and treatments associated with:
  • equipment tagging
  • fall protection
  • identification and preparation of access and egress points
  • identification of equipment guarding and cut-off switches
  • lighting
  • power cables, including overhead service trays, cables and conduits
  • restricted access barriers
surrounding structures
traffic control
trip hazards
work site visitors and the public
working at heights
working in confined spaces
working in proximity to others.

**Environmental requirements** may include:

- management of:
  - clean-up
  - dust
  - energy use
  - noise
  - vibration
  - waste
  - water use
  - sedimentation control
  - stormwater quality.

**Small plant and equipment** may include:

- small plant, such as:
  - air compressors
  - elevated work platforms (EWPs)
  - forklifts
  - generators
  - jackhammers
  - material and personnel hoists
  - mini-loaders
  - pumps
  - rubber-tyred loaders

- equipment, such as:
  - brooms
  - safety equipment, including:
    - barricades
    - fall prevention
    - PPE
    - scaffolds
    - signs
  - pallet trolleys
  - wheelbarrows.

**Hazards associated with individual demolition**

- hazards identified in project demolition plan
- unpredicted hazards uncovered as a result of prior work completed on site, such as:
tasks may include:

- buried asbestos waste
- fire damage
- termite damage
- undocumented new or relocated services, including electrical wiring.

*Preparation of work areas* may include:

- communicating with those who may be affected by the demolition task
- erecting scaffolding and dust protection
- identifying positions of hoses and cables clear of hazards
- installing supports and bracing
- location of signage and barricades
- provision for site safety.

*Demolition tasks*: must include:

- breaking concrete
- dismantling warehouse purlins and wall or roof sheeting
- loading trucks
- pulling down walls
- removing wall and floor toppings
- separating waste for recycling
- stripping out interiors of buildings

- may be performed:
  - at ground level
  - at heights
  - in confined spaces
  - on new construction sites
  - on existing structures being removed, renovated or extended, which involves the complete or partial removal of components
  - over water
  - under water
  - underground.

*Pre-operational checks* may include:

- hydraulic fluid
- levels of lubricants
- water.

*Communication with work team* may include:

- non-verbal communication, including immediate stop work flags or notices in the case of uncovered hazards that must be re-assessed
- verbal communication
- use of technological equipment.

Custom Content Section
Not applicable.
CPCCDE3019A Demolish small buildings and structures using hand tools and small plant and equipment

Modification History
New unit.
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

Unit Descriptor
This unit of competency specifies the outcomes required to select and use hand tools, small plant and equipment safely and effectively to demolish small buildings and structures. Manual demolition processes include dismantling or demolishing and removing materials and component parts of a building or structure using only hand tools, small plant and equipment.

Application of the Unit
This unit of competency supports demolition workers who remove fixtures and fittings, roofs, trusses, ceilings, external and internal walls, floors and floor support systems of small buildings and structures and sort materials for reuse and recycling.
Small buildings and structures include two-storey houses, small shops, factories, workshops and warehouses.

Licensing/Regulatory Information
Licensing, legislative, regulatory or certification requirements apply to demolition work in different States and Territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare.
   1.1 Work instructions are obtained using relevant *information*, confirmed and applied to planning and preparation.

   1.2 *Work health and safety (WHS) requirements* are identified and applied to task planning according to safety plans and policies.

   1.3 *Hand tools, small plant and equipment* are selected to carry out tasks consistent with job requirements, checked for serviceability, and faults are rectified and reported before work begins.

   1.4 *Environmental requirements* are identified for the project according to environmental plans and regulatory obligations.

2 Prepare demolition site.
   2.1 *Demolition tasks* are confirmed and requirements of site demolition plan determined according to workplace procedures.

   2.2 *Site inspection* is conducted to determine condition of work site and surrounds before work begins.

   2.3 Confirmation is obtained from supervisor and regulatory authorities that relevant *services* have been disconnected and services that will remain live on the demolition site are identified.

   2.4 Hazardous material is identified for separate handling according to workplace requirements and instructions.
2.5 Requirements for safe work at heights including fall protection devices are installed according to workplace requirements.

2.6 Small plant and equipment are positioned in operating locations, and appropriate exclusion zone and traffic control are arranged.

2.7 Site is protected and secured according to compliance requirements and unauthorised access is prevented.

3 Dismantle or demolish building components.

3.1 **Building components** are dismantled or demolished and removed in a directed sequence according to site demolition plan and safe work method statements.

3.2 Selected types of small plant are operated according to manufacturer specifications, standards and workplace procedures to carry out demolition of building components.

3.3 **Communication** is maintained with team members, during the demolition process.

3.4 Work site conditions and progress are monitored in consultation with team members and work is stopped or techniques adjusted as required, according to workplace requirements.

4 Sort and store demolition materials and waste.

4.1 Removed components are relocated to storage or disposal area according to workplace requirements.

4.2 Materials and building component parts are safely and effectively handled using selected material handling techniques.

4.3 Materials and components identified for salvaging are handled, stored and stacked ready for transport according to standard material handling practices and workplace procedures.

4.4 Removed components are relocated to storage or disposal area according to workplace requirements.
5 Clean up.  

5.1 Work area is cleared and materials disposed of, reused or recycled according to workplace requirements, regulations, codes of practice and job specification.

5.2 Plant, tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - recognise signs indicating undiscovered hazards on a demolition site, for example termite activity
  - respond to change, such as differences in current work site environmental and sustainability requirements

- numeracy skills to:
  - check levels of lubricants in equipment
  - estimate weights of volumes of demolition debris and recyclable materials
  - perform measurements and calculations associated with work, such as when determining specified length of wall to be removed

- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report hazards on the work site, including faults in tools, equipment and materials
  - use language and concepts appropriate to cultural differences

- reading skills to:
  - interpret documentation relating to work requirements, including:
    - drawings and specifications
    - job safety analyses (JSA)
    - safe work method statements (SWMS)
    - safety data sheets (SDS)
  - understand written instructions, procedures and signage
  - writing skills to complete pre-operational checklists and equipment fault forms

Required knowledge

- general construction terminology
- hazards associated with demolition tasks
- demolition processes and techniques for small structures
- procedures for material storage and environmentally friendly waste management
- types of small plant, tools and equipment used in the demolition of small buildings, including:
  - applications
  - characteristics
limitations
- maintenance requirements
- methods of operation
- quality requirements relating to the demolition of small structures
- workplace and equipment safety requirements that apply to the demolition of small buildings and structures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by observing the demolition of a small building or structure, using hand tools, small plant and equipment.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- as a minimum, given a site demolition plan and instructions, remove fixtures and fittings, a pitched metal/tiled roof, trusses, ceiling, external and internal walls, floor and floor support system of a two-storey house; and clean up, disposing or salvaging materials, ensuring:
  - correct identification of job requirements and conduct of the demolition process
  - correct selection and use of appropriate processes, tools and equipment
  - completion of work to specification
  - safe and effective operation and use of tools, plant and equipment
  - communication and safe work with others
  - compliance with regulations, standards and organisational quality procedures and processes, including:
    - location, interpretation and application of relevant information, standards and specifications
    - compliance with site safety plan and WHS legislation, regulations and codes of practice applicable to workplace operations
    - compliance with organisational policies and procedures, including quality requirements.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks covering the mandatory task requirements
- relevant specifications and work instructions
- small plant, tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• research resources, including industry-related systems information
• safety data sheets (SDS).

Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, a combination of the following methods:

• direct observation of tasks
• questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

*Information may include:*

• advice and guidelines relating to regulatory and legislative requirements for manual demolition processes, including statutory permits
• current Australian standards relating to demolishing small buildings and structures
• diagrams or sketches, including identification of load bearing and non-load bearing elements
• instructions issued by authorised organisational or external personnel
• memos
• safe work procedures relating to manual demolition processes, including identification of suspended elements that may require propping
• safety data sheets
• site demolition plan, including provisions for minimising disruption to the public
• signage
• verbal, written and graphical instructions, including manufacturer specifications and instructions where specified
• work bulletins
• work schedules, plans and specifications.
• emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
• handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
• hazard control
• hazardous materials and substances, including asbestos, lead-based paints, dust, pesticide residue, animal residue and the safe handling or quarantining procedures for each
• personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
• safe operating procedures, including operational risk assessment and treatments associated with:
  • lighting
  • power cables, including overhead service trays, cables and conduits
  • restricted access barriers
  • surrounding structures
  • traffic control
  • trip hazards
  • work site visitors and the public
  • working at heights
  • working in confined spaces
  • working in proximity to others
  • use of firefighting equipment
  • use of appropriate hot work methods and procedures
  • use of tools and equipment
  • workplace environmental requirements and safety.

Work health and safety requirements must comply with state and territory legislation and regulations and project safety plan and may include:

Hand tools, small plant and equipment may

• bars:
include:

- crow
- pinch
- bolt cutters
- hacksaws
- hammers
- handsaws
- picks and mattocks
- pliers
- power drills and saws
- shovels and spades
- sledge hammers
- spanners
- wrenches
- small plant, such as:
  - compressors
  - elevated work platforms (EWPs)
  - generators
  - jackhammers
  - material and personnel hoists
  - mini-loaders
  - mulchers
  - pedestrian trenchers
  - pumps
- equipment, such as:
  - brooms
  - safety equipment, including:
    - barricades
    - fall prevention
    - PPE
    - scaffolds
    - signs
  - pallet trolleys
  - wheelbarrows.

**Environmental requirements** may include:

- clean-up management
- dust and noise control
- sedimentation control
- vibration management
- waste management.

**Demolition tasks** may be

- at ground level
- at height
performed:
- in a confined space with relevant permits and controls in place
- on a new construction site or an existing structure being renovated or extended, which involves the complete or partial removal of components
- over water
- under water
- underground.

**Site inspection** may include:
- assessing condition of property and surrounds
- checking:
  - erection of scaffolding
  - installation of supports and bracing
  - location of signage and barricades
  - provision of site amenities
  - site safety management plan
  - communicating with those who may be affected by demolition task
  - identifying hazardous materials
  - identifying positions of hoses and cables clear of hazards.

**Services**:
- must include:
  - air
  - chemical product (fuel)
  - computer and communication
  - electricity
  - electrical distribution assets
  - gas
  - hydraulic
  - services specific to manufacturing processes
  - steam
  - telecommunications
  - wastewater
  - water
- may be:
  - overhead
  - underground
  - disconnected
  - live:
    - services adjacent to demolition site
    - services required during demolition process
    - located within structural elements
    - temporary
Building components may include:

- undocumented:
  - extensions
  - relocations.

- concrete and masonry areas:
  - edge strips
  - pads
  - paths
  - retaining walls and fences
  - slabs

- external sections of buildings:
  - attached structures, carports and sheds
  - non-load bearing walls
  - patios and decks
  - fixtures and fittings

- internal sections of buildings:
  - built-in components
  - ceilings
  - cladding
  - flooring
  - load bearing and non-load bearing partition walling
  - wet area components.

Communication may include the use of:

- hand signals
- mobile equipment
- radios.

Unit Sector(s)

Demolition

Custom Content Section

Not applicable.
CPCCDE3020A Select and use tools and equipment for hot work in the demolition industry

Modification History

New unit.
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

Unit Descriptor

This unit of competency specifies the outcomes required to cut materials using cutting processes that create a heat source that could cause an ignition. The unit covers the safe operation and maintenance of tools and equipment for hazardous demolition hot work.

Application of the Unit

This unit of competency supports demolition workers who perform demolition tasks, such as cutting concrete, steel and timber.

Licensing/Regulatory Information

Hot work permits and licences for the operation of specialised hot-work equipment are required in different States and Territories. In addition, licensing, legislative, regulatory or certification requirements apply to demolition work in different States and Territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites

CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare.

1.1 Work instructions are obtained using relevant information, confirmed with colleagues or supervisor, and applied to planning and preparation.

1.2 Site work health and safety (WHS) requirements are identified and applied to task planning according to safety plans and policies and work site requirements.

1.3 Work site inspection is conducted and hazards associated with individual demolition hot work tasks are assessed immediately prior to commencing work according to workplace procedures.

1.4 Environmental requirements are identified and applied according to environmental plans and regulatory obligations.

1.5 Permits for hot work and licences for specialised equipment are obtained or checked before starting work.

2 Select tools and equipment and prepare for use.

2.1 Tools and equipment are selected for different hot work tasks according to manufacturer recommendations and workplace requirements.

2.2 Pre-operational checks and maintenance requirements are completed according to manufacturer recommendations, and faults are rectified and reported.

2.3 Safe methods of operation of tools and equipment for hot work are identified from manufacturer instructions and workplace requirements.
2.4 Specific WHS requirements for the selected tools and equipment for hot work are identified and applied.

3 Complete cutting, grinding and hot work.

3.1 Confirmation is obtained from supervisor and regulatory authorities that existing services have been disconnected.

3.2 Safe demolition work method statement is amended if required and confirmed with colleagues or supervisor.

3.3 *Work area is prepared* for hot work according to site safety and workplace requirements.

3.4 Tools and equipment are used for their intended purpose in hot work demolition tasks according to regulations, standards, codes of practice and workplace requirements.

3.5 Work progress and hazards or issues arising during work tasks are *communicated with work team* according to workplace requirements.

3.6 Tools and equipment are placed in safe locations when not in immediate use.

4 Clean up.

4.1 Work area is cleared and materials are sorted for reuse or recycling, and removed or waste disposed of, using safe manual handling techniques and according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - recognise signs indicating undiscovered hazards on a demolition site, for example presence of residual fuel
  - respond to change, such as differences in current work site environmental and sustainability requirements

- numeracy skills to:
  - check levels of lubricants in tools
  - perform measurements and calculations associated with work, such as when determining specified length of wall to be removed

- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report hazards on the work site, including faults in tools and equipment or materials
  - use language and concepts appropriate to cultural differences

- reading skills to:
  - interpret documentation, including drawings and specifications
  - understand written instructions, procedures and signage

- writing skills to complete pre-operational checklists and simple equipment fault forms

Required knowledge

- general construction terminology
- hazards that may exist or arise on demolition sites, especially those associated with hot work, such as:
  - build-up of combustible materials
  - chemical compounds
  - drums
  - dust
  - gas
  - residual fuels, for example in pipework to be cut
  - sparks
  - storage tanks
- procedures for:
• environmentally sound waste management
• managing risks and hazards on demolition sites
• sorting and storing reusable and recyclable materials
• types of information required to plan and prepare for safe and effective completion of demolition tasks
• types of tools and equipment used for cutting, grinding and hot work in the demolition industry, including:
  • applications of each type of tool or piece of equipment
  • maintenance requirements
  • safe methods of operation for different cutting, grinding or hot work tasks
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment
This unit of competency could be assessed in the workplace by observation of the selection and use of hot work tools and equipment, and completion of on-site demolition tasks as part of a team.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
A person should demonstrate the ability to:
- set up and use cutting equipment, such as oxy-fuel gas cutting equipment, to cut through a metal structural element
- set and use a demolition saw to cut through a structural element
- use an LEL unit to identify lower explosive level at two sites
- locate, interpret and apply relevant information, standards and specifications relating to hot work
- comply with site safety plan and requirements of WHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- communicate and work effectively and safely with others
- follow work instructions, operating procedures and inspection practices to safely and effectively use demolition hot work tools and equipment for their appropriate application, ensuring:
  - there is no damage to tools and equipment
  - work is completed to specification
  - compliance with regulations, standards and organisational quality procedures and processes.

Context of and specific resources for assessment
Assessment of this unit:
- must be in the context of the work environment
- must meet relevant compliance requirements.

Resource implications for assessment include:
- an induction procedure
- realistic tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment as listed appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and
addressing hazards and emergencies
- information relevant to each task, such as safety data sheets.

**Method of assessment**

Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:
- direct observation of tasks in real work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Guidance information for assessment**

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information may include:**
- advice and guidelines relating to regulatory and legislative requirements for using demolition tools and equipment
- current Australian standards relating to hot work in the demolition industry
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- job safety analyses (JSA)
- manufacturer specifications and instructions, where specified including advice for the:
  - safe handling of cylinders
- safe maintenance of equipment
- safe use of oxy/fuel gas cutting equipment
- memos
- plans, drawings and specifications
- and procedures relating to the use of demolition hot work tools and equipment
- quality requirements
- safe work method statements (SWMS)
- safety data sheets (SDS)
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Work health and safety requirements must comply with state or territory legislation and regulations and demolition project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
- fire watch during hot work procedures, including post-activity fire watch
- handling of pressurised cylinders
- hazard identification and control, for such things as presence of residual fuels, and selection of alternative methods to hot work
- hot work permits
- manual handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- selection and use of monitoring equipment, such as lower explosive level (LEL) meter
- use of safe operating procedures, including operational risk assessment and treatments associated with:
  - cutting, grinding and hot work
  - equipment tagging
  - fall protection
  - identification and preparation of access and egress points
  - identification of equipment guarding and cut-off switches
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
• traffic control
• trip hazards
• work site visitors and the public
• working at heights
• working in confined spaces
• working in proximity to others.

Hazards associated with individual demolition hot work tasks may include:
• hazards identified in project demolition plan
• unpredicted hazards uncovered as a result of prior work completed on site, such as:
  • chemical waste
  • lead coating
  • underground fuel tanks.

Environmental requirements may include:
• management of:
  • clean-up
  • dust
  • energy use
  • noise
  • vibration
  • waste
  • water use
  • sedimentation control
  • stormwater quality.

Tools and equipment must include:
• arc gouging equipment
• angle grinders
• demolition saws:
  • concrete
  • steel
• chain saws, including diamond chainsaws
• gas cutting equipment
• grinding discs
• oxy-fuel gas cutting equipment
• plasma cutting equipment
• quick cut saws
• thermal lancing equipment
• safety equipment, including:
  • barricades
  • fall prevention
  • PPE
  • scaffolds
  • signs
CPCCDE3020A Select and use tools and equipment for hot work in the demolition industry  Date this document was generated: 2 May 2017

- tools and equipment: electric, hydraulic or pneumatic.
- concrete cutting
- oxy-cutting and removal of structural steel
- oxy-cutting of reinforcement
- saw cutting of timber-framed buildings
- steel cutting.

**Hot work tasks** may include:

**Preparation of work areas** may include:
- communicating with those who may be affected by the demolition task
- erecting scaffolding and dust protection
- identifying positions of hoses and cables clear of hazards
- installing supports and bracing
- location of signage and barricades
- providing for site safety.

**Communication with work team** may include:
- non-verbal communication, including immediate stop work flags or notices in the case of uncovered hazards that must be re-assessed
- verbal communication
- use of technological equipment.

CPCCDE3021A Operate demolition material crushing plants

Modification History
New unit, based on CPCCDE3013A.
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.
Not equivalent unit CPCCDE3013A Operate a crushing plant.

Unit Descriptor
This unit of competency specifies the outcomes required to operate a stationary or mobile crushing plant to produce crushed demolition materials in a range of sizes. It includes the preparation, inspection, maintenance, operation and shut-down of a crushing plant. It may include working with others and as a member of a team.

Application of the Unit
This unit of competency supports those who operate a crushing plant in the demolition industry.

Licensing/Regulatory Information
Licensing, legislative, regulatory or certification requirements apply to demolition work in different States and Territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria  Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare.  1.1 Compliance requirements relevant to crushing and screening plant operations are accessed and applied.

1.2 Work requirements are obtained using relevant information, confirmed and applied to planning and preparation.

1.3 Work health and safety (WHS) requirements are followed according to safety plans and policies.

1.4 Plant and equipment are selected to carry out tasks that are consistent with job requirements and checked for serviceability, and faults are rectified and reported before work begins.

1.5 Environmental requirements are identified for the project according to environmental plans and regulatory obligations.

1.6 Crushing plant pre-start, start-up, run and shut-down procedures are conducted to ensure correct operational condition according to manufacturer requirements, and faults are identified and corrected or reported to supervisor.

1.7 Work area and equipment are prepared and sequence of tasks is planned in coordination with relevant personnel.
2 Operate crushing plant.

2.1 *Operating technique* is selected and modified to meet *changing work conditions* according to workplace and environmental requirements and manufacturer recommendations.

2.2 Uncrushed *materials* are directed into hopper, and feed of uncrushed materials is maintained according to manufacturer instructions.

2.3 Operations are monitored, conducted and controlled within the equipment limitations and while *communicating* with relevant personnel, to maintain crushing and screening efficiency and effectiveness.

2.4 Crushing plant is stopped, cleared of blocked materials and restarted as required, according to manufacturer instructions and site safety plan.

2.5 Crushing plant settings are maintained according to manufacturer instructions.

2.6 Work is completed according to requirements and within the operating capacity of the allocated equipment.

3 Carry out post-operational procedures.

3.1 Plant and equipment are inspected and faults are reported according to workplace and manufacturer requirements.

3.2 *Operational maintenance, servicing, lubricating and housekeeping tasks* are conducted according to manufacturer requirements.

3.3 Operational records and reports are maintained and processed according to workplace requirements.

3.4 Crushing plant is shut down according to manufacturer instructions and site safety and operation plan.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - evaluate own actions and make judgements about performance and necessary improvements
  - respond to change, such as differences in current work site environmental and sustainability requirements
- numeracy skills to:
  - estimate weight of volumes of demolition debris
  - perform measurements and calculations associated with work, such as determining maximum load capacity of equipment
- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report hazards on the work site, including faults in equipment
  - use language and concepts appropriate to cultural differences
- reading skills to:
  - interpret documentation, including drawings
  - understand written instructions, procedures and signage, such as:
    - job safety analyses (JSA)
    - safe work method statements (SWMS)
    - safety data sheets (SDS)
- writing skills to complete pre-operational checklists and equipment fault forms

Required knowledge

- construction terminology
- procedures for material storage and environmentally friendly waste management
- quality requirements relating to products of crushing operations
- types, characteristics, uses and limitations of plant and equipment involved in the conduct of crushing operations, including:
  - hazards associated with the conduct of crushing operations
  - method of operation and maintenance requirements of crushing plant and equipment
  - techniques associated with the conduct of crushing operations
- workplace and equipment safety requirements that apply to the operation of a demolition material crushing plant
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by observation of the operation of a crushing plant in the workplace.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to crush a minimum of 100 tonnes of demolition material into two different nominal sizes of crushings, which may be 5mm, 10mm, 20mm or 40mm, including:

- communicating and working effectively and safely with others
- completing work to specification
- complying with site safety plan and requirements of:
  - organisational procedures and processes, including quality requirements
  - standards and codes of practice applicable to the operation of a demolition materials crushing plant
  - WHS legislation and regulations
- identifying work requirements
- safely and effectively operating plant, and using tools and equipment.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks covering the mandatory task requirements, including a crushing schedule and work instructions
- research resources, including industry-related systems information
- support materials appropriate to activity, including:
  - relevant manuals and specifications
  - safety data sheets
- tools and equipment appropriate to applying safe work practices
- workplace instructions relating to safe work practices and addressing hazards and emergencies.

Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the
following methods:

- direct observation of tasks in real work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Guidance information for assessment**

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Compliance requirements** relating to crushing and screening plant operations may include:

- manufacturer guidelines and specifications
- organisation and site requirements and procedures
- requirements of relevant legislation, codes and standards.

**Work requirements** may include:

- achievement targets
- coordination requirements and issues
- hazards and potential hazards
- lighting conditions
- nature and scope of tasks
- operational conditions
- plant configuration
- plant or equipment defects
- product details
- site layout and out of bounds areas
Information may include:

- stockpile details
- work site inspection requirements.
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- memos
- safe work procedures relating to the operation of crushing plant
- safety data sheets
- signage
- verbal, written and graphical instructions, including manufacturer specifications and instructions where specified
- work bulletins
- work schedules, plans and specifications.
- dust suppression and extraction procedures
- emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices, such as:
  - chemical and gas detectors
  - eye protection
  - hearing protection
  - protection from the elements
  - protective clothing
  - respiratory devices
  - safety harness when working at heights
- safe operating procedures, including operational risk assessment and treatments associated with:
  - falling objects
  - lighting
  - plant movement
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures

Work health and safety requirements must comply with state and territory legislation and regulations and project safety plan and may include:
- traffic control
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Plant and equipment may include:
- conveyor belts
- crusher plants
- excavators.

Environmental requirements may include:
- clean-up management
- dust suppression and extraction
- noise suppression
- sedimentation control
- ventilation of work area
- vibration control
- waste management.

Pre-start and start-up procedures may include:
- visual inspection tour of the plant
- checking and topping up fluid levels, including fuel
- lubrication and greasing
- inspecting attachments to ensure security and to identify defects
- checking instrument and control levers and reporting defects and damage
- following prescribed start-up sequence
- confirming plant is operational.

Shut-down procedures may include:
- emergency shut-down procedures
- end of work shut-down sequence
- securing equipment.

Preparation of work area and equipment may include:
- location of stockpile areas or bins
- positioning plant
- preparing and setting plant for initial size range of crushings
- safeguarding site and non-site personnel by:
  - erecting barricades and posting signs
  - identifying hazards
  - selecting and implementing control measures for the hazards identified
  - selecting appropriate equipment to ensure personnel safety and protection
• stabilising plant.

**Relevant personnel** may include:

• demolition team members
• lead contractor
• mobile plant operators
• maintenance personnel
• waste management team members.

**Operating technique** may include:

• crusher adjustment
• feed control adjustment
• working safely around other machines and personnel.

**Changing work conditions** may include:

• feed grading
• feed contamination
• weather conditions
• day-time
• night-time.

**Materials** may include:

• blocks
• bricks
• concrete
• in situ demolition site materials
• pavers
• recycled materials
• rocks
• stone.

**Communication** may include:

• hand signals and other non-verbal communication
• use of communications technology, such as radios and mobile phones.

**Operational maintenance, servicing, lubricating and housekeeping tasks** may include:

• changing worn components
• cleaning
• adjusting equipment
• greasing
• scheduled servicing.

CPCDE3022A Manage demolition recyclable and waste materials using load shifting equipment

Modification History

New unit.
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

Unit Descriptor

This unit of competency specifies the outcomes required to organise the removal of different types of demolition recyclable and waste materials, including hazardous materials. It involves the operation of a range of load shifting equipment on demolition sites and incorporates knowledge of recyclable materials and the safe disposal of hazardous materials.

Application of the Unit

This unit of competency supports the role of demolition workers who manage and move recyclable and waste materials resulting from demolition work.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements apply to demolition work in different States and Territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare.  
   1.1 Work instructions are obtained using relevant information, confirmed and applied to planning and preparation.
   1.2 Work health and safety (WHS) requirements are identified and applied to task planning according to safety plans and policies.
   1.3 Load shifting equipment, associated attachments and emergency and personal protective equipment (PPE) are selected according to job requirements to maximise efficiency and effectiveness of transportation.
   1.4 Licence to operate specific plant is presented to relevant personnel for compliance inspection.
   1.5 Potential hazards and risks are identified and dealt with according to workplace emergency response procedures and legislative requirements.
   1.6 Environmental requirements are identified and applied to work planning according to work site environmental plans, workplace requirements and regulatory obligations.

2 Perform routine checks on load shifting and other equipment.  
   2.1 Load shifting equipment is inspected and faults are dealt with or reported as required.
   2.2 Load shifting equipment systems are tested to ensure compliance with manufacturer specifications and organisational requirements.
2.3 Service checks are conducted in compliance with manufacturer specifications.

2.4 Emergency and personal protective equipment is checked to ensure it is serviceable.

2.5 Associated equipment is checked to ensure that it is operational and complies with manufacturer specifications.

3 Organise materials and equipment for loading.

3.1 Work site procedures for segregating and locating recyclable and waste demolition materials are confirmed with relevant personnel.

3.2 Recyclable materials to be loaded are identified and checked to ensure integrity of on-site sorting, as required.

3.3 Waste materials to be loaded are identified and checked to ensure integrity of containment, as required.

3.4 Loading procedures are determined according to material or waste type and organisational and environmental requirements.

3.5 Load shifting equipment is parked or set up in a loading position that ensures efficiency and safety of loading.

3.6 Barriers and warning signs are erected at loading sites to ensure safety of surrounding personnel according to organisational requirements and requirements of relevant legislation.

4 Load and move materials.

4.1 Materials are loaded safely and efficiently according to type and using an approved loading method to maintain integrity.

4.2 Visual checks of load and surrounding environment are maintained to identify and avoid, minimise or remedy potential hazards.

4.3 Clear communication with relevant personnel is maintained.

4.4 Load is checked to ensure it conforms to equipment capacity requirements, manufacturer specifications, and
requirements of relevant legislation and codes.

4.5 Equipment is operated and driven in a safe and efficient manner, according to organisational requirements, road and traffic regulations, and requirements of other legislation and codes.

4.6 Materials are moved safely and securely according to organisational requirements, manufacturer specifications, and requirements of relevant legislation and codes.

5 Unload and store materials.

5.1 Materials are unloaded safely and efficiently in designated area according to type and using an approved unloading method to maintain integrity.

5.2 Visual checks are maintained to identify and remedy potential hazards during unloading.

5.3 Load is stacked or housed at destination according to organisational requirements, manufacturer specifications, and requirements of relevant legislation and codes.

6 Shut down and secure load shifting equipment.

6.1 Equipment is parked or stored in a safe location to avoid damage to equipment or obstruction of surrounding site activity.

6.2 Shut-down procedures are completed according to manufacturer specifications and organisational requirements.

6.3 Equipment is secured and stored in a manner that prevents unauthorised access or use.

7 Carry out basic housekeeping and maintenance

7.1 Equipment is cleaned to remove debris and contamination and to ensure safe operating procedures.

7.2 Service checks are conducted according to manufacturer specifications.

7.3 Equipment faults and defects are reported to relevant personnel.

7.4 Record of moving activities is completed promptly and
according to organisational requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- learning skills to:
  - evaluate own actions and make judgements about performance and necessary improvements
  - respond to change, such as differences in current work site environmental and sustainability requirements
- numeracy skills to:
  - estimate the weight of volumes of demolition debris
  - perform measurements and calculations associated with work, such as determining maximum load capacity of equipment
- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report hazards on the work site, including faults in equipment
  - use language and concepts appropriate to cultural differences
- reading skills to:
  - interpret documentation, including route maps
  - understand written instructions, procedures and signage
- writing skills to complete pre-operational checklists and equipment fault forms

**Required knowledge**

- compliance requirements for handling and transporting materials, which include dangerous goods and hazardous substances
- driving procedures for different types of load shifting equipment, including:
  - licence requirements
  - map reading
  - road laws
- hazards and risks associated with handling and transporting materials and management strategies, including:
  - emergency response procedures
  - hierarchy of control
- manual and mechanical loading and unloading methods
- types of loading equipment, including equipment load weight requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by observation of practical demonstration in the workplace using load shifting equipment.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- manage and move a range of demolition recyclable and waste materials in two different contexts, using relevant combinations of the following types of equipment:
  - dozers
  - earthmoving equipment
  - forklifts
  - loaders:
    - front-end
    - rear-end
    - tailgate
  - trucks:
    - articulated trucks
    - open-bodied, including hook lift, pump, and vacuum
    - rigid
  - windrow turners
- locate, interpret and apply relevant information, standards and specifications relating to the management of demolition recyclable and waste materials
- comply with site safety plan and requirements of WHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- communicate and work effectively and safely with others
- follow work instructions, operating procedures and inspection practices to safely and effectively use the load shifting equipment listed above for their appropriate application, ensuring:
  - there is no damage to tools or equipment or injury to persons
  - all work is completed to specification
- compliance with regulations, standards and organisational quality procedures and processes.
Context of and specific resources for assessment

Assessment of this unit:
- must be in the context of the work environment
- must meet relevant compliance requirements.

Resource implications for assessment include:
- an induction procedure
- realistic tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment as listed appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- information relevant to each task, such as safety data sheets, work plans and approved specifications, forms and procedures manuals.

Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:
- direct observation of tasks
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present
with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information may include:

- advice and guidelines relating to regulatory and legislative requirements, including:
  - Australian Code for the Transport of Dangerous Goods by Road and Rail
  - commonwealth, state and territory legislation, including:
    - environmental protection
    - trade practices
    - road laws
  - current Australian standards relating to managing and moving demolition materials
  - instructions issued by authorised organisational or external personnel
  - job routes and sequences
  - materials and waste types, classifications, characteristics and transport requirements
  - quality requirements relating to the management of demolition recyclable and waste materials
  - safe work method statements and procedures for managing and moving demolition materials and waste
  - safety data sheets
  - signage
  - site contact
  - site requirements
  - vehicle and associated equipment requirements
  - work schedules, plans and specifications.

Work health and safety requirements must comply with state or territory legislation and regulations and demolition project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
- manual handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- identification of hazardous materials and substances and relevant safe handling or quarantining procedures for each, including:
  - animal residue
  - asbestos
  - dust
  - lead
  - lead-based paints
- pesticide residue
- use of safe operating procedures, including operational risk assessment and treatments associated with:
  - equipment tagging
  - fall protection
  - identification and preparation of access and egress points
  - identification of equipment guarding and cut-off switches
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others.

**Load shifting equipment** may include:

- dozers
- earthmoving equipment
- forklifts
- loaders:
  - front-end
  - rear-end
  - tailgate
- trucks, including:
  - articulated
  - open-bodied, including:
    - hook lift
    - pump
    - vacuum
  - rigid
- windrow turners.

**Emergency and personal protective equipment:**

- must include:
  - communications equipment
  - eye protection, such as goggles and protective glasses
  - eyewash kit
  - fire extinguishers
  - first aid kit
  - footwear
- gloves
- overalls and protective clothing

- may include:
  - breathing apparatus
  - emergency procedure guides
  - face shields or masks
  - hard hats
  - hearing protection
  - safety data sheets
  - spill kit

- personal protective equipment must be:
  - cleaned and fitted according to organisational requirements, manufacturer specifications and WHS requirements
  - worn when required according to organisational requirements
  - stored according to organisational requirements.

**Potential hazards and risks:**

- may include:
  - broken glass
  - broken metal
  - compaction equipment
  - contamination
  - dust
  - fire
  - gases and fumes
  - hazardous waste
  - narrow driveways
  - other vehicles and equipment
  - overhanging signs
  - projectiles
  - spark-producing equipment
  - unguarded conveyor belts
  - weather

- may cause:
  - damage to plant, vehicle or property
  - harm to the environment
  - illness or injury to employees, contractors or the public
  - injuries resulting from manual handling and repetitive work.

**Emergency response**

- cleaning up
procedures may include:
- containing emergency
- isolating or shutting down equipment or plant
- evacuation
- first aid
- making site safe
- notifying authorities
- using PPE.

Faults in load shifting equipment may include:
- component wear or damage
- leaks
- obstructions.

Service checks may include:
- ensuring that the following are maintained at designated levels:
  - air pressure
  - fuel
  - greasing
  - oil
  - water.

Recyclable and waste demolition materials may include:
- recyclable materials, such as:
  - bricks
  - concrete
  - copper wiring
  - glass
  - masonry
  - metal
  - polyvinyl chloride (PVC) pipe
  - timber
- waste materials, including:
  - hazardous:
    - medical and clinical
    - prescribed
    - quarantined
    - regulated
  - non-hazardous solid and liquid waste.

Integrity of containment may include checks for:
- contamination
- drum expansion
- gases
- leaching
- leaks
- seals
- spillage
Loading procedures may involve:

- unstable form.
- cart lifter
- forklift
- front-end loader
- high pressure vacuum loading
- loading by hand
- shovelling.

Communication may include:

- non-verbal communication, such as:
  - flagging
  - hand signals
  - SMS
- verbal communication, which may be conducted using:
  - radio
  - telephone.

Cleaning of equipment may include:

- high pressure water or air-hosing
- shovelling
- sweeping out
- using cleaning and decontamination products
- vacuuming.

CPCD E3023A Operate skid steer loaders at ground level on demolition sites

Modification History
New unit.
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

Unit Descriptor
This unit of competency specifies the outcomes required to operate a skid steer loader at ground level in the demolition industry. It includes planning and preparing; conducting machine pre-operational checks; preparing a site for the demolition process; removing demolition debris; selecting, removing and fitting loader attachments; removing demolition materials and waste; relocating skid steer loaders; and carrying out machine operator maintenance.

Application of the Unit
This unit of competency supports the role of demolition workers who demolish residential, commercial and industrial buildings and structures.

Licensing/Regulatory Information
Licensing, legislative, regulatory or certification requirements apply to demolition work in different States and Territories. Candidates are advised to consult with the relevant regulatory authorities.

Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare. 1.1 Compliance requirements relevant to skid steer loader operations are accessed, interpreted and applied.

1.2 Work instructions are obtained from relevant information, confirmed with team members and other relevant personnel, and applied to planning and preparation.

1.3 Work health and safety (WHS) requirements are identified and applied to task planning according to safety plans and policies.

1.4 Environmental requirements are identified for the project according to environmental plans and regulatory obligations.

1.5 Maintenance tools and equipment are checked for serviceability, and faults are reported or rectified.

1.6 Skid steer loader pre-start, start-up, park and shut-down operational checks are conducted according to manufacturer recommendations.

1.7 Skid steer loader controls and functions are checked for serviceability, and faults are rectified and reported.

2 Select, check and fit attachments. 2.1 Skid steer loader attachments are selected to carry out tasks, consistent with job requirements.

2.2 Attachments and connections are checked for excessive wear, and replaced and reported as required.

2.3 Attachments are securely fitted according to safe work
method, and safety pins or clips are fitted according to manufacturer specifications and workplace requirements.

2.4 Hydraulic components are **checked** and faults are rectified or components replaced, and reported.

2.5 Operation of hydraulic system is tested before applying load according to manufacturer specifications and workplace requirements.

2.6 Attachment operation is tested by raising and lowering attachment and attachment is locked in raised position for travel according to manufacturer specifications and workplace requirements.

2.7 Attachments are removed, cleaned and stored according to manufacturer specifications and workplace requirements.

3 Prepare demolition site.

3.1 Requirements of site demolition plan are determined and discussed with team members according to workplace procedures.

3.2 **Site inspection** is conducted to determine condition of work site and surrounds before work begins, and safe work method statement is amended and approved as required.

3.3 Confirmation is obtained from supervisor and regulatory authorities that all existing above and below ground services have been disconnected.

3.4 Hazardous material is identified for separate handling according to workplace requirements and instructions.

3.5 Mechanical equipment and plant are positioned in operating locations and appropriate exclusion zone and traffic control are arranged.

4 Operate skid steer loader for demolition process.

4.1 Skid steer loader general operating techniques are identified and applied to achieve optimum output according to manufacturer design specifications, while achieving specified tolerances.

4.2 Site hazards associated with skid steer loader demolition operations are identified and **safe operating techniques**
are followed to minimise risks.

4.3 Skid steer loader is moved safely between work locations, observing relevant codes and traffic management requirements.

4.4 Control measures are implemented to manage hazards arising from demolition process according to the demolition plan, safe work methods and regulatory requirements.

4.5 Demolition tasks are assessed immediately prior to starting and safe work method statement is reviewed to incorporate management of previously undiscovered hazards.

4.6 Skid steer loader is operated at ground level to remove demolition debris using suitable attachments according to approved demolition plan and current safe work method.

4.7 Communication is maintained with team members, during the demolition process.

4.8 Work site conditions and progress are monitored in consultation with team members and work is stopped or techniques adjusted as required, according to workplace requirements.

5 Carry out machine operator inspection and maintenance tasks.

5.1 Skid steer loader is safely parked and shut down, and attachments are removed.

5.2 Skid steer loader is inspected for faults and defective parts are removed and replaced according to manufacturer specifications and workplace requirements.

5.3 Regular programmed operator maintenance tasks are conducted according to manufacturer specifications and workplace requirements.

6 Clean up.

6.1 Work area is cleared and materials and waste are sorted and located for removal, as required, according to site demolition project environmental management plan.

6.2 Maintenance tools and equipment are cleaned, checked,
maintained and stored.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - recognise signs indicating undiscovered hazards on a demolition site, for example presence of termites
  - respond to change, such as differences in current work site environmental and sustainability requirements

- numeracy skills to:
  - check levels of lubricants in equipment
  - estimate weight of volumes of demolition debris
  - perform measurements and calculations associated with work, such as when determining load capacity of equipment

- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report hazards on the work site, including faults in tools, equipment and materials
  - use language and concepts appropriate to cultural differences

- reading skills to:
  - interpret documentation relating to work requirements, including:
    - drawings and specifications
    - job safety analyses (JSA)
    - safe work method statements (SWMS)
    - safety data sheets (SDS)
  - understand written instructions, procedures and signage
  - writing skills to complete pre-operational checklists and equipment fault forms

Required knowledge

- general construction terminology
- hazards associated with the operation of skid steer loaders from ground level on residential, commercial and industrial demolition sites
- methods for materials storage and disposal, including environmentally friendly waste management
- method of operation, and maintenance requirements, of skid steer loader and attachments
- types, characteristics, uses and limitations of skid steer loaders in the demolition industry
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by observation of on-site operation of a skid steer loader and the use of different attachments to complete demolition tasks on large and complex buildings, working as part of a team.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to operate a skid steer loader from ground level to complete the following demolition tasks at a minimum of two different work sites:

- lifting and transfer of demolition rubble
- sorting materials
- loading trucks
- demolition of minor non-structural elements
- including:
  - knowledge of the requirements, procedures and instructions for conducting demolition skid steer loader operations
  - implementation of requirements, procedures and techniques for the safe, effective and efficient completion of demolition skid steer loader operations, including:
    - working with others to undertake and complete demolition skid steer loader operations that meet all of the required outcomes
    - consistent timely completion of demolition skid steer loader operations that safely, effectively and efficiently meet the required outcomes.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks covering the mandatory task requirements
- relevant specifications and work instructions
- plant, tools and equipment as listed appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- information relevant to each task, such as safety data sheets,
work plans and approved specifications, forms and procedures manuals.

**Method of assessment**

Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:

- direct observation of tasks
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Guidance information for assessment**

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Compliance requirements may include:**

- Australian standards relevant to plant operation
- codes of practice for plant operation
- legislative and regulatory requirements for plant operation
- manufacturer guidelines and specifications
- organisational requirements and procedures
- requirements of Employment and Workplace Relations legislation
- requirements of Equal Employment Opportunity and Disability Discrimination legislation
- site requirements.

**Information regarding**

- advice and guidelines relating to regulatory and legislative
work task instructions may include:

- requirements for mechanical demolition processes
- approved demolition plan
- current Australian standards relating to operating skid steer loaders
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- memos
- safe work procedures relating to the conduct of mechanical demolition processes
- safety data sheets
- site signage
- site traffic management plan
- verbal, written and graphical instructions, including manufacturer specifications and instructions where specified
- work bulletins
- work schedules, plans and specifications.
- emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including asbestos, lead-based paints, dust, pesticide residue, animal residue and the safe handling or quarantining procedures for each
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including operational risk assessment and treatments associated with:
  - falling objects
  - lighting
  - plant movement
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces

Work health and safety requirements must comply with state or territory legislation and project safety plan may include:
• working in proximity to others
• traffic management, barriers and signage
• use of tools and equipment
• workplace environmental requirements.

**Environmental requirements may include:**

• clean-up management
• dust and noise control
• sedimentation control
• vibration management
• waste management.

**Attachments may include:**

• buckets
• hammers.

**Checks must include for:**

• bulges
• fractures
• leaks
• splits.

**Site inspection may include:**

• assessing condition of property and surrounds
• communicating with those who may be affected by the demolition task
• erecting scaffolding for exclusion zones, if applicable
• identifying hazardous materials
• identifying position of hoses and cables clear of hazards
• installing supports and bracing
• location of signage and barricades
• providing for site safety.

**Safe operating techniques for skid steer loaders may include:**

• emergency shut-down and stopping
• management of hazards and risks, including:
  • buildings
  • cuttings
  • embankments
  • excavations
  • fires
  • hazardous materials
  • overhead and underground services
  • structures
  • traffic
  • trees
  • uneven or unstable terrain
• safe parking practices, ensuring:
  • access ways are clear
  • equipment or machinery is:
- located a safe distance from excavations
- located away from overhangs and refuelling sites
- secured from unauthorised access or movement.

**Hazards arising from demolition process** may include:
- dust
- fire
- fumes
- noise
- vibration.

**Demolition tasks** that may be completed using a skid steer loader and attachments include:
- lifting and transfer of demolition rubble
- sorting materials
- loading trucks
- minor non-structural demolition.

**Communication** may include the use of:
- hand signals
- mobile equipment
- radios.

**Operator maintenance tasks:**
- must include:
  - cleaning
  - authorised servicing
  - monitoring, recording and reporting faults
- may include:
  - authorised minor replacements
  - assisting maintenance personnel during maintenance and repair activities.

**Unit Sector(s)**
Demolition

CPCCDE3024A Operate mobile plant on suspended floors on demolition sites

Modification History

New unit.
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

Unit Descriptor

This unit of competency specifies the outcomes required to operate mobile plant on suspended floors to demolish building elements on or above the same suspended floor. It includes planning and preparing; conducting machine pre-operational checks; preparing a site for the demolition process; following demolition procedures for different building elements; selecting, removing and fitting attachments; removing demolition materials and waste; relocating excavators; and carrying out machine operator maintenance.

Application of the Unit

This unit of competency supports the role of demolition workers who operate mobile plant, such as excavators and skid steer loaders during the demolition of multi-storey residential, commercial and industrial buildings and structures, including chemical processing plants.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements apply to demolition work in different States and Territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. **Plan and prepare.**

   1.1 *Compliance requirements* relevant to excavator operations are accessed, interpreted and applied.

   1.2 Work instructions are obtained from relevant *information*, confirmed with team members and other relevant personnel, and applied to planning and preparation.

   1.3 Instructions and advice from structural engineer regarding demolition techniques on suspended floors and load bearing capacities are followed.

   1.4 *Work health and safety (WHS) requirements* are identified and applied to task planning according to safety plans and policies.

   1.5 Placement of mobile plant and allowable weight of demolition debris loads on suspended floors are confirmed according to advice of structural engineer.

   1.6 *Environmental requirements* are identified for the project according to environmental plans and regulatory obligations.

   1.7 Tools and equipment for plant pre-start checks and operator maintenance tasks are checked for serviceability, and faults are reported or rectified.

   1.8 Mobile plant pre-start, start-up, park and shut-down operational checks are conducted according to manufacturer recommendations.

   1.9 Mobile plant controls and functions are checked for serviceability, and faults are rectified and reported.
2 Select, check and fit attachments.

2.1 Mobile plant attachments are selected to carry out tasks, consistent with job requirements.

2.2 Arms and connections are checked for excessive wear, and are replaced and reported as required.

2.3 Attachments are securely fitted according to safe work method, and safety pins or clips are fitted according to manufacturer specifications and workplace requirements.

2.4 Hydraulic components are checked and faults are rectified or components replaced, and reported.

2.5 Operation of hydraulic system is tested before applying load according to manufacturer specifications and workplace requirements.

2.6 Attachment operation is tested by raising and lowering attachment and attachment is locked in position for travel according to manufacturer specifications and workplace requirements.

2.7 Attachments are removed, maintained and stored according to manufacturer specifications and workplace requirements.

3 Prepare demolition site.

3.1 Requirements of site demolition plan are determined and discussed with team members according to workplace procedures.

3.2 Site inspection of property or dilapidation survey is conducted to determine condition of work site and surrounds before work begins, and safe work method statement is amended and approved as required.

3.3 Confirmation is obtained from supervisor and regulatory authorities that specified services, above and below ground, have been disconnected and any remaining live services are identified and protected.

3.4 Hazardous material is identified for separate handling according to workplace requirements and instructions.

3.5 Mechanical equipment and plant are positioned in operating locations and appropriate exclusion zone and
4 Operate mobile plant for demolition process.

4.1 Mobile plant general operating techniques are identified and applied to achieve safe, effective and efficient output according to manufacturer's design specifications while achieving specified tolerances.

4.2 Site hazards associated with mobile plant demolition operations are identified and safe operating techniques are followed to minimise risks.

4.3 Placement of mobile plant and allowable weight of demolition debris loads on suspended floors are monitored and controlled throughout the demolition process.

4.4 Mobile plant is moved safely between work locations, observing relevant codes and traffic management requirements.

4.5 Control measures are implemented to manage hazards arising from demolition process according to the demolition plan, safe work methods and regulatory requirements.

4.6 Demolition tasks are assessed immediately prior to starting and safe work method statement is reviewed to incorporate management of previously undiscovered hazards.

4.7 Mobile plant is operated on suspended floors to demolish building elements or remove demolition debris using suitable attachments according to approved demolition plan, structural engineering advice, and current safe work method.

4.8 Communication is maintained with team members, during the demolition process.

4.9 Work site conditions and progress are monitored in consultation with team members and work is stopped or techniques adjusted as required, according to workplace requirements.
5  Carry out machine operator inspection and maintenance tasks.
   5.1 Mobile plant is safely parked and shut down, and attachments are removed and stored according to workplace requirements.
   5.2 Mobile plant is inspected for faults and defective parts are removed and replaced according to manufacturer specifications and workplace requirements.
   5.3 Regular programmed *operator maintenance tasks* are conducted according to manufacturer specifications and workplace requirements and log sheets are completed.

6  Clean up.
   6.1 Work area is cleared and materials and waste are sorted and located for removal, as required, according to site demolition project environmental management plan.
   6.2 Maintenance tools and equipment are cleaned, checked, maintained and stored.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - recognise signs indicating undiscovered hazards on a demolition site, for example presence of termites
  - respond to change, such as differences in current work site environmental and sustainability requirements

- numeracy skills to:
  - estimate weight of accumulated volumes of demolition debris on suspended floors
  - calculate combined weight of mobile plant and demolition debris on suspended floors
  - check levels of lubricants in equipment
  - perform measurements and calculations associated with work, such as when determining specified length of wall to be removed

- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report hazards on the work site, including faults in tools, equipment and materials
  - use language and concepts appropriate to cultural differences

- reading skills to:
  - interpret documentation relating to work requirements, including:
    - drawings and specifications
    - job safety analyses (JSA)
    - safe work method statements (SWMS)
    - safety data sheets (SDS)

- writing skills to complete pre-operational checklists, equipment fault forms and log sheets

Required knowledge

- basic principles of structural engineering relating to:
  - placement of loads on suspended floors during demolition of the same floor
  - propping requirements
  - stability of buildings and structures throughout the demolition process
  - general construction terminology
  - hazards associated with the operation of mobile plant on suspended floors on residential,
commercial and industrial demolition sites

- hazards associated with inappropriate demolition methodology, including structural collapse or the premature failure of floors or other structural elements
- methods for materials storage and disposal, including environmentally friendly waste management
- method of operation and maintenance requirements of mobile plant and attachments
- types, characteristics, uses and limitations of mobile plant in the demolition industry
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by observation of on-site operation of an excavator and the use of different attachments to complete demolition tasks on large and complex buildings, working as part of a team.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to operate a mobile plant on suspended floors during the floor demolition process completing the following mandatory demolition tasks at a minimum of two different work sites:

- progressive demolition of roof, wall and floor from a suspended slab
- removal of rubble
- including:
  - assessment of accumulated loads
  - knowledge of the structural engineering constraints and requirements for working on a suspended slab
  - knowledge of the requirements, procedures and instructions for conducting demolition mobile plant operations
  - implementation of requirements, procedures and techniques for the safe, effective and efficient completion of demolition mobile plant operations, including:
    - working with others to undertake and complete demolition excavator operations that meet all of the required outcomes
    - consistent timely completion of demolition mobile plant operations that safely, effectively and efficiently meet the required outcomes.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks covering the mandatory task requirements
- relevant specifications and work instructions
- plant, tools and equipment as listed appropriate to applying safe work practices
- support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• information relevant to each task, such as safety data sheets, work plans and approved specifications, forms and procedures manuals.

**Method of assessment**
Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:
• direct observation of mandated tasks
• questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Guidance information for assessment**
This unit could be assessed on its own or in combination with other units relevant to the job function.
Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.
Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

**Range Statement**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Compliance requirements may include:**
• Australian standards relevant to plant operation and demolition
• codes of practice for plant operation
• legislative and regulatory requirements for plant operation
• manufacturer guidelines and specifications
• organisational requirements and procedures
• requirements of Employment and Workplace Relations legislation
• requirements of Equal Employment Opportunity and
Information regarding work task instructions may include:

- Disability Discrimination legislation
- site requirements.
- advice and guidelines relating to regulatory and legislative requirements for mechanical demolition processes
- advice and instructions from structural engineer regarding placement of loads on suspended floors
- approved demolition plan
- current Australian standards relating to operating mobile plant on suspended floors on demolition sites
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- memos
- SWMS relating to the conduct of mechanical demolition processes
- safety data sheets
- site signage
- site traffic management plan
- verbal, written and graphical instructions, including manufacturer specifications and instructions where specified
- work bulletins
- work schedules, plans and specifications.
- emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including asbestos, lead-based paints, dust, pesticide residue, animal residue and the safe handling or quarantining procedures for each
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including operational risk assessment and treatments associated with:
  - falling objects
  - lighting
  - plant movement
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures

Work health and safety requirements must comply with state or territory legislation and project safety plan may include:
• traffic control
• trip hazards
• work site visitors and the public
• working at heights
• working in confined spaces
• working in proximity to others
• traffic management, barriers and signage
• use of tools and equipment
• workplace environmental requirements.

Environmental requirements may include:
• clean-up management
• control of spills and leaks of hydraulics, oil and fuels
• dust and noise control
• sedimentation control
• vibration management
• waste management.

Attachments may include:
• buckets
• grapples
• hammers
• magnets
• pulverisers
• rippers
• rock breakers
• shears.

Checks must include for:
• bulges
• factures
• leaks
• splits.

Site inspection may include:
• assessing condition of property and surrounds
• communicating with those who may be affected by the demolition task
• determining floor loadings
• erecting scaffolding and public protection
• identifying hazardous materials
• identifying position of hoses and cables clear of hazards
• installing supports and bracing
• location of signage and barricades
• providing site safety.

Safe operating techniques for mobile plant may include:
• emergency shut-down and stopping
• management of hazards and risks, including:
  • falls from heights
  • fires
• hazardous materials
• overloading of suspended slab
• structures
• structural collapse
• uneven or unstable terrain
• safe parking practices ensuring:
  • access ways are clear
  • equipment or machinery is:
    • located a safe distance from excavations
    • located away from refuelling sites
    • secured from unauthorised access or movement.

**Hazards arising from demolition process** may include:
• dust
• fire
• noise
• vibration.

**Demolition tasks** that may be completed using mobile plant and attachments on suspended floors include:
• progressive demolition of roof, wall and suspended slab (floor)
• removal of demolition rubble to specified locations for disposal.

**Communication** may include the use of:
• hand signals
• mobile equipment
• radios.

**Monitoring of work site conditions and progress** must include:
• degraded structures
• hazardous materials
• live edges
• overhead and below ground services
• potential effect to neighbouring properties
• potential effect to the general public
• termite activity
• trenches
• unconsolidated ground or fill materials
• underground storage tanks.

**Operator maintenance tasks:**
• must include:
  • cleaning
  • authorised servicing
  • monitoring, recording and reporting faults
• may include:
  • authorised minor replacements
  • assisting maintenance personnel during maintenance and
repair activities.

CPCCDE3025A Operate remote-controlled plant on demolition sites

Modification History

New unit
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

Unit Descriptor

This unit of competency specifies the outcomes required to operate remote-controlled plant to conduct high risk demolition operations, such as overhead cutting, sawing and jack hammering; and work in restricted spaces, such as tunnels. Remote-controlled plant may be operated at ground level, below ground or on suspended floors.

Application of the Unit

This unit of competency supports the role of demolition workers who demolish residential, commercial and industrial buildings and structures.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements apply to demolition work in different States and Territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare.

1.1 Compliance requirements relevant to remote-controlled plant demolition operations are accessed, interpreted and applied.

1.2 Work instructions are obtained from relevant information, confirmed with team members and other relevant personnel, and applied to planning and preparation.

1.3 Instructions and advice from structural engineer regarding demolition techniques on suspended floors and load bearing capacities are followed.

1.4 Work health and safety (WHS) requirements are identified and applied to task planning according to safety plans and policies.

1.5 Environmental requirements are identified for the project according to environmental plans and regulatory obligations.

1.6 Maintenance tools and equipment are checked for serviceability, and faults are reported or rectified.

1.7 Remote-controlled plant pre-start, start-up, park and shut-down operational checks are conducted according to manufacturer recommendations.

1.8 Remote-controlled plant controls and functions, including brakes and manoeuvrability, are checked for serviceability, and faults are rectified and reported.
2 Select, check and fit attachments.

2.1 Remote-controlled plant attachments are selected to carry out tasks, consistent with job requirements and according to manufacturer specifications.

2.2 Attachments’ arms and connections are checked for excessive wear, and replaced and reported as required.

2.3 Attachments are securely fitted according to safe work method, and safety pins or clips are fitted according to manufacturer specifications and workplace requirements.

2.4 Hydraulic components are checked and faults are rectified or components replaced, and reported.

2.5 Operation of hydraulic system is tested before applying load according to manufacturer specifications and workplace requirements.

2.6 Attachment operation is tested by raising and lowering attachment and attachment is locked in raised position for travel according to manufacturer specifications and workplace requirements.

2.7 Attachments are removed, cleaned and stored according to manufacturer specifications and workplace requirements.

3 Prepare demolition site.

3.1 Requirements of site demolition plan are determined and discussed with team members according to workplace procedures.

3.2 Site inspection of property or dilapidation survey is conducted to determine condition of work site and surrounds before work begins, and safe work method statement is amended and approved as required.

3.3 Confirmation is obtained from supervisor and regulatory authorities that all existing services have been disconnected.

3.4 Hazardous material is identified for separate handling according to workplace requirements and instructions.

3.5 Mechanical equipment and plant are positioned in operating locations and appropriate exclusion zone and
traffic control are arranged.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - recognise signs indicating undiscovered hazards on a demolition site, for example presence of termites
  - respond to change, such as differences in current work site environmental and sustainability requirements

- numeracy skills to:
  - estimate weight of accumulated volumes of demolition debris on suspended floors
  - calculate combined weight of remote-controlled plant and demolition debris on suspended floors
  - check levels of lubricants in equipment
  - perform measurements and calculations associated with work, such as when determining specified length of wall to be removed

- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report hazards on the work site, including faults in tools, equipment and materials
  - use language and concepts appropriate to cultural differences

- reading skills to:
  - interpret documentation relating to work requirements, including:
    - drawings and specifications
    - job safety analyses (JSA)
    - safe work method statements (SWMS)
    - safety data sheets (SDS)
  - understand written instructions, procedures and signage

- writing skills to complete pre-operational checklists and equipment fault forms

Required knowledge

- basic principles of structural engineering regarding loads on suspended floors
- general construction terminology
- hazards associated with the operation of remote-controlled plant on residential, commercial and industrial demolition sites
- methods for materials storage and disposal, including environmentally friendly waste management
- method of operation and maintenance requirements of remote-controlled plant and attachments
- types, characteristics, uses and limitations of remote-controlled plant in the demolition industry
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by observation of on-site operation of remote-controlled plant and the use of different attachments to complete demolition tasks on large buildings working as part of a team.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to complete the following mandatory demolition tasks:

- fit and secure grapples, buckets and hydraulic hammers and remove, maintain and store attachments after use
- position plant appropriately and load a truck with building rubble using a bucket
- progressively, and with reference to the pre-planned and controlled sequencing of tasks outlined in the demolition plan, logically demolish all or part of three different types of buildings or structures, including breaking up a concrete floor or structure using a hydraulic hammer attachment
- segregating building materials effectively for recycling or disposal
- a person should also demonstrate:
  - knowledge of the requirements, procedures and instructions for conducting demolition remote-controlled plant operations
  - implementation of requirements, procedures and techniques for the safe, effective and efficient completion of demolition remote-controlled plant operations, including:
    - working with others to undertake and complete demolition remote-controlled plant operations that meet all of the required outcomes
    - consistent timely completion of demolition remote-controlled plant operations that safely, effectively and efficiently meet the required outcomes.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks covering the mandatory task requirements
relevant specifications and work instructions
• plant, tools and equipment as listed appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• information relevant to each task, such as safety data sheets, work plans and approved specifications, forms and procedures manuals.

Method of assessment
Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:
• direct observation of mandated tasks
• questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment
This unit could be assessed on its own or in combination with other units relevant to the job function.
Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.
Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Compliance requirements may include:
• Australian standards relevant to plant operation
• codes of practice for plant operation
• legislative and regulatory requirements for plant operation
• manufacturer guidelines and specifications
Information regarding work task instructions may include:
- organisational requirements and procedures
- requirements of Employment and Workplace Relations legislation
- requirements of Equal Employment Opportunity and Disability Discrimination legislation
- site requirements.
- advice and guidelines relating to regulatory and legislative requirements for mechanical demolition processes
- advice and instructions from structural engineer regarding loads on suspended floors
- approved demolition plan
- current Australian standards relating to operating remote-controlled plant on demolition sites
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- memos
- safe work procedures relating to the conduct of mechanical demolition processes
- safety data sheets
- site signage
- site traffic management plan
- verbal, written and graphical instructions, including manufacturer specifications and instructions where specified
- work bulletins
- work schedules, plans and specifications.
- emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances and the safe handling or quarantining procedures for each type, including:
  - animal residue
  - asbestos
  - dust
  - lead-based paints
  - pesticide residue
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including operational risk

Work health and safety requirements must comply with state or territory legislation and project safety plan may include:
assessments and treatments associated with:
- falling objects
- lighting
- load bearing capacities of suspended floors
- plant movement
- power cables, including overhead service trays, cables and conduits
- restricted access barriers
- surrounding structures
- traffic control
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- traffic management, barriers and signage
- use of tools and equipment
- workplace environmental requirements.

**Environmental requirements** may include:
- clean-up management
- dust and noise control
- sedimentation control
- vibration management
- waste management.

**Attachments** may include:
- backhoe
- buckets
- buckets, including 4:1 buckets
- chain digger
- clamshell buckets
- concrete crushers
- concrete cutter or saw
- crushing jaws
- dozer blade
- drilling equipment
- forklift
- front end loader (FEL)
- grabs
- grapples
- hammer
- metal shears
- planers
- power broom
- profiler
- pulverisers
- rippers
- rock breakers
- rotary hoe
- saws
- scabblers
- scarifier
- shears
- side angling device
- tiller/mixer
- vibrating plates.

Checks must include for:
- bulges
- fractures
- leaks
- splits.

Site inspection may include:
- assessing condition of property and surrounds
- communicating with those who may be affected by the demolition task
- determining floor loadings
- erecting scaffolding
- identifying hazardous materials
- identifying position of hoses and cables clear of hazards
- installing supports and bracing
- location of signage and barricades
- providing for site safety.

Safe operating techniques for remote-controlled plant loaders may include:
- emergency shut-down and stopping
- management of hazards and risks, including:
  - bridges
  - buildings
  - cuttings
  - embankments
  - excavations
  - fires
  - hazardous materials
  - overhead and underground services
  - structures
  - traffic
  - trees
  - uneven or unstable terrain
- safe parking practices ensuring:
access ways are clear
- equipment or machinery is:
  - located a safe distance from excavations
  - located away from overhangs and refuelling sites
  - secured from unauthorised access or movement.

**Hazards arising from demolition process** may include:
- dust
- fire
- noise
- vibration.

**Demolition tasks** that may be completed using remote-controlled plant and attachments include:
- controlled collapse of structures by:
  - pulling using cables
  - pushing
- demolition of:
  - buildings
  - chemical or manufacturing plants
  - chimneys
  - tanks
  - towers
- excavation of:
  - basements
  - footings
  - slabs
- loading materials
- processing and sorting materials.

**Communication** may include the use of:
- hand signals
- mobile equipment
- radios.

**Operator maintenance tasks:**
- must include:
  - cleaning
  - authorised servicing
  - monitoring, recording and reporting faults
- may include:
  - authorised minor replacements
  - assisting maintenance personnel during maintenance and repair activities.

CPCCDE3026A Operate excavators at ground level to demolish building elements

Modification History

New unit.
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

Unit Descriptor

This unit of competency specifies the outcomes required to operate an excavator at ground level in the demolition industry. The unit covers planning and preparing; conducting machine pre-operational checks; preparing a site for the demolition process; following demolition procedures for different building elements; selecting, removing and fitting attachments; removing demolition materials and waste; relocating excavators; and carrying out machine operator maintenance.

Application of the Unit

This unit of competency supports the role of demolition workers who demolish residential, commercial and industrial buildings and structures.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements apply to demolition work in different States and Territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare. 1.1 *Compliance requirements* relevant to excavator operations are accessed, interpreted and applied.

1.2 Work instructions are obtained from relevant *information*, confirmed with team members and other relevant personnel, and applied to planning and preparation.

1.3 *Work health and safety (WHS) requirements* are identified and applied to task planning according to safety plans and policies.

1.4 *Environmental requirements* are identified for the project according to environmental plans and regulatory obligations.

1.5 Tools and equipment for pre-start checks and operator maintenance tasks are checked for serviceability, and faults are rectified and reported.

1.6 Excavator pre-start, start-up, park and shut-down operational checks are conducted according to manufacturer recommendations.

1.7 Excavator controls and functions are checked for serviceability, and faults are rectified and reported.

2 Select, check and fit attachments. 2.1 Excavator *attachments* are selected to carry out tasks, consistent with job requirements.

2.2 Attachments and connections are checked for excessive
wear, and replaced and reported as required.

2.3 Attachments are securely fitted according to safe work method, and applicable safety retaining device is used according to manufacturer specifications and workplace requirements.

2.4 Hydraulic components are checked and faults are rectified or components replaced, and reported.

2.5 Operation of hydraulic system is tested before applying load according to manufacturer specifications and workplace requirements.

2.6 Attachment operation is tested by raising and lowering, and attachment is securely locked in position for travel according to manufacturer specifications and workplace requirements.

2.7 Attachments are removed, maintained and stored according to manufacturer specifications and workplace requirements.

3 Prepare demolition site.

3.1 Requirements of site demolition plan are determined and discussed with team members according to workplace procedures.

3.2 Site inspection of property or dilapidation survey is conducted to determine condition of work site and surrounds before work begins, and safe work method statement is amended and approved as required.

3.3 Confirmation is obtained from supervisor and regulatory authorities that specified services, above and below ground, have been disconnected and any remaining live services are identified and protected.

3.4 Hazardous material is identified for separate handling according to workplace requirements and instructions.

3.5 Mechanical equipment and plant are positioned in operating locations and appropriate exclusion zone and traffic control are arranged.

6 Clean up.  

6.1 Work area is cleared and materials and waste are sorted and located for removal, as required and according to site demolition project environmental management plan.

6.2 Maintenance tools and equipment are cleaned, checked, maintained and stored.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - recognise signs indicating undiscovered hazards on a demolition site, for example presence of termites
  - respond to change, such as differences in current work site environmental and sustainability requirements

- numeracy skills to:
  - check levels of lubricants in equipment
  - estimate weight of volumes of demolition debris
  - perform measurements and calculations associated with work, such as when determining load capacity of equipment

- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report hazards on the work site, including faults in tools, attachments, equipment and materials
  - use language and concepts appropriate to cultural differences

- reading skills to:
  - interpret documentation relating to work requirements, including:
    - drawings and specifications
    - job safety analyses (JSA)
    - safe work method statements (SWMS)
    - safety data sheets (SDS)
  - understand written instructions, procedures and signage

- writing skills to complete pre-operational checklists, equipment fault forms and log sheets

Required knowledge

- general construction terminology
- hazards associated with the operation of excavators from ground level on residential, commercial and industrial demolition sites
- methods for materials storage and disposal, including environmentally friendly waste management
- method of operation and maintenance requirements of excavator and attachments
- types, characteristics, uses and limitations of excavators in the demolition industry
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by observation of on-site operation of an excavator and the use of different attachments to complete demolition tasks on large and complex buildings, working as part of a team.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to operate an excavator from ground level to complete the following mandatory demolition tasks:

- fit and secure grapples, buckets and hydraulic hammers and remove, maintain and store attachments after use
- position excavator appropriately and load a truck with building rubble using a bucket
- progressively and, with reference to the pre-planned and controlled sequencing of tasks outlined in the demolition plan, logically demolish all or part of three different types of buildings or structures including breaking up a concrete floor or structure using a hydraulic hammer attachment
- segregating building materials effectively for recycling or disposal
- a person should also demonstrate:
  - selection of appropriate sized machine and attachments
  - identification of appropriate machine (operator) protection or guarding
  - knowledge of the requirements, procedures and instructions for conducting demolition excavator operations
  - implementation of requirements, procedures and techniques for the safe, effective and efficient completion of demolition excavator operations, including:
    - working with others to undertake and complete demolition excavator operations that meet all of the required outcomes
    - consistent timely completion of demolition excavator operations that safely, effectively and efficiently meet the required outcomes.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- must meet relevant compliance requirements.
Resource implications for assessment include:

- an induction procedure
- realistic tasks covering the mandatory task requirements
- relevant specifications and work instructions
- plant, tools and equipment as listed appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- information relevant to each task, such as safety data sheets, work plans and approved specifications, forms and procedures manuals.

Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:

- direct observation of mandated tasks
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Compliance

- Australian standards relevant to plant operation and
requirements may include:

- demolition
- codes of practice for plant operation
- legislative and regulatory requirements for plant operation
- manufacturer guidelines and specifications
- organisational requirements and procedures
- requirements of Employment and Workplace Relations legislation
- requirements of Equal Employment Opportunity and Disability Discrimination legislation
- site requirements.

Information regarding work task instructions may include:

- advice and guidelines relating to regulatory and legislative requirements for mechanical demolition processes
- approved demolition plan
- current Australian standards relating to operating excavators to demolish building elements
- diagrams or sketches including identification of load bearing and non-load bearing elements
- instructions issued by authorised organisational or external personnel
- memos
- safe work methods statements (SWMS) relating to the conduct of mechanical demolition processes, including identification of suspended elements that may require propping
- safety data sheets
- site signage
- site traffic management plan
- verbal, written and graphical instructions, including manufacturer specifications and instructions where specified
- work bulletins
- work schedules, plans and specifications.

Work health and safety requirements must comply with state or territory legislation and project safety plan may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including asbestos, lead-based paints, dust, pesticide residue, animal residue and the safe handling or quarantining procedures for each
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including operational risk
assessment and treatments associated with:
- falling objects
- lighting
- plant movement
- power cables, including overhead service trays, cables and conduits
- restricted access barriers
- surrounding structures
- traffic control
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- traffic management, barriers and signage
- use of tools and equipment
- workplace environmental requirements.

**Environmental requirements may include:**
- control of spills and leaks of hydraulics, oil and fuels
- dust and noise control
- sedimentation control
- vibration management
- waste management.

**Attachments may include:**
- buckets
- grapples
- hammers
- magnets
- pulverisers
- rippers
- rock breakers
- shears.

**Checks must include for:**
- bulges
- factures
- leaks
- splits.

**Site inspection may include:**
- assessing condition of property and surrounds
- communicating with those who may be affected by the demolition task
- erecting scaffolding for exclusion zones and public protection, if applicable
- identifying hazardous materials
Safe operating techniques for excavators may include:

- identifying position of hoses and cables clear of hazards
- installing supports and bracing
- location of signage and barricades
- providing for site safety.
- emergency shut-down and stopping
- management of hazards and risks, including:
  - buildings
  - cuttings
  - embankments
  - excavations
  - fires
  - hazardous materials
  - overhead and underground services
  - structures
  - traffic
  - trees
  - uneven or unstable terrain
- safe parking practices ensuring:
  - access ways are clear
  - equipment or machinery is:
    - located a safe distance from excavations
    - located away from refuelling sites
    - secured from unauthorised access or movement.

Hazards arising from demolition process may include:

- dust
- fire
- fumes
- noise
- vibration.

Demolition tasks that may be completed using an excavator and attachments may include:

- controlled collapse of structures by:
  - pulling using cables
  - pushing
- demolition of:
  - buildings
  - chemical or manufacturing plants
  - chimneys
  - tanks
  - towers
- excavation of:
  - basements
  - footings
Communication may include the use of:

- hand signals
- mobile equipment
- radios.

Monitoring of work site conditions and progress must include:

- degraded structures
- hazardous materials
- live edges
- overhead and below ground services
- potential effect to neighbouring properties
- potential effect to the general public
- trenches
- unconsolidated ground or fill materials
- underground storage tanks.

Operator maintenance tasks:

- authorised servicing
- cleaning
- daily checks
- monitoring, recording and reporting faults
- may include:
  - authorised minor replacements
  - assisting maintenance personnel during maintenance and repair activities.

Unit Sector(s)

Demolition

Custom Content Section

Not applicable.
CPCDE4001A Plan and prepare for activities on demolition sites

Modification History

New unit.
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

Unit Descriptor

This unit of competency specifies the outcomes required to assess the size and scope of large demolition projects, including structures or installations above 15 metres, on different types of sites and identify the resources required to complete the project on time and within budget. It includes communication of project requirements to team members in preparation for demolition work to commence.

Application of the Unit

This unit of competency supports the role of demolition supervisors who identify and plan resource requirements for large demolition projects, including structures or installations above 15 metres. It involves working with others and leading a team.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements apply to demolition work in different States and Territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. **Assess demolition site and scope of work.**
   1.1 Demolition plan is reviewed and site inspected to evaluate size and complexity of demolition tasks.
   1.2 Concurrent work of other construction teams is assessed and communication channels established or confirmed.
   1.3 Site access and egress and traffic management plan are assessed, and additional provisions or changes negotiated as required.
   1.4 Provisions for site storage and amenities are assessed and additional provisions or changes arranged as required.
   1.5 General site work health and safety (WHS) and environmental requirements are confirmed and applied to planning.
   1.6 *Regulatory compliance requirements* are confirmed and applied to planning.
   1.7 HAZMAT audits are arranged prior to demolition work start date and findings are applied to planning.

2. **Schedule demolition activities.**
   2.1 Demolition plan is analysed and individual *demolition tasks* prioritised according to WHS, site and *resource requirements*.
   2.2 Concurrent tasks are planned and sequenced to maximise efficient use of resources.
   2.3 Resource hours required for individual demolition tasks are estimated with allowances for contingencies.
2.4 Timelines for different project stages are calculated, compared to demolition plan, and adjustments are made as required.

2.5 Project schedule is prepared, reviewed by relevant personnel, amended as required and processed according to workplace requirements.

3 Prepare safe work method statements for individual demolition activities.

3.1 **Hazards and risks** associated with each demolition task are assessed by site inspection, discussion with relevant WHS and site personnel, and consideration of sequencing of tasks.

3.2 Risk management strategies are analysed according to the hierarchy of controls in consultation with relevant WHS and site personnel.

3.3 Safe work method statement (SWMS) is prepared for each demolition task with instructions for review immediately before work starts to re-assess work site conditions resulting from previous tasks.

4 Arrange resources for demolition activities.

4.1 Resource requirements for demolition tasks are confirmed, and requirements for concurrent tasks calculated according to project schedule.

4.2 Arrangements are made for delivery of required plant, tools and equipment according to project schedule.

4.3 Specialised skill requirements for different project stages are determined and skills of available team members assessed to identify skill shortages.

4.4 Recruitment of additional team members with required skills is conducted and completed within required timeframe for prompt start to work.

4.5 Team members are allocated to tasks and human resource requirements for all project stages are checked and confirmed as complete.
5 Conduct site induction and team briefing for demolition project.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - assimilate past experience to develop and implement solutions to problems
  - respond to change, such as differences in quality standards required by clients
- numeracy skills to:
  - calculate resource requirements
  - schedule tasks
- oral communication skills to:
  - conduct team briefings and direct staff
  - develop and maintain relationships with clients and other relevant personnel
- reading skills to interpret contractual documentation
- writing skills to prepare safe work method statements

Required knowledge

- contract management strategies
- customer service strategies
- demolition procedures, techniques and safety requirements
- demolition site inspection procedures
- hazards and risks existing or arising on demolition sites and relevant risk management strategies
- legislation, regulations, codes and standards relating to different stages of the demolition process
- plant, tools and equipment required for demolition tasks, including:
  - permits and licences required
  - safe operating procedures
- project management strategies
- quality management strategies
- team leadership strategies
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment
This unit of competency could be assessed by reviewing the planning and preparation for individual demolition activities in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
A person should demonstrate the ability to plan and prepare for individual demolition tasks on two different large demolition projects, one of which must involve structures or installations above 15 metres, including:

- interpreting and applying to planning:
  - contractual requirements
  - relevant legislation, regulations, codes and standards, including WHS, environmental and quality requirements
- inspecting demolition sites for existing hazards and risks and applying relevant risk management strategies to planning
- planning demolition tasks to ensure:
  - efficient use of resources
  - timely completion of tasks to required standards
- preparing safe work method statements for different demolition tasks in consultation with relevant personnel
- briefing team members to ensure understanding of requirements.

Context of and specific resources for assessment
Assessment of this unit:

- must be in the context of the work environment
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks covering the mandatory task requirements
- support materials appropriate to activity, including:
  - access to industry information relating to legislation, regulations, codes and standards
  - contractual information and work specifications.

Method of assessment
Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:
- direct observation of tasks in real work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing managers or specialist training staff.

**Guidance information for assessment**

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Regulatory compliance requirements** must include:

- permits and licences for different tasks
- noise limitations
- lighting requirements
- traffic movement requirements.

**Demolition tasks** must include:

- manual demolition of:
  - floors
  - frame
  - roofs
  - structural members
  - walls
- mechanical demolition, including work on suspended floors
  - induced collapse
  - tasks involving special conditions or requirements, such as:
    - arched roofs, domes, masonry and brick arches
    - basements, cellars and vaults
- chimneys and spires
- facade retention
- lift shafts
- pre- and post-tensioned concrete
- pre-cast concrete panels
- pylons and masts
- storage tanks and pipelines
- structurally unsound buildings or structures.

**Resource requirements**

must include:

- equipment
- human resources, including personnel with:
  - specialised skills
  - licences to operate plant and equipment
- materials
- plant
- tools.

**Assessment of hazards and risks**

must include:

- adjacent buildings
- debris
- exposure to:
  - dust
  - fumes
  - noise
  - ultraviolet (UV) rays
  - vibrations
- evidence of undocumented damage, such as by:
  - fire
  - termites
- fall hazards
- fragile roofing
- hazardous materials
- lifting and handling of heavy materials and components
- loading of demolition materials and plant on suspended floors
- penetrations
- people on site
- pits
- plant and equipment
- services, including:
  - electricity
  - gas
  - telecommunications
  - water
• which may be:
  • overhead
  • underground
  • undocumented
  • within elements of the structure
• storage or placement of demolition materials, plant, tools and equipment
• structural integrity of the building to be demolished at all stages of the project, such as after partial demolition of:
  • roof
  • walls
• weather conditions, especially wind speed.

CPCCDE4002A Plan and supervise demolition work to minimise environmental and public health and safety impact

Modification History
New unit.
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

Unit Descriptor
This unit of competency specifies the outcomes required to monitor and manage large demolition projects, including structures or installations above 15 metres, to minimise environmental and public health and safety impact. It includes interpreting and meeting relevant compliance requirements, and developing and implementing proactive measures to exceed them where possible.

Application of the Unit
This unit of competency supports the work of demolition project management staff responsible for regulatory compliance and minimising environmental contamination and public health and safety impacts on structures or installations above 15 metres.

Licensing/Regulatory Information
Licensing, legislative, regulatory or certification requirements apply to demolition work in different States and Territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Assess potential impacts of demolition tasks.
   1.1 Environmental and public health and safety compliance requirements for the demolition site and geographic locality are determined.
   1.2 Safe work method statements (SWMS) for individual demolition tasks are reviewed and potential impacts on environment are determined.
   1.3 Safe work method statements for individual demolition tasks are reviewed and potential impacts on public health and safety are determined.

2 Identify measures to minimise impacts of demolition work on the environment.
   2.1 Strategies to minimise impacts on air quality are investigated, selected and incorporated into procedures.
   2.2 Strategies to minimise water wastage and impacts on stormwater are investigated, selected and incorporated into procedures.
   2.3 Strategies to minimise energy wastage and employ renewable energy technologies are investigated, selected and incorporated into procedures.
   2.4 Strategies to minimise material wastage and to ensure safe disposal of hazardous and waste materials are investigated, selected and incorporated into procedures.
3 Identify measures to minimise impacts of demolition work on the public.
   3.1 Site containment, exclusion and signage strategies are reviewed and amended to maximise awareness of, and minimise impacts on, the public.
   3.2 Pedestrian and traffic management plan for site and site perimeter is reviewed and amended to minimise risks to the public.
   3.3 Fall prevention strategies for both personnel and materials are reviewed and amended to minimise risks to site personnel and the public.
   3.4 Noise, air pollution and vibration management strategies are reviewed and amended to minimise impact on the public.

4 Brief team and supervise implementation of impact minimisation strategies.
   4.1 Strategies for minimising impact of demolition work on the environment and on public health and safety are explained to demolition teams.
   4.2 Amended safe work method statements are distributed and questions invited and responded to, as required.
   4.3 Implementation of strategies to minimise impact of demolition work on the environment and on public health and safety is monitored and directed.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - respond to change, such as differences in environmental and public health and safety standards required by clients
  - use past experience to develop and implement solutions to problems
- numeracy skills to calculate or estimate:
  - energy use
  - predicted volume of waste
- oral communication skills to:
  - motivate and direct team members
  - develop and maintain relationships with clients and other relevant personnel
- reading skills to interpret work specifications
- writing skills to amend work procedures and safe work method statements

Required knowledge

- demolition procedures, techniques and safety requirements
- demolition site inspection procedures
- environmental and public health and safety hazards and risks existing or arising on demolition sites, and relevant risk management strategies
- legislation, regulations, codes and standards relating to environmental and public health and safety on demolition sites
- plant, tools and equipment required for demolition tasks and:
  - permits and licences required
  - safe operating procedures
- project management strategies
- quality management strategies
- strategies to minimise environmental and public health and safety risks on and around demolition sites
- team leadership strategies
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by reviewing the planning of demolition activities to minimise environmental and public health and safety impacts, and observing the supervision of the implementation of planned strategies in the workplace.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to plan and supervise the implementation of strategies to minimise environmental and public health and safety impacts on two different large demolition projects, one of which must involve structures or installations above 15 metres. The evidence shall demonstrate:

- analysing potential impacts of demolition activities on the environment and on public health and safety
- interpreting and applying legislation, regulations, codes and standards relating to protecting the environment and public health and safety
- researching and developing strategies to minimise impacts of demolition activities on the environment and on public health and safety
- monitoring demolition activities to ensure effective implementation of planned strategies.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks covering the mandatory task requirements
- support materials appropriate to activity, including:
  - access to industry information relating to legislation, regulations, codes and standards
  - contractual information and work specifications
- human resources and plant, tools and equipment appropriate to the tasks.

Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:

- direct observation of tasks in real work conditions
- questioning to confirm the ability to consistently identify and
correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing managers or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Impacts on the environment** must include:
- dust
- energy use
- excavation
- hazardous material
- material disposal
- sediment
- storage
- stormwater quality
- water use.

**Impacts on public health and safety** must include:
- air pollution relating to:
  - dust
  - fumes
  - smell
- change or damage to public infrastructure
- hours of work
- noise
- vehicle movements
- vibration
- volume of traffic.

CPCCDE4003A Supervise individual activities on demolition sites

Modification History

New unit.
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

Unit Descriptor

This unit of competency specifies the outcomes required to monitor and direct demolition activities on large demolition projects, including structures or installations above 15 metres and on different types of sites to ensure that projects are completed within required timeframe and to specifications. It includes overseeing preparation for demolition work, reviewing safe work methods prior to task commencement, monitoring and directing team members throughout task completion, and overseeing site clean-up activities.

Application of the Unit

This unit of competency supports the role of demolition supervisors who lead and manage team members to complete different demolition activities on different types of sites, and on structures or installations above 15 metres.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements apply to demolition work in different States and Territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites

Nil

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - assimilate past experience to develop and implement solutions to problems
  - respond to change, such as differences in quality standards required by clients
  - numeracy skills to interpret and confirm measurements for demolition tasks from plans and specifications
  - oral communication skills to:
    - motivate and direct team members
    - develop and maintain relationships with clients and other relevant personnel
  - reading skills to interpret work specifications
  - writing skills to amend safe work method statements

Required knowledge

- contract management strategies
- customer service strategies
- demolition procedures, techniques and safety requirements
- demolition site inspection procedures
- hazards and risks existing or arising on demolition sites and relevant risk management strategies
- legislation, regulations, codes and standards relating to demolition
- plant, tools and equipment required for demolition tasks, including:
  - permits and licences required
  - safe operating procedures
- project management strategies
- quality management strategies
- team leadership strategies
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by observation of the finalisation of demolition activities and supervision of property handover in the workplace.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to supervise demolition activities on two different large demolition projects, one of which must involve structures or installations above 15 metres, up to the stage where all structures have been demolished, including underground structures. The person should demonstrate the ability to:

- interpret and apply:
  - contractual requirements
  - legislation, regulations, codes and standards relevant to different demolition tasks and processes, including WHS, environmental and quality requirements
- monitor and manage demolition activities to ensure:
  - efficient use of resources
  - timely completion of tasks to required standards
- motivate and direct team members to ensure timely completion of tasks to required standards
- inspect and monitor site for existing and arising hazards and risks, and implement relevant risk management strategies
- complete relevant project documentation.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks covering the mandatory task requirements
- support materials appropriate to activity, including:
  - access to industry information relating to legislation, regulations, codes and standards
  - contractual information and work specifications
- human resources and plant, tools and equipment appropriate to the tasks.

Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the
following methods:

- direct observation of tasks in real work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing managers or specialist training staff.

**Guidance information for assessment**

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Permit applications** must include:

- building (demolition)
- hoarding
- hot work
- protection of assets
- temporary fencing.

**Demolition tasks** must include:

- manual demolition of:
  - floors
  - frame
  - roofs
  - structural members
  - walls
  - mechanical demolition, including work on suspended floors
  - induced collapse
  - tasks involving special conditions or requirements, such as:
    - arched roofs, domes, masonry and brick arches
- basements, cellars and vaults
- chimneys and spires
- facade retention
- lift shafts
- pre- and post-tensioned concrete
- precast concrete panels
- pylons and masts
- storage tanks and pipelines
- structurally unsound buildings or structures.

CPCCDE4004A Finalise demolition activities and supervise property handover

Modification History

New unit.
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

Unit Descriptor

This unit of competency specifies the outcomes required to ensure that large demolition projects, including structures or installations above 15 metres on different types of sites are completed within the required timeframe and to specifications, with agreed alterations to specified work clearly recorded.
It includes ensuring that the property is handed over to the owner or their nominated representative within projected timeframes and that relevant documentation is completed and processed.

Application of the Unit

This unit of competency supports the role of demolition supervisors who manage the final stages of large demolition projects, including those involving structures and installations over 15 metres on different types of sites, from the stage where all of the structures on the site, including underground structures, have been demolished, up to the handover of the site.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements apply to demolition work in different States and Territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Plan handover of property.

1.1 Information relating to demolition contract is reviewed to confirm timelines for completion and site handover specifications.

1.2 Handover process is confirmed and scheduled with relevant stakeholders and required amendments to timeframes or handover specifications are negotiated and recorded.

1.3 **Demolition finalisation tasks** are confirmed and scheduled, and **resources** required are assessed and arranged according to workplace and site requirements.

1.4 Work health and safety (WHS) requirements are determined and applied to task planning according to safety plans and policies.

1.5 Environmental requirements are identified for the project according to environmental plans and regulatory obligations.

1.6 Demolition team is briefed and demolition finalisation tasks are allocated and confirmed as understood by team members according to workplace procedures.
2 Monitor quality and timeliness of job completion.

2.1 Audit of property is conducted to determine condition of work site and surrounds before initiating demolition finalisation tasks, and safe work method statements (SWMS) are adjusted in consultation with relevant personnel, as required.

2.2 Scheduled tasks are started within required timeframes and progress is monitored to completion to ensure deadlines are met.

2.3 Hazard control and regulatory compliance are monitored throughout the finalisation process and team members are directed to use specific procedures or techniques, as necessary.

2.4 Completed tasks are assessed against specifications; and discrepancies are noted and resolved or recorded in relevant documentation.

2.5 Property is inspected and checked against finalisation schedule and quality requirements; and discrepancies are identified, and resolved or recorded in relevant documentation.

3 Conduct handover site inspection with stakeholders.

3.1 Handover site inspection appointment is confirmed with property owner or authorised representatives and other relevant personnel, as required.

3.2 Procedures and required documentation for handover site inspection are confirmed with stakeholders.

3.3 Records relating to completed demolition work are reviewed and agreed variations to initial specifications are recorded or confirmed in completion documentation.

3.4 Site safety inspection is conducted and site safety induction arranged or delivered to stakeholders prior to handover site inspection.

3.5 Sections of site are inspected according to handover site inspection schedule and signed off as complete; or discrepancies are discussed and solutions negotiated and recorded.
4 Finalise work and complete handover documentation.  

4.1 Solutions to discrepancies discovered on handover site inspection are implemented according to negotiated schedule and monitored and checked for completion to required standard.

4.2 Site clearance is supervised and checked to ensure all plant, tools, equipment, materials and waste are removed and ground prepared according to agreed standard.

4.3 Final documentation is prepared and processed according to project and workplace requirements.

4.4 Site is secured according to project and workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - assimilate past experience to develop and implement solutions to problems
  - respond to change, such as differences in quality standards required by clients
- numeracy skills to:
  - calculate resource requirements
  - schedule tasks
- oral communication skills to:
  - conduct team briefings and direct staff
  - develop and maintain relationships with clients and other relevant personnel
- reading skills to interpret contractual documentation
- writing skills to prepare project finalisation documentation, such as site handover documents

Required knowledge

- contract management strategies
- customer service strategies
- demolition procedures, techniques and safety requirements
- demolition site audit procedures
- hazards and risks existing or arising on demolition sites and relevant risk management strategies
- legislation, regulations, codes and standards relating to relating to the finalisation of demolition tasks and handing over the property
- plant, tools and equipment required for demolition tasks, including:
  - permits and licences required
  - safe operating procedures
- project management strategies
- quality management strategies
- team leadership strategies
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by observation of the finalisation of demolition activities and supervision of property handover in the workplace.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to oversee the finalisation of two different large demolition projects, one of which must include structures or installations above 15 metres, from the stage where all structures have been demolished, including underground structures, and up to satisfactory handover of the site to the client or their representative. The person should demonstrate the ability to:

- interpret and apply:
  - contractual requirements
  - relevant legislation, regulations, codes and standards including WHS, environmental and quality requirements relevant to the finalisation of demolition tasks and property handover
- plan demolition finalisation tasks to ensure:
  - efficient use of resources
  - timely completion of tasks to required standards
- brief and direct team members to ensure timely completion of tasks to required standards
- audit and monitor site for existing and arising hazards and risks and implement relevant risk management strategies
- liaise with client and relevant stakeholders to build and maintain relationships and facilitate timely completion of project
- prepare relevant documentation for property handover.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks covering the mandatory task requirements
- support materials appropriate to activity, including:
  - access to industry information relating to legislation, regulations, codes and standards
• contractual information and work specifications
• human resources and plant, tools and equipment appropriate to the tasks.

Method of assessment
Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:
• direct observation of tasks in real work conditions
• questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• review of relevant authenticated documentation from third parties, such as existing managers or specialist training staff.

Guidance information for assessment
This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. driver, rigger and dogman.
3.3. Dogging equipment and tools are safely **handled** with mechanical lifting devices.

4. Clean up.
4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - evaluating own actions and making judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
  - teamwork skills to coordinate own work with others to action tasks and relate to
REQUIRED SKILLS AND KNOWLEDGE

people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- crane operations
- designs and functions of lifting equipment
- dogging equipment
- dogging handling techniques
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- relevant Acts, regulations and codes of practice
- safe working load tags
- signalling methods
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and
EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- safely handle dogging equipment and associated tools for all mandatory equipment and tools specified in the range statement.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with...
disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be
EVIDENCE GUIDE

obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to handling and using dogging tools and equipment
- relevant Australian standards
- safe work procedures relating to handling and using dogging tools and equipment
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
RANGE STATEMENT

Project safety plan and may include:

- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Quality requirements include:

- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- noise
- vibration
- waste management.

Dogging equipment:

- includes:
  - single leg slings
  - four leg slings
RANGE STATEMENT

- chain slings
- synthetic webbing slings
- two leg sling
- brick cages
- chocks and wedges
- flexible steel wire rope
- kibbles
- natural ropes
- packers
- personnel box
- rigging screws
- rubbish bins
- shackles and eye bolts
- spreader beams
- turn buckles
- whistles

- may include:
  - cantilevered crane loading platforms
  - perimeter safety screens and shutters
  - rescue boxes
  - two-way radios.

Stacking and storage include:

- banding
- pallets
- stillage.

Handling methods for dogging equipment include:

- manual handling
- assisting the forklift driver, rigger and dogman
- basic mechanical lifting devices
- slings.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. *Tools and equipment* selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Materials quantity requirements are calculated in accordance with plans, specifications and *quality requirements*.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Select dogging equipment. | 2.1. Resources, materials and equipment are selected and inspected for compliance with job specifications.  
2.2. Job sequencing schedule is communicated with team members and others to ensure coordination.  
2.3. Load mass is *calculated* and confirmed using load charts and standard calculations.  
2.4. Loads in *slings* and equipment are calculated to suit job requirements. |
| 3. Sling loads. | 3.1. *Lifting devices* are assembled and erected for the movement of load.  
3.2. Using appropriate *load slinging method*, loads are slung to *crane* ready for lifting. |
| 4. Shift loads. | 4.1. Loads are shifted ensuring stability and in compliance with work method statement.  
4.2. Load is directed to landing position using communications in compliance with Australian standards and recognised work practices.  
4.3. Load is landed in required position on packing or bearers. |
| 5. Remove dogging | 5.1. Load shifting equipment is dismantled and inspected |
ELEMENT   PERFORMANCE CRITERIA

5. Logbook and site records are completed to company requirements.

6. Clean up.

6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

6.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

6.3. Work completion procedures are applied and relevant personnel notified that work is finished.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - evaluating own actions and making judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental
REQUIRED SKILLS AND KNOWLEDGE

and sustainability frameworks or management systems

- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- crane operations and limitations
- designs and functions of lifting equipment
- dogging equipment
- dogging techniques
- elevated work platforms
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- logbooks
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- relevant Acts, regulations and codes of practice
- safe working at heights and fall arrest
- safe working load tags
- signalling methods and communications
- types, characteristics, uses and limitations of plant, tools and equipment
- weather and ground considerations
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, read tags, sling, load, direct and land loads in conjunction with a slewing mobile crane with a telescopic boom and a winch, out of sight for:
  - rigid heavy loads to two thirds capacity of the crane
  - luff movements, boom retract and boom extend, slew right and slew left, winch up and down in combination
  - a flexible load with a minimum of three lifting points
  - using hand signals and whistle from minimum radius to maximum radius.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements
EVIDENCE GUIDE

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
EVIDENCE GUIDE

- Competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace.
- Where the assessment is part of a structured learning experience, the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.
- All assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- Diagrams or sketches
- Instructions issued by authorised organisational or external personnel
- Manufacturer specifications and instructions,

  - trip hazards
  - work site visitors and the public
RANGE STATEMENT

- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:
- brick cages
- kibbles
- personnel cages
- rescue cages
- rubbish bins
- spreader bars and beams.

Quality requirements include:
- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Environmental requirements include:
- clean-up management
- noise
- vibration
- waste management.

Calculations include:
- delivery dockets
- load charts
- load share
- pre-cast compliance charts
- safe working loads
- standard calculations.

Slings include:
- chain
- flexible steel wire rope
- natural or synthetic fibre.

Lifting devices:
- eye bolts
- lifting clutches
- shackles
- snatch blocks
- tags
- may include:
  - collared eye bolts
RANGE STATEMENT

- equalizing sheaves
- lifting lugs
- rigging screws
- turn buckles.

Load slinging methods include:
- straight sling
- adjustable sling
- reeved sling
- inclined sling.

Cranes include:
- fixed cranes
- hydraulic mobile cranes
- lattice boom mobile cranes
- slewing cranes
- tower cranes.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret drawings and specifications
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- manufacturing and assembly processes in constructing componentry units
- measuring and marking processes and techniques related to assembling units
REQUIRED SKILLS AND KNOWLEDGE

- temporary bracing techniques
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to prepare components and assemble at least one of the assembled unit types listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- comply with organisational policies and procedures, including quality assurance requirements within the context of assembling units
- select and use appropriate processes, tools and equipment to carry out tasks
- indicate visual checking of component parts to ensure right part and right location
- select and use appropriate packing material for protection of surfaces during assembly
- select and apply effective methods of holding components together in an assembly process
- demonstrate sound procedures to ensure joints are closed and true and assembly is square and out of winding
- display sound and safe procedures to fix or secure joints.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory
EVIDENCE GUIDE

or Australian standards’ requirements.

Resource implications for assessment include:

- work area appropriate to task
- working drawings and specifications relevant to task
- procedure documents appropriate to manufacturing processes
- tools, plant and equipment relevant to manufacture process
- material appropriate to proposed project activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with
EVIDENCE GUIDE

- a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining assembling components
- relevant Australian standards
- safe work procedures relating to assembling components
RANGE STATEMENT

- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Planning and preparation

include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Tools and equipment

include:

- air compressor and hoses
- chisels
- hammers
- measuring tapes and rules
- nail guns
- spirit levels
- squares.

Quality requirements

include:

- control of handling procedures
RANGE STATEMENT

- quality of materials
- relevant regulations, including:
  - Australian standards
  - internal company quality policy and standards
  - manufacturer specifications where specified
  - workplace operations and procedures.

Materials include:
- aluminium
- timber.

Assembled units include:
- door and window frames
- doors
- fitments, including cupboards, counters, shelving and robes
- grills
- louvres
- relocatable structures
- roof trusses
- shopfronts
- stairs
- wall frames
- window sashes.

Environmental requirements include:
- clean-up management
- dust and noise
- stormwater protection
- waste management.

Statutory and regulatory authority includes:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Assembly methods may involve:
- clamps
- cramps
- packers and wedges
- platform or frame jigs
- presses.

- Other minor editorial changes

Equivalent to CPCCJN2002A Prepare for off-site manufacturing process

Unit Descriptor
This unit specifies the outcomes required to prepare material for the manufacturing process and assemble components to form manufactured units.

Application of the Unit
This unit of competency supports the achievement of skills and knowledge to prepare for the off-site manufacturing process, which may include working with others and as a member of a team.

Licensing/Regulatory Information
No licensing, legislative and regulatory requirements apply to this unit at the time of endorsement.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret drawings
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- National Construction Code (NCC) and relevant Australian standards
- construction materials and their characteristics
- fasteners and fixings relevant to unit assembly processes
- interpretation of workshop drawings and specifications
- job safety analysis (JSA) and safe work method statements
- measurement and calculation processes relevant to manufacturing work
- types and uses of static machines
- types of adhesives relevant to unit assembly processes
- types of construction material and component manufacturing processes
- workplace and safety requirements.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to prepare materials and components for manufacture and assembly of at least one of the manufactured units or products listed in the range statement, providing evidence of the ability to:

- comply with WHS regulations applicable to workplace operations
- comply with organisational policies and procedures, including quality assurance requirements within the context of preparation of materials
- indicate a clear understanding of construction requirements of maximum and minimum dimension standards and governing authority, where applicable
- adopt and use sound techniques to identify material requirements, including allowances for joints
- indicate a clear understanding of joining methods and method of assembly of unit
- select and use appropriate processes, tools and equipment to carry out tasks
- demonstrate sound techniques in the selection and handling of material for components
- demonstrate sound techniques in handling and storing materials to ensure surfaces and edges are protected
- demonstrate sound and safe techniques to prepare...
material for manufacturing process
- communicate with others to ensure safe and effective workplace operations.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- work area appropriate to task
- working drawings and specifications relevant to task
- procedure documents appropriate to manufacturing processes
- tools, plant and equipment relevant to manufacturing process
- materials appropriate to proposed project activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.
Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

*Information* includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- memos
- regulatory and legislative requirements pertaining preparing for an off-site manufacturing process
- relevant Australian standards
- safe work procedures relating to preparing for an
off-site manufacturing process
  - SDS
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

Planning and preparation include:
  - assessment of conditions and hazards
  - determination of work requirements and safety plans and policies
  - equipment defect identification
  - work site inspection.

Work health and safety is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
  - emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
  - hazard control
  - hazardous materials and substances
  - organisational first aid
  - PPE prescribed under legislation, regulations and workplace policies and practices
  - safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
    - concealed services (water, power and gas)
    - lighting
    - restricted access barriers
    - traffic control
    - work site visitors and the public
    - working at heights
    - working in confined spaces
    - working in proximity to others
  - use of firefighting equipment
  - use of lifting equipment
  - use of machines
  - use of tools and equipment
  - workplace environmental requirements and safety.

Tools and equipment include:
  - angle grinders
  - bevels
  - bolt-cutters
  - buzzers
- circular saws
- compressors
- docking saws
- drop saws
- guillotines
- hammers
- measuring tapes
- metal cutting saws
- overhead/pendant cranes and forklifts
- squares
- thicknessers
- trolleys
- wire cutters.

**Quality requirements** include:
- control of handling procedures
- cutting and dressing procedures
- quality of materials
- relevant regulations, including:
  - internal company quality policy and standards
  - manufacturer specifications where specified
  - National Construction Code
  - relevant Australian standards
  - workplace operations and procedures
- use and maintenance of equipment
- workplace operations and procedures.

**Materials** include:
- aluminium
- laminated material
- medium density fibreboard (MDF)
- metallic and non-metallic materials
- plastic with solid core
- plywood
- timber
- veneered particleboard and sheeting.

**Environmental requirements**
- clean-up management
- dust and noise
- stormwater protection
- waste management.

**Statutory and regulatory authority**
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.
Fixings and fasteners include:
- nail plates
- nails
- nuts and bolts
- screws.

Preparation techniques include:
- cutting to length
- dressing to dimensional size
- marking for identification
- ripping to size
- stacking.

Component parts include:
- balusters
- bearers
- handrailing
- joists
- multiple railing
- newels
- risers
- strings
- treads.

Manufactured units or products include:
- doors
- fitments
- prefabricated framework
- shopfronts
- stairs
- windows.

| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for planning and preparation purposes.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and *quality requirements*.  
1.6. *Materials to be packaged* appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and *statutory and regulatory authority* requirements, and are applied. |
| 2. Identify and select appropriate packaging. | 2.1. *Packaging materials* are selected to supervisor's instructions and job specification.  
2.2. Wrapping, enclosing and packaging techniques are identified.  
2.3. Special items in bulk, finish or value are identified for special packaging requirements. |
| 3. Prepare for handling and transporting manufactured products. | 3.1. *Packaging processes* are carried out to enclose and protect item or unit for handling and transporting.  
3.2. Loose packaging, such as cover sheets and packaging cushions, is selected for transporting. |
| 4. Undertake appropriate handling and transporting techniques for manufactured products. | 4.1. Special packaging, if required, is obtained and used.  
4.2. Packaged units are covered for transportation.  
4.3. Loaded units are packed and secured for transportation. |
| 5. Clean up. | 5.1. Area is cleaned and waste material removed.  
5.2. Tools and equipment are cleaned, maintained and stored. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- basic packaging techniques
- construction products and their protection requirements
- materials handling related to work orientation
- measurement and calculations related to packaging products
- organisation's quality assurance requirements
- transporting techniques
- types of packaging materials and packaging systems
- workplace safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to load and package products for transportation, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- comply with organisational policies and procedures, including quality assurance requirements within the context of protecting finished products
- select and use appropriate handling techniques to minimise opportunity of damage to material surface
- demonstrate safe and effective application of at least two types of packaging processes of products
- adopt and apply effective loose packaging to packaged material for transportation
- identify typical faults and problems that occur and action required to rectify them
- communicate with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.
EVIDENCE GUIDE

Resource implications for assessment include:

- packaging systems appropriate to proposed tasks
- workplace operations
- tools and equipment relevant to proposed activities
- finished products
- packaging and packing materials.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability
EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to packaging manufactured products for transport
- relevant Australian standards
- safe work procedures relating to packaging manufactured products for transport
- signage
- verbal, written and graphical instructions
RANGE STATEMENT

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- work bulletins
- work schedules, plans and specifications.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
REQUIRED SKILLS AND KNOWLEDGE

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - Australian standards
    - operating manual
    - specifications
    - other relevant documentation
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences

- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action

- numeracy skills to workplace requirements

- problem solving skills to recognise and take action to rectify minor faults and problems

- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- basic maintenance of static machines
- job safety analysis (JSA) and safe work method statements
- materials handling related to working with static machines
- types of static machines and their operation
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to set up three separate types of machines for processing at least one of the materials listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace and machine operations
- comply with organisational policies and procedures, including quality assurance requirements within context of carrying out machining operations
- identify and appropriately apply manufacturer recommendations in use of machine
- identify and correctly apply guarding requirements in operating machine
- demonstrate correct setting up procedures for machine operations prior to use
- demonstrate correct start-up procedures for operation of machines
- demonstrate safe and effective operation of machine
- demonstrate correct shut-down and switch-off procedures on completion of machining operation
- clean and maintain machine correctly
- place or remove cutters and blades safely and correctly.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements
EVIDENCE GUIDE

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- workshop location
- access to a range of static machines
- materials appropriate to work orientation of machining operations
- information and specifications of material machining requirements.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances
EVIDENCE GUIDE

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to using static machines
- relevant Australian standards
- safe work procedures relating to using static
RANGE STATEMENT

machines
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.
• assessment of conditions and hazards
• determination of work requirements and safety plans and policies
• equipment defect identification
• work site inspection.

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
• emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
• hazard control
• hazardous materials and substances
• organisational first aid
• PPE prescribed under legislation, regulations and workplace policies and practices
• safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  • concealed services (water, power and gas)
  • lighting
  • restricted access barriers
  • traffic control
  • work site visitors and the public
  • working at heights
  • working in confined spaces
  • working in proximity to others
• use of firefighting equipment
• use of tools and equipment
• workplace environmental requirements and safety.

Tools and equipment include:
• brushes
• feeler gauges
• grease guns
• hammers
• measuring tapes and rules
• oil cans
• packers
RANGE STATEMENT

- screwdrivers
- spanners
- spirit levels
- squares
- wedges.

Quality requirements include:
- attention to specifications of work
- control of handling procedures
- quality of materials used in machining operations
- relevant regulations, including:
  - Australian standards
  - internal company quality policy and standards
  - manufacturer specifications where specified
  - workplace operations and procedures
- use and maintenance of machines
- workplace operations and procedures.

Materials include:
- acrylic or similar materials
- glass or similar materials
- metal or similar materials
- natural soft or hard stone
- timber or similar materials.

Environmental requirements include:
- clean-up management
- dust and noise
- stormwater protection
- waste management.

Statutory and regulatory authority includes:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Static machines include:
- band saws
- buzzers (jointer/surface planer)
- dimensional saws
- docking saws
- grinders
- mortisers
- multi-drill machine
- rip saws
- table sanders
- thicknessers
RANGE STATEMENT

- travelling beam saws
- vertical and horizontal drills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and *quality requirements*.  
1.6. *Materials* appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and *statutory and regulatory authority* requirements, and are applied. |
| 2. Carry out data input adjustments. | 2.1. Programming terms, methods and data storage capacity are determined and stated consistent with job requirements and machine specifications.  
2.2. Program is edited to produce straight and circular tool movements, compensating for tool profiles.  
2.3. Program is entered. |
| 3. Transfer program to machine control. | 3.1. Methods of transferring programs into machine memory are identified and listed.  
3.2. Program is loaded into machine memory using appropriate method. |
| 4. Demonstrate operation of the loaded program to control the machine. | 4.1. *Program operations* are tested through dry run simulation mode, and alarm settings and program are edited where required using the control station.  
4.2. Specified work piece is produced using automatic mode as per manufacturer specifications. |
| 5. Clean up. | 5.1. Debris and waste materials are removed on completion of process.  
5.2. Re-usable and recyclable materials are salvaged and stored. |

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret drawings, specifications and job designs
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- basic keyboarding skills
- basic problem and fault-finding skills with software applications
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply workplace requirements
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

#### Required knowledge

Required knowledge for this unit is:

- construction materials and their characteristics
- hardware requirements for relevant software
- job safety analysis (JSA) and safe work method statements
REQUIRED SKILLS AND KNOWLEDGE

- measuring techniques relevant to dimensions and shape
- range of software applications appropriate to computer numerically-controlled (CNC) equipment
- types and uses of computer-controlled machinery
- types of static machines and machining processes
- workplace and equipment safety requirements.
## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to produce two separate components using any of the materials listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- select and use appropriate processes, tools and equipment consistent with requirements of activity
- apply organisational quality procedures and processes within the context of operating computer-controlled machinery
- select and correctly apply program opening and shut-down procedures
- demonstrate correct procedures to provide data input to achieve requirements of job
- demonstrate sound procedures with machine operated through a reduced speed dry run to check functions and alarms
- produce products to design in accordance with job specifications and drawings
- communicate with others to ensure safe and effective workplace operations
- identify typical faults and problems that may occur and action required to rectify them.

### Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge
EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- CNC machinery applicable to proposed activity
- range of cutters, heads and required tools and equipment
- machining projects and specifications relevant to activity
- data and software programs relevant to application activity
- material applicable to activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected
EVIDENCE GUIDE

must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

mental abilities.

Required knowledge

Required knowledge for this unit is:

- AS1473 Guarding and safe use of woodworking machinery
- common material identification marking systems
- component setting out techniques
- job safety analysis (JSA) and safe work method statements
- manufacturing processes for door and window construction
- materials and their characteristics relevant to window and door construction
- measuring techniques relevant to setting up static machines
- setting up processes for static machines
- types and uses of static machines
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to machine components for window and door frames, sashes and panelled doors, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within context of machining components for door and window construction
- select appropriate machines to carry out each process
- demonstrate safe and accurate setting up of each machine for each process
- operate each machine safely and efficiently to produce designed result
- demonstrate sound and accurate techniques to produce manufactured components for window and door frames, sashes and a panelled door to set-out design for each component
- identify typical faults and problems that occur and action required to rectify them
- communicate with others to ensure safe and effective workshop operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory
EVIDENCE GUIDE

or Australian standards’ requirements.
Resource implications for assessment include:

- workshop location relevant to activity
- static machines appropriate for application tasks
- tools and equipment appropriate to activity
- set out component material for application processes
- documentation and reference notation relevant to set-out material.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the

2.2. Materials are identified and selected against characteristic and suitability of production components.  
2.3. Material acquisition and preparation techniques are identified and used, as appropriate.  
2.4. Appropriate handling and stacking processes are identified and used. |
| 3. Manufacture components. | 3.1. Types of component parts are identified from working drawings and specifications.  
3.2. Terminology and dimension limitations specified by standards governing design are referenced and able to be identified.  
3.3. Processes for manufacture and joining techniques and components are identified and used.  
3.4. Machines to be used and sequence of machining are selected according to machining processes to be |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
 | carried out.
3.5. Safety procedures for each machine are checked as being in accordance with OHS requirements and AS1473 Guarding and safe use of woodworking machinery.
4. Secure and hold components in place. | 4.1. Component parts and knockdown fittings are identified and prepared for location in full component assembly.
4.2. Adhesive is applied, where applicable, to specification.
4.3. Components are located and held in their assembled positions to design specifications.
5. Fabricate assembled components. | 5.1. Frame or unit is secured by adhesive and cramped to design specification.
5.2. Fastened joints are secured by fasteners/knockdown fittings using appropriate tools to specification.
5.3. Plated joints are secured by placement and pneumatic hammer or press of gangnail plates to specification.
6. Process for manufacture and fabrication sequencing is monitored. | 6.1. Space requirements for preparation, manufacture or assembly of product is identified and located.
6.2. Component parts are acquired and checked for accuracy, quality and suitability according to plans, drawings and specifications.
6.3. Assembling process is identified according to sequential order of events and packaging and handling techniques and methods of protecting material edge and surface are used.
6.4. Common faults in product and process problems are identified and appropriate remedial action taken according to workplace operating procedures.
7. Clean up. | 7.1. Unused materials are recycled or returned to store.
7.2. Tools, equipment and plant are cleaned, maintained and stored.
7.3. Work area is cleaned and waste disposed of safely.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - drawings and specifications
    - MSDS data
    - standards
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations and to identify data
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- AS1473 Guarding and safe use of woodworking machinery
- interpretation of working drawings and specifications
- job safety analysis (JSA) and safe work method statements
- machining processes relevant to joining of joinery components
- materials and their characteristics relevant to joinery unit construction
- materials identification marking systems
- measuring and setting out processes relevant to joinery unit components
- types and characteristics of adhesives relevant to manufacture of joinery units and components
- types and characteristics of fixings and fasteners relevant to joinery unit
REQUIRED SKILLS AND KNOWLEDGE

construction

- types and uses of static machines
- types of fitments and their construction
- types of framework and their construction
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to manufacture at least two joinery units using the materials listed in the range statement, providing evidence of the ability to:

- identify types of joinery unit products
- identify components of joinery unit products
- identify construction and assembly method and process sequencing
- identify maximum and minimum standards and governing authority
- comply with OHS regulations applicable to workplace operations
- organisational quality procedures and processes applied within context of manufacturing components for joinery units
- identify machining processes required and select appropriate machines
- set up machines for machining applications safely and correctly
- safely and efficiently operate machines to accurately carry out designed processes to set-out material
- select and use appropriate processes, tools and equipment for hand application work
- set up and operate portable power tools safely and correctly
- demonstrate safe and efficient procedures in setting up work and using hand tools
- demonstrate safe and efficient procedures in holding components during manufacturing
EVIDENCE GUIDE

- identify typical faults and problems that occur and action required to rectify them
- communicate with others to ensure safe and effective workshop operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- work area and static machines appropriate to task
- working drawings and specifications relevant to activity
- procedure documents appropriate to manufacturing processes
- tools, plant and equipment relevant to manufacture processes
- materials and components appropriate to activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that
EVIDENCE GUIDE

competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.
RANGE STATEMENT

**Information** includes:
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to manufacturing joinery components
- relevant Australian standards
- safe work procedures relating to manufacturing joinery components
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Planning and preparation** include:
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

**Safety (OHS)** is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
RANGE STATEMENT

- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Tools and equipment** include:
- angle grinders
- bevels
- compressors
- crimping machines
- drop saws
- hammers
- hand and pneumatic pop-riveters
- measuring tapes
- overhead/pendant cranes and forklifts
- pneumatic screwdrivers
- punching and forming press tools
- squares.

**Plant** includes:
- air compressors
- portable power tools
- power requirements
- static machines.

**Quality requirements** include relevant regulations, including:
- AS1473 Guarding and safe use of woodworking machinery
- internal company quality policy and standards
- manufacturer specifications where specified
- workplace operations and procedures.

**Materials** include:
- laminated material
- metallic and non-metallic materials
- timber.

**Environmental requirements** include:
- clean-up management
- dust and noise
- stormwater protection
- waste management.

**Statutory and regulatory authority** includes:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Fasteners** include:
- adhesives
- crimping
- knockdown fittings
- nails
- nuts and bolts
RANGE STATEMENT

- pop rivets
- screws.

Preparation techniques include:
- cutting, routing and jointing processes
- dressing process
- stacking procedures.

Processes for manufacture include:
- glass panels
- panelling and laminates
- timber framework
- timber mouldings.

Fastened joints include:
- bolts and nuts
- metal rods and connection plates
- nails.

Assembling processes include:
- fitments and units
- prefabricated timber framework
- shopfronts.

Packaging and handling techniques include using:
- bubble plastic
- cardboard
- clear plastic sheet
- polystyrene
- timber.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. *Tools and equipment* selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and *quality requirements*.  
1.6. *Materials* appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and *statutory and regulatory authority* requirements, and are applied.  
1.8. Safe working area around glass installation is maintained in accordance with site requirements and OHS regulations. |
| 2. Cut glass to a straight line. | 2.1. Type, size and thickness of glass are selected appropriate for application (thickness less than 6.38mm) and location is determined from job drawings, specifications and glazing schedule.  
2.2. Openings to receive glass are inspected for obstructions and clearances in accordance with standard operating procedures.  
2.3. Cutting process is identified in accordance with AS1288 Glass in building - Selection and installation, and glass is cut to specification on a line using straight edge and scoring and breaking to run cut to tolerance of ±1mm.  
2.4. Glass sheets are used in the most economical layout, with cutting defects recognised and corrective action taken.  
2.5. Sharp edges are removed to provide safe edges to glass. |
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 3. Circle and hole cutting. | 3.1. Type and thickness of glass is selected appropriate for application and centre of hole or circle is set out using edge, rule and permanent marking pen.  
3.2. Circles and holes in glass are cut to specification using pyramid method, completing pre-cut checks before positioning circle cutter.  
3.3. Cutting defects are recognised and corrective action is taken in line with standard procedures and according to AS1288, with most economical layout used with glass sheets.  
3.4. Sharp edges are removed to provide safe edges to glass. |
| 4. Cut glass to simple shapes. | 4.1. Glass to be used is selected and template is marked and prepared to designed shape.  
4.2. Template is used to mark outline on glass with permanent marking pen.  
4.3. Glass is cut to shape and size to specification and glass offcuts are removed safely to AS1288 specification.  
4.4. Cutting defects are recognised and corrective action is taken in line with standard procedures and according to AS1288, with most economical layout used with glass sheets.  
4.5. Sharp edges are removed to provide safe edges to glass. |
| 5. Clean up. | 5.1. Recyclable material is sorted and stored for collection.  
5.2. Glass surface and surrounding frame are cleaned and cleared of waste material and assembled according to job specifications, with loose debris and waste material removed and disposed of safely.  
5.3. Tools and equipment are cleaned, maintained and stored. |

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.
REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - drawings and specifications
    - glazing schedules
  - use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- AS1288 Glass in buildings - Selection and installation
- job safety analysis (JSA) and safe work method statements
- material handling processes related to glass
- measuring and setting out processes relevant to glass cutting
- safe procedures for glass cutting
- types of glass and their characteristics
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to set out and cut glass, providing evidence of the ability to:

- select and use appropriate processes, tools and equipment to carry out application tasks
- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within the context of glazing
- demonstrate sound techniques in selecting, handling and placing glass for cutting
- display sound and accurate techniques to set out glass or templates
- demonstrate sound and safe techniques to cut regular and irregular shaped glass and cut a hole in a glass panel
- communicate with others to ensure safe and effective workshop operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- workshop location and appropriate bench or table
- tools and equipment appropriate for
EVIDENCE GUIDE

application tasks

- range of glass suitable for proposed activities
- drawings and documentation relevant to tasks.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.
EVIDENCE GUIDE

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to cutting and installing glass
- relevant Australian standards
- safe work procedures relating to cutting and installing glass
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
RANGE STATEMENT

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Tools and equipment include:

- dividers and wing compasses
- glass cutters
- measuring tapes and rules
- pincers
- squares
- straight edges
- tee squares.

Quality requirements include relevant regulations, including:

- AS1288 Glass in buildings - Selection and installation
- internal company quality policy and standards
- manufacturer specifications where specified
- workplace operations and procedures.

Materials include:

- aluminium
- glass
- timber.

Environmental requirements

- clean-up management
RANGE STATEMENT

include:
- dust and noise
- stormwater protection
- waste management.

Statutory and regulatory authority includes:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. *Tools and equipment* selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and *quality requirements*.  
1.6. *Materials* appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and *statutory and regulatory authority* requirements, and are applied. |
| 2. Prepare strings for assembly. | 2.1. Strings are set out for treads and risers with nosing marked accurately, housings cut and waste removed accurately to set-out and depth.  
2.2. Grooves or mortises to receive balusters are run/carried out to set-out requirements.  
2.3. Open strings are cut to set-out shape for treads and risers and ends of strings are cut to set-out requirements for junction with newels/landing or are left long for on-site fitting with string marked for identification where applicable. |
| 3. Prepare post for spiral stair. | 3.1. Post is manufactured and/or dressed to designed shape and set-out to designed requirements of *stair*.  
3.2. Housings are cut and made accurately to set-out and required depth. |
| 4. Prepare newels for assembly. | 4.1. Housings are cut and made accurately to newel set-out and required depth.  
4.2. Mortises are cut and made accurately to set-out and required depth and newels are marked for identification, where applicable. |
ELEMENT  PERFORMANCE CRITERIA

5. Cut treads, risers and wedges to length and shape.  
5.1. Treads are cut to designed length and shape.  
5.2. Risers are cut to designed length and requirement for junction with strings and wedges marked to design and cut to shape and quantity.

6. Prepare balustrade components.  
6.1. Handrail is manufactured to shape with groove run for balusters where applicable, with mortises in handrail for balusters made accurately to set-out.  
6.2. Balusters are accurately cut to designed length.  
6.3. Handrail is cut to length and sections marked for identification, where applicable.

7. Finish surface and preassemble stair.  
7.1. Exposed surfaces of components are sanded to specification for finish and component parts are checked to ensure fit to specification.  
7.2. Components are preassembled to ensure stair will assemble appropriately.

8. Clean up.  
8.1. Materials are stacked and/or stored for transportation.  
8.2. Work area is cleared and waste material disposed of safely.  
8.3. Tools and equipment are cleaned, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret drawings and specifications
REQUIRED SKILLS AND KNOWLEDGE

- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- basic stair design
- Building Code of Australia (BCA) requirements relevant to stair building and installation
- commonly used stair construction and joining methods
- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- materials identification marking systems
- measuring and setting out processes relevant to stair construction
- organisation's quality assurance requirements
- types and characteristics of adhesives, fixings and fasteners related to stair construction
- types and characteristics of stairs
- types and uses of static machines
- types of materials and their characteristics related to stair construction
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to produce components for one cut and one closed string stair, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within context of manufacturing components for stairs
- identify design of stair and details of component composition and design
- identify methods of manufacturing, setting out techniques and material required
- select and use appropriate processes, tools and equipment to construct and manufacture components
- select appropriate material and safe and effective procedures to use machines and prepare material to initial requirements
- adopt appropriate and efficient procedures to construct strings to designed requirements
- use correct procedures in setting out and using machines, power tools and hand tools to mould and manufacture components to designed shape
- safely and efficiently prepare all components for assembly
- appropriately check all component connections to ensure joints will fit in assembly
- adopt safe and effective handling procedures
EVIDENCE GUIDE

for movement and placement of material and components

- identify typical faults and problems that occur and action required to rectify them
- communicate with others to ensure safe and efficient workshop operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- workshop location and appropriate workspace
- static machines appropriate for activity
- set-out material and components prepared for manufacturing processes
- tools and equipment appropriate for activity
- drawings and documentation relevant to design.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able
EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace.
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
- use of firefighting equipment
- use of static machines
RANGE STATEMENT

- use of tools and equipment
- workplace environmental requirements and safety.

**Tools and equipment** include:
- chisels
- clamps
- hammers
- hand saws
- jig saws
- measuring tapes and rules
- power drills
- power saws
- routers
- saw stools
- spirit levels
- squares
- work bench.

**Quality requirements** include:
- attention to machining processes
- control of handling procedures
- quality of materials
- relevant regulations, including:
  - AS1473 Guarding and safe use of woodworking machinery or equivalent
  - internal company quality policy and standards
  - manufacturer specifications where specified
  - workplace operations and procedures
- use and maintenance of equipment
- workplace operations and procedures.

**Materials** include:
- metal
- timber.

**Environmental requirements** include:
- clean-up management
- dust and noise
- stormwater protection
- waste management.

**Statutory and regulatory authority** includes:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Stair types** include:
- curved
- geometric

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. *Tools and equipment* selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and *quality requirements*.  
1.6. *Materials* appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and *statutory and regulatory authority* requirements, and are applied. |
| 2. Select and prepare materials and components. | 2.1. Methods of assembling erected stairs are identified and *components* checked for appropriate locations in stair structure.  
2.2. Method of assembling and *fixing* are determined in accordance with stair design and location. |
| 3. Assemble strings and newels. | 3.1. Specific position for stairs is identified, measurements are checked and adjustments made where applicable.  
3.2. Strings and newels are assembled to design and fixed to specification.  
3.3. Strings to be fixed to walls are temporarily supported or directly fixed in position to specification. |
| 4. Install treads and risers. | 4.1. Assembled strings and newels are temporarily braced in vertical position.  
4.2. Treads and risers about newels are fitted and fixed to assembly and flight is checked for true and square.  
4.3. Intermediate treads and risers are fitted and wedged where applicable to fit tight to housings to specification. |
## ELEMENT | PERFORMANCE CRITERIA
---|---
5. Assemble and install landings. | 5.1. Bearers, where applicable, and joists are fitted and fixed to level according to fixing specification.
5.2. Nosing and flooring are fitted and fixed to form landing to specified finish and fascia is fitted and fixed to landing according to finish specification.
6. Install handrail and balustrade. | 6.1. Balusters/intermediate railing and handrails are fitted to form stair balustrade according to specification, with balusters checked to ensure plumb fit.
6.2. Newels are checked prior to final fixing to ensure plumb fit.
6.3. Handrailings are fitted and fixed to wall in accordance with specifications.
7. Install spiral stair and curved strings. | 7.1. Location of stair and first step is accurately marked on floor and central post is erected into true position, fixed at floor and temporarily braced at top.
7.2. Initial string section is temporarily supported in place for assembly, and treads and risers are fitted and fixed into position to specification.
7.3. Stair is progressively developed with the extending, supporting and fixing of curved string, and completed with head secured to floor/landing, balustrade *installed* and central post fixed to specifications.
8. Secure stair to structure and line spandril area. | 8.1. Securing of stair to building is carried out during/on completion of assembly.
8.2. Spandril, where applicable, is framed, lined and fixed out to specified finish.
9. Clean up. | 9.1. Stair is checked, with marks removed and surfaces left to specified finish.
9.2. Area is cleared and waste material removed.
9.3. Glue blocks are fitted to treads and risers according to specified locations.
9.4. Tools and equipment are cleaned, maintained and stored.

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environment or sustainability frameworks or management systems.
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand.
  - follow instructions.
  - read and interpret drawings and specifications.
  - use and interpret non-verbal communication.
  - use language and concepts appropriate to cultural differences.
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action.
- numeracy skills to apply calculations.
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks.
- problem solving skills to recognise and take action to rectify minor faults and problems.
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- adhesives, fixings and fasteners related to stair construction.
- assembling procedures for stairs.
- interpretation of drawings and specifications.
- job safety analysis (JSA) and safe work method statements.
- levelling techniques.
- materials and their characteristics, relevant to stair construction.
- marking of components.
- materials identification.
- measuring and setting out related to assembling and installing stairs.
- organisation’s quality assurance requirements.
- stair construction and joining methods.
- types of stairs.
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to assemble and install a complete stair that includes flight and landing balustrades, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within the context of assembling and installing timber stairs
- identify correct location, design of stair and method of attaching and securing to structure
- identify delivered components, materials and assembly diagram, if applicable
- accurately set out stair location and check levels for adjustments on newels
- select and use appropriate processes, tools and equipment to assemble stair components
- demonstrate safe and effective procedures in assembling strings and newels and installing landing bearers and joists
- select and use safe and efficient procedures in installing treads, risers, flooring and nosing
- adopt and use appropriate techniques to fit and fix balustrades
- complete installation with stair true to plumb and level, and fixed securely to structure with surfaces finished free of marks
EVIDENCE GUIDE

- adopt safe and effective handling procedures for movement and placement of material and components
- identify typical faults and problems that occur and action required to rectify them
- communicate with others to ensure safe and effective stair installation.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- site location for stair installation
- stair components, accessory materials and fixings and fasteners
- tools and equipment appropriate for activity
- drawings, specifications and documentation relevant to the installation.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able
EVIDENCE GUIDE

to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
RANGE STATEMENT

- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to assembling and installing stairs
- relevant Australian standards
- safe work procedures relating to assembling and installing stairs
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working platforms
- use of firefighting equipment
- use of tools and equipment
RANGE STATEMENT

**Tools and equipment**

- air compressor and hoses
- chisels
- clamps
- hammers
- hand saws
- measuring tapes and rules
- nail guns
- power drills
- power leads
- power planers
- power saws
- saw stools
- screwdrivers
- set spanners
- spirit levels
- squares.

**Quality requirements**

- control of handling procedures
- procedures for installing and finishing
- quality of materials
- relevant regulations, including:
  - Australian standards
  - internal company quality policy and standards
  - manufacturer specifications where specified
  - workplace operations and procedures
  - use and maintenance of equipment
  - workplace operations and procedures.

**Materials**

- medium density fibreboard (MDF)
- plastics
- plywood
- steel
- timber.

**Environmental requirements**

- clean-up management
- dust and noise
- stormwater protection
- waste management.

**Statutory and regulatory authority**

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.
RANGE STATEMENT

Components include:

- balusters
- flooring
- handrailings
- landing bearers
- landing joists
- newels
- nosing
- risers
- strings
- treads.

Fixing includes:

- bolts and nuts
- glue and wedging
- glue blocks
- handrail bolts
- nailing
- screws, including coach screws.

Installed stairs may involve:

- a piece by piece assembly on location, for example with a stair between two full height walls to allow for flights to be preassembled and lifted and fitted into place as part of a complete stair.

</thead>
</table>
| **1. Plan and prepare.** | 1.1. Work instructions and operational details are obtained using relevant **information**, confirmed and applied for **planning and preparation** purposes.  
1.2. **Safety (OHS)** requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. **Tools and equipment** selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and **quality requirements**.  
1.6. **Materials** appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. **Environmental requirements** are identified for the project in accordance with environmental plans and **statutory and regulatory authority** requirements, and are applied. |
| **2. Prepare wreath for continuous handrailing.** | 2.1. Pitch of stair and change of direction of handrail are identified from stair design.  
2.2. Area governing design of wreath is set out or assessed to determined thickness of material to be prepared.  
2.3. Material is prepared, cut square to wreath length and set out to shape for dressing.  
2.4. Wreath is formed to square section with designated twist and free of bumps. |
| **3. Join and mould wreath to straight sections.** | 3.1. Straight sections of handrail are measured and cut to length with ends square to join wreath and joined to specifications with joints tight and no movement.  
3.2. Wreath is moulded to handrail shape and fine sanded to smooth finish.  
3.3. Handrailing is installed in lengths practical to manage and rejoined in location. |
| **4. Manufacture scroll and join to handrail.** | 4.1. Design of scroll and wreath, where applicable, is identified, set out and prepared to designed shape.  
4.2. Materials are prepared to required overall scroll and wreath dimensions, set-out patterns are applied and |
**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
 | scroll and wreath are formed to basic shapes.
4.3. Scroll and wreath are moulded to design and connecting handrail shape and fine sanded to smooth finish.
4.4. Scroll and wreath are joined to handrail to specification with joints tight and no movement.
5. Manufacture and install bullnosed steps. | 5.1. Design of bullnosed steps is identified, method of constructing curve is determined, and riser of step is manufactured to design curve with block support fixed to specification.
5.2. Tread is cut and dressed with nosing to shape according to design specification.
5.3. Bullnosed step is fitted and fixed to stair and secured in location to specified fixing.
6. Manufacture and install brackets and decorative features. | 6.1. Brackets and Scotia, where applicable, are fitted and secured into place to cut and mitred string to specified fixing.
6.2. Decorative/ornamental features are fitted and secured to designed position and to specified fixing, and all surfaces are fine sanded to smooth finish.
7. Clean up. | 7.1. Area is cleaned and waste material disposed of safely.
7.2. Tools and equipment are cleaned, maintained and stored.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
REQUIRED SKILLS AND KNOWLEDGE

- follow instructions
- read and interpret drawings and specifications
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- interpret drawings and documentation
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- commonly used stair construction and joining methods
- identification marking of materials systems
- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- measuring and setting out processes relevant to manufacturing and installing stair components
- methods of forming and constructing handrails
- organisation's quality assurance requirements
- special feature components of stair construction
- timber carving and moulding techniques
- types and characteristics of stairs
- types and use of adhesives, fixings and fasteners relevant to stair construction
- types and uses of static machines
- types of materials and their characteristics relevant to stair construction
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to manufacture a scroll, ramp and wreath and join to a handrail where applicable plus manufacture and install bullnose and common stair brackets and decorative features, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within the context of manufacturing and installing special features to stairs
- identify details of special features, design of stair and method of attaching to adjoining components
- identify method of manufacturing, setting out techniques and materials required
- select and use appropriate processes, tools and equipment to manufacture and install feature items
- select appropriate materials and use safe and effective procedures to operate machines and prepare material to initial requirements
- demonstrate correct procedures in setting out and using machines, power tools and hand tools to mould and manufacture designed shape
- adopt safe and effective handling procedures for movement and placement of materials and components
- safely and efficiently fit and secure feature item to designed location
EVIDENCE GUIDE

- identify typical faults and problems that occur and action required to rectify them
- communicate with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- workshop and site location for manufacturing and installation processes
- materials appropriate to application tasks
- tools and equipment appropriate to proposed processes
- drawings and documentation relevant to activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.
EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied. |
| 2. Manufacture strings for geometric curves. | 2.1. Material is prepared to designed structural requirements.  
2.2. Curved wall/profile is constructed to curve design of stair.  
2.3. Developed pitch is set out to curved wall/profile location.  
2.4. String is manufactured in accordance with curved wall and set out to specifications. |
| 3. Prepare strings for assembly. | 3.1. Strings are set out for treads and risers with nosing marked accurately, housings cut and waste removed accurately to set-out and depth.  
3.2. Grooves or mortises to receive balusters are run/carried out to set-out requirements.  
3.3. Open strings are cut to set-out shape for treads and risers and ends of strings are cut to set-out requirements for junction with newels/landing or left long for on-site fitting with string marked for identification where applicable. |
| 4. Set out and manufacture curved | 4.1. Curved and geometric stairs are set out to specifications. |
ELEMENT

and geometric stair post for spiral stairs.

PERFORMANCE CRITERIA

4.2. Post is manufactured and/or dressed to designed shape and set out to designed requirements of stair.

4.3. Housings are cut and made accurately to set-out and required depth.

5. Prepare newels for assembly.

5.1. Housings are cut and made accurately to newel set-out and required depth.

5.2. Mortises are cut and made accurately to set-out and required depth and newels are marked for identification, where applicable.

6. Cut treads, risers and wedges to length and shape.

6.1. Treads are cut to designed length and shape.

6.2. Risers are cut to designed length and requirement for junction with string.

6.3. Wedges are marked to design and cut to shape and quantity.

7. Prepare balustrade components.

7.1. Handrail is manufactured to shape with groove run for balusters, where applicable, and mortises in handrail for balusters are made accurately to set-out.

7.2. Balusters are cut to designed length.

7.3. Handrail is cut to length and sections are marked for identification, where applicable.

8. Finish surface and preassemble stair.

8.1. Exposed surfaces of components are sanded to specification for finish and component parts are checked to ensure they will fit to specification.

8.2. Components are preassembled to ensure stair will assemble appropriately.

9. Clean up.

9.1. Materials are stacked and/or stored for transportation.

9.2. Work area is cleared and waste material disposed of safely.

9.3. Tools and equipment are cleaned, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills
REQUIRED SKILLS AND KNOWLEDGE

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret drawings and specifications
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- basic curved stair design
- Building Code of Australia (BCA) requirements relevant to stair construction
- commonly used stair construction and joining methods
- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- material identification marking systems
- measuring and setting out processes relevant to curved stair construction
- organisation’s quality assurance requirements
- types and characteristics of stairs
- types and use of adhesives, fixings and fasteners related to stair construction
- types and use of static machines
- types of materials and their characteristics related to stair construction
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to produce all components for assembly of two stair types, one with a cut and closed string and one an open string, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within context of manufacturing components for curved stairs
- identify design of stair and details of component composition and design
- identify methods of manufacturing, setting out techniques and materials required
- select and use appropriate processes, tools and equipment to construct and manufacture components
- select appropriate material and safe and effective procedures to use machines and prepare material to initial requirements
- adopt appropriate and efficient procedures to construct curved strings to designed requirements
- use correct procedures in setting out and using machines, power tools and hand tools to mould and manufacture components to designed shape
- safely and efficiently prepare all components for assembly
- check all component connections to ensure joints will fit in assembly
EVIDENCE GUIDE

- adopt safe and effective handling procedures for movement and placement of materials and components
- identify typical faults and problems that occur and action required to rectify them
- communicate with others to ensure safe and efficient workshop operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

1.1. Resource implications for assessment include:

- workshop location and appropriate workspace
- static machines appropriate for activity
- set-out materials and components prepared for manufacturing processes
- tools and equipment appropriate for activity
- drawings and documentation relevant to design.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that
EVIDENCE GUIDE

Competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- Competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace.
- Where the assessment is part of a structured learning experience, the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice. A decision on competency is only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.
- All assessment that is part of a structured learning experience must include a combination of direct, indirect, and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy, and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders, or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.
RANGE STATEMENT

Information includes:
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to manufacturing stair components
- relevant Australian standards
- safe work procedures relating to manufacturing stair components
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
RANGE STATEMENT

- use of static machines
- use of tools and equipment
- workplace environmental requirements and safety.

**Tools and equipment** include:

- chisels
- clamps
- hammers
- hand saws
- jig saws
- measuring tapes and rules
- power drills
- power saws
- routers
- saw stools
- spirit levels
- squares
- work bench.

**Quality requirements** include:

- attention to machining processes
- control of handling procedures
- quality of materials
- relevant regulations, including:
  - AS1473 Guarding and safe use of woodworking machinery
  - internal company quality policy and standards
  - manufacturer specifications where specified
  - workplace operations and procedures
  - use and maintenance of equipment
  - workplace operations and procedures.

**Materials** include:

- metal
- timber.

**Environmental requirements** include:

- clean-up management
- dust and noise
- stormwater protection
- waste management.

**Statutory and regulatory authority** includes:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Stair** includes:

- curved
RANGE STATEMENT

- geometric
- open or closed strings
- spiral.

Manufactured may include using:

- band saw
- buzzer
- docking saw
- mortiser
- spindle shaper.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>

</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. *Tools and equipment* selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and *quality requirements*.  
1.6. *Materials* appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and *statutory and regulatory authority* requirements, and are applied. |
| 2. Set out and prepare material. | 2.1. Exit and ground finish levels are determined from job drawings and site location.  
2.2. Rise, going and pitch of stair calculations are determined from job drawings and site location, with all measurements and requirements conforming to the *Building Code of Australia* (BCA).  
2.3. Full size set out of stairs is made to determine rise, going and pitch of stairs to actual location of landings, strings, treads and newels.  
2.4. Location of stair and newels is determined from job drawings and pitch of stairs or full size is set out.  
2.5. Location of footings, where applicable, is marked to layout of designed stairs to meet job drawings and specifications or full size set-out.  
2.6. Strings components are selected in accordance with set-out.  
2.7. Components for newels are selected and set out to design of stairs, storey rods and job drawings or from full size set-out.  
2.8. Newels are assembled and checked to provide tight

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret drawings and specifications
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- BCA requirements relevant to stairs
- factors governing design of stairs
- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- measurement and calculation processes related to lineal measurements in stair design
- stair construction techniques
- terminology of stair components and dimensional relationships
- types and characteristics of stairs
- types and uses of materials used in stair construction.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to assemble and erect timber and other material component stairs covering one flight to a landing, including handrail or balustrade, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- comply with organisational quality procedures and processes within the context of constructing and installing fabricated stairs
- identify location and details of fabricated stair components and construction
- carry out accurate calculations to determine actual rise and going for each step and pitch of stairs
- prepare accurate set-out of stair in order to check all stair components
- adopt and use safe and effective procedures to prepare stair components, assemble and fix to position in accordance with BCA, specifications and site conditions
- identify typical faults and problems that occur and action required to rectify them
- identify types of stair construction and common terminology
- convey appropriate analysis and understanding of design concepts in drawings and specifications of nominated project
- communicate with others to ensure safe and effective workplace operations.
EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- drawings and information relevant to stair design activities
- suitable work location to carry out design work stair construction
- BCA documentation
- work location ready for stair construction and installation
- plant and equipment appropriate to construction process of stairs
- construction materials appropriate to proposed construction of stairs
- hand and power tools appropriate to construction process of stairs.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able
EVIDENCE GUIDE

to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
RANGE STATEMENT

- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to constructing stairs
- relevant Australian standards
- safe work procedures relating to constructing stairs
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
RANGE STATEMENT

- working platforms and scaffolding
- workplace environmental requirements and safety.

**Tools and equipment** include:
- air compressor and hoses
- bevels
- chisels
- fencing bars
- hammers
- hand saws
- measuring tapes and rules
- mechanical nailing tools
- nail bags
- power drills
- power leads
- power planers
- power saws
- saw stools
- shovels
- spanners
- spirit levels
- squares
- steel squares and fences
- string lines.

**Quality requirements** include:
- attention to specification of work
- control of handling procedures
- quality of materials
- relevant regulations, including:
  - Australian standards
  - internal company quality policy and standards
  - manufacturer specifications where specified
  - workplace operations and procedures
  - use and maintenance of equipment
  - workplace operations and procedures.

**Materials** include:
- cast acrylic materials
- glass
- metal
- timber
RANGE STATEMENT

- fibreglass strings made of:
  - composite materials
  - metal
  - timber
- treads made of:
  - metal
  - timber
  - cast acrylic materials
  - concrete
  - fibreglass
  - fibre-cement.

**Environmental requirements**

include:

- clean-up management
- dust and noise
- stormwater protection
- waste management.

**Statutory and regulatory authority** includes:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Fixings and fasteners** include:

- for timber construction:
  - bolts and nuts
  - coach screws
  - metal brackets
  - nails and spikes
  - steel tie rods
  - timber joining methods
- for steel construction:
  - bolts
  - patented metal connecting plates
- for stair members to masonry walls:
  - metal angle brackets
  - patented masonry anchors
  - wall plug and coach screw.

**Balustrade** construction may be of:

- handrailing and balusters fixed to face of newels
- handrailing mortised into newels
- parallel railing fixed to face of newels.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for work. | 1.1. **Quality assurance requirements** with company's stair-building operations are recognised and adhered to.  
1.2. **Safety (OHS)** requirements in accordance with setting out of stairs and workshop operations are recognised and adhered to.  
1.3. **Design of stair** is identified from job drawings and specifications for types of stair construction and stair components to be set out.  
1.4. Doorways and head height clearance are measured and dimensions governing stair pitch and factors of design are obtained directly from constructed building or drawing details.  
1.5. **Rise and going for steps** are determined and lengths of strings calculated appropriate for the stair use and structural design, including landings if specified.  
1.6. Use and structural design for winders are identified and considered for inclusion in stair set-out if required.  
1.7. Methods of joining stair components and balustrade members are identified for manufacturing processes and preparation of components for joining.  
1.8. Storey rod and full size set-out are prepared where applicable. |
| 2. Prepare stair material for setting out. | 2.1. **Materials** are selected and dressed in accordance with stair requirements and specifications.  
2.2. Laminated sections are formed and joined to designed curve and pitch to specifications. |
| 3. Set out strings for a stair. | 3.1. **Tools and equipment** are selected to carry out processes consistent with job requirements.  
3.2. Steel square or pitch board is prepared to stair pitch set-out.  
3.3. Strings are set out in temporary erected positions to show locations of treads and risers, with allowances for nosing and wedges on closed strings and to show lengths for junctions with newels and landings |
| 4. Set out newels. | 4.1. Floor/landing height relationships with allowances for floor discrepancies are accurately marked on newels.  
4.2. Newels are set out to show positions of strings, treads, flooring, joists, bearers and handrails. |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
4.3. Locations for housings are accurately marked on newels.
5. Set out component parts.
5.1. Lengths and bevels, where applicable, are determined from string and newel set-outs.
5.2. Component parts are set out to respective lengths and bevels where applicable.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret drawings and specifications
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

**Required knowledge**

Required knowledge for this unit is:

- Building Code of Australia (BCA)
REQUIRED SKILLS AND KNOWLEDGE

- calculations related to lineal measurements in stair design
- component parts of balustrades, landings and stairs
- drawings and specifications
- handling of materials relevant to stair construction
- job safety analysis (JSA) and safe work method statements
- materials relevant to stair construction
- measuring and setting out related to stair construction
- organisation's quality assurance requirements
- stair construction and joining methods
- terminology of components and dimensional relationships
- tools and equipment related to stair setting out
- types of stairs
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to set out at least two types of stair designs listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within context of preparation of material and setting out for timber stairs
- identify details and specifications of nominated stair to be set out
- identify limitations on design in accordance with BCA
- demonstrate appropriate calculations to accurately determine number of rises, actual rise, run and going
- identify materials required and prepare accurate cutting list
- select materials and safely and effectively operate machines to dress material to specified sizes
- select and use appropriate processes, tools and equipment for setting out material
- display accurate application and clear marking in setting out materials for stair components
- demonstrate safe and effective handling procedures for movement and placement of material and components
- identify typical faults and problems that occur and action required to rectify them
EVIDENCE GUIDE

- communicate with others to ensure safe and effective workplace operations.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- workplace operation, tools and equipment appropriate to activity
- static machines appropriate to material preparation for setting out
- material relevant to proposed activity
- drawings, set-out, specifications and documentation relevant to activities.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
EVIDENCE GUIDE

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality assurance requirements include:

- control of handling procedures
- procedures for setting out
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.
RANGE STATEMENT

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Design of stair includes:

- open or closed string
- curved flight
- dog legged
- geometric stairs
- quarter spaced landings
- spiral stairs
- straight flights
- ¼ winder stairs that include:
  - a landing
  - cut and closed strings.

Factors of design include:

- area available for stair and rise of stair
- doorways and head height clearance
- structural limitations in accordance with BCA.

Rise and going for steps are determined by:

- going for step design in accordance with minimum going according to classification of building
- maximum allowable rise for each step
RANGE STATEMENT

- total rise of the stair.
- designed with dimensions for winder treads in accordance with BCA
- identified and included for use in lieu of landings.

Winders are:

Components include:

- balusters
- handrails
- landing bearers
- landing joists
- multiple railing
- newels
- risers
- strings
- treads.

Manufacturing processes include:

- docking to lengths
- grooving
- housing
- mortising
- rebating
- trenching.

Materials include:

- medium density fibreboard (MDF)
- plastics
- plywood
- steel
- timber.

Tools and equipment include:

- bevels
- marking gauge
- measuring tapes and rules
- squares
- steel squares.

Unit Descriptor
Unit descriptor
This unit specifies the outcomes required to operate a concrete placing boom which is a mobile truck mounted plant incorporating a knuckle boom, capable of power operated slewing and luffing to place concrete by way of pumping through a pipeline attached to, or forming part of, the boom of the plant for licensing purposes.

Application of the Unit
Application of the unit
This unit requires the operator to plan the work, conduct routine checks, check controls, set up and prepare for operation, deliver concrete, and shut down and secure concrete placing boom.

This unit is based on the requirements of the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

<table>
<thead>

<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Set up and prepare for operation.** | 1.1. *Ground suitability* is inspected and checked.  
1.2. *Concrete placing boom* is driven to or located at work area according to procedures.  
1.3. Concrete placing boom is positioned for work application and *stability* according to procedures.  
1.4. Concrete placing boom is started according to procedures and checked for any abnormal noise.  
1.5. All *safety devices* are tested according to procedures.  
1.6. Post start operational checks are carried out according to procedures.  
1.7. Delivery system components, including booms, lines and adaptors, are positioned securely and safely according to procedures.  
1.8. Appropriate *hazard prevention/control measures* are applied to the work area according to procedures.  
1.9. Pumping systems are tested and prepared for use according to procedures. |
| **2. Deliver concrete.** | 2.1. Supply of bulk concrete to the hopper is coordinated safely with the *supply vehicle* operator/s.  
2.2. Concrete placing boom is operated safely using *relevant boom movements* to deliver the concrete as required.  
2.3. *Safe operating techniques* are applied for all operations.  
2.4. *Communication signals* are correctly interpreted according to the *appropriate standard*.  
2.5. Monitor boom movement constantly ensuring safety of personnel, delivery hose and stability.  
2.6. *Unplanned and/or unsafe situations* are responded to in line with procedures.  
2.7. Concrete placing boom is safely withdrawn from the work area at the completion of the delivery task. |
| **3. Shut down and secure concrete placing boom.** | 3.1. Delivery lines and hopper are cleaned out according to procedures.  
3.2. Boom is correctly stowed and secured for travel according to procedures.  
3.3. Outriggers/stabilisers are stowed and secured according to procedures.  
3.4. Plates or packing are stowed and secured for travel.  
3.5. Concrete placing boom is *shut down* according to procedures. |
3.6. Routine post-operational equipment checks are carried out according to procedures.

3.7. All defects and damage are reported and recorded according to procedures and appropriate action is taken.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- accurately record and maintain information relating to concrete placing boom operations
- communication techniques in the workplace including hand signals and use of fixed channel two-way radios
- complete the positioning, stabilising, set up and pack up of concrete placing booms, including the use of outriggers/stabilisers and packing
- communication skills at a level sufficient to communicate with other site personnel
- operation and control of a concrete placing boom including all functions to within their maximum capability
- risk assessment and hazard prevention strategies, including hierarchy of control as applied to the positioning and safe operation of the concrete placing boom (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, wind, pedestrians and tipping)
- verify problems and equipment faults and demonstrate appropriate response procedures.

**Required knowledge**

Required knowledge for this unit is:

- assessment of ground conditions to confirm that the site is suitable (e.g. firm, level and safe) to set up the concrete placing boom
- Commonwealth, state or territory OHS legislation, standards and codes of practice relevant to the full range of processes for conducting concrete placing boom operations
- level of literacy to be able to read and comprehend manufacturer’s instructions, procedures and safety signs
REQUIRED SKILLS AND KNOWLEDGE

- concrete placing boom delivery operations and operating techniques
- organisational and site standards, requirements, policies and procedures for conducting concrete placing boom operations
- procedures for the recording, reporting and maintenance of workplace records and information, including the use of the service logbook.
- understanding of the hierarchy of hazard identification and control
- read and interpret the data plate for the concrete placing boom.
- typical routine problems encountered in the process and with equipment and adjustments required for correction.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OHS matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS licensing legislation
- assess ground conditions to confirm that the site is suitable (e.g. firm, level and safe) to erect the concrete placing boom.
- assess risk and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the concrete placing boom (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, wind, pedestrians and tipping)
- complete the pre operational check, positioning, stabilising, set up, operation, post operational checks of a concrete placing boom including all functions to their maximum extension in the moving of the boom and placement of concrete to the safe working rated capacity of the concrete placing boom
- operate the concrete placing boom in conjunction with other appropriate personnel (where applicable).

Context of and specific resources for assessment

- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument
- Assessment of performance must be undertaken either in the workplace or in a
EVIDENCE GUIDE

- realistically simulated workplace setting
  - Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace
  - Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints
  - Assessment is to comply with relevant appropriate standard requirements
  - Applicants must have access to:
    - personal protective equipment (PPE) for the purpose of the Performance Assessment
    - appropriate concrete placing boom and associated equipment in safe condition
    - communication equipment (e.g. two way radios, etc) where appropriate
    - other appropriate personnel to direct the placement of concrete (where applicable).

Method of assessment

Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.

The use of 'simulators' in the assessment of this unit of competency is not acceptable.

Assessment may be in conjunction with the assessment of other units of competency.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include but not limited to:

- ground stability (eg. ground condition, recently filled trenches, slopes)
- overhead hazards (eg. power lines, service pipes)
- insufficient lighting
- traffic (eg. pedestrians, vehicles, other plant)
- environmental conditions (eg. wind, lightning, storms)
- other specific hazards (eg. dangerous materials).

Hazard control measures:

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:

- elimination
- substitution
- isolation
- engineering control measures
- using safe work practices
- personal protective equipment.

Appropriate standards may include:

- codes of practice
- legislation
- Australian Standards,
- manufacturer's specifications
- industry standards (where applicable).

Concrete placing boom may include:

- a mobile truck mounted plant incorporating a knuckle boom, capable of power operated slewing and luffing to place concrete by way of pumping through a pipeline attached to, or forming part of, the boom of the plant.

Communication methods may

- verbal and non-verbal language
RANGE STATEMENT

include but not limited to:

- written instructions
- signage
- hand signals
- listening
- questioning to confirm understanding
- appropriate worksite protocol.

Appropriate personnel may include but are not limited to:

- those associated with the operations of the concrete placing boom
- supervisors
- suppliers
- clients
- colleagues
- managers.

Procedures may include but are not limited to:

- manufacturer's guidelines (range chart, instructions, specifications or checklists)
- industry operating procedures
- workplace procedures (work instructions, operating procedures, checklists).

Service logbook may include but is not limited to:

- any logbook
- service book
- history record system where the service and maintenance history is kept.

Hoppers may include but not limited to:

- large receptacles mounted on the concrete placing boom which receive the concrete from supply vehicles and dispense the concrete to the pumping system.

Communication equipment may include but not limited to:

- fixed channel two way radios
- mobile phones.

NB: where radio communication equipment is used the transmitting frequencies of the equipment must be selected to prevent interference to or from other radio equipment being used in the vicinity of the crane.

Ground suitability may include but not limited to:

- rough uneven ground
- backfilled ground
- soft soils
- hard compacted soil
- rock
- bitumen
- concrete.
## RANGE STATEMENT

**Stability** may include but not limited to:
- deploying outriggers
- establish correct size plates or packing
- correctly position plates or packing.

**Safety devices** may include but not limited to:
- horns/sirens
- audible and visual reversing devices
- operator restraint devices (where applicable)
- lights
- safety interlocks.

**Hazard prevention/control measures** may include but not limited to:
- safety tags on electrical switches/isolators
- powerlines are insulated
- safety observer used inside exclusion zone
- power disconnected
- traffic barricades and control
- pedestrian barricades
- trench covers
- movement of obstructions
- personal protective equipment
- adequate lighting
- earth chain.

**Supply vehicle** may include but not limited to:
- cement mixer trucks
- agitator trucks
- other concrete transport vehicles.

**Relevant boom movements** may include but not limited to:
- raising boom
- lowering boom
- skewing
- knuckling.

**Safe operating techniques** may include but not limited to:
- achieving a safe optimum output from the concrete delivery system within the manufacturers design specifications
- ensuring hopper levels are maintained at safe and recommended levels
- safe operation of the boom to ensure safety of operator and other personnel
- managing engine power to ensure efficiency of concrete pump truck platform movements and to minimise damage to the engine and gears
- coordinating engine power with gear selection ensuring smooth transition and operation within torque range.
RANGE STATEMENT

Communication signals may include but not limited to:
- boom up - hand
- boom down - hand
- boom left - hand
- boom right - hand
- open or extend boom - hand
- close or retract boom - hand
- stop boom - hand
- start pump speed up - hand
- slow pump down - hand
- little bit - hand
- add water - hand
- all done clean-up - hand.

Unplanned and/or unsafe situations may include but not limited to:
- failure/lose of control e.g. blown hose or concrete line
- failure of equipment e.g. hydraulic system
- environmental conditions (e.g. wind, lightning, storms, etc).

Shut down may include but is not limited to:
- retracting boom
- positioning/securing boom
- retracting outriggers/stabilisers
- idle engine to stabilise temperature
- disengage PTO (where applicable)
- turning off engine (where applicable)
- remove key from ignition (where applicable)
- lock and secure cabin (where applicable).

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication techniques in the workplace including whistles, hand signals and use of fixed channel two-way radios
- communication skills at a level sufficient to communicate with other site personnel
- calculate rated capacity of lifting equipment
- apply different methods for making temporary connections to loads using fibre and synthetic ropes
REQUIRED SKILLS AND KNOWLEDGE

- ability to interpret rated capacity and working load limit tags
- hazard identification and control
- slinging techniques
- selection and inspection of lifting equipment
- directing crane operators in the moving of loads in a safe manner, using a slewing crane
- inspection and care of a wide range of lifting equipment to appropriate Australian Standards and/or manufacturer's specifications.

Required knowledge

Required knowledge for this unit is:

- appropriate mathematical procedures for estimation and measurement of loads
- basic knowledge of types of cranes and their functions
- Commonwealth, state or territory OHS legislation, standards and codes of practice relevant to the full range of techniques for undertaking dogging activities
- load stability and safety factors in line with manufacturer's specifications
- types of lifting equipment and slinging techniques for use, and their limitations and performance in a wide range of conditions (including but not limited to slings, beams, accessories, clamps, work-boxes, bins and pallets)
- understanding of the hierarchy of control.
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment of this unit which have been endorsed by the national body responsible for OHS matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with Commonwealth, state or territory OHS legislation, standards relevant to safe dogging and crane operations.
- communicate and work safely with others in the work area.
- apply Hazard prevention and control measures consistent with appropriate standards.
- apply to move loads in conjunction with cranes including, the reading of tags, slinging, loading, directing and landing loads with a slewing mobile crane with a telescopic boom and a winch, in and out of sight of the crane/operator, moving four loads of varying shapes, sizes and weights.
- use fibre and/or synthetic rope as tag lines, and connecting to loads using clove hitch, rolling hitch, bowline and single sheetbend.
- conduct pre and post operational checks of the lifting equipment.

Context of and specific resources for assessment

- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the national OHS endorsed Assessment Instrument
- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting
EVIDENCE GUIDE

- Assessors must ensure that the assessment in the workplace is organised through a workplace supervisor to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.
- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with the requirements of any relevant Standards or operating procedures for dogging activities.
- Applicants must have access to:
  - personal protective equipment (PPE) for the purpose of the performance assessment.
  - four different loads as prescribed in the endorsed assessment instrument.
  - lifting and associated equipment.
  - suitable slewing crane.
  - communication equipment (e.g. fixed channel, two-way radios) as applicable.

Method of assessment

Assessment must be conducted using the national OHS endorsed Assessment Instrument. This Instrument provides instruction on the application of the assessment.

Assessment may be in conjunction with the assessment of other units of competency.

The use of 'simulators' in the assessment of this unit of competency is not acceptable.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Site information may include but not be limited to:
- local conditions such as access and egress
- work method statements.

Hazards may include but not limited to:
- ground stability (e.g., ground condition, recently filled trenches, slopes)
- overhead hazards (e.g., power lines, service pipes, trees, buildings, etc)
- insufficient lighting
- traffic (e.g., pedestrians, vehicles, plant)
- weather (e.g., wind, lightning, storms)
- other specific hazards (e.g., trip hazards, heights, radio interference, etc).

Hazard prevention/control measures

The systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of controls, including:
1. elimination.
2. substitution.
3. isolation.
4. engineered control measures.
5. safe work practices.
6. personal protective equipment.

Appropriate standards may include:
- codes of practice
- legislation
- Australian Standards
- manufacturer's specifications
- industry standards.

Lifting Equipment may include but not limited to:
- fibre ropes
- wire ropes
- chain
RANGE STATEMENT

- wire and synthetic slings
- shackles
- eyebolts
- beam clamps
- plate clamps
- spreader beams
- lifting beams
- pallet forks and cages
- concrete kibbles
- personnel boxes.

Communication Methods may include but are not limited to:

- written instructions
- signage,
- hand signals
- listening
- questioning to confirm understanding
- appropriate worksite protocol.

Cranes may include but not limited to:

- tower cranes (including self erecting)
- portal boom cranes
- vehicle loading cranes
- slewing mobile cranes
- non-slewing cranes
- derrick cranes.

Appropriate personnel may include but are not limited to:

- supervisors
- colleagues
- managers who are authorised to take responsibility for the workplace or operations.

Communication Equipment may include but not limited to:

- fixed channel two-way radios
- whistles
- bells.

Personal protective equipment (PPE) may include but not limited to:

- hard hat
- safety boots
- gloves
- high visibility clothing
- reflective vest
- relevant breathing, hearing, sight, skin and sun protection.

Load destination may include but not limited to:

- ground
- loading platforms
- suspended floors
- vehicles.
RANGE STATEMENT

**Communication signals** may include but not limited to:

- stop - hand
- stop - whistle
- hoist up - hand
- hoist up - whistle
- hoist down - hand
- hoist down - whistle
- luff boom down - hand
- luff boom down - whistle
- luff boom up - hand
- luff boom up - whistle
- telescope out - hand
- telescope out - whistle
- telescope in - hand
- telescope in - whistle
- slew left - hand
- slew left - whistle
- slew right - hand
- slew right - whistle.

**Defective Equipment** may include but not limited to:

- excessive wear
- damage
- stretched
- broken wires
- cut/damaged fibres.

Unit Descriptor

Unit descriptor
This unit specifies the outcomes required to operate a builder's hoist in which personnel, goods and/or materials may be hoisted, and which comprises a car, structure, machinery or other equipment associated with the hoist, and which may be a cantilever hoist, a tower hoist or a multiple winch operation. Included in this definition are situations where winches may be configured to operate as hoists for the transportation of personnel for licensing purposes.

Application of the Unit

Application of the unit
This unit requires the operator to plan work, conduct routine checks, conduct hoist operations and shut down and secure a hoist.

This unit is based on the requirements of the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit, which is not acceptable to regulators for the purpose of licensing.

</table>
ELEMENT | PERFORMANCE CRITERIA
--- | ---
4. Shut down and secure hoist. | 3.5. *Unplanned and/or unsafe situations* are responded to in line with procedures.

4.1. Hoist is *shut down* according to procedures.

4.2. All fences and gates are secured according to procedures.

4.3. Routine post-operational checks are carried out according to procedures.

4.4. Power is isolated and secured against unauthorised access.

4.5. All damage and defects are reported and recorded according to procedures and appropriate action taken.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- accurately record and maintain information relating to personnel and materials hoist operations
- communication techniques in the workplace including bells, lights, intercom and use of two-way radios
- conduct personnel and materials hoist operations
- operate emergency brake and decent system
- hazards associated with the operation of the personnel and materials hoist are identified, risks are assessed and effective hazard prevention/control measures for those hazards identified and put into place
- inspect personnel and materials hoist equipment, safety equipment and installation for safe operation including general maintenance
- communication skills at a level sufficient to communicate with other site personnel (e.g. receive and interpret work instructions, safety information, emergency procedures)
- verify problems and equipment faults and demonstrate appropriate response.

**Required knowledge**

Required knowledge for this unit is:
REQUIRED SKILLS AND KNOWLEDGE

- weight of the load is determined from labels, markings or load paperwork
- level of literacy to be able to read and comprehend manufacturer’s instructions, procedures and safety signs
- Commonwealth, state or territory OHS legislation, standards and codes of practice relevant to the full range of processes for the hoist class
- hoist operations and operating techniques
- understanding of the hierarchy of hazard identification and control
- materials safety data sheets and requirements for safe movement of materials
- organisational and workplace standards, requirements, policies and procedures for conducting operations for the hoist class
- procedures for the recording, reporting and maintenance of workplace records and information
- rated capacity and working load limits
- typical routine problems encountered in the operation of a personnel and materials hoist, inspection techniques and adjustments required for correction.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OHS matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS licensing legislation
- effectively communicate and work safely with others in the work area
- identify hazards associated with the operation of the hoist and put in place effective hazard controls for those hazards identified
- determine load weights
- effectively conduct personnel and materials hoist operations to include the tasks of raising and lowering loads with hoist; in conjunction with awareness of the limitations of the hoist according to manufacturer’s specifications
- ensure hoist controls are attended throughout operation.
- effectively conduct emergency lowering of the hoist according to the emergency lowering procedure
- effectively conduct pre operational and shut down checks of the personnel and materials hoist (particular awareness of controls, alarms and lockout devices).

Context of and specific resources for assessment

- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument
- Assessment of performance must be
EVIDENCE GUIDE

undertaken either in the workplace or in a realistically simulated workplace

- Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace

- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints

- Assessment is to comply with relevant appropriate standard requirements

- Applicants must have access to:
  - personal protective equipment (PPE) for the purpose of the Performance Assessment.
  - appropriate personnel and material hoist and associated equipment in safe condition
  - suitable loads as specified by the endorsed assessment instrument
  - communication equipment (e.g. two-way radios, intercoms, light systems, buzzers, bells etc)

Method of assessment

Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.

The use of 'simulators' in the assessment of this unit of competency is not acceptable.

Assessment may be in conjunction with the assessment of other units of competency.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include but are not limited to:

- ground conditions (e.g. condition of pavement, slopes)
- overhead hazards (e.g. power lines, service pipes)
- traffic (e.g. pedestrians, vehicles, other plant)
- environmental conditions (e.g. wind, lightning, rain)
- hoist overload
- other specific hazards (e.g. dangerous materials).

Hazard prevention/control measures may include:

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls. It includes application of the hierarchy of control, the six step preference of control measures to manage and control risk:

- elimination
- substitution
- isolation
- engineering control measures
- using safe work practices
- personal protective equipment

Appropriate standards may include:

- codes of practice
- legislation
- Australian standards
- manufacturer specifications.

Hoist includes:

- the operation of a builder's hoist in which personnel, goods and/or materials may be hoisted, and which comprises a car, structure, machinery or other equipment associated with the hoist, and which may be a cantilever hoist, a tower hoist or a multiple winch operation. Included in this definition are situations where winches may be configured to operate as
## RANGE STATEMENT

**Procedures** may include but not limited to:
- manufacturer's guidelines (instructions, specifications or checklists)
- industry operating procedures
- workplace procedures (work instructions, operating procedures, checklists).

**Communication methods** may include but not limited to:
- verbal and non-verbal language
- written instructions
- signage
- hand signals
- listening
- questioning to confirm understanding
- appropriate worksite protocol
- interfloor/level communications

**Appropriate personnel** may include but not limited to:
- those associated with the operations of the personnel and materials hoist
- supervisors
- colleagues
- managers who are authorised to take responsibility for the workplace or operations.

**Service logbook** may include but is not limited to:
- any logbook
- service book
- history record system where the service and maintenance history is kept.

**Routine pre start operational checks** may include but not limited to:
- ground stability
- tower ties/guys are secure
- power supply is covered by earth leakage protection
- power leads secured above ground level and not attached to scaffolds or building structure
- tower guides are clean and free of rust and damage
- signs are clearly displayed and legible
- brakes and drive mechanism
- overhead protection
- intercom and signalling systems
- barriers, fencing and gates
- fuels, oil and water
- lubrication (grease)
- hoist rope
- sheaves and anchorage points.
RANGE STATEMENT

**Communication equipment** may include but not limited to:
- fix frequency two-way radios
- bells
- buzzers
- lights.

**Safety devices** may include but not limited to:
- emergency braking system
- overrun limits
- gate interlocks
- personnel access interlock on hoist roof.

**Appropriate standards** may include but are not limited to:
- codes of practice
- legislation
- Australian Standards
- manufacturer’s specifications
- industry standards (where applicable).

**Unplanned and/or unsafe situations** may include but not limited to:
- failure/loss of control e.g. power supply, braking system
- failure of equipment e.g. hydraulic system, broken hoist cable, damaged gear drive
- environmental conditions e.g. wind, lightning, storms.

**Shut down** may include but not limited to:
- platform positioned at base of tower
- lock on manual safety brake
- landing gates secured to prevent unauthorised access
- power isolated from control panel
- mains power supply isolated and secured
- internal combustion engine idled to stabilise temperature
- engine turned off
- fencing/barriers around base secured to prevent unauthorised access
- key removed (where applicable).

Co-requisite units: Nil

Functional area
Functional area
CPCCLHS3002A Licence to operate a materials hoist

Modification History
Not Applicable

Unit Descriptor
Unit descriptor This unit specifies the outcomes required to operate a materials hoist being a builder's hoist by which only goods or materials and not personnel may be hoisted and where the car, bucket or platform is cantilevered from, and travels up and down externally to, a face of the support structure for licensing purposes.

Application of the Unit
Application of the unit This unit requires the operator to plan work, conduct routine checks, check controls and operation, conduct hoist operation and shut down and secure hoist.

This unit is based on the requirements of the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

|                     | 2.7. All controls located and checked for serviceability.  
|                     | 2.8. Post start operational checks are carried out according to procedures.  
|                     | 2.9. All communication equipment, lighting and alarm systems are checked for serviceability.  
|                     | 2.10. All hoist safety devices and functions are tested to their maximum according to procedures.  
|                     | 2.11. All damage and defects are reported and recorded according to procedures and appropriate action taken.  |
| 3. Conduct hoist operations. | 3.1. Hoist is operated according to procedures.  
|                     | 3.2. Communication methods associated with hoist movement are conducted according to procedures and the appropriate standard.  
|                     | 3.3. Loads and Load distribution are continually monitored to ensure that the hoist is operated within its capacity and according to procedures.  
|                     | 3.4. Hoist movement is monitored constantly ensuring safety to personnel and stability.  
|                     | 3.5. Unplanned and/or unsafe situations are responded |
Element: Shut down and secure hoist.

Performance Criteria:

4. Shut down and secure hoist.
   4.1. Hoist is shut down, according to procedures.
   4.2. All fences and gates are secured according to procedures.
   4.3. Routine post-operational checks are carried out according to procedures.
   4.4. Power is isolated and secured against unauthorised access.
   4.5. All damage and defects are reported and recorded, according to procedures and appropriate action taken.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- accurately record and maintain information relating to materials hoist operations
- communication techniques in the workplace including bells, lights, hand signals, intercom and use of two-way radios
- conduct materials hoist operations
- hazards associated with the operation of the materials hoist are identified, risks are assessed and effective hazard prevention/control measures for those hazards identified and put into place
- inspect materials hoist equipment, safety equipment and installation for safe operation
- interpersonal communication skills at a level sufficient to communicate with other site personnel (e.g. receive and interpret work instructions, safety information, emergency procedures)
- verify problems and equipment faults and demonstrate appropriate response procedures.

Required knowledge

Required knowledge for this unit is:

- weight of the load is determined from labels, markings or load paperwork
- level of literacy to be able to read and comprehend manufacturer’s instructions,
REQUIRED SKILLS AND KNOWLEDGE

- procedures and safety signs
- Commonwealth, state or territory OHS legislation, standards and codes of practice relevant to the full range of processes for the hoist class
- hoist operations and operating techniques
- understanding of the hierarchy of hazard identification and control
- materials safety data sheets and requirements for safe movement of materials
- organisational and workplace standards, requirements, policies and procedures for conducting operations for the hoist class
- procedures for the recording, reporting and maintenance of workplace records and information
- rated capacity and working load limits
- typical routine problems encountered in the operation of a materials hoist, inspection techniques and adjustments required for correction.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OHS matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS licensing legislation.
- effectively communicate and work safely with others in the work area.
- identify hazards associated with the operation of the hoist and put in place effective hazard prevention/controls.
- determine load weights.
- effectively conduct materials hoist operations to include the tasks of raising and lowering loads with equipment and materials for cantilevered cars, buckets or platforms.
- ensure the hoist is attended at all times.
- effectively conduct pre operational and shut down checks of the materials hoist (particular awareness of controls, alarms and lockout devices).

Context of and specific resources for assessment

- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.
- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.
- Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a
EVIDENCE GUIDE

suitable working area is made available to suit the assessment and the workplace

- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment is to comply with relevant appropriate standard requirements
- Applicants must have access to:
  - personal protective equipment (PPE) for the purpose of the Performance Assessment.
  - appropriate material hoist and equipment in safe condition
  - suitable loads as specified by the endorsed assessment instrument
  - communication equipment (e.g. two-way radios, intercoms, light systems buzzers or bells etc)

Method of assessment

Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.

The use of 'simulators' in the assessment of this unit of competency is not acceptable.

Assessment may be in conjunction with the assessment of other units of competency.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include but not limited to:
- ground conditions (e.g. condition of pavement, slopes)
- overhead hazards (e.g. power lines, service pipes)
- Insufficient lighting
- traffic (e.g. pedestrians, vehicles, other plant)
- environmental conditions (e.g. wind, lightning, rain)
- hoist overload
- other specific hazards (e.g. dangerous materials).

Hazard control measures:
Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls.
It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:
- elimination
- substitution
- isolation
- engineering control measures
- using safe work practices
- personal protective equipment.

Appropriate standards may include but not limited to:
- codes of practice
- legislation
- Australian Standards
- manufacturer's specifications
- industry standard (where applicable).

Hoist may include:
the operation of builder's hoist by which only goods or materials and not personnel may be hoisted and where the car, bucket or platform is cantilevered from, and travels up and down externally to, a face of the support structure.

Procedures may include but are
- manufacturer's guidelines (instructions,
RANGE STATEMENT

not limited to:

- specifications or checklists
- industry operating procedures
- workplace procedures (work instructions, operating procedures, checklists).

**Communication methods** may include but are not limited to:

- verbal and non-verbal language
- written instructions
- signage
- hand signals
- listening
- questioning to confirm understanding
- appropriate worksite protocol
- interfloor/level communications.

**Appropriate personnel** may include but are not limited to:

- those associated with the operations of the hoist
- supervisors
- colleagues
- managers who are authorised to take responsibility for the workplace or operations.

**Hazard prevention/control measures** may include but not limited to:

- safety tags on electrical switches/isolators
- traffic barricades and control
- pedestrian barricades
- movement of obstructions
- personal protective equipment
- hoist safety gates and guards
- hoist safety interlocks
- adequate illumination.

**Service logbook** may include but is not limited to:

- any logbook
- service book
- history record system where the service and maintenance history is kept.

**Routine pre start operational checks** may include but are not limited to:

- check ground stability
- tower ties/guys are secure
- power supply is covered by earth leakage protection
- power leads are secured above ground level and not attached to scaffolds or building structure
- tower guides are clean and free of rust and damage
- signage is clearly displayed and legible
- brakes and drive mechanism
RANGE STATEMENT

- overhead protection
- intercom and signalling systems
- barriers, fencing and gates
- fuels, oil and water (where applicable)
- lubrication (grease)
- hoist rope
- sheaves and anchorage points.

Communication equipment may include but is not limited to:

- fixed channel two-way radios
- intercoms
- bells
- lights
- buzzers.

NB: where radio communication equipment is used the transmitting frequencies of the equipment must be selected to prevent interference to or from other radio equipment being used in the vicinity of the hoist.

Safety devices may include but not limited to:

- emergency braking system
- overrun limits
- gate interlocks.

Unplanned and/or unsafe situations may include but are not limited to:

- failure/lose of control e.g. power supply, braking system
- failure of equipment e.g. hydraulic system, broken hoist cable, damaged drive gear
- environmental conditions (e.g. wind, lightning, storms, etc).

Shut Down may include but not limited to:

- position platform at base of tower
- power isolated from control panel
- mains power supply isolated and secured
- fencing/barriers around base secured to prevent unauthorised access
- landing gates secured to prevent unauthorised access
- key removed from control panel (where applicable).

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to calculate Safe Working Load (SWL) and Working Load Limit (WLL)
- ability to erect and dismantle, level, plumb and stabilise associated plant and structures
- ability to work safely at heights including the correct application of safety equipment.
- accurate interpretation of basic structural charts and structural plans (site information)
- applying methods for making temporary connections of ropes using fibre and synthetic types
- apply methods of splicing and whipping fibre and synthetic ropes
- correct application and use of all rigging and associated equipment
- risk assessment and hazard control strategies
- interpersonal and communication skills at a level sufficient to site/workplace requirements. This includes the relevant communication methods and equipment.
- verify problems and equipment faults and demonstrate appropriate response.

Required knowledge

Required knowledge for this unit is:

- appropriate mathematical procedures for estimation and measurement of loads
- ability to interpret manufacturer’s specifications for all plant and equipment use in rigging operations
- knowledge of principles relating to all plant, equipment and structural stability
- knowledge of the types and functions of rigging, safety and associated equipment including an understanding of their limitations.
- organisational and workplace standards, requirements, policies and procedures for rigging
REQUIRED SKILLS AND KNOWLEDGE

- understanding of the hierarchy of hazard identification and control
- relevant Commonwealth, state or territory and local government OHS legislation, standards and codes of practice for undertaking rigging activities
- understanding of inspection and maintenance requirements of a wide range of appropriate plant and equipment in line with Australian Standards or manufacturer's specifications
- estimation of ground bearing pressures of the full range of soil types and associated ground conditions for setting up plant and equipment.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment endorsed by the national body responsible for OHS matters for the assessment of this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS licensing legislation.
- effectively communicate and work safely with others in the work area.
- effectively conduct risk assessment and management procedures.
- effectively complete the following tasks:
  - inspection of all plant and equipment, and
  - installation of a fall arrest system (Static line), and
  - use of a safety harness / fall arrest system, and
  - installation of crane loading platforms and
  - installation of a safety net, and
  - installation of a shutter and safety screen, and
  - demonstrated ability to work safely at heights, and
  - erection of structural steel, and
  - erection of precast panel, and
  - set up and operation of a winch for load movement, and
  - installation of a materials hoist, or
  - installation of a mast climber.
- effectively demonstrate the following knots,
EVIDENCE GUIDE

- bends and hitches:
  - Sheet bend,
  - Becket hitch,
  - Running bowline,
  - Double bowline.
- effectively demonstrate the following splices and whippings:
  - Eye splice,
  - Back splice,
  - Short splice,
  - Sail makers whipping,
  - Common whipping,
  - West countryman's

Context of and specific resources for assessment

Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the National OHS endorsed Assessment Instrument.

Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.

Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.

Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with the requirements of any relevant Standards or operating procedures for basic rigging.

Applicants must have access to:
- personal protective equipment (PPE) for the purpose of the Performance Assessment.
- appropriate safety equipment in safe condition
- appropriate rigging equipment, associated equipment associated plant in safe condition as described in the endorsed assessment instrument
- communication equipment (e.g. two-way
EVIDENCE GUIDE

Radios) where applicable
- appropriate materials as required for safe erection of structures
- appropriate materials for conducting fibre rope slicing, whipping, knots, bends and hitches.

Method of assessment

Assessment must be conducted using the national OHS endorsed Assessment Instruments. These Instruments provide advice on their application.

The use of 'simulators' in the assessment of this unit of competency is not acceptable.

Assessment may be in conjunction with the assessment of other units of competency.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include but are not limited to:
- ground stability (e.g. ground condition, recently filled trenches, slopes)
- overhead hazards (e.g. power lines, service pipes) (NB: minimum clearance distance from powerlines or electrical equipment as determined by relevant state authority or
RANGE STATEMENT

electrical supply authority.)
- traffic (e.g. pedestrians, vehicles, other plant)
- insufficient lighting
- environmental conditions (e.g. wind, lightning, storms)
- other specific hazards (e.g. dangerous materials).

Hazard control measures:

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:
- elimination
- substitution
- isolation
- engineering control measures
- using safe work practices
- personal protective equipment.

Appropriate standards may include:
- codes of practice
- legislation
- Australian Standards
- manufacturer's specifications
- industry standards (where applicable).

Site Information may include, but not limited to:
- local conditions such as access and egress,
- work method statements,
- site specific job safety analyses and other site specific documentation as required.
- task plans / Schedules and structural plans.

Forces and Loads may include, but not limited to:
- dead loads
- live loads
- static load
- dynamic loads
- wind loads.

Structures may include but are not limited to:
- structural steel
- precast panels.

Associated plant may include but not limited to:
- static lines
- safety nets
- hoists
RANGE STATEMENT

Appropriate personnel may include:

- mast climbers
- loading platforms.
- engineers
- supervisors
- colleagues
- managers who are authorised to take responsibility for the workplace or operations.

Rigging Equipment may include but is not limited to:

- scaffolds
- elevated work platforms
- personnel box
- cantilevered crane loading platforms
- mast climbers.
- safety screens and shutters
- cranes including but not limited to:
  - non-slewing cranes
  - mobile slewing cranes
  - vehicle loading cranes
  - tower cranes
  - self-erecting tower cranes
  - portal boom cranes
  - derrick cranes
  - bridge and gantry cranes.

Associated equipment may include but is not limited to:

- all types of power and manually operated lifting gear
- fibre ropes
- flexible steel wire rope (FSWR)
- chains
- wire and synthetic slings
- shackles
- terminations
- wedge sockets
- eye bolts
- beam clamps
- plate clamps
- rope grips
- tumbuckles
- rigging screws
- chain blocks
- lever blocks
- lever-action winches
RANGE STATEMENT

- sheaves
- spreader bars
- lifting beams
- jacks
- levers
- skates
- wedges
- rollers
- girder trolley

**Procedures** may include but is not limited to:

- manufacturer's guidelines (instructions, specifications or checklists)
- industry operating procedures, relevant codes of practice
- workplace procedures (work instructions, operating procedures, checklists).

**Safety Equipment** may include but not limited to:

- safety harness
- energy absorber
- lanyard
- inertia reel
- static safety lines
- safety nets.

**Communication Methods** may include but is not limited to:

- verbal and non-verbal language
- written instructions
- signage
- hand signals
- listening,
- questioning to confirm understanding, and appropriate worksite protocol.

**Communication equipment** may include but is not limited to:

- fixed channel two-way radios

**Hazard prevention/control measures** may include but is not limited to:

- safety tags on electrical switches/isolators
- powerlines are insulated
- safety observer used inside exclusion zone
- power disconnected
- traffic barricades and control
- pedestrian barricades
- trench covers

**NB**: Mobile phones are not to be used for signalling purposes during the rigging process.
RANGE STATEMENT

- movement of obstructions
- personal protective equipment
- adequate illumination
- safety shutters and screens.

Ground suitability may include but is not limited to:

- rough uneven ground
- backfilled ground
- soft soils
- hard compacted soil
- rock
- bitumen
- concrete
- suspended concrete floors
- building roofs
- landings
- ground bearing pressure.

Appropriate personnel may include but not limited to:

- other riggers
- doggers
- crane operators.

Temporary connections may include but not limited to:

- knots
- bends
- hitches
- spicing
- whipping.

Flexible Steel Wire Rope (FSWR) includes:

- identification, uses and connections.

May include termination for:

- static lines,
- guys,
- purchase systems,
- lashing,
- cranes,
- hoist and winch ropes.

Unit Descriptor

Unit descriptor
This unit specifies the outcomes required to perform rigging work at the intermediate level, which includes all the outcomes for rigging work at the basic level, and also includes rigging of cranes, rigging of conveyors, rigging of dredges and excavators, rigging associated with tilt slabs, rigging associated with demolition work, and dual lifts for licensing purposes.

Application of the Unit

Application of the unit
This unit requires the applicant to be able plan the work, select and inspect equipment, set up task, erect structures and plant and dismantle structures and plant.

This unit is based upon the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

This unit has a pre-requisite requirement. This requirement may be met by either the successful completion of the unit CPCCLRG3001A Licence to perform rigging basic level or holding a valid licence for basic rigging.

ELEMENT  PERFORMANCE CRITERIA

(where appropriate)

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to calculate Safe Working Load (SWL) and Working Load Limit (WLL)
- ability to erect and dismantle, level, plumb and stabilise associated plant and structures
- ability to work safely at heights including the correct application of safety equipment.
- accurate interpretation of structural charts and structural plans (site information)
- correct application and use of all rigging and associated equipment
- risk assessment and hazard control strategies
- interpersonal and communication skills at a level sufficient to site/workplace requirements. This includes the relevant communication methods and equipment.
- verify problems and equipment faults and demonstrate appropriate response.

Required knowledge

Required knowledge for this unit is:

- appropriate mathematical procedures for estimation and measurement of loads
- ability to interpret manufacturer's specifications for all plant and equipment use in rigging operations
- knowledge of principles relating to all plant, equipment and structural stability
- knowledge of the types and functions of rigging, safety and associated equipment including an understanding of their limitations
- organisational and workplace standards, requirements, policies and procedures for rigging
- understanding of the hierarchy of hazard identification and control
- relevant Commonwealth, state or territory and local government OHS legislation, standards and codes of practice for undertaking rigging activities
- understanding of inspection and maintenance requirements of a wide range of appropriate plant and equipment in line with Australian Standards or manufacturer's specifications
- estimation of ground bearing pressures of the full range of soil types and associated...
REQUIRED SKILLS AND KNOWLEDGE

ground conditions for setting up plant and equipment.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OHS matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS licensing legislation.
- effectively communicate and work safely with others in the work area.
- effectively conduct risk assessment and management procedures.
- effectively complete the following tasks:
  - adding and removing a tower crane section, or
  - adding and removing a crane lattice boom section, or
  - erecting a non guyed tower (e.g. light tower, and
  - perform a multiple crane lift, or
  - a multiple winch lift, or
  - a combination of a crane and winch lift, and
  - lifting and installing a series of tilt-up panels, or
  - lifting and installing a series of scenery panels (i.e. entertainment industry), and
  - demolish/remove a series of tilt-up panel structures, or
  - demolish/remove a series of scenery panel structures, and
  - demolishing a concrete encased structural steel column and beam.
- NB: All specifications for these performance
EVIDENCE GUIDE

- tasks are detailed in the endorsed assessment instrument.
- effectively conduct pre and post operational checks of intermediate rigging equipment.

Context of and specific resources for assessment

Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.

Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.

Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.

Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with relevant appropriate standard requirements.

Applicants must have access to:
- personal protective equipment (PPE) for the purpose of the Performance Assessment
- appropriate safety equipment is safe condition
- appropriate rigging equipment, associated equipment associated plant in safe condition as described in the endorsed assessment instrument
- communication equipment (e.g. radios) where applicable
- appropriate materials as required for safe erection of structures.

Method of assessment

Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.

The use of 'simulators' in the assessment of this unit of competency is not acceptable.

Assessment may be in conjunction with the assessment of other units of competency.
EVIDENCE GUIDE

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include but not limited to:

- ground stability (e.g. ground condition, recently filled trenches, slopes)
- overhead hazards (e.g. power lines, service pipes) (NB: Minimum clearance distance from powerlines or electrical equipment as determined by relevant state authority or electrical supply authority)
- traffic (e.g. pedestrians, vehicles, other plant)
- insufficient lighting
- environmental conditions (e.g. wind, lightning, storms)
- other specific hazards (e.g. dangerous materials).

Hazard control measures:

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of control, the six-step preference of control.
RANGE STATEMENT

measures to manage and control risk:

- elimination
- substitution
- isolation
- engineering control measures
- using safe work practices
- personal protective equipment.

Appropriate standards may include but are not limited to:

- codes of practice
- legislation
- Australian Standards
- manufacturer’s specifications
- industry standards (where applicable).

Site Information may include but is not limited to:

- local conditions such as access and egress
- work method statements
- site-specific job safety analyses and other site specific documentation as required
- task plans /schedules and structural plans.

Forces and Loads may include but are not limited to:

- dead loads
- live loads
- static load
- dynamic loads
- wind loads.

Structures may include but not limited to:

- concrete tilt-up panels
- scenery panels (used in entertainment)
- non guyed light towers.

Associated plant may include but is not limited to:

- all types of cranes
- conveyors
- dredges
- excavators.

Appropriate personnel may include but not limited to:

- supervisors
- engineers
- colleagues
- managers who are authorised to take responsibility for the workplace or operations.

Rigging Equipment may include but is not limited to:

- scaffolds
- elevated work platforms
- stages
- personnel box
- cantilevered crane loading platforms.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to calculate Safe Working Load (SWL) and Working Load Limit (WLL)
- ability to erect and dismantle, level, plumb and stabilise associated plant
- ability to work safely at heights including the correct application of safety equipment.
- accurate interpretation of structural charts and structural plans (Site information)
- applying methods for making temporary connections of ropes using fibre and synthetic types
- correct application and use of all rigging and associated equipment
- risk assessment and hazard control strategies
- interpersonal and communication skills at a level sufficient to site/workplace requirements. This includes the relevant communication methods and equipment.
- verify problems and equipment faults and demonstrate appropriate response.

Required knowledge

Required knowledge for this unit is:

- appropriate mathematical procedures for estimation and measurement of loads
- ability to interpret manufacturer’s specifications for all plant and equipment use in rigging operations
- knowledge of principles relating to all plant, equipment and structural stability
- knowledge of the types and functions of rigging, safety and associated equipment including an understanding of their limitations
- organisational and workplace standards, requirements, policies and procedures for rigging
- understanding of the hierarchy of hazard identification and control
- relevant Commonwealth, state or territory and local government OHS legislation, standards and codes of practice for undertaking rigging activities
- understanding of inspection and maintenance requirements of a wide range of appropriate plant and equipment in line with Australian Standards or manufacturer’s specifications
- estimation of ground bearing pressures of the full range of soil types and associated ground conditions for setting up plant and equipment.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OHS matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS licensing legislation.
- effectively communicate and work safely with others in the work area.
- effectively conduct risk assessment and management procedures.
- effectively complete the following tasks:
  - rig a span rope, or
  - rig a flying fox, and
  - install a swinging stage, or
  - install a bosuns chair, and
  - set up a gin pole and conduct a lift with a powered winch, and
  - erect and dismantle a hung or suspended scaffold.

NB: All specifications for these performance tasks are detailed in the endorsed assessment instrument.

- effectively demonstrate the following knots, bends and hitches:
  - Alpine hitch
  - Bosun chair hitch
  - Prusik hitch
  - Figure eight
- effectively conduct pre and post operational
EVIDENCE GUIDE

Context of and specific resources for assessment

Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.

Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.

Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.

Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with relevant appropriate standard requirements.

Applicants must have access to:

- personal protective equipment (PPE) for the purpose of the Performance Assessment
- appropriate safety equipment is safe condition
- Appropriate rigging equipment, associated equipment associated plant in safe condition as described in the endorsed assessment instrument
- communication equipment (e.g. radios) where applicable
- appropriate materials as required for safe erection and dismantling of performance tasks
- appropriate materials for conducting fibre rope knots, bends and hitches.

Method of assessment

Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.

The use of 'simulators' in the assessment of this unit of competency is not acceptable.

Assessment may be in conjunction with the assessment of other units of competency.

Assessment methods must confirm consistency
EVIDENCE GUIDE

and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include but are not limited to:

- backfilled ground
- soft soils
- hard compacted soil
- rock
- bitumen
- concrete
- suspended concrete floors
- building roofs
- landings
- ground bearing pressure.

Temporary connections may include but not limited to:

- knots
- bends
- hitches
- whipping.

Flexible Steel Wire Rope (FSWR) includes:

May include termination for:

- static lines
- guys
- purchase systems
- lashing
- cranes
- hoist and winch ropes.

Unit Descriptor
Unit descriptor
This unit specifies the outcomes required to erect, alter and dismantle scaffolding at the basic level, consisting of scaffolding work connected with the operation or use of modular or pre-fabricated scaffolds, cantilevered materials hoists with a maximum working load of 500kg, ropes and gin wheels, safety nets and static lines, and bracket scaffolds (tank and formwork) for licensing purposes.

Application of the Unit
Application of the unit
This unit covers the scope of work to plan the job, select and inspect equipment, set up task, erect scaffold and scaffold equipment and dismantle scaffold and scaffold equipment.

This unit is based upon the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form it state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

</thead>
</table>
| 1. Plan job. | 1.1. Task to be undertaken is assessed.  
1.2. Potential workplace hazards are identified.  
1.3. **Hazard control measures** are identified consistent with **appropriate standards** to ensure the safety of personnel and equipment.  
1.4. Site information is obtained.  
1.5. **Scaffold, associated equipment and scaffolding equipment** are identified from site information and in consultation with **appropriate personnel** (where applicable).  
1.6. **Safety equipment** is identified.  
1.7. All forces and loads exerted on and by the scaffold and/or scaffolding equipment are determined and calculated.  
1.8. Appropriate **communication methods** are identified with appropriate personnel. |
| 2. Select and inspect plant and equipment. | 2.1. Scaffold, associated equipment and scaffold equipment are selected and inspected according to **procedures** and site information.  
2.2. Safety equipment is selected and inspected according to procedures.  
2.3. All defective Scaffold, associated equipment, scaffold equipment and safety equipment are isolated according to procedures.  
2.4. All defective Scaffold, associated equipment, scaffold equipment and safety equipment are reported and recorded according to procedures.  
2.5. **Communication equipment** is selected and inspected for serviceability (where applicable). |
| 3. Set up task | 3.1. Appropriate **hazard prevention/control measures** are applied to the work area according to procedures.  
3.2. Ground suitability is checked.  
3.3. Appropriate footings are prepared to support scaffold and scaffold equipment according to procedures and the appropriate standard.  
3.4. Scaffold and scaffold equipment are prepared for erection according to procedures and the appropriate standard.  
3.5. Safety equipment is fitted and secured according to procedures (where applicable). |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
3.6. Scaffold and scaffold equipment are positioned for work application and stability according to procedures and the appropriate standard.

4. Erect scaffold and scaffold equipment.
4.1. Scaffold and scaffold equipment are erected according to procedures and the appropriate standard.
4.2. Work is conducted safely at heights including safe and effective use of safety equipment.
4.3. Scaffold and scaffold equipment are erected consistent with site information.
4.4. Appropriate communication methods are used to coordinate the tasks.
4.5. Completed tasks are inspected for compliance with the appropriate standard.
4.6. Handover certificate is completed as required and handed to appropriate personnel.
4.7. Excess materials from the work area are removed (where applicable).

5. Dismantle scaffold and scaffold equipment.
5.1. Scaffold and scaffold equipment are dismantled according to procedures and the appropriate standard.
5.2. Work is conducted safely at heights including safe and effective use of safety equipment.
5.3. Scaffold, associated equipment and scaffold equipment are inspected for damage and defects.
5.4. All damaged and defective scaffold, associated equipment and scaffold equipment are tagged and isolated according to procedures.
5.5. Hazard prevention/control measures are removed (where appropriate).
5.6. All damaged and defective scaffold, associated equipment and scaffold equipment are reported and recorded according to procedures and appropriate action taken.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.
REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- ability to calculate Safe Working Load (SWL) and Working Load Limit (WLL)
- ability to erect scaffold within the scope of the basic scaffolder
- ability to erect, level, plumb and stabilise cantilever hoists and scaffolds
- ability to interpret manufacturer's specifications for plant and equipment
- ability to work safely at heights
- ability to set up fall arrest systems, including safety nets
- ability to work safely in confined spaces
- accurate interpretation of basic structural charts and structural plans
- applying methods for making temporary connection using fibre ropes
- correct application of all scaffolding equipment
- methods for making temporary connection of guy ropes and static lines using Flexible Steel Wire Rope (FSWR)
- verify problems and equipment faults and demonstrate appropriate response.

Required knowledge

Required knowledge for this unit is:

- use of appropriate mathematical procedures for estimation and measurement of loads Commonwealth, state or territory OHS legislation and local government regulations, including standards and codes of practice relevant to the full range of techniques for undertaking basic scaffolding activities
- knowledge of principles relating to plant and equipment stability
- knowledge of types of scaffolding and their application
- knowledge of scaffolding erection and dismantling techniques
- knowledge of types of hoists, plant and equipment associated with basic scaffolding and their use/s
- risk assessment and control, including understanding of the hierarchy of control
- estimation of bearing pressures of the full range of soil types and associated ground conditions for setting up plant and equipment
- load capabilities of different types of scaffolding constructions
- understanding and application of organisational and workplace standards, requirements, policies and procedures for scaffolding
- safety equipment applicable to scaffolding
- understanding and application of the inspection and maintenance requirements for basic scaffold, associated equipment and scaffold equipment
- uses and limitations of tools and equipment, appropriate to scaffolding tasks and activities.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work. State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment endorsed by the national body responsible for OHS matters for the assessment of this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS licensing requirements.
- effectively communicate and work safely with others in the work area.
- effectively apply risk assessment and hazard management procedures at a basic scaffolder level.
- effectively complete the planning, erection and dismantling of a scaffolding system, in accordance with procedures, including a minimum of erect and dismantle:
  - Modular Scaffold with return and ladder access and platform brackets (hop-up brackets)
  - Bracket Scaffold
  - Mobile Scaffold
  - gin wheel
  - Cantilever Hoist
  - safety net and static line
  - safety screen

Scaffold to be of a minimum height of at least 5.0 metres above the supporting surface with full edge protection (includes safety screen) for each work platform including toe boards and handrails.

- correctly demonstrate fibre rope bends and hitches.
EVIDENCE GUIDE

Context of and specific resources for assessment

- Effectively conduct pre and post operational checks of basic scaffolding.
- Complete handover certificate as required.
- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the National OHS endorsed Assessment Instrument.
- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.
- Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.
- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints for basic scaffolding.
- Applicants must have access to:
  - Personal protective equipment (PPE) for the purpose of the Performance Assessment.
  - Appropriate safety equipment in safe condition.
  - Appropriate scaffolding and associated scaffolding equipment.
  - Communication equipment (e.g. fixed channel two way radios) where applicable.
  - Appropriate personnel to assist with the erecting and dismantling of scaffold and scaffold equipment.

Method of assessment

Assessment must be conducted using the national OHS endorsed Assessment Instruments. These Instruments provide advice on their application. Assessment may be in conjunction with the assessment of other units of competency.

The use of 'simulators' in the assessment of this unit of competency is not acceptable.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
EVIDENCE GUIDE

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

Guidance information for assessment
Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include but not limited to:

- ground conditions (e.g. ground bearing pressure/s, back filled trenches, underground services, slopes)
- overhead hazards (e.g. power lines, service pipes) (minimum clearance distance from powerlines or electrical equipment as determined by relevant state authority or electrical supply authority)
- traffic (e.g. pedestrians, vehicles, other plant)
- insufficient lighting
- environmental conditions (e.g. wind, lightning, storms)
- other site specific hazards (e.g. hazardous materials).

Hazard control measures:
Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls. It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:

- elimination
RANGE STATEMENT

- substitution
- isolation
- engineering control measures
- using safe work practices
- personal protective equipment.

Appropriate standards may include:
- codes of practice
- legislation
- Australian Standards
- manufacturer's specifications
- industry standards (where applicable).

Site Information may include, but not be limited to:
- local conditions such as access and egress
- work method statements
- site-specific job safety analyses and other documentation as required
- task plans.

Scaffold may include but not limited to:
- mobile scaffolding
- bracket scaffolding
- modular scaffolding, including:
  - steel
  - fibreglass and
  - aluminium frame scaffolding
- prefabricated scaffolding.
- planks
- flexible steel wire rope and fittings.

NB: including identification, uses and connections which may include termination for static lines and guys for cantilever hoists.

- ladders
- tie tubes and fittings
- fibre rope

NB: including identification and uses (natural and synthetic), and connections associated with bends and hitches.

- stairways and screening
- hand tools, including, but not limited to:
  - box spanners
  - hammers
  - spirit levels
  - tape measures
RANGE STATEMENT

- scaffold belts
- podgers
- hammers
- wire nips
- wrenches
- torpedo levels
- shovels
- spanners
- cutters
- hammer drills
- sledge hammers
- wheel barrows and
- relevant maintenance equipment.

*Scaffolding equipment* may include but not limited to:

- materials hoists
- gin wheels
- safety nets
- static lines and fittings.

*Appropriate personnel* may include, but are not limited to:

- supervisors
- colleagues
- managers who are authorised to take responsibility for the workplace or operations
- other scaffolders
- other site personnel as applicable.

*Safety equipment* may include but not limited to:

- safety harness
- energy absorber
- lanyard
- inertia reel.

*Forces and Loads* may include, but are not limited to:

- dead loads
- live loads
- static load
- dynamic loads
- wind loads.

*Communication Methods* may include but not limited to:

- verbal and non-verbal language
- written instructions
- signage
- communication signals
- listening
- questioning to confirm understanding, and appropriate worksite protocol.
RANGE STATEMENT

**Procedures** may include but not limited to:
- manufacturer's guidelines (instructions, specifications or checklists)
- industry operating procedures, relevant codes of practice
- workplace procedures (work instructions, operating procedures, checklists)
- reporting and recording procedures such as e.g. equipment defect/s.

**Communication equipment** may include but is not limited to:
- fixed frequency two way radios
- mobile phones.

**Hazard prevention/control measures** may include but not limited to:
- safety tags on electrical switches/isolators
- safety observer used inside exclusion zone (e.g. Spotter), to include the use of power line warning systems (e.g. Tiger tails)
- power disconnected by competent authority where applicable
- traffic and pedestrian barricades and controls
- safe and adequate access / egress is established
- personal protective equipment
- adequate illumination.

**Ground suitability** may include but not limited to:
- rough uneven ground
- backfilled ground
- soft soils
- hard compacted soil
- rock
- bitumen
- concrete.

**Stability** may include but is not limited to:
- ground bearing pressure
- sole plates/boards
- screw jacks
- levelling
- ties/guys.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.
REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- ability to erect scaffold and scaffolding equipment within the scope of the intermediate scaffolder
- ability to erect, level, plumb and stabilise scaffolds and scaffold equipment within the scope of the intermediate scaffolder
- ability to interpret manufacturer's specifications for plant and equipment
- ability to work safely at heights
- accurate interpretation of basic structural charts and structural plans
- correct application of all scaffolding equipment
- verify problems and equipment faults and demonstrate appropriate response.

Required knowledge

Required knowledge for this unit is:

- use of appropriate mathematical procedures for estimation and measurement of loads
- Commonwealth, state or territory OHS legislation and local government regulations, including standards and codes of practice relevant to the full range of techniques for undertaking intermediate scaffolding activities
- knowledge of principles relating to plant and equipment stability
- knowledge of types of scaffolding and their application
- knowledge of scaffold and scaffold equipment erection and dismantling techniques
- knowledge of types of scaffold and scaffold equipment, associated with intermediate scaffolding and their use/s
- risk assessment and control, including understanding of the hierarchy of control
- load capabilities of different types of scaffolding constructions
- understanding and application of organisational and workplace standards, requirements, policies and procedures for scaffolding
- application of safety equipment applicable to scaffolding
- understanding and application of the inspection and maintenance requirements for intermediate scaffold, associated equipment and scaffold equipment
- uses and limitations of tools and equipment, appropriate to scaffolding tasks and activities.

Evidence Guide

EVIDENCE GUIDE
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment endorsed by the national body responsible for OHS matters for the assessment of this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- Effectively communicate and work safely with others in the work area.
- Effectively apply risk assessment and hazard management procedures at an intermediate scaffolder level.
- Effectively complete the planning, erection and dismantling of scaffolding systems, in accordance with procedures, including a minimum of erect and dismantle the following:
  - Cantilevered and spurred scaffolds
  - Barrow ramps and/or sloping platforms
  - Tube and coupler scaffolds
  - Cantilevered crane-loading platforms
  - Mast climbers

Cantilevered, spurred and tube and coupler scaffolds to be of a minimum height of 5.0 metres above the supporting surface with full edge protection, for each work platform including toe boards and handrails.

- Apply safety screen to tube and coupler scaffold.
- Effectively conduct compliance inspections of scaffold and scaffold equipment for intermediate scaffolding.
- Complete handover certificate as required.
- Assessment of the safe and effective
EVIDENCE GUIDE

resources for assessment

application of knowledge and skill to workplace tasks (performance) must be undertaken using the National OHS endorsed Assessment Instrument.

- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.
- Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.
- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints for intermediate scaffolding.
- Applicants must have access to:
  - personal protective equipment (PPE) for the purpose of the Performance Assessment
  - appropriate safety equipment in safe condition
  - appropriate scaffold and scaffold equipment in safe condition
  - site information as described in the mandated assessment instrument
  - communication equipment (e.g. fixed channel two way radios) where applicable
  - appropriate personnel to assist with the erecting and dismantling of scaffold and scaffold equipment.

Method of assessment

Assessment must be conducted using the national OHS endorsed Assessment Instruments. These Instruments provide advice on their application.

Assessment may be in conjunction with the assessment of other units of competency.

The use of 'simulators' in the assessment of this unit of competency is not acceptable.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied
EVIDENCE GUIDE

under the particular circumstance, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed assessment instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include but not limited to:

- ground conditions (e.g. ground bearing pressure/s, back filled trenches, underground services, slopes)
- overhead hazards (e.g. power lines, service pipes) (minimum clearance distance from powerlines or electrical equipment as determined by relevant state authority or electrical supply authority.)
- traffic (e.g. pedestrians, vehicles, other plant)
- insufficient lighting
- environmental conditions (e.g. wind, lightning, storms)
- other site specific hazards (e.g. hazardous materials).

Hazard control measures:

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:
- ability to erect scaffold and scaffold equipment within the scope of the advanced scaffolder
- ability to erect, level, plumb and stabilise scaffolds and scaffold equipment within the scope of the advanced scaffolder
- ability to work safely at heights
REQUIRED SKILLS AND KNOWLEDGE

- ability to interpret manufacturer's specifications for plant and equipment
- accurate interpretation of structural charts and structural plans
- correct application of all scaffolding equipment
- verify problems and equipment faults and demonstrate appropriate response.

Required knowledge

Required knowledge for this unit is:

- use of appropriate mathematical procedures for estimation and measurement of loads
- Commonwealth, state or territory OHS legislation and local government regulations, including standards and codes of practice relevant to the full range of techniques for undertaking advanced scaffolding activities
- knowledge of principles relating to plant and equipment stability
- knowledge of types of scaffolding and their application
- knowledge of scaffold and scaffold equipment erection and dismantling techniques
- knowledge of types scaffold and scaffold equipment, associated with advanced scaffolding and their use/s
- risk assessment and control, including understanding of the hierarchy of control
- load capabilities of different types of scaffolding constructions
- understanding and application of organisational and workplace standards, requirements, policies and procedures for scaffolding
- application of safety equipment applicable to scaffolding
- understanding and application of the inspection and maintenance requirements for advanced scaffold, associated equipment and scaffold equipment
- uses and limitations of tools and equipment, appropriate to scaffolding tasks and activities.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment endorsed by the national body responsible for OHS matters for the assessment of this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- Effectively communicate and work safely with others in the work area.
- Effectively apply risk assessment and hazard management procedures at an advanced scaffolder level.
- Effectively complete the planning, erection and dismantling of scaffolding systems, in accordance with procedures, including a minimum of erection and dismantling of:
  - a hung scaffold, and
  - a suspended scaffold.

**Hung scaffold** means a scaffold that is hung from another structure and that is not capable of being raised or lowered when in use.

**Suspended scaffold** means a scaffold incorporating a suspended platform that is capable of being raised or lowered when in use.

- Effectively conduct compliance inspections of scaffold and scaffold equipment for advanced scaffolding.
- Complete handover certificate as required
- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the National OHS endorsed...
EVIDENCE GUIDE

Assessment Instrument

- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting
- Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace
- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints for basic scaffolding
- Applicants must have access to:
  - personal protective equipment (PPE) for the purpose of the Performance Assessment
  - appropriate safety equipment in safe condition
  - appropriate scaffolding and scaffold equipment in safe condition
  - site information as described in the mandated assessment instrument
  - communication equipment (e.g. fixed channel, two-way radios) where applicable
  - appropriate personnel to assist with the erecting and dismantling of scaffold and scaffold equipment.

Method of assessment

Assessment must be conducted using the national OHS endorsed Assessment Instruments. These Instruments provide advice on their application. Assessment may be in conjunction with the assessment of other units of competency.

The use of 'simulators' in the assessment of this unit of competency is not acceptable.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
**EVIDENCE GUIDE**

**Guidance information for assessment**

Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.

---

**Range Statement**

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Hazards** may include but not limited to:

- overhead hazards (e.g. power lines, service pipes) (minimum clearance distance from powerlines or electrical equipment as determined by relevant state authority or electrical supply authority)
- traffic (e.g. pedestrians, vehicles, other plant)
- insufficient lighting
- environmental conditions (e.g. wind, lightning, storms)
- other site specific hazards (e.g. hazardous materials).

**Hazard control measures**: Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:

- elimination
- substitution
- isolation
- engineering control measures
- using safe work practices
- personal protective equipment.

**Appropriate standards** may

- codes of practice
- legislation
RANGE STATEMENT

include:
- Australian Standards
- manufacturer's specifications
- industry standards (where applicable).

Site Information may include, but not limited to:
- local conditions such as access and egress
- work method statements
- site-specific job safety analyses and other documentation as required.

Scaffold may include but not limited to:
- all scaffold at the basis and intermediate levels
- hung scaffolds, including scaffolds hanging from tubes, wire ropes or chains
- suspended scaffolds.

Associated equipment may include but not limited to:
- all associated equipment at the basic and intermediate levels
- counterweights
- prefabricated needles.

Scaffolding equipment may include but not limited to:
- all scaffold equipment at the basis and intermediate level
- swinging stages.

Appropriate personnel may include, but is not limited to:
- supervisors
- colleagues
- managers who are authorised to take responsibility for the workplace or operations
- other scaffolders
- other site personnel as applicable.

Safety equipment may include but is not limited to:
- safety harness
- energy absorber
- lanyard
- inertia reel.

Forces and Loads may include, but are not limited to:
- dead loads
- live loads
- static load
- dynamic loads
- wind loads.

Communication Methods may include but are not limited to:
- verbal and non-verbal language
- written instructions
- signage
- communication signals
- listening
- questioning to confirm understanding, and
RANGE STATEMENT

Procedures may include but are not limited to:
- manufacturer's guidelines (instructions, specifications or checklists)
- industry operating procedures, relevant codes of practice
- workplace procedures (work instructions, operating procedures, checklists)
- reporting and recording procedures such as e.g. equipment defect/s.

Communication equipment may include but is not limited to:
- fixed frequency radios
- mobile phones.

Hazard prevention/control measures may include but are not limited to:
- safety tags on electrical switches/isolators
- safety observer used inside exclusion zone (e.g. Spotter), to include the use of power line warning systems (e.g. Tiger tails)
- power disconnected by competent authority where applicable.
- traffic and pedestrian barricades and controls
- safe and adequate access / egress is established
- personal protective equipment
- adequate illumination.

3.7. Crane is operated according to procedures.

3.8. Load movement is monitored constantly to ensure safety of personnel, load and structural stability.

3.9. Unplanned and/or unsafe situations are responded to in line with procedures.

4. Shut down and secure crane.

4.1. Crane is placed in weather vane mode according to procedures (where applicable).

4.2. Relevant motion locks and brakes are applied (where applicable).

4.3. Crane and equipment is secured correctly, according to procedures and the appropriate standard.

4.4. Crane is shut down according to procedures.

4.5. Routine post-operational checks on crane are carried out, according to procedures.

4.6. All damage and defects are reported and recorded according to procedures and appropriate action taken.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- accurate recording and maintenance of information relating to crane operations
- communication techniques in the workplace including whistles, hand signals and use of two-way radios
- interpersonal communication skills at a level sufficient to communicate with other site personnel
- loading of data into crane computer (where fitted) and checking of operation to accurately reflect the crane configuration
- operation of a tower crane for the lifting and moving of loads to the safe working
REQUIRED SKILLS AND KNOWLEDGE

rated capacity in conjunction with other appropriate personnel where required

- risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the crane (particular awareness of the risks associated with overhead powerlines/electrical cables, wind, etc)
- use and interpretation of crane manufacturer’s specifications and data, including load charts to enable the crane to be configured for the load
- verifying problems and equipment faults and demonstrating appropriate response procedures

Required knowledge

Required knowledge for this unit is:

- ability to read and comprehend manufacturer’s instructions, procedures and safety signs
- appropriate mathematical procedures for estimation of loads
- commonwealth, state or territory OHS legislation, standards and codes of practice relevant to the full range of processes for the crane class
- organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- understanding of the hierarchy of hazard identification and control
- level of literacy to be able to read and comprehend manufacturer's instructions, procedures and safety signs
- tower crane operating techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- tower crane characteristics and capabilities to allow the operation of the crane to suit the range of loads
- rated capacity and working load limits (including use of crane load charts)
- typical routine problems encountered in the operation of the crane and equipment and adjustments required for correction.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OHS matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OH&S licensing legislation
- communicate and work safely with others in the work area
- assess risks and management procedures (particular awareness of the risks associated with overhead powerlines/electrical cables, wind, etc)
- operate a tower crane for the lifting and moving of loads to the safe working rated capacity in conjunction with other appropriate personnel
- apply appropriate mathematical procedures for estimation of loads.

- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument
- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting
- Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace
- Assessment must occur under standard and
EVIDENCE GUIDE

authorised work practices, safety requirements and environmental constraints

- Assessment is to comply with relevant appropriate standard requirements
- Applicants must have access to:
  - personal protective equipment (PPE) for the purpose of the Performance Assessment.
  - appropriate tower crane and associated equipment in safe condition
  - suitable loads as specified by the endorsed assessment instrument
  - communication equipment (eg. two way radios, whistles, etc)
  - other appropriate personnel to sling and direct the loads.

Method of assessment

Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.

The use of 'simulators' in the assessment of this unit of competency is not acceptable.

Assessment may be in conjunction with the assessment of other units of competency.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised
RANGE STATEMENT

wring, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazard may include but not limited to:
- ground stability (e.g. ground condition or slopes for load placement)
- overhead hazards (e.g. power lines, service pipes)

**NB**: where radio communication equipment is used the transmitting frequencies of the equipment must be selected to prevent interference to or from other radio equipment being used in the vicinity of the crane.
RANGE STATEMENT

limited to:
- safety observer used inside exclusion zone
- power disconnected
- traffic barricades and control/s
- pedestrian controls
- trench covers
- movement of obstructions
- personal protective equipment
- adequate illumination.

Test lift

The load is lifted just clear of the lifting plane to allow for checks to be safely made in consultation with appropriate personnel to ensure that:
- near capacity loads do not overload the crane
- loads of unusual shape or weight distribution are correctly slung
- load measuring equipment can be used to verify the calculated weight of the load
- all crane equipment is functioning properly
- adjustments to the slinging can be made in a safe manner.

Relevant crane movements may include but not limited to:
- luffing
- slewing
- hoisting and lowering loads
- trolleying.

Communication signals may include but not limited to:
- stop - hand
- stop - whistle
- hoist up - hand
- hoist up - whistle
- hoist down - hand
- hoist down - whistle
- luff boom down - hand
- luff boom down - whistle
- luff boom up - hand
- luff boom up - whistle
- trolleying out - hand
- trolleying out - whistle
- trolleying in - hand
- trolleying in - whistle
- slew left - hand
- slew left - whistle
- slew right - hand
RANGE STATEMENT

Unplanned and/or unsafe situations may include but not limited to:
- slew right - whistle.
- failure/lose of control e.g. slew brakes, hoist drums
- failure of equipment e.g. hydraulic system
- environmental conditions (e.g. wind, lightning, storms, etc).

Shut Down may include but not limited to:
- boom/jib raised to clear buildings and structures (where applicable)
- trolleying hoist block to park position (where applicable)
- retracting hoist rope&hook block
- idle engine to stabilise temperature
- weather vane mode
- turning off engine
- remove key from ignition
- lock and secure cabin (where applicable)
- lock and secure platform access hatch.

**Required skills**

Required skills for this unit are:

- accurate recording and maintenance of information relating to crane operations
- communication techniques in the workplace including whistles, hand signals and use of two-way radios
- interpersonal communication skills at a level sufficient to communicate with other site personnel
- load data into crane computer (where fitted) and check operation to accurately reflect the crane configuration
- operation of a self-erecting tower crane for the lifting and moving of loads to the
REQUIRED SKILLS AND KNOWLEDGE

safe working rated capacity in conjunction with other appropriate personnel.

- risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the crane including particular awareness of the risks associated with overhead powerlines/electrical cables, wind, and crane stability
- use and interpretation of crane manufacturer's specifications and data, including load charts and ballast, to enable the crane to be configured for the load
- verify problems and equipment faults and demonstrate appropriate response procedures.

Required knowledge

Required knowledge for this unit is:

- ability to be able to read and comprehend manufacturer's instructions, procedures and safety signs
- appropriate mathematical procedures for estimation of loads
- Commonwealth, state or territory OHS legislation, standards and codes of practice relevant to the full range of processes for the crane class
- organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- understanding of the hierarchy of hazard identification and control
- level of literacy to be able to read and comprehend manufacturer's instructions, procedures and safety signs
- self-erecting tower crane operating techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- self-erecting tower crane characteristics and capabilities to allow the operation of the crane to suit the range of loads
- rated capacity and working load limits (including use of crane load charts)
- typical routine problems encountered in the operation of the crane and equipment and adjustments required for correction.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OHS matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS licensing legislation
- effectively communicate and work safely with others in the work area
- assess risk and management procedures (particular awareness of the risks associated with overhead powerlines/electrical cables, wind and crane stability)
- operate a self-erecting tower crane for the lifting and moving of loads to the safe working rated capacity in conjunction with other appropriate personnel
- apply standard mathematical procedures for estimation of loads.
- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument
- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting
- Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace
- Assessment must occur under standard and...
EVIDENCE GUIDE

- authorised work practices, safety requirements and environmental constraints

- Assessment is to comply with relevant appropriate standard requirements

- Applicants must have access to:
  - personal protective equipment (PPE) for the purpose of the Performance Assessment.
  - appropriate self-erecting tower crane and associated equipment in safe condition
  - suitable loads as specified by the endorsed assessment instrument
  - communication equipment (eg. two-way radios, whistles, etc)
  - other appropriate personnel to sling and direct the loads.

Method of assessment

Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.

The use of 'simulators' in the assessment of this unit of competency is not acceptable.

Assessment may be in conjunction with the assessment of other units of competency.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed assessment instruments may be obtained from state/territory OHS regulators.

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised
RANGE STATEMENT

wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazard may include but not limited to:
- ground stability (e.g. ground condition or slopes for load placement)
- overhead hazards (e.g. power lines, service pipes)
- Insufficient lighting
- traffic (e.g. pedestrians, vehicles, plant)
- environmental conditions (e.g. wind, lightning, storms, etc)
- other specific hazards (e.g. dangerous materials).

Hazard control measures:
Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:
- elimination
- substitution
- isolation
- engineering control measures
- using safe work practices
- personal protective equipment.

Appropriate standards may include:
- codes of practice
- legislation
- Australian Standards
- manufacturer's specifications
- industry standards (where applicable).

Appropriate personnel may include but not limited to:
- riggers
- doggers.

Crane
Self-erecting tower crane covers the operation of a crane where the tower structure and boom/jib elements are not disassembled into component sections, which can be transported between sites as a complete unit, and where the erection and dismantling processes are an inherent part of the crane's function.
**RANGE STATEMENT**

**Appropriate** may include but is not limited to:
- crane capabilities
- environmental conditions (e.g. wind, lightning, storms, etc).

**Communication methods** may include but are not limited to:
- verbal and non-verbal language
- written instructions
- signage
- hand signals
- listening
- questioning to confirm understanding
- appropriate worksite protocol.

**Signage and labels** may include but not limited to:
- crane data plates/labels
- load charts
- crane decals
- control labels.

**Procedures** may include but are not limited to:
- manufacturer’s guidelines (instructions, specifications or checklists),
- industry operating procedures
- workplace procedures (work instructions, operating procedures, checklists).

**Controls** may include but not limited to:
- luffing levers (where applicable)
- hoisting and lowering levers
- slewing levers including brake
- trolley levers (where applicable).

**Service logbook** may include but is not limited to:
- any logbook
- service book
- history record system where the service and maintenance history is kept.

**Crane safety devices** may include but not limited to:
- audible and visual warning devices
- operator restraint devices (where applicable)
- lights (where applicable).

**Communication equipment** may include but not limited to:
- two-way radios
- whistles
- bells
- buzzers.

**NB:** where radio communication equipment is used the transmitting frequencies of the equipment must be selected to prevent interference to or from other radio equipment being used in the vicinity of the crane.

**Hazard prevention/control**
- safety tags on electrical switches/isolators
RANGE STATEMENT

**measures** may include but are not limited to:

- power lines are insulated
- safety observer used inside exclusion zone
- power disconnected
- traffic barricades and control
- pedestrian barricades
- trench covers
- movement of obstructions
- personal protective equipment
- adequate lighting
- suitable site for the crane
- counterweights (ballast).

**Test lift**

The load is lifted just clear of the lifting plane to allow for checks to be safely made in consultation with appropriate personnel to ensure that:

- near capacity loads do not overload the crane
- loads of unusual shape or weight distribution are correctly slung
- load measuring equipment can be used to verify the calculated weight of the load
- all crane equipment is functioning properly
- adjustments to the slinging can be made in a safe manner.

**Relevant crane movements** may include but not limited to:

- luffing (where applicable)
- slewing
- trolleying
- hoisting and lowering loads.

**Communication signals** may include but not limited to:

- stop - hand
- stop - whistle
- hoist up - hand
- hoist up - whistle
- hoist down - hand
- hoist down - whistle
- luff boom down - hand (where applicable)
- luff boom down - whistle (where applicable)
- luff boom up - hand (where applicable)
- luff boom up - whistle (where applicable)
- trolleying out - hand
- trolleying out - whistle
- trolleying in - hand
- trolleying in - whistle
RANGE STATEMENT

- slew left - hand
- slew left - whistle
- slew right - hand
- slew right - whistle.

Unplanned and/or unsafe situations may include but not limited to:

- failure/lose of control e.g. slew brake hoist drum
- failure of equipment e.g. hydraulic system
- environmental conditions (e.g. wind, lightning, storms, etc).

Shut Down may include but not limited to:

- boom/jib slewed to clear buildings and structures (where applicable)
- trolleying hoist block to park position (where applicable)
- weather vain mode
- retracting hoist rope&hook block
- idle engine to stabilise temperature
- turning off engine
- isolating power supply (where applicable)
- remove key from ignition/control panel
- lock and secure cabin (where applicable).

Unit sector: Construction

Co-requisite units

Co-requisite units: Nil
Functional area

Functional area
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Modification History
Not Applicable

Unit Descriptor
This unit of competency specifies the outcomes required to carry out OHS requirements through safe work practices at any on or off-site construction workplace. It requires the performance of work in a safe manner through awareness of risks and work requirements, and the planning and performance of safe work practices with concern for personal safety and the safety of others.

Application of the Unit
This unit of competency covers fundamental OHS necessary to undertake work tasks within any sector in the construction industry. It includes the identification of hazardous materials, including asbestos, and compliance with legislated work safety practices. It does not cover removal of asbestos, which is a licensed activity.

The unit relates directly to the general induction training program specified by the National Code of Practice for Induction for Construction Work (ASCC 2007) required to enter a construction work site. Completion of unit CPCCOHS1001A covers this requirement.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>

</table>
| 1. Identify and assess risks. | 1.1. **Hazards** in the work area are identified, assessed and reported to designated personnel.  
1.2. Safety risks in the work area are identified, assessed and reported to designated personnel.  
1.3. **Safe work practices, duty of care** requirements and safe work instructions are followed for controlling risks.  
1.4. OHS, hazard, accident or **incident** reports are contributed to according to workplace procedures and Australian government and state or territory OHS legislation and relevant information. |
| 2. Identify hazardous materials and other hazards on work sites. | 2.1. **Hazardous materials** on a work site are correctly identified and, if appropriate, handled and used according to company and legislated procedures.  
2.2. **Measures for controlling risks** and construction hazards are applied effectively and immediately.  
2.3. Hazardous materials that have safety implications for self and other workers are secured immediately they are identified, using appropriate **signs and symbols**.  
2.4. Asbestos-containing materials are identified on a work site and reported to designated personnel. |
| 3. Plan and prepare for safe work practices. | 3.1. Correct **personal protective equipment** and clothing for each area of construction work are identified, worn, correctly fitted, used and stored according to enterprise procedures.  
3.2. Selection of **tools, equipment and materials**, and organisation of tasks are performed in conjunction with other personnel on site and in accordance with enterprise procedures.  
3.3. Required barricades and signage are determined and erected at the appropriate site location.  
3.4. Material safety data sheets (MSDS), and job safety analysis (JSA) and safe work method statements relevant to the work to be carried out are identified and applied. |
| 4. Apply safe work practices. | 4.1. Tasks are performed in a manner that is safe for operators, other personnel and the general community in accordance with legislative requirements, and enterprise policies and procedures.  
4.2. Plant and equipment guards are used in accordance with manufacturer specifications, work site |

5. Follow emergency procedures.

| 5.1.    | Designated personnel are identified in the event of an emergency for communication purposes. |
| 5.2.    | Safe workplace procedures for dealing with accidents, various types of fire and other emergencies are followed, including identification or use, if appropriate, of fire equipment within scope of responsibilities. |
| 5.3.    | Emergency response and evacuation procedures are known, practised and carried out effectively when required. |
| 5.4.    | Emergency first aid treatment of minor injuries is carried out correctly and details of any treatment administered are reported accurately to designated personnel as soon as possible. |

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to accurately recognise OHS hazards, including asbestos and take all opportunities to alleviate safety problems in a variety of construction work sites and environments
- capacity to deal calmly and effectively with any potential safety problems and work closely with other team members and supervisors to ensure safe working conditions are maintained
REQUIRED SKILLS AND KNOWLEDGE

- communication skills to:
  - determine and report hazards and risks
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
- read and interpret:
  - MSDS, JSA and safe work method statements
  - other relevant documentation
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to contribute to reports
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- asbestos management code prevention of exposure
- basic first aid procedures
- common construction industry terminology
- common workplace safety hazards and risks and procedures for reporting these to designated personnel
- construction industry communications equipment and use
- construction industry health and safety signage
- emergency response and evacuation procedures
- JSA and safe work method statements
- MSDS
- OHS hierarchy of control and role of OHS committees and representatives
- relevant legislation, regulations and workplace requirements relating to OHS, including hazard reduction and personal safety, including duty of care responsibilities, workers' compensation and injury management requirements
- safe manual handling techniques
- safe work practices in normal working environment
- safety equipment, policies and requirements for working in confined spaces and at
REQUIRED SKILLS AND KNOWLEDGE

- height, including on roofs
- tools and equipment prohibited for use near identified asbestos-containing materials (ACM)
- types of fires and basic firefighting equipment
- types, possible location and risks of ACM, including serpentine and amphibole groups, and their use in common building materials
- types, purpose and use of construction industry personal protective equipment and clothing
- workplace and equipment safety requirements.
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- correctly locate, interpret and apply relevant information, standards and specifications
- comply with a site safety plan, organisational policies, OHS regulations and state and territory legislation applicable to workplace operations, including quality requirements
- correctly identify ACM and policies and procedures for reporting this to designated personnel
- effectively communicate and work safely with others
- apply general procedures for responding to incidents and reporting hazards and injuries
- select and use firefighting equipment to extinguish a simulated mechanical fire
- evacuate a site through simulated response to an emergency, complying with workplace procedures.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
EVIDENCE GUIDE

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct,
EVIDENCE GUIDE

indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards include:

- chemical spills
- electrical safety work in confined spaces
- excavations, including trenches
- falling objects
- fires
- gases
- hazardous materials
- high or very low temperatures
- HIV and other infectious diseases
- liquids under pressure
- manual handling
- moving machinery and equipment
- noise, dust and vapours
- overhanging beams
- protrusions
- sharp equipment
- traffic
- ultraviolet (UV) radiation
- unplanned collapse
RANGE STATEMENT

*Designated personnel* to be contacted in case of an emergency, accident, fire or to report a risk such as identification of ACM are:

- working at heights.
- designated safety officers, determined by the enterprise, who have undertaken specific safety response training
- managers or other senior personnel
- personnel competent and/or licensed in the safe handling of asbestos
- supervisors.

*Safety work practices*:

- include:
  - day to day observation of OHS policies and procedures
  - emergency procedures
  - risk assessment
  - use of basic firefighting equipment

- relate to:
  - access to site amenities, such as drinking water and toilets
  - general requirements for safe use of plant and equipment
  - general requirements for use of personal protective equipment and clothing
  - housekeeping to ensure a clean, tidy and safer work area
  - no drugs and alcohol at work
  - preventing bullying and harassment
  - smoking in designated areas
  - storage and removal of debris.

*Duty of care* requirements:

- legal responsibility under duty of care to do everything reasonably practicable to protect others from harm
- relevant state and territory OHS requirements and include employers and self-employed persons, persons in control of the work site, construction supervisors, designers, manufacturers and suppliers, construction workers, subcontractors and inspectors
- may relate to:
  - own responsibilities to comply with safe work practices, including activities that
RANGE STATEMENT

require licences, tickets or certificates of competency.

Incidents include:

- accidents resulting in personal injury or damage to property
- near misses or dangerous occurrences that do not cause injury but may pose an immediate and significant risk to persons or property, and need to be reported so that action can be taken to prevent recurrence, for example:
  - breathing apparatus malfunctioning to the extent that the user's health is in danger
  - collapse of the floor, wall or ceiling of a building being used as a workplace
  - collapse or failure of an excavation more than 1.5 metres deep (including any shoring)
  - collapse or partial collapse of a building or structure
  - collapse, overturning or failure of the load bearing of any scaffolding, lift, crane, hoist or mine-winding equipment
  - damage to or malfunction of any other major plant
  - electric shock
  - electrical short circuit, malfunction or explosion
  - uncontrolled explosion, fire or escape of gas, hazardous substance or steam
  - any other unintended or uncontrolled incident or event arising from operations carried on at a workplace.

Australian government and state or territory OHS legislative requirements include:

- Australian standards
- construction industry OHS standards and guidelines
- duty of care
- health and safety representatives, committees and supervisors
- JSA and safe work method statements
- licences, tickets or certificates of competency
- National Code of Practice for Induction Training for Construction Work
- national safety standards
RANGE STATEMENT

Information includes:

- OHS and welfare Acts and regulations
- safety codes of practice
- diagrams or sketches
- emergency situation contacts
- evacuation plans
- instructions issued by authorised organisational or external personnel
- labels
- manufacturer specifications and instructions
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements, such as Acts, regulations and codes of practice
- relevant Australian standards
- reports of near misses or accidents
- safe work procedures or equivalent documentation
- safety meeting minutes
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Hazardous materials include:

- ACM
- cleaning chemicals, including those in pressurised containers
- glues
- insulation materials
- solvents
- treated timber products.

Measures for controlling risk or minimising hazards in accordance with the hierarchy of control include:

- elimination
- substitution
- isolation
- engineering control
- administrative control
- personal protective equipment.

Signs and symbols include:

- emergency information signs (exits, equipment, first aid)
- fire signs (location of fire alarms and
RANGE STATEMENT

- firefighting equipment
- hazard identification, facility or location signs
- regulatory signs (e.g. prohibition, mandatory and limitation or restriction), such as hazard signs (danger and warning)
- safety tags and lockout (danger tags, out of service tags)
- site safety, directional, traffic and warning signs and symbols.

Asbestos-containing materials are identified:
- includes recognising common types of ACM that may be found in construction materials and buildings
- covers asbestos rope/fabrics, asbestos cement sheeting, asbestos cement piping and lagging on pipes, bituminous waterproof membrane, fire doors, electrical switchboards, millboard, and sheeting under ceramic or vinyl floor tiles in wet areas.

Asbestos-containing materials are reported to:
- person in control of the workplace as set out in the relevant Asbestos Management Code.

Personal protective equipment is to include:
- aprons
- arm guards
- caps
- dust mask/respirators
- ear muffs/plugs
- gloves
- hard hats
- high visibility retro reflective vests
- jackets
- overalls
- safety glasses/goggles
- steel capped boots
- UV protective clothing and sunscreen.

Tools and equipment include:
- firefighting equipment
- first aid kit
- ladders and work platforms
- personal protective equipment.

Materials include:
- first aid materials suitable for emergency first aid treatment of minor injuries.

Prohibited tools and equipment that cannot be used near identified
RANGE STATEMENT

ACM include:

- air or abrasive blasting
- any vacuum cleaning equipment not specifically designed for safe work with asbestos.

Environmental requirements are to cover workplace quality management and include:

- clean-up protection
- stormwater protection
- waste management.

Types of fire includes:

- electrical, chemical, gas, mechanical, paper, wood or natural fire.

Fire equipment includes:

- breathing apparatus
- fire extinguishers
- fire hydrant and hoses
- fire reel
- fire truck
- manual firefighting instruments, such as fire blankets.

Emergency response and evacuation procedures include:

- emergencies, such as fire, toxic and/or flammable vapours emission, vehicle/mobile plant accident, structural collapse, chemical spill and injury to personnel
- extinguishing fires, organisational first aid requirements and evacuation.

Unit Sector(s)

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

### ELEMENT  PERFORMANCE CRITERIA

1. **Plan and prepare.**
   1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.
   
   1.2. **Safety (OHS)** requirements are followed in accordance with safety plans and policies.
   
   1.3. Signage and barricade requirements are identified and implemented.
   
   1.4. **Tools and equipment** selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.
   
   1.5. **Materials** quantity requirements are calculated in accordance with plans and specifications and *quality requirements*.
   
   1.6. Materials appropriate to the work application are identified, obtained, prepared, *safely handled* and located ready for use.
   
   1.7. **Environmental requirements** are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements and applied.
   
   1.8. Importance of the design and installation of the base, bedding and surface layers in the performance of the paving project are identified.

2. **Identify soil type.**
   2.1. Class of soil is identified using soil class charts.
   
   2.2. Soil is assessed to determine its properties.
   
   2.3. Results of penetration tests are used to determine subgrade requirements.

3. **Prepare subgrade.**
   3.1. Drainage and other features are identified within the area to be paved.
   
   3.2. **Remedial actions** are used where required.
   
   3.3. Drainage needs are identified and drains put in place where required.
   
   3.4. Services are identified in work area.
   
   3.5. Termite barriers are identified and not breached, or remedial action is taken if needed to ensure barrier integrity is maintained.
   
   3.6. Damp proof courses are identified and paving is constructed so that it does not compromise them.
   
   3.7. Components are cleaned, stacked and stored for
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 4. Excavate the site. | 4.1. Site is excavated in preparation for paving to remove top soil, weeds and their root systems.  
4.2. Factors that determine amount of excavation are identified.  
4.3. Bulking factor for different soil types is calculated. |
| 5. Install base course materials. | 5.1. Quantity of base course materials is calculated based upon the subgrade type and purpose of the paved area.  
5.2. Material is distributed over area, allowing for compaction.  
5.3. Area is compacted, taking care not to over-compact base materials.  
5.4. Compacting machinery is handled correctly. |
| 6. Install bedding course materials. | 6.1. Bedding course material is selected, ensuring that it is suitable for the purpose.  
6.2. Need for geotextile materials as drainage or separation layers is determined.  
6.3. Quantity of layer course materials is calculated.  
6.4. Bedding course is stabilised for paths with slopes of greater than 1:15.  
6.5. Transverse concrete supports are installed for driveways with a sloping pavement of greater than 5 metres.  
6.6. Material is distributed over the area to be paved within tolerances stipulated by relevant standards.  
6.7. If using bedding sand, area is compacted to Australian standards taking care not to over-compact base materials, and allowance is made for compaction.  
6.8. Compacting machinery is handled correctly.  
6.9. If using concrete, area to be paved is framed and concrete is mixed to manufacturer's directions and spread to required depth. |
| 7. Screed base materials. | 7.1. Base materials are screeded to levels as determined, and set out by stringlines or other mechanisms.  
7.2. Excess base materials are screeded to a specified area. |
| 8. Clean up. | 8.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification. |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
8.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - evaluate own actions and make judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
REQUIRED SKILLS AND KNOWLEDGE

- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- principles of California bearing ratio (CBR)
- properties of bedding course materials
- properties of geotextile materials
- relevant Australian standards
- stabilising bedding sand.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others.

Context of and specific resources

This competency is to be assessed using standard
EVIDENCE GUIDE

for assessment

and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
EVIDENCE GUIDE

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.
RANGE STATEMENT

Information includes:
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to paving and concreting materials
- relevant Australian standards
- safe work procedures relating to handling concreting materials
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
RANGE STATEMENT

- surrounding structures
- traffic control
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- compactors
- concrete mixer
- levelling devices
- rakes
- screed
- shovels
- stringlines
- wheelbarrows.

Materials include:

- aggregates
- bedding sand
- cement
- concrete
- crushed rock
- road base
- sand.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Safety handled includes:

- correct calculation of quantities
- manual handling, including:
  - using pallets
  - carrying materials using correct lifting techniques
  - control of waste
- MSDS
- protection of materials
- stacking and storing of materials.
RANGE STATEMENT

| **Environmental requirements** include: | • clean-up management  
• dust and noise  
• dust suppression, which includes keeping dust in the air to a minimum and may include spraying with water  
• vibration  
• waste management. |
|---|---|
| **Remedial actions** include: | • soil stabilisation  
• installing a capping layer  
• making drainage improvements. |
| **Factors determining amount of excavation** include: | • compaction measurements  
• achieving a consistent subgrade  
• cost factors. |
| **Quantity of layer course materials** is based upon: | • purpose of the paved area (pedestrian or vehicle access)  
• subgrade type  
• type of paver. |

Unit Sector(s)

Unit sector: Construction

Functional area

Functional area
CPCCPA3002A Lay segmental pavers

Modification History
Not Applicable

Unit Descriptor

This unit of competency specifies the outcomes required to lay segmental pavers on prepared subgrade and base. It includes assessing segmental paver type and quality, setting up stringlines, setting up squared sections for the laying of segmental pavers where required and shifting pavers.

Application of the Unit

This unit supports the attainment of skills and knowledge to safely and efficiently lay a range of segmental pavers while working with others as a member of a team.

Licensing/Regulatory Information
Not Applicable

Pre-Requisites

CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry
Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare.   | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.  
  1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
  1.3. Signage and barricade requirements are identified and implemented.  
  1.4. *Tools and equipment* selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
  1.5. Material quantity requirements are calculated in accordance with plans and specifications and *quality requirements*.  
  1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
  1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements and applied.  |
| 2. Assess pavers.      | 2.1. Segmental pavers are assessed for fitness for purpose.  
  2.2. Pavers are bulk sampled for consistency in size, dimensions, colour and imperfections, such as chips.  
  2.3. Rejected pavers are assessed for use as cut pavers and put aside.  |
| 3. Lay pavers.         | 3.1. Pavers are moved to area for paving.  
  3.2. Stringline grid squares are set up to establish the gauge of the paving project and guide levels and lines (where determined).  
  3.3. Pavers are laid to *design* following *efficient laying practices*.  
  3.4. Pavers are laid to reduce localised stresses between adjacent pavers.  
  3.5. Laid pavers are checked for tolerances in allowable variations from an intended work size or position.  
  3.6. Correct handling procedures are adhered to.  
  3.7. Pavers are adjusted to ensure integrity of design with allowances for setting materials.  |
ELEMENT | PERFORMANCE CRITERIA
---|---
3.8. A header or soldier course is laid where required (which may be at the outset of the paving project).
4. Clean up. 4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - evaluate own actions and make judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
  - teamwork skills to work with others to action tasks and relate to people from a
REQUIRED SKILLS AND KNOWLEDGE

- range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Require knowledge for this unit is:

- properties of different segmental paving and their 'fit-for-purpose'
- properties of segmental pavers
- relevant Australian standards.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
EVIDENCE GUIDE

- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at
EVIDENCE GUIDE

the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to handling concreting materials
- relevant Australian standards
- safe work procedures relating to handling concreting materials
- signage
RANGE STATEMENT

Planning and preparation include:

- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.
RANGE STATEMENT

**Tools and equipment** include:
- levelling devices
- screed
- stringlines
- wheelbarrows.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

**Environmental requirements** include:
- clean-up management
- dust and noise
- dust suppression, which includes keeping dust in the air to a minimum and may include spraying with water
- vibration
- waste management.

**Segmental pavers** include:
- materials, including:
  - brick
  - concrete
  - coping products
  - flags (gross plan area > 0.08 square metres)
  - manufactured products
  - stone
- types, including:
  - dentated units that interlock to either:
    - resist the relative movement of joints parallel to both longitudinal and transverse axes of the joint
    - resist the relative movement of joints parallel to one axis
  - units that do not interlock.

**Fitness for purpose** is determined with reference to the relevant Australian standards for:
- abrasion resistance
- breaking load
- resistance to salt attack
- slip resistance
- work size.

**Design** includes:
- at forty-five degrees orientation
- at ninety-degrees orientation
- at other orientation
- basketweave 2 x 1
RANGE STATEMENT

- basketweave 2 x 2
- concentric
- crazy pave
- herringbone
- may be:
  - offset running bond
  - offset stretcher
  - radial
  - stack
  - stack and stretcher
  - stretcher bond
  - tracery
  - winding
  - zigzag running bond.

Efficient laying practices include:
- considering direction of fall or slope on the job
- good access to materials
- minimising cutting
- working around existing structures.

  - use of tools and equipment
  - workplace environmental requirements and safety.

1.3. **Tools and equipment**

- levelling devices
RANGE STATEMENT

include:
- screed
- stringlines
- wheelbarrows.

1.4. Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

1.5. Environmental requirements include:
- clean-up management
- dust and noise
- dust suppression, which includes keeping dust in the air to a minimum and may include spraying with water
- vibration
- waste management.

1.6. Segmental pavers include:
- brick
- concrete
- coping products
- flags (gross plan area &gt; 0.08 square metres)
- manufactured products
- stone.

1.7. Types of cuts include:
- angle cuts
- concave cuts
- convex cuts
- insert cuts (where a series of incisions are made into the paver, then gently tapped out with a cold chisel)
- straight cuts
- undercuts (to angle a paver, for example when incorporating an angled channel drain).

1.8. Cutting saws include:
- angle grinders
- bolsters
- cold chisels
- concrete cutting saws
- diamond-tipped blade brick cutting saws
- guillotines.

- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at
EVIDENCE GUIDE

the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

1.1. **Information** includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to paving and concreting materials
- relevant Australian standards
- safe work procedures relating to handling concreting materials
- signage
RANGE STATEMENT

1.2. **Planning and preparation**
include:
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

1.3. **Safety (OHS)** is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

1.4. **Tools and equipment**
- brooms
## RANGE STATEMENT

include:
- plate compactor
- protective sheet or rollers for plate compactor
- shovels
- trowels.

1.5. **Quality requirements**
include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

1.6. **Setting materials**
include:
- joint-filling sand
- mortar
- pebbles
- silica products.

1.7. **Environmental requirements**
include:
- clean-up management
- dust and noise
- dust suppression, which includes keeping dust in the air to a minimum and may include spraying with water
- stormwater management
- vibration
- waste management.

| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Setting material quantity requirements are calculated in accordance with plans and specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements and applied. |
| 2. Identify maintenance or repair issues. | 2.1. Paved area is assessed for problems.  
2.2. Causal factors are identified and remedial action plan is developed. |
| 3. Remedial action is undertaken. | 3.1. Remedial action is undertaken.  
3.2. Pavement is opened and segmental pavement is reinstated, including matching newer pavers with the existing pavers.  
3.3. Subgrade is repaired.  
3.4. Joints are maintained, including refilling joints with sand or mortar. |
| 4. Paved area is cleaned. | 4.1. Routine cleaning is undertaken, taking care to avoid excessive removal of jointing sands.  
4.2. Stains are identified and appropriate cleaning methods are used following OHS requirements and manufacturers specifications.  
4.3. Causes of efflorescence are recognised and means to minimise condition are used. |
| 5. Clean up. | 5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, |
ELEMENT  PERFORMANCE CRITERIA

5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - evaluate own actions and make judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
REQUIRED SKILLS AND KNOWLEDGE

- use a range of mobile technology, such as two-way radio and mobile phones
- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and treatment of:
  - efflorescence
  - white scum
  - dirt and grime
  - vanadium stains
  - fresh mortar stains
  - hard mortar stains
  - fungi, lichens, moulds and mosses
  - oil, bitumen and tar
  - food stains
  - tyre marks
  - chewing gum

- correct cleaning procedures, incorporating OHS
- types and applications of chemical cleaners.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
EVIDENCE GUIDE

- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at
EVIDENCE GUIDE

the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.
RANGE STATEMENT

**Tools and equipment** include:
- brooms
- plate compactor
- protective sheet or rollers for plate compactor
- shovels
- trowels.

**Setting materials** include:
- joint-filling sand
- mortar
- pebbles
- silica products.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

**Environmental requirements** include:
- clean-up management
- dust and noise
- dust suppression, which includes keeping dust in the air to a minimum and may include spraying with water
- stormwater management
- vibration
- waste management.

**Problems** include:
- chipping
- joint grouting
- staining
- surface movement - horizontal or vertical cracking
- wearing.

**Remedial actions** include:
- regrouting paving
- relevelling
- replacement of broken or chipped segmental pavers.

**Cleaning methods** include:
- chemical, including acid washes
- dry brushing
- pressure water cleaning
- scraping
- wet scrubbing.

#### 5. Check and complete work.

5.1. Completed work is checked to ensure stop-up activities will be easily completed, appropriate fastening systems have been used and work will retain structural integrity.

6. Clean up.

6.1. Work area is cleared and waste board, adhesives, waste fasteners and other materials are disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

6.2. Hazardous material is identified for separate handling.

6.3. Non-toxic materials are removed using correct procedures.

6.4. Dust suppression procedures are used to minimise health risk to work personnel and others.

6.5. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and
REQUIRED SKILLS AND KNOWLEDGE

- confirm requirements, share information, listen and understand
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- safely use equipment, and shift and handle products and materials
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- general construction terminology
- hazardous materials
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plasterboard adhesives and fixings
- plasterboard fixing techniques
- plasterboard materials
- processes for the calculation of material requirements
- quality requirements
- tools and equipment types, characteristics, uses and limitations
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others to identify faults in substrate/frame, plasterboard sheets, fasteners, adhesives and personal tools and equipment
- explain the reasons for:
  - lifting wall sheets off the floor and clear of windows and door openings
  - butt joins between studs and backblocking the join
  - position joins over windows and doors away from the corner of the opening
  - drilling or sawing openings for power points and light switches
  - marking wires without brackets as directed by the builder
  - using temporary surface fixing of wallboard
  - using paper tape
- execute work within agreed timeframes and
EVIDENCE GUIDE

standards
- interpret delivery documentation and work orders
- locate relevant materials
- apply knowledge of industry products and specifications to:
  - match manufacturers’ components and materials
  - identify warranty compliance issues
  - identify suitable adhesives and fasteners for fixing plasterboard
  - identify common faults and problems that require reporting
- follow work instructions, operating procedures and inspection practices to:
  - prevent damage to goods, equipment or products
  - select and use appropriate personal protective equipment
  - work effectively alone or with others and minimise the risk of injury
  - modify work activities to cater for variations in work site procedures, personnel, contexts and environment
  - maintain workplace records in relation to materials use
  - use safe handling requirements, based on information provided for equipment, products and materials.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- workplace location or simulated workplace
- materials relevant to fixing plasterboard activities building framework, materials, tools and equipment activities appropriate to fixing
EVIDENCE GUIDE

plasterboard

- realistic activities covering the mandatory task requirements specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination
EVIDENCE GUIDE

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
RANGE STATEMENT

- MSDS
- memos
- regulatory and legislative requirements pertaining to fixing plasterboard
- relevant Australian standards
- safe work procedures relating to fixing plasterboard
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- work site inspection
- equipment defect identification
- assessment of conditions and hazards

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - traffic control
  - restricted access barriers
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
RANGE STATEMENT

**Tools and equipment** include:

- broad knives
- brooms
- electric screw guns
- hand and power drills
- hand saws
- keyhole saws
- measuring tapes and rules
- paintbrushes
- plasterboard hammers
- plasterer's trowels
- scaffold planks
- T squares
- taping knives
- trestles.

**Quality requirements** include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

**Materials** include:

- beads
- cement render
- fibre cement sheets
- finishing materials
- plaster compounds
- plasterboard
- plasterglass sheets
- water resistant plasterboard.

**Environmental requirements** include:

- clean-up management
- dust and noise
- vibration
- waste management.

**Work sequences and fixing processes** include:

- facilitate finishing techniques appropriate to system
- maximise board use
- minimise finishing problems
- minimise joints
- minimise waste.

ELEMENT PERFORMANCE CRITERIA

handling techniques.

4.2. Work sequences and fixing processes are undertaken.

5. Check and complete work.

5.1. Completed work is checked to ensure stop-up activities will be easily completed and appropriate fastening systems have been used.

6. Clean up.

6.1. Work area is cleared and waste board, adhesives waste fasteners and other materials are disposed of, reused or recycled in accordance with legislation, regulations and codes of practice and job specification.

6.2. Hazardous material is identified for separate handling.

6.3. Non-toxic materials are removed using correct procedures.

6.4. Dust suppression procedures are used to minimise health risk to work personnel and others.

6.5. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
**REQUIRED SKILLS AND KNOWLEDGE**

- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change, and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

**Required knowledge**

Required knowledge for this unit is:

- general construction terminology
- hazardous materials
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plasterboard adhesives and fixings
- plasterboard fixing techniques
- plasterboard materials
- processes for the calculation of material requirements
- quality requirements
- tools and equipment types, characteristics, uses and limitations
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate plasterboard ceiling materials and work methods
- explain the reasons for:
  - screw fixing of ceiling sheets
  - using particular types of screws for timber or metal frame and furring channel
  - using trimmers and noggins
  - butt joins centred between battens and staggered
  - drilling or sawing openings as required
  - using paper tape for all joins
  - backblocking and stitching of butt joins
- follow manufacturers' instructions for installation without constant supervision
- identify faults in plasterboard fixing, joining and finishing
- execute work within agreed timeframes and standards
- interpret delivery documentation and work orders
- locate relevant materials
- apply knowledge of industry products and specifications to identify:
  - manufacturers' components and materials
  - warranty compliance issues
  - suitable materials for a wide range of applications
EVIDENCE GUIDE

- common faults and problems that require reporting
- follow work instructions, operating procedures and inspection practices to:
  - prevent damage to goods, equipment or products
  - select and use appropriate personal protective equipment
  - work effectively alone or with others and minimise the risk of injury
  - modify work activities to cater for variations in work site procedures, personnel, contexts and environment
  - maintain workplace records in relation to materials, plant and equipment use
  - use safe handling requirements, based on information provided for equipment, products and materials.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- building framework
- materials
- tools and equipment.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of
EVIDENCE GUIDE

the Construction, Plumbing and Services Training Package

- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCCM2010A Work safely at heights.
EVIDENCE GUIDE

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to fixing plasterboard
- relevant Australian standards
- safe work procedures relating to fixing plasterboard
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
RANGE STATEMENT

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - traffic control
  - restricted access barriers
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- broad knives
- brooms
- electric screw guns
- hand and power drills
- hand saws
- keyhole saws
- measuring tapes and rules
- paintbrushes
- plasterboard hammers
- plasterer's trowels
- scaffold planks
- T squares
- taping knives
- trestles.

Quality requirements include

- Australian standards
RANGE STATEMENT

relevant regulations, including:
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:
- beads
- cement render
- fibre cement sheets
- finishing materials
- plaster compounds
- plasterboard
- plasterglass sheets
- water resistant plasterboard.

Environmental requirements include:
- clean-up management
- dust and noise
- vibration
- waste management.

Assemble materials includes:
- adhesives
- board
- equipment
- fasteners.

Processes for fixing and work sequencing include:
- facilitate finishing techniques appropriate to system
- maximise board use
- minimise finishing problems
- minimise joints
- minimise waste.

**Elements and Performance Criteria Pre-Content**

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. *Tools and equipment* selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans and specifications and *quality requirements*.  
1.6. *Materials* appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Identify work requirements. | 2.1. Requirements for fixing battens to support structures are identified and selected.  
2.2. Fasteners appropriate to fixing battens are identified and selected.  
2.3. Joists and trusses are checked to confirm suitability for fixing battens, and any requirement to correct unevenness in joists and trusses is noted. |
| 3. Cut and fix battens. | 3.1. Packing materials are used to correct uneven joists where required.  
3.2. Battens are measured and cut using approved work methods and required personal protective equipment.  
3.3. Battens are fixed using selected fasteners at specified centres according to manufacturer recommendations.  
3.4. Completed work is checked for correct alignment and fixing. |
| 4. Clean up. | 4.1. Work area is cleared and batten materials and fasteners are disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.  
4.2. Hazardous material is identified for separate

range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- adjust work activity to maintain quality standards
- application of product and process knowledge to identify problems and predict consequences
- identifying faults in operation of equipment or in materials quality
- identifying from workplace information and labels the type and purpose of materials and potential for health and safety risks
- identifying the purpose of tags and logs of use for equipment
- implications on work quality requirements for instruction to be followed
- manufacturer and supplier instructions for plant and equipment
- manufacturers' system installation procedures and nominated specifications for the work process
- names and functions of equipment, components and materials
- requirements for a systematic approach to planning own work
- safely use equipment, shift and handle products and materials.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate batten materials and work methods
- operate from basic instructions without constant supervision
- identify faults in substrate/frame and rectify or report as required by contract
- execute work within agreed timeframes and standards
- interpret delivery documentation and work orders, and locate relevant materials
- apply knowledge of industry products to identify:
  - manufacturers' components and materials
  - Australian standards, Building Code of Australia (BCA) and manufacturer or contractor warranty compliance issues
  - suitable materials for a wide range of applications
  - common faults and problems that require reporting
- follow work instructions, select and use appropriate tools, materials, fasteners and equipment for safe work at heights to:
  - prevent damage to goods, equipment or products
  - select and use appropriate personal protective equipment
  - work effectively alone or with others and

</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Identify work requirements. | 2.1. Framing/substrate is checked to confirm suitability for the fixing work.  
2.2. Processes for fixing sheets are identified from manufacturer recommendations.  
2.3. Sheets are measured to minimise waste and joins in problem areas while maximising board use.  
2.4. Where required, baths, shower bases and basins are covered with scrap sheets. |
| 3. Plan and cut wet area sheets. | 3.1. Wall dimensions are matched to sheet size.  
3.2. Cuts are planned to locate joints to minimise effect of jointing processes on function and visual appearance.  
3.3. Cutting process follows employer-approved procedures, minimising dust exposure to others and using appropriate personal protective equipment.  
3.4. Penetrations are made following manufacturer approved tools, personal protective equipment and procedures.  
3.5. Cut sheets are relocated to fixing site and stored to minimise damage and facilitate planned fixing activities. |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
REQUIRED SKILLS AND KNOWLEDGE

- written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application of product and process knowledge to identify problems and predict consequences
- identifying faults in operation of equipment or materials quality
- identifying from workplace information and labels the type and purpose of materials and potential for health and safety risks
- implications on work quality requirements for instruction to be followed
- manufacturers' product installation procedures and nominated specifications for the work process
- names and functions of equipment, components and materials
- requirements for a systematic approach to planning own work
- safely use equipment, shift and handle products and materials.
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate wet area materials and work methods
- operate from basic instruction without constant supervision
- explain the reasons for:
  - lifting sheets off the floor and clear of windows, door openings and plumbing fixtures
  - providing flashing for wet areas
  - only using mechanical fastening systems in tiled areas
  - using full sheets over windows and doors
  - drilling or sawing openings for plumbing, power points and light switches
  - marking wires without brackets clearly
  - using personal protective equipment
  - identifying faults in wet area fixing, joining and finishing
  - executing work within agreed timeframes and standards
  - interpreting delivery documentation and work orders
  - locating relevant materials
- apply knowledge of industry products to identify:
  - manufacturers' components and materials
  - warranty compliance issues
EVIDENCE GUIDE

- suitable materials for a wide range of applications
- common faults and problems that require reporting
- follow work instructions, operating procedures and inspection practices to:
  - prevent damage to goods, equipment or products
  - meet required work output and quality
- select and use appropriate personal protective equipment
- work effectively alone or with others and minimise the risk of injury
- modify work activities to cater for variations in work site procedures, personnel, contexts and environment
- maintain workplace records in relation to materials, plant and equipment use
- use safe handling requirements, based on information provided for equipment, products and materials.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- building framework
- materials
- tools and equipment.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the
EVIDENCE GUIDE

provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for

This unit could be assessed on its own or in

- water resistant plasterboard.

Environmental requirements include:
- clean-up management
- dust and noise
- vibration
- waste management.

Sheets are hung consistent with:
- employer-approved manual handling techniques
- manufacturer’s recommended methods and fasteners.

Work and fixing processes include:
- facilitate finishing techniques appropriate to system
- maximise board use
- minimise finishing problems
- minimise joints
- minimise waste.

Completed work ensures that:
- appropriate fastening systems have been used
- stop-up activities will be easily completed
- work will retain structural integrity.

</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. *Tools and equipment* selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans and specifications and *quality requirements*.  
1.6. *Materials* appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Plan and cut ceiling sheets. | 2.1. Framing is checked to confirm suitability for fixing the ceiling sheets.  
2.2. *Work sequences and fixing processes* are identified from manufacturer recommendations.  
2.3. Sheets are measured to minimise waste and joins in problem areas while maximising board use.  
2.4. Ceiling dimensions are matched to sheet size.  
2.5. Cuts are planned to locate joints to minimise effect of jointing processes on function and visual appearance.  
2.6. Cutting process follows employer-approved procedures for minimising dust exposure to others and using appropriate personal protective equipment.  
2.7. Cut sheets are relocated to fixing site and stored to minimise damage and facilitate planned fixing activities. |
| 3. Fix standard ceiling sheets. | 3.1. Sheets are fixed.  
3.2. Work and fixing processes are sequenced and undertaken.  
3.3. Completed work is checked. |
ELEMENT PERFORMANCE CRITERIA

4. Clean up.

4.1. Work area is cleared and board materials and fasteners are disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

4.2. Hazardous material is identified for separate handling.

4.3. Non-toxic materials are removed using correct procedures.

4.4. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - evaluate own actions and make judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
REQUIRED SKILLS AND KNOWLEDGE

- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- adjust work activity to maintain quality standards
- application of product and process knowledge to identify problems and predict consequences
- identifying faults in operation of equipment or materials quality
- identifying from workplace information and labels the type and purpose of materials and potential for health and safety risks
- identifying purpose of tags and logs of use for equipment
- implications on work quality requirements for instruction to be followed
- manufacturer and supplier instructions for plant and equipment
- manufacturers’ product installation procedures and nominated specifications for the work process
- names and functions of equipment, components and materials
- requirements for a systematic approach to planning own work
- safely use equipment, shift and handle products and materials.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate plasterboard ceiling materials and work methods
- operate from basic instruction without constant supervision
- identify faults in plasterboard fixing, joining and finishing
- execute work within agreed timeframes and standards
- interpret delivery documentation and work orders
- locate relevant materials
- apply knowledge of industry products to identify:
  - manufacturers' components and materials
  - warranty compliance issues
  - suitable materials for a wide range of applications
  - common faults and problems that require reporting
- follow work instructions, operating procedures and inspection practices to:
  - prevent damage to goods, equipment or products
  - meet required work output and quality
  - select and use appropriate personal protective equipment
  - work effectively alone or with others and
EVIDENCE GUIDE

minimise the risk of injury

- modify work activities to cater for variations in work site procedures, personnel, contexts and environment
- maintain workplace records in relation to materials, plant and equipment use
- use safe handling requirements, based on information provided for equipment, products and materials.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- building framework
- materials
- tools and equipment.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
EVIDENCE GUIDE

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to fixing ceiling sheets
- relevant Australian standards
- safe work procedures relating to fixing ceiling sheets
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and
RANGE STATEMENT

treatments associated with:
- concealed services (water, power and gas)
- lighting
- traffic control
- restricted access barriers
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:
- broad knives
- brooms
- electric screw guns
- hand and power drills
- hand saws
- keyhole saws
- measuring tapes and rules
- paintbrushes
- plasterboard hammers
- plasterer's trowels
- scaffold planks
- T squares
- taping knives
- trestles.

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:
- beads
- cement render
- fibre cement sheets
- finishing materials
- plaster compounds
- plasterboard
- plasterglass sheets
RANGE STATEMENT

Environmental requirements include:
- water resistant plasterboard.
- clean-up management
- dust and noise
- vibration
- waste management.

Work sequences and fixing processes include:
- facilitate finishing techniques appropriate to system
- maximise board use
- minimise finishing problems
- minimise joints
- minimise waste.

Sheets are fixed consistent with:
- manufacturer's recommended methods and fasteners
- employer-approved manual handling techniques.

| 2. Identify levels of finish. | 2.1. Level of finish documentation is accessed.  
2.2. Features of each level of finish are identified.  
2.3. Differences between levels of finish are identified from photographs and personal observation. |
| 3. Establish level of finish requirements. | 3.1. Workplace documents, specifications, contract and/or supervisors are used to establish customer levels of finish requirements.  
3.2. Recommended work practices to produce required level of finish required by the customer are identified.  
3.3. Required modifications to materials or work processes to meet required level of finish are identified.  
3.4. Required modifications to materials or work methods are communicated to appropriate personnel. |
| 4. Inspect completed work for level of finish. | 4.1. Distinguishing features of levels of finish are identified in the completed work.  
4.2. Effects of framing tolerances, windows, light fittings and location of joins on finish of plasterboard are explained. |
ELEMENT | PERFORMANCE CRITERIA
---|---
4.3. | Identified features are compared to level of finish descriptions.
4.4. | Build-up on joins is inspected for influence on level of finish.
4.5. | Level of finish classification is allocated to inspected work.
5. | Provide advice for surface finishing.
5.1. | Requirements for painting are identified.
5.2. | Explanations are provided to customer and painter.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - follow instructions and diagrams in manual for equipment and installation of plasterboard
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - evaluate own actions and make judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
REQUIRED SKILLS AND KNOWLEDGE

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- adjusting work activity to maintain quality standards
- application of product and process knowledge to predict consequences and identify improvements
- identification of architectural styles, structures and fittings that will influence glancing light
- identifying and applying appropriate safety precautions to safely use equipment, and shift and handle products and materials
- identifying and reading manufacturers’ product installation procedures and nominated specifications for the work process to produce level 4 and 5 finishes
- identifying faults in building structure, materials quality and finished joints and edges
- job safety analysis (JSA) and safe work method statements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- explain key differences and typical application of level 3, 4 and 5 finishes
- select and use appropriate level of finish standard
- plan and execute work within agreed timeframe and to a high standard under general supervision
- apply a broad knowledge of industry products to identify:
  - manufacturers' components and materials
  - warranty compliance issues
  - suitable materials for a wide range of applications
- identify problems to level of finish and suggest appropriate alternative rectifications
- interpret work order and locate and apply relevant information from building plans and delivery documents
- follow work instructions, operating procedures and inspection practices to:
  - prevent damage to goods, equipment or products
  - meet required work output and product quality
  - select and use appropriate personal protective equipment
  - minimise the risk of injury to self or others
EVIDENCE GUIDE

- work effectively with other workers on and off site
- modify work activities to cater for variations in work site procedures, personnel, contexts and environment
- maintain workplace records in relation to materials, plant and equipment use
- follow safe handling requirements of equipment, products and materials.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- completed plasterwork and planned work
- level of finish standards.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and
EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace.
- where the assessment is part of a structured learning experience, the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** includes:
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to plasterboard
- relevant Australian standards
- safe work procedures relating to plasterboard
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Planning and preparation** include:
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

**Safety (OHS)** is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
RANGE STATEMENT

- lighting
- traffic control
- restricted access barriers
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:
- broad knives
- brooms
- electric screw guns
- hand and power drills
- hand saws
- keyhole saws
- measuring tapes and rules
- paintbrushes
- plasterboard hammers
- plasterer's trowels
- scaffold planks
- T squares
- taping knives
- trestles.

Quality requirements include relevant regulations, including:
- Australian standards, including AS/NZS2589.1:1997
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:
- beads
- cement render
- fibre cement sheets
- finishing materials
- plaster compounds
- plasterboard
- plasterglass sheets
- water resistant plasterboard.
RANGE STATEMENT

Environmental requirements include:
- clean-up management
- dust and noise
- vibration
- waste management.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. *Tools and equipment* selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans and specifications and *quality requirements*.  
1.6. *Materials* appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Select materials, equipment and work area. | 2.1. Types of *finishing compounds* compatible with system performance are identified and selected to match work requirements and manufacturer specifications.  
2.2. Processes and equipment for mixing compounds are identified and selected to match tasks from manufacturer recommendations.  
2.3. Suitable work area is selected to minimise dust exposure to self and others and to minimise manual handling risks when shifting, mixing and blending. |
| 3. Mix compound. | 3.1. Work sequences and mixing requirements are followed.  
3.2. Mixture consistency is adjusted to suit intended use.  
3.3. Completed work is checked to ensure work meets manufacturer specifications and requirements for intended use. |
| 4. Clean up. | 4.1. Mixing equipment is cleaned using employer-approved work practices, disposing of silica-based material following required environmental controls.  
4.2. Site area is cleaned up, with waste materials |
ELEMENT | PERFORMANCE CRITERIA
---|---
collected for recycling or disposal, containers covered to prevent spills and contamination.
4.3. Hazardous material is identified for separate handling.
4.4. Non-toxic materials are removed using correct procedures.
4.5. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations, regulatory and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - evaluate own actions and make judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
REQUIRED SKILLS AND KNOWLEDGE

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application of product and process knowledge to predict consequences and identify improvements
- identifying and applying appropriate safety precautions to safely use equipment, and shift and handle products and materials
- identifying and reading manufacturers’ product installation procedures and nominated specifications for the work process
- identifying by name and function equipment, components and materials
- identifying potential for health and safety risks from workplace information and labels
- job safety analysis (JSA) and safe work method statements
- requirements for a systematic approach to planning own work.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate compounds, consistency and mixing methods
- apply a broad knowledge of industry products to identify:
  - manufacturers' components and materials
  - reasons why manufacturers recommend a three coat system for finishing plaster joins
  - finished textures for hand and mechanical finishing of joints
  - impact of glancing light on finished joins
  - suitable materials for a wide range of applications
- follow work instructions, operating procedures and inspection practices to:
  - prevent damage to goods, equipment or products
  - meet required work output and product quality
  - select and use appropriate personal protective equipment
  - minimise the risk of injury to self or others
  - work effectively with other workers on and off site
  - follow safe handling requirements of equipment, products and materials.

Context of and specific

This competency is to be assessed using standard and authorised work practices, safety requirements
EVIDENCE GUIDE

resources for assessment

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.
Assessment is to comply with relevant regulatory or Australian standards' requirements.
Resource implications for assessment include:
- building framework
- finishing materials
- tools and equipment.
Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.
Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.
Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with
EVIDENCE GUIDE

A decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to mixing plaster compounds
- relevant Australian standards
- safe work procedures relating to mixing plaster compounds
RANGE STATEMENT

- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - traffic control
  - restricted access barriers
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Tools and equipment include:

- broad knives
- brooms
- electric screw guns
- hand and power drills
- hand saws
- keyhole saws
- measuring tapes and rules
RANGE STATEMENT

- paintbrushes
- plasterboard hammers
- plasterer's trowels
- scaffold planks
- T squares
- taping knives
- trestles.

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:
- beads
- cement render
- fibre cement sheets
- finishing materials
- plaster compounds
- plasterboard
- plasterglass sheets
- water resistant plasterboard.

Environmental requirements include:
- clean-up management
- dust and noise
- vibration
- waste management.

Finishing compounds include:
- join finishing materials
- quality checks for compound
- sequences and number of coats.

Work sequences and mixing requirements include:
- facilitate finishing techniques appropriate to system
- maximise board use
- minimise finishing problems
- minimise joints
- minimise waste.

5.4. Dust suppression procedures are used to minimise health risk to work personnel and others.

5.5. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - evaluate own actions and make judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
REQUIRED SKILLS AND KNOWLEDGE

- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- adjusting work activity to maintain quality standards
- application of product and process knowledge to predict consequences and identify improvements
- identifying and applying appropriate safety precautions to safely use equipment, and shift and handle products and materials
- identifying and reading manufacturers’ product installation procedures and nominated specifications for the work process
- identifying by name and function equipment, components and materials
- identifying faults in operation of equipment or materials quality
- identifying from workplace information and labels the type and purpose of materials and potential for health and safety risks
- identifying the purpose of tags and logs of use for equipment
- interpreting manufacturer and supplier instructions for plant and equipment
- job safety analysis (JSA) and safe work method statements
- requirements for a systematic approach to planning own work.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate finishing materials and work methods
- plan and execute work within agreed timeframe and to a high standard under general supervision
- apply a broad knowledge of industry products to identify:
  - manufacturers' components and materials
  - warranty compliance issues
  - suitable materials for a wide range of applications
- report problems to supervisors and suggest appropriate alternative rectifications
- interpret work order and locate and apply relevant information from building plans and delivery documents
- follow work instructions, operating procedures and inspection practices to:
  - prevent damage to goods, equipment or products
  - meet required work output and product quality
  - select and use appropriate personal protective equipment
  - minimise the risk of injury to self or others
- work effectively with other workers on and off site
EVIDENCE GUIDE

- modify work activities to cater for variations in work site procedures, personnel, contexts and environment
- maintain workplace records in relation to materials, plant and equipment use
- follow safe handling requirements of equipment, products and materials.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- building framework
- finishing materials
- tools and equipment.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.
EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to plasterboard
- relevant Australian standards
- safe work procedures relating to plasterboard
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
RANGE STATEMENT

- traffic control
- restricted access barriers
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Tools and equipment** include:
- broad knives
- brooms
- electric screw guns
- hand and power drills
- hand saws
- keyhole saws
- measuring tapes and rules
- paintbrushes
- plasterboard hammers
- plasterer's trowels
- scaffold planks
- T squares
- taping knives
- trestles.

**Quality requirements** include relevant regulations, including:
- Australian standards, including AS/NZ2589
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

**Materials** include:
- beads
- cement render
- fibre cement sheets
- finishing materials
- plaster compounds
- plasterboard
- plasterglass sheets
- water resistant plasterboard.

**Environmental requirements** include:
- clean-up management
- dust and noise
- vibration
RANGE STATEMENT

Finishing techniques include:
- waste management.
- join finishing materials
- processes for finishing system joins
- quality checks for joint finishing
- work sequence.

Joint finishing specifications include:
- employer-approved manual handling techniques
- manufacturer’s recommended methods and materials.

5. Clean up. | 5.1. Work area is cleared and materials are disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.  
5.2. Sanding dust is cleaned up and contained for disposal in accordance with approved workplace procedures, with any hazardous material identified for separate handling.  
5.3. Non-toxic materials are removed using correct procedures.  
5.4. Dust suppression procedures are used to minimise health risk to work personnel and others.  
5.5. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - evaluate own actions and make judgments about performance and necessary improvements
REQUIRED SKILLS AND KNOWLEDGE

- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application of product and process knowledge to identify problems and predict consequences
- effects of glancing light on plasterboard joins when paint is applied
- factors that influence level of finish
- identifying from workplace information and labels the type and purpose of materials and potential for health and safety risks
- implications on work quality requirements for instruction to be followed
- job safety analysis (JSA) and safe work method statements
- manufacturers' product mixing and application procedures and nominated specifications for the work process
- manufacturer and supplier instructions for plant and equipment
- requirements for a systematic approach to planning own work
- safely use equipment, shift and handle products and materials.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate sanding materials and work methods
- operate from basic instruction without constant supervision
- identify requirements to achieve specified level of finish
- identify faults in plasterboard fixing, joining and finishing
- execute work within agreed timeframes and standards
- interpret delivery documentation and work orders
- locate relevant materials
- explain warranty, guarantee and liability requirements for plastering work
- apply knowledge of industry requirements to identify:
  - condition and colour of the top coat when set
  - manufacturers' components and materials
  - contract compliance requirements
  - reasons for use of P1 rating (protection against mechanically generated particles) or P2 rating (protection against mechanically and thermally generated particles) mask and protective clothing when sanding topcoats
  - common faults in materials and work and problems that require reporting
EVIDENCE GUIDE

- follow work instructions, operating procedures and inspection practices to:
  - prevent damage to goods, equipment or products
  - select and use appropriate personal protective equipment
  - work effectively alone or with others and minimise the risk of injury
  - modify work activities to cater for variations in work site procedures, contexts and environment
  - identify and use appropriate behaviour for interactions with other workers, supervisors, clients and members of the public.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- stopped plasterboard walls and ceilings
- sanding materials
- access methods.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or
EVIDENCE GUIDE

simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified
EVIDENCE GUIDE

equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to sanding plaster work
- relevant Australian standards
- safe work procedures relating to sanding plaster work
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- grade of paper to be used
- joins to be hand sanded
- method of accessing work site
RANGE STATEMENT

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- readiness of topcoat for sanding
- work site inspection equipment defect identification.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - traffic control
  - restricted access barriers
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- broad knives
- brooms
- electric screw guns
- hand and power drills
- hand saws
- keyhole saws
- measuring tapes and rules
- paintbrushes
- plasterboard hammers
- plasterer's trowels
- scaffold planks
- T squares
- taping knives
RANGE STATEMENT

**Quality requirements** include relevant regulations, including:

- Australian standards
- Internal company quality policy and standards
- Manufacturer specifications
- Workplace operations and procedures.

**Materials** include:

- Beads
- Cement render
- Fibre cement sheets
- Finishing materials
- Plaster compounds
- Plasterboard
- Plasterglass sheets
- Water resistant plasterboard.

**Environmental requirements** include:

- Clean-up management
- Dust and noise
- Vibration
- Waste management.

**Problems** with completed work include:

- Sand-through areas.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Select materials, processes and equipment. | 2.1. Substrate is inspected to confirm suitability for the installation of wet area system.  
2.2. Materials, equipment and processes for sealing wet area system to category 1 are identified and selected from manufacturer’s installation advice.  
2.3. Materials, equipment and processes to finish wet areas to category 2 are identified and selected from manufacturer’s installation advice. |
| 3. Stop and finish joins, penetrations and edges. | 3.1. Work sequences are planned and undertaken to implement manufacturer’s requirements for wet finishing and sealing.  
3.2. Problems from glancing light are minimised in category 2 classified areas.  
3.3. Potential to perform within Australian standard are maximised in category 1 areas.  
3.4. Stopping material is used to match the wet area system.  
3.5. Edges of wet area board to be caulked are sealed using appropriate caulking material.  
3.6. Board in category 1 areas is sealed to meet manufacturers’ instructions and Australian standard |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences

### PERFORMANCE CRITERIA

</tbody>
</table>
REQUIRED SKILLS AND KNOWLEDGE

- use and interpret non-verbal communication, such as hand signals
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- interpret manufacturers' instructions in diagrams, photographs and written form for equipment and installation of plasterboard
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application of product and process knowledge to predict consequences and identify improvements
- describing how Australian standards vary between categories 1 and 2
- identifying and applying appropriate safety precautions to safely use materials for wet area sealing and finishing
- identifying and reading manufacturers' product installation procedures and specifications for wet area installation
- identifying by name and function equipment, components and materials appropriate for wet areas
- identifying from workplace information and labels the type and purpose of materials and potential for health and safety risks for wet area materials
- identifying category 1 and 2 wet areas on plans
- job safety analysis (JSA) and safe work method statements
- requirements for a systematic approach to planning own work.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- interpret work order and locate and apply relevant information from building plans and delivery documents
- select and use appropriate wet area materials and work methods
- explain reasons for use of sealers in category 2 areas and care in finishing category 1 areas to deal with glancing light in wet areas
- plan and execute work within agreed timeframe and to a high standard under general supervision
- apply a broad knowledge of industry products to identify:
  - available wet area systems
  - implications of mixing and manufacturers’ components and materials
  - warranty compliance issues for wet area installation and Australian standard requirements
- identify and report problems to supervisors and suggest appropriate alternative rectifications
- follow work instructions, operating procedures and inspection practices to:
  - prevent damage to goods, equipment or products
  - meet required work output and product quality
  - select and use appropriate personal
EVIDENCE GUIDE

protective equipment
- minimise the risk of injury to self or others
- work effectively with other workers on and off site
- modify work activities to cater for variations in work site procedures, personnel, contexts and environment
- maintain workplace records in relation to materials, plant and equipment use
- follow safe handling requirements of equipment, products and materials.

Context of and specific resources for assessment
This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- building framework
- wet area materials
- tools and equipment.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment
Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning
EVIDENCE GUIDE

Knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.
EVIDENCE GUIDE

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to finishing wet areas
- relevant Australian standards
- safe work procedures relating to finishing wet areas
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
RANGE STATEMENT

include:

- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - traffic control
  - restricted access barriers
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Tools and equipment** include:

- broad knives
- brooms
- electric screw guns
- hand and power drills
- hand saws
- keyhole saws
- measuring tapes and rules
- paintbrushes
- plasterboard hammers
- plasterer's trowels
- scaffold planks
- T squares
- taping knives
- trestles.

**Quality requirements** include relevant regulations, including:

- Australian standard 3740: 2004
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

**Materials for wet areas** include:

- penetration seals
- sealers
RANGE STATEMENT

Environmental requirements include:
- clean-up management
- dust and noise
- vibration
- waste management.

Work sequences include:
- facilitate finishing techniques appropriate to system
- maximise board use
- minimise finishing problems
- minimise joints
- minimise waste.

Stopping material includes:
- paper tape
- topcoat, applying the required number of coats and allowing for drying time
- wet area acrylic taping cement.

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**
REQUIRED SKILLS AND KNOWLEDGE

Required skills for this unit are:
- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:
- adjusting work activity to maintain quality standards
- application of product and process knowledge to predict consequences and identify improvements
- identifying and applying appropriate safety precautions to safely use equipment, and shift and handle products and materials
- identifying and reading manufacturers' product installation procedures and nominated specifications for mixing adhesives, and fixing and cutting cornices
- identifying by name and general application paper-faced and handmade cornices
- identifying faults in materials
- identifying from workplace information and labels the type and purpose of
REQUIRED SKILLS AND KNOWLEDGE

- materials and potential for health and safety risks for cornices and adhesives
- requirements to plan own work using a systematic approach to allow for efficient and safe handling of cornices and safe access to work at heights.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify work order or contract and delivery documentation and match to delivered cornice
- select and use appropriate cornice materials and work methods
- plan and execute work within agreed timeframe and to a high standard under general supervision
- identify problems in fitting cornices and suggest appropriate alternative rectifications
- follow work instructions, operating procedures and inspection practices to:
  - prevent damage to goods, equipment or products
  - explain the reasons for use of cornice reinforcing systems
  - meet required work output and product quality
  - select and use appropriate personal protective equipment
  - minimise the risk of injury to self or others
- work effectively with other workers on and off site
- modify work activities to cater for variations in work site procedures, personnel, contexts and environment
- maintain workplace records in relation to materials, plant and equipment use
- follow safe handling requirements of
EVIDENCE GUIDE

equipment, products and materials.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- building framework with plasterboard clad walls
- cast cornice
- materials
- tools and equipment.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over
EVIDENCE GUIDE

A period of time reflecting the scope of the role and the practical requirements of the workplace.

- Where the assessment is part of a structured learning experience, the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- All assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to fitting cornices
- relevant Australian standards
- safe work procedures relating to fitting cornices
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Planning and preparation** include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

**Safety (OHS)** is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
RANGE STATEMENT

- traffic control
- restricted access barriers
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Tools and equipment** include:
- broad knives
- brooms
- electric screw guns
- hand and power drills
- hand saws
- keyhole saws
- measuring tapes and rules
- paintbrushes
- plasterboard hammers
- plasterer's trowels
- scaffold planks
- T squares
- taping knives
- trestles.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

**Materials** include:
- beads
- cement render
- fibre cement sheets
- finishing materials
- plaster compounds
- plasterboard
- plasterglass sheets
- water resistant plasterboard.

**Environmental requirements** include:
- clean-up management
- dust and noise
- vibration
RANGE STATEMENT

- waste management.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Identify travel requirement. | 2.1. Reason for journey is determined.  
2.2. Route planning is varied to suit the type of vehicle and load to be carried.  
2.3. Relevant regulations regarding the transport of dangerous goods are identified and compared to the load to be transported. |
| 3. Identify and determine the most appropriate route. | 3.1. Street directory and road map symbols are recognised and interpreted.  
3.2. Points of departure and destination are identified in a directory index and the information is used to locate places on the appropriate map.  
3.3. Directions for a predetermined route are interpreted and the route is traced using a street directory and road map.  
3.4. Key intersections and other landmarks along the route are identified for use in following the planned route.  
3.5. Time required to complete the trip is estimated based on speed limits, time of day, expected traffic conditions, distance and controlled intersections. |
| 4. Follow planned route. | 4.1. Route is memorised or marked out on map.  
4.2. Predetermined route is followed.  
4.3. Time taken is compared to predicted time and reasons for any discrepancy are identified. |

## Required Skills and Knowledge
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - recognise and interpret work related signs, including road signs, safety logos and warnings
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - compare counted quantities with delivery notes and orders
  - evaluate own actions and make judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- implications on work quality for instructions to be followed
- names and functions of equipment, components and materials
- safely use equipment, and shift and handle products and materials
REQUIRED SKILLS AND KNOWLEDGE

- traffic patterns, road rules and conditions that impact on travel route selection and travel times
- use of indexes, grid references and landmarks.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate travel routes using maps, street directory and verbal instructions
- operate from basic instruction without constant supervision
- interpret delivery documentation and work orders
- locate relevant materials
- follow work instructions to:
  - prevent damage to goods, equipment or products
  - meet required work output and quality
  - work effectively alone or with others and minimise the risk of injury
  - identify and use appropriate behaviour for interaction with other workers, supervisors, clients and members of the public
  - maintain workplace records.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- travel requirement
EVIDENCE GUIDE

- street directory/map
- work order.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a
EVIDENCE GUIDE

combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

1.1. Information includes:
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to transport
- relevant Australian standards
- safe work procedures relating to transport
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

1.2. Planning and preparation include:
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
RANGE STATEMENT

1.3. Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - traffic control
  - restricted access barriers
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - evaluate own actions and make judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
REQUIRED SKILLS AND KNOWLEDGE

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- adjust work activity to maintain quality standards
- application of product and process knowledge to identify problems and predict consequences
- identifying faults in insulation materials
- identifying from workplace information and labels the type and purpose of materials and potential for health and safety risks
- identifying the purpose of tags and logs of use for equipment
- implications on work quality requirements for instruction to be followed
- manufacturers' product installation procedures and nominated specifications for the work process
- matching requirements for types and the following rating of insulation materials:
  - resistance to heat (R)
  - sound transmission class (STC)
  - field sound transmission class (FSTC)
- requirements for a systematic approach to planning own work
- safely use equipment, shift and handle products and materials and access work at height.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate insulation materials and work methods to match customer order and manufacturers' specified procedures
- operate from basic instruction without constant supervision
- execute work within agreed timeframes and standards
- interpret delivery documentation and work orders
- locate relevant materials
- apply knowledge of industry products to identify:
  - manufacturers' components and materials
  - relationships of R rating with Building Code of Australian (BCA) requirements and energy ratings of a property
  - manufacturer specifications in relation to the insulation properties of the product available
  - suitable materials for a wide range of applications
  - common faults and problems that require reporting
- follow work instructions, operating procedures and inspection practices to:
  - prevent damage to goods, equipment or products
  - select and use appropriate personal
EVIDENCE GUIDE

- protective equipment

- work effectively alone or with others and minimise the risk of injury

- modify work activities to cater for variations in work site procedures, personnel, contexts and environment

- maintain workplace records in relation to materials, plant and equipment use

- use safe handling requirements, based on information provided for equipment, products and materials.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- ceiling and wall spaces
- materials and tools.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package

- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

- reinforce the integration of employability skills
EVIDENCE GUIDE

with workplace tasks and job roles

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and
EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- complete not less than three installation tasks which cover acoustic and thermal protection systems, in accordance with regulatory requirements and related specifications.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to the installation of acoustic and thermal protection systems
- hand and power tools and equipment appropriate to the installation of acoustic and thermal protection systems
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.
EVIDENCE GUIDE

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

- may include:
  - C clamps
  - air compressors and hoses
  - docking saw and drop saws
  - laser levelling devices
  - masonry drills
  - nail guns
  - pop riveters
  - saw stools
  - system scaffolding and planks.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:

- acoustic ceiling products
- adhesive
- fibrous plaster
- insulation blankets
- jointing tape
- loose fill insulation
- metal and aluminium type products
- nails
- plasterboard
- polystyrene sheets
- rigid sheet insulation
- screws
- sealants
- staples
- steel safety mesh.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management.
RANGE STATEMENT

Installation includes:
- acoustic and energy insulation materials
- acoustic ceiling tiles and sheets
- fibre cement sheeting
- fixing of plasterboard
- metal pan type ceiling cladding
- plaster products.

</table>
| 5. Clean up. | 5.1. Work area is cleared and materials and fasteners are disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.  
5.2. Hazardous material is identified for separate handling.  
5.3. Non-toxic materials are removed using correct procedures.  
5.4. Dust suppression procedures are used to minimise health risk to work personnel and others.  
5.5. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices. |

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - evaluate own actions and make judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools,
REQUIRED SKILLS AND KNOWLEDGE

equipment or materials

- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- adjusting work activity to maintain quality standards
- application of product and process knowledge to predict consequences and identify improvements
- identifying and applying appropriate safety precautions to safely use equipment, and shift and handle products and materials
- identifying and interpreting manufacturers' product installation procedures and nominated specifications for the work process
- identifying by name and function equipment, components and materials appropriate for internal and external fixing and finishing of columns
- identifying faults in materials or structures where the column is to be fitted
- identifying from workplace information and labels the type and purpose of materials and potential for health and safety risks
- names and architectural styles for different types of columns
- requirements to plan own work.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate materials and work methods to ensure safe shifting and fixing of columns
- identify application of plaster and fibre cement columns in building applications
- plan and execute work within agreed timeframe and to a high standard under general supervision
- apply a broad knowledge of industry products to identify:
  - manufacturers' components and materials for the system to be installed and the location of the column
  - warranty compliance issues
  - suitable materials for a wide range of applications
- report problems to supervisor and suggest appropriate alternative rectifications
- interpret work order and locate and apply relevant information from building plans and delivery documents
- follow work instructions, operating procedures and inspection practices to:
  - prevent damage to goods, equipment or products
  - select and use appropriate personal protective equipment
  - minimise the risk of injury to self or others
EVIDENCE GUIDE

- work effectively with other workers on and off site
- modify work activities to cater for variations in work site procedures, personnel, contexts and environment
- maintain workplace records in relation to materials, plant and equipment use
- follow safe handling requirements of equipment, products and materials.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- building framework
- plaster sheet
- tools and equipment.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to
EVIDENCE GUIDE

be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace.

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to installing and finishing columns
- relevant Australian standards
- safe work procedures relating to installing and finishing columns
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and
RANGE STATEMENT

- treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - traffic control
  - restricted access barriers
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

**Tools and equipment** include:
- broad knives
- brooms
- electric screw guns
- hand and power drills
- hand saws
- keyhole saws
- measuring tapes and rules
- paintbrushes
- plasterboard hammers
- plasterer's trowels
- scaffold planks
- T squares
- taping knives
- trestles.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

**Materials** include:
- beads
- cement render
- fibre cement sheets
- finishing materials
- plaster compounds
- plasterboard
- plasterglass sheets
RANGE STATEMENT

Environmental requirements include:
- water resistant plasterboard.
- clean-up management
- dust and noise
- vibration
- waste management.

Work sequences planning includes:
- approved manual handling techniques
- facilitating finishing techniques appropriate to columns
- implementing manufacturers' requirements for column installation
- minimising finishing problems.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. *Tools and equipment* selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans and specifications and *quality requirements*.  
1.6. *Materials* appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Identify faults. | 2.1. Perceived *faults are identified* in plaster work.  
2.2. *Faults found* are described using correct construction industry terminology.  
2.3. Appropriate measurements are taken to confirm observed faults. |
| 3. Determine causes of faults and recommend rectification. | 3.1. Investigation is conducted to establish *cause of faults*, including accessing substrate if necessary.  
3.2. Faults in structure or substrate are communicated to appropriate personnel.  
3.3. Plaster rectification is planned to achieve desired level of finish and rectification of faults is observed.  
3.4. Permission to proceed with planned rectification is sought and obtained. |
| 4. Rectify faults. | 4.1. Planned rectification process is followed to rectify faults.  
4.2. Completed rectifications are inspected to confirm perceived faults have been rectified.  
4.3. Sign-off on completed rectification work is sought and obtained from appropriate personnel. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand

  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application of product and process knowledge to predict consequences and identify improvements
- customer liaison skills
REQUIRED SKILLS AND KNOWLEDGE

- identifying and applying appropriate safety precautions to safely use equipment, and shift and handle products and materials
- identifying and reading manufacturers' product installation procedures and nominated specifications
- identifying fault types, causes and rectification methods
- identifying faults in materials quality and installation and finishing work
- identifying the implications of contract requirements
- job safety analysis (JSA) and safe work method statements
- requirements for a systematic approach to planning own work.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- interpret faults in plaster work from descriptions and observation
- apply a broad knowledge of industry products to identify:
  - manufacturers’ components and materials for finishing plaster products and completion of decorated surfaces to minimise effects of glancing light
  - contract and warranty compliance implications of faults
- suggest appropriate alternative rectification for identified problems
- follow work instructions, operating procedures and inspection practices to:
  - prevent damage to goods, equipment or products
  - meet required work output and product quality
  - select and use appropriate personal protective equipment
  - minimise the risk of injury to self or others
- work effectively with other workers on and off site
- modify work activities to cater for variations in work site procedures, personnel, contexts and environment
- maintain workplace records in relation to contract with customers and other trades for

| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Determine work requirements. | 2.1. Work area is inspected to determine work requirements.  
2.2. Level of finish as specified in the contract or job order is noted and mismatches between quality of fixing and finishing are recorded and reported or rectified as appropriate for contract.  
2.3. Personal protective equipment (PPE) suitable for the task is selected based on manufacturer recommended and employer-approved specification. |
| 3. Mechanically sand joins. | 3.1. Work site access is gained using approved workplace methods based on risk assessment for the task, site and circumstance.  
3.2. Sanding equipment, leads and any required dust protection or warning signs are set up for use.  
3.3. Appropriate stance and posture are used to hold and manipulate sanding equipment to minimise manual handling risks.  
3.4. Sanding is completed to required standard of finish.  
3.5. Completed sanding work is inspected for compliance with workplace and customer requirements and contracted level of finish. |
ELEMENT  PERFORMANCE CRITERIA

3.6. Any sand-through areas are reported to appropriate personnel.
3.7. Sanded area is brushed down.

4. Clean up.
4.1. Sanding dust is collected and contained for disposal in accordance with approved workplace procedures.
4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices using appropriate PPE; and recycled in accordance with legislation, regulations, codes of practice and job specification.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources

- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application of product and process knowledge to identify problems and predict consequences
- effects of glancing light on plasterboard joins when paint is applied
- factors that influence level of finish
- identifying from workplace information and labels the type and purpose of materials and potential for health and safety risks
- implications on work quality requirements for instruction to be followed
- job safety analysis (JSA) and safe work method statements
- manufacturer and supplier instructions for plant and equipment
- manufacturers’ product mixing and/or application procedures and nominated specifications for the work process
- requirements to plan own work
- safely use equipment, shift and handle products and materials.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate sanding materials and work methods
- ensure that electrical equipment is inspected prior to use and includes required tags, logs and maintenance records prescribed by regulations
- operate from basic instruction without constant supervision
- identify requirements to achieve the specified level of finish
- identify faults in plasterboard fixing, joining and finishing
- execute work within agreed timeframes and standards
- interpret delivery documentation and work orders
- locate relevant materials
- explain warranty, guarantee and liability requirements for plastering work
- apply knowledge of industry requirements to identify:
  - condition and colour of top coat when set
  - manufacturers' components and materials
  - contract compliance requirements
  - reasons for use of P1 rating (protection against mechanically generated particles) or P2 rating (protection against mechanically and thermally generated particles) mask and
EVIDENCE GUIDE

protective clothing when emptying and cleaning equipment and disposing of dust

- common faults in materials and work and problems that require reporting
- follow work instructions, operating procedures and inspection practices to:
  - prevent damage to goods, equipment or products
  - maintain equipment in good working condition and identify faults requiring repair by electrician
  - work effectively alone or with others and minimise the risk of injury
  - modify work activities to cater for variations in work site procedures, contexts and environment
  - identify and use appropriate behaviour for interactions with other workers, supervisors, clients and members of the public.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- stopped plasterboard walls and ceilings
- sanding materials
- access methods.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.
EVIDENCE GUIDE

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job.
EVIDENCE GUIDE

function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to plasterboard
- relevant Australian standards
- safe work procedures relating to plasterboard
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements:
RANGE STATEMENT

- safety plans and policies
- joins to be hand sanded
- grade of paper to be used
- readiness of topcoat for sanding
- method of accessing work site
- power supply availability on the same level as the work
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - traffic control
  - restricted access barriers
  - trip hazards
  - working at heights
  - working in confined spaces
  - working in proximity to others, work site visitors and the public
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

Tools and equipment include:

- broad knives
- brooms
- electric screw guns
- hand and power drills
- hand saws
- keyhole saws
- measuring tapes and rules
RANGE STATEMENT

- paintbrushes
- plasterboard hammers
- plasterer's trowels
- powered sanding machines
- scaffold planks
- T squares
- taping knives
- trestles.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

**Materials** include:
- beads
- cement render
- fibre cement sheets
- finishing materials
- plaster compounds
- plasterboard
- plasterglass sheets
- water resistant plasterboard.

**Environmental requirements** include:
- clean-up management
- dust and noise
- vibration
- waste management.

<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant **information**, confirmed and applied for **planning and preparation** purposes.  
1.2. **Safety (OHS)** requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. **Tools and equipment** selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans and specifications and **quality requirements**.  
1.6. **Materials** appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. **Environmental requirements** are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Inspect equipment. | 2.1. **Equipment is inspected** prior to transport and set up.  
2.2. Warning systems are checked for operational effectiveness. |
| 3. Identify and assess impact of faults on work requirements. | 3.1. Faults are identified and assessment made of potential effect of the fault on operation of equipment for the required work.  
3.2. Faults that may affect the safe operation of the equipment are reported to appropriate personnel for rectification, and equipment is tagged and set aside for repair.  
3.3. Accurate reporting of the results of the inspection and testing is made in accordance with **statutory requirements** and company policy.  
3.4. Records are clear, unambiguous and concise with clear reference made to items that may require replacement or repair in the future. |

## Required Skills and Knowledge
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - evaluate own actions and make judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application of product and process knowledge to identify problems and predict consequences
- identifying potential for health and safety risks from workplace information and labels
- identifying the purpose of tags and logs of use for equipment
- implications for work output, safe operations and quality for instructions to be followed
REQUIRED SKILLS AND KNOWLEDGE

- job safety analysis (JSA) and safe work method statements
- manufacturers' inspection procedures and specifications for the equipment
- names and functions of equipment, components and materials
- operating principles and working components of equipment used
- requirements to plan own work
- safely use equipment, shift and handle products and materials.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate equipment and work methods
- operate from basic instruction without constant supervision
- identify faults in equipment
- interpret delivery documentation and work orders
- locate relevant materials
- apply knowledge of industry products to identify:
  - manufacturers' instructions for equipment
  - wear that may require maintenance in the future
  - compatible components for running repairs
- follow work instructions, operating procedures and inspection practices to:
  - identify damage to goods, equipment or products
  - select and use appropriate personal protective equipment
  - work effectively alone or with others and minimise the risk of injury
  - maintain workplace records in relation to materials, plant and equipment use
  - use safe handling requirements, based on information provided for equipment, products and materials.
EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- equipment
- specifications
- maintenance records
- tools.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- adjusting work activity to maintain quality standards
- application of product and process knowledge to predict consequences and identify improvements
- identifying and applying appropriate safety precautions to safely use equipment, and shift and handle products and materials
- identifying and reading manufacturers’ product installation procedures and nominated specifications for mixing adhesives, and fixing and cutting cornices
- identifying faults in materials and construction that may influence the match mitre process
- identifying materials used for hand and machine-made cornices by name and general application
- identifying from workplace information and labels the type and purpose of materials and potential for health and safety risks for cornice and adhesives
REQUIRED SKILLS AND KNOWLEDGE

- job safety analysis (JSA) and safe work method statements
- requirements for safe lifting and temporary fixing of cornice and safe work at heights.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify work order or contract and delivery documentation and match to delivered cornice
- plan materials use and match mitres to minimise waste and maximise decorative effect
- select and use appropriate cornice materials and work methods
- plan and execute work within agreed timeframe and to a high standard under general supervision
- apply a broad knowledge of industry products to identify:
  - hand manufactured and machine-made cornices
  - materials used in hand manufactured cornices and precautions for safe cutting
- identify problems in pattern matching and cornice fixing and suggest appropriate alternative rectifications
- interpret building plans and delivery documents to match cornice type to appropriate rooms
- follow work instructions, operating procedures and inspection practices to:
  - prevent damage to goods, equipment or products
  - meet required work output and product quality
EVIDENCE GUIDE

- select and use appropriate personal protective equipment
- minimise the risk of injury to self or others
- work effectively with other workers on and off site
- modify work activities to cater for variations in work site procedures, personnel, contexts and environment
- maintain workplace records in relation to materials, plant and equipment use
- follow safe handling requirements of equipment, products and materials.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- building framework with plasterboard clad walls
- cast cornices
- materials
- tools and equipment.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or
EVIDENCE GUIDE

simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes.
EVIDENCE GUIDE

where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel

  - evaluate own actions and make judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - respond to change and contribute to workplace responsibilities, such as current
REQUIRED SKILLS AND KNOWLEDGE

- work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application of product and process knowledge to predict consequences and identify improvements
- identifying and applying appropriate safety precautions to safely use equipment, and shift and handle products and materials
- identifying and interpreting manufacturers’ product installation procedures and nominated specifications for the work process
- identifying faults in building construction that may influence the eventual sound rating
- interpreting manufacturer and supplier instructions for sound attenuation properties of materials
- job safety analysis (JSA) and safe work method statements
- requirements for a systematic approach to planning own work.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- assemble and use appropriate acoustic materials and work methods
- apply a broad knowledge of industry products to identify:
  - manufacturers’ components and materials to the requirements of the building and the contract
  - contract and warranty compliance issues for inappropriate selection and installation of acoustic system
  - suitable materials for a wide range of applications
- report problems to supervisor and suggest appropriate alternative rectifications
- locate and apply relevant information from building plans to identify factors that may influence acoustic rating in different parts of the building structure
- follow work instructions, operating procedures and inspection practices to:
  - prevent damage to goods, equipment or products
  - meet required work output and product quality
  - select and use appropriate personal protective equipment
  - minimise the risk of injury to self or others
- work effectively with other workers on and off
EVIDENCE GUIDE

- modify work activities to cater for variations in work site procedures, personnel, contexts and environment
- maintain workplace records in relation to materials, plant and equipment use
- follow safe handling requirements of equipment, products and materials.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- access to building framework
- acoustic system materials
- tools and equipment.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and
EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace;
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge;
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to plasterboard
- relevant Australian standards
- safe work procedures relating to plasterboard
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
RANGE STATEMENT

- lighting
- traffic control
- restricted access barriers
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Tools and equipment** include:

- broad knives
- brooms
- electric screw guns
- hand and power drills
- hand saws
- keyhole saws
- measuring tapes and rules
- paintbrushes
- plasterboard hammers
- plasterer's trowels
- scaffold planks
- T squares
- taping knives
- trestles.

**Quality requirements** include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.
- relevant regulations including Building Code of Australian (BCA) and Australian standard 2499 - 1981, 1530 Parts 1 and 3 and provisions for the geographic location, local government or energy authority.

**Materials** include:

- beads
- cement render
- fibre cement sheets
- finishing materials
- plaster compounds
RANGE STATEMENT

- plasterboard
- plasterglass sheets
- water resistant plasterboard.

*Environmental requirements*
- clean-up management
- dust and noise
- vibration
- waste management.

*Processes for installing acoustic system*
- assessing acoustic materials
- quality checks for acoustic system
- work sequence.

*Manufacturers' requirements for acoustic system installation*
- cutting and hanging sheets to:
  - maximise board use
  - minimise joints
  - minimise waste
  - minimising finishing problems
  - using fasteners and penetration seals.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. *Tools and equipment* selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans and specifications and *quality requirements*.  
1.6. *Materials* appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Plan the use of mechanical taping and filling tools. | 2.1. *Work requirements* are identified and assessed.  
2.2. Penetrations and openings requiring barriers are identified.  
2.3. Amount of compound required is estimated.  
2.4. Length required for tool handle is measured. |
| 3. Prepare for work. | 3.1. Barriers are erected at identified points.  
3.2. Floor is cleared and cleaned.  
3.3. Compound is mixed to required consistency using appropriate personal protective equipment (PPE) and safe work methods when mechanically mixing compound.  
3.4. Tool handle is adjusted to required length. |
| 4. Complete mechanical filling and taping operations. | 4.1. Filling is completed with minimum compound loaded for immediate use.  
4.2. Internal angles are reinforced with a smooth and even appearance.  
4.3. Flat joins are completed so that they are smooth and even and properly reinforced to form a seamless appearance.  
4.4. Proper posture is maintained during use. |
ELEMENT | PERFORMANCE CRITERIA
---|---
4.5. Tasks are rotated in accordance with work site risk assessment.
5. Complete mechanical finishing operations. | 5.1. Finishing is completed with minimum compound loaded for immediate use.
5.2. Joins are finished to produce a smooth and even, seamless appearance.
5.3. Proper posture is maintained during use.
6. Clean up. | 6.1. Spilt compound is cleaned from floor.
6.2. Work area is cleared and excess compound is returned to container or disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
6.3. Hazardous material is identified for separate handling.
6.4. Non-toxic materials are removed using correct procedures.
6.5. Dust suppression procedures are used to minimise health risk to work personnel and others.
6.6. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- **communication skills to:**
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
REQUIRED SKILLS AND KNOWLEDGE

- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application of product and process knowledge to predict consequences and identify improvements
- identifying and rectifying faults in operation of equipment or materials quality
- identifying by name and function equipment and materials used for mechanical taping
- identifying from workplace information and labels the type and purpose of materials and potential for health and safety risks
- interpreting manufacturer and supplier safe use instructions for equipment and materials
- requirements for a systematic approach to planning own work.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the
EVIDENCE GUIDE

Assessment Guidelines for the Training Package.

Overview of assessment
This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- explain requirements for mechanically finished joins for:
  - flat joins
  - internal angles
  - external angles
  - ceiling joints
  - square set joins

- select and use appropriate materials and work methods

- plan and execute work within agreed timeframe and meet the contracted requirements under general supervision

- identify problems in mechanical taping and filling tool operations and suggest appropriate alternative rectifications

- interpret work order and locate and apply relevant information from building plans and delivery documents

- follow work instructions, operating procedures and inspection practices to:
  - prevent damage to goods, equipment or products
  - meet required work output and product quality
  - select and use appropriate PPE
  - minimise the risk of injury to self or others

- work effectively with other workers on and off site

- modify work activities to cater for variations in work site procedures, personnel, contexts and environment
EVIDENCE GUIDE

- follow workplace-approved safe manual handling requirements for equipment, products and materials.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- unfinished plasterboard wall and ceiling
- tools
- materials and equipment.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over
EVIDENCE GUIDE

- A period of time reflecting the scope of the role and the practical requirements of the workplace.
- Where the assessment is part of a structured learning experience, the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.
- All assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. | 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. *Tools and equipment* selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans and specifications and *quality requirements*.  
1.6. *Materials* appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Assess risks arising from the relocation of the load. | 2.1. Products, goods or materials to be relocated are identified.  
2.2. Characteristics of load in relation to weight, shape, balance and dimensions are identified.  
2.3. Environmental factors influencing the shift, including wind, trip hazards, wet conditions and traffic (vehicular and personal), are assessed for effect on personal safety.  
2.4. Appropriate strategies for shifting load are selected based on workplace-approved manual handling procedures.  
2.5. Location for storage is determined.  
2.6. Routes to be followed and potential risks are identified and strategies to minimise risks are identified.  
2.7. Points of balance are estimated.  
2.8. Procedures for safe use of lifting equipment to minimise risks are identified. |
| 3. Plan load relocation. | 3.1. Required load shifting equipment is selected and the safe working load (SWL) and working load limit (WLL) are identified and compared to the load to be |
ELEMENT PERFORMACE CRITERIA

shifting.

3.2. Process for relocating load proposed is determined, including planning for potential difficulties in the work environment.

3.3. Proposed process is checked against relevant code of practice and workplace procedures for compliance.

3.4. Lifting equipment and accessories are checked for safe operation following manufacturers’ instructions and workplace procedures.

4. Relocate load.

4.1. Unsafe equipment is reported to appropriate personnel.

4.2. Planned process and route are followed, using equipment within necessary range of limitations.

4.3. Relocated materials are set down without damage to goods, personnel or equipment and checked for stability.

4.4. Relocation is checked to see that it meets work requirements, and any variations are reported.

4.5. Equipment is returned to storage area.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required Skills

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
REQUIRED SKILLS AND KNOWLEDGE

- use and interpret non-verbal communication, such as hand signals
- written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- adjust work activity to maintain quality standards
- application of product and process knowledge to identify problems and predict consequences
- identify dimensions and mass of items to be shifted or transported and compare with vehicle and building
- identify faults in operation of equipment or materials quality
- identify from workplace information and labels the type and purpose of materials and potential for health and safety risks
- identify shape, load and balance characteristics of products and equipment used
- identify the purpose of tags and logs of use for equipment
- implications on personal health and quality for product for instructions to be followed
- job safety analysis (JSA) and safe work method statements
- manufacturer and supplier instructions for plant and equipment
- names and functions of equipment, components and materials
- requirements to plan own work
- safely use equipment, shift and handle products and materials
- total weights of individual items to estimate overall load and compare with safe working loads for vehicles, scaffold, equipment and manual handling.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate workplace-approved manual handling equipment and work methods
- operate from basic instruction without constant supervision
- execute work within agreed timeframes and standards
- apply knowledge of industry products to identify:
  - manual handling risks
  - warranty compliance issues
  - common faults in products being unloaded and problems that require reporting
- follow work instructions, operating procedures and inspection practices to:
  - prevent damage to goods, equipment or products
  - work effectively alone or with others and minimise the risk of injury
  - modify work activities to cater for variations in work site procedures, contexts and environment
  - identify and use appropriate behaviour for interactions with other workers, supervisors, clients and members of the public
  - use safe handling requirements, based on information provided for equipment,
EVIDENCE GUIDE

products and materials.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- materials
- mechanical handling equipment
- work site.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the
EVIDENCE GUIDE

where the assessment is part of a structured learning experience, the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
RANGE STATEMENT

- regulatory and legislative requirements pertaining to plasterboard
- relevant Australian standards
- safe work procedures relating to plasterboard
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - traffic control
  - restricted access barriers
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- electrical equipment
- stationary and moving plant, equipment and materials.
RANGE STATEMENT

Quality requirements include relevant regulations, including:
- Australian standards
- Internal company quality policy and standards
- Manufacturer specifications
- Workplace operations and procedures.

Materials include:
- Beads
- Cement render
- Fibre cement sheets
- Finishing materials
- Plaster compounds
- Plasterboard
- Plasterglass sheets
- Water resistant plasterboard.

Environmental requirements include:
- Clean-up management
- Dust and noise
- Vibration
- Waste management.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- explain reasons for providing moisture protection
- protect the board from weather and moisture from slabs
- select and use appropriate storage methods
- operate from basic instruction without constant supervision
- execute work within agreed timeframes and standards
- interpret delivery documentation and work orders
- locate relevant materials
- explain warranty, guarantee and liability requirements for plastering work
- apply knowledge of industry products to identify:
  - warranty compliance issues that may arise from inappropriate storage
  - common faults in plasterboard and plaster products and problems that require reporting
- follow work instructions, operating procedures and inspection practices to:
  - prevent damage to goods, equipment or products
  - work effectively with, and minimise the risk of injury to self and other workers
  - modify work activities to cater for
EVIDENCE GUIDE

variations in work site procedures, contexts and environment

- identify and use appropriate behaviour for interactions with other workers, supervisors, clients and members of the public
- maintain workplace records in relation to materials, plant and equipment use
- use safe handling requirements, based on information provided for equipment, products and materials.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- work site
- materials
- plasterboard.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning
EVIDENCE GUIDE

Knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Functional area

Functional area
CPCCPB3026B Erect and maintain trestle and plank systems

Modification History
Minor editorial change in PC 1.6
Equivalent to CPCCPB3026A

Unit Descriptor
This unit of competency specifies the outcomes required to erect and monitor trestle and plank work platforms.

Application of the Unit
This unit supports the attainment of skills and knowledge to safely and efficiently erect, use and maintain plank and trestle systems on a construction site while working with others as a member of a team.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Plan and prepare.  

1.1 Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.

1.2 Safety (OHS) requirements are followed in accordance with safety plans and policies.

1.3 Signage and barricade requirements are identified and implemented.

1.4 Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.

1.5 Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.

1.6 Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.

1.7 Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.

2 Inspect work site.  

2.1 Type of trestle and plank system required is identified from work site and work instructions.

2.2 Work area is cleaned of rubbish or unnecessary materials.

2.3 Risks to other workers, power supply and other services are assessed.

2.4 Access to erected trestle and plank platform is planned.

2.5 Access of plaster products and tools from the plank is planned.
3 Erect trestle and plank system.  

3.1 Trestle and plank system is selected to meet the Australian standard AS6001-1999 and work requirements.

3.2 Trestle system components are collected and located at work site.

3.3 Trestles and planks are inspected for serviceability as determined by the Australian standards.

3.4 Trestles are appropriately positioned for the work and the planks to be used.

3.5 Planks are fitted to the trestles at the required height using authorised procedures and within work site or regulatory restrictions.

4 Inspect system.  

4.1 Trestle and plank work platform is inspected before and during use.

4.2 Faults found are reported to supervisor and rectifications are conducted or system is labelled to prevent use pending repair.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - evaluate own actions and make judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- identifying faults in operation of equipment
- identifying potential for health and safety risks from workplace information and labels
- identifying the purpose of tags and logs of use for equipment
- job safety analysis (JSA) and safe work method statements
- manufacturer and supplier instructions for plant and equipment
- names and functions of equipment, components and materials
- requirements to plan own work
- safely use equipment, shift and handle products and materials.

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify situations where the use of trestle and plank system is appropriate
- explain benefits of one trestle and plank system compared to another
- select and use appropriate trestles, planks and work methods
- operate from basic instruction without constant supervision
- identify faults in trestles and planks
- execute work within agreed timeframes and standards
- interpret manufacturers’ documentation
- apply knowledge of industry products to identify:
  - trestle and plank systems that meet the Australian standard
  - common faults in trestle and plank systems and problems that require reporting
- follow work instructions, operating procedures and inspection practices to:
- prevent damage to goods, equipment or products
- work effectively alone or with others and minimise the risk of injury
- modify work activities to cater for variations in work site procedures, contexts and environment
- identify and use appropriate behaviour for interactions with other workers, supervisors, clients and members of the public
- maintain workplace records in relation to materials, plant and equipment use
- use safe handling requirements, based on information provided for equipment, products and materials.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- work site
- trestles
- planks.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to
confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Guidance information for assessment**

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and
numeracy capacity of the candidate in relation to the competency being assessed.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** includes:

CPCPB3027A Install ceiling insulation

Modification History
Not Applicable

Unit Descriptor

This unit of competency specifies the outcomes required to install ceiling insulation to comply with safety requirements as well as environmental requirements for energy efficiency ratings in accordance with sustainable building practices. It includes identifying and complying with applicable legislative requirements, planning and preparing for work, installing ceiling insulation, and completing installation and post-work clean-up activities.

This unit may be an essential requirement for registration to install ceiling insulation. Registration requirements may vary in different states and territories.

At the time of endorsement, this unit meets the regulatory requirements of the Government's Energy Efficient Homes Package.

Application of the Unit

This unit supports those individuals who safely and efficiently install ceiling insulation while working with others as members of a team.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify legislative, regulatory, and organisational requirements. | 1.1. **Safety** and applicable *legislative requirements* are identified and complied with.  
1.2. Organisational environmental and safety plans and policies are identified and complied with according to *organisational requirements*.  
1.3. **Safe work methods and practices** are identified and applied according to organisational safety plans and policies.  
1.4. *Environmental requirements* are identified and applied according to organisational environmental plans and regulatory requirements.  
1.5. **Emergency response and evacuation procedures** are identified and carried out when required. |
| 2. Plan and prepare for installing insulation. | 2.1. **Work instructions** and relevant *information* are obtained and confirmed for *planning and preparation* purposes.  
2.2. Risk assessment is undertaken to identify existing risks and *hazards* in the work area, including *electrical risks and hazards*.  
2.3. Identified risks are documented and *appropriate response* is undertaken according to safety requirements.  
2.4. **Ceiling insulating material and insulation requirements** are confirmed in accordance with work specifications.  
2.5. Appropriate *personal protective equipment* (PPE) and clothing are identified, correctly fitted, and used according to organisational policies and procedures.  
2.6. **Tools and equipment** are selected appropriate to the requirements of the work, confirmed for serviceability, and reported for repair or replacement where not serviceable.  
2.7. **Associated material** is determined and organised ready for use according to *quality requirements* and work plans and specifications. |
| 3. Install ceiling insulation. | 3.1. Insulation material is accurately measured to minimise waste.  
3.2. Insulation is *installed* using approved processes and handling techniques according to manufacturer specifications and relevant *electrical and building regulations*. |
ELEMENT  

PERFORMANCE CRITERIA

3.3. Dust-suppression procedures are used to minimise health risk in work area to self and others.

3.4. Insulation is installed safely without damage or distortion of the surrounding environment, electrical and other services and in a manner that maximises safety of self and others.

3.5. Variations and difficulties affecting performance or quality requirements of own work are identified and reported.

4. Complete installation.

4.1. Final inspections are conducted to ensure installed ceiling insulation conforms to job and manufacturer specifications.

4.2. Notification of work completion is made to designated personnel according to organisational procedures.

4.3. Work area is cleaned and materials are disposed of, reused or recycled according to organisational, safety and environmental requirements.

4.4. Tools and equipment are cleaned, checked, maintained and stored according to manufacturer specifications and organisational procedures.

4.5. Malfunctions, faults, wear or damage to tools, equipment and site are accurately documented and reported for repair or replacement according to organisational procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- self-management skills to:
  - adjust work activity to maintain quality standards
  - evaluate own actions and make judgments about performance and necessary improvements

- communication skills to:
  - communicate clearly and directly, using questioning to identify and confirm requirements
REQUIRED SKILLS AND KNOWLEDGE

- follow instructions
- listen and understand
- share information
- use and interpret non-verbal communication, such as hand signals
- use language and concepts appropriate to cultural differences
- literacy skills to:
  - read and interpret:
    - company procedures
    - documentation from a variety of sources
    - drawings and specifications
    - material safety data sheets (MSDS), job safety analyses (JSA), safe work method statements, and risk assessments
  - recognise and interpret work-related signs, such as safety logos and warnings
  - report faults, safety risks and hazards
  - record results of checks and tests and relevant work-completion procedures
- numeracy skills to calculate insulation material quantities
- identify and report to designated personnel any faults in tools, equipment or materials
- identify faults in insulation materials
- organisational skills to:
  - identify and document wiring that is likely to be adversely affected by the retrospective installation of thermal insulation
  - identify and document hazards, including electrical
  - plan, prioritise and set out work
- problem-solving skills to:
  - respond to change
  - address safety concerns and seek specialist advice where required
- teamwork skills to:
  - relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - work with others to action tasks
- technological skills to:
  - use a range of mobile technology, such as two-way radios and mobile phones
  - voice and hand signals to access and understand site-specific instructions

Required knowledge

- appropriate PPE and its use to reduce injury and electric shock
- ceiling insulation material types and quality requirements
- common health and safety risks associated with handling ceiling insulation
- common workplace safety hazards and risks, and procedures for reporting these to
REQUIRED SKILLS AND KNOWLEDGE

designated personnel
- emergency response and evacuation procedures
- environmental requirements, including waste management and recycling
- hierarchy of hazard control
- legislation, regulation and building codes related to ceiling insulation
- MSDS, JSA and safe work method statements
- methods for calculating insulation material quantities
- organisational requirements and procedures relating to ceiling insulation installation, including requirements for a systematic approach to planning own work
- procedures to safely use equipment, shift and handle products and materials, and work at heights and in enclosed areas
- product and process knowledge to identify problems and predict consequences
- relationships of 'R' rating with Building Code of Australia (BCA) and Australian standards' requirements and energy ratings
- tools and equipment prohibited for use near identified asbestos-containing materials (ACM)
- type and purpose of tags and logs of use for equipment
- types, characteristics, uses and limitations of installation tools and equipment
- types, possible location and risks of ACM, including serpentine and amphibole groups, and their use on common building materials
- reason for the operating temperature limit of electrical cables
- effect on cables partially surrounded by thermal insulation and fully surrounded by thermal insulation
- common wiring systems used in domestic premises indicating the age of the installation
- wiring not likely to be adversely affected by the retrospective installation of thermal insulation; note: the following conditions shall apply:
  1. cables are thermoplastic sheathed (white), and
  2. cables are in continuous contact with a surface (e.g. laying on ceiling lining, fixed to structural members) or in a position where they cannot be partially or fully surrounded by thermal insulation
- clearance of thermal insulation from recessed downlights and ancillary equipment in accordance with AS/NZS 3000:2007 Clause 4.5.2.3; note:
  1. Clause 4.5.2.3 in part states:
    • recessed luminaires and their auxiliary equipment shall be installed in such a manner that necessary cooling air movement through or around the luminaire is not impaired by thermal insulation or other material
    • where thermal insulation is of a type that is not fixed in position (e.g. loose fill), a barrier or guard constructed of fire-resistant material shall be provided and secured in position to maintain the necessary clearance
  2. any barriers placed around recessed luminaires shall not be enclosed and allow the
REQUIRED SKILLS AND KNOWLEDGE

- heat from the luminaire to dissipate freely
- electrical hazards in roof spaces, including unenclosed connections, unenclosed conductors, damaged cable sheaths and exposed conductors
- risk assessment documentation and actions to take where:
  - wiring is of a type likely to be adversely affected by the installation of thermal insulation, and
  - electrical hazards are present
  - note: this requires the engagement of a licensed electrician through an electrical contractor to evaluate the suitability of the wiring for the retrospective installation of thermal insulation and to rectify electrical hazards
- hazards related to polystyrene, polyurethane and metallic foil; note:
  1. polystyrene and polyurethane have a detrimental effect on electrical insulation, reducing the effective safe service life of the cables and should not be used where there is a likelihood of contact with electrical cables
  2. metallic foil is electrically conductive, therefore appropriate tools, equipment and fixings must be selected

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified in this unit.

In particular the person should demonstrate the ability to:

- apply knowledge of industry products to identify:
  - common faults and problems
  - manufacturer specifications in relation to insulation properties of the available product
  - manufacturer components and materials
  - relationships of 'R' rating with BCA and Australian standards' requirements and energy ratings
- apply knowledge for the safe installation of thermal insulation in relation to electrical equipment, including:
EVIDENCE GUIDE

- effects of thermal insulation on cables
- wiring likely to be adversely affected by the retrospective installation of thermal insulation
- clearance of thermal insulation from recessed downlights and ancillary equipment
- complete a risk assessment sheet for each installation which documents:
  - whether the wiring system is compatible with thermal insulation
  - number of recess luminaires in ceiling and how the clearances are to be met
  - electrical hazards, and measures taken to eliminate them
- relevant work instructions
- communicate and work effectively and safely with others
- comply with organisational policies and procedures, including quality requirements
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- follow work instructions, operating procedures and inspection practices to:
  - maintain workplace records in relation to materials, plant and equipment use
  - modify work activities to cater for variations in workplace procedures, personnel, contexts and environment
  - prevent damage to the environment, equipment, products, or site
  - select and use appropriate PPE
  - work effectively alone or with others and operate with minimal supervision
  - select and use non-conductive and insulated tools and materials to minimise electrical hazards
  - locate, interpret and apply relevant information, standards and specifications
  - select and install ceiling insulation on at least two occasions within agreed timeframes and standards using safe handling methods for materials and equipment.

Context of and specific resources for

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment,
EVIDENCE GUIDE

assessment

provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

This unit is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- ceiling spaces
- materials and tools.

Assessment of this unit may be in conjunction with assessment of other units commonly performed at the same time in normal work roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and work roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a
EVIDENCE GUIDE

number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety requirements are to be in accordance with commonwealth, state and territory legislation and regulations, organisational safety plans and policies, and include:

- emergency procedures, including evacuation and provision of first aid
- hazard control procedures
- hazardous materials and substances
- electrical hazards
- PPE prescribed under legislation, regulations and workplace policies and practices
- reporting hazards, incidents, injuries, near misses and identified ACM
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - manual handling
RANGE STATEMENT

- concealed services, including water, power and gas
- lighting
- traffic control
- restricted access barriers
- trip hazards
- power sources and leads
- power tools, including cutting tools
- workplace visitors and the public
- working at heights
- working in enclosed areas
- working in proximity to others
- types of fire and use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements.

Commonwealth, state and territory legislative requirements include:

- Australian standards, including working at heights requirements:
  - AS 6001:1999 Working platforms for domestic application
  - AS 1576 Scaffolding
  - AS/NZS4576:1995 Guidelines for scaffolding
- conduct on-site operational assessment of electrical risk and implement control measures to prevent it
- construction industry OHS standards and guidelines
- duty of care
- health and safety representatives, committees and supervisors
- licences, tickets and certificates of competency
- National Code of Practice for Induction Training for Construction Work
- national safety standards
- OHS and welfare Acts and regulations
- safety codes of practice, and JSA and safe work method statements.

Organisational requirements relate to:

- access and equity policy, principles and practice
- client service standards
- defined resource parameters
- emergency and evacuation procedures
- employer and employee rights and responsibilities
- OHS policies, procedures and programs
- organisational goals, objectives, plans, systems and
RANGE STATEMENT

processes

- organisational policies and procedures, including personnel practices and guidelines
- own role and responsibility
- quality and continuous improvement processes and standards.

Safe work methods and practices relate to:

- access to site amenities, such as drinking water and toilets
- avoiding unnecessary risks
- awareness of existing and potential hazards
- day to day observation of OHS policies and procedures
- general requirements for safe use of plant, tools and equipment
- general requirements for use of PPE and clothing
- housekeeping to ensure a clean, tidy and safe work area
- no drugs and alcohol at work
- preventing bullying and harassment
- risk assessment
- smoking in designated areas
- storage and removal of debris
- use of plant and equipment guards.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management and recycling.

Emergency response and evacuation procedures include:

- emergencies, such as fire, toxic and/or flammable vapours emission, vehicle/mobile plant accident, structural collapse, chemical spill and injury to personnel, including electric shock
- evacuation
- extinguishing fires
- first aid.

Work instructions may include:

- completion dates
- work requirements and tasks
- procedures for installing insulation in relation to electrical equipment
- electrical isolation and tagging of work area
- site access information
- risk assessment documentation
- safety measures for electrical hazards
- specific client and site requirements
RANGE STATEMENT

- work schedules.
- diagrams or sketches
- drawings, plans and specifications
- instructions issued by authorised organisational or external personnel
- log books
- manufacturer specifications and instructions
- MSDS
- memos
- regulatory and legislative requirements pertaining to installing ceiling insulation
- relevant Australian standards
- safe work procedures relating to installing ceiling insulation
- signage
- suppliers’ information
- verbal and written instructions, including diagrams
- work bulletins.

Planning and preparation relate to:

- assessing conditions and hazards
- determining work requirements and safety plans and policies
- identifying equipment defects
- inspecting workplaces.

Hazards may include:

- asbestos dust and fibres
- asbestos containing materials
- enclosed areas (e.g. heat stress)
- dust from fibreglass and other insulation materials
- electrical hazards
- inability of ceiling structure to support additional weight of insulation materials and installers
- manual handling hazards (e.g. knee and back injury)
- noise, plant and equipment hazards
- slips, trips and falls
- synthetic mineral fibres
- working at heights.

Electrical risks and hazards include:

- unenclosed connections
- unenclosed conductors
- damaged cable sheaths
- exposed conductors
- wiring that is likely to be adversely affected by retrospective installation
RANGE STATEMENT

- not following specified clearances/insulation barriers around recessed luminaires
- not observing operating temperature limit of electrical cables
- wiring system age
- using polystyrene, polyurethane and metallic foil-based products.

Appropriate response may include:
- engaging a licensed electrician to evaluate suitability of wiring
- isolating and tagging work area
- seeking changes to work instructions
- deciding not to undertake work
- reporting to designated personnel
- following OHS legislative requirements.

Ceiling insulating material includes:
- batts and blankets:
  - glasswool
  - glasswool/rockwool - foil attached
  - polyester
  - rockwool
  - sheep's wool
- boards:
  - expanded polystyrene
  - expanded polystyrene - foil attached
  - extruded polystyrene (styrofoam)
- loose fills:
  - cellulose fibre
  - granulated rockwool
  - sheep's wool
- reflective:
  - foil batts
  - multi-layer reflective
  - roll-form reflective foil laminate (RFL).

Insulation requirements:
- as determined by BCA and Australian standards
  - AS/NZS 4859.1, AS 4200.1, AS 4200.2 (2006)
- include:
  - approved system radiative transfer (RT) calculations
  - downward R-values
  - upward R-values.

Personal protective
- aprons
RANGE STATEMENT

*equipment* includes:

- arm guards
- caps
- dust masks and respirators
- ear muffs and plugs
- gloves
- hard hats
- harnesses and ropes
- high visibility retro reflective vests
- jackets
- overalls
- safety glasses and goggles
- steel-capped boots
- UV protective clothing and sunscreen.

*Tools and equipment*:

- broad knives
- brooms
- caulking guns
- electric screw guns
- hammers
- hand saws
- keyhole saws
- ladders
- manual levelling devices
- measuring tapes and rules
- nail bags
- power drills
- power leads
- power saws
- spanners
- spirit levels
- T squares
- taping knives
- tin snips
- trestles
- trowels
- non-conductive and insulated tools
- may include:
  - air compressors and hoses
  - C clamps
RANGE STATEMENT

- docking saw and drop saws
- laser levelling devices
- masonry drills
- nail guns
- pop riveters
- saw stools
- scaffolding and planks.

Associated materials include:

- adhesive
- ceiling products
- downlight covers
- fibrous plaster
- jointing tape
- metal and aluminium type products
- nails
- non-conductive fixing devices
- plasterboard
- screws
- sealants
- staples
- steel safety mesh.

Quality requirements incorporate relevant regulations and include:

- Australian standards
- internal organisational quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Installation includes:

- employer-approved manual handling techniques
- manufacturer recommended methods and fasteners
- maintaining specified clearances from recessed luminaires
- installing thermal insulation barriers to luminaires and other electrical equipment according to manufacturer's recommendations and applicable standards, including AS/NZS3000:2007
- work sequences and fixing processes that minimise waste and maximise material.

Electrical and building regulations may include:

- BCA
- Australian standards such as:
  - AS 3999:1992 Thermal insulation of dwellings - Bulk insulation - Installation requirements
  - AS/NZS 4859.1:2002 Materials for the thermal insulation of buildings - Testing and labelling of
RANGE STATEMENT

- AS/NZS 4200 Pliable building membranes and underlays - reflective foils
- AS/NZS 4200.1 Part 1: Materials - reflective foils
- AS/NZS 4200.2 Part 2: Installation requirements - reflective foils
- AS 1366.1 Rigid cellular polyurethane (RC/PUR) - other insulations
- AS 1366.2 Rigid cellular polyisocyanurate (RC/PIR) - other insulations
- AS 1366.3 Rigid cellular polystyrene moulded (RC/PS-M) - other insulations
- AS 1366.4 Rigid cellular polystyrene - extruded (RC/PS)
- AS 4073 Urea-formaldehyde foam thermal insulation - In situ set foam BCA insulation levels - Other insulations.
- AS/NZS 3000:2007 (with Amd 1) Wiring Rules, in particular Clause 4.5.2.3.

Materials include:
- hazardous materials
- non-toxic materials.

Competency field

Competency field Plasterboard
CPCCPD2011A Handle painting and decorating materials

Modification History
Not Applicable

Unit Descriptor

Unit descriptor  This unit of competency specifies the outcomes required to handle, sort and store painting and decorating materials.

The unit includes planning and preparing for the work; identifying, handling and storing materials; and selecting and distributing appropriate housekeeping standards. Environmentally sustainable practices are required for waste disposal and equipment cleaning.

Application of the Unit

Application of the unit  This unit of competency supports the attainment of the understanding and skills to handle painting and decorating materials, which may include working with others and as a member of a team.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
**Elements and Performance Criteria**

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Tools and equipment are selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Materials quantity requirements are calculated in accordance with plans, specifications and *quality requirements*.  
1.6. *Environmental requirements* are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Identify, handle and store painting and decorating materials. | 2.1. *Materials and components* are identified and checked for conformity to material schedule, plans and specifications and *environmental characteristics*.  
2.2. Handling characteristics of *painting and decorating material* and components are identified and safe and effective handling techniques adopted.  
2.3. Storage locations are confirmed as satisfying fire safety, ventilation and product dispersal requirements.  
2.4. Materials are handled safely and effectively according to material safety data sheets (MSDS) and requirements of regulatory authorities. |
| 3. Identify, handle and store painting and decorating materials. | 3.1. Painting and decorating materials are sorted to suit material type and size, and stacked for ease of identification and retrieval.  
3.2. Painting and decorating material and components are *protected* against physical and water damage and stored clear of traffic ways. |
| 4. Select and distribute painting and decorating materials in preparation for use. | 4.1. Painting and decorating products, material and components are identified, selected from stack and safely handled and distributed to required job location.  
4.2. Storage/holding area at job location is checked to
ELEMENT  PERFORMANCE CRITERIA

ensure provision of adequate ventilation, fire safety and dispersal.

4.3. Painting and decorating materials are stored to best serve their subsequent use.

4.4. Work areas are prepared, including the removal of objects and the use of drop sheets to protect surrounding surfaces.

5. Clean up.

5.1. Hazardous material is identified for separate handling by authorised personnel.

5.2. Work area is cleared and material disposed of in a safe and effective manner in accordance with state and territory requirements.

5.3. Unused materials are sealed and stored/stacked in accordance with standard material handling practices.

5.4. Non-paint Waste materials and debris are removed and placed into job waste bins or rubbish stockpile in a safe and effective manner in accordance with environmental requirements.

5.5. Paint waste, water and solvents used in cleaning painting equipment are disposed of in an environmentally sustainable manner and in accordance with relevant legislative requirements.

5.6. Likelihood of spontaneous combustion is identified and suitable protective measures are applied.

5.7. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations, environmental sustainability requirements and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
REQUIRED SKILLS AND KNOWLEDGE

- determine requirements
- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- follow instructions
- read and interpret:
  - documentation from a variety of sources
  - drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- basic spontaneous combustion theory
- job safety analysis (JSA) and safe work method statements
- MSDS
- materials storage and environmentally sustainable waste management, including correct disposal of water-based, latex-based and solvent-based paints
- painting and decorating terminology
- processes for the calculation of material requirements
- quality requirements
- types, titles, packaging and storage requirements for commonly encountered painting and decorating materials
- Australian Paint Approval Scheme (APAS) classifications
- types of paints, including the characteristics and uses of paint materials with various volatile organic compound (VOCs) levels and alternative and natural paints
- solid waste and paint sludge disposal techniques and relevant legislation, including
REQUIRED SKILLS AND KNOWLEDGE

Environmental Protection Authority (EPA) and local Council regulations

- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- safely and effectively identify, handle, store and distribute painting and decorating materials, which are to include a range of coatings and two each of:
  - cleaning solvents
  - fillers
  - adhesives.
- dispose of all paint types in an environmentally sustainable way compliant with relevant local legislation and regulations
- clean and store painting equipment using environmentally sustainable methods and work practices including waste reticulation systems.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
**EVIDENCE GUIDE**

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role
EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
RANGE STATEMENT

- memos
- regulatory and legislative requirements pertaining to handling of painting and decorating materials
- relevant Australian standards
- safe work procedures relating to handling of painting and decorating materials
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including solvents, lead, chemicals, fumes/gases
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - electrical and fire and/or explosion from combustible materials
  - falling objects
  - lighting
  - manual handling
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
RANGE STATEMENT

- solvents, lead, chemicals, fumes/gases
- surrounding structures
- traffic control
- trip hazards
- work access platforms
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others, work site visitors and the public
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Quality requirements include:
- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Environmental requirements include:
- clean-up management
- dust and noise
- stormwater protection
- low odour and emissions
- waste management.

Materials and components:
- include:
  - cleaning solvents
  - coatings
  - fillers and adhesives
- may include wall and decorative covering materials.

Environmental characteristics can include but is not limited to:
- low odour and low-VOC (Volatile Organic Compound) paint
- no-VOC paint
- non-toxic paint
- alternative and natural paint and paint materials
- brushware
  - natural bristle
  - nylon
  - microcellular synthetic bristles
RANGE STATEMENT

**Painting and decorating material** include:
- water-based
- solvent-based
- two-pack
- textures.

**Protection** of stacked/stored materials includes:
- barricades
- covering
- lock away (for hazardous materials)
- signs.

**Waste materials and debris** includes:
- banding straps
- cardboard
- excess material
- packing pieces

**Paint waste, water and solvents** disposal includes:
- use of manual and machine environmentally sustainable cleaning methods
- cleaning water re-cycling or professional disposal
- solid waste disposal requirements

**Environmental sustainability requirements** include:
- correct paint storage to minimise waste
- recycling
- use and storage of volatile materials

</table>
### PERFORMANCE CRITERIA

4.4. Tools are safely located when not in immediate use.

5. Select plant and equipment.

5.1. Function and limitations of plant and equipment used in painting and decorating are identified.

5.2. **Plant and equipment** are selected consistent with hazard minimisation and needs of job.

5.3. Method of operation of plant and equipment is identified.

5.4. OHS requirements for operating and using plant and equipment are recognised and adhered to.

5.5. Plant and equipment are checked for safety and faults are rectified or reported.

6. Use plant and equipment.

6.1. Plant and equipment are safely and effectively used.

6.2. Plant and equipment are safely located when not in immediate use.

6.3. Plant and equipment are cleaned, maintained and stored after use.

7. Clean up.

7.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

7.2. Machinery, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
REQUIRED SKILLS AND KNOWLEDGE

- read and interpret:
  - documentation from a variety of sources
  - drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- painting and decorating industry terminology
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- types, characteristics, uses and limitations of painting and decorating hand tools and power tools
- types, characteristics, uses and limitations of painting and decorating plant items
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- use and maintain the mandatory tools listed in the range statement
- use and maintain at least two of the mechanical sanding equipment types listed in the range statement
- use, operate and maintain conventional and airless spray equipment.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
EVIDENCE GUIDE

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and
EVIDENCE GUIDE

separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to painting and decorating tools and equipment
- relevant Australian standards
- safe work procedures relating to the use of
RANGE STATEMENT

painting and decorating tools and equipment
  • signage
  • verbal, written and graphical instructions
  • work bulletins
  • work schedules, plans and specifications.
  • assessment of conditions and hazards
  • determination of work requirements and safety plans and policies
  • equipment defect identification
  • work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

  • emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
  • handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
  • hazard control
  • hazardous materials and substances
  • organisational first aid
  • PPE prescribed under legislation, regulations and workplace policies and practices
  • safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
    • earth leakage boxes
    • lighting
    • manual handling
    • noise, dust and ventilation
    • power cables, including overhead service trays, cables and conduits
    • power equipment, leads and sources
    • restricted access barriers
    • surrounding structures
    • traffic control
    • trip hazards
    • work site visitors and the public
    • working at heights
    • working in confined spaces
    • working in proximity to others
RANGE STATEMENT

- working with cutting edges
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Quality requirements** include:
- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

**Environmental requirements** include:
- clean-up management
- dust and noise
- stormwater protection
- waste management.

**Tools and equipment** include:
- brushware
- brushware accessories
- buckets
- covers
- drop sheets
- duster brushes
- filling knives and blades
- hammers
- hand sanders
- heat guns
- mechanical sanders, including:
  - belt
  - disc
  - orbital
  - random orbital
- nail punches
- paint pots and buckets
- paint stirrers
- putty knives
- roller accessories
- roller frames
- scrapers
- wire brushes.

**Plant and equipment** include:
- airless spray equipment
- conventional spray equipment (e.g. compressor)
RANGE STATEMENT

- water blasters.

- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- correct and safe procedures for removal and replacement of glass
- door and window furniture removal and replacement techniques
- glass cutting techniques
- job safety analysis (JSA) and safe work method statements
- materials storage and environmentally friendly waste management
- painting and decorating and basic carpentry terminology
- plans, drawings and specifications
- quality requirements
- safe handing techniques for glass
- types, uses and limitations of tools used in the removal and replacement of door and window furniture
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- remove and replace components ensuring surrounding areas and furniture components remain undamaged
- safely and effectively remove and replace a minimum of:
  - one door with an independent screen
  - furniture from two different door types
  - furniture from two different window types with at least one having independent screens
  - glazing from a timber door or window.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.
EVIDENCE GUIDE

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies

| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.  
1.8. Finishes to be applied to all surfaces are identified in accordance with job requirements, and application that complies with manufacturer specifications. |
| 2. Prepare new or uncoated surfaces for painting or clear finish. | 2.1. Suitability of surface for painting or clear finish application is determined in accordance with manufacturer recommendations and job specifications.  
2.2. Surface preparation method is correctly selected in accordance with the environment, finish and substrate requirements.  
2.3. Surface is prepared to manufacturer specifications in compliance with substrate requirements, specifications and relevant standards.  
2.4. Surface imperfections are stopped, filled and sanded to a smooth finish ready for painting in accordance with manufacturer recommendations and job specifications. |
| 3. Prepare previously coated surfaces for painting or clear finish. | 3.1. Condition and nature of existing substrate and surface material are determined and tested in accordance with relevant standards.  
3.2. Potential hazards are identified and correct |
## ELEMENT | PERFORMANCE CRITERIA
---|---
|  | procedures are used to reduce risks in accordance with manufacturer recommendations and job specifications.  
|  | 3.3. **Surface preparation method** is correctly selected in accordance with the environment, finish and substrate requirements.  
|  | 3.4. Surfaces are prepared by removing unwanted coatings and loose debris.  
|  | 3.5. Surface defects are repaired and imperfections stopped, filled and sanded to smooth finish ready for painting in accordance with manufacturer recommendations and job specifications.  

### 4. Remove wallpaper and prepare surface for painting.

|  | 4.1. Type, condition and nature of existing type of wallpaper are determined prior to removal.  
|  | 4.2. Surface preparation method is correctly selected in accordance with the environment, finish and substrate requirements.  
|  | 4.3. **Wallpaper is removed** using the most appropriate method.  
|  | 4.4. Surfaces are prepared for paint application by removing loose debris.  
|  | 4.5. Surface defects are repaired and imperfections stopped, filled and sanded to smooth finish ready for painting in accordance with manufacturer recommendations and job specifications.  

### 5. Clean up.

|  | 5.1. Waste and unwanted materials are removed and placed into job waste bins or rubbish stockpile in accordance with sound work practices and compliance with environmental requirements.  
|  | 5.2. Painting tools and equipment are cleaned with correct solutions and without damage, and are stored safely and effectively to manufacturer specifications.  
|  | 5.3. Unused materials are sealed and stored/stacked in accordance with standard material handling practices and techniques and company requirements.  
|  | 5.4. Work area is cleared and materials disposed of or recycled in a manner to avoid spontaneous combustion in accordance with legislation, regulations, codes of practice and job specification.
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - evaluating own actions and making judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
  - teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- corrosion processes and techniques for the protection of metals
- hazards associated with lead, asbestos, solvents, chemicals and dust
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- paint application testing procedures
REQUIRED SKILLS AND KNOWLEDGE

- painting and decorating terminology
- plans, drawings and specifications
- prevention and/or rectification procedures for surface coating defects
- procedures, products and techniques associated with preparation of surfaces
- procedures, products and techniques associated with removal of wallpaper
- processes for the calculation of material requirements
- properties and surface preparation requirements of new substrates
- quality requirements
- required protection for application of clear or stained finishes
- surface coating technology
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- prepare a minimum of four surfaces for painting to specification:
  - one being a new gyprock surface of a minimum 8 square metres and one new surface of a minimum of 1 square metre or 8 lineal metres
  - three being previously coated surfaces with one being an external timber surface, one an internal surface and one a metal or masonry surface
- remove wallpaper from a room, cubicle or equivalent and prepare the surface for painting.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role
EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
RANGE STATEMENT

- memos
- regulatory and legislative requirements pertaining to the preparation of surfaces for painting
- relevant Australian standards
- safe work procedures relating to the preparation of surfaces for painting
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - electrical and fire and/or explosion from combustible materials
  - falling objects
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - solvents, lead, asbestos, chemicals, fumes/gases, manual handling
RANGE STATEMENT

- surrounding structures
- traffic control
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:
- drop sheets
- duster brushes
- filling knives and blades
- hammers
- hand Sanders
- heat removal equipment
- mechanical Sanders
- nail punches
- putty knives
- scrapers
- water blasters
- wire brushes.

Quality requirements include:
- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Environmental requirements include:
- clean-up management
- dust and noise
- stormwater protection
- waste management.

Surface includes:
- horizontal or vertical
- inclined or curved
- internal or external
- timber, metal, masonry, concrete or plaster.

Existing substrate and surface may be contaminated with:
- dust
- films of grease
- mild chalking
- mild efflorescence
RANGE STATEMENT

- mould
- paint films that are:
  - blistering
  - flaking
  - peeling
  - cracking
- smoke damage.

*Tested* includes:
- adhesion test
- solvent test
- testing procedures to determine the presence of lead-based paints and asbestos.

*Surface preparation method* includes:
- chemical stripping
- grinding
- sanding
- scraping (mechanical and hand)
- use of heat guns
- washing down
- water blasting.

*Wallpaper removal methods* include:
- dry stripping
- soaking
- steam stripping.

Unit Descriptor

Unit descriptor
This unit of competency specifies the outcomes required to apply brushed or rolled paint coatings to different materials to form a protective and decorative painted finish.

The unit includes planning and preparation for the work, preparation of the work area, mixing of materials, application of paint, finishing of the surface and completion of clean-up activities.

Application of the Unit

Application of the unit
This unit of competency supports the attainment of the understanding and skills to apply paint by brush and roller, which may include working with others and as a member of a team.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant **information**, confirmed and applied for **planning and preparation** purposes.  
1.2. **Safety (OHS)** requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. **Tools and equipment** are selected to carry out tasks consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Materials quantity requirements are calculated in accordance with plans, specifications and **quality requirements**.  
1.6. **Materials** appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. **Environmental requirements** are identified for the project in accordance with environmental plans and regulatory obligations and applied.  
1.8. Work planning is undertaken in consideration of environmental factors such as light, weather and dust. |
| 2. Prepare work area and materials. | 2.1. If necessary, materials and **substrate surfaces** are prepared in accordance with manufacturer recommendations and relevant Australian standards.  
2.2. Surrounding surfaces not to be painted are protected by drop sheets, masking or removal of objects in accordance with manufacturer recommendations and job specifications.  
2.3. Where doors, windows and associated furniture are removed they are stacked, stored and protected correctly and safely.  
2.4. Job location is checked to ensure provision of adequate ventilation and precautions are taken to prevent fire and explosion in accordance with manufacturer recommendations and material safety data sheet (MSDS) data.  
2.5. Materials for specified paint finish are mixed to designed proportion and consistency in accordance with manufacturer recommendations and job |
ELEMENT | PERFORMANCE CRITERIA
--- | ---

2.6. **Paint** and colours are thoroughly stirred, using separate stirring sticks or other suitable proprietary devices.

2.7. Correct amounts of paint material are prepared to specified ratio and drying time in accordance with manufacturer recommendations and specifications.

3. **Apply paint with brush or roller.**

3.1. Brush, roller or brush/roller combination is selected for specified surface profile, size of area, type of paint and finish specified in accordance with manufacturer recommendations and job specifications.

3.2. **Paint is applied** to achieve required level of opacity, finish, texture and sheen in accordance with manufacturer recommendations and job specifications.

4. **Finish the application.**

4.1. Finished paint surface is cured using curing method in accordance with manufacturer recommendations and job specifications.

4.2. Finished paint surface is **tested** using testing procedures in accordance with manufacturer recommendations and job specifications.

4.3. Doors, windows and furniture removed for painting application are re-installed correctly and without damage to finished surfaces.

5. **Clean up.**

5.1. Painting tools and equipment are cleaned with correct solutions and without damage, and are stored safely and effectively to manufacturer specifications.

5.2. Unused materials are sealed and stored/stacked in accordance with standard material handling practices and techniques and company requirements.

5.3. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

5.4. Work area is cleared and materials disposed of or recycled in accordance with legislation, regulations, codes of practice and job specification.

---

**Required Skills and Knowledge**
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - evaluating own actions and making judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
  - teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- compatibility of preparatory materials and paint systems
- hazards associated with solvents, chemicals and dust
- job safety analysis (JSA) and safe work method statements
- materials storage and environmentally friendly waste management
- MSDS
- painting and decorating terminology
- plans, drawings and specifications
REQUIRED SKILLS AND KNOWLEDGE

- processes for the calculation of material requirements
- quality requirements
- responsibilities with regard to:
  - conservation areas
  - environmental requirements
  - heritage listed buildings
- surface coating technology, including specification of paint systems for interior and exterior painting projects to maximise durability, protection and aesthetic considerations
- testing techniques and support materials
- theoretical principles relating to adhesion and cohesion of paint
- theoretical principles relating to pigmentation and colouring agents, drying and curing processes and the role of solvents
- types, uses and limitations of commonly used brushes and rollers
- variances in work carried out within sectors of painting and decorating industry for:
  - new building (residential, commercial and high rise)
  - maintenance, renovation and refurbishment
  - restoration
  - conservation
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- apply paint by brush and roller (with finishes being to specification, including in terms of defects, thickness, colour, level of opacity, finish, texture and sheen), to a range of surfaces, including:
  - four different surface types
  - a minimum application of 6 square metres brushed or rolled
  - a timber panel door
  - a flush door
  - a timber window, including architrave and frame with moving parts (e.g. box frame, hopper and awning).

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements
EVIDENCE GUIDE

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
EVIDENCE GUIDE

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace.
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions,
RANGE STATEMENT

where specified
• MSDS
• memos
• regulatory and legislative requirements pertaining to the application of paint by brush and roller
• relevant Australian standards
• safe work procedures relating to the application of paint by brush and roller
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.
• assessment of conditions and hazards
• determination of work requirements and safety plans and policies
• equipment defect identification
• work site inspection.
• emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
• handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor

• hazardous materials and substances
• organisational first aid
• PPE prescribed under legislation, regulations and workplace policies and practices
• safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  • earth leakage boxes
  • falling objects
  • lighting
  • manual handling
  • power cables, including overhead service trays, cables and conduits
  • restricted access barriers
  • solvents, chemicals, fumes/gases

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
RANGE STATEMENT

- surrounding structures
- traffic control
- trip hazards
- work access platforms
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others, work site visitors and the public
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Tools and equipment:**

- include:
  - brushware
  - brushware accessories
  - drop sheets
  - paint pots and buckets
  - paint stirrers
  - roller frames
- may include:
  - duster brushes
  - filling knives and blades
  - hammers
  - hand sanders
  - heat and flame paint removal equipment
  - mechanical sanders
  - nail punches
  - putty knives
  - scrapers
  - wire brushes.

**Quality requirements** include:

- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

**Materials** include:

- adhesives
- cleaning solvents
- fillers.
RANGE STATEMENT

Environmental requirements include:
• clean-up management
• dust and noise
• stormwater protection
• waste management.

Surfaces to be painted include:
• horizontal or vertical
• inclined or curved
• internal or external
• timber, metal, masonry, concrete or plaster.

Paint coatings may be:
• solvent-based
• two-pack
• water repellent for timber
• water-based.

Paint products may be classified as:
• sealers
• primers
• sealer and undercoats
• undercoats and intermediate coats
• finish coats.

Paint applications:
• are to be in accordance with Australian standards unless this is replaced by other authorised job specifications.

Tests include:
• wet film thickness test.

correct application technique to achieve an even finish with opacity and sheen level in accordance with the job specification.

3.3. Defects in coating are identified and corrective action is taken to achieve the required finish in accordance with job specification.

4. Apply texture coat by spray.

4.1. Spray equipment is operated to standard operating procedures in accordance with manufacturer recommendations.

4.2. Texture coat paint is applied to surface using correct application technique to achieve an even finish with opacity and sheen level in accordance with the job specification.

4.3. Defects in coating are identified and corrective action taken to achieve the required paint finish in accordance with the job specification.

5. Clean up.

5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

5.2. *Paint waste, water and solvents* used in cleaning painting equipment are disposed of in an environmentally sustainable manner and in accordance with relevant legislative requirements.

5.3. Paint waste, water and solvents used in cleaning painting equipment are disposed of in an environmentally sustainable manner and in accordance with relevant legislative requirements.

5.4. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:
REQUIRED SKILLS AND KNOWLEDGE

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - evaluating own actions and making judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
  - teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- applicator system types, characteristics, uses and limitations
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally sustainable waste management, including correct disposal of water-based, latex-based and solvent-based paints
- painting and decorating terminology
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- Australian Paint Approval Scheme (APAS) classifications
- types of paints, including the characteristics and uses of paint materials with various volatile organic compound (VOCs) levels and alternative and natural paints
- solid waste and paint sludge disposal techniques and relevant legislation, including
REQUIRED SKILLS AND KNOWLEDGE

- Environmental Protection Authority (EPA) and local Council regulations
- Surface preparation techniques related to texture coatings
- Texture coat paint systems technology
- Texture coatings and their properties, uses and limitations
- Workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- prepare and apply to specification texture coat paints using brush and roller and either spray or one other applicator system, to a minimum of:
  - one complete wall a minimum of 5 square metre with 2 hard edges
  - one complete wall, ceiling to floor including an internal corner (e.g. wall junction and ceiling/wall junction)
  - one complete window reveal
- dispose of all paint types in an environmentally sustainable way compliant with relevant local legislation and regulations
- clean and store painting equipment using environmentally sustainable methods and work practices including waste reticulation
EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and
EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
RANGE STATEMENT

- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the application of texture coat paint
- relevant Australian standards
- safe work procedures relating to the application of texture coat paint
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - electrical and fire and/or explosion from combustible materials
  - falling objects
  - lighting
  - manual handling
RANGE STATEMENT

- power cables, including overhead service trays, cables and conduits
- restricted access barriers
- solvents, lead, chemicals, fumes/gases
- surrounding structures
- traffic control
- trip hazards
- work access platforms
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others, work site visitors and the public
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment:

- include:
  - brooms
  - brushes
  - mixers
  - roller equipment
  - sprays
  - vacuum cleaners
- may include:
  - compressors
  - hopper guns
  - hoses and fittings
  - mobile scaffold
  - stepladders
  - trestles and planks.

Quality requirements include:

- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- sedimentation control
RANGE STATEMENT

- low odour and emissions
- vibration
- waste management.

Application processes:
- is to conform with AS2311 The Painting of Buildings.

Application of texture coat paint:
- is to be by:
  - brush
  - roller
- may be by:
  - spray
  - other application system.

Texture coat paint finishes:
- include high-build (acrylic or styrene/acrylic) coatings
- may include proprietary products or lines.

Surface for application of textured paint finishes includes:
- brick and masonry
- fibrous cement sheeting
- off-form concrete
- paper-faced plasterboard
- tilt-up concrete slabs.

Paint waste, water and solvents disposal includes:
- use of manual and machine environmentally sustainable cleaning methods
- cleaning water re-cycling or professional disposal
- solid waste disposal requirements

Unit Descriptor
Unit descriptor
This unit of competency specifies the outcomes required to apply paint by spray onto different surfaces to form a protective paint finish.

The unit includes planning and preparation for the work, preparation of materials and application area, setting up and testing of the spray equipment, application of paint and completion of clean-up activities.

Application of the Unit
Application of the unit
This unit of competency supports the attainment of the understanding and skills to apply paint by spray, which may include working with others and as a member of a team.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Plant, *tools and equipment* selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Materials quantity requirements are calculated in accordance with plans, specifications and *quality requirements*.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Prepare materials and application area. | 2.1. Area is set up for application processes to suit spray system being used.  
2.2. Adjoining surfaces to application area are protected by masking off or covering prior to application of spray paint.  
2.3. Adequate ventilation to application area is provided to maintain a safe environment.  
2.4. Measures are taken to ensure application area remains free of dust and foreign matter.  
2.5. *Paint* is mixed and viscosity adjusted to allow for application process for spray paint finishing materials, in accordance with equipment and manufacturer requirements and plans and specification. |
| 3. Set up and test spray equipment. | 3.1. *Spray equipment, accessories and lines* for selected *spray system* are identified, selected and set up in the operating location in accordance with manufacturer recommendations, plans and specification.  
3.2. Fittings are checked for function and security prior to use in accordance with manufacturer recommendations. |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
4. Apply paint using the spray system. | 3.3. Safety devices are identified and tested, and defects corrected in accordance with standard operational and manufacturer requirements.

4.1. Spray equipment is operated to standard operating procedures in accordance with manufacturer recommendations.

4.2. Paint is applied to surface using correct application technique to achieve an even finish with opacity and sheen level in accordance with job specification.

4.3. Defects in coating are identified and corrective action is taken to achieve required spray paint finish in accordance with the job specification.

5. Clean up and store equipment. | 5.1. Spray gun and associated components and equipment are dismantled, checked, cleaned and maintained in accordance with manufacturer recommendations and operator’s manual.

5.2. Spray paint materials and solvents are stored safely to manufacturer specifications and company procedures.

5.3. *Paint waste, water and solvents* used in cleaning painting equipment are disposed of in an environmentally sustainable manner and in accordance with relevant legislative requirements.

5.4. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
REQUIRED SKILLS AND KNOWLEDGE

- follow instructions
- read and interpret:
  - documentation from a variety of sources
  - drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- Australian Paint Approval Scheme (APAS) classifications
- compatibility of surface coating to substrates
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally sustainable waste management, including correct disposal of water-based, latex-based and solvent-based paints
- paint types, their uses and limitations
- painting and decorating terminology
- plans, drawings and specifications
- preparatory materials relevant to spray operations
- processes for the calculation of material requirements
- quality requirements
- rules, regulations, Australian standards and codes of practice of spray painting
- solid waste and paint sludge disposal techniques and relevant legislation, including Environmental Protection Authority (EPA) and local Council regulations
- spray equipment types, characteristics, uses and limitations
REQUIRED SKILLS AND KNOWLEDGE
- techniques for the application of paint by spray
- types of paints, including the characteristics and uses of paint materials with various volatile organic compound (VOCs) levels and alternative and natural paints
- workplace and equipment safety requirements including respiratory protection.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment
This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
A person who demonstrates competency in this unit must be able to provide evidence of the ability to:
- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- apply by spray to specification the following (with finishes being to specification, including in terms of defects, thickness, sheen, opacity, colour and sharpness):
  - one acrylic and one alkyd or solvent paint system to at least 6 square metres
  - airless applicant of acrylic paint
EVIDENCE GUIDE

- HVLP
- application to a door of at least 2 square metres
- dispose of all paint types in an environmentally sustainable way compliant with relevant local legislation and regulations
- clean and store painting equipment using environmentally sustainable methods and work dispose of all paint types in an environmentally sustainable way compliant with relevant local legislation and regulations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services
EVIDENCE GUIDE

Training Package

- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to applying paint by spray
- relevant Australian standards
- safe work procedures relating to undertaking a applying paint by spray
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
RANGE STATEMENT

- earth leakage boxes
- electrical and fire and/or explosion from combustible materials
- falling objects
- lighting
- manual handling
- power cables, including overhead service trays, cables and conduits
- restricted access barriers
- solvents, lead, chemicals, fumes/gases
- surrounding structures
- traffic control
- trip hazards
- work access platforms
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others, work site visitors and the public
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- brushes
- drop sheets
- masking equipment
- respirators
- Sanders
- scaffold, including:
  - planks
  - trestles
  - stepladders
  - aluminium mobile
- spray equipment
- vacuum cleaners.

Quality requirements include:

- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
RANGE STATEMENT

Environmental requirements include:
- workplace operations and procedures.
- clean-up management
- dust and noise
- low odour and emissions
- stormwater protection
- waste management.

Paint coatings may include:
- solvent-based (alkyd, urethane, urethane/alkyd, urethane oil or modified alkyd resins)
- two pack
- water based
- water repellents for timber
- low odour and low-VOC (Volatile Organic Compound) paint
- no-VOC paint
- non-toxic paint
- alternative and natural paint and paint materials.

Spray equipment, accessories and lines include:
- compressors
- diaphragm
- hoses
- piston airless spray unit (electrical, pneumatic and petrol)
- regulators
- spray guns
- spray tips and filters.

Spray systems:
- include:
  - airless spray units
  - conventional spray units
  - high volume, low pressure (HVLP) spray applications
- may include electrostatic spray applications.

Paint waste, water and solvents disposal includes:
- use of manual and machine environmentally sustainable cleaning methods
- cleaning water re-cycling or professional disposal
- solid waste disposal requirements

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. *Tools and equipment* are selected to carry out tasks consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Materials quantity requirements are calculated in accordance with plans, specifications and *quality requirements*.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Match paint colour to specified sample. | 2.1. Base colour is identified from analysis of sample.  
2.2. *Paint* type, tint base and sheen level of *sample* are established in accordance with manufacturer recommendations and specifications.  
2.3. Colorants are selected as suitable for colour match.  
2.4. Colour is mixed and matched against sample and allowed to dry to establish accuracy of colour match.  
2.5. Full quantity of paint is mixed and colour match is retested prior to application in accordance with specifications. |
| 3. Clean up. | 3.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.  
3.2. Machinery, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - evaluating own actions and making judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
  - teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- colour principles related to monochromatic, complementary, split complementary, analogous and triadic colours
- colour theory related to primary, secondary, tertiary and intermediate colours
- colours used in heritage painting or restoration
- effect, over time, of light on colours
- factors that affect the apparent colour of paint, including:
REQUIRED SKILLS AND KNOWLEDGE

- age and deterioration of painted sample if in situ
- colour and opacity of the paint
- colour considerations regarding durability of colours in exterior locations
- colour of drapes and other furnishings
- colour of surface covered by paint
- gloss level and paint type
- lighting conditions
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- painting and decorating terminology
- plans, drawings and specifications
- presentation of paint formulas
- processes for the calculation of material requirements
- quality requirements
- use of the colour wheel
- workplace and equipment safety requirements.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- colour match a minimum of two solvent-based and two latex/ acrylic paints to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying
EVIDENCE GUIDE

- safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the colour matching of paint
- relevant Australian standards
- safe work procedures relating to the colour matching of paint
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
RANGE STATEMENT

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid

  - working in proximity to others, work site visitors and the public
  - use of firefighting equipment
  - use of tools and equipment

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
RANGE STATEMENT

- workplace environmental requirements and safety.

Tools and equipment:
- include:
  - colorant dispenser
  - mixing receptacles
  - paintbrushes
  - stirring implements
  - may include mechanical paint mixers (shakers).

Quality requirements include:
- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Environmental requirements include:
- clean-up management
- dust and noise
- stormwater protection
- waste management.

Paints to be matched include:
- latex/acrylics
- solvent-based.

Sample includes:
- fan decks
- in situ previously painted unit or area
- paint manufacturers' colour card.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Tools and equipment selected to carry out tasks, including work platforms where required are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.  
1.8. Stain colour to be applied is matched to previously treated timber or associated area or item. |
| 2. Prepare materials and application area. | 2.1. Area is set up for application processes to suit application system being used.  
2.2. Adjoining surfaces to application area are protected by masking off or covering, prior to application of stains and finishes.  
2.3. Adequate ventilation to application area is provided to maintain a safe environment.  
2.4. Measures are taken to ensure application area remains free of dust and foreign matter.  
2.5. Existing stained or finished surfaces for application are stripped using appropriate techniques. |
| 3. Stain bare timber surface. | 3.1. Stain is selected for type of timber allowing for aesthetics and durability in accordance with manufacturer recommendations and job specifications.  
3.2. Stain is prepared to proportions and consistency in accordance with manufacturer recommendations and job specification. |
### ELEMENT PERFORMANCE CRITERIA

| 3.3. | Application method for the specified *surface*, area size and type of finish is selected in accordance with manufacturer recommendations and job specifications. |
| 3.4. | Stain is applied to bare timber surface to specifications and manufacturers’ instructions. |
| 3.5. | Wood filler and putty are selected, mixed, colour matched and applied to timber in accordance with job specifications. |

4. Apply clear finishes.

| 4.1. | Coats of selected clear *finish* are applied to achieve required level of opacity, finish and sheen in accordance with manufacturer recommendations and job specifications. |
| 4.2. | Drying time is allowed between coats in accordance with manufacturer recommendations and job specifications. |
| 4.3. | Clear finish surfaces are cured in accordance with manufacturer recommendations and job specifications. |

5. Clean up.

| 5.1. | Unused materials are sealed and stored/stacked in accordance with standard material handling practices and techniques and company requirements. |
| 5.2. | Painting tools and equipment are cleaned with correct solutions and without damage, and stored safely and effectively to manufacturer specifications. |
| 5.3. | *Paint waste, water and solvents* used in cleaning painting equipment are disposed of in an environmentally sustainable manner and in accordance with relevant legislative requirements. |
| 5.4. | Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification. |

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**
REQUIRED SKILLS AND KNOWLEDGE

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - evaluating own actions and making judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
  - teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- Australian Paint Approval Scheme (APAS) classifications
- basic softwood and hardwood timber technology
  - conservation
  - conservation areas
- hazards associated with solvents, chemicals and dust
  - heritage listed buildings
- job safety analysis (JSA) and safe work method statements
  - maintenance, renovation and refurbishment
- material safety data sheets (MSDS)
- materials storage and environmentally sustainable waste management, including
REQUIRED SKILLS AND KNOWLEDGE

- correct disposal of water-based, latex-based and solvent-based paints and finishes
- new building (residential, commercial and high rise)
- painting and decorating terminology
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- responsibilities with regard to:
  - restoration
- solid waste and paint sludge disposal techniques and relevant legislation, including Environmental Protection Authority (EPA) and local Council regulations
- surface preparation techniques for clear wood finishing
- testing techniques and support materials
- theoretical principles relating to pigmentation and colouring agents, drying and curing processes and the role of solvents
- types of paints, including the characteristics and uses of paint materials with various volatile organic compound (VOCs) levels and alternative and natural paints
- types, properties, uses and limitations of clear timber finishes and timber stains
- types, uses and limitations of commonly used brushes, rollers and other applicators
- variances in work carried out within sectors of painting and decorating industry for:
- workplace and equipment safety requirements.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- apply stains and clear timber finishes (with finishes being to specification, including in terms of defects, colour, level of opacity, finish and sheen) which is at a minimum to cover:
  - one oil-based stain product
  - one water and spirit-based timber stain
  - one water-based clear finish
  - one oil-based clear finish
  - grain filler applications
  - putty applications.
- apply at least one stain and one clear finish to two previously treated timber surfaces with each stain and clear finish application to be not less than 2 square metres or two linear metres in each case.
EVIDENCE GUIDE

- dispose of all paint and finishes in an environmentally sustainable way compliant with relevant local legislation and regulations
- clean and store painting equipment using environmentally sustainable methods and work practices including waste reticulation systems.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and
EVIDENCE GUIDE

Correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised...
RANGE STATEMENT

w wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

*Information* includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the application of stains and clear timber finishes
- relevant Australian standards
- safe work procedures relating to the application of stains and clear timber finishes
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

*Planning and preparation* include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

*Safety (OHS)* is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
RANGE STATEMENT

- electrical and fire and/or explosion from combustible materials
- falling objects
- lighting
- manual handling
- power cables, including overhead service trays, cables and conduits
- restricted access barriers
- solvents, lead, chemicals, fumes/gases
- surrounding structures
- traffic control
- trip hazards
- work access platforms
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others, work site visitors and the public
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- brushware
- brushware accessories
- buckets
- drop sheets
- duster brushes
- filling knives and blades
- hammers
- hand sanders
- heat guns
- mechanical sanders
- nail punches
- paint pots and buckets
- paint stirrers
- putty knives
- roller accessories
- roller frames
- scrapers
- spray equipment.
RANGE STATEMENT

Work platforms include:
- stepladders
- trestles
- planks.

Quality requirements include:
- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Materials:
- grain fillers (water, spirit or oil)
- putty
- single pack clear finish
- timber stains (water, spirit, oil or slightly pigmented varnish/polyurethane)
- may include:
  - acrylic clear and two pack epoxy clear,
  - shellac, tinting agents and waxes
  - clear finishes for timber, including lacquers and two pack polyurethane.

Environmental requirements include:
- clean-up management
- dust and noise
- low odour and emissions
- stormwater protection
- waste management.

Application methods:
- brush
- paint pad (sponge)
- rag
- roller
- may include spray.

Application:
- is to be in accordance with the relevant Australian standard unless this is replaced by other authorised job specifications.

Surfaces to be finished/pre-finished:
- curved
- horizontal
- inclined
- vertical
- may be all common profiles encompassing:
RANGE STATEMENT

- building boards, including particle board
- doors
- floors
- in sound or unsound conditions
- medium density fibreboard (MDF)
- natural timber products
- panelling
- ply
- previously coated/treated timber surface
- stairs.

Finish includes:

- flat
- full gloss
- satin
- semi-gloss.

Paint waste, water and solvents disposal includes:

- use of manual and machine environmentally sustainable cleaning methods
- cleaning water re-cycling or professional disposal
- solid waste disposal requirements

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
REQUIRED SKILLS AND KNOWLEDGE

- use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- common wallpapering defects
- compatibility of preparatory materials and wallpaper
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- painting and decorating terminology
- plans, drawings and specifications
- procedures used to apply straight pattern match, drop pattern match and random match wallpapers
- processes for the calculation of material requirements
- responsibilities with regard to:
  - conservation areas
  - heritage listed buildings
- quality requirements
- surface preparation techniques for the application of wallpaper
- types and properties of wall coverings and their suitability to various substrates
- types, uses and limitations of commonly used adhesives
- wallpaper hanging processes and techniques
- wallpapering tools and equipment, their uses and limitations
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- apply wallpaper to specification for a minimum of 6 square metres on a minimum of three jobs, covering:
  - lining paper, vinyl wallpaper and unpasted wallpaper
  - walls and internal and external corners, reveal, window and arch
  - walls containing power points and switches.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory
EVIDENCE GUIDE

or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured
EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the application of wallpaper
RANGE STATEMENT

- relevant Australian standards
- safe work procedures relating to the application of wallpaper
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - electrical and fire and/or explosion from combustible materials
  - falling objects
  - lighting
  - manual handling
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers

RANGE STATEMENT

- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others, work site visitors and the public
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Tools and equipment** include:
- applicators
- broad knives
- filling blades
- lay brushes
- plumb bobs and string lines
- rubber rollers
- scissors
- scrapers
- seam rollers
- smoothing blocks
- spirit levels
- sponges
- steam strippers
- tape measures
- trimming knives and cutters.

**Work platforms** include:
- mobile scaffold
- planks
- stepladders
- trestles.

**Quality requirements** include:
- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

**Environmental requirements** include:
- clean-up management
- dust and noise
- stormwater protection
- waste management.

**Adhesives** include:
- cellulose
- latex
- polyvinyl alcohol (PVA)
RANGE STATEMENT

Wallpaper includes:
- starch
- other special adhesive blends.

Wallpaper applications include those to walls which may be:
- constructed of set plaster
- curved
- fibre cement products
- fibrous plaster
- flat
- medium density fibre board
- plasterboard.

4.2. Scumble glaze is applied to prepared ground and desired broken colour effect is produced to match sample in accordance with manufacturer specifications and/or job specifications.

4.3. Clear coating is applied to achieve an even finish to specified sheen level in accordance with manufacturer specifications and/or job specifications.

6.2. Paint materials, applicators and brushware are identified and selected in accordance with suitability of use for lining application and job specifications.

6.3. Specified application techniques are applied to produce designed lining work effects and finish in accordance with manufacturer specifications and/or job specifications.

7.2. Specified transfer method is used and design is cut accurately using a 'register' mark.

7.3. Initial stencil is placed and taped to designed location and paint is applied to produce colour to specifications.

8.2. A range of traditional and modern special finishes are applied to produce specified effects and finish in accordance with manufacturer specifications and/or job specifications.

9.2. Waste and unwanted materials are removed and placed into job waste bins or rubbish stockpile in a safe and effective manner in accordance with sound work practices compliant with environmental
ELEMENT | PERFORMANCE CRITERIA
--- | ---

9.3. Unused materials are sealed and stored/stacked in accordance with standard material handling practices and techniques and company requirements.

9.4. *Paint waste, water and solvents* used in cleaning painting equipment are disposed of in an environmentally sustainable manner and in accordance with relevant legislative requirements.

9.5. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

9.6. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer specifications and/or standard work practices.

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - evaluating own actions and making judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
REQUIRED SKILLS AND KNOWLEDGE

- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- Australian Paint Approval Scheme (APAS) classifications
- colour fleck materials and application techniques
- compatibility of surface coatings to substrates
- decorative painted finishes technology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally sustainable waste management, including correct disposal of water-based, latex-based and solvent-based paints
- painting and decorating terminology
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- solid waste and paint sludge disposal techniques and relevant legislation, including Environmental Protection Authority (EPA) and local Council regulations
- types of paints, including the characteristics and uses of paint materials with various volatile organic compound (VOCs) levels and alternative and natural paints
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- complete to specification, the following decorative finishes:
  - a mirror finish to a minimum of a door or standard panel
  - a minimum of two broken colour effects on walls or standard panel size surfaces
  - use of lining within a decorative finish
  - a minimum of two (one traditional and one modern) special effects including imitation marbling, imitation wood graining and basic gilding
  - dispose of all paint types in an environmentally sustainable way compliant with relevant local legislation and regulations
  - clean and store painting equipment using environmentally sustainable methods and
EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able
EVIDENCE GUIDE

to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.
RANGE STATEMENT

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the application of decorative paint finishes
- relevant Australian standards
- safe work procedures relating to the application of decorative paint finishes
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - electrical and fire and/or explosion from combustible materials
  - falling objects
  - lighting
RANGE STATEMENT

- manual handling
- power cables, including overhead service trays, cables and conduits
- restricted access barriers
- solvents, lead, chemicals, fumes/gases
- surrounding structures
- traffic control
- trip hazards
- work access platforms
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others, work site visitors and the public
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Tools and equipment** include:

- brushes
- compressors
- mobile scaffold
- planks
- rollers
- sanders
- scrapers
- spray equipment
- stepladders
- trestles
- vacuum cleaners.

**Materials** include:

- fillers
- linseed oil
- manufacturers' proprietary products
- oil-based products
- scumbling mediums
- stainers
- terebine dryers
- water-based products.

**Quality requirements** include:

- internal company quality policy and standards
- manufacturer specifications, where specified
RANGE STATEMENT

- relevant regulations, including Australian standards
- workplace operations and procedures.

Environmental requirements include:
- clean-up management
- dust and noise
- low odour and emissions
- stormwater protection
- waste management.

Decorative paint finishes:
- broken colour effects
- lines
- mirror finish
- gilding
- stencilling
- basic imitation marbling
- basic imitation wood graining.
- may include:
  - gilding
  - luminescent finishes.

Mirror finishing:
- is applied by:
  - brush
  - brush/roller
- may be applied by:
  - spray
  - flood coating.

Broken colour effects:
- are achieved using:
  - rag rolling
  - sponging
  - stippling
- may use:
  - bagging
  - flouncing
  - dragging
  - blending
  - highlighting.

Acrylic finishes include but are not limited to:
- suede
- metalessness
- pearlessness/illuminessence
RANGE STATEMENT

- lime washes.
- cutting boards
- cutting knives and scalpels
- drawing and tracing materials
- stencil brushes
- stencil materials.

**Stencilling** includes the use of:

- basic imitation marbling
- basic imitation wood graining
- basic gilding.

**Special finishes** include:

- use of manual and machine environmentally sustainable cleaning methods
- cleaning water re-cycling or professional disposal
- solid waste disposal requirements

**Paint waste, water and solvents disposal** includes:

**Unit Sector(s)**

Unit sector Construction

**Functional area**

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Plant, tools and equipment are selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Prepare site and materials. | 2.1. Site area is set up for graffiti removal and preventative application processes to suit surfaces to be treated.  
2.2. Adjoining surfaces to application area are protected by masking off or covering prior to application of graffiti preventative coatings.  
2.3. Adequate ventilation is provided for application area.  
2.4. Stormwater protection systems are installed where appropriate. |
| 3. Remove graffiti. | 3.1. Preparation processes are selected to suit substrate surfaces and graffiti circumstances.  
3.2. Type of coating previously used to cover graffiti is identified in accordance with current industry standards of practice, manufacturer recommendations and specifications.  
3.3. Graffiti removal processes are applied to affected area in accordance with current industry standards of practice, manufacturer recommendations and specifications. |
| 4. Apply preventative | 4.1. Substrate surfaces are cleaned and prepared for |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
application material. | preventative application coatings in accordance with current industry standards of practice and manufacturer recommendations.

4.2. Type of preventative coating to cover specific type of graffiti is identified and prepared in accordance with manufacturer recommendations and job specifications.

4.3. Preventative application coating to cover specific type of graffiti is applied in accordance with manufacturer recommendations and job specifications.

5. Clean up and store equipment.

5.1. Painting equipment is dismantled, cleaned, maintained and stored in accordance with manufacturer recommendations and standard work practices.

5.2. Unused materials are sealed and stored/stacked in accordance with standard material handling practices and company procedure.

5.3. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

5.4. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
REQUIRED SKILLS AND KNOWLEDGE

- documentation from a variety of sources
- drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

**Required knowledge**

Required knowledge for this unit is:

- graffiti resistant material technologies and applications
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- painting and decorating terminology
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- surface preparation techniques
- types and properties of commonly used graffiti materials
- types, characteristics, uses and limitations of graffiti removal materials
- types, uses, limitations and operating techniques of graffiti removal equipment
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- remove graffiti from two different substrates of at least 1 square metre using two approved cleaning methods
- apply a minimum of one sacrificial and one non-sacrificial preventative coating, each to a different substrate of at least 1 square metre.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
EVIDENCE GUIDE

- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice,
EVIDENCE GUIDE

with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

1.1. Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the removal of graffiti and application of protective coatings
- relevant Australian standards
- safe work procedures relating to the removal of graffiti and application of protective coatings
RANGE STATEMENT

coatings
signage
verbal, written and graphical instructions
work bulletins
work schedules, plans and specifications.
assessment of conditions and hazards
determination of work requirements and safety plans and policies
equipment defect identification
work site inspection.

1.2. Planning and preparation

include:

emergencies procedures, including extinguishing fires, organisational first aid requirements and evacuation
handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
hazard control
hazardous materials and substances
organisational first aid
PPE prescribed under legislation, regulations and workplace policies and practices
safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
earth leakage boxes
electrical and fire and/or explosion from combustible materials
falling objects
lighting
manual handling
power cables, including overhead service trays, cables and conduits
restricted access barriers
solvents, lead, chemicals, fumes/gases
surrounding structures
traffic control
trip hazards
work access platforms
work site visitors and the public
working at heights
RANGE STATEMENT

- working in confined spaces
- working in proximity to others, work site visitors and the public
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

1.4. **Tools and equipment**
include:
- airless spray equipment
- brushes
- mobile scaffold
- planks
- rollers
- scrapers
- stepladders
- trestles
- vacuum cleaners
- water blasters.

1.5. **Quality requirements**
include:
- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

1.6. **Materials**
include:
- solvents
- cleaning materials.

1.7. **Environmental requirements**
include:
- clean-up management
- dust and noise
- stormwater protection
- waste management.

1.8. **Preventative coatings:**
include:
- sacrificial
- non sacrificial
- may include:
  - siliconised
  - other types.

1.9. **Application:**
- systems include:
  - brush/roller
  - spray
- is to conform with relevant Australian standard.
Unit Sector(s)

Unit sector Construction

Functional area

Functional area
CPCCPD3030B Apply protective paint coating systems

Modification History
Photovoltaic (solar) panels added to range statement
Equivalent to CPCCPD3030A

Unit Descriptor
This unit of competency specifies the outcomes required to apply specialised paint coating systems as a protective measure against atmospheric conditions, sanitation and hygiene risks and the impacts of high traffic areas.
The unit includes planning and preparation for the work, preparation of the work area and materials, application of the coating system and completion of clean-up activities.

Application of the Unit
This unit of competency supports the attainment of the understanding and skills to apply protective coatings, which may include working with others and as a member of a team.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare. 1.1 Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.

1.2 Safety (OHS) requirements are followed in accordance with safety plans and policies.

1.3 Signage and barricade requirements are identified and implemented.

1.4 Plant, tools and equipment are selected to carry out tasks, including work platforms where required are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.

1.5 Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.

1.6 Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.

1.7 Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.

2 Prepare surfaces for protective coating. 2.1 Suitability of surface for protective paint coating is determined in accordance with manufacturer recommendations and job specifications.

2.2 Surface preparation method is correctly selected in accordance with the environment, finish and substrate
requirements.

2.3 Surface is prepared to manufacturer specifications in compliance with substrate requirements, specifications and relevant standards.

2.4 Surface imperfections are repaired or stopped, filled and sanded to a smooth finish ready for the protective coating in accordance with manufacturer recommendations and job specifications.

3 Apply protective coating system.

3.1 Job location is checked to ensure provision of adequate ventilation and precautions taken to prevent fire and explosion.

3.2 Application for paint coating is selected consistent with the job location, type of paint, type and condition of surface and climatic conditions.

3.3 Protective coating system is applied and finished in accordance with job/manufacturer specifications and relevant standards.

3.4 Measurement and dry and wet testing are carried out in accordance with manufacturer specifications and relevant standards.

4 Clean up.

4.1 Waste and unwanted materials are removed and placed into job waste bins or rubbish stockpile in accordance with sound work practices and compliance with the environmental requirements.

4.2 Painting tools, equipment and plant are cleaned with correct solutions and without damage, and stored safely and effectively to manufacturer specifications.

4.3 Unused materials are sealed and stored/stacked in accordance with standard material handling practices and techniques and company requirements.

4.4 Paint waste, water and solvents used in cleaning painting equipment are disposed of in an environmentally sustainable manner and in accordance with relevant legislative requirements.

4.5 Work area is cleared and materials disposed of or recycled in a manner to avoid spontaneous combustion
and in accordance with legislation, regulations, codes of practice and job specification.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - evaluating own actions and making judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
  - teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- Australian Paint Approval Scheme (APAS) classifications
- hazards associated with solvent vapour, chemical fumes, gases, harmful dusts, metal chips, abrasive grit and asbestos fibres
• impact of atmospheric conditions and high traffic on new and existing structures and coatings
• job safety analysis (JSA) and safe work method statements
• material safety data sheets (MSDS)
• materials storage and environmentally sustainable waste management, including correct disposal of water-based, latex-based and solvent-based paints
• painting and decorating terminology
• plans, drawings and specifications
• processes for the calculation of material requirements
• protective paint coating application equipment and techniques and their uses and limitations
• protective surface coating technology
• quality requirements
• solid waste and paint sludge disposal techniques and relevant legislation, including Environmental Protection Authority (EPA) and local Council regulations
• types of commonly used protective paint coatings, their uses and limitations
• types of paints, including the characteristics and uses of paint materials with various volatile organic compound (VOCs) levels and alternative and natural paints
• workplace and equipment safety requirements.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

• locate, interpret and apply relevant information, standards and specifications
• comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
• comply with organisational policies and procedures
including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- prepare an application of a minimum of three different protective paint coating systems of at least 1 square metre to specification
- dispose of all paint types in an environmentally sustainable way compliant with relevant local legislation and regulations
- clean and store painting equipment using environmentally sustainable methods and work practices including waste reticulation systems.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training
Package

- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.
Information includes:
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the application of protective paint coating systems
- relevant Australian standards
- safe work procedures relating to the application of protective paint coating systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - electrical and fire and/or explosion from combustible materials
- falling objects
- lighting
- manual handling
- photovoltaic (solar) panels
- power cables, including overhead service trays, cables and conduits
- restricted access barriers
- solvents, lead, chemicals, fumes/gases
- surrounding structures
- traffic control
- trip hazards
- work access platforms
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others, work site visitors and the public
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Tools and equipment** include:

- brushware
- brushware accessories
- buckets
- covers
- drop sheets
- duster brushes
- hand and mechanical wire brushes
- hand sanders
- high pressure water blasters
- mechanical grinders
- mechanical sanders
- paint pots and buckets
- paint stirrers
- rags
- roller accessories
- roller frames
- scrapers
- spray equipment
- wet and dry film thickness gauges.
Work platforms include:
- aluminium mobile scaffolds
- elevated work platforms
- hop ups
- in situ scaffold erected by qualified personnel
- ladders
- planks
- scissor lifts
- stepladders
- trestles.

Quality requirements include:
- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Materials include:
- cleaning aids
- cleaning chemicals
- solvents.

Environmental requirements include:
- chemical fumes
- clean-up management
- dust and noise
- low odour and emissions
- stormwater protection
- waste management.

Surface to be prepared and coated:
- may be:
  - new
  - previously coated
- includes:
  - concrete
  - fibreglass
  - metallic (iron, steel, ferrous and non-ferrous metals)
  - plastics, including polyvinyl chloride (PVC).
**Paint coating** includes:
- polyurethane primer (two pack)
- epoxy primer (two pack)
- high build epoxy
- high build chlorinated rubber.

**Surface preparation method** includes:
- abrasive blasting
- chemical stripping
- grinding
- heat gun
- sanding
- scraping (mechanical and hand)
- washing down using sugar soap
- water blasting.

**Application:**
- is to comply with relevant Australian standards.

**Paint coating** includes:
- corrosion control
- decoration
- hygiene and sanitation protection
- trafficable areas.

**Measurement and dry and wet testing techniques:**
- are those required to confirm that wet film meets specifications.

**Paint waste, water and solvents disposal includes:**
- use of manual and machine environmentally sustainable cleaning methods
- cleaning water re-cycling or professional disposal
- solid waste disposal requirements

3.4. **Debris and waste** management procedures are identified for lead contamination from flake, chalk and dust.

3.5. Removal processes are applied and contaminated materials are containerised for movement.

3.6. Substrates are repaired, restored and prepared for subsequent coatings.

4. **Manage contaminated materials.**

4.1. Stabilisation method is determined to make the building lead safe by applying temporary control measures.

4.2. Appropriate methods for the containment of existing surfaces are determined or confirmed in accordance with regulatory requirements.

4.3. Over painting is conducted using oil-based paints by applying a high quality undercoat sealer and two coats of quality topcoats.

4.4. Specialised liquid encapsulant is applied in accordance with manufacturer specifications.

4.5. Contaminated surface is enclosed using overlaying materials such as plasterboard or weatherboard and applying warning notices of the latent lead hazard.

5. **Clean up.**

5.1. Work area is cleared and materials disposed of or recycled in accordance with legislation, regulations, codes of practice and job specification.

5.2. Waste and unwanted materials are removed and placed into containment vessels for disposal in accordance with authorised systems and relevant standards.

5.3. Surface and soil tests are conducted to verify that no contamination has taken place and building is safe for occupation.

5.4. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

---

**Required Skills and Knowledge**
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - evaluating own actions and making judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
  - teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- agents and techniques available for encapsulation, their uses and limitations
- agents available for chemical stripping treatments, their uses and limitations
- containment techniques and processes for lead-based paint flakes, dust and chalk
- health risks associated with lead and lead-based paint products
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
REQUIRED SKILLS AND KNOWLEDGE

- painting and decorating terminology
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- sanding equipment and techniques
- types and specifications of lead-based paints and the manufacturer recommendations for removal
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- apply treatments of at least 6 square metres for a minimum of two different lead paint hazards (where the processes and outcomes are to be in
EVIDENCE GUIDE

line with current regulations and relevant Australian standards), including:

- a chemical stripping treatment
- paint systems to contain lead or asbestos.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
EVIDENCE GUIDE

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work
RANGE STATEMENT

situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Testing:**
- includes lead test kits
- may include x-ray fluorescence equipment and laboratory testing of field samples.

**Information includes:**
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the treatment of lead paint hazards
- relevant Australian standards
- safe work procedures relating to the treatment of lead paint hazards
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Planning and preparation**
include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

**Safety (OHS)** is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
RANGE STATEMENT

- earth leakage boxes
- electrical and fire and/or explosion from combustible materials
- falling objects
- lighting
- manual handling
- power cables, including overhead service trays, cables and conduits
- restricted access barriers
- solvents, lead, chemicals, fumes/gases
- surrounding structures
- traffic control
- trip hazards
- work access platforms
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others, work site visitors and the public
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment:

- chemical strippers (caustic based, flammable and methylene chloride)
- containment receptacles (heavy duty)
- disposable heavy duty plastic
- disposable personal boot covers and coveralls
- high efficiency particulate accumulator (HEPA) filtered vacuum cleaner
- HEPA filtered sanders
- measuring tapes and rules
- respirators (maintained to AS1716)

- may include:
  - heat guns
  - masking tape
  - shovels
RANGE STATEMENT

- wet mops
- wheelbarrows.

Quality requirements include:
- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Materials include:
- solvents
- approved cleaning materials.

Environmental requirements include:
- clean-up management
- dust and noise
- lead contamination
- stormwater protection
- waste management.

Treatment includes:
- encapsulation
- stripping and removal.

Removal processes include:
- chemical stripping
- heat gun
- sanders
- scraper
- use of HEPA vacuum
- wet sanding
- wet scraping.

Debris and waste include:
- cardboard
- empty containers
- other receptacles
- paint chalk
- paint dust
- paint flakes
- paper
- plastic sheeting
- protective clothing
- soil contaminants
- waste materials.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Tools and equipment are selected to carry out tasks, including work platforms where required are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Prepare surface for wallpaper. | 2.1. Condition, suitability and nature of existing substrate and surface material are determined and removal process is selected.  
2.2. Hazards are identified and correct procedures used to reduce risk to self and others in accordance with manufacturer recommendations and specifications.  
2.3. Surfaces are prepared for wallpapering application by removing existing coating and loose debris.  
2.4. Surface defects are repaired and imperfections stopped, filled and sanded to smooth finish ready for wallpapering in accordance with manufacturer recommendations and job specifications. |
| 3. Prepare for the hanging process. | 3.1. Final application plan for hanging of wallpaper and specialty material is determined and documented in accordance with manufacturer recommendations and with client requirements.  
3.2. Selected adhesives are prepared in accordance with manufacturer recommendations.  
3.3. Materials are checked for conformity to dye lot, batch number and other shading requirements in |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
4. Apply wallpaper. | 4.1. Size coating is applied to work area in accordance with manufacturer recommendations.
 | 4.2. **Wallpaper and specialty materials** are applied to work area ensuring an even surface, seams are butted, paper is plumb and pattern is free of defects.
 | 4.3. Trimming around fittings is completed accurately and with minimal impact on surroundings.
 | 4.4. **Application of wallpaper and specialty material** is completed in accordance with manufacturer recommendations and job specifications.
5. | 
6. Clean up. | 6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
 | 6.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- common wallpapering defects
- compatibility of preparatory materials and wallpaper
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- painting and decorating terminology
- plans, drawings and specifications
- procedures used to apply straight pattern match, drop pattern match and random match wallpapers
- processes for the calculation of material requirements
- responsibilities with regard to:
  - conservation areas
  - heritage listed buildings
- quality requirements
- surface preparation techniques for the application of wallpaper
- types and properties of wall coverings and their suitability to various substrates
- types, uses and limitations of commonly used adhesives
- wallpaper hanging processes and techniques
- wallpapering tools and equipment, their uses and limitations
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- apply specialty wallpaper to specification on a minimum of two jobs for at least 6 square metres covering one anaglypta and one other with surfaces containing power points, vents and switches.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the
EVIDENCE GUIDE

mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at
EVIDENCE GUIDE

the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the application of advanced wallpaper techniques
- relevant Australian standards
- safe work procedures relating to the application of advanced wallpaper techniques
RANGE STATEMENT

- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - electrical and fire and/or explosion from combustible materials
  - falling objects
  - lighting

  - restricted access barriers
  - solvents, lead, chemicals, fumes/gases
  - surrounding structures
  - traffic control
  - trip hazards
  - work access platforms
  - work site visitors and the public
  - working at heights
RANGE STATEMENT

- working in confined spaces
- working in proximity to others, work site visitors and the public
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:
- broad knives
- filling blades
- lay brushes
- plastic applicators
- plumb bobs and string lines
- rubber rollers
- scissors
- scrapers
- seam rollers
- smoothing blocks
- spirit levels
- sponges
- steam strippers
- tape measures
- trimming knives and cutters.

Work platforms include:
- mobile scaffold
- stepladders
- trestles and planks.

Quality requirements include:
- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Environmental requirements include:
- clean-up management
- dust and noise
- stormwater protection
- waste management.

Adhesives include:
- cellulose
- latex
- polyvinyl alcohol (PVA)
- starch
- other special adhesive blends.

Wallpaper and speciality
- anaglypta
RANGE STATEMENT

**materials** include:
- flock
- frontrunner
- linen backed vinyl
- lyncrusta
- metallic foils
- photo murals
- suede grass weaves
- other commercial grade materials.

**Applications** include those to walls and ceilings, which may be:
- constructed of:
  - set plaster
  - plasterboard
  - fibrous plaster
  - medium density fibre board
  - fibre cement products
  - flat or curved.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**
REQUIRED SKILLS AND KNOWLEDGE

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - evaluating own actions and making judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
  - teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- chemical properties of the coating carbon supplier; acid source and expanding agent
- coating requirements for structural metal work, including coating performance differences between hollow and concrete filled structures
- coating requirements for timber
- compatibility of coatings to substrates
- fire resistance level (FRL) rating of intumescent coatings for a range of construction materials
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
REQUIRED SKILLS AND KNOWLEDGE

- painting and decorating terminology
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- volume solids behaviour and impact on intumescent coatings performance.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- complete to specification, ensuring correct film thickness, surface preparation and finishing techniques, the following intumescent coating applications:
  - a minimum of one application on a timber surface
  - a minimum of one application on a structural steel surface.

Context of, and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.
EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected
EVIDENCE GUIDE

must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements
RANGE STATEMENT

pertaining to the application of intumescent coatings
• relevant Australian standards
• safe work procedures relating to the application of intumescent coatings
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.
• assessment of conditions and hazards
• determination of work requirements and safety plans and policies
• equipment defect identification
• work site inspection.

Planning and preparation
include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

• emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
• handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
• hazard control
• hazardous materials and substances
• organisational first aid
• PPE prescribed under legislation, regulations and workplace policies and practices
• safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  • earth leakage boxes
  • electrical and fire and/or explosion from combustible materials
  • falling objects
  • lighting
  • manual handling
  • power cables, including overhead service trays, cables and conduits
  • restricted access barriers
  • solvents, lead, chemicals, fumes/gases
  • surrounding structures
  • traffic control
RANGE STATEMENT

- trip hazards
- work access platforms
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others, work site visitors and the public
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- brushes
- compressors
- mobile scaffold
- planks
- rollers
- sanders
- scrapers
- spray equipment
- stepladders
- trestles
- vacuum cleaners.

Materials:

- primers
- water-based intumescent coatings
- solvent-based intumescent coatings
- suitable clear finishes for protection of the coating
- may include manufacturers' proprietary products.

Quality requirements include:

- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- stormwater protection
- waste management.
RANGE STATEMENT

**Intumescent coatings:**
- include:
  - surface coatings that in a fire situation undergo a chemical reaction with the increase in temperature, so the intumescent coating expands to many times its original thickness; the coating should provide an insulating foam-like coating or 'char' that protects the substrate
  - water or solvent-based, depending on the humidity requirements and job site environment
  - may be applied by:
    - brush
    - roller or airless spray equipment
  - must meet:
    - fire resistance level (FRL) requirements for the material it is applied to and the structure being coated.

**Structural metal:**
- includes:
  - beams
  - columns
  - may be:
    - concrete filled
    - hollow.

**Thickness measuring gauges:**
- measure film thicknesses from 0.03mm to 13mm
- can be hand held.

**Unit Sector(s)**

Unit Descriptor
Unit descriptor This unit of competency specifies the outcomes required to apply decorative paint finishes to a range of different material surfaces.

The unit includes planning and preparation for the work, preparation of the application area, application of imitation marble effects and imitation wood grain effects, application of stencils and completion of clean-up activities.

Application of the Unit
Application of the unit This unit of competency supports the attainment of the understanding and skills to apply advanced decorative paint finishes, which may include working with others and as a member of a team.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied for planning and preparation purposes.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Tools and equipment are selected to carry out tasks consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Prepare application area. | 2.1. Area is set up for application processes to suit surfaces to be painted.  
2.2. Adjoining surfaces to application area are protected by masking off or covering prior to application of decorative paint finishing materials.  
2.3. Ventilation is provided in application area to maintain safety of self and others.  
2.4. Measures are taken to ensure application area is dust free. |
| 3. Produce imitation marble effects. | 3.1. Ground coat of specified colour and consistency is applied evenly to prepared surface for both traditional and modern imitation granite and lapis effects.  
3.2. Marbling medium is mixed to designed proportions and colour and correctly applied to produce veins and markings as per sample in accordance with manufacturer specifications and job specifications.  
3.3. Clear coating is applied to achieve an even finish to specified sheen level in accordance with manufacturer specifications and job specifications. |
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 4. Produce imitation wood grain effects. | 4.1. Ground coat of specified colour and consistency is applied evenly to prepared surface for traditional complex imitation wood grain effects including inlays.  
4.2. Wood graining medium is mixed to designed proportions and colour and correctly applied to produce grain markings as per sample and in accordance with manufacturer specifications and job specifications.  
4.3. Specific highlights are added to match sample of decorative paint finishing materials in accordance with manufacturer specifications and job specifications.  
4.4. Clear coating is applied to achieve an even finish to specified sheen level in accordance with manufacturer specifications and job specifications. |
| 5. Apply advanced stencils. | 5.1. Stencil design is selected and laid out onto recommended material.  
5.2. Specified multi-layering transfer method is used and design is cut accurately for multiple colours using a 'register' mark.  
5.3. Initial stencil is placed and taped to designed location and paint is applied to produce first colour to specifications.  
5.4. Subsequent stencils and overlays are located accurately to pattern with each separate colour applied to specifications to produce designed finish in accordance with manufacturer specifications and job specifications. |
| 6. Apply advanced lining and special finishes and techniques. | 6.1. Complex pattern lining and textures, including Gris Lais are applied to appropriate surfaces for decorative purposes as specified  
6.2. Gold leaf and other metallic finishes such as aluminium and bronze are applied to complex surfaces for decorative purposes.  
6.3. Gilding and gilding powder in mediums are applied to selected surfaces.  
6.4. Finishing techniques are applied, including waxes and other suitable finishes.  
6.5. Trowelled decorative finishes, including Stucco Venezia are applied using a range of tools and techniques |
| 7. Create large scale | 7.1. Ground coat of specified colour and consistency is |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
decorative projects | applied evenly to prepared surface for traditional application of large decorative effects
7.2. Murals and trompe l'oeil projects are completed to specification.
8. Clean up and store equipment. | 8.1. Special effect painting equipment and spray painting equipment are dismantled, cleaned, maintained and stored.
8.2. Waste and unwanted materials are removed and placed into job waste bins or rubbish stockpile in a safe and effective manner in accordance with sound work practices compliant with environmental requirements.
8.3. Unused materials are sealed and stored/stacked in accordance with standard material handling practices and techniques and company requirements.
8.4. *Paint waste, water and solvents* used in cleaning painting equipment are disposed of in an environmentally sustainable manner and in accordance with relevant legislative requirements.
8.5. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
8.6. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer specifications and/or standard work practices.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
REQUIRED SKILLS AND KNOWLEDGE

- read and interpret:
  - documentation from a variety of sources
  - drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- Australian Paint Approval Scheme (APAS) classifications
- compatibility of surface coatings to substrates
- decorative painted finishes technology
- gilding materials and application techniques
- imitation marble materials and application techniques
- imitation wood grain materials and application techniques
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally sustainable waste management, including correct disposal of water-based, latex-based and solvent-based paints painting and decorating terminology
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- solid waste and paint sludge disposal techniques and relevant legislation, including Environmental Protection Authority (EPA) and local Council regulations
- stencilling materials and application techniques.
- types of paints, including the characteristics and uses of paint materials with
REQUIRED SKILLS AND KNOWLEDGE

various volatile organic compound (VOCs) levels and alternative and natural paints
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- complete to specification the following decorative finishes:
  - a minimum of one marble graining effect on a standard panel size surface
  - a minimum of one wood graining effect on a standard panel size surface
  - design and cutting of a multi-plate stencil and at least two applications of the stencil
- dispose of all paint types in an environmentally sustainable way compliant with relevant local legislation and regulations
- clean and store painting equipment using environmentally sustainable methods and work practices including waste reticulation systems.

Context of and specific resources

This competency is to be assessed using standard and authorised work practices, safety requirements
EVIDENCE GUIDE

for assessment

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
EVIDENCE GUIDE

- Competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace.
- Where the assessment is part of a structured learning experience, the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.
- All assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- Diagrams or sketches
- Instructions issued by authorised organisational or external personnel
- Manufacturer specifications and instructions,

3. Record results. | 3.1. Results of checks and tests are recorded in hoist book to requirement of regulatory authority. 
 | 3.2. Faults are reported in accordance with company policy.
4. Operate hoist. | 4.1. Loads are checked for conformity to safe load capacity of hoist. 
 | 4.2. Hoist is safely operated to requirements of operator's manual and state or territory regulatory authority. 
 | 4.3. Hoist is shut down, rendered safe and secured at end of work period in accordance with operator's manual. 
 | 4.4. Post-operational checks are conducted and recorded.
5. Clean up. | 5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification. 
 | 5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices. 
 | 5.3. Work completion details and procedures are applied and relevant personnel notified that work is finished.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - follow instructions
  - notify completion of work
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
REQUIRED SKILLS AND KNOWLEDGE

- written skills to record results of checks and tests and relevant work completion procedures
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply calculations, including load mass requirements
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:
- designs and functions of hoisting equipment
- emergency procedures (hoist specific)
- fault finding and identification
- general construction terminology
- hoist operation techniques
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- personnel and materials hoist equipment
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of load mass requirements
- quality requirements
- relevant Acts, regulations and codes of practice
- signalling methods and communications
- working at heights
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete pre-operational check, raise and lower to four limits including a top and bottom, conduct manual lowering between floors, shut down and carry out post-operational checks, finalise logbook, all to manufacturer specifications and complying with OHS legislation.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
EVIDENCE GUIDE

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and
EVIDENCE GUIDE

separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Planning includes:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor.
RANGE STATEMENT

- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Types of hoist include:
- bucket
- cantilevered
- car
- materials
- multiple winch and tower
- personnel and materials
- platform.

Tools and equipment include:
- associated equipment
- personnel and materials hoists.

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:
- clean-up management
- dust and noise
- vibration
RANGE STATEMENT

- waste management.
- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Statutory and regulatory authorities include:
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to operating personnel and materials hoists
- relevant Australian standards
- safe work procedures relating to operating personnel and materials hoists
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Information includes:
- rack and pinion
- self-climbing
- super hoist
- winch operated.

Personnel and materials hoist equipment include:
- anemometer
- emergency brakes
- limit switches
- manual lowering systems.

Safety systems include:
- check sheets
- equipment defect records
- job cards
- JSAs
- plant and maintenance records
- safe work method statements.

Work completion details include:

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  
Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Plan and prepare.** | 1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained for relevant *information*, confirmed and applied for *scope of work*.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Plant, *tools and equipment* selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and *quality requirements*.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and *statutory and regulatory authority* obligations and applied. |
| **2. Select equipment.** | 2.1. Resources, materials and equipment are selected and inspected for compliance with job specifications.  
2.2. Lifting equipment is inspected according to manufacturer specifications.  
2.3. Lifting equipment identified as inconsistent with manufacturer specifications is labelled, rejected and disposed of to prevent its use in any circumstance. |
| **3. Connect equipment.** | 3.1. Loads and slings are slung to protect the load and associated equipment.  
3.2. Whole or part loads are secured to prevent uncontrolled movement.  
3.3. Slings, or parts of slings, are attached to the load and positioned to ensure safe movement.  
3.4. Slings, or parts of slings, are attached to hook while the hoist wire is vertical.  
3.5. Tag lines are attached to the load where specified.  
3.6. Test lifts are performed to ensure safe and secure movement of the load where specified. |
**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
4. Move and position loads. | 4.1. Load destination is determined and landing area prepared to accept the load.
 | 4.2. Lifting or pulling device is assembled and erected where specified.
 | 4.3. Load is safely moved to required destination and secured in position to client specifications or job requirements.
 | 4.4. Standard communication signals are used to coordinate safe movement of the load.
5. Remove rigging equipment. | 5.1. Lifting/moving equipment and packing are dismantled, lowered and inspected for wear.
 | 5.2. Logbook and site records are completed to company requirements.
6. Clean up. | 6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
 | 6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.
 | 6.3. Work completion procedures are applied and relevant personnel notified that work is finished.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:
- communication skills to:
  - determine requirements
  - follow instructions
  - notify completion of work
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
REQUIRED SKILLS AND KNOWLEDGE

- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to complete logbooks, site records and relevant work completion procedures
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- basic rigging equipment and techniques
- crane operations and limitations
- designs and functions of lifting equipment
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- relevant Acts, regulations and codes of practice
- signalling methods and communications
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the
EVIDENCE GUIDE

Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete one of the following:
  - install and use a fall arrest system to sling, receive, place and brace a minimum 16 square metre module of structural steel in the correct sequence a minimum of 5 metres high
  - set up, place, install and brace perimeter safety screen and jump for two floors and a loading bay
  - skid, locate and install heavy industrial equipment using winches and creeper skids for at least one tonne of plant.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.
EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances
EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to performing basic rigging
- relevant Australian standards
- safe work procedures relating to performing
RANGE STATEMENT

Scope of work:

- basic rigging
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- planning and preparation includes work site inspection, equipment defect identification, assessment of conditions and hazards and determination of work requirements
- calculations include load charts, fleet angles, diverter sheaves, lead loads, head loads, load angle factors, multiple fall, load share, pre-cast compliance charts and safe working loads
- sling types include chain, flexible steel wire rope, and natural or synthetic fibre
- load slinging methods are to include straight sling, adjustable sling, reeved sling and inclined sling
- lifting devices include shackles, turn buckles, jacks, chain winches, hand operated creeper winches, chain blocks, pulley blocks, come alongs, air winches, trolleys, eye bolts, rigging screws, lifting lugs, lifting clutches and snatch blocks
- types of cranes include fixed cranes, tower cranes, hydraulic mobile cranes, lattice boom mobile cranes, slewing cranes, non-slewing cranes and gantry cranes.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and
RANGE STATEMENT

treatments associated with:
- earth leakage boxes
- lighting
- power cables, including overhead service trays, cables and conduits
- restricted access barriers
- surrounding structures
- traffic control
- trip hazards
- working at heights
- work site visitors and the public
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment:

- include:
  - automatic levels
  - drifts
  - hammers
  - podgers spanners
  - shifting spanners
  - sledge hammers
  - spirit levels
  - tape measures
  - wedges
  - wrenches

- may include:
  - angle grinders
  - elevated work platforms
  - explosive power tools
  - laser levels
  - oxy-acetylene equipment
  - pneumatic tools
  - scaffolding
  - skids
  - water levelling equipment.
RANGE STATEMENT

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

- signalling methods and communications
- workplace and equipment safety requirements.
Evidence Guide

OVERVIEW OF ASSESSMENT

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

CRITICAL ASPECTS FOR ASSESSMENT AND EVIDENCE REQUIRED TO DEMONSTRATE COMPETENCY IN THIS UNIT

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete the erection of a portal frame building, including trusses, bracing, purlins and girts, incorporating at least one strongback lift and one bowstring lift, all in accordance with manufacturer and engineer's specifications.

CONTEXT OF AND SPECIFIC RESOURCES FOR ASSESSMENT

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
EVIDENCE GUIDE

- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice,
EVIDENCE GUIDE

with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to performing advanced structural steel erection
- relevant Australian standards
- safe work procedures relating to performing
RANGE STATEMENT

advanced structural steel erection
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.
• planning and preparation includes work site inspection, equipment defect identification, assessment of conditions and hazards and determination of work requirements
• calculations include load charts, fleet angles, diverter sheaves, lead loads, head loads, load angle factors, multiple fall, load share, pre-cast compliance charts and safe working loads
• sling types include chain and flexible steel wire rope
• load slinging methods include straight sling, adjustable sling, reeved sling and inclined sling
• types of cranes include fixed cranes, tower cranes, hydraulic mobile cranes, lattice boom mobile cranes, slewing cranes, non-slewing cranes and gantry cranes
• advanced lifting techniques include strongbacks and bowstrings
• steel components include columns, beams, bracing, rafters, purlins, girts, bridging and fly bracing, trusses, freestanding structures and portal frame buildings.
• emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
• handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
• hazard control
• hazardous materials and substances, including cement and curing agents
• organisational first aid
• PPE prescribed under legislation, regulations and workplace policies and practices
• safe operating procedures, including the conduct of operational risk assessment and

Scope of work:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
RANGE STATEMENT

treatments associated with:

- earth leakage boxes
- lighting
- power cables, including overhead service trays, cables and conduits
- restricted access barriers
- surrounding structures
- traffic control
- trip hazards
- working at heights
- work site visitors and the public
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment:

- include:
  - air winches
  - chain blocks
  - chain winches
  - come alongs
  - drifts
  - eye bolts
  - hammers
  - hand operated creeper winches
  - jacks
  - podgers spanners
  - pulley blocks
  - shackles
  - shifting spanners
  - sledge hammers
  - spirit levels and automatic levels
  - tape measures
  - trolleys
  - turn buckles
  - wedges
  - wrenches
RANGE STATEMENT

- may include:
  - angle grinders
  - elevated work platforms
  - explosive power tools
  - laser levels
  - lifting clutches and snatch blocks
  - lifting lugs
  - oxy-acetylene equipment
  - pneumatic tools and scaffolding
  - rigging screws
  - skids
  - water levelling equipment.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work to be performed.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Plant, tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied. |
| 2. Select equipment. | 2.1. Resources, materials and equipment are selected in accordance with load charts and inspected for compliance with job specifications.  
2.2. Lifting equipment is inspected according to manufacturer specifications.  
2.3. Lifting and load shifting equipment identified as inconsistent with manufacturer specifications is labelled, rejected and disposed of to prevent its use in any circumstance.  
2.4. Elevated work platforms and other means of mechanical access systems are determined and selected where specified.  
2.5. Fall arrest equipment is installed.  
2.6. Personnel cartage systems are identified and selected. |
| 3. Erect tilt-up slabs. | 3.1. Job sequencing schedule and documentation are identified and communicated to team members to ensure coordination.  
3.2. Load mass is calculated and confirmed. |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
3.3. Erection sequence for tilt-up slab components is identified.
3.4. Lifting or pulling devices are assembled and erected for the movement of loads.
3.5. Load is slung.
3.6. Load is shifted in accordance with job safety analysis (JSA) and safe work method statement.
3.7. Stability of load is maintained during lifting, tilting and transportation.
3.8. Load is directed to landing position in accordance with engineer's specifications.
4. Position and anchor.
4.1. Tilt slab components are positioned in accordance with engineer's specifications.
4.2. Shape of structure is achieved by checking dimensions and applying temporary bracing.
4.3. Tilt slab components are anchored in accordance with manufacturer and engineer's specifications.
5. Remove rigging equipment.
5.1. Lifting/shifting equipment and packing is dismantled, lowered and inspected for wear.
5.2. Logbook and site records are completed to company requirements.
6. Clean up.
6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.
6.3. Work completion procedures are applied and relevant personnel notified that work is finished.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:
REQUIRED SKILLS AND KNOWLEDGE

- communication skills to:
  - determine requirements
  - follow instructions
  - notify completion of work
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to complete logbooks, site records and relevant work completion procedures
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - numeracy skills to apply calculations
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- cast in lifting and bracing inserts
- crane types operations and limitations
- designs and functions of lifting equipment
- documentation requirements
- elevated work platforms
- general construction terminology
- JSA and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- panel lifting point design
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- relevant Acts, regulations and codes of practice
REQUIRED SKILLS AND KNOWLEDGE

- rigging equipment and techniques
- signalling methods and communications
- tilt-up slab and pre-cast construction
- tilt-up slab code of practice
- tilt-up slab storage
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- erect one multi-point pre-cast tilt-up slab and one cast in situ tilt-up slab, each of at least 10 tonne with correct rigging, slinging and de-rigging techniques, including determination of lifting points, temporary supports and permanent fixing points from panel erection drawings and following the lift plan, including:
  - positioning and bracing the slab
  - safe unloading from the truck
  - rotating panel from one plane to another
  - incorporating at least two bracing techniques.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge
EVIDENCE GUIDE

will usually be conducted in an off-site context. Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured
EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to performing advanced tilt-up slab
STATEMENT

Scope of work:

- planning and preparation includes work site inspection, equipment defect identification, assessment of conditions and hazards and determination of work requirements
- calculations include charts, fleet angles, diverter sheaves, lead loads, head loads, load angle factors, multiple fall, load share, load share distribution, pre-cast compliance charts and safe working loads
- sling types include chain and flexible steel wire rope
- load slinging methods include straight sling, adjustable sling, reeved sling and inclined sling
- personal cartage systems include personnel boxes and elevated work platforms
- types of cranes include fixed cranes, tower cranes, hydraulic mobile cranes, lattice boom mobile cranes, skewing cranes, non-slewing cranes and gantry cranes
- tilt-up slabs include prefabricated and cast in situ tilt-up slabs and slabs with cast-in lifting and/or bracing inserts
- tilt-up slabs are to be erected following panel erection drawings and lift plans
- bracing of tilt-up slabs is to include lateral bracing, end bracing, main bracing, knee bracing and deadman bracing
- advanced lifting techniques include rotation (turning panel from one plane to another), standard lift from a truck and lift from flat on ground all to engineer’s specifications.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the
RANGE STATEMENT

and may include:

- assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - working at heights
  - work site visitors and the public
  - working in confined spaces
  - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment:

- include:
  - air winches
  - chain blocks
  - chain winches
  - come alongs
  - drifts
  - eye bolts
  - hammers
  - hand operated creeper winches
  - jacks
  - podgers spanners
  - pulley blocks
RANGE STATEMENT

- shackles
- shifting spanners
- sledge hammers
- spirit levels and automatic levels
- plumbing/levelling equipment
- tape measures
- trolleys
- turn buckles
- wedges
- wrenches
- may include:
  - angle grinders
  - elevated work platforms
  - explosive power tools
  - hydraulic jacks
  - laser levels
  - lifting clutches and snatch blocks
  - lifting lugs
  - oxy-acetylene equipment
  - pneumatic tools
  - rigging screws
  - skates
  - skids
  - water levelling equipment
  - winches and rails.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - follow instructions
  - notify completion of work
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to complete work completion procedures
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

**Required knowledge**

Required knowledge for this unit is:
REQUIRED SKILLS AND KNOWLEDGE

- crane erection, climbing and dismantling techniques
- crane types, capabilities, operations and limitations
- designs and functions of lifting equipment
- documentation requirements
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- relevant Acts, regulations and codes of practice
- rigging equipment and techniques
- signalling methods and communications
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- fully erect and rig one hammerhead tower crane and one luffing boom tower crane (including a jib for each) to manufacturer and engineer's specifications
- complete the raising of one hammerhead tower crane and one luffing boom tower crane by installing at least two extra sections for each.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
EVIDENCE GUIDE

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and
EVIDENCE GUIDE

Separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- All assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

• work schedules, plans and specifications.
• planning and preparation includes work site inspection, equipment defect identification, assessment of conditions and hazards and determination of work requirements
• calculations include load charts, fleet angles, diverter sheaves, lead loads, head loads, load angle factors, multiple fall, load share, load share distribution, pre-cast compliance charts and safe working loads
• sling types include chain, flexible steel wire rope, and natural or synthetic fibre
• load slinging methods include straight sling, adjustable sling, reeved sling and inclined sling
• personal cartage systems include personnel boxes and elevated work platforms
• types of cranes to be used in erection include fixed cranes, tower cranes, hydraulic mobile cranes, lattice boom mobile cranes, slewing cranes
• types of cranes to be erected include hammerhead tower cranes, luffing boom tower cranes and self erecting tower cranes
• crane components to be erected include crane bases, bottom towers, tower sections, climbing frame/transition pieces, tower braces, guys, masts, turntables, machine decks, power packs, main jibs, counter jibs, counter weights, wire ropes, hook and block reeving and connecting bolts.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
• emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
• handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
• hazard control
• hazardous materials and substances, including
**RANGE STATEMENT**

cement and curing agents

- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - working at heights
  - work site visitors and the public
  - working in confined spaces
  - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Tools and equipment:**

- air winches
- chain blocks
- chain winches
- come alongs
- drifts
- eye bolts
- hammers
- hand operated creeper winches
- jacks
- plumbing/levelling equipment
- pneumatic wrenches
- podgers spanners
- pulley blocks
- shackles
- shifting spanners
RANGE STATEMENT

- sledge hammers
- spirit levels and automatic levels
- tape measures
- torque multipliers
- trolleys
- turn buckles
- wedges
- wrenches
- may include:
  - angle grinders
  - elevated work platforms
  - explosive power tools
  - hydraulic jacks
  - laser levels
  - lifting clutches and snatch blocks
  - lifting lugs
  - oxy-acetylene equipment
  - pneumatic tools
  - rigging screws
  - skates
  - skids
  - water levelling equipment
  - winches and rails.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied for the scope of work performed.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Plant, tools and equipment selected to carry out tasks that are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied. |
| 2. Receive, sort and distribute roof tiling materials. | 2.1. Roof tiling products, materials and components are identified and checked for conformity to material schedule, plans, quality requirements and specifications on delivery to site.  
2.2. Handling characteristics of roof tiling material and components are identified and safe and effective handling techniques are applied in accordance with safe work method statements and workplace procedures.  
2.3. Fall safety devices are installed to roof perimeter and handled in accordance with regulatory and workplace requirements.  
2.4. Elevator is handled, assembled and erected at job location to manufacturer specifications and workplace requirements.  
2.5. Roof surface sarking and batten materials are handled and loaded onto roof and positioned ready for installation in accordance with specified tile and job specifications.  
2.6. Roof tiling material and components are sorted to suit material type and size, and stacked for ease of identification and retrieval for task sequence.  
2.7. Roof tiling material and components are transferred, loaded onto roof, supported and evenly distributed. |
| 3. Handle and remove | 3.1. Materials are handled safely and effectively |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
surplus material from roof. | according to material safety data sheets (MSDS) and regulatory authorities’ requirements.

3.2. Hazardous material is identified for separate handling by authorised personnel.

3.3. Surplus roof tiling material and components are loaded and transferred from roof to ground.

3.4. Materials are stored safely and effectively according to MSDS and requirements of regulatory authorities.

3.5. Roof, guttering and downpipes are cleared free of waste and surplus material.

4. **Clean up**

4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
REQUIRED SKILLS AND KNOWLEDGE

- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and applications of roof tiling materials
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- materials storage and environmentally friendly waste management
- MSDS
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- quality requirements
- roof construction systems and structures and tiling considerations
- roof tiling materials handling and disposal techniques and procedures
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice
EVIDENCE GUIDE

- applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, transfer sufficient materials to sark, batten and tile 45 square metres of roof from ground level to the roof working area, greater than 1.8m high; relocate the above materials from the work area to ground level, position a bucket and dispose of waste material from a typical tiling task, ensuring:
  - correct identification of requirement and sorting and distributing roof tiling material
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with
EVIDENCE GUIDE

disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be
EVIDENCE GUIDE

obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to handling roof tiling materials
- relevant Australian standards
- safe work procedures relating to handling roof tiling materials
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Scope of work:

- includes receiving, handling, sorting and loading roof tiling products in support of a tiling job; and removing surplus materials from the roof and disposing of waste materials
- waste materials include banding straps, packing pieces, broken or damaged goods; and cardboard, plastic, paper and surplus material
- specifications include tile colour, tile profile, type of bond, nailing sequence and wind
RANGE STATEMENT

- category
  - tiles may be interlocking (terracotta) or non-interlocking (concrete) and conform to the requirements of relevant Australian Standards
  - pointing material may be flexible pointing material or its equivalent.
  - emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
  - handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
  - hazard control
  - hazardous materials and substances, including cement and curing agents
  - organisational first aid
  - PPE prescribed under legislation, regulations and workplace policies and practices
  - safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
    - earth leakage boxes
    - lighting
    - power cables, including overhead service trays, cables and conduits
    - restricted access barriers
    - surrounding structures
    - traffic control
    - trip hazards
    - working at heights
    - work site visitors and the public
    - working in proximity to others
    - use of firefighting equipment
    - use of tools and equipment
    - workplace environmental requirements and safety.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

Tools and equipment:
- include:
  - air compressors and hoses
  - bedding frames
  - blowers
RANGE STATEMENT

- brooms
- buckets
- calculators
- chalk lines
- chisels
- chutes
- concrete mixers
- elevators
- eyelets
- gutter protectors
- hammers
- hand saws
- hoppers high pressure
- ladders
- measuring tapes and rules
- nail bags
- nail guns
- pincers
- power drills
- power leads
- power saws
- safety harness and static lines
- safety rails
- shovels
- signage and barricades
- squares
- string lines
- tile cutters
- trowels
- water cleaners
- may include:
  - blocks
  - breaks or cutting irons
  - elevated work platforms
  - guillotines
  - rippers
  - scaffolds
  - slate cutters
RANGE STATEMENT

- slate reefers
- slater's hammers
- slating knives
- small compressors
- small petrol or diesel engines.

Environmental requirements include:

- clean-up management
- dust and noise
- stormwater management
- vibration
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Materials:

- include:
  - adhesives
  - concrete and terracotta tiles
  - fastenings and other mechanical fixings
  - flashings
  - mortar
  - sarking materials
  - timber and metal battens
- may include:
  - flexible pointing material
  - lead
  - shingles
  - slate
  - other hand manufactured products.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and applications of roof tiling materials
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- measuring and marking
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- techniques and procedures for using roof tiling tools and equipment
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, follow work instructions, operating procedures and inspection practices to use the listed roof tiling tools and equipment for their appropriate application, ensuring:
  - correct selection and use of appropriate processes, tools and equipment
  - no damage to materials, tools or equipment
  - completion of all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.
EVIDENCE GUIDE

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
EVIDENCE GUIDE

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

4.2. Roof tiles are spread, cut, secured and installed to manufacturer specifications.
4.3. Roof tiles are bedded using correct mortar mix, maintaining alignment.
4.4. Roof tiles are pointed with mortar to a flush, smooth finish in accordance with job specifications and are installed to manufacturer specifications.

5. Clean up.
5.1. Roof, guttering and downpipes are cleared free of waste and surplus material.
5.2. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
5.3. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to complete logbooks, site records and relevant work completion procedures
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
REQUIRED SKILLS AND KNOWLEDGE

- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and applications of roof tiling materials
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- measuring and marking
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- roof construction systems and structures and tiling considerations
- roof tiling techniques and procedures
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, tile 45 square metres of a roof frame, incorporating a 1.5m hip, a 1.5m valley, a 1.5m gable and a 1.5m top ridge, including the appropriate sarking, battens, tile cutting, bedding and pointing, ensuring:
  - correct identification of requirement and installation and finishing of the tiles
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory
EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured
EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

1.1. Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to tiling a regular roof
RANGE STATEMENT

- relevant Australian standards
- safe work procedures relating to tiling a regular roof
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

1.2. **Scope of work:**
- includes preparing a regular roof for tiling by sarking and battening; and fixing and finishing tiles, including their installation, bedding and pointing
- regular roofs include gable, hip, hip and valley, pitch roofs, skillion, Dutch gable and layback gable
- specifications include tile colour, tile profile, type of bond, nailing sequence and wind category
- tiles may be interlocking or non-interlocking and conform to Australian standards
- types of terracotta tiles include Marseille, modern French, Swiss, Spanish and French
- types of concrete tiles include Elebane, Villa, Centurian, Chateau and shingle (concrete)
- pointing material may be mortar, flexible pointing material or its equivalent.

1.3. **Safety (OHS)** is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
RANGE STATEMENT

- power cables, including overhead service trays, cables and conduits
- restricted access barriers
- surrounding structures
- traffic control
- trip hazards
- working at heights
- working in proximity to others, work site visitors and the public
- working safely on roofs
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

1.4. Tools and equipment:
- include:
  - air compressors and hoses
  - bedding frames
  - blowers
  - brooms
  - buckets
  - calculators
  - chalk lines
  - chisels
  - concrete mixers
  - elevators
  - fall safety devices
  - gutter protectors
  - hammers
  - hand saws
  - high pressure water cleaners
  - ladders
  - measuring tapes and rules
  - nail bags
  - nail guns
  - pinchers
  - power drills
  - power leads
  - power saws
RANGE STATEMENT

- shovels
- squares
- string lines
- tile cutters
- trowels
- may include:
  - blocks
  - breaks or cutting irons
  - guillotines
  - knives
  - planes
  - rippers
  - scaffolds
  - slate cutters
  - slate reefers
  - slater's hammers
  - slating knives
  - small compressors
  - small petrol or diesel engines
  - tin snips.

1.5. Materials:

- include:
  - adhesives
  - concrete and terracotta tiles
  - fastenings and other mechanical fixings
  - flashings
  - mortar
  - sarking materials
  - timber and metal battens
- may include:
  - flexible pointing materials
  - lead
  - shingles
  - slate
  - other hand manufactured products.

1.6. Quality requirements
include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.
RANGE STATEMENT

1.7. **Environmental requirements** include:
- clean-up management
- dust and noise
- stormwater management
- vibration
- waste management.

1.8. **Statutory and regulatory authorities** include:
- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

</table>
| 4. Tile roof openings and lay back surfaces and/or facades. | 4.1. Opening surrounds are checked for soakers and flashings, and prepared for tiles.  
4.2. Surrounds and weatherproofing are tiled to job specifications.  
4.3. Tiles are spread and secured to steep and vertical surfaces, by individual tile fixing to specifications. |
| 5. Clean up. | 5.1. Roof, guttering and downpipes are cleared free of waste and surplus material.  
5.2. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.  
5.3. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices. |

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to complete logbooks, site records and relevant work completion procedures
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
REQUIRED SKILLS AND KNOWLEDGE

- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and applications of roof tiling materials
- general construction terminology
- irregular roofs and tiling considerations
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- measuring and marking
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- roof construction systems and structures
- roof tiling techniques and procedures
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, tile 45 square metres of an irregular roof frame of any type, incorporating a 1.5m hip, a 1.5m valley, a 1.5m gable and a 1.5m top ridge, including the appropriate sarking, battens, tile cutting, bedding and pointing, ensuring:
  - correct identification of requirement and installation and finishing of the tiles
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.
EVIDENCE GUIDE

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
EVIDENCE GUIDE

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements
RANGE STATEMENT

pertaining to tiling an irregular roof
- relevant Australian standards
- safe work procedures relating to tiling an irregular roof
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Scope of work:

includes preparation for tiling an irregular roof by sarking and battens and the fixing and finishing of tiles, including their installation, bedding and pointing

irregular roofs include roofs constructed to irregular shaped plans where corners are not right angled and include Dutch hip, turrets, spires, unequal pitch surfaces and Cape Cod, mansard, belcast, pyramid, bed and point valleys, and steel framed roof trusses

openings in irregular roofs include chimneys, roof ventilators, cupolas, dormer windows, two storey inserts, skylights, pipes and flues

specifications include tile colour, tile profile, type of bond, nailing sequence and wind category

.tiles may be interlocking (terracotta) or non-interlocking (concrete) and conform to the requirements of relevant Australian Standards

types of terracotta tiles include Marseille, modern French, Swiss, Spanish, Roman and new French

types of concrete tiles include Elebane, Villa, Centurian, Chateau and shingle (concrete)

pointing material may be flexible pointing material or its equivalent.

emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation

handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor

hazard control

hazardous materials and substances, including

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
RANGE STATEMENT

cement and curing agents

- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - working at heights
  - work site visitors and the public
  - working in proximity to others
  - working safely on roofs
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment:

- include:
  - air compressors and hoses
  - blowers
  - brooms
  - buckets
  - calculators
  - chalk lines
  - chisels
  - concrete mixers
  - elevators
  - fall safety devices
  - gutter protectors
  - hammers
  - hand saws
  - high pressure water cleaners
  - ladders
RANGE STATEMENT

- measuring tapes and rules
- nail bags
- nail guns
- pincers
- power drills
- power leads
- power saws
- shovels
- squares
- string lines
- tile cutters
- trowels
- may include:
  - blocks
  - breaks or cutting irons
  - guillotines
  - rippers
  - scaffolds
  - slate cutters
  - slate reefers
  - slater's hammers
  - slating knives
  - small compressors
  - small petrol or diesel engines.

Materials:

- include:
  - adhesives
  - concrete and terracotta tiles
  - fastenings and other mechanical fixings
  - flashings
  - mortar
  - sarking materials
  - timber and metal battens
- may include:
  - flexible pointing material
  - lead
  - shingles
  - slate
  - other hand manufactured products.
RANGE STATEMENT

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

**Environmental requirements** include:
- clean-up management
- dust and noise
- stormwater management
- vibration
- waste management.

**Statutory and regulatory authorities** include:
- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

### Unit Sector(s)

### Functional area

| Functional area |  |
CPCCRT3003B Repair and replace valleys, valley irons and flashings

Modification History
Photovoltaic (solar) panels added to range statement
Equivalent to CPCCRT3003A

Unit Descriptor
This unit of competency specifies the outcomes required to repair and replace valley roof sections and flashings to different types and styles of tiled roof structures. It includes the preparation, set out, repair, replacement and pointing of tiles to valley sections of roof structures.

Application of the Unit
This unit supports the attainment of skills and knowledge to repair and replace valley roof sections, including flashings, which includes working with others and as a member of a team.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare. 1.1 Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.

1.2 Safety (OHS) requirements are followed in accordance with safety plans and policies.

1.3 Signage and barricade requirements are identified and implemented.

1.4 Plant, tools and equipment selected to carry out tasks that are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.

1.5 Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.

1.6 Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.

1.7 Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.

2 Prepare valley section for repair. 2.1 Damaged area is identified and located in accordance with plans and specifications.

2.2 Fall arrest system is installed to roof perimeter in
accordance with regulatory and workplace requirements.

2.3 Tiles to be repaired or replaced are identified from a removed sample.

2.4 Damaged tiles are removed to ensure minimum disturbance to remaining roof tiles.

2.5 Pointing or mortar is removed ensuring no damage to roof tiles.

2.6 Damaged area is left clean and free of loose waste.

2.7 Roof structure valleys and flashing installations are checked for soundness and adequacy according to specifications and manufacturer recommendations.

3 Repair valley sections.

3.1 Damaged structural components of valley section of roof are disassembled and repaired or replaced in accordance with job specifications and manufacturer recommendations.

3.2 Roof tie down fixings are replaced or installed to roof structure in accordance with job specifications and manufacturer recommendations.

3.3 Replacement valley flashings are fabricated and installed in accordance with job specifications and manufacturer recommendations.

3.4 Work area and material surface are cleaned free of debris and waste materials in accordance with workplace procedures.

3.5 Replacement and recycled roof tiles are retained and sorted to ensure conformity to requirements in matching original roof tiles to specification.

3.6 Loose mortar is removed from roof tile surface and mortar joints are struck to match existing or specified colour of roof tiles.

4 Replace roof tiles.

4.1 Roof tiles are examined individually to ensure conformity to requirements in matching original tiles.

4.2 Mortar is mixed to required composition to match original specifications.
4.3 Roof tiles are laid to maintain conformity to original
gauge and alignment, while maintaining bond to
specifications.

4.4 Roof tiles are laid to produce designed features in
accordance with original design and specifications.

5.1 Pointing material is prepared and distributed for use to
design specifications.

5.2 Pointing material is applied to ridge tile joints to
specification.

5.3 Joints are pointed to produce matching finish to existing
surrounds, and loose material is removed from roof tile
surface.

6.1 Work area is cleared and materials disposed of, reused
or recycled in accordance with legislation, regulations,
codes of practice and job specification.

6.2 Plant, tools and equipment are cleaned, checked,
maintained and stored in accordance with manufacturer
recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

communication skills to:
- determine requirements
- follow instructions
- read and interpret:
  - documentation from a variety of sources
  - drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and applications of materials used in repairing tiled roof valleys, valley irons and flashings
- general construction terminology
- installation of roof battens, sarking and flashing
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- measuring and marking
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
• processes for the calculation of material requirements
• quality requirements
• roof construction systems and structures and tiling considerations
• techniques and procedures for repairing tiled roof valleys, valley irons and flashings
• working on roof structures
• workplace and equipment safety requirements.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

• locate, interpret and apply of relevant information, standards and specifications
• comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
• comply with organisational policies and procedures, including quality requirements
• safely and effectively use tools, plant and equipment
• communicate and work effectively and safely with others
• as a minimum, remove and replace 1.5 lineal metres of a tiled roof and damaged roof valley iron, ensuring:
  • correct identification of requirement and completion of repairs and replacement
  • correct selection and use of appropriate processes, tools and equipment
• completing all work to specification
• compliance with regulations, standards and organisational quality procedures and processes.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace

• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge

• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

• diagrams or sketches
• instructions issued by authorised organisational or external personnel
• manufacturer specifications and instructions, where specified
• MSDS
• memos
• regulatory and legislative requirements pertaining
to repairing and replacing valleys, valley irons and flashings
- relevant Australian standards
- safe work procedures relating to repairing and replacing valleys, valley irons and flashings
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Scope of work:**

- includes repairing or replacing valley sections and valley irons, replacing tiles and repointing a repaired roof
- specifications include tile colour, tile profile, type of bond, nailing sequence and wind category
- tiles may be interlocking (terracotta) or non-interlocking (concrete) and conform to standards
- pointing material may be flexible pointing material or its equivalent.

**Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:**

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - photovoltaic (solar) panels
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
• surrounding structures
• traffic control
• trip hazards
• working at heights
• work site visitors and the public
• working in proximity to others
• working safely on roofs
• use of firefighting equipment
• use of tools and equipment
• workplace environmental requirements and safety.

Tools and equipment:

• include:
  • air compressors and hoses
  • bedding frames
  • blowers
  • brooms
  • buckets
  • calculators
  • chalk lines
  • chisels
  • concrete mixers
  • elevators
  • fall safety devices
  • gutter protectors
  • hammers
  • hand saws
  • high pressure water cleaners
  • ladders
  • measuring tapes and rules
  • nail bags
  • nail guns
  • pincers
  • power drills
  • power leads
  • power saws
  • shovels
  • squares
  • string lines
  • tile cutters
- trowels
- may include:
  - blocks
  - breaks or cutting irons
  - guillotines
  - rippers
  - scaffolds
  - slate cutters
  - slate reefers
  - slater’s hammers
  - slating knives
  - small compressors
  - small petrol or diesel engines.

**Materials:**

- include:
  - adhesives
  - concrete and terracotta tiles
  - fastenings and other mechanical fixings
  - flashings
  - mortar
  - sarking materials
  - timber and metal battens
- may include:
  - flexible pointing material
  - lead
  - shingles
  - slate
  - other hand manufactured products.

**Quality requirements** include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

**Environmental requirements** include:

- clean-up management
- dust and noise
- stormwater management
- vibration
- waste management.
Statutory and regulatory authorities include:

- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

CPCCRT3004B Repair and renovate tile roofs

Modification History
Photovoltaic (solar) panels added to range statement
Equivalent to CPCCRT3004A

Unit Descriptor
This unit of competency specifies the outcomes required to repair and renovate roof tiles to different roof structures.
It includes the preparation for and replacement and fixing of tiles to the roof.

Application of the Unit
This unit supports the attainment of skills and knowledge to repair and renovate a range of different roof structures, which includes working with others and as a member of a team.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Plan and prepare.  
1.1 Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.

1.2 Safety (OHS) requirements are followed in accordance with safety plans and policies.

1.3 Signage and barricade requirements are identified and implemented.

1.4 Plant, tools and equipment selected to carry out tasks that are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.

1.5 Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.

1.6 Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.

1.7 Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.

2 Prepare roof area.  
2.1 Damaged area is identified and located in accordance with job drawings and specifications.

2.2 Fall arrest system is installed in accordance with regulatory and workplace procedures.

2.3 Roofing materials and building component parts are safely and effectively handled using appropriate material handling techniques.

2.4 Damaged tiles are removed to ensure minimum disturbance to remaining roof tiles.

2.5 Pointing or mortar to be replaced is removed ensuring no damage to roof tiles.
2.6 Area to be repaired is left clean and free of loose waste.

2.7 Roof battens, sarking, boarding and flashing installations are checked for soundness and adequacy and replaced in accordance with job specifications.

3 Replace roof tiles. 3.1 Roof tiles are individually examined to ensure conformity to original roof tiles.

3.2 Mortar is mixed to required composition and job specifications.

3.3 Roof tiles are laid to maintain conformity to gauge, level alignment and plumb, while maintaining bond to specifications.

3.4 Roof tiles are laid to produce design features in accordance with original design and specifications.

3.5 Mortar joints are struck to match existing colour and loose mortar is removed from roof tile surface.

4 Replace pointing material. 4.1 Pointing material is mixed to specifications.

4.2 Pointing material is applied to ridge tile joints to specification.

4.3 Joints are pointed to produce matching finish to existing surrounds and loose material is removed from roof tile surface.

5 Clean up. 5.1 Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

5.2 Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - numeracy skills to apply measurements and calculations
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and applications of roof tiling materials
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- roof construction systems and structures and tiling considerations
• roof tiling techniques and procedures and the process of repairing/renovating tiled roofs
• workplace and equipment safety requirements.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:
• locate, interpret and apply of relevant information, standards and specifications
• comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
• comply with organisational policies and procedures, including quality requirements
• safely and effectively use tools, plant and equipment
• communicate and work effectively and safely with others
• as a minimum, replace approximately 1 square metre of damaged tiles in 5 square metre of a roof frame, including appropriate tile cutting, bedding and pointing, ensuring:
  • correct identification of requirement and installation and finishing of replacement tiles
  • correct selection and use of appropriate processes, tools and equipment
  • completing all work to specification.
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a
period of time reflecting the scope of the role and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to repair and restoration of a tiled roof
- relevant Australian standards
- safe work procedures relating to repair and restoration of a tiled roof
- signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

Scope of work:

• includes replacing damaged roof tiles, including the preparation of the area, and the matching, installation and pointing of the replacement tiles
• specifications include tile colour, tile profile, type of bond, nailing sequence and wind category
• tiles may be interlocking or non-interlocking
• types of terracotta tiles include Marseille, modern French, Swiss, Spanish and French
• types of concrete tiles include Elebane, Villa, Centurian, Chateau and shingle (concrete)
• pointing material may be flexible pointing material or its equivalent.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

• emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
• handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
• hazard control
• hazardous materials and substances, including cement and curing agents
• organisational first aid
• PPE prescribed under legislation, regulations and workplace policies and practices
• safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  • earth leakage boxes
  • lighting
  • photovoltaic (solar) panels
  • power cables, including overhead service trays, cables and conduits
  • restricted access barriers
  • surrounding structures
  • traffic control
  • trip hazards
  • working at heights
  • work site visitors and the public
- working in proximity to others
- working safely on roofs
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Tools and equipment:**

- include:
  - air compressors and hoses
  - bedding frames
  - blowers
  - brooms
  - buckets
  - calculators
  - chalk lines
  - chisels
  - concrete mixers
  - elevators
  - fall safety devices
  - gutter protectors
  - hammers
  - hand saws
  - high pressure water cleaners
  - ladders
  - measuring tapes and rules
  - nail bags
  - nail guns
  - pincers
  - power drills
  - power leads
  - power saws
  - shovels
  - squares
  - string lines
  - tile cutters
  - trowels
- may include:
  - scaffolds
  - small compressors
  - small petrol or diesel engines.
Materials include:

- adhesives
- concrete and terracotta tiles
- fastenings and other mechanical fixings
- flashings
- mortar
- sarking materials
- timber and metal battens.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- stormwater management
- vibration
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

CPCCRT3005B Slate a roof

Modification History
Photovoltaic (solar) panels added to range statement
Equivalent to CPCCRT3005A

Unit Descriptor
This unit of competency specifies the outcomes required to install slate to a conventional hip and valley roof.
It includes preparing for, setting out and installing slate to a roof.

Application of the Unit
This unit supports the attainment of skills and knowledge to safely slate a hip and valley roof, which includes working with others and as a member of a team.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Plan and prepare.  

1.1 Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.

1.2 Safety (OHS) requirements are followed in accordance with safety plans and policies.

1.3 Signage and barricade requirements are identified and implemented.

1.4 Plant, tools and equipment selected to carry out tasks that are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.

1.5 Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.

1.6 Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.

1.7 Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.

2 Prepare roof surface.  

2.1 Fall arrest system is installed to roof perimeter by regulatory and workplace requirements.

2.2 Elevator is assembled and used in accordance with manufacturer instructions and workplace procedures.

2.3 Roof surface is set out, sarked, boarded and battened as required by job specifications.

2.4 Roof surface and structure are checked for stability and safe access to roof for tile installation.

2.5 Tiles are loaded onto roof, supported and evenly distributed.
3 Prepare slate.

3.1 Slate is graded, marked and holed to alignment requirements.

3.2 Slate is loaded on to roof, supported and evenly distributed.

4 Lay and secure slate.

4.1 Slate is laid and secured to designed layout of gauge, bond and line.

4.2 Ridges and hips are finished in accordance with placement of slate to specifications.

4.3 Hip covering is installed, measured, prepared, fitted and secured to specifications.

4.4 Roof and guttering are cleared free of waste and surplus material.

5 Clean up.

5.1 Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

5.2 Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and applications of slate and slating materials
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- measuring and marking
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
• roof construction systems and structures and slating considerations
• slating techniques and procedures
• workplace and equipment safety requirements.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, slate 45 square metres of a roof frame, incorporating a 1.5m hip, a 1.5m valley, a 1.5m gable and a 1.5m top ridge, including the appropriate sarking, boarding, battening, bedding and pointing, ensuring:
  - correct identification of requirement and installation and finishing of the slate
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or
Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on
competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

---

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

*Information* includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to slating a roof
- relevant Australian standards
- safe work procedures relating to slating a roof
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

*Scope of work*:

- includes preparation of a regular roof for slating by sarking, boarding and battening; and laying and securing slate
Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- preparation tasks of ridge and hip covering include marking for length, cutting, folding and drilling holes for securing slate
- safety hazards include steepness of roof, flatness of roof and adequacy of footholds
- hip finishes to slate work may be mitred or covered
- groundwork for slate may be battened and felted (sarked), boarded and felted (sarked), boarded, felted (sarked) and battened and boarded, felted (sarked), counter battened and battened.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - photovoltaic (solar) panels
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - working at heights
  - work site visitors and the public
  - working in proximity to others
  - working safely on roofs
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.
Tools and equipment:

- include:
  - air compressors and hoses
  - blocks
  - blowers
  - breaks or cutting irons
  - brooms
  - buckets
  - calculators
  - chalk lines
  - chisels
  - concrete mixers
  - elevators
  - guillotines
  - gutter protectors
  - hammers
  - hand saws
  - high pressure water cleaners
  - ladders
  - measuring tapes and rules
  - nail bags
  - nail guns
  - pincers
  - power drills
  - power leads
  - power saws
  - rippers
  - safety devices
  - shovels
  - slate cutters
  - slate reefers
  - slater's hammers
  - slating knives
  - squares
  - string lines
  - surface ladders
  - trowels
- may include:
  - scaffolds
  - small compressors
- small petrol or diesel engines.

**Materials** include:
- adhesives
- cats eyes and picket ridge
- fastenings and other mechanical fixings
- finials and saddles
- flashings
- metal ridging
- mortar
- sarking materials
- slate
- terracotta and concrete ridging
- timber and metal battens.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

**Environmental requirements** include:
- clean-up management
- dust and noise
- stormwater management
- vibration
- waste management.

**Statutory and regulatory authorities** include:
- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

CPCCRT3006B Fix shingles to roofs and facades

Modification History
Photovoltaic (solar) panels added to range statement
Equivalent to CPCCRT3006A

Unit Descriptor
This unit of competency specifies the outcomes required to fix timber shingles or shakes to provide a waterproof covering to roofs, walls and facades. It includes preparation for, installation and finishing of the covered surface.

Application of the Unit
This unit supports the attainment of skills and knowledge to safely fix timber shingles and shakes to roofs and walls, which includes working with others and as a member of a team.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Plan and prepare. 1.1 Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.

1.2 Safety (OHS) requirements are followed in accordance with safety plans and policies.

1.3 Signage and barricade requirements are identified and implemented.

1.4 Plant, tools and equipment selected to carry out tasks that are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.

1.5 Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.

1.6 Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.

1.7 Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.

2 Prepare roof face. 2.1 Run-off devices are installed and maintained as appropriate to the task.

2.2 Fall arrest system is installed to roof perimeter by regulatory and workplace requirements.

2.3 Elevator is assembled and operated in accordance with manufacturer instructions and workplace procedures.

2.4 Roof surface is set out, sarked and boarded where required to job specifications.

2.5 Battens are cut, fitted and fixed to line and spacing to shingle manufacturer and job specifications.

2.6 Metal valley sheets are laid and fixed into place by
nailing on edge extremities.

2.7 Protrusions for installation of flashing are prepared with covered roof surface.

3 Install shingles/shakes.

3.1 Shingles/shakes are loaded, supported and evenly distributed on roof.

3.2 Sarking is laid below initial course of shingles/shakes to job specifications.

3.3 Shingles/shakes are fixed in line, with spacing between and guttering overhang to standards and job specifications.

3.4 Subsequent courses are laid with sarking and shingles fixed to standards and job specifications.

3.5 Staggered joints are maintained with overlapping shingles/shakes to job specifications.

3.6 Shingles/shakes are split and cut to form junctions with walls or roof surfaces.

3.7 Valleys are finished to specifications.

3.8 Gable ends are finished to line and specified overhang.

4 Finish hips and ridges.

4.1 Same size shingles/shakes are selected for hips and ridges.

4.2 Edges of shingles/shakes are bevel cut to provide butt joints in capping sections.

4.3 Hips and ridges are covered, fixed and finished to line.

5 Clad walls and facades.

5.1 Method of finishing shingles/shakes on wall or facade is identified from specifications.

5.2 Sheathed surfaces are sheeted and fixed to framework.

5.3 Wall or facade is set out to spacing for battens and exposure of shingles/shakes is specified.

5.4 Sarking and shingles/shakes are fitted according to specified method for fixing.
5.5 Junctions are constructed at corners to specified finishes.

5.6 Flashings are finished to job specifications.

6 Clean up.

6.1 Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

6.2 Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - numeracy skills to apply measurements and calculations
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and applications of shingle/shake materials
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- measuring and marking
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- roof and facade construction systems and structures, and shingling considerations
- roof and facade shingling techniques and procedures
- workplace and equipment safety requirements.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, fix shingles/shakes to 8 square metres of a roof frame, incorporating a 1.5m hip, a 1.5m valley, a 1.5m gable and a 1.5m top ridge, including appropriate sarking, battening and finishing; and fixing shingles/shakes to an external wall of 8 square metres, incorporating an internal corner, including appropriate sarking, battening and finishing, ensuring:
  - correct identification of requirement and installation and finishing of the shingles
• correct selection and use of appropriate processes, tools and equipment
• completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
• an induction procedure and requirement
• realistic tasks or simulated tasks covering the mandatory task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

• diagrams or sketches
• instructions issued by authorised organisational or external personnel
• manufacturer specifications and instructions, where specified
• MSDS
• memos
• regulatory and legislative requirements pertaining to fixing shingles to roofs and facades
• relevant Australian standards
• safe work procedures relating to fixing shingles to roofs and facades
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

Scope of work:

• includes preparation of a roof and a wall for fitting with shingles/shakes by sarking and battens, as well as fixing and finishing shingles/shakes
• shingles/shakes may be terracotta or timber
• timber shingles/shakes may be straight split, taper split or hand split and re-sawn
• groundwork for shingles/shakes on roof surfaces may be battened and sarked, board and sarked, and board, battened and sarked
• types of roof protrusions include chimneys, dormer windows, two storey insert, skylights, pipes and flues, roof ventilators and cupolas
• wall or facade covering method may be single coursing or double coursing
• joining at wall corners includes butted against boards and laced for external, laced with flashing behind for internal, and butted against timber stop for both external and internal.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

• emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
• handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
• hazard control
• hazardous materials and substances, including cement and curing agents
• organisational first aid
• PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - photovoltaic (solar) panels
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - working at heights
  - work site visitors and the public
  - working in proximity to others
  - working safely on roofs
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

**Tools and equipment:**

- include:
  - air compressors and hoses
  - blowers
  - brooms
  - buckets
  - calculators
  - chalk lines
  - chisels
  - concrete mixers
  - cutting blades
  - elevators
  - fall safety devices
  - gutter protectors
  - hammers
  - hand saws
  - high pressure water cleaners
  - ladders
  - measuring tapes and rules
  - nail bags
  - nail guns
- pincers
- power drills
- power leads
- power planers
- power saws
- saw stools
- shovels
- spirit levels
- squares
- string lines
- trowels
- may include:
  - scaffolds
  - small compressors
  - small petrol or diesel engines.

Materials include:
- fastenings and other mechanical fixings
- flashings
- mortar
- sarking materials
- shingles/shakes
- timber and metal battens.

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:
- clean-up management
- dust and noise
- stormwater management
- vibration
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Plant, tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults or concerns regarding quality requirements are rectified or reported prior to commencement.  
1.5. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.6. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied. |
| 2. Handle, sort and stack scaffolding equipment and associated tools. | 2.1. Tools and equipment are safely and effectively used according to manufacturer recommendations and state or territory OHS requirements.  
2.2. Scaffolding equipment is moved to specified location, applying safe manual and mechanical handling techniques.  
2.3. Scaffolding equipment is sorted to suit material type and size, and stacked for ease of identification and retrieval for task sequence and job location in accordance with job specifications.  
2.4. Scaffolding equipment and associated tools are protected against physical, chemical, environmental and water damage and stored clear of access ways, for ease of identification, retrieval and distribution. |
| 3. Prepare for mechanical handling of materials. | 3.1. Scaffolding equipment is stacked/banded for mechanical handling in accordance with the type of material and plant or equipment to be used.  
3.2. Scaffolding equipment is loaded, unloaded, moved or located at specified location assisting the forklift driver, rigger and dogman.  
3.3. Scaffolding equipment and tools are safely handled |
4. Clean up.
   4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
   4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

**Required knowledge**
REQUIRED SKILLS AND KNOWLEDGE

Required knowledge for this unit is:

- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- relevant Acts, regulations and codes of practice
- scaffolding equipment
- scaffolding handling techniques
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
EVIDENCE GUIDE

- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- safely handle scaffolding equipment and associated tools for all mandatory equipment and tools specified in the range statement, following OHS regulations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to

- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete whipping, splicing, tying and inspecting of five fibre ropes in accordance with regulations
- complete planning, erection and dismantling of a modular scaffolding system, in accordance with JSA and safe work method statements and regulations, including a minimum of:
  - five bays with an internal and external return
  - four lifts, including ties
  - ladder and stair access
  - fall and edge protection.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role
EVIDENCE GUIDE

- and the practical requirements of the workplace
- where the assessment is part of a structured learning experience, the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
RANGE STATEMENT

- memos
- regulatory and legislative requirements pertaining to erecting and dismantling modular scaffolding
- relevant Australian standards
- safe work procedures relating to erecting and dismantling modular scaffolding
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Scope of work:

- planning and preparation includes work site inspection, equipment defect identification, assessment of conditions and hazards, and determination of work requirements
- erection of scaffolding is to include placement, sequencing, squaring, levelling, tying to structure, and the reverse for dismantling
- purposes of scaffolding include provision of work platforms, edge protection, access ways, falsework, grandstands and covered walkways
- lifting devices include cantilevered hoists and gin wheels
- establishment of footings includes review of JSA and safe work method statements to determine the bearing capacity of ground or working surfaces
- whipping methods include common, west countryman, American and sail makers
- splicing methods include end splice and eye splice
- types of bends and hitches include clove hitch around a tube, rolling hitch around a tube, single bow line, timber hitch and half hitch around a plank, and sheet bend to another rope
- alteration and repair may be required due to storm damage, accidents, misuse and process changes.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or
RANGE STATEMENT

- mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - working at heights
  - work site visitors and the public
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Tools and equipment:

- adjustable base plates
- bends and hitches
- box spanners
- braces
- bracket scaffolds (tank and formwork)
- cantilevered hoists (materials only with maximum capacity of 500kg)
- couplers and accessories
- fibre ropes
- guard rails
- hammers
- ledgers
RANGE STATEMENT

- mesh guards
- mid rails
- modular and prefabricated scaffolds
- podgers hammers
- prefabricated components
- scaffold belts
- scaffolding planks
- spirit levels
- stairs or ladders
- standards
- steel and aluminium tubes
- tape measures
- torpedo levels
- transoms
- wire nips
- wrenches
- may include:
  - gin wheels
  - safety nets
  - shovels
  - spanners
  - static lines.

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:
- clean-up management
- dust and noise
- vibration
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

### ELEMENT | PERFORMANCE CRITERIA
---|---
1. Plan and prepare. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Plant, tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults or concerns regarding quality requirements are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.  
2. Erect scaffolding. | 2.1. Purpose for scaffolding is confirmed and associated work tasks are identified.  
2.2. Design loading on scaffold and supporting structure is determined using load tables in accordance with appropriate limits, standards and specifications.  
2.3. Site access and egress routes are identified.  
2.4. Scaffolding and components are selected and inspected, and damaged components are isolated, labelled, tagged and rejected.  
2.5. Sole board/base plate is selected in accordance with regulations, legislation, codes of practice and manufacturer specifications.  
2.6. Scaffolding is set out and erected in accordance with regulatory and manufacturer requirements.  
2.7. Fall protection and static lines, where specified, are erected and installed in accordance with regulations and manufacturer specifications.  
2.8. Lifting device is assembled and erected where
ELEMENT | PERFORMANCE CRITERIA
--- | ---
3. Inspect, repair and alter erected scaffolding. | 3.1. Erected tube and coupler scaffolding is inspected for damage, corrosion, wear and compatibility prior to use.  
3.2. Faulty components are isolated, labelled, tagged, rejected or replaced immediately.  
3.3. Current use of scaffolding is checked against original design.  
3.4. Scaffolding stability is inspected and confirmed.  
3.5. Alteration or repair is carried out where specified or where required to ensure regulatory compliance.  
3.6. Inspection log and handover is completed and dated, ready for signing by a certified scaffolder.

4. Dismantle scaffolding. | 4.1. Scaffolding is isolated and appropriately signed and barricaded to ensure safe dismantling.  
4.2. Scaffolding is dismantled using reverse procedures as for erection.

5. Clean up. | 5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.  
5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
REQUIRED SKILLS AND KNOWLEDGE

- drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to complete inspection log and handover
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- general construction terminology
- job safety analysis (JSA) and safe work method statements
- lifting devices
- logbooks
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- relevant Acts, regulations and codes of practice
- scaffolding equipment and techniques
- signalling methods
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete planning, designing, erecting and dismantling tube and coupler intermediate scaffolding, in accordance with JSA and safe work method statements and regulations, including a minimum of:
  - three bays and two lifts with an internal or external return
  - one barrow ramp
  - one spur
  - fall/edge protection.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory
EVIDENCE GUIDE

or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured
EVIDENCE GUIDE

Learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge.

- All assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to erecting and dismantling
RANGE STATEMENT

intermediate scaffolding

- relevant Australian standards
- safe work procedures relating to erecting and dismantling intermediate scaffolding
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- planning and preparation includes work site inspection, equipment defect identification, assessment of conditions and hazards and determination of work requirements
- intermediate scaffolding includes planning, design, erection, alteration and dismantling of clip, tube and fitting scaffolding with mast climbers, cantilevers, barrow ramps, spurs, longitudinal and transverse braces, random planks, put logs and modular scaffolding
- erection of scaffolding includes set out, placement, sequencing, squaring, levelling, tying to structure, securing of planks against uplift or movement and the reverse for dismantling
- purposes of scaffolding include provision of work platforms, edge protection, access ways, falsework and includes grandstands and covered walkways
- lifting devices include mast climbers, cantilevered hoists and gin wheels
- establishment of footings includes review of JSA and safe work method statements to determine bearing capacity of ground or working surfaces
- alteration and repair may be required due to storm damage, accidents, misuse and process changes.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor

Scope of work:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
RANGE STATEMENT

- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - working at heights
  - work site visitors and the public
  - working in confined spaces
  - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Tools and equipment:**

- barrow ramps
- box spanners
- bracket scaffolds (tank and formwork)
- cantilevered hoists (materials only with maximum capacity of 500kg)
- cantilevers
- clips
- couplers and accessories
- gin wheels
- hammers
- ladders
- perimeter safety screens and shutters
- prefabricated components
RANGE STATEMENT

- ropes
- scaffolding planks
- spirit levels
- spurs
- stairs
- steel and aluminium tubes
- tape measures
- tube and fitting scaffolding with mast climbers
- may include:
  - modular scaffolding
  - shovels
  - spanners
  - static lines.

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:
- clean-up management
- dust and noise
- vibration
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Unit Sector(s)

Unit sector: Construction

Functional area

Functional area
CPCCSF2001A Handle steelfixing materials

Modification History

Unit Descriptor

Unit descriptor
This unit of competency specifies the outcomes required to handle, sort and store steelfixing materials.

It includes identification of a range of commonly used materials; planning and preparation for work; safe and effective handling, sorting and storage of steelfixing materials; and completion of clean-up activities.

Application of the Unit

Application of the unit
This unit supports the attainment of skills and knowledge to safely and effectively handle and store a range of steelfixing materials, which includes working with others and as a member of a team.

Licensing/Regulatory Information

Pre-Requisites

Prerequisite units

CPCCOHS2001A    Apply OHS requirements, policies and procedures in the construction industry
Employability Skills Information

Employability skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

#### ELEMENT  PERFORMANCE CRITERIA

1. **Plan and prepare.**

   1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant *information*, confirmed and applied to the *scope of work* performed.

   1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.

   1.3. Signage and barricade requirements are identified and implemented.

   1.4. *Tools and equipment* are selected to carry out tasks consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.

   1.5. *Environmental requirements* are identified for the project in accordance with environmental plans and *statutory and legislative authority* obligations and applied.

2. **Handle, sort and stack materials and components manually.**

   2.1. *Materials* and components are identified and checked for conformity to material schedule, plans, *quality requirements* and specifications.

   2.2. Handling requirements of materials and components are identified and safe and effective handling techniques are applied.

   2.3. Materials and components are sorted to suit material type and size and are stacked for ease of identification and retrieval for task sequence.

   2.4. Materials and components are protected against physical damage and stacked/stored clear of trafficways.

   2.5. Signage and barricades are erected where applicable to isolate stored materials from workplace traffic or access.

   2.6. Dust suppression procedures are used to minimise health risk to work personnel and others.

3. **Handle and remove waste safely.**

   3.1. Waste materials and components are handled correctly and safely according to material safety data sheets (MSDS) and requirements of regulatory authorities.

   3.2. Hazardous material is identified for separate handling in accordance with regulatory requirements.

   3.3. Non-toxic materials are removed using correct procedures.
ELEMENT | PERFORMANCE CRITERIA
--- | ---
4. **Clean up.** | 4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

**Required knowledge**

Required knowledge for this unit is:

- construction and steelfixing terminology
REQUIRED SKILLS AND KNOWLEDGE

- job safety analysis (JSA) and safe work method statements
- materials storage and environmentally friendly waste management
- MSDS
- mechanical lifting techniques
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- site traffic management and storage principles
- steelfixing tools and equipment types, uses and limitations
- systems and techniques for the safe handling of materials
- types, uses, packaging arrangements and handling techniques for steelfixing materials
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- individually, or as a part of a team, handle, sort and store the mandatory steelfixing materials listed in the range statement on a minimum of two occasions at two different sites
- dispose of waste and excess materials according to environmental protection requirements.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
EVIDENCE GUIDE

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and
EVIDENCE GUIDE

- separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to handling steelfixing materials
- relevant Australian standards
- safe work procedures relating to handling
RANGE STATEMENT

Scope of work:

- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

- steelfixing materials include wire ties, ligatures and spacer/spreader assemblies, deformed bars, plain rods, bar chairs, mesh sheets of plain bars and mesh sheets of deformed bars; and include scaffolding components, pipe sections and structural steel sections
- methods of protecting stacked/stored materials include covering, tying or banding, barricades, signs and locking away (hazardous materials)
- dust suppression procedures include spraying with water and covering
- waste material and debris include banding straps, broken or damaged goods, cardboard, plastic, paper and loose materials.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - cutting, grinding and welding equipment
  - lighting
  - power equipment
  - power leads and sources
  - trip hazards
  - work site visitors and the public
RANGE STATEMENT

- working in confined spaces
- working in proximity to others
- working with metals under stress
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Tools and equipment** include:
- angle grinders
- bolt cutters
- general and hand power tools
- measuring tapes and rules
- mesh guillotines
- oxy-acetylene sets and cutting attachments
- reinforcement benders
- tie wire reels
- wire nippers.

**Environmental requirements** include:
- clean-up management
- dust and noise
- stormwater protection
- waste management.

**Statutory and regulatory authorities** include:
- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

**Materials** include:
- labelling
- specialist material handling gloves.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

7.2. Machinery, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - follow instructions
  - read and interpret:
REQUIRED SKILLS AND KNOWLEDGE

- documentation from a variety of sources
- drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- mathematical and numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- steelfixing industry terminology
- systems and techniques for safe handling of materials
- types, characteristics, uses and limitations of:
  - steelfixing hand tools
  - steelfixing power tools
  - steelfixing plant and equipment
  - steelfixing materials
- workplace and equipment safety requirements.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- communicate and work effectively and safely with others
- select, use and maintain the hand and power tools and equipment listed in the range statement
- select, use and provide operator maintenance for the equipment items listed in the range statement.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
EVIDENCE GUIDE

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete
EVIDENCE GUIDE

- confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the use of steelfixing tools and equipment
RANGE STATEMENT

- relevant Australian standards
- safe work procedures relating to steelfixing tools and equipment

- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Scope of work:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- may involve reinforcement for foundations, pits and slabs, columns, walls, stairs, plinths, kerbs, gutters, pathways and hard standings.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - cutting, grinding and welding equipment
  - lighting
  - power equipment
  - power leads and sources
  - trip hazards
  - work site visitors and the public
  - working in confined spaces
  - working in proximity to others
  - working with metals under stress
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Materials:

- include:
  - deformed bars
RANGE STATEMENT

- ligatures and spacer/spreader assemblies
- mesh sheets of deformed bars
- mesh sheets of plain bars
- plain rods
- wire ties
- may include:
  - pipe sections
  - scaffolding components
  - structural steel sections.

Environmental requirements include:
- clean-up management
- dust and noise
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Tools and equipment:
- include:
  - bolt cutters
  - wire nippers
  - tie wire reels
  - angle grinders
  - measuring tapes and rules
  - mesh guillotines
  - cutting attachments
- may include:
  - general and hand power tools
  - generators for angle grinders
  - reinforcement benders
  - welding sets.

Unit Sector(s)

### Required Skills and Knowledge

#### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
REQUIRED SKILLS AND KNOWLEDGE

- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- mathematical and numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction and steelfixing terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- oxy acetylene and LPG heating and cutting equipment set-up and operating techniques
- oxy acetylene and LPG heating and cutting equipment types, characteristics, uses and limitations
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- types and properties of steelfixing materials
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- use both oxy-acetylene and LPG systems to cut to specification a range of bars up to and including 36mm
- heat and bend a minimum of three bars to specification including at least one 36mm bar.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the
EVIDENCE GUIDE

mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at
EVIDENCE GUIDE

- the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
  - all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to cut and bend materials using oxy/LPG equipment
- relevant Australian standards
- safe work procedures relating to cut and bend materials using oxy/LPG equipment
RANGE STATEMENT

- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Scope of work:

- cutting of steel includes cutting up of waste for salvage, cutting reinforcement steel and cutting holes in plate
- bending includes reinforcement steel
- all work is to conform to the requirements of relevant Australian standards.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - cutting, grinding and welding equipment
  - lighting
  - power equipment
  - power leads and sources
  - trip hazards
  - work site visitors and the public
  - working in confined spaces
  - working in proximity to others
  - working with metals under stress
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Equipment includes:

- cylinders
- regulators
RANGE STATEMENT

- gas tubing
- cutting blowpipes
- flint lighters
- measuring tapes and rules
- clamps and support stands.

Materials:
- cutting consumables
- deformed bars
- mesh sheets of deformed bars
- mesh sheets of plain bars
- plain rods
- pipe sections
- scaffolding components
- structural steel sections.

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:
- clean-up management
- dust and noise
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to arc welding of reinforcement steel
- relevant Australian standards
- safe work procedures relating to arc welding of reinforcement steel
- signage
- verbal, written and graphical instructions
RANGE STATEMENT

Scope of work:

- work bulletins
- work schedules, plans and specifications.
- welding is to be conducted using MMAW equipment
- reinforcing material to be welded includes deformed bars, plain rods, mesh sheets of plain bars and mesh sheets of deformed bars
- welding is to conform to relevant Australian standard.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - cutting, grinding and welding equipment
  - lighting
  - power equipment
  - power leads and sources
  - trip hazards
  - work site visitors and the public
  - working in confined spaces
  - working in proximity to others
  - working with metals under stress
  - use of firefighting equipment
  - use of tools and equipment
- workplace environmental requirements and safety.

Tools and welding equipment include:

- angle grinders
- bolt cutters
- measuring tapes and rules
RANGE STATEMENT

- mesh guillotine
- reinforcement benders
- tie wire reels
- wire nippers.

Materials:

- bar chairs
- deformed bars
- ligatures and spacer/spreader assemblies
- mesh sheets of deformed bars
- mesh sheets of plain bars
- plain rods
- welding consumables
- wire ties
- may include:
  - pipe sections
  - scaffolding components
  - structural steel sections.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Unit Sector(s)

Unit sector: Construction

Functional area

Functional area
CPCCSF2006A Machine cut reinforcement materials

Modification History
Not Applicable

Unit Descriptor

Unit descriptor
This unit of competency specifies the outcomes required to machine cut reinforcement material components that form part of the construction process. It includes preparation and planning for the work, set up of the machine, cutting of the reinforcing materials and completion of clean-up activities.

Application of the Unit

Application of the unit
This unit supports the attainment of skills and knowledge to cut reinforcement materials with machine cutting equipment for a construction project, which includes working with others and as a member of a team.

Licensing/Regulatory Information
Not Applicable

Pre-Requisites

Prerequisite units
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry
Employability Skills Information

Employability skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Cutting machine and tools and equipment are selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied. |
| 2. Set up for cutting. | 2.1. Appropriate cutting method is identified and selected, in relation to the job specification and site conditions.  
2.2. Area is cleaned of flammable material and barriers are erected to contain waste material from cutting process.  
2.3. Secure and safe work environment with stable base and platform is provided for the reinforcing material.  
2.4. Cutting machine is set up for operation in accordance with manufacturer and job specifications. |
| 3. Cut reinforcement steel. | 3.1. Cutting machine is operated safely in accordance with manufacturer recommendations.  
3.2. Reinforcement steel is cut or docked to prescribed lengths and configurations as per job specifications.  
3.3. Fabric reinforcement is cut to ensure allowances for element penetrations.  
3.4. Cut lengths are stacked and bundled for inclusion to reinforcing layout. |
ELEMENT  PERFORMANCE CRITERIA

3.5. Area is cleaned of waste products to allow for next process as required.

4. Clean up.

4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

4.2. Machinery, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- mathematical and numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge
REQUIRED SKILLS AND KNOWLEDGE

Required knowledge for this unit is:

- construction and steelfixing terminology
- job safety analysis (JSA) and safe work method statements
- machine cutting equipment set-up and operating techniques
- machine cutting equipment types, uses and limitations
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- types and properties of steelfixing materials
- workplace and equipment safety requirements.
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safe and effective operational use of machinery, tools, plant and equipment
- communicate and work effectively and safely with others
- machine cut a range of reinforcement steel materials using a guillotine shear/cropper and a minimum of one other mechanical device.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
EVIDENCE GUIDE

- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability
EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to machine cutting of reinforcement materials
- relevant Australian standards
- safe work procedures relating to machine cutting of reinforcement materials
- signage
- verbal, written and graphical instructions
RANGE STATEMENT

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- work bulletins
- work schedules, plans and specifications.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - cutting, grinding and welding equipment
  - lighting
  - power equipment
  - power leads and sources
  - trip hazards
  - work site visitors and the public
  - working in confined spaces
  - working in proximity to others
  - working with metals under stress
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Cutting machines:

- include:
  - angle grinder
  - guillotine shear/cropper
- may include:
  - diamond tipped or carbide tipped radial saw
  - friction disc saw (static bench fold or manual handheld grinding friction disc).

Tools and equipment include:

- angle grinders
RANGE STATEMENT

- bolt cutters
- general hand and power tools
- measuring tapes and rules
- tie wire reels
- wire nippers.

Materials:

- cutting consumables
- deformed bars
- mesh sheets of deformed bars
- mesh sheets of plain bars
- plain rods

- may include:
  - pipe sections
  - scaffolding components
  - structural steel sections.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Unit Sector(s)

Unit sector  Construction

Functional area

Functional area
CPCCSF2007A Splice and anchor using mechanical methods

Modification History
Not Applicable

Unit Descriptor
Unit descriptor
This unit of competency specifies the outcomes required to mechanically splice and anchor for reinforcement in concrete.
It includes planning and preparation for the work, splicing and anchoring and completing clean-up activities.

Application of the Unit
Application of the unit
This unit supports the attainment of skills and knowledge to safely use mechanical methods to splice and anchor materials in a steelfixing project, which includes working with others and as a member of a team.

Licensing/Regulatory Information
Not Applicable

Employability Skills Information

Employability skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Plant, tools and equipment are selected to carry out tasks and are consistent with the requirements of the job, checked for serviceability, and any faults are rectified or reported prior to commencement.  
1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied. |
| 2. Carry out mechanical splicing and anchoring. | 2.1. Reinforcement bars are threaded as detailed in job specifications.  
2.2. Detail of splicing arrangement is configured as per job specifications.  
2.3. Splicing couplers are fitted and secured to reinforcing bar in accordance with manufacturers’ handling instructions and job specifications.  
2.4. Reinforcement is secured in accordance with prescribed tolerances.  
2.5. Coupler connections and reinforcing bars are freed of mill scale and residual debris that may foul connections.  
2.6. Reinforcement is located and anchored as prescribed in job specifications and relevant standards. |
| 3. Check reinforcement prior to use. | 3.1. Location and position of reinforcement and fixing ties to reinforcement are checked for accuracy.  
3.2. Depth of coverage, clearance, spacing and overlap of reinforcement material are checked for conformance with job specifications and relevant standards. |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
4. Clean up. | 4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
4. | 4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.
