- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in
EVIDENCE GUIDE

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Regulatory and organisational requirements include:

- building approval conditions
- contract documents
- engineer reports
- environmental standards
- planning and scheduling
- plans and specifications
- safety management plans
- site consultations
- wage and taxation requirements.

On-site communication includes:

- allocating and managing human resources
- applying communication and interpersonal skills to facilitate dispute prevention and resolution
- communicating with regulatory authorities and ensuring conformity with relevant requirements
- dispersal and scheduling of plant and equipment
- maintaining environmental controls and obligations
- managing expenditure
- participating in on-site meetings
- placing orders for supplies or equipment.
RANGE STATEMENT

Quality control procedure includes:
- checking materials supplied to the site
- comparing materials against specifications
- quality checklists
- regular on-site progress and quality checks
- reviews of plans and specifications with clients.

Project administration processes include:
- contract variations
- defect identification and rectification
- determining project progress
- inspections
- obtaining required certification
- progress payments.

</thead>
</table>
| 1. Apply the laws relating to builder licensing or registration. | 1.1. *Licensing or registration legislation* relevant to the region is researched and identified.  
1.2. Classifications for builders, supervisors and managers are applied. |
| 2. Apply OHS legislation and provisions on site. | 2.1. Main provisions of *OHS legislation* and regulations are researched and identified and local legislative requirements are met.  
2.2. Regulations and codes applicable to on-site construction are identified, applied and monitored.  
2.3. Site safety signage requirements are identified and applied. |
| 3. Apply the codes, Acts, regulations and standards relevant to construction. | 3.1. Current *codes, Acts, regulations and standards* applicable to a particular building and construction project are researched.  
3.2. Construction process is carried out in accordance with codes, Acts, regulations and standards concerning construction, insurance, sustainability, environmental matters and appropriate by-laws. |
| 4. Comply with insurance and regulatory requirements for housing construction. | 4.1. *Insurance cover* is arranged in accordance with legal requirements.  
4.2. Contract law is applied in accordance with common law principles, relevant state or territory laws and regulations, and fair trading legislation. |
| 5. Apply legislation to financial transactions. | 5.1. Payroll systems are set up and administered in compliance with current legislative requirements.  
5.2. GST systems are set up and administered in compliance with current legislation. |
| 6. Meet building contract obligations. | 6.1. Correct form of contract is selected for the project.  
6.2. Contracted work is carried out in accordance with the contractual obligations applicable to both parties.  
6.3. Conditions of the contract, including approvals and financial matters are met. |
| 7. Apply industrial relations policies and obligations relevant to housing construction. | 7.1. Relevant *industrial relations policies and obligations* are researched, identified and applied.  
7.2. Subcontract companies that comply with company policy and obligations under subcontract agreements are identified and contracted.  
7.3. Relevant awards are applied to contracts.  
7.4. Workplace agreements are used in accordance with |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
| company policy.
7.5. Proactive measures are taken to ensure discrimination and harassment are not practised in the workplace.
7.6. Provisions of training agreements are identified and applied.
7.7. Reference material on access to industrial relations or legal information is made available to employees.
8. Apply dispute resolution processes.
8.1. Organisational dispute resolution processes are applied.
8.2. Customer complaints are dealt with according to company policy.
8.3. Disputes are documented and outcomes recorded and maintained.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to research, access and interpret complex documents
- communication skills to:
  - communicate with local or regulatory authorities on matters relating to site conditions or approvals and to negotiate on matters concerning industrial relations by telephone, or face to face
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
  - written skills to communicate by memo, letter, facsimile or email with subcontractors, staff, clients and regulatory authorities
- interpersonal skills relevant to the supervision and monitoring of work processes
- numeracy skills to apply calculations.

Required knowledge

Required knowledge for this unit is:

- building and construction industry contracts
REQUIRED SKILLS AND KNOWLEDGE

- OHS frameworks and obligations under federal, state and territory legislation and regulation
- organisational policies and procedures related to discrimination and harassment
- reasonable understanding of federal, state or territory anti-discrimination and equal employment opportunity legislation
- risk management processes and practices and the planning required to develop plans
- state or territory building and construction codes, standards and government regulations
- workplace safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the preparation of a portfolio of the legislative requirements for one residential and one low rise commercial building and construction project case study. ('Low rise' licensing classification with reference to Class 1 and 10 construction and Classes 2 to 9 with a gross floor area not exceeding 2000 square metres, not including Type A or Type B construction).

The unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- understand appropriate registration, licensing or compliance requirements of state or territory registration authorities
- meet appropriate business registration
EVIDENCE GUIDE

- identify and specify appropriate insurance documentation, citing protection that meets local industry requirements
- identify and specify requirements for compliance with:
  - OHS legislation
  - legislation pertaining to financial transactions, including payment of wages and subcontractor and supplier invoices
  - relevant building and construction codes, Acts, regulations and standards
  - sustainability and environmental legislation
  - industrial relations laws
  - legal obligations of contractual agreements.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and government regulations
- office equipment, including calculators, photocopiers and telephone systems
- technical reference library with current publications on measurement, design, building construction and manufacturer's product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.
EVIDENCE GUIDE

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Licensing or registration legislation** includes state laws such as:

- Builders Registration Act 1939 and the Home Building Contracts Act 1991 in Western Australia

**OHS legislation** includes state laws such as:

- Occupational Health and Safety Act 1983 in New South Wales
- Occupational Health and Safety Act 1984 in Western Australia
- Occupational Health and Safety Act 1985 in Victoria
- Occupational Health and Safety Act 1986 in South Australia
- WorkCover Queensland Act 1996.

**Codes, Acts, regulations and standards** include:

- latest editions of:
  - AS1720 Timber structures
  - AS3600 Concrete structures
  - AS4100 Steel structures
- relevant Australian building and construction standards
- relevant state or territory fair trading Acts and regulations
- relevant state, territory and local authority planning and other approval requirements
- Timber Framing Code of Australia.

**Insurance cover** includes:

- home owner's warranty
- superannuation
- workers' compensation.

**Industrial relations policies and obligations** include:

- federal and state industrial instruments
- federal and state industrial legislation.

</table>
| 1. Apply structural principles when planning the erection or demolition of a structure. | 1.1. Main **structural principles** that apply to the erection or demolition of a **residential low rise** structure are identified.  
1.2. Structural performance of a structure is described in terms of the effect of section properties on various materials.  
1.3. Structural performance characteristics of slabs, floors, beams, columns and retaining walls are explained and applied to the planning of the construction work.  
1.4. Demolition of existing structures is coordinated in accordance with legislative and planning requirements, environmental standards, and safe work practices. |
| 2. Analyse and plan for the structural integrity of Class1 and Class 10 buildings. | 2.1. Relevant **industry professionals** are consulted as required to provide advice regarding the design process and the structural integrity of the proposed Class 1 or Class 10 building.  
2.2. **Project documentation** is collected and analysed to assist in the analysis of plans and specifications.  
2.3. Project documentation is analysed for compliance with BCA requirements for bushfire, high wind, earthquake and alpine environments.  
2.4. New and emerging building technologies are assessed for application to the construction process and their compliance with BCA requirements and Australian standards.  
2.5. Pre-commencement site inspection is conducted to confirm analysis. |
| 3. Plan, coordinate and manage the laying of footings. | 3.1. Footings are set out in accordance with building's plan.  
3.2. Structural integrity of the footings specified in building's plan is assessed for compliance with relevant codes and accepted industry construction principles.  
3.3. **Footings** specified in building's plan are laid and checked for compliance with project documentation.  
3.4. Damp coursing, provision of termite barriers, and other relevant techniques are planned, implemented and checked in accordance with codes, standards and industry practice. |
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 4. Plan, coordinate and manage the laying of floor system. | 4.1. Concrete slab or bearers and joists specified in building's plan are assessed for structural integrity and compliance with relevant codes and accepted industry construction principles.  
4.2. Laying of floor system specified in building's plan is supervised and checked for compliance with project documentation. |
| 5. Plan, coordinate and manage the building of structural and non-structural wall systems. | 5.1. Technical construction principles and performance of materials used in the construction are identified and analysed in the planning of the building and construction project.  
5.2. Application of bracing requirements, tie-downs, tolerances, allowances, and fixing and installation of components are planned, implemented and checked for compliance with relevant Australian standards, codes and manufacturer specifications.  
5.3. Structural timber members are selected for low rise buildings to conform to AS1684 requirements.  
5.4. Processes are put in place and managed to ensure quality of the frame, whether factory pre-cut and pre-nailed, factory pre-cut and assembled on site, or cut and assembled on site.  
5.5. Vapour permeable sarking or a waterproof membrane, relevant to construction method, is attached and checked. |
| 6. Plan, coordinate and manage the building of roof system. | 6.1. Structural integrity of roof system components specified in building's plan is assessed for compliance with relevant codes and accepted industry construction principles.  
6.2. Erection of roof trusses is planned, implemented and checked in accordance with requirements of building plan, type of roof being constructed, relevant codes and accepted industry construction principles.  
6.3. Processes are put in place and managed to ensure quality of the manufactured roof trusses or hand-cut roof system.  
6.4. Roof sarking and cladding are planned and installation is supervised and checked for compliance with codes, standards and industry practice. |
| 7. Plan, coordinate and manage the external wall cladding of structure. | 7.1. Structural performance of cladding to be used for bracing in the frame construction is assessed for compliance with relevant codes, manufacturer specifications and accepted industry construction principles. |
## ELEMENT PERFORMANCE CRITERIA

7.2. Installation of the cladding, as specified in building’s plan, is supervised and checked for compliance with standards and accepted industry construction principles.

7.3. Installation of windows and external doors is supervised to ensure compliance with relevant codes, manufacturer specifications and accepted industry construction principles.

### Required Skills and Knowledge

#### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills for this unit are:

- apply manufacturer specifications and Australian standards and codes
- apply structural principles to a variety of structures within BCA Classes 1 and 10
- communication skills to:
  - consult with industry professionals
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret project documentation
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
  - identify and analyse relevant information
  - select structural members based on project or specification requirements
  - work safely to OHS regulations and site requirements.

#### Required knowledge

Required knowledge for this unit is:

- building and construction industry contracts
- relevant state or territory building and construction codes, standards and government regulations
- underlying mathematics related to structural analysis
- workplace safety requirements.
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the effective application of structural principles and concepts in accordance with the range of variables and application to only one sector of the building and construction industry.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- assess the structural integrity of a variety of structures found on building and construction sites
- apply the structural principles behind the safe erection and demolition of a low rise structure classified within the BCA as Class 1 and 10
- apply technical construction principles to the appropriate selection, integration and building in of construction elements and components
- coordinate, plan, implement and check the building of a low rise structure.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction
EVIDENCE GUIDE

- office
- relevant codes, standards and government regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- technical reference library with current publications on measurement, design, building construction and manufacturers’ product literature
- suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances
EVIDENCE GUIDE

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Structural principles include:

- behaviour of structural materials
- loads and loading
- performance of beams
- performance of columns
- performance of roof trusses
- section properties
- solution of force systems
- wind bracing.

Residential low rise buildings as described within the BCA are:

- Class 1
- Class 10.
RANGE STATEMENT

Industry professionals include:
- architects
- draftspersons
- engineers
- quantity surveyors
- surveyors.

Project documentation includes:
- building approval plans
- contract plans
- designs and specifications
- engineer footing designs and specifications
- original contour survey plan
- registered plans
- retaining walls
- site plans
- soil investigation reports
- structural floor systems, wall systems and roof systems
- tanking designs and specifications
- underpinning, rock anchors and shoring designs and specifications.

Footings include:
- bored pier footings
- columns or stumps
- concrete slab floors
- piers and beams.

Floor system components of the bearers and joists include:
- compressed sheet wet area flooring
- engineered floor joists
- fitted (cut-in) floors
- platform floor construction
- sheet flooring
- tongue and groove flooring.

Materials include:
- cavity brick
- concrete block
- structural steel
- timber.

Type of roof includes:
- box gable
- dual pitch roof
- Dutch gable
- Dutch hip
- gable end
- hip and valley
- north light
RANGE STATEMENT

Cladding used on timber frame constructions includes:
- skillion.
- brick veneer
- coatings over base materials
- colourbond or zincaleum sheeting
- fibre cement or compressed wood panelling
- weatherboards.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- analytical skills and the capacity to foresee potential problems
- apply Australian standards, codes and manufacturer specifications
- apply structural principles to a variety of low rise structures
- construction management and planning techniques
- coordination of the work and advice of internal and external professionals
- communication skills to:
  - consult with industry professionals
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret project documentation
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
- identify and analyse relevant information
- low rise construction building problem solving
- numeracy skills to apply calculations
- select structural members based on project or specification requirements
- work safely to OHS regulations and site requirements.

**Required knowledge**

Required knowledge for this unit is:

- building and construction industry contracts
- new and emerging building technologies, techniques and materials
- relevant state or territory building and construction codes, standards and government regulations
- underlying principles related to structural analysis
- workplace safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the effective application of structural principles and concepts for erection and demolition in accordance with the range of variables and application in a low rise building project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- assess structural integrity of a variety of structures found on building and construction sites
- apply structural principles behind the safe erection and demolition of low rise structures classified within the BCA as Classes 2 to 9 with a gross floor area not exceeding 2000 square metres but not including Type A or Type B construction
- apply technical construction principles to the appropriate selection, integration and building in of construction elements and components
- coordinate, plan, implement and check building of a low rise structure.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.
EVIDENCE GUIDE

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and government regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace.
EVIDENCE GUIDE

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Structural principles** include:

- loads and loading
- section properties
- behaviour of structural materials
- performance of beams
- performance of columns
- performance of roof trusses
- principles of formwork
RANGE STATEMENT

- solution of force systems
- wind bracing.
- Classes 2 to 9
- with a gross floor area not exceeding 2000 square metres, not including Type A or Type B construction.

Low rise commercial buildings as described within the BCA are:

- brick veneer and cladding over timber-framed and lightweight section steel-framed construction
- cavity brick construction
- earth-wall construction
- lightweight concrete construction, such as construction of autoclaved aerated concrete (AAC)
- pole frame construction
- portal frame construction
- post and beam construction
- post and truss construction
- single-leaf (reinforced) masonry construction
- tilt-slab construction.

Materials and their related construction methods may include:

- architects
- draftspersons
- engineers
- quantity surveyors
- surveyors.

Industry professionals include:

- building approval plans
- contract plans
- design and specifications
- engineer's footing design and specifications
- original contour survey plans
- registered plans
- retaining walls and tanking design and specifications
- site plans
- soils investigation reports
- structural floor systems, wall systems and roof systems
- underpinning, rock anchors and shoring design and specifications.

Footing systems include:

- concrete slab floors
- drilled or driven piles
RANGE STATEMENT

- mass concrete piers
- reinforced concrete piers and beams
- screw piles
- waffle pod slabs.

*Structural floor system* includes:
- brick bases
- engineered timber products
- panel systems of concrete and AAC
- suspended and slab-on-ground concrete slab floors
- timber and steel floor construction.

*Structural wall systems* include:
- composite walls featuring tilt-slab, post and beam, pole and truss and portal frame
- earth walls, including rammed earth and mud brick
- framed walls incorporating timber, engineered timber products and lightweight section steel
- masonry walls incorporating cavity brick, single-leaf masonry and lightweight concrete (AAC).

*Wall cladding systems* include:
- boarding
- coatings over base materials
- sheeting
- tilt-slab
- unfired, fired and autoclaved masonry.

*Relevant services* may include:
- ducting for heating and cooling
- electrical, electronic and communication systems
- extractive vacuum and exhaust systems
- passive and active fire detection and prevention systems
- plumbing and drainage
- powered systems for operating doors and windows
- smoke control and containment systems.

*Structural roof system* includes:
- for roof types including:
  - gable including dual pitch
  - hip
  - north light
  - rafter and purlin
  - skillion
- prefabricated and site fabricated trussed roof
RANGE STATEMENT

Roof cladding system includes:

- concrete, clay and metal tiles
- shakes and shingles
- short and long run metal sheeting.

6 Identify non-structural aspects to the specification.

6.1 Key features of products included in the specification are identified, including the design, purpose, aesthetics and cost relationships.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - consult with industry professionals
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - interact effectively by telephone, facsimile, email and in writing with clients, organisational personnel and appropriate local authorities
  - read and interpret:
    - tender documentation
    - other relevant workplace documentation
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
  - written communication skills to produce required documentation
  - identify and analyse relevant information
  - numeracy skills to calculate labour hours and costs and material quantities and costs
  - translation of documented requirements into on-site activities and site and structural features from two-dimensional to three-dimensional formats.

**Required knowledge**

Required knowledge for this unit is:

- building and construction practices
- internal documentation systems
- regulatory approvals processes and timeframes
- relevant state or territory building and construction codes, standards and regulations
- types of building and construction drawings and drawing perspectives
- types of building and construction industry contracts.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by correctly interpreting a range of plans and specifications for activities relating to low rise residential and commercial construction projects.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- read and interpret plans and specifications including identification of key features, levels, contours, sections, service entry points, site features to be removed or retained and other details pertinent to the construction process
- identify the characteristics and features of sites and structures pertinent to a construction project, including:
  - determine correct orientation of structures on site
  - establish location of key on-site features in relation to building or other structures
- identify and incorporate customer variations to agreed plans and specifications
- correctly interpret essential elements and apply these to estimation, planning and supervisory tasks
- effectively communicate specification changes to organisational personnel and confirm variations with the client.
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and government regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- technical reference library with current publications on measurement, design, building construction and manufacturer's product literature
- suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.
Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Types of drawings** include:

- CAD drawings
- construction information
- detailed amendment drawings
- details of:
  - roads and pathways
  - parking areas
  - boundaries and landscaping
- initial sketches
- preliminary and final drawings and plans
- presentation drawings
• service details, such as:
  • wiring
  • piping
  • ducts and waste disposal
• sketch plans
• working drawings.

Aspects of drawings include:
• elevations
• plans
• sections
• views in isometric projection and perspective.

Key features of site plan include:
• access and egress
• contours and slopes
• drainage lines
• easements
• existing dwellings, buildings or other structures
• location and situation
• major geological and topographical features
• paving
• retaining walls
• service connection points
• set backs
• stormwater disposal
• trees and vegetation.

Specification includes:
• levels and survey information
• materials lists
• performance data and material technical data
• schedules of quantities
• stress, load and bearing calculations.

  - other relevant workplace documentation
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- written skills to produce required documentation to company standards
- estimate labour and materials costs from written information
- numeracy skills to calculate labour hours and costs and material quantities and costs
- use appropriate costing software programs.

Required knowledge

Required knowledge for this unit is:

- operations and structure of the organisation’s costing and contracting system
- state or territory building and construction codes, standards and government regulations relevant to the form of building or construction being undertaken
- types of building, construction or civil contracting drawings and specifications
- types, scope and usage of labour through the employee and subcontractor systems.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the preparation of complete tender documentation for a construction contract.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify requirements of selected contracts for tender
- gather detailed information effectively
- check documentation and calculations in short timeframes
- produce documentation that meets the quality standards established by the organisation
- communicate effectively, both verbally and in writing.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation that should normally be available in a building, construction or civil contracting office

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Tender documents include:

- Cost schedules
- Details of specialist resources
- Details of specific terms and conditions to be included and excluded in relation to contracts
- Estimated timeframes
- Human resource details, including known subcontractors
- Materials specifications
- Plans and drawings
- Site layout information.

Risks include:

- Breaches of contract
- Circumstances, such as:
  - Delivery delays that delay project completion
RANGE STATEMENT

- subsequent delays in progress payments
- labour shortages
- weather
- disputes over payments
- exposure through clauses that work against the organisation
- failure to adequately anticipate labour or materials costs
- inappropriate funding levels and funding shortfalls
- industrial disputes through misunderstandings or overt action
- risk of default or non-performance of key players.

Supporting documentation includes:

- artist's impressions
- documentation processes required by building information modelling (BIM)
- organisational information
- product information
- promotional materials
- reports or findings beneficial to the organisation.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
- drawing techniques
REQUIRED SKILLS AND KNOWLEDGE

- interpret and apply relevant standards and codes
- numeracy skills to apply measurements and calculations.

Required knowledge

Required knowledge for this unit is:

- drawing conventions and features, including direction, scale, key, contours, symbols and abbreviations
- requirements of the relevant codes, standards, statutory and authority requirements
- safe work methods.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by creating a set of sketches and drawings for a small work project in the relevant field of expertise.

Measurements of components, sub-assemblies, products, models, equipment, layouts or facilities needed for the preparation of the required drawings and calculations of required dimensions and other drafting details based on the measurements and other relevant information should be made and recorded.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- produce clear and effective drawings and sketches with appropriate notations and labelling
- apply appropriate techniques for making inspections and taking measurements
- make good incursions into the fabric of a building
- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes
- select and use appropriate processes, tools and equipment.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context. Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include access to:

- an appropriate work site
- appropriate documentation and data related to tasks
- scaffolding and fall protection equipment
- tools and equipment relevant to activity process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and
EVIDENCE GUIDE

separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Types of drawings required include:

- floor plan
- land boundaries and footprint of building
- orthographic drawings
- schematic drawings of wiring and pipe work
- sectional views.

Key features to be recorded may include:

- ceiling heights and variations
- doors
- light fittings and power supplies
- services
- wall penetrations
- walls.
RANGE STATEMENT

**OHS requirements** include:
- detailing appropriate installation of scaffolding
- detailing power supplies
- details of all services
- understanding hazards located in the area
- use of personal protective equipment.

**Tools and equipment** include:
- recording devices, including:
  - computer
  - digital camera
  - pen and paper.

**Standard drawing conventions** include:
- standard design symbols common to the building and construction industries.

| 1. Determine specification requirements. | 1.1. Project brief, working drawings, development approval and other relevant documents are examined to identify essential information to be included in the specification.  
1.2. *Standard specifications* are examined to determine suitability for adaptation to the current project.  
1.3. Non-standard requirements are developed and where technical aspects require clarification, advice is sought from specialists. |
| 2. Assess the nature and scope of the work. | 2.1. Site inspection is conducted to establish site layout and preliminary site-work requirements, and site details and features are recorded.  
2.2. Specification includes all relevant details at a level necessary to describe clearly the nature and *scope of the work*, including *prescriptive and performance requirements*.  
2.3. Research is undertaken to establish appropriate schedules, using relevant *data sources*.  
2.4. Details are tabulated and cross-referenced to ensure consistency between the design brief, working drawings and specifications.  
2.5. Details in the specification conform to industry codes of practice, Australian standards and relevant statutory requirements.  
2.6. Information requested from specialists, colleagues and clients is coordinated and added to the specifications where required. |
| 3. Prepare the specification document. | 3.1. Specification clearly identifies the *contractual obligations* and rights of the parties involved.  
3.2. Specification document is complete, checked thoroughly for compliance with requirements and edited.  
3.3. Specification is presented to the client in the required format and timeframe. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- apply numeracy skills to workplace requirements
- attention to detail in preparing documentation
- client service standards
- commonly used document management
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - enable liaison with specialists to seek advice and request information
  - prepare, read and interpret:
    - codes of practice
    - design briefs
    - plans and drawings
    - regulations
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
  - written skills to prepare reports and specifications
  - construction work site teamwork
  - identifying specification requirements
  - identifying documentation requirements for a range of sources
  - product and service analysis
  - research methods and investigation techniques relevant to construction specification preparation.

Required knowledge

Required knowledge for this unit is:

- client requirements
- document control
- documentation requirements for specifications
- organisational policy relating to specifications
- industry codes of practice
- NATSPEC
- relevant Australian standards
- relevant legislation, including contract law and trade practices legislation
- research sources to determine schedules
- schedule of rates
REQUIRED SKILLS AND KNOWLEDGE

- standard specification documents
- types of specification and their use.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the effective preparation of a specification meeting NATSPEC and other relevant standards applicable to a building project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- use a range of research methodologies and tools
- correctly identify and use specifications for the range of work
- apply contractual principles to the specification drafting.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include
EVIDENCE GUIDE

access to documentation such as:

- computer data files
- detailed specifications that address specific components such as mechanical, structural, electrical or other requirements
- documentation requirements arising from BIM
- local, state and commonwealth government documents and registers
- media reports
- NATSPEC or other industry standard specifications
- policy statements
- preliminary, outline or developed specifications
- publications and journals
- statistical summaries
- statutes.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the
EVIDENCE GUIDE

workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Standard specifications include:

- detailed specifications that address specific components such as mechanical, structural, electrical or other requirements
- developed specifications
- documentation requirements arising from building information modelling (BIM)
- NATSPEC or other industry standard
RANGE STATEMENT

Specifications
- preliminary or outline specifications.

Scope of the work includes:
- allowance for the provision of services
- characteristics
- compatibility
- dimensions
- fitout
- lining systems
- location
- patterns
- quantities
- sizes
- surfaces
- type of product or service.

Prescriptive and performance requirements include:
- performance requirements:
  - standards of work
  - work schedules
  - milestones
  - prescriptive requirements:
    - detail relating to materials and quality of work
    - nominated subcontractors
    - provision and costs of site access and facilities
    - quality assurance.

Data sources include:
- computer data files
- local, state and federal government documents and registers
- media reports
- policy statements
- publications and journals
- statistical summaries
- statutes.

Contractual obligations include:
- expected performance levels
- insurance requirements
- OHS issues
- prescriptive requirements
- type of tender.

| 1. Identify and analyse the essential elements, sections and clauses of a business contract. | 1.1. Various types of *building and construction contracts* are identified and the appropriate application of each type is analysed.  
1.2. Legislative requirements relating to building and construction contracts are identified and applied.  
1.3. Essential terms and elements of a valid contract are identified and analysed.  
1.4. Importance of identifying an intention to create legal relations is analysed.  
1.5. Rights and liabilities of parties under a contract are identified and analysed.  
1.6. Common building contract terms and procedures are identified and applied.  
1.7. Circumstances that bring about a breach of contract are identified and analysed. |
| 2. Select an appropriate contract for the works to be undertaken. | 2.1. Contract, appropriate for the type of construction, is accurately selected.  
2.2. *Range of documents* that collectively make up a contract is accurately identified and prepared.  
2.3. Requirements associated with an offer and acceptance of a contract are accurately identified and applied.  
2.4. Capacity of the parties to form a binding agreement in the form of a contract is confirmed.  
2.5. Factors associated with the parties' consent to a contract are identified and applied. |
| 3. Identify and apply the factors involved in the termination of a business contract. | 3.1. Impact and effects of repudiation of a contract by one party are identified and analysed.  
3.2. Agreed definition of acceptance of repudiation by the other party is identified and applied.  
3.3. Definitions of unreasonable or vexatious notice are identified, agreed and applied.  
3.4. Definition of the conditions for completion at the cost of the contractor is identified and applied.  
3.5. Definition of the effect of ousting the contractor from the building or construction site is identified and applied.  
3.6. Definition of abandonment of a contract is identified and applied.  
3.7. Contracts are terminated in accordance with relevant
ELEMENT | PERFORMANCE CRITERIA
---|---
4. Administer the contract. | 4.1. Contract rise and fall amounts are accurately calculated.
 | 4.2. Progress payments due under the contract are accurately processed.
 | 4.3. Applications for extension of time are processed in accordance with company policy and contract conditions.
 | 4.4. Variations to contract are identified, negotiated and documented.
 | 4.5. Action is taken to minimise liquidated damages or penalties nominated in the contract.
 | 4.6. Contracts are administered and contractual disputes resolved in accordance with contract and relevant legislation and regulations.
 | 4.7. Conditions for issuing a final certificate are identified and applied.
5. Finalise a contract. | 5.1. Definition of practical completion of contract is identified and applied.
 | 5.2. Definition of defects liability under a building or construction contract is identified and applied.
 | 5.3. Appropriate certificate is issued upon completion of the contract work.
 | 5.4. Documentation arising from finalisation of a contract is completed and secured for records purposes.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - communicate with clients, subcontractors, colleagues and external parties by phone, facsimile, email or in writing
  - communicate with members of the organisation and external parties, including
REQUIRED SKILLS AND KNOWLEDGE

clients and subcontractors

- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- facilitate drafting detailed responses to queries relating to the finer points of contracts
- read and interpret:
  - complex legal text
  - construction schedules
  - contracts
  - reports
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- written skills to complete workplace documentation, including drafting responses to queries relating to the finer points of contracts
- identify and analyse relevant information
- maintain files
- monitor price variations in construction products and services
- numeracy skills to apply calculations
- use and apply data.

Required knowledge

Required knowledge for this unit is:

- basic understanding of the Australian legal system and its relevance to contracts
- contracts required or supplied by regulatory authorities
- definitions and interpretations commonly applied to contracts
- legal meanings of terms and clauses in building and construction contracts
- relationships between the organisation and its clients
- various contract types and the circumstances they cover.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the selection, development and administration of appropriate contracts that meet organisational and industry standards and relate to residential or commercial projects.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the relevant aspects of contract selection, insertion of appropriate clauses and administration of events arising from contract clauses, including rise and fall and progress payments.

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select right contract for particular project
- select appropriate clauses and conditions within the contract
- administer contract to the standard required by the organisation and according to legal or regulatory requirements that may exist within the state or territory in which work is being done
- determine appropriate measures to be taken in the event of an anomaly in the rendering of the contract.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.
EVIDENCE GUIDE

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and government regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturer’s product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role
EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Building and construction contracts include:
- Australian standard contracts (including the AS2124 and AS4000 series)
- Construction Industry Contract (CIC) suite
- contracts required or supplied by regulatory authorities
- individual organisational contracts
RANGE STATEMENT

- Joint Contracts Committee (JCC) suite
- MBA and HIA contracts
- Simple Building Works (SBW), including series 1 and series 2 (SBW2 Lump Sum).

Range of documents includes:
- equipment, site accommodation and services information
- human resource projections
- materials lists
- plans, drawings and specifications
- project timelines
- schedules.

6.2. Construction arrangements required by contract are finalised to satisfy the project schedule. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

• apply numeracy skills to workplace requirements
• communication skills to:
  • enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  • provide information to client, authorities and relevant on-site and off-site personnel by telephone, facsimile, email and in writing
  • read and interpret plans
  • use and interpret non-verbal communication
  • use language and concepts appropriate to cultural differences
  • written skills to complete workplace documentation
• coordinating a range of team members and activities
• effective management of a construction work site
• interpreting plans
• planning and scheduling construction work
• supervising site.

Required knowledge

Required knowledge for this unit is:

• contract documentation, quantities, rates and costs related to payments and claims
• differences in and uses of various building and construction industry contracts
• resource procurement processes
• safe working policy and procedures
• scope, operations and structures of the building and construction industry subcontractor system
• state or territory building and construction codes, standards and government regulations relevant to the form of building or construction being undertaken.
Evidence Guide
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment
This unit of competency could be assessed by identifying, planning and putting in place the essential infrastructure (including human, physical, plans and processes) required to commence and support a construction project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- procure resources effectively
- communicate effectively, both verbally and in writing with suppliers and subcontractors
- complete documentation to organisational standards
- advise appropriate authorities and gain necessary approvals or responses.

Context of and specific resources for assessment
This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and government regulations
- office equipment, including calculators,
EVIDENCE GUIDE

photocopying, photocopiers and telephone systems

- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability

| **1. Perform setting out, measuring techniques and associated calculations.** | 1.1. Trigonometric and geometric calculations commonly used with grid lines, off sets and right angle triangles are calculated and recorded without error.  
1.2. Site set-out procedures are carried out according to standard work methods on sites.  
1.3. Errors in measured distances due to site characteristics and measurement methods are identified and explained.  
1.4. *Cut and fill calculations* are conducted without error. |
| **2. Set up and use levelling devices.** | 2.1. Use of *levelling device* is demonstrated in accordance with standard operating procedures.  
2.2. Error present in a level by the 'two peg test' device is demonstrated in accordance with standard operating procedures.  
2.3. Reduction in a closed level run by rise and fall method and by height of plane of collimation (HPC) method is carried out in accordance with standard practices.  
2.4. Calculation of staff readings to enable a specific reduced level (RL) set-out to be determined is calculated without error. |
| **3. Mark out and determine levels on a grid for contouring and volume calculations.** | 3.1. Set out grid and levels are determined.  
3.2. Contour plans are prepared from grid levels to specified tolerances and stated contour intervals.  
3.3. Volume of solids and the surface being levelled and contoured are determined to specified tolerances. |
| **4. Construct longitudinal sections and determine associated grades and levels in typical drainage and pipeline situations.** | 4.1. Longitudinal sections are drawn from reduced levels and running chainages.  
4.2. Levels and clearances from given grades and distances are determined to specified tolerances.  
4.3. Calculations and expressions of grades in *three forms* are determined to specified tolerances.  
4.4. Calculations for batter levels from grades and distances are determined without error. |

**Required Skills and Knowledge**
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- application of design concepts and principles relating to structural systems
- application of measurements and calculations
- attention to detail when transferring levels
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret plans
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- numeracy skills to apply measurements and calculations
- use of levelling devices for survey and site set outs.

Required knowledge

Required knowledge for this unit is:

- applications of structure in building systems and application to survey and site set-out
- BCA and Australian standards
- design principles
- level and grade checking used to perform survey control to accuracy criteria
- nature of survey and levelling devices and effect of performance on site
- work drawings and specifications.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the application of survey and site set-out procedures and principles of selection and use of two levelling devices to survey and set out building projects.
EVIDENCE GUIDE

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS and organisational quality procedures and process within the context of this unit of competency
- apply and interpret relevant documentation and codes
- accurately apply survey and levelling principles relating to performance of site set-out, including contouring, volume and grade calculations
- identify typical faults and problems and necessary action taken to rectify such faults.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation, including design brief drawings, specifications, codes, design concepts, construction schedules and other necessary supporting documents
- research resources, including levelling device information and data
- access to relevant legislation, regulations and codes of practice
- relevant computer software package and suitable hardware where applicable to survey and set-out practices.

Reasonable adjustments for people with
disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be

Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Sites include:
- low rise commercial construction
- residential developments.

Cut and fill calculations include:
- area and volume of land to be levelled
- area of land to be filled
- use of appropriate software
- volume of fill required.

Levelling devices include:
- electronic distance measuring (EDM) equipment
- laser
- optical plummets
- theodolite.

Three forms relate to:
- angles
- percentages
- run ratios.

| 1. Apply legislative and planning requirements for effective water management systems to the building process. | 1.1. Current relevant state, territory and council requirements for effective management of water systems are identified as part of the building and construction design process.  
1.2. Client needs and expectations for the design and use of water management systems are identified and negotiated.  
1.3. Expert plumbing and other advice is gathered as part of the planning process.  
1.4. Relevant Australian standards are consulted to identify the implications for the conduct of the building project.  
1.5. Environmental and resource efficiency issues are identified and addressed. |
| 2. Identify and apply opportunities for improved water management. | 2.1. Impact of client and resident behaviour on effective water management and use is identified.  
2.2. Opportunities to select efficient water management fixtures and appliances as part of the building design are identified, evaluated and applied.  
2.3. Relative installation and ongoing usage costs of efficient water management fixtures and appliances are quantified and communicated to the client.  
2.4. Efficient water management fixtures and appliances are used as negotiated within the building project. |
| 3. Apply sound water management principles to the site and its landscaping. | 3.1. Soil and sediments are contained to the site as part of the site preparation and management.  
3.2. Sound waste management practices are used on site.  
3.3. Effective sediment control barriers are in place and used.  
3.4. Topsoil and local rocks are stockpiled and retained for later use in landscaping.  
3.5. Appropriate input is made to the landscape design process to optimise water use, reuse and recycling. |
| 4. Promote best practice in water management. | 4.1. Selection, location and installation of tanks to optimise the reuse of roof water are evaluated and implemented.  
4.2. Costs, planning implications and construction techniques for the reuse of grey water are identified and implemented as negotiated with the client.  
4.3. Costs and performance characteristics of various |
ELEMENT | PERFORMANCE CRITERIA

| materials used in the installation of water management systems are identified and negotiated with the client.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- application of Australian standards and codes and manufacturer specifications
- evaluation of alternative water management systems
- communication skills to:
  - communicate information to client
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - identify and negotiate client requirements
  - read and interpret legislative and planning requirements
  - seek advice
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
- numeracy skills to apply calculations
- work safely to OHS regulations and site requirements.

Required knowledge

Required knowledge for this unit is:

- building and construction industry contracts
- relevant state or territory building and construction codes, standards and government regulations
- workplace safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the effective application of mechanical principles and concepts to design of a sustainable water management system.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- source and analyse legislative and planning requirements for water management in the building process
- calculate costs and savings of implementing alternative water management systems
- apply principles of effective water use, recycling and reuse to the planning of a building project
- produce work plans that reflect effective water management.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and government
EVIDENCE GUIDE

- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers’ product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with
EVIDENCE GUIDE

A decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- All assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Effective management of water systems** includes:
- grey water recycling
- roof water reuse.

**Fixtures and appliances** include:
- dishwashers
- showerheads (low flow and maxi flow)
- spas
- taps
- toilets
- washing machines.

**Waste management practices** include ensuring that:
- run-off from the cleaning up of equipment (e.g. painting) is handled appropriately
- waste bins are used and emptied appropriately.

</table>
| 1. Apply legislative and planning requirements for thermal efficiency to the building process. | 1.1. Current relevant state, territory and council requirements for building thermally efficient structures are identified.  
1.2. Factors that contribute to the construction of a five-star rated dwelling identified within the Building Code of Australia (BCA) are identified and the impact of regional climate differences is assessed.  
1.3. Client needs and expectations for the design and construction of thermally efficient structures are identified and negotiated.  
1.4. Expert design and other advice is gathered as part of the planning and construction process.  
1.5. Relevant Australian standards are consulted to identify the implications for the conduct of the building project. |
| 2. Review design solutions for effectiveness and compliance. | 2.1. Impact of radiation, convection, conduction and evaporation on the thermal comfort of residents is identified.  
2.2. Orientation of the building, location and size of glazing, and use of thermal mass as design features are evaluated for effectiveness and compliance with planning and other regulatory requirements.  
2.3. Effective strategy for insulating the structure is evaluated, costed and communicated to the client.  
2.4. Building designs are assessed for their compliance with the energy efficiency requirements of the BCA’s five-star rating system.  
2.5. Designers and clients are consulted to ensure final construction plans are effective, efficient and compliant. |
| 3. Manage the building process to ensure an effective outcome. | 3.1. Effective communications are established between designers, architects and clients to ensure effective thermal performance is embedded from the design to construction phase.  
3.2. Effective quality assurance processes are confirmed as in place to evaluate and implement the building of a five-star dwelling.  
3.3. Cost effective strategies to achieve desired level of thermal performance are assessed and communicated to client.  
3.4. Life cycle costs of various construction approaches |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- application of Australian standards and manufacturer specifications
- application of BCA Part 3.12
- communication skills to:
  - communicate information to client
  - consult designers
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - identify and negotiate client requirements
  - read and interpret legislative and planning requirements
  - seek advice
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
  - evaluation of the thermal efficiency of building design solutions
  - apply numeracy skills to workplace requirements.

Required knowledge

Required knowledge for this unit is:

- building and construction industry processes for building sustainability
- relevant state or territory building and construction codes, standards and government regulations
- underlying mathematics related to the calculation of thermal efficiency
- workplace safety requirements.

## Elements and Performance Criteria

**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
1. Plan a waste management strategy. | 1.1. Current relevant state, territory and council requirements for managing and minimising building waste are identified.
| | 1.2. Relative costs and savings associated with strategies to minimise waste are calculated and negotiated with client.
| | 1.3. Effective communications are established with the architect, designer, engineer and other relevant professionals to ensure project plans incorporate waste minimisation strategies.
| | 1.4. Relevant Australian standards are consulted to identify the implications of waste minimisation strategies for the conduct of the building project.
| | 1.5. Waste management strategy to support the building and construction project is developed.

2. Manage materials procurement to minimise waste. | 2.1. Building and construction materials are evaluated to identify high quality and more durable materials that will extend the life of the structure and simplify its future extension and refurbishment.
| | 2.2. Recycled materials are used where appropriate and with regard to regulatory and standards' restrictions.
| | 2.3. Procurement specifications are developed that seek to minimise packaging waste.

3. Manage the building process to reduce waste. | 3.1. Demolition practices are determined and used to increase the recovery of materials for recycling and reuse.
| | 3.2. Strategies are adopted to minimise the volume of site excavation and other materials that are disposed of in landfill.
| | 3.3. Litter abatement strategies are adopted on site.
| | 3.4. Safe and environmentally effective disposal of unavoidable waste is planned and implemented.

## Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.
REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- application of Australian standards and manufacturer specifications
- application of the Building Code of Australia (BCA)
- communication skills to:
  - communicate information to client
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - identify and negotiate client requirements
  - seek advice
- read and interpret:
  - legislative and planning requirements
  - relevant Australian standards
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- written skills to produce a waste management strategy
- numeracy skills to apply calculations
- problem solving to determine optimum waste minimisation practices.

Required knowledge

Required knowledge for this unit is:

- building and construction industry processes for building sustainability
- relevant state or territory building and construction codes, standards and government regulations
- workplace safety requirements.
Evidence Guide

EVIDENCE GUIDE

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

### ELEMENT | PERFORMANCE CRITERIA
--- | ---
1. Provide effective administration. | 1.1. *Licences and approvals* required for tilt-up work are checked or obtained, work plan is prepared, and relevant regulatory authorities are notified of work if necessary.  
1.2. Copies of all structural and design documents, pre-cast panel shop drawings, layout plans and other documents are obtained, stored on site and accessed as required.  
1.3. Details of persons assigned to perform tilt-up work are checked to ensure relevant competency licences are held and *regulatory training requirements* have been met.  
2. Plan and set up site. | 2.1. Site security, amenities, services and *emergency/first aid* facilities are provided and associated site procedures are prepared.  
2.2. Requirements for footings, structural elements, concrete slabs and site access roads for the tilt-up work are reviewed and made available.  
2.3. Concrete panel casting and delivery sequence are planned to support the work sequence and taking into account the required curing times for the concrete panels.  
2.4. Traffic management and public safety plans and procedures are developed and exclusion zones planned for concrete panel delivery, casting and erection operations.  
2.5. Ground conditions such as soakwells and drains likely to affect crane stability are identified, crane standing areas are checked for strength and compaction, crane suppliers are consulted and suitable crane operating locations are identified and recorded.  
2.6. A site specific *OHS management plan* is prepared and implemented, work plan is implemented, and *OHS risk control measures* are applied.  
3. Organise and coordinate tilt-up work. | 3.1. Delivery sequence is coordinated for concrete panels cast off site, or a casting and curing schedule and distribution of panels on site are coordinated.  
3.2. Process is put in place to ensure concrete panels are placed and stored in accordance with engineer’s requirements.  
3.3. Concrete panel inspection records are checked to

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - ensure safe systems of work and safe work practices are followed
  - facilitate discussion of workplace hazards and risks
  - read, interpret and apply information from:
    - design specifications
    - legislative requirements
    - plans
    - procedures
    - tilt-up guidance material
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
  - written skills to complete:
    - memos
    - safe work and OHS management plans
    - safe work method statements
    - schedules
    - site records
  - numeracy skills to check and calculate dimensions and levels.

**Required knowledge**

Required knowledge for this unit is:

- National Standard for Construction Work and National Code of Practice for Induction for Construction Work
- capacity and limitations of plant, lifting gear and equipment used in tilt-up work, including associated safe systems of work
REQUIRED SKILLS AND KNOWLEDGE

- capacity and limitations of rigging and equipment, including use of load charts
- grouting, bracing, torquing, stabilisation and fixing work practices
- hazard identification and the formulation of safe work method statements and safe systems of work, which include those for safe work at height (fall arrest equipment and scaffolding and access equipment)
- interpretation of plans, drawings and specifications for tilt-up work
- National Code of Practice for Precast, Tilt-up and Concrete Elements in Building Construction, OHS regulations, and Australian standard 3850 Tilt-up concrete construction, as related to the supervision of tilt-up work.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by demonstration of the successful supervision of a tilt-up construction project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the relevant aspects supervising the erection of one multi point pre-cast tilt slab or one cast in situ tilt slab, each of at least 10 tonne.

Competence requires full compliance with the National Standard for Construction Work and National Code of Practice for Induction for Construction Work. Competence also needs to demonstrate a familiarity with and understanding of tilt-up construction codes of practice, standards, regulations and approval gaining processes, and their application.

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- access and apply legislative requirements
- identify OHS hazards and assess and control OHS risks associated with the tilt-up construction process
- prepare the site OHS management plan
- plan, prepare and carry out the tilt-up construction process and implement state or territory legislative requirements and guidance material
- identify potential hazards and interpret and apply information from plans, specifications, drawings and procedures.
EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and government regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturer’s product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
EVIDENCE GUIDE

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.
RANGE STATEMENT

Licences and approvals include:
- building licences
- notification and approval, which may be required under OHS legislation for tilt-up work.

Regulatory training requirements refer to:
- induction and training, which may be required under state or territory OHS legislation for tilt-up work
- induction and training in accordance with the National Standard for Construction Work and National Code of Practice for Induction for Construction Work.

Emergency/first aid includes:
- emergency shutdown and stopping
- extinguishing fires
- OHS first aid, emergency and evacuation requirements.

OHS management plan refers to:
- requirements of the National Standard for Construction Work.

OHS risk control measures refer to:
- control measures required by different site and soil conditions
- control measures required by other site conditions, such as working with surrounding structures, restricted site access conditions, traffic control issues and working in proximity to others, including work site visitors and the public
- those in accordance with OHS standards, regulations and codes of practice
- trip hazards, noise, working with dangerous materials, manual handling, working in confined spaces, working at height, and electrical hazards such as overhead cables and conduits.

Safe work method statements refer to:
- requirements of the National Standard for Construction Work.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - communicate by telephone
REQUIRED SKILLS AND KNOWLEDGE

- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- research and evaluate information and circumstances surrounding a business dispute
- read and interpret relevant legislation
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- written skills to:
  - complete checklists
  - send emails and faxes
  - write memos and reports
- negotiation relevant to dispute resolution situations
- problem solving in the context of dispute resolution
- research and evaluate information and circumstances surrounding a business dispute.

Required knowledge

Required knowledge for this unit is:

- contractual and business frameworks underpinning the building and construction industry
- mores, values and attitudes of various groups in the community that should be accounted for in discussions
- possible reactions from persons under pressure, such as anger and withdrawal.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by developing a set of dispute resolution procedures and demonstrating how these would apply to a selection of disputes.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify the nature of the dispute and the identity of the parties to the dispute
- document the details of the dispute in sufficient terms for an unambiguous evaluation of the issues to occur
- identify and follow established dispute resolution procedures
- develop and implement dispute resolution procedures, where there are none established.
- understand need to remain completely impartial in any involvement in a dispute.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building, construction or civil contracting office
EVIDENCE GUIDE

- relevant codes, standards and government regulations
- suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.
EVIDENCE GUIDE

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Dispute resolution procedures include:

- arbitrated decisions
- common law outcomes
- litigated decisions
- mutual resolution
- on-site negotiations
- reference to contractual obligations.

Cause of business disputes includes:

- contract payment issues
- different opinions about design, structural layout or dimensions
- dissatisfaction with project progress
- structural finish, quality, materials or construction methodology.

| 1. Manage own work performance. | 1.1. *Personal qualities* appropriate to the construction workplace environment and culture are known and demonstrated.  
1.2. Organisational strategies and priorities linked to personal responsibilities and accountability are reflected in personal performance plans.  
1.3. Stable work performance is maintained consistently and under pressure situations.  
1.4. Difficult workplace situations are recognised, addressed promptly and sensitively, and concluded positively.  
1.5. Work performance and presentation requirements are established and met. |
| 2. Set and meet own work priorities. | 2.1. Competing demands for work time and priority action are assessed and organised to achieve individual, team and organisational *work priorities*.  
2.2. Activities are managed effectively to accomplish personal, team and organisational goals and objectives.  
2.3. Technology is used where appropriate to improve efficiency and effectiveness in managing work priorities and commitments. |
| 3. Develop and maintain professional competence. | 3.1. Personal strengths and weaknesses are assessed against job requirements to determine personal development priorities and action where necessary.  
3.2. Feedback on performance is regularly sought and used to improve professional development.  
3.3. Management skills relevant to the job role are identified and developed to enhance performance.  
3.4. Participation in professional networks and associations is used to enhance knowledge, skills and relationships. |

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.
REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- adherence to organisational ethical and probity standards
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - communicate by telephone
  - participate in workplace conversations and meetings
  - read and interpret documentation from a variety of sources
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- written skills to:
  - complete checklists
  - produce memos and reports
  - send emails and faxes
- managing conflict and change in construction work situations
- numeracy skills to apply calculations
- recognising and managing workplace improvement opportunities
- teamwork skills to:
  - relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - work with others to coordinate and action tasks.

Required knowledge

Required knowledge for this unit is:

- mores and values of the workplace
- professional network and associations within the industry
- relevant local codes, standards and regulations applicable to the building and construction industry
- technologies applicable to and found within the workplace
- workplace safety requirements.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the preparation of a personal work and development plan.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- recognise and apply personal motivation and commitment to the work role
- manage day to day responsibilities and conflicting demands in an efficient and cooperative manner
- relate positively to clients, fellow workers and the management team
- assess personal strengths and weaknesses and plan and implement appropriate personal development.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation that should normally be available in a building or construction office
- relevant codes, standards and government regulations
- a suitable work area appropriate to the
EVIDENCE GUIDE

construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in

relation to the competency being assessed.
Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Personal qualities include:
- appropriate personal presentation for the job role
- confidence
- fairness
- integrity
- patience
- perseverance
- probity
- timeliness and punctuality.

Work priorities include:
- dealing with conflicting goals
- determining work and personal needs
- individual and team goals and targets
- planning new work
- prioritising and scheduling
- reassessing performance
- work in progress.

Unit Descriptor

Unit descriptor
This unit of competency specifies the outcomes required to prepare documentation and submit a building approval application or submission to appropriate authorities and the management of the submission through to its final approval.

To successfully manage building approvals requires a detailed understanding of the technical documentation that must be prepared, including building plans and specifications together with knowledge of the current regulatory and planning processes. The unit requires the ability to communicate effectively with related building professionals, planning officers and clients.

Application of the Unit

Application of the unit
This unit of competency supports builders, project managers and related construction industry professionals responsible for coordinating and managing the building approval process. The unit has application to residential and commercial building projects. Although the building approval process is highly structured, there is a significant degree of variability between building approval submissions, which requires problem solving and effective communications to achieve the required outcomes.

| 1. Plan the process for lodging approval applications. | 1.1. **Approvals** required for each project stage are identified.  
1.2. Level and type of *information and documentation* needed for the application are determined and confirmed, where appropriate, in consultation with **external specialists**.  
1.3. Plan is developed and submitted for approval, recognising scheduling requirements and client needs.  
1.4. External specialists are consulted, as required, to facilitate certification of documents. |
| 2. Prepare and lodge applications for approval. | 2.1. Necessary documentation and supporting information are prepared and checked for compliance with the requirements of the building approval authority.  
2.2. Impact of planning application on range of *stakeholders* is analysed and strategies are adopted to maximise the likelihood of their support for the application.  
2.3. Necessary documentation and supporting information are lodged with approval authority.  
2.4. Confirmation of application status is sought at appropriate intervals to ensure continuing progress. |
| 3. Evaluate and review outcome of application. | 3.1. Outcome of building approval application is assessed to determine impact on project.  
3.2. Where required, minor amendments are negotiated in accordance with client, organisation and approval authority requirements.  
3.3. Rejected submissions are analysed to determine likely success of an appeal or a resubmission, and course of action is determined with the client. |

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

**Required skills**
REQUIRED SKILLS AND KNOWLEDGE

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - liaise with clients, stakeholders, specialists and approval authorities
  - negotiate amendments
  - read and interpret:
    - codes of practice
    - plans, specifications and drawings
    - regulations
    - reports
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
  - written skills to prepare planning submission.

Required knowledge

Required knowledge for this unit is:

- building approval processes
- documentation requirements of building approval submissions
- organisation document control processes
- organisation policy relevant to building approval submissions
- industry code of practice
- range of planning approval types
- relevant Australian standards
- specialist services for certification of documentation.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the preparation, submission and management of a building approval.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- submit planning documents in a logical, accurate and complete manner
- demonstrate sound document control processes
- apply relevant Australian standards
- manage a range of approval types, for example fire safety compliance, sustainability or other approvals that may be required by the local authority
- interpret building approval requirements and processes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation, including client briefs, designing concepts, construction schedules and necessary supporting documentation
- client file and information for review.
EVIDENCE GUIDE

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to convey information factually and accurately without overpowering the client
- ability to identify and source the latest industry information
- adhere to organisational ethical and probity standards
- apply numeracy skills to workplace requirements
- communication skills to:
  - demonstrate and communicate property benefits to customers, including long-term benefits of sustainable building solutions and other unique selling features
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret product information and relevant industry information and documentation from a variety of sources
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
  - written skills to record client and sales information
- conflict resolution skills to manage customer dissatisfaction
- negotiation skills to manage buyer resistance
- research skills to use sales statistics to support a verbal argument
- teamwork skills to:
  - relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - work with others to coordinate and action tasks
- technological skills to use equipment to aid presentation of sales information and to operate a range of office equipment
- using persuasive and assertive language to promote product features and benefits.
REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Required knowledge for this unit is:

- customer types and needs, including:
  - customer behaviour and cues
  - customer buying motives
  - individual and cultural differences, demographics, lifestyle and income
- detailed product knowledge, including industry intelligence and market analysis
- identification and overview knowledge of key provisions of relevant legislation from all levels of government that affect business operations, codes of practice and national standards, such as:
  - anti-discrimination
  - consumer protection
  - contract law
  - ethical principles
  - privacy laws
  - Trade Practices Act
- materials and aids that can be used to support the sales process
- sales strategies and sales targets and how to achieve them
- statistical methods to demonstrate sales performance
- types of customer needs, e.g. functional and psychological.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by preparing and submitting a self-development plan and a marketing plan for the sale of a structure.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- understand the role of a sales consultant
- identify characteristics of the sectors of the construction industry and range of products available in each sector
- demonstrate key attributes of a sales consultant, including personal presentation, oral communication skills and mannerisms that support client contact and instil confidence
- understand importance of adherence to organisational ethical and probity standards
- manage personal professional development and performance in line with organisational expectations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation that should normally be
EVIDENCE GUIDE

available in either a building or construction office

- relevant codes, standard and regulations
- office equipment, including calculators, photocopiers and telephone systems
- a technical reference library with current publications on measurement, design, building construction and manufacturers’ product literature
- a suitable work area
- promotional materials and relevant information on marketing, market segments and sales strategies.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and

separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Industry building types** include:

- double brick, brick veneer, rammed earth and steel frame construction residences
- single and multiple storey buildings
- timber and/or fibro-cement construction.

**Market segments** include:

- first and subsequent home buyers
- speculative and investment buyers.

**Proof of benefits** includes:

- anecdotes and examples
- comparisons
- statistics
- testimony.
RANGE STATEMENT

Sales aids include:
- drawings
- electronic media
- graphs
- models
- photographs
- printed materials
- product itself
- transparencies
- whiteboards.

Self-development includes:
- maintaining financial and lender knowledge
- maintaining product and construction knowledge
- membership of professional associations
- professional development relating to sales and industry skills
- undertaking appropriate training courses.

Personal performance includes:
- commitment to achieving sales targets
- commitment to organisation's goals and objectives
- level of achievement
- mannerisms and demeanour
- oral communication skills
- presentation skills.

Source of buyer resistance includes:
- company resistance
- price resistance
- salesperson resistance
- service dissatisfaction
- timing issues
- uncertainty about the product.

Strategies to overcome buyer resistance include:
- assertive messages
- boomerang technique
- checking perceptions
- direct denial
- incentives offer
- indirect denial
- open and closed questions
- requesting additional information from buyers
- superior benefit.

| 1. Confirm client requirements. | 1.1. Client requirements are clarified and confirmed through discussion with client and team member, if appropriate.  
1.2. Financial expectations of the client are reconfirmed.  
1.3. Preliminary design notions are discussed with team members to ensure consistency with client's vision. |
| 2. Clarify stakeholder requirements. | 2.1. Input from stakeholders is assessed to confirm the responsibilities, requirements and limitations of the design brief.  
2.2. Analysis of site survey is commissioned, as appropriate, and all relevant information is gathered and used to inform development of the brief. |
| 3. Negotiate engagement with the client. | 3.1. Fee proposal is discussed with the client and amended as appropriate prior to formalisation of the agreement.  
3.2. Scope of services to be undertaken within the contract is discussed and confirmed with the client, either directly or by delegation to a team member.  
3.3. Draft proposals are presented to the client, and client feedback is used to modify and improve the proposal.  
3.4. Design brief is finalised in compliance with stakeholder requirements and all documentation is completed to the client's satisfaction. |

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - clarify stakeholder requirements
REQUIRED SKILLS AND KNOWLEDGE

- confirm client requirements
- negotiate engagement
- read and interpret:
  - design briefs
  - drawings and plans
  - sketches
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- work with a team
- written skills to:
  - complete relevant workplace documentation
  - develop a design brief
- numeracy skills to apply calculations and to budget and forecast
- risk analysis and management for construction projects.

Required knowledge

Required knowledge for this unit is:

- fee structures
- industry codes of practice
- relevant statutory requirements applying to building work
- scope of services provided by the organisation.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the effective preparation of a design brief applicable to construction project work.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- understand financial, legal and administrative factors affecting the contractual relationship
- communicate with clients effectively
- apply and interpret relevant statutory requirements
- analyse and commission a client design brief that complies with the requirements of all relevant stakeholders.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation, including correspondence relevant to the assessment
- relevant management information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to
**EVIDENCE GUIDE**

modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing
EVIDENCE GUIDE

supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Stakeholders include:

- architects and designers
- construction managers and site supervisors
- federal, state or local authorities
- principals of the building and construction company or other relevant senior personnel
- regulatory bodies
- services authorities
- subcontractors.

Fee proposals require consideration of:

- client profile and relationship to the building and construction company
- cost-benefit analysis
- financing options.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - provide information to the customer, including long-term benefits of sustainable building solutions and other unique selling features
  - respond to client questions about the building construction process
  - read and interpret relevant construction information
  - use and interpret non-verbal communication
REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- numeracy skills to estimate approximate construction timeframes based on the specifications of the building and site details.

Required knowledge

Required knowledge for this unit is:

- approvals that must be obtained prior to commencement
- building construction process and sequence of events
- site establishment requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by determining the approvals and insurances required for a construction project, and the requirements for establishing the site and the sequence of the construction.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify and explain nature of the approvals that need to be obtained before the contract proceeds
- ensure that right information is passed on to client at right time
- provide information that is accurate and easily understandable without unnecessary jargon
- use information effectively in communicating with clients
- explain circumstances that can contribute to delays in building progress and impact of those delays.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation that should normally be
EVIDENCE GUIDE

available in either a building or construction office
- relevant codes, standards and government regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturer’s product literature
- a suitable work area appropriate to the sales process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected
EVIDENCE GUIDE

must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Approvals include:
- building license approvals
- electricity supply permits
- Health Department effluent disposal approvals
- Local Government Act building provisions approvals
- water service and sewerage connection approvals.

Insurance cover includes:
- builder's all risk
- indemnity
RANGE STATEMENT

- public liability
- workers' compensation.

Industry conditions include:
- availability of labour and materials
- provisions for inclement weather
- subcontracting structure.

Site establishment requirements include:
- access and egress
- drainage
- earthworks
- electricity supply
- protection for adjoining owners
- rubbish and waste disposal
- signage
- site facilities
- water connection.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills for this unit are:
REQUIRED SKILLS AND KNOWLEDGE

- apply numeracy skills to workplace requirements
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - provide information to clients
  - identify client requirements
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- listening and questioning skills to avoid misinterpretation of client requirements.

Required knowledge

Required knowledge for this unit is:

- economic circumstances and seasonal factors that influence the volume of housing sales
- effect of body language and personal appearance on client attitudes and behaviour
- industry, including market segments and product range
- purchasing patterns and other socioeconomic data
- types of potential customers and the factors which stimulate their decision to purchase a new dwelling.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the preparation and submission of a current market analysis for the local region, outlining the external operating environment, competition and local opportunities.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- demonstrate understanding of external operating environment, economic and social factors and associated issues, such as land availability, which relate to housing sales
- understand internal factors which can affect construction planning
- sell benefits of housing construction to clients as a form of investment
- understand importance of adhering to organisational ethics and probity standards
- provide detailed information to clients effectively and efficiently.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation that should normally be

• office equipment, including calculators, photocopiers and telephone systems
• a technical reference library with current publications on measurement, design, building construction and manufacturer’s product literature
• a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with
EVIDENCE GUIDE

A decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- All assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

External operating environment includes characteristics of the marketplace which exert an influence on people’s individual decisions whether to invest in a building may be abstract or direct factors, such as:

- Interest rate movements
- Perceptions about the investment value of the completed property
- Perceptions about the resale value of the property
- Perceptions about the value of the currency and possible movements
- Speculative ambitions.

Economic factors include:

- Availability of finance
- Current interest rates
- Level of economic activity.
RANGE STATEMENT

Social factors include:
- business confidence
- job security or insecurity
- level of socioeconomic activity
- migration.

Personal perceptions of potential clients include:
- perceptions about the investment value of the completed property
- perceptions about the resale value of the property
- perceptions about the value of the currency and possible movements
- perceptions of potential interest rate movements
- speculative ambitions.

Capacity to meet requirements of the client may be influenced by:
- availability of labour and materials
- current financial situation
- current order levels
- projects already committed.

Competition includes effects of investments in:
- antiques
- art
- rental properties
- share market.

Other markets include:
- apartments
- duplexes and triplexes
- existing real estate properties
- high rise apartments
- high rise construction
- holiday homes and resorts
- mobile homes
- retirement villages
- terrace housing.

## Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to communicate by telephone, facsimile, email and in writing
- apply numeracy skills to workplace requirements
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - communicate requirements to drafting personnel
  - confirm understanding
  - obtain information from, and provide information to, clients
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
  - written skills to produce contract documentation and other relevant workplace documentation
- personnel and resource management skills to achieve development or project objectives.

Required knowledge

Required knowledge for this unit is:

- building and construction industry contracts
- building and construction industry planning processes
- financial and business principles related to dealing with clients
- regulatory authority approval processes for the area in which project is to be undertaken
- state or territory building and construction codes, standards and government regulations.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by preparing contract documentation, drawings and
EVIDENCE GUIDE

specifications for a construction project that complies with client requirements.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- obtain accurate and detailed information concerning client needs
- select right type of contract for the particular project
- process contract and all other relevant documentation correctly
- select appropriate clauses and conditions to apply within the contract
- administrate contract to standard required by the organisation and within any legal or regulatory requirements that may exist in the state or territory in which work is being done
- obtain confirmation, by initial and signature, of client acceptance of project documentation and plan agreement or preliminary contracts.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office

1.4. *Clauses in the contract* are described to the client and the reasons for inclusion and impact are explained.  
1.5. Appropriate measures to be taken in the event of an anomaly in the rendering of the contract are determined and explained to the client. |
| 2. Identify other legislative requirements applying to the sales process. | 2.1. Contracts are negotiated in accordance with *other federal, state or territory laws, regulations and codes*, including the Trade Practices and Fair Trading Acts and regulations.  
2.2. Cooling off periods, definitions of building work and provisional sum (PS) and prime cost (PC) allowances are applied. |
| 3. Identify and apply types of pre-contract agreements. | 3.1. Identify *pre-contract agreements* that meet legal and organisational requirements.  
3.2. *Pre-contract clauses* are discussed and agreed with the client.  
3.3. Apply correct pre-contract agreements. |
| 4. Finalise the pre-contract agreement with customer. | 4.1. Clauses that reflect client's requirements are included in pre-contract agreement.  
4.2. Documents are signed in accordance with legal and organisational requirements.  
4.3. Payment or deposit is received from client in accordance with legal and contractual requirements.  
4.4. Documents are processed according to organisational policy. |

## Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to communicate by telephone, facsimile, email and in writing
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - come to agreement with the client
  - participate in discussions
  - provide information to clients
  - read and interpret:
    - codes of practice
    - complex legal text
    - contracts
    - legislation
    - regulations
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
  - written skills to complete workplace documentation, including the drafting of responses to queries relating to the finer points of contracts.

Required knowledge

Required knowledge for this unit is:

- contract types and the circumstances they cover
- definitions and interpretations commonly applied to contracts
- definitions of building work
- Fair Trading regulations, including cooling off periods
- legal meanings of terms and clauses in building and construction contracts
- relationship between the organisation and its clients.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the
EVIDENCE GUIDE

Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the effective application of contract law to a building sale contract.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- explain importance of contract in the sales process to the client and how contract is applied
- select right contract for particular project and explain reasons for that choice
- select appropriate clauses and conditions within contract and explain impact of those clauses
- administer contract to standard required by the organisation and within any legal or regulatory requirements that may exist within the state or territory in which the work is being done
- determine and explain appropriate measures to be taken in the event of an anomaly in rendering contract.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
EVIDENCE GUIDE

- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- suitable sales area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with
EVIDENCE GUIDE

- a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Contract law** includes:
- Builders Registration Acts in various States and Territories
- common law
- federal and state legislation, such as:
  - Home Building Contracts Act 1991 in Western Australia

**Clauses in the contract** include:
- cost adjustments
- extensions of time
- offers and acceptances
- payments
RANGE STATEMENT

- retention of moneys
- scope of work
- terms and representations.

Other federal, state or territory laws, regulations and codes include:

- common law
- Commonwealth Trade Practices Act
- consumer credit codes in each State and Territory
- Fair Trading Act 1987 in Western Australia.

Pre-contract agreements include:

- offer and acceptance documentation
- preliminary contracts
- preparation of plan agreements.

Pre-contract clauses include:

- conditions
- scope of work
- time for completion.

- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- coordinating and scheduling skills.

Required knowledge

Required knowledge for this unit is:

- contemporary understanding of effective interior design solutions
- organisation standards for the management of the display home or setting
- specific customer requirements in relation to access and cultural requirements and protocols.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by arranging a sales presentation area with appropriate displays of product information.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select most appropriate location in which to establish the sales environment, providing an area in which it is possible to hold a private conversation with limited distraction from other persons
- establish displays of materials and drawings in positions of prominence without obstructing the movement of people through the area
- maintain an environment, which is well lit and pleasantly appointed, clean and free from dirt and debris.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- use language and concepts appropriate to cultural differences
- technological skills to facilitate use of the organisation's software and office technology
- written communication skills to complete relevant documentation and reports.

**Required knowledge**

Required knowledge for this unit is:

- definitions and common technical terms or usage specified under general provisions of BCA, PCA and other standards
- nature of materials and the effects of performance
- relevant construction industry legislative and OHS requirements, codes and practices
- work drawings and specifications.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the application of design principles and solutions specified in the DTS and performance-based concept of BCA criteria applied to building projects or the PCA criteria applied to plumbing and services projects.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with organisational quality procedures and processes
- apply and interpret relevant documentation and codes
- accurately apply relevant BCA or PCA codes and standards relating to performance and compliance of building project work.
- demonstrate understanding of the assessment methods available to determine whether a building solution complies with performance requirements or DTS provisions of the BCA.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- BCA and relevant Australian/New Zealand
EVIDENCE GUIDE

standards

- PCA and relevant Australian/New Zealand standards
- documentation, including design brief drawings, specifications, codes, design concepts, construction schedules and other necessary supporting documents
- research resources, including product information and data
- relevant computer software package and suitable hardware.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace

1.3. Area to be disturbed is determined and surrounding areas are noted for possible work application effects and cover protection requirements.  
1.4. Nature of the work is assessed and noted for possible use of heavy or bulky equipment.  
1.5. Effect on public access is assessed and recorded to ensure protection of the public and the environment is undertaken. |
| 2. Consult with technical specialists. | 2.1. Consultations with the conservator, engineer or supervisor are conducted to discuss and clarify specific job requirements.  
2.2. Specific risks and areas of concern arising due to the nature of the heritage and conservation aspects of the work are identified.  
2.3. Agreed processes and timeframes are established to ensure effective communications between project team members.  
2.4. Role responsibilities and requirements are discussed, understood and agreed with project team members. |
| 3. Consult with clients and stakeholders. | 3.1. Consultations are held with the client and other stakeholders, as appropriate, to clarify expectations regarding access to the site, performance of the work and timeframes.  
3.2. Clients and stakeholders are consulted to ensure common understanding of the historical and/or cultural significance of the heritage building under restoration.  
3.3. Appropriate communication channels and reporting processes are discussed and agreed, as appropriate, with the client and other relevant stakeholders. |
| 4. Clarify the impact of contractual requirements. | 4.1. Relevant contractual requirements affecting the performance of the restoration work are identified and clarified.  
4.2. Relevant dispute resolution processes that are to be used if required are identified. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- analytical skills to analyse operations and develop procedures
- communication skills to:
  - communicate with team
  - consult with technical specialists, client and other stakeholders
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - facilitate discussions
- read and interpret:
  - documentation from a variety of sources
  - plans, specifications and drawings
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- written skills to record relevant information
- organisational skills, including the ability to plan for and set out work
- time management skills and prioritisation skills to enable work to be completed within agreed timeframes.

Required knowledge

Required knowledge for this unit is:

- Australian standards relevant to the work
- conservation processes, including good conservation practice arising from principles of Burra Charter
- dispute resolution processes
- methods and processes relating to historic building construction, including the range and use of building materials, structure of buildings and drafting techniques
- relevant architectural knowledge, including orders of architecture and the characteristics and features of period architecture
- trade-specific techniques used in restoration work
- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by completion of relevant processes and activities essential prior to the commencement of a heritage restoration project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- apply conservation considerations and consultative processes associated with preservation of historic structures
- demonstrate understanding of preservation of fabric
- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within the context of initiating the heritage restoration process
- identify job-specific requirements and inherent risks associated with heritage restoration
- select and use appropriate processes to analyse and identify particular needs for projects
- communicate and agree on expectations and timeframes for the work to be undertaken
- apply appropriate techniques to cross-reference interlocking or overlapping operations
- demonstrate techniques to check and ensure relevant information and stages of preparation are fully covered
- interactive communication with others to
EVIDENCE GUIDE

ensure all factual information is gathered and shared with relevant stakeholders.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- restoration project appropriate to competency
- appropriate documentation and data related to project.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

| 1. Ensure compliance with conservation and workplace standards. | 1.1. Conservation requirements and processes associated with the preservation of historically significant buildings are identified.  
1.2. *Quality assurance* requirements associated with the performance of the relevant trade skill are identified.  
1.3. *OHS requirements*, including the identification of *personal protective equipment* are identified.  
1.4. *Safety hazards* are identified and correct procedures to minimise risk to self and others are identified and implemented. |
| 2. Identify and obtain historical data. | 2.1. Period and style of construction of the building or structure are ascertained and recorded.  
2.2. Available construction information is sourced from engineers and records and analysed for relevant and *historically accurate information*.  
2.3. *Materials* used for previous restoration work are identified, recorded and verified as appropriate for the work.  
2.4. Information relevant to the location, structure and specifications of the building are photographed or collated using alternative means and recorded. |
| 3. Prepare work area and resources. | 3.1. Cover protection of nearby surfaces is carried out in accordance with restoration activities.  
3.2. Scaffolding barricades and signage are erected to OHS regulations in accordance with job requirements.  
3.3. Appropriate lighting is erected at the site.  
3.4. Materials required for the identified restoration work are calculated and acquired in accordance with organisational procedures.  
3.5. *Tools and equipment* are selected and checked for serviceability. |
| 4. Establish and maintain records for restoration purposes. | 4.1. Method of organising files is determined in accordance with organisational procedures.  
4.2. System of presentation of the file is organised and a list made of *relevant categories of information*.  
4.3. Photographs of the current structure are taken and stored for future reference as required.  
4.4. Details of materials used, including colour matches, are recorded and filed throughout the life of the |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - communicate with team
  - consult with technical specialists, client and other stakeholders
  - facilitate discussions
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
  - written skills to record relevant information
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan for and set out work.

Required knowledge

Required knowledge for this unit is:

- Building Code of Australia (BCA) and other Australian standards relevant to the nature of work and materials being used
- conservation processes, including good conservation practice arising from principles of Burra Charter
- methods and processes relating to historic building construction, including the range and use of building materials, structure of buildings and drafting techniques
- relevant architectural knowledge, including orders of architecture, and characteristics and features of period architecture and period plastering associated with historic buildings
- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by carrying out all processes required to prepare for a restoration project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- apply conservation considerations and consultative processes to determine desired restoration application and finish
- demonstrate understanding of preservation of fabric
- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within the context of heritage restorations
- record and identify materials used
- use appropriate techniques to provide cover protection
- use safe and effective procedures to handle hazardous materials
- identify typical faults and problems that occur and take necessary action to rectify
- interact with others to ensure safe and effective work site operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge
EVIDENCE GUIDE

will usually be conducted in an off-site context. Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- historic work locations appropriate to competency range and activities
- materials appropriate to application activities
- appropriate documentation and data related to tasks
- scaffolding equipment, plant, tools and equipment relevant to activity processes.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice,
EVIDENCE GUIDE

with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Quality assurance** includes:

- application techniques
- attention to specifications of work
- cleanliness of surfaces
- preparation of surfaces
- quality of materials
- quality of tools
- quality records
- workplace operations and procedures.

**OHS requirements** cover:

- handling materials
- protective clothing and equipment
- use of ladders
- use of tools and equipment
RANGE STATEMENT

- working platforms and scaffolding
- workplace environment and safety.

**Personal protective equipment** includes:
- boots
- caps
- ear plugs and muffs
- gloves
- masks and respirators
- safety glasses and goggles.

**Safety hazards** include:
- cutting back loose surfaces
- dust
- handling hazardous materials
- wind
- working from platforms.

**Historically accurate information** includes from sources such as:
- building trusts
- elderly local residents
- historical societies
- municipal building records
- National Trust
- restoration contractors.

**Materials** may include:
- fixings and fasteners of the period era
- paints
- plaster mixes
- specialist materials of the relevant period era
- tiles.

**Tools and equipment** include:
- bricklaying: shovels, wheelbarrows and string lines
- carpentry: measuring tapes and rules, hammers, spirit levels, hand saws, scrapers, power leads, trowels, mortar boards and straight edges
- general construction: shovels, modelling tools, brooms, wheelbarrows and trowels
- painting: brushes, straight edges and ladders
- plastering: wood floats, steal floats, hawk, spirit levels and trowels
- plumbing: hammers, mallets and blow torches
- stonemasonry: chisels, wheelbarrows and modelling tools
- tiling: squares, scrapers, power leads, trowels, mortar boards and straight edges.
RANGE STATEMENT

Relevant categories of information include:

- construction technical data
- drawings, sketches and photographs
- material technical data
- materials and suppliers
- materials in construction and finishing
- OHS building regulations
- original structure and construction
- reference notes
- restoration records
- restoration work carried out
- specialist materials for the period era
- specifications
- technical brochures.

<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for drawing requirements. | 1.1. Specifications for drawing are identified from request or conservation authority requirements.  
1.2. Dimensions of the *historical or significant building* are determined in accordance with appropriate methods, taking into account the type of structure, access to details and previous drawings available, if applicable.  
1.3. Method of recording feature details is determined in accordance with nature of the feature, location and accessibility.  
1.4. Method and system of recording identification, location and dimensional information are determined and applied in accordance with requested drawing requirements.  
1.5. Equipment and instruments required are identified, listed and used in accordance with recording task requirements. |
| 2. Organise information for drawing preparation. | 2.1. Information is gathered and organised to determine overall dimensions of the building, structure or details to be drafted.  
2.2. Information is gathered to identify and group all recorded details associated with each area or section of the building or structure.  
2.3. Size of the drawing and scale to be used is determined in accordance with dimensions of building, structure or section.  
2.4. Sketches, tracings or photographs of recorded features are identified and located with other recorded information related to *feature work*. |
| 3. Draw or develop orthographic description. | 3.1. Block layout of views and designed spacings, where applicable, are drawn or developed to planned layout and scaled accurately to recorded or calculated dimensions.  
3.2. *Orthographic description* views are detailed to show visible lines of structure and elements as seen with each view to correct scale representation of recorded dimensions.  
3.3. Architectural drawing conventions, symbols and hatching, where applicable, are shown on drawings in accordance with AS1100.301 - 1985 Architectural Drafting. |

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to use instruments and equipment for measuring
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
  - written skills to record relevant information
- numeracy skills to calculate measurements
- organisational skills, including the ability to set out work
- work to scale.

**Required knowledge**

Required knowledge for this unit is:

- Australian standards - AS1100.101 and AS1100.301
- conservation processes, including good conservation practice arising from principles of Burra Charter
- finishing trade applications to materials
- methods and processes relating to historic building construction, including the range and use of building materials, structure of buildings and drafting techniques
- methods of measuring
- relevant architectural knowledge, including orders of architecture and the characteristics and features of period architecture
REQUIRED SKILLS AND KNOWLEDGE

- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by carrying out the necessary preparatory processes and developing at least two examples of each form of drawing specified, using sample or case study heritage projects for any of the buildings listed in the range statement.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- clearly understand conservation considerations and consultative processes associated with preservation of historic structures
- clearly appreciate preservation of fabric
- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within the context of preparing drawings to conservation requirements
- apply recording and identification system for measurements, locations and details
- select and use appropriate processes, instruments and equipment to measure and record information
- use appropriate and safe techniques to obtain measurements and details
- apply accurate techniques in preparing information for related drawings
- select and use appropriate techniques to ascertain accurate analysis of featured design shapes
EVIDENCE GUIDE

- apply techniques to ensure all relevant information is included in orthographic description
- select and use appropriate techniques to produce accurate, sharp and complete drawings.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- historic locations appropriate to competency range
- drafting and computer equipment
- equipment relevant to measuring processes.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over
EVIDENCE GUIDE

- a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Historical or significant building includes:
- built or sculptured artefacts
- cathedrals and churches
- civic buildings
- commercial and retail buildings
- doors
### RANGE STATEMENT

- external features
- fences
- government buildings
- houses
- mansions
- out buildings
- walls
- wharves
- windows.

**Methods** include:
- accurately trace shapes or features
- calculate height by use of levelling equipment and/or trigonometry
- physically tape and measure all internal and external measurement
- scale proportion of roof, chimney and spire heights from photograph where wall height is determined.

**Feature work** includes:
- decorative tiling
- mosaic tiling
- ornamental mouldings
- ornamental plasterwork
- ornamental stonework.

**Orthographic description** includes:
- front, rear and side elevations
- plans
- sectional elevations
- sectional plans.

**Sectional detailed drawings** include:
- ceiling and roof framing construction
- ceiling construction
- chimney construction
- cladding details
- external wall construction
- fence construction
- footings and foundation
- internal wall construction
- roofing details
- sub-floor construction.

**Development** of drawings includes:
- computer aided drafting
- drafting techniques
- drawings developed in accordance with National Trust guidelines or in accordance with AS1100.101 - 1992 Technical Drawing -

5.1. Preparation of surfaces, where applicable, is identified for stage processes and application work and comments are recorded in accordance with organisational procedures.

5.2. Application, fixing or installation of material is determined and particular comments are recorded in accordance with organisational procedures.

5.3. Application of finishing processes is identified and particular comments are recorded in accordance with organisational procedures.

5.4. Repairs and restoration work to disturbed locations are identified and comments are recorded for inclusion in work plan.

6. Identify and record clean-up procedures.

6.1. Items for clean-up and removal are listed and relevant procedures included in the work plan.

6.2. Unused or reusable materials and waste are listed for storage or removal procedures.

6.3. Cleaning of the area is specified and relevant comments of anticipated processes are noted.

6.4. Removal of portable workforce sheds is identified and listed in work plan and related comments are recorded.

7. Prepare work plan.

7.1. Recorded notes and information are reviewed for direct reference and inclusion in work plan.

7.2. Additional areas of information for work plan are researched and determined in content and expression.

7.3. Information is prepared and work plan written in accordance with organisational procedures.

7.4. Draft work plan is checked and amended to ensure completeness of all necessary stages prior to work plan presentation.

Required Skills and Knowledge
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- analytical skills to be able to analyse operations and develop procedures
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - consult with architect
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- written skills to:
  - record relevant information
  - produce a safety management plan and work plan
- organisational skills, including the ability to plan for and set out work.

Required knowledge

Required knowledge for this unit is:

- Australian standards relevant to the nature of work and demolition
- Burra Charter
- conservation processes, including good conservation practice arising from principles of decorating and finishing techniques used in restoration work
- methods and processes relating to historic building construction, including the range and use of building materials, structure of buildings and drafting techniques
- relevant architectural knowledge, including orders of architecture and characteristics and features of period architecture
- site preparation and organisational skills
- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by determining work site operations for a heritage restoration project and developing and preparing a work plan for the project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- apply conservation considerations and consultative processes associated with preservation of historic structures
- demonstrate understanding of preservation of fabric
- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within context of preparing work plans to conservation requirements
- apply recording and identification system for determining work site operations
- select and use appropriate processes to analyse and identify particular needs for project operations
- apply appropriate techniques to ensure coverage of all elements of project's operations
- apply accurate techniques in preparing identified and determined information for reference in work plan
- apply appropriate techniques to cross-reference interlocking or overlapping operations
EVIDENCE GUIDE

- select and use appropriate format and presentation to produce final finished plan
- apply techniques to check and ensure all relevant information and stages of the project are fully covered
- communicate interactively with others to ensure all factual information is gathered.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- restoration project appropriate to unit
- appropriate documentation and data related to project.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over
EVIDENCE GUIDE

- a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Restoration work includes:
- applied finishes
- cladding restoration
- decorative finishes
- lining finishes
- roofing restoration
RANGE STATEMENT

- structural replacement
- structural restoration.

Access:
- to structures and storage facilities or space may be limited.

Heavy or bulky equipment includes:
- compressors
- cranes
- excavators
- mobile scaffold or working platforms.

Hazardous materials include:
- lead paint
- materials containing asbestos.

Methods may vary in accordance with:
- analysis during application work where consultation is required to determine best conservation application.

Comments as appendices to work plan include:
- those regarding various controlling authorities for OHS, municipal building control, Environment Protection Authority (EPA) and structure trust authority.

Work plan presentation includes:
- clear site
- clear work location
- delivery and storage of materials
- demolition and salvage
- excavation
- finish application
- preliminary investigation
- preparation of surfaces
- protection of environment
- protection of public
- protection of structure
- restoration
- site preparation
- work location preparation.

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret:
    - documentation from a variety of sources
    - plans specifications and drawings
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
  - written skills to record relevant information
- equipment handling techniques and safe handling practices
- numeracy skills to calculate measurements
- organisational skills, including the ability to plan for and set out work
- problem solving skills to enable resolution of technical issues which threaten to disrupt work
- trade skills relevant to the restoration work being undertaken.

Required knowledge

Required knowledge for this unit is:

- Building Code of Australia (BCA) and other Australian standards relevant to the nature of work and materials being used
- conservation processes, including good conservation practice arising from principles of Burra Charter
- methods and processes relating to historic building construction, including range and use of building materials, structure of buildings and drafting techniques
- relevant architectural knowledge, including orders of architecture, characteristics and features of period architecture and period plastering associated with historic buildings
- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by application of a recognised trade skill to a heritage restoration project. Application should include correct use of trade skills and knowledge, ongoing monitoring of own work, compliance with relevant legislation and adherence to relevant heritage restoration codes and standards as well as organisational requirements, and correct clean-up procedures at completion of the work.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- apply conservation considerations and consultative processes to determine restoration application and finish
- demonstrate understanding of preservation of fabric
- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within the context of heritage restorations
- record and identify materials used
- use appropriate techniques to provide cover protection
- use safe and effective procedures to handle hazardous materials
- identify typical faults and problems that occur and necessary action taken to rectify
- communicate interactively with others to
EVIDENCE GUIDE

ensure safe and effective work site operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- historic work locations appropriate to competency range and activities
- materials appropriate to application activities
- appropriate documentation and data related to tasks
- scaffolding equipment, plant, tools and equipment relevant to activity processes.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the
EVIDENCE GUIDE

workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Trade skills include:

- carpentry
- gilding
- painting
- plastering
- plumbing
- stonemasonry
RANGE STATEMENT

Legislative and organisational requirements include:

- tiling.
- adherence to all relevant codes and Australian standards
- compliance with relevant quality assurance requirements pertaining to the relevant trade skill being employed
- OHS requirements, including the use of personal protective equipment, barricades and safe handling practices for all materials.

| 1. Gather information to be included in the report. | 1.1. Details of the *area of the structure* and information regarding *areas of fault* are identified. 
1.2. *General description of the building or structure* and its period of construction are identified. 
1.3. Surrounding area and faults are identified for *inspection and investigation*. 
1.4. Assessment of unsafe conditions is conducted and identified for investigation. |
| 2. Assess and outline possible means of restoring the areas of the structure. | 2.1. Assessment of conditions and degree of deterioration and disturbance are conducted and recorded using appropriate technical language. 
2.2. Possible *causes for deterioration* of condition and stability are assessed and recorded as guidelines for investigatory enquiries and restoration considerations. 
2.3. Sound construction or finish applications surrounding or adjacent to the faulted area are identified and recorded to inform restoration processes. 
2.4. Relevant information regarding unsafe conditions at or around the structure are identified and recorded. 
2.5. Advice regarding restoration techniques and work required is identified and documented based on assessment of the structure. |
| 3. Document and present the report. | 3.1. Method of presenting the report in a logical and sequential manner is determined with key stakeholders and implemented. 
3.2. Report is written to provide all investigated and determined information in accordance with request and agreed format. 
3.3. Report is written in a manner that will be readily understood by relevant stakeholders. |

Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.
REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- ability to prepare drawings and work to scale
- ability to use instruments and equipment for measuring
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- read and interpret:
  - documentation from a variety of sources
  - plans, specifications and drawings
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- written skills to record information and prepare reports
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to set out work
- teamwork skills and the ability to work with others to ensure coordination and cooperation between self and others in the heritage restoration.

Required knowledge

Required knowledge for this unit is:

- Building Code of Australia (BCA) and other Australian standards relevant to the nature of work and materials being used
- conservation processes, including good conservation practice arising from principles of Burra Charter
- methods and processes relating to historic building construction, including range and use of building materials, structure of buildings and drafting techniques
- relevant architectural knowledge, including orders of architecture and characteristics and features of period architecture
- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by determining all relevant information and preparing a written report on at least three separate categories of structure areas listed within the range of variables.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- apply conservation considerations and consultative processes associated with preservation of historic structures
- demonstrate understanding of preservation of fabric
- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within the context of preparing reports
- apply sound identification and recording system of investigation findings
- use appropriate processes, tools and equipment to carry out investigation examinations
- use appropriate safe techniques to use ladders and scaffolding
- demonstrate safe and effective procedures to handle hazardous materials
- apply sound and accurate techniques to prepare information for report
- select and use appropriate terminology relevant to applicable trade
EVIDENCE GUIDE

- use sound techniques to ensure report is well written and accurate
- communicate interactively with others to ensure safe and effective work site operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- historic work locations appropriate to area of work
- appropriate documentation and data related to investigations
- ladder and/or scaffolding equipment
- plant, tools and equipment relevant to investigation processes.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
EVIDENCE GUIDE

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Area of the structure includes:
- ceilings
- doors
- external walls
- fences
RANGE STATEMENT

- floors
- footings and sub-floor structure
- roof cladding
- roof structure
- wall cladding
- wall lining
- wall structure
- windows.

Identification of areas of fault requires:
- location of fault, internal or external to the building or structure
- nature and extent of the fault or deterioration, identified in technical terms relevant to the respective trade work required
- number of separate faults.

General description of the building or structure includes:
- address of the structure
- description of the area surrounding structure where influential to the fault
- references to north and south identified and recorded in relationship to the sides of the structure
- type and condition of materials used in structure, including details of any missing materials
- type of structural construction building types:
  - cathedrals and churches
  - civic buildings
  - commercial and retail buildings
  - fences
  - government buildings
  - houses
  - mansions
  - out buildings
  - walls.
  - wharves.

Inspection and investigation may involve use of access and safety equipment, such as:
- boots
- gloves
- hand tools
- hard hat
- inspection investigations ladders
RANGE STATEMENT

- jacket
- masks and respirators
- safety glasses
- spirit levels
- straight edges
- torches
- trestles and planks.

Causes of deterioration include:
- fire damage
- storm impact from vehicles or trees and other objects
- water damage.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
1. Interpret refractory plans and specifications. | 1.1. *General and detailed refractory plans* are accessed and analysed to determine nature of work to be undertaken.
1.2. *Standard signs and symbols* are noted, interpreted and implemented.
1.3. *Notes* to the plan are observed and complied with in accordance with design requirements.
1.4. Specified *materials* required are identified from the plans and obtained in accordance with organisational procedures.
2. Implement safety requirements. | 2.1. Material safety data sheets (MSDS) are accessed and relevant *safety precautions* implemented.
2.2. Organisational *OHS requirements* are implemented and maintained.
3. Prepare refractory materials and equipment. | 3.1. Test certificates of materials are checked to ensure materials meet required job specifications as detailed in refractory plans.
3.2. *Tools and equipment* are selected and checked for serviceability.
3.3. Mortar is prepared and mixed to design requirements.

Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret:
    - MSDS
    - refractory plans and specifications
    - test certificates
REQUIRED SKILLS AND KNOWLEDGE

- other relevant documentation
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- numeracy skills to interpret mathematical information, calculate material quantities and measure accurately
- organisational skills, including the ability to plan for and set out work
- teamwork skills and the ability to work with others to ensure coordination and cooperation between self and others
- technical skills to ensure ability to select and use relevant plant, tools and equipment.

Required knowledge

Required knowledge for this unit is:

- Building Code of Australia (BCA) and other Australian standards relevant to the nature of work and materials being used
- characteristics and applications of different materials used in refractory brickwork
- methods and processes relating to the use of refractory bricks and insulation materials for the construction of fire resistant structures
- organisational procedures for the acquisition of materials
- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by carrying out relevant preparations for refractory work. It should include analysis and interpretation of the plans and specifications, demonstrated understanding of all aspects detailed in the plans, implementation of safety precautions and correct selection of relevant materials and equipment.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully
EVIDENCE GUIDE

replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- demonstrate understanding of the purpose and application of refractory bricklaying
- comply with OHS regulations applicable to workplace operations
- use safe and effective procedures to handle hazardous materials
- apply organisational quality procedures and processes within context of constructing or repairing structures employing refractory materials
- read and interpret two-dimensional refractory plans and specifications
- select and use processes, tools and equipment appropriate to job requirements
- prepare materials and samples in accordance with job requirements
- identify typical faults and problems with materials and equipment that occur and necessary action to rectify
- communicate effectively with others to ensure safe work site operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- materials appropriate to refractory brickwork
- plant, tools and equipment relevant to refractory brickwork.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to

supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

General and detailed refractory plans include:
- detailed plans show aspects and sections of the structure in greater detail than the general plan
- general plans show the entire structure to be constructed.

Signs and symbols relate to:
- assembly of completed parts of the structure
- dimensions and scales
- materials to be used
- particular views of the structure
- quality control requirements
- sections of the structure
- tolerances.

Notes include:
- details of Australian standards to be complied with
- quality control requirements to be followed and documented
- requirements for samples of castables to be taken.

Materials include:
- castables
- different types of insulation materials, including insulation boards and bricks
- fire bricks
- fire clay
- stainless steel joints.

Safety precautions include:
- environmental precautions, such as the operation of an extraction system to filter dust and fumes.
RANGE STATEMENT

- use of personal protective clothing, including:
  - disposable overalls
  - dust masks
  - eye and ear protection
  - gloves
  - respirator
  - steel toe capped shoes.

**OHS requirements** include:
- handling materials
- protective clothing and equipment
- use of tools and equipment
- working platforms and scaffolding
- workplace environment and safety.

**Tools and equipment** include:
- clay mixer
- measuring tapes and rules
- mortar boards
- rubber mallets and scutches
- straight edges
- string lines
- trowels.

5.3. Intrados of the arch is cleaned and repointed with mortar as necessary. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to use tools and equipment employed in refractory work
- ability to apply materials accurately and to required tolerances and specifications
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - communicate technical issues
  - communicate with the team
  - consult with architect and stakeholder
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan for and set out work
- relevant application techniques specific to the laying and installation of refractory materials
- teamwork skills and the ability to work with others to ensure coordination and cooperation between self and others
- technical skills to select and use relevant tools and equipment.

Required knowledge

Required knowledge for this unit is:

- Building Code of Australia (BCA) and other Australian standards relevant to the nature of work and materials being used
- characteristics and applications of different materials used in refractory brick work
- methods and processes relating to the use of refractory bricks and insulation materials for the construction of fire resistant structures
- organisational procedures for the acquisition and storage of materials
- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by constructing a fire brick wall and arch. This work may include a 230mm fire brick wall to incorporate an opening (600mm x 600mm) with a segmental arch above, a minimum of 1.5m long and 1.2m high to the top of the arch.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- demonstrate understanding of the purpose and application of refractory bricklaying
- comply with OHS regulations applicable to workplace operations
- use safe and effective procedures to handle hazardous materials
- apply organisational quality procedures and processes within context of constructing or repairing structures employing refractory materials
- read and interpret two-dimensional refractory plans and specifications
- select and use processes, tools and equipment appropriate to the job requirements
- prepare materials and samples in accordance with job requirements
- identify typical faults and problems with materials and equipment that occur and necessary action taken to rectify
- communicate effectively with others to ensure safe work site operations.

Context of and specific resources

This competency is to be assessed using standard
EVIDENCE GUIDE

for assessment

and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- materials appropriate to refractory brickwork
- plant, tools and equipment relevant to refractory brickwork.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at
EVIDENCE GUIDE

The point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- All assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Job specifications and drawings include:**
- Detailed plans showing aspects and sections of the structure in greater detail than the general plan
- General plans showing the entire structure to be constructed.

**Required bond includes:**
- Header bond
- Stretch bond.

**Adjustable props include:**
- Metal props
- Packers
- Timber toms
- Timber wedges.

**Adjusted supports:**
- Ensure the arch centre is level at right angles to the wall face and level across the springing.
RANGE STATEMENT

Wedge shape bricks include the following common sizes:

- 51mm
- 63mm
- 69mm.

Measurements and placement include:

- accurate positioning and maintenance of the centre line of the key brick is through the vertical centre line of the arch ensuring:
  - all bricks are cut and laid to maintain even joints
  - even joint thickness around the extrados.

5. Shut down and stow self-erecting tower crane. | 5.1. Self-erecting tower crane is shut down and stowed using the correct sequence of procedures in accordance with manufacturer recommendations and specifications.
5.2. Routine post-operational checks are carried out in accordance with manufacturer specifications.
5.3. Self-erection system is lowered by activating the recoil procedure or ram in accordance with manufacturer specifications.
5.4. Self-erecting tower crane operations and faults are recorded and reported to appropriate personnel.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - clarify and confirm work order with appropriate personnel
  - follow instructions
  - participate in on-site meetings
  - report faults and respond appropriately
  - read and interpret:
    - instructions
    - work orders
    - other relevant documentation
  - use a range of communication technologies and equipment
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- written skills to:
REQUIRED SKILLS AND KNOWLEDGE

- document hazards
- record and report faults relating to self-erecting tower crane operations
- comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for conducting self-erecting tower crane operations
- efficiently and safely conduct self-erecting tower crane operations
- inspect work plans (job safety analyses and safe work method statements) in accordance with legislation
- numeracy skills to calculate rated capacity, working load limits and load charts
- use and maintain relevant tools, machinery and equipment
- verify problems and equipment faults and demonstrate appropriate response procedures.

Required knowledge

Required knowledge for this unit is:

- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols in the workplace
- federal, state and territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for conducting self-erecting tower crane operations
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS) and material handling methods
- organisational and site standards, requirements, policies and procedures for conducting self-erecting tower crane operations
- procedures for recording, reporting and maintaining workplace records and information
- remote control operations and indicators
- risk assessment and management
- routine problems encountered with equipment use or adjustment and required corrective actions
- self-erecting tower crane capabilities and gear
- self-erecting tower crane operations and operating techniques
- techniques for calculating rated capacity, working load limits and load charts
- types of tools and equipment, and procedures for their use, operation and maintenance.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction
EVIDENCE GUIDE

with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by providing evidence that the candidate can safely and efficiently conduct self-erecting tower crane operations according to organisational and regulatory requirements.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with organisational and site policies and procedures, including quality requirements and state or territory legislation applicable to workplace operations.
- comply with OHS and environmental regulations, policies and procedures
- communicate effectively and work safely with others in the work area
- conduct effective risk assessment and management procedures
- complete the raising and lowering of the coil structure or ram
- operate a self-erecting tower crane, including all functions to their maximum extension and travel in the lifting and moving of at least three differing load types (including different sizes, shapes, weights and materials) to different locations on the site
- conduct pre and post- operational checks of the self-erecting tower crane.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge
EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- workplace location or simulated workplace
- materials and equipment relevant to self-erecting tower crane operations
- specifications and work instructions.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability
EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as disability are a factor
- hazard control
- hazardous materials and substances
- housekeeping
- organisational first aid
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and
RANGE STATEMENT

- treatments associated with:
  - air monitoring equipment
  - falling objects
  - man-made structures
  - obstructions
  - recently filled trenches
  - restricted access barriers
  - safe parking
  - security from unauthorised access or movement
  - traffic control
  - uneven or unstable surfaces or terrain
  - underground or overhead services
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

**Licensing requirements** include:
- relevant recognition, permit, licence or permission to operate within any state or territory issued by the government regulatory authority of that jurisdiction.

**Legislative requirements** include:
- award and organisation agreements and relevant industrial arrangements
- confidentiality and privacy requirements
- environmental issues
- equal opportunity
- industrial relations and anti-discrimination
- OHS issues
- relevant industry codes of practice
- relevant legislation from all levels of government that affect business operation.

**Organisational requirements** include legal, organisational and site policy, guidelines and procedures relating to:
- access and equity principles and practices
- consultative processes
- emergency and evacuation procedures
- equipment maintenance and storage procedures
- ethical standards
- OHS policies
RANGE STATEMENT

- own role and responsibility
- procedures and programs
- quality and continuous improvement processes and standards
- quality assurance or procedures manuals
- recording and reporting procedures.

Work order includes:

- organisational work specifications and instructions issued by authorised personnel for the operation of a self-erecting tower crane and its respective tasks.

Appropriate personnel includes:

- client
- colleague
- manager
- supervisor
- supplier.

Self-erecting tower crane includes:

- cranes with bales mounted in a triangular or nested configuration for transport
- driven by electric or hydraulic mechanical systems
- cranes of the telescopic ram type
- involvement of riggers to:
  - stabilise the self-erecting tower crane with the use of plates and packing under the footplates to adequately distribute the load, ensuring the bearing capacity of the crane standing is not exceeded
  - conduct other erection activities, including the boom and counterweights
- self-erecting systems with:
  - automatic locking mechanisms
  - braking systems
  - operator cabins designed to ascend and descend the erected tower
  - outriggers
  - ramps
  - remote control
  - self-leveling systems
  - stabilisers.

Equipment includes:

- self-erecting tower cranes, lifting gear, workboxes and relevant maintenance equipment and may include remote control
RANGE STATEMENT

devices (pendant control and radio control)
- procedures for equipment lock-out protecting operators and co-workers from accidental injury by isolating the equipment
- emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation.

*Environmental protection measures* include organisational and project requirements, including:
- clean-up management
- dust and noise
- vibration
- waste management.

*Pre start-up checks* are conducted to ensure:
- equipment has been set up correctly
- gear is fitted accurately
- plant is operating to optimum performance and to manufacturer specifications.

*Hazards* include:
- buildings
- chemicals
- fires
- hazardous materials
- movement of equipment, goods or material
- structures
- traffic
- underground or overhead services
- uneven or unstable surface or terrain.

*Barriers and signage* include:
- barrier tape or netting
- fencing
- specified safety signage
- temporary boundaries.

*Riggers’ role* is to include:
- process of fitting and removing booms, cables, spars and counterweights to ensure structural stability and load capacity of self-erecting tower cranes.

*Doggers’ role* is to include:
- provision of directional signals to the crane operator on the position and security of the load.

*Stability* is to ensure:
- self-erecting tower crane is positioned and secured so as not to topple over during operations.

*Ground controls* include:
- pendant controls
- remote control devices.
RANGE STATEMENT

**Weight of load** includes:

- that prescribed by manufacturer as not exceeding the allowable capacity of the self-erecting tower crane.

**Lifting gear** includes:

- chains
- flexible steel wire rope slings
- grabs
- spreader beams
- other slinging equipment.

**Tasks** include:

- boom up and boom down and operation of attachments
- luff movements
- outriggers
- slew left and right
- telescope in and out
- trolley in and trolley out
- winch up and down in combination
- service operations that provide for lighting, telecommunications and raised platforms for applications, including:
  - airports
  - entertainment
  - firefighting
  - harbours
  - law enforcement
  - mining
  - oil and gas exploration
  - road construction
  - search and rescue
  - sports.

**Records and reports** include:

- conclusions
- costs
- dangerous occurrences or equipment malfunctions
- difficulties or issues faced
- environmental issues
- hazards
- incidents or injuries
- maintenance of equipment
RANGE STATEMENT

- maintenance records
- pro formas
- production reports
- recommendations, including for future work
- results
- self-erecting tower crane operations
- using logbooks.

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - clarify and confirm work order with appropriate personnel
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - participate in on-site meetings
  - read and interpret:
    - instructions
    - work orders
    - other relevant documentation
  - report faults and respond appropriately
  - use a range of communication technologies and equipment
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
  - written skills to document hazards and record and report faults relating to conducting tower crane operations
  - compliance with legislation, regulations, standards, codes of practice and established safe practices and procedures for conducting tower crane operations
  - efficiently and safely conduct tower crane operations
  - numeracy skills to calculate rated capacity, working load limits and load charts
  - use and maintain relevant tools, machinery and equipment
  - use appropriate communication and interpersonal techniques with colleagues and others
  - verify problems and equipment faults and demonstrate appropriate response procedures.

Required knowledge

Required knowledge for this unit is:

- appropriate mathematical procedures for estimation and measurement
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols in the workplace
- federal, and state or territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for conducting tower crane operations
- job safety analysis (JSA) and safe work method statements
REQUIRED SKILLS AND KNOWLEDGE

- material safety data sheets (MSDS) and material handling methods
- organisational and site standards, requirements, policies and procedures for conducting tower crane operations
- procedures for recording, reporting and maintaining workplace records and information
- remote control operations and indicators
- risk assessment and management
- routine problems encountered with equipment use or adjustment and required corrective actions
- techniques for calculating rated capacity, working load limits and load charts
- tower crane capabilities and gear
- tower crane operations and operating techniques
- types of tools and equipment and procedures for their use, operation and maintenance.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by providing evidence of safely and efficiently conducting tower crane operations according to organisational and regulatory requirements.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with organisational and site policies and procedures, including quality requirements and state or territory legislation applicable to workplace operations
- comply with OHS and environmental regulations, policies and procedures
- communicate effectively and work safely with others in the work area
- conduct risk assessment and management procedures
- operate a tower crane, including all functions (including a multiple lift) to their maximum extension and travel in the lifting and moving of at least three differing load types and sizes to different locations on the site
- conduct pre and post-operational checks of the tower crane.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.
EVIDENCE GUIDE

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- workplace location or simulated workplace
- materials and equipment relevant to tower crane operations.

Specifications and work instructions. Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a
EVIDENCE GUIDE

A combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as disability are a factor
- hazard control
- hazardous materials and substances
- housekeeping
- organisational first aid
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - machines
RANGE STATEMENT

- man-made structures
- obstructions
- recently filled trenches
- restricted access barriers
- safe parking
- security from unauthorised access or movement
- signage and barricades
- surrounding structures
- traffic control
- underground or overhead services
- uneven or unstable surfaces or terrain
- work site visitors and the public
- working at heights
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Licensing includes:

- relevant recognition, permit, licence or permission to operate within any state or territory issued by the government regulatory authority of that jurisdiction.

Organisational requirements include:

- access and equity principles and practices
- consultative processes
- emergency and evacuation procedures
- equipment maintenance and storage procedures
- ethical standards
- legal, organisational and site policy or guidelines
- OHS policies
- policies and procedures relating to own role and responsibility
- procedures and programs
- quality and continuous improvement processes and standards
- quality assurance or procedures manuals
- recording and reporting procedures.

Work order includes:

- organisational work specifications and instructions issued by authorised personnel for
RANGE STATEMENT

the operation of a tower crane and its respective tasks.

Appropriate personnel includes:
- client
- colleague
- manager
- supervisor
- supplier.

Tower crane:
- a boom or jib crane mounted on a tower structure that is demountable or permanent and includes horizontal and luffing jib types
- may include:
  - height and jib extension
  - ram luffers
  - rope luffers and hammerheads (trolley in and trolley out)
- is generally pre-erected by riggers with use of mobile cranes.

Equipment:
- includes:
  - lifting gear
  - tower cranes
  - workboxes and relevant maintenance equipment
- may include:
  - emergency shutdown and stopping
  - extinguishing fires
  - organisational first aid requirements and evacuation
  - procedures for equipment lock-out to protect operators and co-workers from accidental injury by isolating the equipment
  - remote control devices (pendant control and radio control).

Legislative requirements include:
- award and organisation agreements and relevant industrial arrangements
- confidentiality and privacy requirements
- environmental issues
- equal opportunity
- industrial relations and anti-discrimination
RANGE STATEMENT

- OHS issues
- relevant industry codes of practice
- relevant legislation from all levels of government that affect business operation.

Environmental protection measures include organisational and project requirements, including:
- clean-up management
- dust and noise
- vibration
- waste management.

Pre start-up checks ensure:
- equipment has been set up correctly
- gear is fitted accurately
- plant is operating to optimum performance.

Hazards include:
- buildings
- chemicals
- fires
- goods and materials, including hazardous materials
- movement of equipment
- structures
- traffic
- underground or overhead services
- uneven or unstable surface or terrain.

Barriers and signage include:
- barrier tape or netting
- fencing
- temporary boundaries and specified safety signage.

Weight of load includes:
- that prescribed by manufacturer as not exceeding the allowable capacity of the tower crane.

Lifting gear includes:
- chains or slinging equipment
- grabs.

Dogging includes:
- provision of directional signals to the crane operator on the position and security of the load.

Rigging includes:
- process of fitting and removing cables and spars to ensure structural stability and load capacity of tower cranes.

Tasks include operations, including:
- attachments
- boom up and boom down
- luff movements
- outriggers
RANGE STATEMENT

- slew left and right
- telescope in and out
- trolley in and trolley out
- winch up and down in combination.

Records and reports include:

- conclusions
- costs
- dangerous occurrences or equipment malfunctions using logbooks
- difficulties or issues faced
- environmental issues
- hazards
- incidents or injuries
- pro formas
- production reports
- recommendations and maintenance records
- recommendations for future work
- results
- tower crane operations and maintenance of equipment.

Employability skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for operation. | 1.1. Applicable safety (OHS), licensing, legislative and organisational requirements relevant to performing advanced rigging are verified and complied with.  
1.2. Work order is reviewed, confirmed and clarified with appropriate personnel.  
1.3. Type of operations to be conducted for advanced rigging are assessed and prepared.  
1.4. Equipment is selected appropriate to work requirements and checked for operational effectiveness in accordance with manufacturer recommendations.  
1.5. Advanced rigging operations are planned in accordance with site procedures.  
1.6. Environmental protection measures are adhered to in accordance with environmental plans and regulations.  
1.7. Communication with others is established and maintained in accordance with OHS requirements. |
| 2. Select advanced rigging equipment. | 2.1. Advanced rigging equipment, resources and material are visually inspected prior to operation for evidence of damage, structural weakness or interference according to pre-operational safety check procedures.  
2.2. Lifting equipment is inspected in accordance with manufacturer recommendations and specifications.  
2.3. Lifting equipment verified as inconsistent with manufacturer specifications is labelled, rejected and disposed of to prevent its use in any circumstance.  
2.4. Lifting devices are specified and selected in accordance with job requirements.  
2.5. Hung prefabricated scaffolding is specified and selected in accordance with job requirements.  
2.6. Permanent guys are specified and selected in accordance with job requirements.  
2.7. Site hazards associated with dogging operations are detected, risks are assessed and safe operating techniques are used to eliminate or control risks. |
| 3. Connect equipment. | 3.1. Loads are slung to ensure encapsulation of the whole of load.  
3.2. Part loads are slung to ensure full encapsulation of the part load.  
3.3. Whole or part loads are slung to protect loads and... |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
secured to prevent uncontrolled movement. 3.4. *Tag lines* are attached and used to prevent unnecessary load movement.

4. Move or remove, place and secure loads.

4.1. Load lifting or shifting order is specified to minimise necessity of double lifts. 4.2. Lifting or *shifting equipment* is connected to the load.

4.3. Test lift or shift is performed in conjunction with the *crane* operator to ensure lift suitability.

4.4. Load is safely moved or removed to the required destination, placed and secured in position to client specifications or job requirements and *tasks* are completed effectively.

4.5. Load is constantly monitored to ensure safety to personnel, load and structural stability with monitoring systems and alarms immediately acted upon in accordance with site requirements.

4.6. Load is directed and safe movement coordinated using communications in compliance with recognised work practices.

5. Remove advanced rigging equipment and clean up.

5.1. Lifting or shifting equipment and packing are dismantled, lowered and inspected for wear, and logbook and site records are completed to company requirements.

5.2. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specifications.

5.3. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

5.4. Work completion procedures are applied and appropriate personnel is notified that work is finished.

5.5. Advanced rigging operations and faults are *recorded and reported* to the appropriate personnel.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - clarify and confirm work order with appropriate personnel
  - participate in on-site meetings
  - read and interpret:
    - instructions
    - work orders
    - other relevant documentation
  - report faults and respond appropriately
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
  - written skills to:
    - document hazards
    - record and report faults
  - comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for performing advanced rigging operations
  - efficiently and safely perform advanced rigging operations
  - numeracy skills to calculate rated capacity and working load limits
  - use and maintain relevant tools, machinery and equipment
  - verify problems and equipment faults and demonstrate appropriate response procedures.

Required knowledge

Required knowledge for this unit is:

- advanced rigging capabilities and gear
- advanced rigging operations and operating techniques
- crane operations and limitations
- designs and functions of lifting equipment
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols in the workplace
- federal, and state or territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for performing advanced rigging operations
- job safety analysis (JSA) and safe work method statements
REQUIRED SKILLS AND KNOWLEDGE

- material safety data sheets (MSDS) and material handling methods
- organisational and site standards, requirements, policies and procedures for performing advanced rigging operations
- procedures for recording, reporting and maintaining workplace records and information
- rated capacity and working load limit tags
- risk assessment and management
- safe working at heights and fall arrest
- techniques for calculating rated capacity and working load limits
- types of tools and equipment and procedures for their use, operation and maintenance
- typical routine problems encountered in the process and with equipment and adjustments required for correction
- weather and ground considerations.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by providing evidence of safely and efficiently performing advanced rigging according to organisational and regulatory requirements.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with organisational and site policies and procedures including quality requirements and state or territory legislation applicable to workplace operations
- comply with OHS and environmental regulations, policies and procedures
- communicate effectively and work safely with others in the work area
- conduct risk assessment and management procedures
- erect and dismantle at least one lattice boom crane and fly with correct rigging and slinging techniques
- set up, erect, test, operate and dismantle a hoist, flying fox, gin pole and hung prefabricated scaffold
- conduct advanced rigging operations for a demolition project, including the deconstruction of major construction components
- apply both single and dual lifting techniques
- conduct pre and post-operational checks of advanced rigging equipment.
EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials and equipment relevant to performing advanced rigging
- specifications and work instructions.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and
EVIDENCE GUIDE

Separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- All assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- Emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- Handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as disability are a factor
- Hazard control
- Hazardous materials and substances
- Housekeeping
- Organisational first aid
- Personal protective equipment (PPE)
RANGE STATEMENT

prescribed under legislation, regulations and workplace policies and practices

- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - machines
  - man-made structures
  - obstructions
  - recently filled trenches
  - restricted access barriers
  - safe parking
  - security from unauthorised access or movement
  - signage and barricades
  - surrounding structures
  - traffic control
  - underground or overhead services
  - uneven or unstable surfaces or terrain
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

**Licensing** includes:

- relevant recognition, permit, licence or permission to operate within any state or territory issued by the government regulatory authority of that jurisdiction.

**Legislative requirements** include:

- award and organisation agreements and relevant industrial arrangements
- confidentiality and privacy requirements
- environmental issues
- equal opportunity
- industrial relations and anti-discrimination
- OHS issues
- relevant industry codes of practice
- relevant legislation from all levels of government that affect business operation.

**Organisational requirements**

- access and equity principles and practices
RANGE STATEMENT

include legal, organisational and site policies, guidelines and procedures relating to:

- consultative processes
- emergency and evacuation procedures
- equipment maintenance and storage procedures
- ethical standards
- OHS policies
- own role and responsibility
- procedures and programs
- quality and continuous improvement processes and standards
- quality assurance or procedures manuals
- recording and reporting procedures.

Work order includes:

- organisational work specifications and instructions issued by authorised personnel for the performing of advanced rigging and its respective tasks.

Appropriate personnel includes:

- client
- colleague
- manager
- supervisor
- supplier.

Advanced rigging includes work involving the use of mechanical load shifting equipment and associated gear:

- to set up and dismantle cranes and hoists and demolition activities
- to ensure the stability of those members
- to move, place or secure a load using plant, equipment or members of a building or structure.

Equipment includes:

- advanced rigging lifting gear, including:
  - angle grinders
  - automatic levels
  - chains
  - drifts
  - elevated work platforms
  - explosive power tools
  - flexible steel wire ropes
  - hammers
  - laser levels
  - natural or synthetic fibre
  - oxy-acetylene equipment
  - pneumatic tools
  - podgers
RANGE STATEMENT

- rattle guns
- relevant maintenance equipment
- shifting spanners
- skids
- sledgehammers
- spanners
- spirit levels
- tape measures
- water levelling equipment
- wedges
- wrenches
- procedures:
  - for equipment lock-out protecting operators and co-workers from accidental injury by isolating the equipment
  - emergency shutdown and stopping
  - extinguishing fires
  - organisational first aid requirements
  - evacuation.

Environmental protection measures include organisational and project requirements, including:

- clean-up management
- noise and dust
- waste management.

Lifting equipment:

- includes:
  - air winches
  - chain blocks
  - chain winches
  - come alongs
  - hand operated creeper winches
  - L bolts
  - jacks
  - pulley blocks
  - shackles
  - trolleys
  - turn buckles
- may include:
  - electric chain motors
  - lifting clutches and snatch blocks
RANGE STATEMENT

- lifting lugs
- rigging screws.

**Lifting devices include:**
- cantilevered crane loading platforms
- hoists
- mast climbers.

**Hung prefabricated scaffolding includes:**
- sections or componentry of suspended scaffolds.

**Permanent guys include:**
- flying foxes and cable ways
- gin poles
- guyed derricks
- shear legs.

**Hazards include:**
- buildings
- chemicals
- fires
- hazardous materials
- movement of equipment, goods or material
- structures
- traffic
- underground or overhead services
- uneven or unstable surface or terrain.

**Encapsulation is to ensure:**
- that the part load or whole load is fully contained within the slinging equipment.

**Tag lines include:**
- lines to assist the directional guidance of the load.

**Shifting equipment includes:**
- hydraulic jacks
- rails
- skates
- winches.

**Cranes include:**
- bridge and gantry cranes
- city cranes
- derrick cranes
- fixed cranes
- hydraulic mobile cranes
- lattice boom mobile cranes
- non-slewing cranes
- portal cranes
- slewing cranes
- tower cranes, including self-erecting tower cranes.
RANGE STATEMENT

Tasks include:
- demolition activities
- erection and dismantling of lifting devices
- fixing and securing of permanent guys
- load distribution and calculation of loads
- placing and securing of hung scaffolds and prefabricated suspended scaffolds.

Records and reports include:
- advanced rigging operations and maintenance of equipment
- conclusions
- costs
- dangerous occurrences or equipment malfunctions using logbooks
- difficulties or issues faced
- environmental issues
- hazards
- incidents or injuries
- pro formas
- production reports
- recommendations and maintenance records
- recommendations for future work
- results.

3.2. *Cantilevered hoist*, with a lifting device working load limit not exceeding 500kg, is erected and checked for serviceability. |
| 4. Inspect, repair and alter erected scaffolding. | 4.1. Erected hung or suspended scaffolding and tube and coupler scaffolding are inspected for damage, corrosion, wear and compatibility prior to use.  
4.2. Faulty components are isolated, labeled, tagged, rejected or replaced immediately.  
4.3. Existing use of scaffolding is checked against original design to be in accordance with regulations and specifications.  
4.4. Scaffolding stability is inspected and confirmed in accordance with OHS regulations.  
4.5. *Alterations and repairs* are carried out on specified equipment or where faults are discovered to ensure regulatory compliance.  
4.6. Inspection log and *handover* are completed and dated. |
| 5. Dismantle scaffolding and clean up. | 5.1. Scaffolding is isolated and appropriately signed and barricaded to ensure safe dismantling.  
5.2. Scaffolding is dismantled using reverse procedure as for erection.  
5.3. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specifications.  
5.4. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.  
5.5. Work completion procedures are applied and appropriate personnel is notified that work is finished.  
5.6. Advanced scaffolding operations and faults are *recorded and reported* to appropriate personnel. |

**Required Skills and Knowledge**
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - clarify and confirm work order with appropriate personnel
  - follow instructions
  - participate in on-site meetings
  - read and interpret:
    - instructions
    - work orders
    - other relevant documentation
  - report faults and respond appropriately
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
  - written skills to:
    - complete inspection log
    - document hazards
    - record and report faults
  - compliance with legislation, regulations, standards, codes of practice and established safe practices and procedures for erecting and dismantling advanced scaffolding
  - efficiently and safely erect and dismantle advanced scaffolding
  - numeracy skills to calculate rated capacity and working load limits
  - use and maintain relevant tools, machinery and equipment.

Required knowledge

Required knowledge for this unit is:

- advanced scaffolding capabilities and gear
- designs and functions of equipment
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols in the workplace
- federal, and state or territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for erecting and dismantling advanced scaffolding
- job safety analysis (JSA) and safe work method statements
- lifting devices and capabilities
REQUIRED SKILLS AND KNOWLEDGE

- material safety data sheets (MSDS) and material handling methods
- organisational and site standards, requirements, policies and procedures for erecting and dismantling advanced scaffolding
- procedures for recording, reporting and maintaining workplace records and information
- rated capacity and working load limit tags
- risk assessment and management
- safe working at heights and fall arrest
- types of tools and equipment, and procedures for their use, operation and maintenance
- typical routine problems encountered in the process and with equipment and adjustments required for correction
- weather considerations.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by providing evidence of safely and efficiently erecting and dismantling advanced scaffolding according to organisational and regulatory requirements.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with organisational and site policies and procedures, including quality requirements and state or territory legislation applicable to workplace operations
EVIDENCE GUIDE

- comply with OHS and environmental regulations, policies and procedures
- communicate effectively and work safely with others in the work area
- conduct risk assessment and management procedures
- complete the planning, erection and dismantling of suspended and hung scaffold system, in accordance with JSA and safe work method statements and regulations, including a minimum of:
  - two bays hung
  - support suspension system for a single stage
  - edge protection
- conduct pre and post-operational checks of advanced scaffolding.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials and equipment relevant to erecting and dismantling advanced scaffolding
- specifications and work instructions.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or
EVIDENCE GUIDE

simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

  - traffic control
  - underground or overhead services
  - uneven or unstable surfaces or terrain
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
RANGE STATEMENT

- use of tools and equipment
- workplace environmental requirements and safety.

Legislative requirements include:
- award and organisation agreements and relevant industrial arrangements
- confidentiality and privacy requirements
- environmental issues
- equal opportunity
- industrial relations and anti-discrimination
- OHS issues
- relevant industry codes of practice
- relevant legislation from all levels of government that affect business operation.

Organisational requirements include legal, organisational and site policy, guidelines and procedures relating to:
- access and equity principles and practices
- consultative processes
- emergency and evacuation procedures
- equipment maintenance and storage procedures
- ethical standards
- OHS policies
- own role and responsibility
- procedures and programs
- quality and continuous improvement processes and standards
- quality assurance or procedures manuals
- recording and reporting procedures.

Work order includes:
- organisational work specifications and instructions issued by authorised personnel for erecting and dismantling advanced scaffolding and respective tasks.

Appropriate personnel includes:
- client
- colleague
- manager
- supervisor
- supplier.

Advanced scaffolding includes:
- cantilevered and spurred scaffolding
- cantilevered crane loading platforms
- couplers
- hung scaffolds (scaffold hanging from tubes, wire ropes and chains)
RANGE STATEMENT

- sloping platforms
- suspended scaffolds (swing stages, boatswain chairs, multiple layer, single layer and articulated layer supported by wire ropes and may include maintenance units)
- tube and fitting scaffolding systems with mast climbers, cantilevers, barrow ramps, spurs, longitudinal and transverse braces, random planks and putlogs
- may include:
  - modular scaffolding.
- includes:
  - bracket scaffolds (tank and formwork)
  - cantilevered hoists (materials only with maximum working load limit not exceeding 500kg)
  - couplers
  - fibre ropes
  - gin wheels
  - hung scaffolds
  - manual and/or motorised winches
  - modular stages (aluminium or steel)
  - safety nets
  - static lines
  - suspended scaffolds
  - tube and fitting scaffolding
- may include:
  - adjustable base plates
  - box spanners
  - braces
  - cutters
  - forklifts
  - guardrails
  - hammer drills
  - hammers
  - ledgers
  - mast climbers
  - materials hoists

Equipment:
RANGE STATEMENT

- mesh guards
- mid rails
- pallet trolleys
- perimeter safety screens and shutters
- podgers hammers
- prefabricated components
- relevant maintenance equipment
- scaffold belts
- scaffolding planks (including laminated)
- shovels
- sledgehammers
- spanners
- spirit levels
- stairs or ladders
- standards
- steel and aluminium tubes
- tape measures
- torpedo levels
- transoms
- wheelbarrows
- wire nips
- wrenches.

Environmental protection measures include organisational and project requirements, including:

- clean-up management
- noise and dust
- waste management.

Tasks include:

- access ways
- edge protection
- falsework
- grandstands
- provision of work platforms
- stages and covered walkways.

Footings include:

- review of JSA and safe work method statements to determine the bearing capacity of ground or working surfaces
- components, including sole boards or base plates.

Erection includes:

- levelling
- placement
RANGE STATEMENT

- sequencing
- squaring
- tying to a structure.

*Lifting devices* include:
- manual or motorised winches
- mast climbers cantilevered hoists and gin wheels.

*Hazards* include:
- buildings and structures
- chemicals and hazardous materials
- fires
- movement of equipment, goods or material
- traffic
- underground or overhead services
- uneven or unstable surface or terrain.

*Fall protection*:
- a full body rescue harness connected to a fall line and working platform edge protection while the scaffold is erected
- static lines include:
  - static lines that can sometimes be used to form part of a travel restraint system that are horizontal lines, generally constructed from steel wire rope, to which lanyards are usually connected
- static lines may be used:
  - as part of a travel restraint system where access is required close to an unprotected edge, or on a sloping or slippery surface.

*Cantilevered hoist* includes:
- that with a working load limit not exceeding 500kg which only moves materials and is erected subsequent to the scaffold.

*Alterations and repairs* may be required due to:
- accidents
- misuse
- process changes
- storm damage.

*Handover* includes:
- signing of the handover certificate which certifies that scaffold is ready for service and complies with Australian standards in its entirety.

*Records and reports* include:
- advanced scaffolding operations and maintenance of equipment
- costs
RANGE STATEMENT

- dangerous occurrences or equipment malfunctions using logbooks, pro formas, production reports and maintenance records
- difficulties or issues faced
- environmental issues
- hazards
- incidents or injuries
- logbooks, pro formas, production reports and maintenance records recording dangerous occurrences or equipment malfunctions
- recommendations for future work
- results.

1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.  
1.5. Environmental protection requirements for the project are identified and applied in accordance with environmental plans and regulatory obligations. |
| 2. Identify authorised installation materials and techniques. | 2.1. Authorised materials and installation techniques for walls, partitions, ceilings, openings and penetrations are identified and confirmed from the plan, relevant standards and codes and manufacturer specifications.  
2.2. Authorised materials and installation techniques for air handling, structural encasement and fire escape systems are identified and confirmed from the plan, relevant standards and codes and manufacturer specifications.  
2.3. Most suitable system is selected to meet job specifications. |
| 3. Inspect for compliance with authorised standards. | 3.1. Installation is progressively inspected to confirm that materials and work comply with the authorised plan and standards and rigidly follow the test and/or sponsored investigation documents.  
3.2. Fire rating, including resistance levels and resistance to incipient spread of fire, is confirmed.  
3.3. At each stage of installation, walls, ceilings, openings, penetrations and other special needs are inspected and confirmed as being compliant.  
3.4. Steel componentry and fastener loadings are inspected and confirmed as being compliant. |
| 4. Record and report the results of inspections. | 4.1. Results of inspections, including certification, are completed in accordance with authorised procedures.  
4.2. Inspection findings, including non-conformance |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret:
    - codes and standards
    - documentation from a variety of sources
    - plans, specifications and drawings
    - report faults
    - provide feedback and advice
    - use and interpret non-verbal communication
    - use language and concepts appropriate to cultural differences
    - written skills to record and report results of inspections
  - numeracy skills to apply measurements and calculations
  - organisational skills, including the ability to plan for and set out work.

Required knowledge

Required knowledge for this unit is:

- Building Code of Australia (BCA) and Australian standards related to fire-rated lining systems
- fire technology, combustion theory and terminology relevant to the inspection of fire-rated systems
- methods for ensuring compliance with incipient spread of flame requirements
- quality systems, including inspection, compliance and recording or recording requirements
REQUIRED SKILLS AND KNOWLEDGE

- range of materials commonly used in the installation of fire-rated lining systems
- regulatory/legislative requirements pertaining to installation of fire-rated systems
- safe work procedures related to the inspection of fire-rated systems
- types, specifications and installation techniques for fire-rated ceiling systems related to direct fix, furred, suspended and spanning types
- types, specifications and installation techniques for fire-rated wall systems related to steel stud and timber stud walls, shaft walls and timber joists
- types, specifications and installation techniques for openings, penetrations, air handling, structural encasement and fire escape systems.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by inspecting a total fire-rated system and compiling a detailed report, or by selecting a total fire-rated system which complies with all codes and standards.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- inspect and report on, or select, a total fire-rated system that complies with all codes and standards and covers, at a minimum, a commercial multi-floor site involving compartmentation, plant rooms, access ladders, escalators, lifts, shafts, columns and beams
- communicate effectively and work safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory
EVIDENCE GUIDE

or Australian standards’ requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to the quality assurance of fire-rated lining systems
- tools and equipment appropriate to the quality assurance of fire-rated lining systems
- realistic activities covering the mandatory task requirements
- specifications, plans, building codes, Australian standards and work instructions.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the
EVIDENCE GUIDE

point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge

• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Fire-rated systems include:

• all fire systems are to be certified in a National Association of Testing Authorities (NATA) approved laboratory
• quality assurance of fire-rated lining systems covers walls, ceilings, openings, penetrations, air handling, structural encasement, escape systems, mechanical service shafts and relief joints
• quality assurance processes are to include detail of responsibilities, types of certification and essential aspects of inspection, recording and reporting procedures
• worksheets are to include work area sheets, inspection plans and non-conformance sheets or
RANGE STATEMENT

equivalent

- fire technology includes:
  - effect and movement of smoke and combustion products
  - fire triangle
  - flash over
  - fire resistance levels and resistance to incipient spread of fire
  - char factors (timber framing)
- fire resistance level (FRL) covers the grading period in minutes determined in accordance with the specification for structural adequacy, integrity and insulation
- resistance to incipient spread of fire (RISF) covers the ability of a ceiling membrane to insulate the space between the ceiling and the roof, or ceiling and floor above, to limit the temperature rise of combustibles in this space during the standard fire test to 180°C above the initial temperature, expressed in terms of 30, 60, 90 or 120 minutes resistance.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - lighting
  - power sources and leads
  - treatments associated with manual handling
  - trip hazards
  - working at heights
RANGE STATEMENT

- working in confined spaces
- working in proximity to others
- work site visitors and the public
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Tools and equipment** include:
- inspection support tools
- measuring equipment.

**Environmental protection requirements** include:
- acoustic conformance
- waste management.

**Authorised materials** include:
- fire compliant steel furring channel and suspension components
- fire grade metal studs and track
- fire grade plasterboard sheeting
- fire sealants:
  - base compound coats
  - finishing coats
  - perforated paper tapes
  - vermiculite or equivalent product.

**Relevant standards and codes** include:
- BCA
- Australian standards AS1530, 1684 and 2785
- documents detailing the responsibilities and authorities in relation to design, installation and supervision of fire-rated lining systems; they define and explain fire-rated protection, the principles of compartmentation, fire resistance levels, standard fire tests and the dangers of incompatible mix and match solutions.

**Walls** include:
- acoustic capabilities:
  - double wall advantages for impact sound resistance
  - flanking
  - impact of live and/or dead slab
  - loads deflection
  - staggered stud
  - thermal expansion of stud in fire rated partitions
  - weighted sound reduction index (RW)
- fire rated wall systems:
RANGE STATEMENT

- chase walls
- D-stud walls
- exterior walls
- partition walls
- shaft walls
- staggered stud partitions
- load and non-load bearing timber and steel types and related acoustic systems and components
- partitions and components:
  - column and beam
  - exterior
  - high performance wall
  - inter-tenancy
  - shaft.

Ceilings include:
- direct fix, furred and suspended ceilings
- impact of excessive moisture on fire-rated ceiling materials
- methods of ensuring compliance with incipient spread of fire requirements.

Openings include:
- fire doors (steel and timber framed)
- local strengthening of walls
- rating and fitting of windows hatches and appropriate glass
- treatment of door heads
- types of fire doors, which may include single hinged, double hinged and sliding
- types of fire-rated glass, which may include glaze, borosilicate drawn and heat-treated, clear ceramic and wire glass
- types of hatches, which may include those tested for vertical or horizontal positioning.

Penetrations:
- services include:
  - ducts for power and heating or cooling systems
  - metal and polyvinyl chloride (PVC) plumbing in groups or singles
  - power outlets
- types of service penetrations include:
  - baffles
RANGE STATEMENT

- encasement/enclosures and blocking systems
- fire-rated box
- springs
- system integrity maintenance includes:
  - board
  - collars
  - impregnated foams
  - mastic
  - mortar
  - pillows
  - use of tested and approved intumescent seals.

Other special needs include:
- fire escape systems, including escalators, fire tunnels and stairways
- fire-rated air handling systems, including fire dampers, direct protection and insulation
- fire-rated structural member encasement, which may be timber, steel or concrete and may be void or require filling.

Fasteners include:
- 30mm, 40mm or 50mm D type screws
- 30mm S type screws
- 30mm and 40mm L type screws
- 30mm and 45mm W type screws
- 30 mm, 40 mm, 50mm or 60mm plasterboard nails
- metal masonry anchors
- wafer head screws.

Appropriate authority includes:
- statutory/regulatory authorities, including federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Access and interpret relevant code and standard requirements. | 1.1. Relevant performance requirements from the BCA that apply to individual swimming pool and spa installations are identified.  
1.2. Requirements of relevant BCA deemed-to-satisfy (DTS) provisions are determined.  
1.3. Requirements of relevant Australian standards referenced in the BCA are accessed and interpreted accordingly. |
| 2. Classify the swimming pool and spa to be built. | 2.1. Intended use and site arrangement of swimming pool and spa are determined.  
2.2. BCA criteria to determine the defined classification are applied. |
| 3. Analyse and apply a range of solutions to a construction problem for compliance with the BCA. | 3.1. Range of criteria that will ensure swimming pool and/or spa construction methods comply with the performance requirements of the BCA is determined.  
3.2. Alternative solutions to a design or construction problem that will comply with BCA requirements are discussed with the clients and proposed in accordance with company policies and procedures.  
3.3. Performance-based solutions are identified and documented in accordance with BCA requirements.  
3.4. Assessment methods referenced in the BCA to determine whether a building solution complies with performance requirements or DTS provision of the BCA are analysed and applied.  
3.5. Relevant documentation is identified and completed in accordance with BCA requirements. |

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and...
REQUIRED SKILLS AND KNOWLEDGE

confirm requirements, share information, listen and understand
• discuss and propose alternative solutions
• read and interpret:
  • documentation from a variety of sources, including BCA and referenced documents
  • specifications and drawings
• use and interpret non-verbal communication
• use language and concepts appropriate to cultural differences
• written skills to complete documentation in accordance with BCA requirements
• numeracy skills to apply mathematical information included in building codes and standards.

Required knowledge

Required knowledge for this unit is:
• understanding of the BCA relating to:
  • basic design principles and the behaviour of structures under stress, strain, compression, bending or combined actions
  • BCA performance hierarchy
  • definitions and common technical terms or usage specified under general provisions of BCA
  • general nature of materials and the effects of performance
  • interpretation and analysis of working drawings and specifications
  • relevance of Australian standards and relevant ancillary provisions in state and territory building legislation
  • relevant legislative and OHS requirements, codes and practices
  • swimming pool design and construction.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by planning a swimming and spa that meets applicable building codes and standards.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with organisational quality procedures and processes
- apply and interpret relevant swimming pool and spa building documentation and codes
- accurately apply BCA performance requirements relating to the design and construction of swimming pools and spas
- demonstrate understanding of some assessment methods available to determine compliance with the BCA
- identify swimming pool and spa faults and problems and proposed action to rectify.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- access to BCA and relevant documents referenced in the BCA
EVIDENCE GUIDE

- access to relevant legislation
- project documentation, including design brief, design drawings, specifications, construction schedules and other supporting documents
- research resources, including product information and data
- relevant computer software package and suitable hardware.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Assessment methods include:
- comparison with BCA DTS provisions
- evidence of suitability as described in the BCA
- expert judgement as defined in the BCA
- verification method as defined in the BCA.

Performance requirements include:
- those contained within other legislation applicable to a specific project
- performance requirements of the BCA determined to be relevant to a specific project
- performance-based contractual requirements that must be fulfilled by any party.

PERFORMANCE CRITERIA

4.2. Application of bracing requirements, tie-downs, tolerances, allowances and fixing, and installation of components are planned, implemented and checked for compliance with manufacturer specifications and relevant Australian standards and codes.

5. Plan, coordinate and manage the finishing and water integrity of swimming pool and/or spa structure.

5.1. Installation of the finishing materials as specified in the building's plan is supervised and checked for compliance with standards and accepted industry construction principles.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- apply Australian standards and codes and manufacturer specifications
- apply BCA structural principles to swimming pools and spas
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - consult with industry professionals
  - read and interpret project documentation
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- identify and analyse relevant information
- select structural members based on project or specification requirements
- work safely to OHS regulations and site requirements.

Required knowledge

Required knowledge for this unit is:

- building and construction industry contracts
- relevant state or territory building and construction codes, standards and government regulations applying to swimming pools and spas
- underlying mathematics related to structural analysis
REQUIRED SKILLS AND KNOWLEDGE

- workplace safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by application of appropriate structural principles to construction of a swimming pool and spa.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- assess the structural integrity of a variety of swimming pool and spa structures
- apply the structural principles behind the safe erection and demolition of a swimming pool or spa
- apply technical construction principles to the appropriate selection, integration and building in of construction elements and components
- coordinate, plan, implement and check the building of a swimming pool and/or spa.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and government regulations
EVIDENCE GUIDE

- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers’ product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete
EVIDENCE GUIDE

- confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify and evaluate the properties of swimming pool and spa building materials. | 1.1. Suitability of *materials* commonly used in the region for swimming pools and spas is identified for a given building system.  
1.2. Properties of materials, their quality and the compatibility and non-compatibility of different materials are identified.  
1.3. Environmental impacts of different materials are identified.  
1.4. Impact of allowable tolerances on the conversion of naturally occurring materials is identified.  
1.5. Tolerances for installing materials are identified and checked in regard to the nature of the work being performed and the requirements of the Australian standards and BCA. |
| 2. Ensure suitable materials are selected for application. | 2.1. Materials that are structurally adequate and appropriate for the building system specified in the contract are *tested*.  
2.2. Materials are selected for safety and *suitability* to the application, durability, serviceability, cost effectiveness and compliance with Australian standards.  
2.3. Short and long-term degradation of materials is considered in relation to the swimming pool and/or spa's proposed life cycle.  
2.4. Alternative materials are evaluated and selected if specified materials are unavailable or unsuitable.  
2.5. Selection of materials for use is finalised in accordance with contractual requirements and in consultation with relevant professionals and the client. |
| 3. Supervise the acceptance, safe handling and storage of materials on site. | 3.1. Limitations and effects of transportation on materials and components are determined and action is taken in the case of potentially damaging circumstances.  
3.2. *Materials are handled correctly and safely* on site using appropriate equipment and safe work practices.  
3.3. Materials are stored in accordance with manufacturer specifications and in compliance with relevant Australian standards.  
3.4. Processes are implemented for inspecting all materials delivered on site for naturally occurring and/or manufactured defects before installation. |
ELEMENT  PERFORMANCE CRITERIA

3.5. Personnel are aware of actions to be taken in the case of defects caused by incorrect installation, application or placement.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- analysis and report preparation
- application of safe work practices and materials handling
- basic supervision of construction work teams
- communication skills to:
  - communicate with manufacturers and suppliers of materials
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - consult relevant professionals and the client
  - provide advice and information to regulatory authorities
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
    - use and interpret non-verbal communication
    - use language and concepts appropriate to cultural differences
  - develop and manage standardised processes
  - apply safe work practices and materials handling.

Required knowledge

Required knowledge for this unit is:

- alternative materials
- BCA
- construction and contracting equipment and its use
- construction supply processes
- environmental effects on various swimming pool and spa construction materials
- relevant Australian standards
- swimming pool and spa construction materials and technologies
REQUIRED SKILLS AND KNOWLEDGE

- relevant state or territory building and construction codes, standards and regulations, including:
  - AS1926.1-1993 Swimming pool safety - Fencing for swimming pools
  - AS1926.2-1995 Swimming pool safety - Location of fencing for private swimming pools
  - AS1926.3-2003 Swimming pool safety - Water recirculation systems
  - AS2610.1-1993 Spa pools Part 1: Public spas
  - AS2610.2-1993 Spa pools Part 2: Private spas
  - AS/NZS3136:2001 Approval and test specification - Electrical equipment for spa and swimming pools

- testing procedures
- workplace safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by planning and supervision of a system for selecting, procuring and safely storing all materials required for construction of a swimming pool and spa.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify suitable swimming pool and spa building materials specified by the project or contract
- use effective verbal and written communication with manufacturers and suppliers of materials
- apply effective and efficient testing of the materials to maintain quality standards on site
- use effective sampling and record keeping processes
- ensure safe handling and storage of materials
- comply with organisational and legislative requirements.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation that should normally be
EVIDENCE GUIDE

available in either a building or construction office

- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers’ product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances
EVIDENCE GUIDE

assessed at different points in time and
separated by further learning and practice, with
a decision on competency only taken at the
point when the assessor has complete
confidence in the person's demonstrated ability
and applied knowledge

- all assessment that is part of a structured
learning experience must include a
combination of direct, indirect and
supplementary evidence.

Assessment processes and techniques should as far
as is practical take into account the language,
literacy and numeracy capacity of the candidate in
relation to the competency being assessed.

Supplementary evidence of competency may be
obtained from relevant authenticated
documentation from third parties, such as existing
supervisors, team leaders or specialist training
staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different
work environments and situations that may affect performance. Bold italicised
wording, if used in the performance criteria, is detailed below. Essential operating
conditions that may be present with training and assessment (depending on the work
situation, needs of the candidate, accessibility of the item, and local industry and
regional contexts) may also be included.

Materials commonly used in
swimming pools and spas include:

- concrete
- fibreglass and plastics
- cements
- masonry units
- mortars
- paints and coatings
- ceramics
- structural steel.

Records of materials tested are
kept and reported by:

- distributing copies in accordance with
organisational policy
RANGE STATEMENT

- following up reports that indicate departures from quality or manufacturing requirements
- obtaining appropriate records and reports for review and analysis
- proving advice and information to regulatory authorities as authorised by the organisation
- taking appropriate remedial action within the scope of individual’s authority.

Selected for suitability involves a range of processes including:

- analysing reports, manufacturer specifications or other reference material regarding the suitability of new swimming pool and spa building material technologies with reference to BCA requirements
- arranging industry standard, external quality tests or inspections and provision of results as necessary
- arranging relevant industry standard, on-site quality tests for products to be used in swimming pools and spas
- decision making to ensure appropriate materials are selected, including:
  - identifying materials from specifications and drawings
  - identifying specifications and standards described in the contract documents
  - selecting and ordering materials that meet those requirements
- arranging for expert advice as necessary to confirm or refute materials options
- referencing external reports and manufacturer specifications
- refusing acceptance of sub-standard or out of specification materials
- seeking expert appraisal from relevant industry professionals, including architects, designers and engineers.

Materials are handled correctly and safely includes:

- allocation of space for on-site storage of materials
- confirming products or materials are as ordered and signing off delivery documentation
- ensuring safe unloading and handling of swimming pool and spa building materials
- ensuring safe use of hazardous materials and

© Commonwealth of Australia, 2017
Artibus Innovation
RANGE STATEMENT

- complying with statutory or regulatory requirements
- ensuring correct materials are being delivered to correct site
- providing for adequate on-site security of materials
- undertaking quality checks within the competence of the individual.

Unit Sector(s)

Co-requisite units

Co-requisite units Nil

Functional area

Functional area
CPCCBC4051A Supervise asbestos removal

Modification History
New to CPC08

Unit Descriptor
This unit of competency specifies the outcomes required to supervise the removal process for friable and non-friable asbestos containing material (ACM). The unit includes planning for and supervising the removal process, including preparing the work area and the work site, using safe and compliant removal practices, maintaining safety procedures, and supervising the decontamination and removal processes.

Ensuring compliance with the asbestos removal control plan (ARCP) is central to the effective performance of the role. This includes ensuring and documenting that required air monitoring and other testing and certification processes are conducted by licensed asbestos assessors according to legislation.

Application of the Unit
Site location for work may be either domestic or commercial, and may be a demolition site, a new work site or an existing structure being renovated, extended, restored or maintained. Project sites may be construction sites and may also include ships, soils and fences.

Licensing/Regulatory Information
Occupational licenses are required nationally. Work must be completed according to relevant legislation, the Code of Practice for the Safe Removal of Asbestos, industry guidelines, customer and organisational requirements, including work health and safety (WHS) policies and procedures. Regulatory mechanisms apply to this unit. This unit is required for all supervisors of the ACM removal process. Candidates are advised to check for regulatory requirements.

Pre-Requisites
CPCCOHS1001A Work safely in the construction industry
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

inspection by a licensed asbestos assessor.

1.10 Processes required to meet health-monitoring and air-monitoring requirements are identified and planned with the licensed asbestos assessor and within limits of own responsibility.

1.11 Occupants, neighbours and other affected parties are notified according to legislation and the code of practice and within limits of own responsibility.

1.12 Proper identification and handling of asbestos containing materials are planned and implemented according to legislative and regulatory requirements.

1.13 ARCP is developed within limits of own responsibility.

1.14 Required documentation is prepared and steps are taken to ensure authorisation according to legislative and company requirements.

1.15 Arrangements and work schedules are organised so that compliant supervision of the asbestos removal job is undertaken.

2 Prepare site for removal.

2.1 Workers’ certificates of competency for the type of removal required are sighted by the supervisor and records are kept on site.

2.2 Team members are provided with instructions for the safe and compliant conduct of the job according to the ARCP.

2.3 Steps are taken to ensure the signage and barricades to delineate the work area from the work site are erected according to legislative requirements.

2.4 Notification documents for the job, copy of asbestos removal licence, and training documents are secured and steps taken to retain them on site.

2.5 Daily air-monitoring readings are posted on the work site according to legislative requirements.

2.6 Team members are provided with PPE and its proper usage and fit are checked.

2.7 Steps are taken to ensure all equipment is installed and
checked for serviceability according to legislation and manufacturer specifications for use.

2.8 Final safety checks are made of the site, including ensuring that utilities are deactivated and secured prior to commencing work.

3 Supervise testing, compliance and documentation in consultation with the licensed asbestos assessor and the asbestos removalist.

3.1 Communication is undertaken with the licensed asbestos assessor to ensure compliance with legislative requirements for air monitoring.

3.2 Testing of equipment and work site is supervised to ensure compliance with legislative requirements.

3.3 In consultation with the licensed asbestos assessor and the asbestos removalist ensure that corrective action is taken, as required, should initial test results not conform to legislative requirements.

3.4 On advice from the licensed asbestos assessor, steps are put in place to ensure removal does not occur until air-monitoring checks have been undertaken and documented according to legislative requirements.

3.5 Required documentation is completed and forwarded to authorities according to legislative and workplace requirements.

4 Oversee removal and decontamination processes.

4.1 Set-up and daily checking of equipment are supervised to ensure safety, efficiency and compliance with legislative requirements.

4.2 Removal of asbestos from the structure is supervised using safe work methods and according to the ARCP, regulatory requirements and codes of practice.

4.3 Steps are taken to ensure asbestos is contained and placed in double-lined bins or ‘double-bagged’ according to regulatory requirements.

4.4 Bags are sealed, labelled and removed from work area to designated work site area according to the ARCP.

4.5 Arrangements are made with removal firms and bin suppliers to ensure the timely and appropriate removal of ACM from the site, and waste facility dumping
receipts are received as evidence of compliance.

4.6 Supervision is provided of the facilities and processes to ensure the compliant decontamination of team members and the work area and work site.

4.7 Clearance inspection, including air monitoring as required, is conducted of work area, work site and equipment to ensure job is completed according to legislative and workplace requirements.

4.8 Site is secured according to legislative requirements until clearance inspection and air-monitoring results have been approved and clearance certificate has been received.

4.9 Incidents are identified and reported according to company and legislative requirements.

5 Supervise and support team members.

5.1 **Appropriate training** on site is provided to asbestos removal team workers to ensure safe and compliant operations of the job site, including use of the ARCP, company’s WHS policies, and site safety plan.

5.2 Work is scheduled to ensure the timely and efficient completion of the job and operation of the team.

5.3 Processes are put in place to encourage open communication with team members regarding safety and the appropriateness of work practices.

5.4 Constructive feedback is provided to team members regarding work performance to improve efficiency and safe work practices.

5.5 Steps are taken to build and reinforce a workplace culture that supports quality, compliant operations and safety.

5.6 Team performance is managed according to company and legislative requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication, and appropriate level of language skills, to:
  - determine requirements
  - prepare documentation (including ARCP) that is accurate, clear and complete
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow and give instructions
  - liaise with related professionals, including occupational hygienists, assessors and testing authorities
  - reduce potential for conflict, particularly in relation to liaison with concerned neighbours, by providing clear information that gives reassurance about the process being undertaken
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - use language and concepts appropriate to cultural differences
- coaching and mentoring skills to strengthen workplace culture and manage the performance of a team
- initiative and enterprise skills to:
  - evaluate own actions and make judgements about performance and necessary improvements
  - identify and report faults in tools, equipment and materials
- planning and organising skills to:
  - plan and set out work
  - set up the decontamination process
- teamwork skills to:
  - coordinate own work and supervise the work of others
  - relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- self-management skills to:
  - set up the asbestos removal area according to safe work methods
  - apply general WHS requirements for work in the construction industry, including applying safe work methods for the removal of friable and non-friable asbestos
  - respond effectively to timelines, deadlines and complex work requirements
  - follow correct decontamination procedures
• use, fit and maintain PPE, decontamination equipment, hand and power tools safely

Required knowledge

• range of materials manufactured using asbestos, type and characteristics of asbestos used in each material, and usual applications associated with the material
• methods and purpose for assessing hazards relating to friable ACM, together with an understanding of:
  • health effects caused by exposure to ACM and requirement for safe handling and removal
  • health impacts on the community and requirement for safe handling and disposal
• requirements of current legislation and standards relating to asbestos safety, and the preparation of an ARCP and related documentation
• rationale for, and principles underpinning, the ARCP and related legislation
• air-monitoring procedures and testing requirements, including for interpretation of results
• general WHS procedures for construction work
• health hazards associated with friable ACM, such as:
  • weathering
  • wear and tear
  • application of tools and equipment
  • accidental damage
• licensing requirements for the use of specific equipment, such as excavators
• safe work methods for the removal of friable and non-friable asbestos
• hazards associated with using enclosures and removing friable and non-friable asbestos
• general construction terminology
• handling requirements of differing types of asbestos materials
• work site and work area procedures for the safe removal of friable and non-friable asbestos
• job safety analysis (JSA) and SWMS, if required for construction
• safety data sheets (SDS)
• materials storage and hazardous waste management in relation to asbestos products
• method of operation, and cleaning, use and maintenance requirements of equipment
• plans, drawings and specifications, asbestos registers and register amendments
• quality requirements relating to supervising asbestos removal
• risk assessment processes and contingency planning relating to supervising asbestos removal
• techniques associated with containing and removing asbestos, including:
  • use of large and small-scale enclosures for different sites
  • use of negative pressure exhaust units
  • encapsulation methods
  • use of decontamination units
• types, characteristics, uses and limitations of plant and equipment involved in enclosing and removing asbestos
• workplace and equipment safety requirements
• application of the documentation for notification and re-notification
• duties and obligations of the supervisory role, including:
  • implementing the ARCP with control monitoring and clearance inspections as required for Class A removal
  • using the certified WHS management system and emergency plan as required
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, providing that simulated or project-based assessment techniques fully replicate workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- obtain and apply work instructions for the safe and correct removal of asbestos
- plan for the safe and correct removal of asbestos, including:
  - analysing all documentation, such as the asbestos register
  - scoping and resourcing the work
- work with and supervise the removal team to ensure the safe and correct removal of ACM
- supervise and coordinate as required the testing process in strict compliance with legislation and code of practice
- supervise decontamination process for workers, equipment and work site to ensure strict compliance with legislation and code of practice
- complete documentation that supports the removal process within limits of own responsibility
- demonstrate team supervision for the safe and compliant removal of ACM.

Context of and specific resources for assessment

This unit is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
workplace instructions relating to safe work practices and addressing hazards and emergencies
research resources, including industry-related systems information
safety data sheets.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>

</tbody>
</table>
- polyvinyl alcohol (PVA) adhesive as spray / spray tack glue
- rags or other material wipes
- heavy-duty polythene bags (200 μm minimum thickness)
- 200 μm unused (not recycled) plastic sheeting or drop sheet
- drums or bins in good condition with well-fitting lids and labelled with required warning sign
- signs
- timber frames, nails, aluminium poles and other materials required for enclosures.

**Quality requirements may include:**

- internal company quality policy and standards
- manufacturer specifications
- relevant regulations, including Australian standards
- workplace operations and procedures.

**Safety procedures are to be according to state and territory legislation and regulations and project safety plan and may relate to:**

- conduct of work site induction
- emergency procedures, including extinguishing fires, and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability, are a factor
- hazard control
- hazardous materials and substances
- organisational first aid requirements
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures according to SWMS, including the conduct of operational risk assessment and treatments associated with:
  - deactivating or securing utilities, including electrical, air conditioning and water services
  - earth leakage boxes
  - falling objects
  - lighting
  - plant movement
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
• working in proximity to others
• use of firefighting equipment
• use of tools and equipment
• workplace environmental requirements and safety.

**Plant, tools and equipment** must be relevant to the job (whether for the removal of friable or non-friable ACM), may require separate licensing for use, and may include:

- high efficiency particulate air (HEPA) vacuum cleaners to comply with AS3544-1988 and AS4260-1997 as amended from time to time
- pipelines
- anchorage points for enclosures
- atomiser water bottles and hand pressure sprayer
- barricades
- barricade tape, including para-webbing or fencing
- bars (crow and pinch)
- bolt cutters
- buckets
- cold chisels
- enclosure equipment for large-scale asbestos removal work
- excavators
- mini-enclosures for small-scale asbestos removal work
- glove bag or wrap and cut equipment
- negative air pressure enclosures or bubbles
- negative pressure exhaust units
- PVA adhesive as spray / spray tack glue
- scaffolds
- scrapers
- shovels and spades
- signs
- smoke generators
- staple guns
- decontamination unit and remote decontamination units if required for large-scale removal
- decontamination facilities for non-friable asbestos removal
- drills (manual and low-speed only)
- enclosures for large-scale asbestos removal work
- flame retardant polythene
- hammers
- hand drills
- hardboard / corex
- hoses and spray fittings
- ladders to comply with construction regulations.

**Personal protective equipment** will be

- protective clothing, such as:
  • disposable coveralls with fitted hood and cuffs
specified to the requirements of the job and may include:

- ships and other forms of transport.

### Utilities may include:
- air conditioning
- electricity
- water services.

### Testing procedures:
- must:
  - conform to legislative requirements
  - be conducted by a licensed asbestos assessor
- may include:
  - air monitoring
  - analysis of materials to determine presence and type of ACM
  - smoke tests for leaks in the enclosure.

### Documentation may include:
- air-monitoring results
- asbestos register
- notification of asbestos removal work to the regulator as required
- asbestos removal control plan
- WHS management system
- JSA and SWMS for construction
- implementation and development of emergency plan
- health-monitoring program
- leak test results
- clearance inspections and certificates
- training certificates.

### Safe work methods may include:
- compliant set-up of the asbestos work area, including set-up of negative air, lighting, water and emergency supplies
- placing adequate signage around work site
- fire and emergency system requirements
- enclosure of the asbestos removal area and the plant, equipment and fixtures remaining in the area
- testing of the asbestos work area by a licensed asbestos assessor
- procedures for entering and leaving the asbestos work area
- safe techniques for removing friable and non-friable asbestos
- packaging, sealing and removing contaminated plant, tools and equipment
- cleaning and decontaminating the asbestos work area
- decontaminating and demobilising the work site
• final decontamination of personnel
• disposing of asbestos waste.

**Appropriate training for team members may include:**

|                         | • conducting on-site training, either one-on-one or small group sessions  
|                         | • recording the mandatory unit of competency for workers for licensed asbestos removal work  
|                         | • providing briefings and explaining the content of induction manuals. |

## CPCCBC5001B Apply building codes and standards to the construction process for medium rise building projects

### Modification History
Not Applicable

### Unit Descriptor

| Unit descriptor | This unit of competency specifies the outcomes required to access, interpret and apply relevant building codes and standards applicable to the construction processes of medium rise commercial and wide span buildings (medium rise licensing classification with reference to Classes 1 and 10 construction, Classes 2 and 3 to a maximum of 3 storeys, and Classes 4 to 9 to a maximum of 3 storeys, not including Type A construction).
To successfully construct medium rise buildings requires thorough knowledge of the purpose and content of the Building Code of Australia (BCA), coupled with the ability to interpret other codes and standards related to a specific building. |

### Application of the Unit

| Application of the unit | This unit of competency supports builders, project managers and related construction industry professionals responsible for ensuring compliance with building codes and standards in the building and construction industry. |

### Licensing/Regulatory Information
Refer to Unit Descriptor
### Pre-Requisites

| Prerequisite units | Nil |

### Employability Skills Information

| Employability skills | This unit contains employability skills. |

### Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Access and interpret relevant code and standard requirements. | 1.1. Relevant performance requirements from the BCA that apply to individual projects (classified as medium rise) are identified.  
1.2. Requirements of relevant BCA deemed-to-satisfy (DTS) provisions are determined.  
1.3. Requirements of relevant Australian standards referenced in the BCA are accessed and interpreted appropriately. |
| 2. Classify buildings. | 2.1. Nature of building is determined according to use and arrangement.  
2.2. BCA criteria to determine the defined classification are applied. |
| 3. Analyse and apply a range of solutions to a construction problem to ensure compliance with the BCA. | 3.1. Range of criteria that will ensure that construction methods comply with BCA performance requirements is determined.  
3.2. Alternative solutions to a design or construction BCA-compliance problem are discussed and proposed in accordance with company policies and procedures.  
3.3. Performance-based solutions are identified and documented in accordance with BCA requirements and organisational quality procedures and processes.  
3.4. Assessment methods referenced in the BCA to determine whether a building solution complies with performance requirements or DTS provision of the BCA are analysed and applied.  
3.5. Relevant documentation is identified and completed in accordance with BCA requirements. |
| 4. Apply fire protection requirements. | 4.1. Passive and active fire control elements required by the BCA and other legislation are identified.  
4.2. Level of fire resistance required for the construction of various medium rise buildings is determined.  
4.3. BCA requirements with respect to passive and active fire protection to medium rise buildings are identified and applied.  
4.4. Check of existing buildings for compliance with passive and active fire protection requirements is carried out in accordance with BCA requirements. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- analysis and interpretation skills relating to documentation from a wide range of sources, including BCA and referenced documents
- application of design concepts and principles in accordance with BCA, namely medium rise:
  - Classes 1 and 10
  - Classes 2 and 3 to a maximum of 3 storeys
  - Classes 4 to 9 to a maximum of 3 storeys, not including Type A construction
- accurate application of building codes and standards
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - discuss and propose alternative solutions
  - read and interpret:
    - documentation from a variety of sources, including BCA and referenced documents
    - specifications and drawings
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- written skills to complete documentation in accordance with BCA requirements
- numeracy skills to apply mathematical information included in building codes and standards
- technological skills to facilitate use of the organisation's software and office equipment.

Required knowledge

Required knowledge for this unit is:

- BCA performance hierarchy
- interpretation and analysis of working drawings and specifications
- relevance of Australian standards
- relevant legislative and OHS requirements, codes and practices
- relevant licensing arrangements
- thorough understanding of the BCA, namely medium rise:
  - Classes 1 and 10
REQUIRED SKILLS AND KNOWLEDGE

- Classes 2 and 3 to a maximum of 3 storeys
- Classes 4 to 9 to a maximum of 3 storeys, not including Type A construction.
### Evidence Guide

<table>
<thead>
<tr>
<th><strong>EVIDENCE GUIDE</strong></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</td>
<td></td>
</tr>
</tbody>
</table>

#### Overview of assessment

This unit of competency could be assessed by the application of design principles and solutions specified in BCA performance requirements or DTS provisions applicable to a particular building project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with organisational quality procedures and processes
- apply and interpret relevant documentation and codes
- apply BCA performance requirements relating to design and construction of a medium rise building
- demonstrate understanding of assessment methods available to determine compliance with the BCA.

#### Context of and specific resources for assessment

This unit of competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- access to BCA and relevant documents referenced in the BCA
### EVIDENCE GUIDE

- access to relevant legislation
- project documentation, including design brief, design drawings, specifications and construction schedules
- research resources, including product information and data
- relevant computer software package and suitable hardware.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

### Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Medium rise falls within the BCA classes:

- 1 and 10
- 2 and 3 to a maximum of three storeys
- 4 to 9 to a maximum of three storeys, not including Type A construction.

Assessment methods include:

- comparison with BCA DTS provisions
- evidence of suitability as described in the BCA
- expert judgement as defined in the BCA
- verification method as defined in the BCA.

Performance requirements include:

- those contained within other legislation applicable to a specific project
- performance requirements of the BCA determined to be relevant to a specific project
- performance-based contractual requirements that must be fulfilled by any party.

CPCCBC5002A Monitor costing systems on medium rise building and construction projects

Modification History
Not Applicable

Unit Descriptor
Unit descriptor
This unit of competency specifies the outcomes required to monitor building or construction costing systems. The processes and practices involved in supervising and monitoring costing systems result in the ongoing maintenance of cost control and the production of expenditure schedules and other arrangements, which ensure contracts or projects remain on budget.

In order to achieve the outcomes for this unit, knowledge of relevant legislation, codes and standards, industry estimating and costing systems, and financial principles is required.

Application of the Unit
Application of the unit
This unit of competency supports the needs of builders, senior managers in building and construction firms, and other construction industry personnel responsible for monitoring building or construction costing systems for medium rise building and construction projects.

Licensing/Regulatory Information
Not Applicable
Pre-Requisites

Prerequisite units Nil

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Supervise the identification and classification of project costs. | 1.1. Staff members are supervised in their identification of building or construction costs and accurate estimates are made from project schedules.  
1.2. Definitive cost estimates are accurately translated into the correct cost centres appropriate to contract requirements.  
1.3. Cost centres are correctly identified and incorporated into a planned project cost network.  
1.4. Risk assessment is undertaken and estimated cost is compared with estimated risk.  
1.5. Planning ensures compliance with relevant codes of practice, standards and legislative requirements. |
| 2. Manage the preparation of a schedule of project expenditure. | 2.1. Draft schedules of project expenditure are prepared with critical points identified.  
2.2. Expenditure schedules are prepared using organisational processes, and hard copies are produced.  
2.3. Critical financial phases of the project are identified and cash flows are matched to expenditure. |
| 3. Prepare curves showing projected cash flow and payments. | 3.1. Interim payment claims and rise and fall calculations are prepared for the contractor and subcontractors.  
3.2. Projected S curve is prepared to show cash flow and resource control.  
3.3. Projected cash flow and payments using time risk and cost risk are prepared and compared.  
3.4. Cash flows using early start and late finish for pessimistic or optimistic outcomes are compared.  
3.5. Pessimistic overdraft requirements are calculated. |
| 4. Maintain continuous checks on expenditure and evaluate outcomes. | 4.1. Cash flow and creditor payments are monitored daily.  
4.2. Budget cost of the network is compared to actual costs in the tender calculations.  
4.3. Rise and fall clause calculations are undertaken and financial controller is advised of variations.  
4.4. Reasons for any cost variations are analysed and identified.  
4.5. Remedial action is taken and recorded as necessary to retain contract financial compliance. |
| 5. Prepare final cost | 5.1. Actual costs are compared with estimates at the completion of the job and a report is compiled |
5.2. Organisational rates are adjusted as required, based on the final cost report and current movements in prices and rates.

**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
 | detailing future actions.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- account keeping skills to identify cost centres and monitor cash flows
- analysis and interpretation skills to undertake financial risk assessments
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret documentation from a variety of sources
  - supervise staff members
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
  - written skills to prepare draft schedules of project expenditure and final cost reports
- management skills, including the ability to supervise staff
- numeracy skills to perform complex financial calculations
- preparation of schedules of expenditure and expenditure projections.

**Required knowledge**

Required knowledge for this unit is:

- advanced estimating and costing systems used in the building and construction industry
- expenditure evaluation methods
- financial principles and cash flows
- project financial processes and timelines
- relevant licensing arrangements
- relevant standards, codes of practice and legislation for medium rise construction projects
REQUIRED SKILLS AND KNOWLEDGE

- variations in rates occurring through rise and fall clauses and their effects.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the effective monitoring of a building or construction costing system.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- monitor and supervise staff who develop and consolidate costing data for Class 2 to 9 Type A building and construction projects
- compare the extent and effectiveness of actual versus estimated costs and the production of schedules of expenditure
- produce efficient and punctual financial data in the form required by the organisation
- plan and continuously revise the schedules of payments and cash flows to match contract performance and efficiency.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory
EVIDENCE GUIDE

Resource implications for assessment include:

- documentation that would support building or construction costing systems for a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers’ product literature
- a suitable work area appropriate to the monitoring process
- copies of appropriate awards and workplace agreements.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over
EVIDENCE GUIDE

- a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Identification of building or construction costs includes:
- human resource costs, including direct employees' and subcontractors' rates
- materials, such as sand, aggregate, bitumen, concrete, bricks, roofing and reinforcing
- overhead costs, including administration
RANGE STATEMENT

support, power, lighting, accommodation and rent
- plant and equipment purchase or lease and operating costs
- relevant codes, standards and legislation
- site services, such as temporary power, lighting and water
- specialist services, such as surveying, architectural, testing and legal
- temporary accommodation and shelter, including sheds, site offices and toilets.

Schedules of project expenditure include:
- consumables, such as fuel and lubricants, electric power and water
- costs of pre-cast and on-site production of concrete components
- labour costs against estimated costs
- labour hours consumed against estimates
- materials
- supplies, such as timber and building materials.

Projected cash flow and payments include:
- progress payments in for work completed
- progress payments out for work undertaken
- progress payments for supplies and materials
- penalties
- wages and salaries
- insurances, including workers' compensation premiums.

Final cost report includes:
- cost-benefit analyses of overtime payments
- detailed summaries of actual costs against estimates
- details of cost over-runs and savings on labour and contracting out
- details of savings or under-expenditure on materials or supplies
- equipment performance information and efficiencies.

4. Ensure the provision of all resources required for project.  
   4.1. Adjustments to the project timeframe to take account of anticipated delays are facilitated.  
   4.2. Temporary services and site accommodation needs are identified and arranged as required.  
   4.3. Plant requirements, site location and installation dates are confirmed.  
   4.4. On-site personnel and labour requirements are determined and documented.  

5. Review existing on-site buildings or structures.  
   5.1. Condition of existing buildings or structures to be retained, and structures on adjacent site boundaries, are reviewed and recorded.  
   5.2. Copies of reports are submitted to adjacent building owners prior to commencing construction work.  

6. Supervise staff and maintain an effective work environment.  
   6.1. Overview of the project site or sites is maintained and staff resources are allocated according to organisational, regulatory and project needs.  
   6.2. Activities of contract planning personnel are monitored and an effective work environment is maintained.  
   6.3. Effective human resource practices and policies which maximise performance and productivity are employed.  

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- evaluation skills to review and evaluate documentation and processes and recommend changes or improvements  
- communication skills to:  
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand  
  - discuss problems with consultants  
  - manage staff
REQUIRED SKILLS AND KNOWLEDGE

- read and interpret:
  - contracts, project schedule and reports
  - documentation from a variety of sources
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- written skills to:
  - document project schedule and resource requirements
  - maintain records
  - record relevant information
- management skills, including the ability to delegate tasks and supervise staff to achieve planning outcomes
- planning skills to enable the effective planning of projects, processes and strategies which maximise the efficiency and cost-effectiveness of building or construction contracts and which effectively organise and use available resources on construction sites.

Required knowledge

Required knowledge for this unit is:

- building and construction industry contracts
- building and construction industry subcontracting system
- building or construction practices in on and off-site management
- construction planning process
- contract documentation, quantities establishment, rates and costs related to payments and claims
- human resource principles and practices
- relevant licensing arrangements
- relevant state or territory building and construction codes, standards and government regulations for medium rise building projects
- workplace safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the
EVIDENCE GUIDE

demonstration of effective supervision of planning on-site building or construction work.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- translate contract requirements into construction plans and processes
- delegate planning tasks
- apply construction planning processes that effect desired outcomes
- development strategies that effectively maximise resource use
- establish and maintain a workplace environment representative of good management practice.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- available in either a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers’ product
EVIDENCE GUIDE

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language,
EVIDENCE GUIDE

literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Contracts include:
- Australian standard contracts, including the AS2124 and AS4000 series
- Construction Industry Contract (CIC) suite
- individual organisational contracts
- Joint Contracts Committee (JCC) suite
- MBA and HIA contracts
- Simple Building Works (SBW), including series 1 and series 2 (SBW2 Lump Sum).

Resources include:
- human resources, both organisational and subcontracted
- on-site facilities
- plant and equipment
- power, water, telephone and other resources
- pre-cut or pre-cast components
- raw materials
- temporary accommodation.

Project schedule includes:
- critical events and milestones
- labour supply and availability information
- materials supply and availability information
- plant and equipment availability information
- services provision
**RANGE STATEMENT**

- subcontractor requirements and availability.
  - *Temporary services* include:
    - offices and crib rooms
    - on-site communications
    - portable generators and lighting
    - power poles
    - toilets.

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify and describe the properties of building materials. | 1.1. Suitability of materials commonly used in the region is identified for a given building system.  
1.2. Properties of materials, their standards of quality and the compatibility and non-compatibility of different materials are identified.  
1.3. Environmental impacts of different materials are identified.  
1.4. Impact of allowable tolerances on the conversion of naturally occurring materials is identified.  
1.5. Tolerances for installing and assembling materials are identified and checked in regard to the nature of the work being performed and the requirements of Australian standards. |
| 2. Ensure suitable building materials are selected for application. | 2.1. Selection of building materials is conducted with reference to structural requirements and suitability for the building system specified in the contract.  
2.2. Materials are selected for their safety, required fire resistance rating, serviceability and cost effectiveness.  
2.3. Short and long-term degradation of materials is considered in relation to the proposed life cycle of the building.  
2.4. Alternative materials are selected if specified materials are unavailable or unsuitable. |
| 3. Supervise the acceptance, safe handling and storage of materials on site. | 3.1. Organisational procedures for the acceptance, safe handling and storage of materials on site are identified and communicated.  
3.2. Limitations and effects of transportation on materials and components are determined and action is taken in the case of potentially damaging circumstances.  
3.3. Materials are handled correctly and safely on site using appropriate equipment and safe work practices.  
3.4. Materials are stored in accordance with manufacturer specifications and in compliance with the relevant Australian standards.  
3.5. Systems are implemented for inspecting all materials delivered on site for naturally occurring and/or manufactured defects before installation.  
3.6. Personnel are aware of actions to be taken in the case of defects caused by incorrect installation, application or placement. |
ELEMENT PERFORMANCE CRITERIA

3.7. Timber is preserved and ferrous and non-ferrous metals used in the construction process are protected using established methods.

4. Supervise testing of materials on site for suitability and fitness for purpose.

4.1. Testing of materials, including soil, filling, compacting, surfacing, concreting and welding, is carried out to specifications and results are analysed on-site before and during installation.

4.2. Samples of materials taken during placement or installation are accurately identified and sent for laboratory testing.

4.3. Materials are given visual checks for suitability before building in, with materials sent off-site for testing if required.

4.4. Processes are implemented to ensure defective materials are identified and remedial action is recorded.

5. Establish records of materials testing and report on testing process conformance or otherwise.

5.1. Records of tests and testing procedures are established and maintained by the organisation in accordance with its quality management obligations.

5.2. Test results and reports are periodically evaluated to maintain integrity of organisational quality standards.

5.3. Non-conformant on-site materials tests are immediately notified to the appropriate company officer for further action.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- apply numeracy skills to workplace requirements
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - communicate organisational procedures and other information to relevant personnel
REQUIRED SKILLS AND KNOWLEDGE

- read and interpret:
  - documentation from a variety of sources
  - plans, specifications and drawings
- report on difficulties with either supply or standards of materials
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- written skills to:
  - establish and maintain records of tests and testing procedures
  - record relevant information
- materials testing skills to enable materials to be tested according to relevant Australian standards or the ability to arrange for testing to be carried out independently
- reporting skills to report on difficulties with either supply or standards of materials
- supervisory skills to ensure the correct selection and installation of materials on site and secure storage of materials on site
- systems development skills to ensure systems are developed to ensure correct materials that meet appropriate standards are delivered and used on site.

Required knowledge

Required knowledge for this unit is:

- alternative materials
- building and construction materials and technologies
- construction and contracting equipment and its use
- construction supply processes
- environmental effects on various building and construction materials
- relevant licensing arrangements
- testing procedures
- workplace safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the effective supervision and application of quality
## EVIDENCE GUIDE

Standards to the selection of specified construction materials.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify building and construction materials specified in the project or contract documentation
- communicate effectively both verbally and in writing with manufacturers and suppliers of materials
- test the materials to maintain quality standards on site
- apply effective sampling and record keeping processes
- use safe handling and materials storage techniques
- comply with organisational and legislative requirements.

### Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view
EVIDENCE GUIDE

2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers’ product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured
EVIDENCE GUIDE

Learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Materials include:

- brick or concrete structures, including:
  - cavity brick
  - core filled concrete blocks
  - single skin clay block
  - tilt-up concrete panels
- cladding, including:
  - brick veneer
  - colourbond and zincalume sheeting
  - fibre cement or compressed wood panelling
  - stuccoed stud walls
  - weatherboards
- floor systems, including:
  - bearers and joists
  - brick bases
  - compressed sheet wet area flooring
RANGE STATEMENT

- concrete slab floors, including slabs on ground and suspended slabs
- engineered floor Joists
- fitted (cut-in) floors
- platform floor construction
- sheet flooring
- tongue and groove flooring
- timber and timber structures.

**Selection of building materials includes:**

- arranging for expert advice as necessary to confirm or refute materials options
- identifying materials from specifications and drawings
- identifying specifications and standards described in contract documents
- selecting and ordering materials that meet those requirements.

**Acceptance, safe handling and storage of materials include:**

- allocation of space for on-site storage of materials
- confirming products or materials are as ordered and signing off delivery documentation
- ensuring safe unloading and handling of construction materials
- ensuring correct materials are delivered to correct site
- providing for adequate on-site security of materials
- undertaking quality checks within the competence of the individual.

**Testing of materials includes:**

- arranging external quality tests or inspections and providing results as necessary
- arranging on-site quality and fit for purpose tests for products to be used in construction
- completing appropriate organisational records
- refusing acceptance of substandard or out of specification materials.

**Records of tests and testing procedures include:**

- distributing copies in accordance with organisational policy
- following up reports that indicate departures from quality or manufacturing requirements
- obtaining appropriate records and reports for review and analysis
- proving advice and information to regulatory
RANGE STATEMENT

- authorities as authorised by the organisation
- taking appropriate remedial action within the scope of individual’s authority.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - communicate with subcontractors on all matters regarding selection and management
  - read and interpret:
    - industrial legislation and contract legal matters that impact on operations
    - subcontractor records and information
REQUIRED SKILLS AND KNOWLEDGE

- review tender responses
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- written skills to:
  - correspond with subcontractors
  - develop a management plan
  - record relevant information
- developing and managing subcontract tender and selection processes
- evaluation skills to undertake and manage subcontractor evaluations for the organisation and review subcontractor performance
- managing subcontractor resources in an equitable and non-discriminatory manner
- numeracy skills to apply calculations and estimate timeframes
- organisation and management skills to manage the development of job profiles and competency statements for subcontractor appointments.

Required knowledge

Required knowledge for this unit is:

- contracts and workplace agreements
- industrial relations structures and processes
- industry subcontracting system and industry benchmarks for subcontract personnel
- relevant licensing arrangements
- subcontractor administration and performance management systems.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by effective selection and management of building and construction contractors for medium rise projects against projected organisational activities and the business plan.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully...
EVIDENCE GUIDE

replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify the subcontractor needs of the organisation based on an evaluation of organisation's projected work load and forward contractual commitments
- assess the extent of effective systems introduced to review subcontractor performance and competency
- implement an effective and efficient appointments process
- implement an effective and efficient management of the system of subcontractor appointments to meet project timeframes
- demonstrate remedial or disciplinary action for below standard subcontractor performance.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers’ product literature
EVIDENCE GUIDE

- copies of appropriate awards and workplace agreements
- a suitable work area appropriate to this process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.
EVIDENCE GUIDE

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Subcontractor requirements include:

- calculating number of subcontractors required by the hours within the timeframe
- calculating quantum of hours required to perform the work
- determining total hours required for each function and stage of work
- estimating project timeframe from start to finish
- identifying work sequence and nature of job roles.

Reviewing subcontractor performance includes:

- anecdotal evidence, including input from project managers and administrators
- examination of data provided by the subcontractor
- input about subcontractor performance from other organisations
- observation of the subcontractor on other project sites
- using subcontractor performance records from previous associations.
RANGE STATEMENT

Selection and engagement of subcontractors include:

- advising interviewees of the outcome of the selection process
- arranging credit checks to determine subcontractor financial viability
- ensuring selection interviews with subcontractors meet the criteria
- providing invitations to tender for subcontract opportunities
- reviewing tender responses and checking referees
- undertaking contractual arrangements between the organisation and successful subcontractors.

Subcontractor performance and compliance with contract requirements include:

- establishment of performance benchmarks within subcontracts
- participation by subcontractors in project meetings and provision of progress reports
- performance management where performance is sub-standard or inappropriate
- performance monitoring against project timelines and objectives
- regular communication with subcontractors.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- application of design concepts and principles to survey and site set-out
- application of measurements and calculations to survey and site set-out
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - perform survey and levelling procedures with others
  - read and interpret:
    - drawings and specifications
    - state regulatory authority requirement
    - other relevant documentation
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- interpretation skills to understand documentation from a wide range of sources, including state regulatory authority requirements
- numeracy skills to apply measurements and calculations.

Required knowledge

Required knowledge for this unit is:

- application of design principles
- BCA and Australian standards and manufacturer specifications
- building systems and application to survey and site set-out
- level and grade checking used to perform survey control to accuracy criteria
- OHS measures as identified by equipment manufacturers and Australian standards
- relevant legislative requirements, codes and practices
- survey and levelling devices and effect of performance on site
- work drawings and specifications.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by applying survey and site set-out procedures and selection and use of two levelling devices to survey and set out building projects.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- accurately apply survey and levelling principles relating to performance of site set-out
- comply with OHS and organisational quality procedures and processes
- apply and interpret relevant documentation, codes and legislation
- use levelling devices to survey and set out building projects
- identify typical faults and problems and take necessary action taken to rectify
- identify hazard categories according to Australian standards, BCA and specifications.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation, including design brief
EVIDENCE GUIDE

drawings, specifications, codes, design concepts, construction schedules and other necessary supporting documents
- research resources, including systems information and data
- access to relevant legislation, regulations and codes of practice.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a
EVIDENCE GUIDE

A combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Levelling equipment** includes:
- electronic distance measuring (EDM) equipment
- laser
- optical plummets
- pegs methods
- theodolite.

Unit Sector(s)

Co-requisite units
Co-requisite units
Nil

Functional area
Functional area
CPCCBC5007B Administer the legal obligations of a building or construction contractor

Modification History

Minor editorial corrections to restore original intent to represent contractors rather than contracts, including associated change in unit title
Literacy skills required for completing legal documents and records made more explicit
Equivalent to CPCCBC5007A

Unit Descriptor

This unit of competency specifies the outcomes required to administer the legal obligations of a building or construction contractor, including obligations as either party to a contract. It is concerned with licensing and/or builders' registration and other legislative matters as appropriate, and administering the systems through which the obligations of complying with legislation are fulfilled.
In order to achieve the outcomes for this unit, knowledge of relevant industry legislation, codes, standards, regulations, licensing, employee awards, agreements, OHS, taxation and insurance is required.

Application of the Unit

This unit of competency supports the needs of builders, senior managers within building and construction firms and other construction industry personnel responsible for administering the legal obligations of a building or construction contractor for medium rise projects.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Comply with the laws relating to establishing and licensing a building or construction contractor.
   1.1 Business registration of the organisation is secured in accordance with owner/operator preferences and legal requirements.
   1.2 Approval of licensing and registration as a contractor/supervisor is sought from appropriate government agency.
   1.3 Responsibilities of operating a construction business in accordance with legislation are met.
   1.4 Legal documents and records are kept and carefully maintained.

2 Engage personnel for the project.
   2.1 Relevant industrial awards are identified for the hiring of staff or labour.
   2.2 Contracts of employment are determined on a case-by-case basis and the principles and legalities of workplace agreements are implemented.
   2.3 Equal opportunity principles are applied in all aspects of recruitment and selection.
   2.4 Procedures for employment termination and redundancy are explained and followed.
   2.5 Dispute resolution processes are established, documented and implemented where necessary.
3 Administer the regulations relating to OHS, welfare, workers' compensation, noise abatement and working hours.

3.1 **OHS and Welfare** Act provisions are identified and complied with, on and off the site.

3.2 OHS authority is contacted to determine the necessary approvals or permits prior to work commencing.

3.3 Provisions of **Workers Compensation** Act are complied with and the rights and responsibilities of workers are observed to ensure a safe workplace.

3.4 Regulations relating to **noise abatement and working hours** are adhered to.

4 Implement rehabilitation arrangements for employees returning to work.

4.1 **Rehabilitation arrangements** for employees returning from injury or illness are facilitated and implemented.

4.2 Workers returning to work after injury or illness are assisted to regain full employment status as soon as practicable.

5 Comply with taxation and insurance requirements of federal, state and territory legislation.

5.1 **Taxation** payments are recorded, collected and made in compliance with Australian Taxation Office requirements, including GST obligations.

5.2 **Insurance** policies are identified to provide appropriate cover for personnel, property and project works.

5.3 Mandatory superannuation provisions are made for employees.

6 Administer all obligations in a conscientious manner and observe fair trading practice.

6.1 Fair trading practice responsibilities are maintained effectively and efficiently.

6.2 Best interests of clients are promoted and undertaken conscientiously in accordance with the agreed contract.

7 Comply with environmental legislation and its intent.

7.1 Renewable materials are used as a primary aim wherever possible over non-renewable materials.

7.2 Low energy materials are used in preference to high energy materials, where practical.
7.3 Processes to ensure compliance with *environmental protection legislation* are implemented.
Required Skills and Knowledge
This section describes the skills and knowledge required for this unit.

Required skills
Required skills for this unit are:
- language and literacy skills to:
  - complete legal documents and records
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - liaise with government agencies
  - provide information to employees
  - read and interpret:
    - contracts and regulations
    - industrial awards
    - legislation
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- manage compliance with a variety of legal obligations and administer various awards and agreements
- management skills to effectively manage personnel
- numeracy skills to apply measurements and calculations.

Required knowledge
Required knowledge for this unit is:
- awards and agreements applying to employees and subcontractors
- legislative requirements, including:
  - environmental legislation
  - fair trading legislation
  - taxation and insurance requirements
- licensing and builders' registration requirements
- local authority regulations
- OHS and rehabilitation requirements
- relevant licensing arrangements.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by effective administration of legal obligations of a building or construction contractor.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- conform to the legal and financial obligations of the organisation
- establish and maintain good human relations with contracted employees, subcontractors and other stakeholders
- manage organisational taxation and insurance obligations successfully
- effectively advise appropriate authorities and gain the necessary approvals or responses
- promote and work in the best interest of clients.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and regulations
• copies of appropriate awards and workplace agreements
• office equipment, including calculators, photocopiers and telephone systems
• a suitable work area appropriate to the process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the
Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Licensing** includes state laws, such as:
- Builders Registration Act 1939
- Home Building Contracts Act 1991 in Western Australia

**OHS, welfare, workers' compensation, noise abatement and working hours** include:
- state codes of practice applicable to the various regulations
- state laws, such as:
  - Occupational Health and Safety Act 1983 in New South Wales
  - Occupational Health and Safety Act 1984 in Western Australia
  - Occupational Health and Safety Act 1985 in Victoria
  - Occupational Health and Safety Act 1986 in South Australia
  - WorkCover Queensland Act 1996
  - Workers Compensation and Rehabilitation Act 1981 in Western Australia
  - Workplace Injury Management and Compensation Act 1998 in New South Wales
- state regulations such as the Occupational Health and Safety Regulations 1996 in Western Australia
- various federal, state and territory industrial relations Acts and regulations.
Rehabilitation arrangements for employees returning to work include:
- cooperation with rehabilitation agencies
- light duties
- normal duties under shorter working hours
- suitable alternative duties.

Taxation and insurance requirements of state, territory and federal legislation include:
- appropriate business and project insurances
- Fringe Benefits Tax Act 1986
- Goods and Services Tax Act 1999
- Income Tax Assessment Act 1987
- Insurance Contracts Act 1984
- pay-as-you-go (PAYG) taxes
- payroll tax
- stamp duty
- workers' compensation.

Environmental protection legislation includes:
- federal, state and territory environmental legislation and regulations applicable to the building and construction industry.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Evaluate commonly used methods of water storage supply and layouts. | 1.1. **Water supply**, connection and layout are sketched for a residence connected to a town supply or a tank storage supply in accordance with relevant building regulations and standards.  
1.2. Use of pumps to maintain water levels in storage tanks is documented for single and two-stage pumping.  
1.3. Limitations of water storage tanks connected for multi-function and single function services are identified and addressed. |
| 2. Evaluate methods of sewerage and drainage disposal and their layouts. | 2.1. **Sewerage connection and layout** are sketched in accordance with relevant building regulations and standards.  
2.2. Different stack types are assessed with reference to number of fixtures and building type.  
2.3. Fixture units are identified.  
2.4. Methods used to connect main drains to local authority sewers are assessed against relevant building standards.  
2.5. Disposal of sewerage from fixtures situated below the level of the local authority sewer is assessed in accordance with relevant building regulations and standards.  
2.6. Collection, treatment and disposal of prohibited discharges are monitored for non-domestic buildings. |
| 3. Assess commonly used methods for mechanical ventilation and air distribution and their layout. | 3.1. **Methods of mechanical ventilation** and air distribution are identified and sketched.  
3.2. Mechanical ventilation and air distribution system design layout is appropriate to the building design and complementary to other services. |
| 4. Evaluate the range of hot water systems. | 4.1. Operating principles of various types of hot water systems are evaluated.  
4.2. Suitable **hot water system** is selected according to accepted and agreed requirements and specifications. |
| 5. Evaluate effective natural lighting for a range of situations. | 5.1. Methods of roof construction used for daylight transmission are identified and outlined in accordance with relevant building regulations and standards.  
5.2. Methods used in artificial **lighting** are compared for various service situations in accordance with relevant building regulations and standards. |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
6. Ensure fire protection standards are met. | 6.1. Authorities involved in plan perusal and site inspection for the various building classifications are identified.
 | 6.2. Requirements for sprinkler systems and fire hoses for the various building classifications are identified according to legal and regulatory standards.
 | 6.3. Fire detector and alarm systems and the application of fire doors are addressed according to legal and regulatory standards.
 | 6.4. Extinguishing agents and their applications are identified.
7. Outline the requirements for general electrical and electronic service installation. | 7.1. Electrical supply authorities and procedures for connection to site are identified and complied with.
 | 7.2. Electrical design and provision for services are implemented in accordance with regulations and Australian standards.
 | 7.3. Electronic cabling, type of service, categories of cabling, layout of equipment, safe guards, access for maintenance, repair and extensions are identified and outlined in accordance with regulations and Australian standards.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- application of design concepts and principles relating to service installations
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret:
    - service installation drawings and specifications
    - state regulatory authority requirements
  - use and interpret non-verbal communication
REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- written skills to document relevant information
- numeracy skills to apply measurements and calculations relating to service installations.

Required knowledge

Required knowledge for this unit is:

- Australian standards and manufacturer specifications
- design concepts and principles relating to service installations
- hazards in relation to devices and systems used according to Australian standards and other codes or standard operating procedures
- installation methods
- nature of materials and effect on performance relating to service installations
- relevant licensing arrangements
- service installation terminology and definitions
- work drawings and specifications.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the effective performance and application of principles relating to service drawings, specifications and methods of determining requirements for services to a range of medium rise and wide span commercial constructions.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS and organisational quality procedures and processes within the context of this unit of competency
- apply and interpret relevant documentation, codes and legislation relating to performance of service installations
- accurately apply principles relating to performance of service installations
- identify typical faults and problems and take necessary action taken to rectify
- identify service installations and hazard categories according to Australian standards, Building Code of Australia (BCA) and job specifications.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory
EVIDENCE GUIDE

Resource implications for assessment include:
- documentation, including design brief drawings, specifications, codes, design concepts, construction schedules and other necessary supporting documents
- research resources, including systems information and data
- access to relevant legislation, regulations and codes of practice.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete
EVIDENCE GUIDE

Confidence in the person's demonstrated ability and applied knowledge.

- All assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Water supply** includes:

- Single and two-stage pumping for multi-function and single function
- Tank storage supply relative to the public water supply and reservoir heights
- Town supply.

**Sewerage connection and layout** include:

- Graded or vertical discharge pipes
- Inspection shafts and overflow relief gullies (ORGs)
- Local authority sewerage drainage system
- Septic or biochemical treatment unit.

**Methods of mechanical ventilation** include:

- Air conditioning applications
- Air distribution, including mechanical ventilation requirements for enclosed car parks
- Air filtration, including air filters, ducting and...
RANGE STATEMENT

- main filter types
- mechanical ventilation.

**Hot water system** details include:
- area to be serviced
- energy sources available
- height of installation
- number of outlets
- type of occupancy
- type of system.

**Lighting** for varying situations includes:
- emergency lighting
- natural and artificial lighting.

**Electronic cabling** factors include:
- access for maintenance, repair and extension
- categories of cabling:
  - data
  - lift controls
  - power supplies
  - telecommunications
- layout of equipment:
  - computers
  - telephones
  - safe guards
- type of service.

<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Establish site communication processes. | 1.1. *Site communication* processes are established and managed to comply with organisational quality management requirements.  
1.2. Dates and times of site meetings are organised and relevant personnel are notified. |
| 2. Establish and review OHS, welfare and risk management procedures. | 2.1. Organisational requirements for on-site first aid facilities are identified, established and reviewed in accordance with relevant *OHS, welfare and risk management* legislation and regulations.  
2.2. Plant and equipment usage policy and practices that require certificated operators are established and managed to comply with risk management procedures.  
2.3. Hazard management procedures are established and implemented, and precautionary measures are instigated.  
2.4. Responsibilities for safe handling of materials are addressed through organisational policy and procedures.  
2.5. Construction safety procedures are established and managed in accordance with OHS, welfare and risk management requirements and key personnel are identified.  
2.6. Safety induction procedures are established and managed in the event of dangerous incidents, injuries and accidents.  
2.7. Safety reporting processes and documentation are developed and implemented in accordance with organisational and legislative requirements. |
| 3. Manage supply of materials and installation of equipment. | 3.1. Process for placing orders for materials is established and managed to ensure the timely and cost effective *supply of materials and installation of equipment*.  
3.2. Procedures are established, managed and monitored for equipment hire and maintenance. |
| 4. Manage on-site operations. | 4.1. *On-site operations* are managed to implement and maintain a safe and cost-effective work environment in accordance with appropriate schedules and the contract.  
4.2. Subcontractor operations are managed and coordinated to ensure compliance with company obligations. |
ELEMENT  

PERFORMANCE CRITERIA

4.3. System to deal with problems and delays affecting performance is established and managed.

4.4. Processes to manage industrial relations are established in accordance with company policy and regulatory guidelines.

4.5. Revisions are made to project schedules when required and variations are documented to comply with quality management procedures.

4.6. Project quality management is effectively implemented to provide for a continuous improvement environment in which safety procedures are monitored continuously, reports are analysed and procedures reviewed as required.

4.7. Contact with statutory authorities and parties to the contract are facilitated when variations are made to approved contract drawings and specifications.

4.8. Multi-site management plans are implemented in accordance with organisational policy and site conditions.

5. Manage the processing of progress claims and payments.

5.1. Progress claims are managed and approved in accordance with contract requirements.

5.2. Project expenditure is managed and claims against scheduled projected costs are checked for accuracy.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - liaise with subcontractors, staff and clients, as well as with local or regulatory authorities on matters relating to site conditions or approvals
  - notify personnel of meetings
  - read and interpret:
REQUIRED SKILLS AND KNOWLEDGE

- documentation from a variety of sources
- plans, specifications and drawings
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- written skills to:
  - complete site communication requirements
  - record and report relevant information
- establishing, implementing and maintaining a safe working environment
- financial management skills to ensure that progress payments are made on time and on the basis of work successfully completed
- management skills in order to manage personnel and resources to effectively achieve contract or project objectives
- negotiation skills to enable effective negotiation on industrial relations issues
- numeracy skills to apply calculations
- problem solving skills to effectively resolve problems relating to construction methodologies or practices.

Required knowledge

Required knowledge for this unit is:

- environmental management procedures to ensure compliance with regulatory requirements
- hazard management processes
- nature and style of building and construction industry contracts
- OHS frameworks and obligations under federal, state or territory legislation and regulations
- quality management processes and procedures as they apply to the building and construction industry
- relevant licensing arrangements
- relevant state or territory building and construction codes, standards and regulations
- risk management processes and practices
- workplace safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the effective management of construction work or projects.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- effectively and efficiently procure resources
- communicate effectively both verbally and in writing with suppliers and subcontractors
- complete documentation to organisational standards
- deal with variations to contracts
- implement effective processes for maintaining site safety and managing risks.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
EVIDENCE GUIDE

- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers’ product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Site communication includes:
- emails and faxes
- face-to-face verbal communication
- mobile and fixed telephone contact
- site diaries
- written reports and memoranda.

OHS, welfare and risk management includes:
- adherence to organisational policies and procedures for:
  - duty of care
  - hazard identification and rectification
  - safe work practices
- compliance with federal, state and territory legislation and regulatory requirements
- rehabilitation of injured workers
- safe handling of materials and equipment
- concrete and pre-formed concrete

Supply of materials and
RANGE STATEMENT

installation of equipment include:
- electrical cabling
- fire suppression systems
- lifting equipment
- plumbing and gas piping systems
- raw construction materials, such as sand, aggregate, timber and cement
- sarking, insulation, air conditioning ducting and roofing
- temporary lighting and power outlets
- waste water disposal systems.

On-site operations include:
- allocation and management of human resources
- communication with regulatory authorities and compliance with their requirements
- dispersal and programming of heavy equipment, including wheeled and tracked earthmoving vehicles
- dispute resolution
- maintenance of environmental controls and obligations
- managing expenditure
- placing orders for supplies or equipment.

compliance with environmental management requirements is monitored.

3.5. Emergency and remediation response strategies are implemented as necessary to assist compliance with the environmental management plan.

4. Evaluate and recommend changes to environmental management plan.

4.1. Environmental management plan is reviewed to identify areas that need improvement, and action is taken.

4.2. Measures are introduced to assist staff to suggest more efficient procedures and innovations to improve the performance of the environmental management plan.

4.3. Plans are redrafted to include improvements or address deficiencies found during the monitoring.

4.4. Revised plans are submitted for endorsement by senior management and procedures are changed accordingly.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- analytical skills, including the ability to assess variations in environmental management performance and identify reasons for those variations
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - liaise with subcontractors, staff and clients, as well as with local or regulatory authorities on matters relating to site conditions or approvals
  - notify personnel of meetings
- read and interpret:
  - documentation from a variety of sources
  - plans, specifications and drawings
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
REQUIRED SKILLS AND KNOWLEDGE

- written skills to:
  - complete site communication requirements
  - record and report relevant information
- numeracy skills to apply calculations
- evaluation skills to evaluate previous environmental management performance and identify strengths and weaknesses of the process
- management skills, including the ability to develop and implement environmental management plans that improve organisational compliance with environmental obligations and responsibilities
- problem solving skills, including the ability to identify environmental management issues and address these before they become contentious or dangerous
- staff management skills to effectively manage personnel in the administration of organisational environmental management systems.

Required knowledge

Required knowledge for this unit is:

- benchmarking and the establishment of environmental goals
- current trends in environmental management and controls
- environmental management practices and methodologies
- legal and regulatory obligations implicit in environmental requirements
- penalties for various breaches of environmental obligations and conformance requirements
- relevant licensing arrangements
- statistical analysis methodologies.
Evidence Guide

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by effective management of building or construction environmental management practices and processes in medium rise building or construction projects.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- develop effective environmental management action plans and strategies
- determine the extent of effective environmental management advice provided to the organisation
- assess the effectiveness and efficiency of the environmental management recording and reporting systems and preparation of documentation to organisational standards
- assess variations in environmental management performance
- implement an effective process to manage improvements to organisational environmental management practices and to reduce the risk of non-conformance
- comply with relevant legislative and regulatory requirements
- research relevant current trends in environmental management and controls.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- copies of appropriate awards and workplace agreements
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.
EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace.
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Best practice and benchmarking methods include:
- comparisons of current, previously established and external environmental management plans.
- costs associated with environmental
RANGE STATEMENT

- conformance
  - formally or informally prepared performance indicators against environmental management objectives
  - performance measurements against industry, local authority, regulatory or world standards
  - specific environmental targets, including emissions, noise, dust, waste disposal, storm and ground water disposal, waste segregation and hazardous materials
  - statistical record-keeping, using at start, ongoing and at conclusion measurements
  - strategic comparisons of resources in and residuals out.

*Environmental management plan* includes:

- environmental prohibitions or restrictions to be applied within specific projects
- formally or informally gathered information concerning environmental issues and requirements
- key people to be consulted or included in decision making
- specific forms of activity to be pursued or which are subject to monitoring or evaluation
- timeframes and key environmental benchmarks to be achieved.

*Environmental data gathering systems* include:

- conformance reporting on achievement of milestones or performance targets
- formal and informal reports from employees and contractors
- scheduled environmental management meetings and briefings
- statistical and analytical data in support of environmental management objectives.

*Feedback systems* include:

- feedback from regulatory authorities
- formal and informal information gathering from employees and contractors
- specifically documented processes using formal reporting arrangements
- spot checks on aspects of the environmental management process.

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to manage the application and monitoring of energy conservation and management practices and processes within the building and construction industry. Successful application of the unit requires knowledge of energy management practices and methodologies, statistical analysis, current trends and factors in energy conservation, and legislative and regulatory requirements.

Application of the Unit

Application of the unit

This unit of competency supports the needs of builders, senior managers within building and construction firms and other industry professionals responsible for managing energy conservation and management practices and processes in medium rise building and construction projects.

Licensing/Regulatory Information

Not Applicable
Pre-Requisites

Prerequisite units  Nil

Employability Skills Information

Employability skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare an energy conservation and management plan for the organisation. | 1.1. Organisational policy and operational guidelines for energy conservation and management are reviewed.  
1.2. *Best practice and benchmarking methods* are used to determine current energy conservation and management performance.  
1.3. Opportunities for energy conservation and savings are identified within the immediate work area and on project sites.  
1.4. Staff and contractors are asked for ideas and suggestions concerning organisational energy conservation.  
1.5. *Energy conservation and management plan* is prepared on the basis of available information.  
1.6. Advice is sought from senior management, as required, concerning implementation of the plan. |

| 2. Manage the energy conservation and management plan. | 2.1. Staff and contractors are informed of their obligations in implementing the energy conservation and management plan and are monitored for compliance.  
2.2. *Energy data-gathering systems* are evaluated, changes are made as necessary, and system is managed for maximum efficiency and accuracy.  
2.3. New projects are evaluated to determine their impact on existing energy conservation planning obligations.  
2.4. Participation by contractors in the achievement of plan's objectives is encouraged and monitored.  
2.5. Difficulties, obstructions or factors that impact on the achievement of the energy conservation plan are identified and measures are taken to address them.  
2.6. Information concerning updates to the plan is communicated to staff and stakeholders.  
2.7. Environmental management plan evaluation strategy is developed and managed to ensure that organisational objectives are achieved. |

| 3. Monitor the energy conservation and management plan to ensure organisational objectives are being met. | 3.1. Organisational *feedback systems* are implemented and managed to assist with compliance with and management of the plan.  
3.2. Regular feedback is obtained from staff and contractors concerning the efficiency of the operations of the energy conservation and management plan. |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
3.3. Energy savings are identified and promoted throughout the organisation.
3.4. Energy wastage is reported and strategies are implemented as necessary to assist with compliance with the energy management plan.
4. Evaluate and recommend changes to the energy conservation and management plan.
4.1. Energy conservation and management plan is reviewed to identify areas needing improvement and action is taken.
4.2. Measures are introduced to encourage staff to suggest more efficient procedures and innovations to improve the performance of the energy conservation and management plan.
4.3. Plans are redrafted to include improvements or address deficiencies identified during monitoring.
4.4. Revised plans are submitted to senior management for endorsement and procedures are amended accordingly.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- analytical skills, including the ability to assess variations in energy management performance and identifying reasons for those variations
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - liaise with local authorities, regulatory agencies and clients
  - provide information
  - read and interpret documents from a variety of sources
  - seek advice and feedback
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
  - written skills to prepare and revise an energy conservation and management plan
REQUIRED SKILLS AND KNOWLEDGE

- numeracy skills to carry out statistical analysis and apply calculations
- evaluation skills to evaluate previous energy conservation and management performance and identify strengths and weaknesses of the process
- management skills, including the ability to develop and implement energy conservation and management plans that improve organisational achievements in regard to energy saving objectives
- problem solving skills, including the ability to identify energy conservation and management issues and address these before they become contentious
- staff management skills in order to effectively manage personnel in the administration of organisational energy conservation and management systems.

Required knowledge

Required knowledge for this unit is:

- benchmarking and the establishment of energy conservation goals
- current trends and factors in energy conservation and management
- energy management practices and methodologies
- organisational policies and practices supporting energy conservation and management
- relevant legislative and regulatory requirements and standards
- relevant licensing arrangements
- statistical analysis methodologies.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by effective management of the application and monitoring of energy conservation and management practices and processes on medium rise building and construction projects.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- develop effective energy conservation and management action plans and strategies
- assess extent of effective energy management advice provided to the organisation
- determine effectiveness and efficiency of the energy conservation and management recording and reporting systems and preparation of documentation to organisational standards
- implement effective processes to manage improvements to organisational energy conservation and management practices and reduce the non-conforming practices
- research current trends in energy conservation and management
- conform to relevant legislative, regulatory and organisational requirements.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge
EVIDENCE GUIDE

will usually be conducted in an off-site context. Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation that should normally be available in a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers’ product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role
EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Best practice and benchmarking methods include:

- comparisons of current, previously established and external energy conservation and management plans
- costs associated with optimum environmental conformance
- formally or informally prepared performance
RANGE STATEMENT

Indicators against energy management objectives
- performance measurements against industry, local authority, regulatory or world standards
- specific energy targets, including electrical power usage and fuel usage, heat loss and thermal efficiency
- statistical record keeping, using at start, ongoing and at conclusion measurements.

Energy conservation and management plan includes:
- formally or informally gathered information concerning energy issues and requirements
- key people to be consulted or included in decision making
- specific forms of activity to be pursued or which are subject to monitoring or evaluation
- timeframes and key energy conservation benchmarks to be achieved.

Energy data-gathering systems include:
- formal and informal reports from employees and contractors
- reports from supply organisations
- scheduled energy conservation management meetings and briefings
- conformance reporting on achievement of milestones or performance targets
- statistical and analytical data in support of energy management objectives.

Feedback system includes:
- feedback from supply authorities
- formal and informal information gathering from employees and contractors
- specifically documented processes using formal reporting arrangements
- spot checks on aspects of the energy management process.

<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Perform pre-purchase property inspections and assessments. | 1.1. Building is inspected and defects are identified and documented in the agreed level of detail requested by client.  
1.2. Engineers’ certificates are obtained according to the state of repair or number and type of defects.  
1.3. Rectification costs are estimated to degree of accuracy required or recommendations are made to demolish structure.  
1.4. At the direction of government agencies, financial institutions or investment houses feasibility studies are conducted. |
| 2. Advise and coordinate the design process and planning approval. | 2.1. Project brief is prepared on behalf of client.  
2.2. Site conditions and structure are assessed.  
2.3. Preliminary design drawings are produced or obtained and probable costs are estimated.  
2.4. Process is coordinated through which final design documentation will be completed and approved by client.  
2.5. Documentation is submitted to obtain authorised planning approval for the project.  
2.6. Planning appeals are prepared and presented to the authority if necessary. |
| 3. Review building or construction works. | 3.1. Contract documentation is checked to ensure client interests are protected.  
3.2. Building or construction works are regularly monitored and reports are provided on the progress and quality of work.  
3.3. Variations are checked and referred back to contractors as required.  
3.4. Progress claims are checked and approved. |
| 4. Provide advice on dispute resolution. | 4.1. Disputes are negotiated on behalf of the client.  
4.2. Impartial advice is provided to the parties involved in a building related dispute for equitable settlement.  
4.3. Referrals are provided for expert legal interpretation of contractual matters.  
4.4. Expert testimony and evidence are provided in the event of disputes going to court. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - negotiate disputes
  - provide advice and referrals
  - read and interpret documents from a variety of sources
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- written skills to:
  - document defects
  - prepare relevant documentation
- evaluation skills, including the ability to review and evaluate documentation and processes and recommend changes or improvements
- numeracy skills to apply calculations
- planning skills to ensure effective planning of projects, processes and strategies that maximise the efficiency and cost-effectiveness of building or construction contracts
- supervisor skills to ensure staff achieve planning outcomes.

Required knowledge

Required knowledge for this unit is:

- building and construction industry contracts
- building and construction industry subcontracting system
- building and construction practices in on and off-site management
- construction planning process
- contract documentation, quantities establishment, rates and costs related to payments and claims
- human resource principles and practices
- relevant licensing arrangements
- relevant state or territory building and construction codes, standards and regulations
- workplace safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by effective development of technical and legal reports for construction projects.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- effectively translate contract requirements into feasibility studies and advice on building, site use, plans and processes
- demonstrate quality construction planning processes and effective outputs
- develop strategies that maximise the effectiveness of resources
- advise and coordinate the design process and obtain planning approval
- oversee building or construction works to effect contractual outcomes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
EVIDENCE GUIDE

- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturer's product literature
- copies of appropriate awards and workplace agreements
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances
EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Defects are identified through property inspections that include:

- adjoining properties
- confirmation of boundaries
- on-site inspections of buildings, structures or features
- site access and egress
- topographical and geological surveys.

Feasibility studies:

- architectural or engineering practicalities
- availability and quantum of finance
- availability of services and conditions
RANGE STATEMENT

governing service provision
• change of use for existing buildings
• confirmation of ownership
• development on vacant land
• encumbrances or caveats on property
• environmental factors or constraints
• existing buildings/structures for a given purpose
• feasibility studies may be conducted on:
  • most cost-effective method of building for a given site or location
  • refurbishment costs of buildings/structures
  • special conditions that may apply to developments.

Planning approval includes:
• engineering approvals by architectural or design consultants
• environmental approvals by Environment Protection Authority (EPA) or local authorities
• final design or specification client approvals
• finance approvals by lending bodies
• zoning and compliance with laws and by-laws by local authorities.

Building or construction works include:
• construction of roads and pathways
• demolition of existing structures
• erection of new structures
• installation of underground cabling
• refurbishment of existing structures
• renovations and extensions
• site levelling or contouring
• stormwater disposal and site drainage.

Functional area

Functional area
CPCCBC5014A Conduct asbestos assessment associated with removal

Modification History
New to CPC08
Replaces unit CPCCBC4023A Plan and undertake site inspection and assessment of asbestos products and materials
Not equivalent

Unit Descriptor
This unit of competency specifies the outcomes required for assessors to visually inspect and use a range of measuring devices to undertake the monitoring of airborne asbestos fibres in the workplace as an integral part of identifying hazards, assessing risks, monitoring the effectiveness of controls, and ensuring that the workplace is free of asbestos fibres prior to reoccupation.
The unit includes the planning of the monitoring process, the selection and use of processes and air-monitoring equipment, the conduct of the assessment process, and the proper handling and interpretation of results.
Asbestos assessment and air monitoring are required during all friable (Class A) asbestos removal and for non-friable asbestos removal where a risk assessment indicates that airborne asbestos fibres may result from the removal activity.

Application of the Unit
Site location for work may be either domestic or commercial, and may be a demolition site, a new work site or an existing structure being renovated, extended, restored or maintained.
Project sites may be construction sites and may also include ships, soils and fences.

Licensing/Regulatory Information
Occupational licenses are required nationally.
Work must be completed according to relevant legislative, code of practice, industry, customer and organisational requirements, including work health and safety (WHS) policies and procedures. Testing must conform to National Association of Testing Authorities (NATA) or other accredited laboratory requirements and standards.
Regulatory mechanisms apply to this unit. Candidates are advised to check for regulatory requirements.
Pre-Requisites
CPCCOHS1001A Work safely in the construction industry

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

   1.1 Scope, timelines and budget for the project are negotiated with the client and asbestos removalist or supervisor.
   1.2 Type of asbestos containing material (ACM), its location, friability and condition are identified by reference to the asbestos register and consultation with workplace personnel and client.
   1.3 Legislation, regulations, code of practice and standards are researched and confirmed to inform the planning process, identify risk and ensure a compliant and independent assessment process.
   1.4 Required reports are identified and undertaken in a timely manner and according to the requirements of the specific audience and the legislation, regulations, code of practice and standards.
   1.5 Characteristics of and health impacts from exposure to ACM and the rationale for air-monitoring processes are researched and confirmed.
   1.6 Accreditation framework and roles and responsibilities
of personnel involved are identified and understood.

1.7 Processes used in the compliant removal of friable and non-friable asbestos using enclosures and leak testing, decontamination units, airline respirators and negative pressure equipment are identified and understood.

1.8 Work-site documentation is collected, reviewed and used to inform the planning process.

1.9 Areas within the work site where measurements are to be taken are defined.

1.10 Measuring equipment specific to the hazard and condition of the ACM, the environment, the activities being carried out and level of risk is selected.

1.11 Limits of own expertise and available equipment are recognised and expert advice and equipment sought as appropriate.

1.12 Equipment, including personal protective equipment (PPE), required to carry out the job is identified and sourced.

1.13 Planning is documented and confirmed with the client, asbestos removalist and supervisor.

2 Prepare to collect site measurements and other data.

2.1 Arrangements are made with work site to collect information and data, including advising those involved of requirements to facilitate the measurement and monitoring process.

2.2 Site visit is conducted and a visual inspection is completed according to legislation, regulations, code of practice and standards.

2.3 Effective air monitor locations for each asbestos removal task are identified and recorded.

2.4 Sampling process is defined according to the standards specified for membrane filter method for estimating airborne asbestos fibres and in consultation with relevant site personnel.

2.5 Sampling schedule and strategy are defined after site inspection and in consultation with asbestos removalist and work site manager or supervisor.
2.6 Air-monitoring program consisting of locations and schedule is developed and provided to asbestos removalist and supervisor.

2.7 **Operability** of monitoring equipment is checked according to manufacturer specifications, organisational procedures and professional standards.

3 Use measuring devices to collect site information and data.

3.1 Air-monitoring equipment is selected, calibration records are checked, equipment is calibrated and appropriate flow rate is determined according to accredited laboratory requirements and professional standards.

3.2 Equipment is used and maintained correctly to accurately collect data.

3.3 Workplace safety procedures are followed during the collection process.

3.4 Required volumes of samples are collected with minimum damage and disruption to the fabric, according to the membrane filter method, labelled and the filter holders replaced according to the sampling schedule and plan.

3.5 **Information and data are collected** and results recorded noting where samples were taken and ensuring compliance with chain of custody protocols.

3.6 Processes are put into place and checks made to ensure all data is collected under the control of a NATA or other accredited laboratory and according to industry standards and legislative requirements.

3.7 Equipment is dismantled, decontaminated and parts or equipment disposed of according to regulations, code of practice and workplace procedures.

3.8 Equipment is stored correctly or made ready for re-use.

3.9 Sampling equipment is serviced and maintained according to professional standards and manufacturer specifications.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication, and appropriate level of language skills, to:
  - determine requirements
  - prepare documentation (including air-monitoring report) that is accurate, clear and complete
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow and give instructions
  - liaise with related professionals, including facility managers, building owners, building surveyors and testing authorities
  - manage conflict between internal and external stakeholders
  - read and interpret:
    - complex testing results and reports from NATA or other accredited laboratories
    - documentation from a variety of sources
    - drawings and specifications
  - use language and concepts appropriate to cultural differences
  - initiative and enterprise skills to identify and report faults in tools, equipment and materials
  - planning and organising skills to plan and set out work
  - teamwork skills to:
    - coordinate own work
    - liaise with workplaces
    - supervise the work of others
    - relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- self-management skills to:
  - work independently and respond effectively to timelines, deadlines and complex work requirements
  - check and evaluate the asbestos removal area according to the safe work method
  - use, fit and maintain PPE, decontamination equipment, hand and power tools safely
  - apply general WHS requirements for work in the construction industry
  - apply safe work methods for the removal of testing samples of friable and non-friable asbestos
  - apply inspection, sample collection, testing, evaluation and reporting techniques and protocols that comply with NATA and other accredited laboratory requirements and
professional standards
- apply chain of custody protocols that comply with NATA and other accredited laboratory requirements and professional standards
- follow correct decontamination procedures

**Required knowledge**
- range of materials manufactured using asbestos, the type and characteristics of asbestos used in each material, and the usual applications associated with the material
- methods and purpose for assessing hazards relating to friable ACM, together with an understanding of:
  - health effects caused by exposure to ACM and requirement for safe handling and removal
  - health impacts on the community and requirement for safe handling and disposal
- requirements of current legislation and standards relating to asbestos safety, the preparation of an asbestos removal control plan (ARCP), and issuance of air-monitoring clearance certificates and related documentation, including:
  - understanding the trigger points for stopping work
  - detailed knowledge of the membrane filter method
  - detailed understanding of the clearance certificate
- rationale for, and principles underpinning, the ARCP, air monitoring and related legislation
- requirements for professional indemnity and other insurances required by legislation and to mitigate business risk
- air-monitoring procedures and testing requirements, including interpretation of results
- asbestos removal methodologies and work practices for both friable and non-friable asbestos
- general WHS procedures for construction work
- health hazards associated with friable ACM and circumstances that may change the nature of ACM from non-friable to friable, such as:
  - weathering
  - wear and tear
  - application of tools and equipment
  - accidental damage
- safe work methods for the removal of friable and non-friable asbestos
- hazards associated with using enclosures and removing friable and non-friable asbestos
- general construction terminology
- handling requirements of differing types of asbestos materials
- work site and work area procedures
- job safety analysis (JSA) and safe work method statements (SWMS) if required for construction
- safety data sheets (SDS)
- materials storage and hazardous waste management
- plans, drawings and specifications, asbestos registers and register amendments
• quality requirements relating to asbestos assessment associated with removal
• risk assessment processes and contingency planning relating to asbestos assessment associated with removal
• scientific techniques for measuring, testing and evaluating air-monitoring results and reports, including:
  • principles of fibre counting
  • analysis of bulk samples
• techniques associated with containing and removing asbestos, including:
  • use of large and small-scale enclosures for different sites
  • use of negative pressure exhaust units
  • encapsulation methods
  • use of decontamination unit
• testing methodologies (in particular air monitoring) and protocols associated with the sampling process, handling, gathering and transport of ACM
• types, characteristics, uses and limitations of plant and equipment involved in enclosing and removing asbestos
• workplace and equipment safety requirements
• documentation required for clearance inspections following application of rigorous professional assessment and using specified wording defined in regulations

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, providing that simulated or project-based assessment techniques fully replicate workplace conditions, materials, activities, responsibilities and procedures.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- plan for the asbestos removal assessment process by ensuring access to required documentation and consultation with the client and workplace
- interpret and apply the requirements of relevant legislation, regulations, codes of practice and standards to ensure the safe and correct assessment of the removal of ACM
- demonstrate understanding of the scientific and technical principles that underpin the ACM removal assessment process
- undertake preparations for collecting samples, including identification of sampling areas, the sampling process, sampling schedule, air-monitoring plan and strategy
- collect samples from site and handle in a manner that ensures the integrity of the sample, including use of protocols for the chain of custody
- prepare samples for analysis and transporting to a NATA or other accredited laboratory
- interpret and analyse laboratory results
- conduct site inspections, prepare advice to clients and provide clearance certification.

### Context of and specific resources for assessment

This unit is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work
practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- research resources, including industry-related systems information
- safety data sheets.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

| Method of assessment |

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Independent assessment is a: | requirement that is achieved by the licensed asbestos removalist and asbestos assessor being contracted independently to the client or project manager in order to avoid conflicts of interest. |
**Characteristic** and health impacts of exposure to ACM include:

- range of diseases
- how it is absorbed into the body
- how it affects specific parts of the body, such as extent of damage to tissue
- dose factors relating to concentration and time.

**Accreditation framework** must include:

- role of NATA and other accredited laboratories
- accreditation processes
- accreditation status of the assessor
- requirements for sampling, testing and reporting for planning purposes
- role relationships with and of the accredited assessor.

**Compliant removal** of asbestos by specialist removalists requires application of methodologies and processes, including:

- decontamination of:
  - worker
  - tools and equipment
  - work area and work site
  - installation, use and disassembly of decontamination units
  - leak test enclosures
  - use, maintenance and construction of enclosures
  - use of:
    - ARCP
    - negative air extraction units
    - PPE.

**Work-site documentation** may include:

- ARCP
- building plans and specifications
- building surveys.

**Areas within the work site** where measurements are to be collected are determined by factors, including:

- area or space available
- location of removal work area or work site
- movements of people and equipment
- number of persons occupying area
- physical features of equipment, such as emitting sources
- tasks or activities being undertaken
- type, quantity and location of asbestos in buildings and other sites
- waste disposal pathways.

**Personal protective equipment** used in the monitoring process may include:

- protective clothing, such as:
  - disposable coveralls with fitted hood and cuffs
  - safety footwear (pull-on, not lace-up)
  - disposable or protective gloves
- respiratory protection class appropriate to the type of asbestos to be removed, which may be P1, P2 or P3
- correct face fitting and use of respiratory protective equipment.
### Air monitor locations may include:
- before asbestos removal activities inside asbestos removal areas
- during asbestos removal activities:
  - areas adjacent to and above and below asbestos removal site
  - areas of high occupancy in the locality
- for removal of friable asbestos:
  - area near (but not directly behind) negative air exhaust
  - clean decontamination area
  - area where underclothes are laundered
- after asbestos removal and final cleaning inside the contained work area and work site.

### Membrane filter method must conform to the:

### Strategy for sampling may include consideration of:
- accessibility and other practical considerations
- bulk sampling analysis
- fibre counting
- frequency of exposure
- location of nearby sensitive receptors
- size of the workforce (i.e. individual worker or groups of workers)
- work shift times.

### Operability of equipment checks may include:
- battery serviceability
- accuracy of calibrated devices
- availability of appropriate attachments, leads, filters, etc.
- pump fault lights
- rejection criteria for flow rate fluctuations
- pump back pressure tests
- ensuring equipment is NATA or other accredited laboratory tested and certified, with certificate of currency as appropriate.

### Equipment may include:
- air-monitoring stands
- air monitors
- battery charges
- field sheets
- filter cassettes
- rotameters
- screwdrivers
- stopwatches
- tubing.
**Calibration records are checked** for equipment, including:
- pumps
- rotameters
- stopwatches.

**Equipment:**
- is used according to manufacturer specification and professional guidelines
- entails processes that include checking the time and flow rate at the start and end of the sample collection period.

**Information and data are collected** and may include:
- conditions, such as activities and number of people present when measurements were made
- date, time and duration of collection
- locations where information and data were collected
- readouts and measurements taken
- required field blanks
- sampling method, such as grab, longitudinal or continuous
- specifications of equipment used.

**Report containing required information and data** may be required for or contain:
- exposure monitoring for the purpose of determining the PPE required
- control and clearance air-monitoring report
- where, when and why measurements were taken
- sampling process:
  - how measurements were taken
  - specifications of equipment used
  - locations where samples were taken
  - conditions at time of sampling, including whether the sampling period represented normal operating conditions
- table of results
- interpretation and discussion of results
- evaluation of results with reference to appropriate standards
- completion of the clearance certificate
- areas not accessed.

**Audience for the report may include:**
- client
- NATA or other accredited laboratory staff
- neighbours
- occupiers of site
- owners and managers
- principal/managing contractors
- removalists
- supervisors
- WHS committee or WHS representatives
- WHS regulatory bodies.

</thead>
</table>
| 1. **Apply structural principles to planning the erection or demolition of a structure.** | 1.1. Main *structural principles* that apply to the erection of *medium rise buildings* are identified.  
1.2. Performance characteristics of the structural elements, including *materials* identified in the building's plan, are identified, analysed and applied to the planning of the construction work.  
1.3. Demolition of existing structures is undertaken in accordance with legislative and planning requirements and safe work practices. |
| 2. **Coordinate and manage site and job set-up assessment.** | 2.1. Processes are put in place to analyse the stability of soils and capacity of the site to support the construction loads.  
2.2. Structural requirements for retaining walls are identified in conjunction with related industry professionals and applied to the planning process.  
2.3. Structural function and requirements for *temporary structural elements* are analysed and applied to the planning process. |
| 3. **Coordinate and manage construction of footing systems.** | 3.1. Set-out of building is checked for compliance with documented building plans.  
3.2. Structural performance of footings specified in the building plan is assessed for compliance with relevant codes and accepted industry construction principles.  
3.3. Footings specified in the building plan are laid and checked for compliance with relevant codes and accepted industry construction principles.  
3.4. Damp coursing and provision of termite barriers and other relevant techniques are planned, implemented and checked in accordance with codes, standards and industry practice. |
| 4. **Coordinate and manage structural elements of the construction process.** | 4.1. Technical construction principles and performance characteristics of the construction materials are identified and analysed in the planning of project.  
4.2. Building plans and relevant standards and codes are identified and implemented to ensure appropriate allowances have been made for plumbing, electrical conduits and other services to be installed.  
4.3. Processes for the construction of structural elements are identified and confirmed as compliant with relevant Australian standards and codes and |
ELEMENT  PERFORMANCE CRITERIA

manufacturer specifications, with reference to specialists as required, and then implemented.

Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- application of design concepts and principles
- communication skills to:
  - consult with industry professionals
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret:
    - codes and standards
    - legislative and planning requirements
    - plans, specifications and drawings
    - other relevant documentation from a wide range of sources
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- numeracy skills to apply measurements and calculations.

**Required knowledge**

Required knowledge for this unit is:

- applications of structural principles in buildings
- Building Code of Australia (BCA) and Australian standards
- design principles and behaviour of structural members undergoing stress, strain, compression, bending or combined actions
- interpretation and analysis of work drawings and specifications
- nature of materials and the effect on performance
- OHS and organisational quality procedures and processes.
# Evidence Guide

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

This unit of competency could be assessed by the application of structural design principles to a medium rise building and construction project, including demolition of existing buildings and communication of the selection, positioning and sizing of all structural members that form fixed or temporary building structures for the project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- plan and implement the erection or demolition of buildings in compliance with relevant legislation
- interpret and apply relevant documentation and codes
- accurately apply design principles relating to performance
- identify typical faults and problems and the action required to rectify them.

### Context of and specific resources for assessment

This unit of competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation, including design brief drawings, specifications, codes, design

EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Structural principles** relate to factors that include:

- dead and live load calculations and characteristics
- fire resistance of materials
- impact of thermal effects
- impact of time-dependent effects, including creep and shrinkage
- impact of wind, snow, ground water, earthquake, liquid pressure, rainwater and earth pressure actions
- structural resistance of forms of construction
- structural resistance of materials.

**Medium rise buildings** as described within the BCA are:

- Classes 1 and 10
- Classes 2 and 3 to a maximum of 3 storeys
- Classes 4 to 9 to a maximum of 3 storeys, not including Type A construction.
### RANGE STATEMENT

**Materials** include:
- aluminium
- composite steel and concrete
- concrete, including reinforced, pre-stressed concrete and tilt-up panels
- masonry
- steel, including cold-formed steel.

**Temporary structural elements** include:
- bracing
- close sheeting
- formwork props
- pressure-resistant formwork
- scaffolding sole plates
- shields
- shoring collar sets
- soldier sets
- ties.

CPCCBC6001B Apply building codes and standards to the construction process for large building projects

Modification History

Minor changes throughout unit, mostly reflecting update to National Construction Code
Equivalent to CPCCBC6001A

Unit Descriptor

This unit of competency specifies the outcomes required to access, interpret and apply relevant building codes and standards applicable to the construction processes of large, high rise and complex buildings (open licensing classification with special reference to Type A buildings).
To successfully comply with relevant standards and codes in large constructions requires a thorough knowledge of the purpose of the National Construction Code (NCC) coupled with the ability to interpret specific standards in relation to the design and specifications of building projects.

Application of the Unit

This unit of competency supports builders, project managers and related construction industry professionals responsible for ensuring compliance with building codes and standards in the residential and commercial construction industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Access and interpret relevant code and standard requirements.
   1.1 Relevant clauses from the NCC that apply to individual projects (classified as open) are identified.
   1.2 Prescriptive requirements of relevant NCC clauses for standard construction are determined for the scope of work.
   1.3 Requirements of relevant Australian standards referenced in the NCC are accessed and interpreted appropriately.

2 Classify buildings.
   2.1 Nature of a building is determined according to use and arrangement.
   2.2 NCC criteria to determine the defined classification are applied.
   2.3 NCC requirements for multiple classifications are identified and interpreted.

3 Analyse and apply a range of solutions to a construction problem for compliance with the NCC.
   3.1 Range of criteria that will ensure construction methods comply with intent of the NCC is determined.
   3.2 Alternative solutions to a construction problem that will comply with NCC performance requirements are discussed and proposed according to company policies and procedures and standard specifications.
   3.3 Performance-based solutions are identified and documented according to NCC requirements.
   3.4 Assessment methods used by authorities to determine whether a building solution complies with the NCC are
analysed and applied.

3.5 NCC assessment methods are identified as appropriate to meet DTS provisions of NCC.

3.6 Relevant documentation is identified and completed according to performance requirements of the NCC.

4 Apply fire protection requirements.

4.1 Fire resistance required for the construction of all classes and types of buildings is determined.

4.2 NCC requirements with respect to passive and active fire protection to all classes and types of buildings are identified and applied.

4.3 Check of existing buildings for compliance with passive and active fire protection requirements is carried out according to NCC requirements.

5 Implement strategy to manage compliance with NCC for large, complex and high rise buildings.

5.1 Processes are established and implemented to coordinate the work of professionals involved in the development and management of the building process.

5.2 Effective design solutions for buildings of more than three storeys are sought to meet the needs of clients and ensure compliance with NCC.

5.3 Quality assurance processes are designed and implemented to ensure effective and compliant management of the construction process.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- accurate application of building codes and standards
- application of design concepts and principles according to Australian standards
- application of design concepts and principles according to NCC
- analysis and interpretation skills relating to documentation from a wide range of sources, including NCC and Australian standards
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - discuss and propose alternative solutions
  - read and interpret specifications and drawings
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
  - written skills to complete documentation according to NCC requirements
  - numeracy skills to apply mathematical information included in building codes and standards.

**Required knowledge**

Required knowledge for this unit is:

- application of NCC, namely:
  - low rise:
    - Class 1 and 10
    - Class 2 to 9 with a gross floor area not exceeding 2000 square metres, not including Type A or Type B construction
  - medium rise:
    - Class 1 and 10
    - Class 2 to 9 to a maximum of 3 storeys, not including Type A construction
  - open:
    - all classes of building and types of construction
- application of relevant Australian standards
- definitions and common technical terms or usage specified under general provisions of NCC
- design principles and the behaviour of structures under stress, strain, compression, bending or combined actions
- nature of materials and effects of performance
- NCC performance hierarchy
- relevant legislative and OHS requirements, codes and practices
- work drawings and specifications.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the application of design principles and solutions specified in the deemed-to-satisfy and performance-based concept of NCC criteria applied to a building project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:
- comply with organisational quality procedures and processes
- apply and interpret relevant documentation and codes
- accurately apply NCC codes and standards relating to performance of and compliance with building project work
- demonstrate understanding of the assessment methods available to determine whether a building solution complies with the NCC.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and
environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- NCC, Class 2 to 9 buildings and Guide to NCC documentation, including design brief drawings, specifications, codes, design concepts, construction schedules and other necessary supporting documents
- research resources, including product information and data
- access to relevant legislation, regulations and codes of practice; like NCC, National Timber Framing Code, AS1684, AS4055 and other Australian standards required to meet the purpose of intended use
- relevant computer software package and suitable hardware.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a
period of time reflecting the scope of the role and the practical requirements of the workplace

- Where the assessment is part of a structured learning experience, the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- All assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Open** is classified as:

- Classes of building and types of construction within the NCC with special reference to the construction of buildings of more than 3 storeys.

**Standard construction** includes:

- Australian standards relative to the scope and context of large building construction
- NCC.

**Scope of work** includes:

- Characteristics
- Compatibility
- Dimensions
- location
- patterns
- quantities
- sizes
- surfaces
- type of product or service.

**Performance requirements** include:
- cost
- detail relating to materials and quality of work
- milestones
- nominated subcontractors
- provision of site access and facilities
- quality assurance
- standard procedures
- standards of work
- work schedules.

**Standard specifications** include:
- detailed specifications addressing specific components, such as:
  - electrical
  - mechanical
  - structural
  - other requirements
- developed specifications
- preliminary and outline specifications.

**Assessment methods** include:
- comparison with DTS provisions
- evidence of suitability
- expert judgement
- verification method.

**Building solutions** include:
- alternative solutions that comply with the performance requirements of the NCC
- deemed-to-satisfy (DTS) provisions of the NCC.

</thead>
</table>
| 1. Identify potential new projects. | 1.1. Organisation's project history is examined to identify projects with successful or above average outcomes for characteristic evaluation.  
1.2. Property and construction market is reviewed for available sites and buildings with development potential.  
1.3. New trends in development and construction are monitored.  
1.4. Available statistical data on possible areas of project development is analysed.  
1.5. Network contacts are used to source businesses requiring new or upgraded facilities.  
1.6. Most promising projects are short-listed and preliminary costings and returns are prepared. |
| 2. Formulate development proposals and feasibility studies. | 2.1. Short-listed projects are reviewed to facilitate selection of preferred options for detailed design work.  
2.2. Project briefs are developed.  
2.3. Environmental impact of projects is reviewed and any existing Environmental Impact Statement is assessed.  
2.4. Feasibility studies are carried out on the project's commercial viability, and capacity to generate income through the various alternatives is ascertained.  
2.5. Accurate costings are generated for each proposal.  
2.6. Discussions are held with potential clients and investors and the benefits and risks of each project are explained.  
2.7. Decision to proceed is taken once client and investor agreement is obtained. |
| 3. Negotiate project approvals. | 3.1. Project plans are submitted to relevant authorities to seek their reaction to project and any impediments to approval.  
3.2. Project plan is revised to comply with authorities' directives.  
3.3. Plans are resubmitted for formal planning approval as necessary. |
| 4. Obtain project finance. | 4.1. Finance institutions or investors are approached for financial support. |
ELEMENT  | PERFORMANCE CRITERIA
--- | ---
|  | 4.2. *Suitable finance package* is obtained for the project from institutions or investors.
|  | 4.3. Possible joint partners for the project are identified and approached, and interest is determined.

| 5. Manage the commissioning of a project. | 5.1. Project consultants are appointed and retained.
|  | 5.2. Documentation for proposed project is prepared, checked against the brief and sent for formal building approval.
|  | 5.3. Detailed costing of approved documentation is completed.
|  | 5.4. Modifications are made to the project to bring it within or under budget if required.
|  | 5.5. Final decision is made to proceed with the project or defer to a future date.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - approach institutions and investors
  - conduct discussions with clients and investors
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - network with others
  - read and interpret documents from a variety of sources
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
  - written skills to:
    - document relevant information
    - prepare project briefs and plans
  - conceptualisation of unique solutions to complex problems and situations
  - facilitation skills to develop new projects
  - interpretation of strategic and often ambiguous information to ensure logical and
REQUIRED SKILLS AND KNOWLEDGE

practical decisions

- management skills, including the ability to delegate tasks within specific functional guidelines and direct the activities of personnel involved in the new project development process
- numeracy skills to interpret statistical data and apply calculations
- supervisory skills to monitor and oversee the performance of the project development systems and individuals involved in the process
- technological skills to facilitate use of the organisation’s software and office equipment.

Required knowledge

Required knowledge for this unit is:

- appropriate sector of the building and construction industry and nature of the contracts upon which its activities are based
- factors to be considered in assessing the risk inherent in different types of building and construction projects
- financial and business administration principles commensurate with organisational needs
- industry’s industrial relations climate and practices
- legislative, regulatory, and administrative obligations incumbent on the building and construction industry for OHS, environmental, employment and financial practices.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the generation of new project developments and their effective direction. Effective performance includes the ability to ensure ongoing positive organisation and customer relationships that result in increased contractual success.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully
EVIDENCE GUIDE

replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- tender for and construct a variety of new projects
- use effective project development procedures and frameworks supported and directed by strong and decisive leadership
- select and deploy correct human and physical resources, which enable new projects to be developed
- implement project management practices, which result in a high level of staff productivity
- interact effectively with personnel both within and external to the organisation
- demonstrate conceptual and strategic problem solving and systems development
- communicate effectively both verbally and in writing with senior management, employees, clients, regulatory authorities and legal representatives.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and
EVIDENCE GUIDE

- print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- copies of appropriate awards and workplace agreements
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability
EVIDENCE GUIDE

and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Projects include:
- commercial constructions
- earthworks
- high and low rise structures
- provision of electrical, plumbing and gas, waste disposal, environmental clean-up and other services
- residential construction.

Feasibility studies include:
- detailed analyses of markets and opportunities
- examination of possible extensions to existing projects
- gathering data from government or private sector publications
- personal investigation of opportunities
- socioeconomic and urban studies.

Suitable finance package
- bank or finance company loans
RANGE STATEMENT

includes:

- customer or client funding
- overdrafts
- personal venture capital
- speculative funds provided for investment.

<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Establish and implement contract administration procedures and frameworks. | 1.1. Contracts administration team is established comprising persons of wide experience and knowledge in the building and construction industry.  
1.2. Overview of the organisation's current legal and administrative climate is developed and communicated to contracts administration team.  
1.3. Strategic plan is developed for construction contract administration procedures and frameworks.  
1.4. Information gathering mechanisms that draw strategic performance advice from all parts of the organisation are established.  
1.5. **Quality assurance measures** are developed and implemented as part of the contracts administration process.  
1.6. Reporting and feedback structures through which advice and action instructions can be conveyed to employees and subcontractors are developed and established.  
1.7. Benchmarks for contract performance are established and a management framework is introduced for achieving, maintaining and exceeding those parameters.  
1.8. Measures are developed and introduced through which contract defaulters can be managed back into contract compliance. |
| 2. Maintain contract administration procedures and frameworks. | 2.1. Policy and administrative guideline documentation is introduced that supports the contract administration process.  
2.2. Evaluation and review methods are developed and implemented to ensure administration procedures and frameworks are effective.  
2.3. Internal feedback systems and methods are initiated to ensure that difficulties with administration of contracts are resolved within organisational guidelines.  
2.4. Measures which ensure the safety and security of contract administration documentation are introduced.  
2.5. Overall corporate contract administration framework comprising employees, subcontractors, client and management is maintained. |

| 3. Review contract administration procedures. | 3.1. Review, recording and evaluation system is developed, implemented and managed to ensure probity and effectiveness of the contract administration system.  
3.2. Regular scheduled and unscheduled reviews of contract administration procedures are implemented and managed.  
3.3. Formal evaluation of the contract and administration system is undertaken regularly in consultation with organisation's legal advisors.  
3.4. Operating procedures are reviewed and clarified.  
3.5. Contract documentation processes are reviewed and feedback is provided to those preparing contracts. |

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills for this unit are:

- communication skills to:
  - communicate with team
  - consult with legal advisors
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - provide and seek feedback and information
  - read and interpret documents from a variety of sources
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- written skills to:
  - develop a strategic plan
  - document relevant information
- conceptualisation and envisaging of unique solutions to complex problems and situations
- facilitation skills to implement new and modified contract administration systems
- interpret mathematical information, including benchmarking
REQUIRED SKILLS AND KNOWLEDGE

- interpret strategic and often ambiguous information to ensure logical and practical decisions
- management skills, including the ability to delegate tasks within specific functional guidelines and direct the activities of personnel involved in contracts administration process
- supervisory skills to monitor and oversee the performance of contract administration systems and individuals involved in the process
- technological skills to facilitate use of the organisation's software and office equipment.

Required knowledge

Required knowledge for this unit is:

- appropriate sector of the building and construction industry and nature of the contracts upon which its activities are based
- factors to be considered in assessing the risk inherent in different types of building and construction projects
- financial and business administration principles commensurate with organisational needs
- human resource practices and the industry's industrial relations climate and practices
- legislative, regulatory, and administrative obligations incumbent on the building and construction industry for OHS, environmental, employment and financial practices.
Evidence Guide

Overview of assessment

This unit of competency could be assessed by demonstration of the effective establishment, maintenance and review of an organisation's contract administration procedures.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- implement effective contract administration procedures and frameworks supported and directed by strong and decisive leadership
- manage practices that result in a high level of staff productivity
- interact effectively with personnel both within and external to the organisation
- develop conceptual and strategic problem solving and systems
- communicate effectively both verbally and in writing with senior management, employees, clients, regulatory authorities and legal representatives.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation that should normally be
EVIDENCE GUIDE

available in either a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers’ product literature
- copies of appropriate awards and workplace agreements
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured
EVIDENCE GUIDE

Learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- All assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Contract administration procedures and frameworks include:

- Australian standard contracts, including the AS2124 and AS4000 series
- Authorised courses of action
- Contracts include:
  - Construction Industry Contract (CIC) suite
  - Dispute resolution procedures
  - Document and contract distribution
  - Individual organisational contracts
RANGE STATEMENT

- in-house rules about document preparation, completion and handling
- internal and external communication models
- Joint Contracts Committee (JCC) suite
- Master Builders Association (MBA) and Housing Industry Association (HIA) contracts
- organisation administration models
- progress and contract performance reviews.
- response times
- Simple Building Works (SBW), including series 1 and series 2 (SBW2 Lump Sum)
- staff roles and organisational procedures.

Quality assurance measures include:

- distributing information
- establishing performance benchmarks for system
- maintaining a quality dialogue with all parties to the construction process
- managing within organisational policy
- monitoring internal expenditures and funding allocations
- obtaining adequate feedback from clients, subcontractors and suppliers
- providing feedback and developing remediation procedures
- responding to external legislation and regulation requirements.

Measures which ensure the safety and security of contract administration documentation include:

- confidentiality in contract handling
- documentation security identification
- limitations on contract access
- limitations on contract circulation
- limitations on document distribution
- security in contract and document filing and storage.

Unit Descriptor

Unit descriptor
This unit of competency specifies the outcomes required to manage tender developments for major projects. It covers the facilitation, implementation and management of the tender development system in a building and construction organisation involved in residential and/or commercial projects.

It supports the production of tenders that are based on sound economic, business, and human and physical resource data in accordance with the necessary organisational guidelines.

Application of the Unit

Application of the unit
This unit of competency supports the needs of builders and senior managers in building, construction and services, typically working in larger organisations and managing more complex projects and processes, responsible for managing tender developments for major residential and commercial projects.

It is essential that competence is demonstrated in relevant aspects of management of the ongoing tender development process, extensive background data provision, risk analysis and comprehensive evaluation of the tender prior to submission by the organisation. Knowledge of financial and business administration principles, human resource practices, industrial relations and legislative and regulatory requirements is essential.

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - consult management team
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - liaise with client
  - read and interpret:
    - contract documents
    - invitation to tender
    - legislation
    - subcontractor quotes
    - tender documentation
    - other relevant documentation
  - use and interpret non-verbal communication
REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- written skills to maintain records
- conceptualising and envisaging unique solutions to complex problems and situations
- delegating tasks within specific functional guidelines
- directing the activities of personnel involved in the tender development process
- facilitating the implementation of new and more appropriate information systems
- interpreting strategic and often ambiguous information and reaching logical and practical decisions
- monitoring and overseeing the performance of systems and individuals involved in the process
- numeracy skills to apply calculations
- technological skills to facilitate use of the organisation's software and office equipment.

Required knowledge

Required knowledge for this unit is:

- appropriate sector of the building and construction industry and nature of the contracts upon which its activities are based
- factors to be considered in assessing the risk inherent in different types of building and construction projects
- financial and business administration principles commensurate with organisation's needs
- human resource practices and the industry's industrial relations climate and practices
- relevant state or territory building and construction codes, standards and regulations
- socioeconomic and political factors which determine the climate in that sector of the building and construction industry.
 Evidence Guide

Overview of assessment

This unit of competency could be assessed by effective management of tender developments for major projects.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- develop tenders that comprehensively address project requirements
- implement management practices that result in a high level of strategic input and accuracy
- manage data acquisition from within and external to the organisation
- demonstrate conceptual and strategic problem solving and organisation of resources
- communicate effectively both verbally and in writing with owners, senior management and employees
- comply with legislative and regulatory requirements, standards and codes of practice.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Conditions of contract include:

- contract clauses and intentions
- dispute resolution
- general conditions of contract
- legislative and regulatory requirements
- liabilities
- parties' obligations under contracts.
RANGE STATEMENT

**Risk analysis** includes:
- analysis and revision of data
- critical incident analysis and reporting
- proposing solutions and recovery scenarios
- risk management practices
- scheduling and planning for contingencies.

**Human and physical resource costs** include:
- developing and introducing costing methods and systems
- development of subcontracting and organisational contracting arrangements
- establishing methods of calculating standard times for work activities
- establishing personnel review and evaluation processes
- evaluation of work practices and industrial relations arrangements
- human resource processes, including:
  - legislative and regulatory requirements
  - maintaining accuracy and legitimacy of the tender process
  - management of material costs and information concerning availability
  - management of work practices and staff discipline
  - performance appraisal
  - selection and training of personnel to deal with the tender function.

**Tender documentation** includes:
- drawings and specifications
- form of tender
- head and sub contracts
- pre-contract documentation
- tendering codes of practice and standards.

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - address and resolve disputes
  - allocate tasks
  - conduct and facilitate meetings
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - provide information to staff
  - read and interpret:
    - orders for resources
    - reports
    - strategic information
    - other relevant documentation
  - use and interpret non-verbal communication
REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- written skills to:
  - prepare schedule of staff duties
  - record communications and action taken
- conceptualisation skills to envisage unique solutions to complex problems and situations
- facilitation skills to implement new and modified systems
- interpreting strategic and often ambiguous information and reaching logical and practical decisions
- management skills, including the ability to delegate tasks within specific functional guidelines and direct the activities of personnel involved in the procurement and acquisition of resources
- supervisory skills to monitor and oversee the performance of systems and individuals involved in the process
- technological skills to enable effective administration and monitoring of procurement system and processes.

Required knowledge

Required knowledge for this unit is:

- building and construction industry contracts
- factors that contribute to the provision of physical and human resources in a construction environment
- financial and business principles as they apply to the building and construction industry
- human resource and industrial relations practices within the building and construction industry
- organisational strategic and operational activities and the mechanisms through which they are addressed
- relevant building and construction codes, standards and regulations.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by establishing and conducting a review and evaluation of processes that ensure the ongoing effectiveness of a procurement system.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- strategically focus on the procurement process and system to handle activities on more than one site
- overcome obstacles to procurement of human and physical resources
- effectively deal with delays
- evaluate the system and recommend and implement remedial or improvement-based changes
- develop resource supply schedules and prioritise events, allowing for possible contingencies
- communicate information, including OHS regulations applicable to workplace.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
EVIDENCE GUIDE

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- current publications on measurement, design, building construction and manufacturers’ product literature
- copies of appropriate awards and workplace agreements
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured
EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Financial and business principles include:

- accountability and integrity
- accurate and timely development and maintenance of financial records
- compliance with all legal and financial obligations
- probity and honest dealing
- transparency of financial processes.

Financial and administrative

- agreements with subcontractors and material suppliers
RANGE STATEMENT

Control over the procurement process includes:

- authorising payment for services provided
- generation of procurement documentation
- managing the raising of purchase orders.

Industrial relations within the procurement process include:

- associations and industrial relationships between the organisation and subcontractors
- associations and industrial relationships between the organisation and material suppliers
- dispute resolution between on-site personnel involved in the procurement process
- dispute resolution involving disagreements between the organisation and subcontractors
- engaging on-site labour
- negotiating payments under awards, agreements and workplace agreements
- proactive communication and incident avoidance.

Communications principles and policies include:

- form of responses to meet circumstantial requirements
- quality and veracity of responses
- recording of communication details and action taken
- responsibilities for follow-up action
- status or level of respondents
- timeliness of responses.

ELEMENT
policies and practices.

PERFORMANCE CRITERIA
4.3. Policy guidelines and obligations are circulated within the organisation and sign-off by staff, employees and contractors is obtained.
4.4. Compliance of all staff with environmental policy is monitored.
5. Implement an environmental conformance feedback system.
5.1. Processes to monitor and report on environmental issues and procedures are developed and introduced.
5.2. Feedback systems are developed, circulated and maintained to ensure all stakeholders can support the environmental management process.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to facilitate the implementation of new and modified environmental management and review systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - obtain agreement on guidelines and obligations
  - seek feedback
  - train staff
- read and interpret:
  - information
  - publications
  - other relevant documentation
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- written skills to develop and document policies and procedures
- interpretation of strategic and often ambiguous information to ensure logical and practical decisions
- conceptualisation of unique solutions to complex problems and situations
- management skills, including the ability to delegate tasks within specific functional
REQUIRED SKILLS AND KNOWLEDGE

guidelines and direct the activities of personnel involved in the environmental management and review process

- supervisory skills to monitor and oversee the performance of the management and review systems and individuals involved in the process
- technological skills to facilitate use of the organisation's software and office equipment.

Required knowledge

Required knowledge for this unit is:

- environmental issues that impact on the organisation and its practices
- financial and business administration principles commensurate with organisational needs
- factors to be considered in assessing the environmental risk inherent in different types of building and site utilisation projects
- key factors that influence decisions on environmental issues and decision making
- legislative, regulatory and administrative obligations incumbent on the building and construction industry for environmental practices.
### Evidence Guide

#### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

This unit of competency could be assessed by the development, implementation and maintenance of an environmental management system within an organisation.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- develop an effective environmental conformance strategy
- develop identifiable roles and responsibilities for organisation personnel involved in that strategy
- implement management practices that result in a high level of conformance by the organisation to environmental obligations
- strategically plan to meet environmental obligations and effectively interact with personnel both within and external to the organisation
- develop conceptual and strategic problem solving and systems
- communicate effectively both verbally and in writing with senior management, employees, clients, regulatory authorities and legal representatives.

#### Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge
EVIDENCE GUIDE

will usually be conducted in an off-site context.
Assessment is to comply with relevant regulatory or Australian standards’ requirements.
Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers’ product literature
- copies of appropriate environmental legislation and regulations
- strategic building and construction market information
- a technical reference library with current publications on design, building construction and manufactures product literature
- suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability
EVIDENCE GUIDE

Skills with workplace tasks and job roles

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and
RANGE STATEMENT

Strategic factors impinging on organisational environmental obligations include:

- federal, state or territory environmental legislation
- local authority by-laws, Acts or regulations concerning environmental issues
- location and nature of the construction activity
- scope of operations and activities of the organisation
- types of licences and permits held or needing to be held by the organisation.

Strategic and operational factors impinging on the organisational environmental management process include:

- management commitment to the environmental management process
- organisation policy and operating guidelines
- public liabilities and exposure to risk
- risk management strategies and policies
- structure of the management team and apportionment of responsibilities.

Environment control system quality principles and practices include:

- ensuring availability of appropriately qualified personnel to deal with environmental issues
- maintenance of agreed expenditure for environmental management compliance
- obtaining timely and relevant expert advice as required by the project
- organisational compliance with appropriate legislation and regulations
- periodic review of environmental management practices and processes
- preventative maintenance of environmental management practices and processes.

Feedback systems include:

- emergency or process breakdown advisory channels
- formal meetings between staff, employees and contractors on a regular basis
- programmed appraisals of compliance with environmental policy involving organisation staff, employees and contractors
- programmed reporting and environmental conformance statements and timetables
- verbal, electronic and hard copy information communications systems.

5.2. Strategic balances and checks which enable the ongoing maintenance of quality of the estimating and tendering system are developed and implemented. |

### Required Skills and Knowledge
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- apply numeracy skills to workplace requirements
- communication skills to:
  - appoint staff
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - obtain senior management endorsement
  - read and interpret documents from a variety of sources
  - seek feedback
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
  - written skills to complete relevant documentation
  - conceptualising and envisaging unique solutions to complex problems and situations
  - delegating tasks within specific functional guidelines
  - directing the activities of personnel involved in the estimating and tendering process
  - facilitating the implementation of new and modified systems
  - interpreting strategic and often ambiguous information and reaching logical and practical decisions
  - monitoring and overseeing the performance of systems and individuals involved in the process
  - technological skills to facilitate use of the organisation's software and office equipment.

**Required knowledge**

Required knowledge for this unit is:

- appropriate sector of the building and construction industry and the nature of the contracts upon which its activities are based
- factors to be considered in assessing the risk inherent in different types of building and construction projects
- financial and business administration principles commensurate with organisational needs
- human resource practices and the industry's industrial relations climate and practices
- relevant state or territory building and construction codes, standards and regulations
REQUIRED SKILLS AND KNOWLEDGE

- Socioeconomic and political factors which determine the climate in that sector of the building and construction industry.
Evidence Guide

Overview of assessment

This unit of competency could be assessed by effective development and implementation of an estimating and tendering system for an organisation.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- implement an effective estimating and tendering system, supported and directed by strong and decisive leadership
- develop conceptual and strategic problem solving and systems
- implement management practices which result in high level staff productivity
- interact effectively with personnel within and external to the organisation
- communicate effectively both verbally and in writing with senior management, employees, clients and regulatory authorities
- comply with legislative and regulatory requirements and codes of practice.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
EVIDENCE GUIDE

- suitable project work applicable to the building and construction process
- appropriate equipment, materials and documentation to comply with OHS legislation and other organisational policies
- related learning resources in support of the underpinning knowledge and skills acquisition required by this unit of competency.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured
EVIDENCE GUIDE

learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Tendering system** factors include:
- legislative and regulatory requirements and codes of practice
- market rates, trends and technological improvements and variations
- materials and labour cost determination
- range of contracts employed by the organisation
- standard organisational documentation
- tendering methods, processes and timeframes
- timeframes and scheduling arrangements.

**Strategic criteria for personnel and processes concerned with estimating and tendering** include:
- analysis and revision of data
- critical incident analysis and reporting
- risk management
- scheduling and planning for contingencies.

**Financial structures which underpin the tendering process**
- accounting methods and systems
- calculation and apportioning of overheads and margins
RANGE STATEMENT

include:

- subcontracting and organisational contracting rates.

Review and feedback system includes:

- critical path development and analysis
- feedback loops
- internal and external client review and feedback systems
- personnel and system review and evaluation processes
- programmed and critical incident evaluation meetings.

Communication system includes:

- phone, facsimile and email systems
- handwritten and word-processed reports and briefing notes
- internal and external memoranda
- face to face communication.

Tender recording system includes:

- day logs and diaries
- financial, labour and materials recording and inventory systems
- manual and computer-based data systems.

Unit Descriptor

This unit of competency specifies the outcomes required to develop, plan and implement an appropriate building or construction planning process. It applies to the strategic development and implementation of an organisation's project and organisational planning.

The unit applies to the management and review systems of an organisation involved in residential and/or commercial projects of significant size and complexity. It supports the establishment of a soundly based contract planning service necessary to produce accurate and successful project outcomes in accordance with organisational guidelines and legislation, codes and standards governing project completion.

Application of the Unit

This unit of competency supports the needs of builders and senior managers within building, construction and services firms, typically working in larger organisations and managing more complex projects and processes, responsible for developing, planning and implementing an appropriate building or construction planning process.

The unit requires facilitating implementation of new and modified systems and monitoring and overseeing the performance of systems and personnel.

Knowledge of industry contracts, human resources and industrial relations practices; socioeconomic factors which influence the industry; and organisational strategic and operational activities is essential.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- apply numeracy skills to workplace requirements
- communication skills to:
  - appoint staff
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - facilitate and obtain senior management endorsement
  - read and interpret:
    - codes and standards
    - legislation
    - other relevant documentation
  - seek feedback
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
  - written skills to complete relevant documentation
  - conceptualising and envisaging unique solutions to complex problems and situations
  - delegating tasks within specific functional guidelines
  - directing the activities of personnel involved in the construction planning process
  - facilitating the implementation of new and modified systems
  - interpreting strategic and often ambiguous information and reaching logical and practical decisions
  - monitoring and overseeing the performance of systems and individuals involved in the process
  - technological skills to facilitate use of the organisation's software and office equipment.

Required knowledge

Required knowledge for this unit is:

- financial and business principles as they apply to the building and construction industry
- human resource and industrial relations practices within the building and construction industry
- organisational strategic and operational activities and mechanisms through which they are addressed
REQUIRED SKILLS AND KNOWLEDGE

- relevant state or territory building and construction codes, standards and regulations
- socioeconomic and political factors which impact on the building and construction industry
- type, breadth and scope of building and construction industry contracts.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by effective development, planning and implementation of an appropriate building or construction planning process.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- develop a strategic focus on the mechanisms implemented to enable the construction planning process
- interpret organisational information and reporting requirements, which results in the establishment of mechanisms that demonstrate those needs are being met
- implement and maintain mechanisms and systems which enable demonstrable improvements to occur within the organisational construction planning process
- delegate effectively and oversee tasks
- communicate effectively both verbally and in writing with owners, senior management and employees.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.
EVIDENCE GUIDE

Resource implications for assessment include:

- documentation that should normally be available in a building or construction office to comply with legislation and the organisation policies
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs, record and print copies
- a technical reference library with current publications on measurement, design, building construction to support underpinning knowledge and manufacturers' product literature
- copies of appropriate awards and workplace agreements
- a suitable work area appropriate to the planning process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over
EVIDENCE GUIDE

- a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Strategic factors impacting on the planning process include:

- clients and client needs
- location of projects
- logistics and location of personnel
- market focus and structure of the organisation
- organisation information needs and timelines
### RANGE STATEMENT

| Legislative, code and standard requirements include: | relevant legislative requirements, codes and standards  
| strategic organisational objectives  
| type of work being undertaken.  
| application of the Building Code of Australia (BCA) related to the size and complexity of the project and the class of building being constructed  
| council and other relevant planning approval processes  
| OHS and other workplace standards  
| relevant state or territory licensing arrangements. |

| Criteria for personnel and processes include: | appropriate experience and qualifications of participants  
| correct and timely selection of key project supervisors and administrators  
| effective lines and methods of communication  
| suitability and timing of communication  
| suitability of documentation and reporting methods  
| suitability of work habits and timeliness of personnel. |

| Planning quality control process includes: | documentation and graphical representation of data  
| establishment of performance benchmarks  
| evaluation and review methods and practices  
| feedback loops and information extraction  
| personnel and system information gathering and insert points  
| project review meetings and project progress reporting. |

| Recording and evaluation include: | key point data availability and crisis flagging  
| maintenance and redevelopment of information recording systems  
| manual and electronic data recording processes  
| performance data entry and responsibility  
| programmed and crisis evaluation strategies. |

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Develop energy conservation and management philosophies and strategies. | 1.1. Factors to be included in the organisational *energy conservation and management system* are quantified and qualified.  
1.2. Strategic factors that impact on the organisational ability to improve energy conservation and management practices and processes are evaluated.  
1.3. Range and scope of activities being undertaken by the organisation in regard to energy conservation and management are quantified.  
1.4. Previous policy and operational factors contributing to energy conservation and management are evaluated.  
1.5. Organisational energy conservation and management policy and strategy are developed, with assessment of savings and benefits to be derived. |
| 2. Scope the introduction and management of energy conservation and management principles and processes. | 2.1. Board and senior management are consulted concerning the introduction and implementation of the energy conservation and management policy and strategy.  
2.2. Organisational policy and management guidelines are developed covering energy conservation and management within and external to the organisation.  
2.3. Strategic plan for the introduction of the policy and strategy is developed and documented.  
2.4. Staff are briefed on criteria for implementing and maintaining systems concerned with energy conservation and management.  
2.5. Methods are developed to gather and monitor energy conservation and management information essential to the management process.  
2.6. Methods are developed to translate the policy into practice in the organisation and on site. |
| 3. Implement the energy conservation and management system. | 3.1. Energy conservation and management instructions are built into organisational operating procedures.  
3.2. Staff training program is introduced to ensure that energy conservation and management practices are applied to organisational activities on a daily basis.  
3.3. Methods for determining effectiveness of the energy conservation and management system are introduced.  
3.4. Routine monitoring of energy benchmarks is |
ELEMENT | PERFORMANCE CRITERIA
---|---
4. Manage the organisational energy conservation processes. | 4.1. Energy conservation and management issues are added to the process agenda at all levels of the organisation.
4.2. Contractors and employees are advised of and monitored within the framework.
4.3. Policy guidelines and obligations are circulated within the organisation and sign-off by staff, employees and contractors is obtained.
4.4. Staff compliance with energy conservation and management policy is monitored.
5. Implement an energy management feedback system. | 5.1. Processes to monitor and report on energy conservation and management achievements are developed and introduced.
5.2. Feedback systems are developed, circulated and maintained to ensure all stakeholders can support the energy conservation and management process.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:
- ability to facilitate the implementation of new and modified energy conservation and management systems
- apply numeracy skills to workplace requirements
- communication skills to:
  - consult board members and senior management
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - obtain agreement on guidelines and obligations
  - provide information to staff and contractors
  - read and interpret documents from a variety of sources
  - seek feedback
  - use and interpret non-verbal communication
REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- written skills to develop policies, strategies and plans
- conceptualisation of unique solutions to complex problems and situations
- interpretation of strategic and often ambiguous information to ensure logical and practical decisions
- management skills, including the ability to delegate tasks within specific functional guidelines and direct the activities of personnel involved in the energy conservation and management review process
- supervisory skills to monitor and oversee performance of the management and review systems and individuals involved in the process
- technological skills to facilitate use of the organisation's software and office equipment.

Required knowledge

Required knowledge for this unit is:

- energy conservation and management issues that impact on organisation and its practices
- factors to be considered in assessing the energy conservation and management requirements inherent in different types of building and site utilisation projects
- financial and business administration principles commensurate with organisational needs
- key factors influencing decisions on energy conservation and management issues and decision making
- legislative, regulatory and administrative obligations incumbent on the building and construction industry for energy conservation and management practices.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by developing, implementing and maintaining the energy conservation and management system for an organisation.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- contribute to an effective energy conservation and management strategy
- establish identifiable roles and responsibilities for organisation personnel involved in that strategy
- implement management practices which result in a high level of compliance with energy management guidelines and organisational policy
- strategically plan to meet energy management obligations effectively
- develop conceptual and strategic problem solving and systems
- communicate effectively both verbally and in writing with senior management, employees, clients, regulatory authorities and legal representatives.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.
EVIDENCE GUIDE

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- copies of appropriate environmental legislation and regulations
- strategic building and construction market information
- a technical reference library with current publications on design, building construction and manufacturers product literature
- suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
EVIDENCE GUIDE

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace.

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.
RANGE STATEMENT

Energy conservation and management system quality principles and practices include:

- ensuring availability of appropriately qualified personnel to deal with energy issues
- maintenance of agreed expenditures for energy management compliance
- obtaining timely and relevant expert advice as required by the organisation or project
- organisational compliance with appropriate legislation and regulations
- periodic review of energy conservation and management practices and processes
- preventative maintenance of energy conservation and management practices and processes.

Strategic factors impinging on the organisational energy conservation and management process obligations include:

- extent and types of equipment being operated
- location and nature of the construction activity
- organisational policy and management practices
- scope of operations and activities of organisation
- types, age and construction of buildings in which organisation operates.

Operational factors impinging on organisational energy conservation and management process include:

- management commitment to the energy conservation and management process
- organisational policy and operating guidelines
- public liabilities and exposure to risk
- risk management strategies and policies
- skills and experience of organisational personnel
- structure of the management team and apportionment of responsibilities
- timing of activities and project deadlines
- types of materials and consumables being employed in the process.

Feedback systems include:

- emergency or process breakdown advisory channels
- formal meetings between staff, employees and contractors on a regular basis
- programmed appraisals of compliance with energy policy involving staff, employees and contractors
- programmed reporting and energy management conformance statements and
RANGE STATEMENT

- timetables
- verbal, electronic and hard copy information communications systems.

5.2. Strategic balances and checks are applied that enable the ongoing maintenance of quality of the costing system.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret documents from a variety of sources
  - seek approval from senior management
  - seek feedback
  - train staff
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
  - written skills to complete relevant documentation
  - conceptualisation of unique solutions to complex problems and situations
  - facilitation skills to implement new and modified systems
  - interpretation of strategic and often ambiguous information to ensure logical and practical decisions
  - management skills, including the ability to delegate tasks within specific functional guidelines and direct activities of personnel involved in the estimating and tendering process
  - numeracy skills to apply calculations to interpret costs
  - supervisory skills to monitor and oversee the performance of systems and individuals involved in the process
  - technological skills to facilitate use of the organisation's software and office equipment.

Required knowledge

Required knowledge for this unit is:
REQUIRED SKILLS AND KNOWLEDGE

- appropriate sector of the building and construction industry and the nature of contracts upon which its activities are based
- factors to be considered in assessing the risk inherent in different types of building and construction projects
- financial and business administration principles commensurate with organisational needs
- human resource practices and industry’s industrial relations climate and practices
- socioeconomic and political factors which determine the climate in that sector of the building and construction industry.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the development and implementation of an organisational construction costing system. This should include relevant aspects of the monitoring process to ensure continued financial viability of the organisation.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- implement effective cost development and monitoring system
- apply management practices that result in a high level of staff productivity
- interact effectively with personnel both within and external to the organisation
- develop conceptual and strategic problem solving and systems
- communicate effectively both verbally and in writing with senior management, employees, clients, regulatory authorities and legal representatives.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
EVIDENCE GUIDE

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- current publications on measurement, design, building construction and manufacturers’ product literature
- copies of appropriate awards and workplace agreements
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured
learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

### Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Strategic factors impacting on the construction costing process include:**

- availability and accessibility of historical records
- availability of materials and suppliers costs
- awards, agreements and work practices
- construction methodologies and practices
- extent of information and anticipated degree of risk
- margins, allowances, rates and penalties
- organisational performance data
RANGE STATEMENT

**Strategic and operational factors impinging on organisation costing processes** include:

- plant, equipment and provision of services.
- ability to gather specific information concerning actual versus estimated costs.
- establishment of internal and external performance management systems.
- relationships with organisation's financial management and construction management systems.

**Criteria for implementing and maintaining systems concerned with costing the construction process** include:

- establishing and maintaining accurate estimating practices.
- gathering and classifying appropriate strategic and performance information.
- using the services of well trained and experienced personnel in the costing process.
- establishing performance benchmarks for system.
- maintaining a quality dialogue with parties to construction process.
- monitoring internal expenditure and funding allocations.
- establishing and maintaining comprehensive records of bids.
- maintaining appropriate manual or electronic databases to assist performance comparisons.
- programmed and spontaneous reviews of success rates.
- providing secure and safe accommodation for costing information.

**Quality control procedures** for maintaining costing involve obtaining adequate feedback from clients, subcontractors and suppliers and include:

- establishing performance benchmarks for system.
- maintaining a quality dialogue with parties to construction process.
- monitoring internal expenditure and funding allocations.
- establishing and maintaining comprehensive records of bids.
- maintaining appropriate manual or electronic databases to assist performance comparisons.
- programmed and spontaneous reviews of success rates.
- providing secure and safe accommodation for costing information.

**Evaluation of recording system and costing system includes:**

- establishing and maintaining comprehensive records of bids.
- maintaining appropriate manual or electronic databases to assist performance comparisons.
- programmed and spontaneous reviews of success rates.
- providing secure and safe accommodation for costing information.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- apply numeracy skills to workplace requirements
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret documents from a variety of sources
  - seek endorsement from senior management
  - seek feedback
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
  - written skills to complete relevant documentation
- conceptualisation of unique solutions to complex problems and situations
- facilitation skills to implement new and modified documentation administration systems
- interpretation of strategic and often ambiguous information to ensure logical and practical decisions
- management skills, including the ability to delegate tasks within specific functional guidelines and direct the activities of personnel involved in the documentation administration process
- supervisory skills to monitor and oversee performance of the documentation administration systems and individuals involved in the process
- technological skills to facilitate use of the organisation's software and office equipment.

Required knowledge

Required knowledge for this unit is:
REQUIRED SKILLS AND KNOWLEDGE

- appropriate sector of the building and construction industry and nature of the contracts upon which its activities are based
- factors to be considered in assessing the risk inherent in different types of building and construction projects
- financial and business administration principles commensurate with organisational needs
- human resource practices and the industry's industrial relations climate and practices
- legislative, regulatory and administrative obligations incumbent on the building and construction industry for OHS, environmental, employment and financial practices.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed through efficient and effective contract documentation management and administration, including the production of contracts, specifications and drawings which contribute to an organisation operating in an efficient and productive project environment.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- document administration procedures and frameworks supported and directed by strong and decisive leadership
- manage practices that result in a high level of staff productivity
- interact effectively with personnel both within and external to the organisation
- develop conceptual and strategic problem solving and systems
- communicate effectively both verbally and in writing with senior management, employees, clients, regulatory authorities and legal representatives.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory
EVIDENCE GUIDE

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers’ product literature
- copies of appropriate awards and workplace agreements
- strategic building and construction market information
- a technical reference library with current publications on design, building construction and manufacturers’ product literature
- suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able
EVIDENCE GUIDE

to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience, the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.
RANGE STATEMENT

Projects include:
- civil construction projects
- commercial construction
- earthworks
- high and low rise structures
- provision of electrical, plumbing and gas, waste disposal, environmental clean-up and other services
- residential construction.

Documentation processes include:
- development of documentation relating to the construction process, such as tenders, offers, contracts, drawings, specifications, schedules, materials lists and variations
- recording, tracking and security of documentation, including secure storage
- review and evaluation of amendments to documentation
- transmission of documentation within and external to the organisation.

Construction documentation quality control system includes:
- confidentiality in document handling
- development by experienced personnel
- limitations on document circulation, access and distribution
- security in document filing, storage and identification.

Documentation recording system and evaluation systems include:
- document reviews for appropriate structure, content, quality and relevance
- electronic or manual transcription of information into document form
- establishing and maintaining accurate document records
- programmed and spontaneous reviews of active documents
- providing secure and safe accommodation for documented information in electronic or hard copy form.

| 1. Assess the nature and performance of concrete for use in multi-storey buildings and other building types. | 1.1. Plastic and hardened concrete properties are identified and recorded for building types.  
1.2. Sources of aggregate are listed and properties of each described.  
1.3. Effects of impurities are described and recorded.  
1.4. Manufacture and testing of concrete is conducted in accordance with relevant Australian standards. |
| 2. Assess application of concrete used in multi-storey buildings. | 2.1. Selection and distribution methods of concrete are determined following analysis of site access.  
2.2. Correct distribution and placement methods of concrete are demonstrated and maintained.  
2.3. Reasons and effects of compaction on both plastic and hardened concrete are identified.  
2.4. Immersion, surface and form vibration are compared.  
2.5. Accurate records relating to the application of concrete are maintained.  
2.6. Types of curing methods and detrimental effects of poor or no curing are identified and recorded. |
| 3. Evaluate methods undertaken to repair concrete. | 3.1. Live and dormant cracks are identified.  
3.2. Repair methods and causes of cracked concrete and concrete cancer are described and recorded in accordance with organisational procedures.  
3.3. Faults in concrete are diagnosed and recorded in accordance with organisational procedures. |
| 4. Evaluate effects of fire and heat on concrete used in multi-storey buildings. | 4.1. Reinforced concrete is tested for effects of fire and heat.  
4.2. Methods of fire protection for concrete elements are identified and applied. |
| 5. Monitor environmental impacts of building materials used. | 5.1. Concrete used in buildings complies with organisation's sustainability policies.  
5.2. New technologies in concrete are monitored and applied in the construction of multi-storey buildings in accordance with organisational policies and guidelines.  
5.3. Performance requirements of concrete in fire resistance construction are identified and applied in accordance with acceptable standard construction practices. |
ELEMENT  PERFORMANCE CRITERIA

5.4. Cost-effectiveness of using recycled materials is identified in accordance with acceptable standard construction practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- application of design concepts and principles
- application of measurements and calculations
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret:
    - documentation from a variety of sources
    - specifications and drawings
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- written skills to record information and maintain records
- numeracy skills to apply calculations
- technological skills to facilitate use of the organisation's software and office equipment.

Required knowledge

Required knowledge for this unit is:

- application of Building Code of Australia (BCA) and Australian standards
- applications of structural principles in buildings
- design principles and behaviour of structural members undergoing stress, strain, compression, bending or combined actions
- grading process and grade markings used to categorise timber and timber products
- OHS requirements, legislative codes and practices
- types and nature of materials and effect of their performance, including properties and uses of cement and types of hydraulic cement
- work drawings and specifications.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by applying correct processes for selecting and sizing materials for all structural components that form a complex building project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS and organisational quality procedures and processes
- apply and interpret relevant documentation and codes
- apply design principles relating to performance
- identify typical faults and problems and the action required to rectify such faults.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation, including design brief drawings, specifications, codes, design concepts, construction schedules and other necessary supporting documents
- research resources, including timber product information and samples
- access to relevant legislation, regulations and
EVIDENCE GUIDE

codes of practice, including BCA, National Timber Framing Code and AS1684, AS4055
- relevant computer software package and suitable hardware.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.
EVIDENCE GUIDE

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Building types include:
- bridge and pier construction
- buildings with concrete skeleton and slabs
- concrete column or wall 10 metres high
- slab on ground floor.

Records maintained include
details regarding:
- causes of surface defects during concrete placement
- compaction of concrete
- finishing processes and surface treatments to slab concrete.

Types of curing methods include:
- accelerated curing
- continuously wetting concrete
- impermeable membrane curing.

Reinforced concrete includes:
- methods of pre-stressed concrete
- principles of reinforced concrete using steel, wire, fibres, etc.

Performance requirements include:
- characteristics, uses, maintenance and selection of materials and systems in terms of their:
  - alternative uses
  - cost effectiveness
RANGE STATEMENT

- hazard potential and environmental safety
- installation requirements
- needs for use of cranes and hoists
- recycling capacity
- rubbish removal demands
- transport problems and restrictions
- cost
- detail relating to materials
- evaluation and assessment for new materials
- milestones
- nominated subcontractors
- provision of site access/facilities
- quality assurance
- quality of work
- standard procedures
- standards of work
- work schedules.

*Standard construction practices* include:

- BCA, including AS1684.

Unit Descriptor

Unit descriptor
This unit of competency specifies the outcomes required to apply structural principles to the building of large, high rise and complex buildings.

The design and construction of large buildings requires the input of a range of skilled professionals, including architects and engineers. The building and construction professional plays a significant role within this project team and requires the ability to communicate effectively with building design professionals and develop sound and safe practices in relation to structural procedures on site.

Application of the Unit

Application of the unit
This unit of competency supports builders, project managers and related construction industry professionals responsible for ensuring the structural integrity of materials and building and construction work so that site safety and quality control measures are maintained during residential and commercial projects.

5. Analyse and plan for structural integrity of buildings.

5.1. Relevant industry professionals are consulted to provide advice regarding the structural integrity of proposed building.

5.2. *Structural requirements and loads* of the building design are assessed.

5.3. Analysis is conducted of the effects of force and movements on structural elements.

5.4. Analysis of properties and behaviours of structural materials is conducted.

5.5. Analysis of section properties of structural elements is conducted using standard industry formulas and performance comparisons.

5.6. *Performance characteristics of columns* are evaluated using standard industry techniques.

5.7. Methods used for stress distribution in connections between structural elements are assessed.

5.8. Impact of *various loads* on the building structure is assessed.

5.9. Design impact of high performance structural elements is considered.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- application of design concepts and principles
- application of measurements and calculations
- communication skills to:
  - consult with industry professionals
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- read and interpret:
REQUIRED SKILLS AND KNOWLEDGE

- codes and standards
- legislative and planning requirements
- plans, specifications and drawings
- other relevant documentation
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- interpret documentation from a wide range of sources
- numeracy skills to apply measurements and calculations.

Required knowledge

Required knowledge for this unit is:

- applications of structural principles in buildings
- Building Code of Australia (BCA) and Australian standards
- design principles and behaviour of structural members undergoing stress, strain, compression, bending or combined actions
- interpretation and analysis of work drawings and specifications
- nature of materials and effect of performance.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the application of structural design principles and communication of the selection, positioning and sizing of all structural members that form fixed or temporary building structures.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- coordinate professional input to evaluate structural integrity of large and complex buildings
- clearly analyse structural impact of design decisions
- comply with OHS and organisational quality procedures and processes
- apply and interpret relevant documentation and codes
- apply design principles relating to performance
- identify typical faults and problems and the action required to rectify such faults.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation, including design brief
EVIDENCE GUIDE

drawings, specifications, codes, design concepts, construction schedules and other necessary supporting documents
• research resources, including timber product information and samples
• access to relevant legislation, regulations and codes of practice, including the BCA
• relevant computer software package and suitable hardware.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability
EVIDENCE GUIDE

All assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Structural principles relate to factors, including:

- dead and live load calculations and characteristics
- impact of wind, snow, ground water, earthquake, liquid pressure, rainwater and earth pressure actions
- impact of time-dependent effects, including creep and shrinkage
- impact of thermal effects
- structural resistance of materials
- fire resistance of materials
- structural resistance of forms of construction.

Materials include:

- masonry
- concrete, including reinforced and pre-stressed concrete
- steel, including cold-formed steel
RANGE STATEMENT

- composite steel and concrete
- aluminium.
- bracing
- close sheeting
- formwork props
- pressure resistant formwork
- scaffolding sole plates
- shields
- shoring collar sets
- soldier sets
- ties.

Temporary structural elements include:

Structural requirements and loads relate to building:

- aesthetics
- economy
- equilibrium
- functionality
- stability
- strength.

Properties and behaviours of structural materials include consideration of:

- effect of force on materials in tension, compression, stress, strain and elasticity
- structural properties of common materials.

Analysis of performance characteristics of columns requires consideration of:

- bending behaviour and performance of loaded support beams
- eccentric and axial load effect
- load spanning elements for bending moments, shear forces, deflection and torsion
- effect of connections
- effect of slab behaviour in relation to spans and stress distribution
- effect of slenderness ratio.

Various loads include:

- dead load
- earthquake load
- live load
- wind load.

High performance structural elements include:

- castellated beams
- connections
- fire resistance
- laminated beams
- pre-stressed beams
- slabs
- trusses.
RANGE STATEMENT

- use of steel to reinforce concrete
- waffle slabs.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:
- application of building survey procedures to the assessment of building systems
- application of design concepts and principles
- application of measurements and calculations
REQUIRED SKILLS AND KNOWLEDGE

- communication skills to:
  - communicate building work progress
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret:
    - legislation
    - plans, specifications and drawings
    - other relevant documentation
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
  - written skills to record relevant information and prepare reports
  - interpretation skills, including the ability to interpret documentation from a wide range of sources
  - numeracy skills to apply measurements and calculations and to interpret mathematical information
  - technological skills to facilitate use of the organisation's software and office equipment.

Required knowledge

Required knowledge for this unit is:

- applications of structural principles in buildings
- building survey practices
- design principles and behaviour of structural members undergoing stress, strain, compression, bending or combined actions
- nature of materials and effect of performance
- relevant legislation, codes and practices, including Building Code of Australia (BCA), Australian standards and OHS requirements
- work drawings and specifications.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the application of building survey procedures to assessment of all structural components that form a building project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS and organisational quality procedures and processes
- apply and interpret relevant documentation and codes
- apply design principles relating to performance of the building system
- identify typical faults and problems and the action required to rectify such faults.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation, including design brief drawings, specifications, codes, design concepts, construction schedules and other necessary supporting documents
- research resources, including timber product information and samples
EVIDENCE GUIDE

- access to relevant legislation, regulations and codes of practice, including the BCA
- relevant computer software package and suitable hardware.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.
EVIDENCE GUIDE

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- analysis and interpretation skills relating to documentation from a wide range of sources, including BCA and Australian standards
- applying access requirements for people with a disability and requirements of the Disability Discrimination Act (DDA) with regard to access to building projects
- applying design concepts and principles in accordance with Australian standards
- applying structural principles to the construction process
- applying building codes and standards
- communication skills to:
  - communicate construction problems to appropriate personnel
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- read and interpret:
  - Australian standards
  - BCA
  - reports and legislation
  - working drawings and specifications
REQUIRED SKILLS AND KNOWLEDGE

- seek expert analysis and opinions
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- written skills to:
  - record construction problem
  - prepare report identifying alternative methods and materials
- apply numeracy skills to workplace requirements.

Required knowledge

Required knowledge for this unit is:

- design and construction principles of buildings
- nature of materials and effect on performance
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- terminology, definitions and hazard identification.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by identifying construction faults and their correction to achieve, certification of compliance on the final outcome or authorisation for commencement by a competent authority.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where appropriate
- assess construction faults in buildings, determine a rectification strategy and consider alternative construction methods; and the associated reporting of data, findings, recommendations and strategies for at least one residential building project and one commercial building project or equivalent in compliance with relevant legislation
- provide reports to appropriate body or individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory
EVIDENCE GUIDE

or Australian standards’ requirements.

Resource implications for assessment include:

- relevant Acts, Australian standards, regulations and codes of practice for building design
- plans, working drawings, specifications and material requirements for relevant buildings.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured
EVIDENCE GUIDE

learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Construction faults include those occurring in:

- initial constructions
- installations
- refurbishments
- renovations
- restorations.

Open classification within the BCA refers to:

- all classes of building and types of construction.

Australian standards may include:

- AS1288 Installation of glass in buildings
- AS1684 Residential timber framed construction
- AS2050 Fixing of roof tiles
- AS2180 Metal rainwater goods, selection and installation
- AS2208 Safety glazing materials for use in buildings
- AS3500 National plumbing
RANGE STATEMENT

- AS3600 Concrete structures
- AS3660 Protection of buildings from subterranean termites
- AS3700 Masonry
- AS3740: 2004 Waterproofing of wet areas in residential buildings
- AS4349 Inspection of buildings.

Unit Descriptor
Unit descriptor
This unit of competency specifies the outcomes required to evaluate the layout of services and connection methods in large, high rise and complex buildings (open licensing classification with special reference to Type A buildings).

It includes the evaluation of cold and hot water supply, sewerage layout, electric and electronic installation requirements, and smoke and fire preventative systems.

It requires compliance with relevant legislation, Australian standards and the Building Code of Australia (BCA).

Builders and other related construction industry professionals for whom this unit is relevant, exercise personal judgement based on their knowledge, skills and experience. They must also coordinate the input and expertise of a range of other professionals in order to assess construction faults and determine appropriate responses.

Application of the Unit
Application of the unit
This unit of competency supports builders, related construction industry professionals and senior managers within building and construction firms responsible for managing the evaluation of service layout and connection methods.

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to evaluate impact of the requirement for service layout and connection methods on the construction process
- analysis and interpretation skills relating to documentation from a wide range of sources, including BCA and Australian standards
- application of design concepts and principles in accordance with Australian standards
- applying building codes and standards
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret:
    - Australian standards
REQUIRED SKILLS AND KNOWLEDGE

- BCA
- legislation
- specifications
- working drawings
- seek professional expertise
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- written skills to record relevant information
- numeracy skills ability to perform and apply measurements and calculations.

Required knowledge

Required knowledge for this unit is:

- design concepts and principles in relation to service installations
- general services installation terminology, definitions, installation methods and hazards
- nature of materials and effect of performance
- processes for the interpretation of working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- processes for the preparation of documentation
- terminology and methods of roof construction used for daylight transmission
- terminology and methods used in artificial lighting
- terminology with reference to items and services that may be used in plumbing, sewerage and drainage systems
- terminology with reference to vertical transportation.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by research, design, analysis, evaluation and reporting to determine service layout and connection methods for large and complex residential and commercial buildings.

Competency must be demonstrated within the context of relevant legislation, the BCA and Australian standards.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- coordinate and assess input received from technical experts
- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable
- evaluate the services layout, connection methods and rectification actions for at least one residential and one commercial building project or equivalent, which includes advice on hot and cold water supply, sewerage layout, electrical and electronic installation lighting systems, vertical transportation requirements and smoke and fire detection and prevention systems
- provide reports to appropriate body or individual as determined by project brief
- apply strategic plans, workplace policies and
EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- a situation, real or realistically simulated, requiring assessment of service layout and connection method requirements for residential and commercial buildings.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances
EVIDENCE GUIDE

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Water supply** includes consideration of:

- town supply
- tank storage supply relative to public water supply and reservoir heights
- single and two-stage pumping for multi-function and single function connected services

**Firefighting services use** includes consideration of:

- sprinkler systems (BCA deemed-to-satisfy [DTS] provisions)
- fire hydrants
- fire hose reels and fire extinguishers
RANGE STATEMENT

- installation of fire stopping and fire collars
- fire and smoke detection and alarm systems (BCA DTS provisions).

**Sewerage connection** includes consideration of:
- local authority sewerage drainage system
- septic or bio-chemical treatment unit
- graded or vertical discharge pipes
- inspection shafts and overflow relief gullies (ORGs).

**Stormwater** includes consideration of:
- design, installation and disposal
- connection to local government water drains
- use of soakage pits and on-site water detection systems
- size, location and construction requirements for eaves and box gutters
- downpipes and unground or concealed piping.

**Mechanical ventilation and air conditioning** include:
- air conditioning applications
- air distribution, including mechanical ventilation requirements for enclosed car parks
- air filtration, including air filters, ducting and main filter types
- air intake systems
- fire dampers
- fume discharge systems
- installation of fire stopping
- smoke control and exhaust systems
- warm water and cooling towers.

**Hot water systems** include consideration of:
- area to be serviced
- energy sources available
- height of installation
- number of outlets
- type of occupancy
- type of system.

**Lighting systems** include consideration of:
- emergency and exit signage systems
- natural and artificial lighting
- terms, such as:
  - brightness
  - control of glare
  - installation of fire stopping
  - intensity
  - lifespan
RANGE STATEMENT

- locations for installation
- reflections.

*General electrical and electronic service* systems include consideration of:

- categories of cabling:
  - data
  - lift controls
  - power supplies
  - telecommunications, including connection to site and distribution facilities

- electrical supply authorities connection to site and distribution facilities (switch room and substations)
- emergency lighting and exit signage systems
- emergency warning and intercommunication systems
- fire stopping
- layout of equipment for:
  - computers
  - lift controls
  - power supplies
  - telephones
  - service system safeguards
  - service system access for maintenance, repair and extension
- type of service (emergency power and alternative power sources).

Not equivalent to CPCCBC6004A

Unit Descriptor
This unit of competency specifies the outcomes required to manage the processes to ensure the legal obligations of a building or construction contractor involved in either residential or commercial contracting projects are fully met. It involves managing relationships with advisors and ensuring that the organisation meets the requirements of licensing, health and safety, welfare, workers compensation, taxation, insurance, fair trading and environmental legislation.

Application of the Unit
This unit of competency supports builders, project managers and related construction industry professionals responsible for ensuring the legal obligations of a contractor are met.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Manage compliance with laws relating to establishing and licensing of a building contractor.
   1.1 Company employees are aware of and comply with requirements of laws relating to establishing and licensing of a building contractor.
   1.2 Company takes necessary steps to obtain the necessary building or construction licenses.
   1.3 Changes to licensing arrangements are identified and responded to in a timely manner.
   1.4 Staff members are advised of the consequences of non-compliance with relevant legal obligations.

2 Manage relationships on legal matters.
   2.1 Processes are introduced and managed which enable the company to obtain such legal advice as may be required in relation to particular contracts.
   2.2 Systems are introduced and managed through which legal interpretations of contract clauses or clauses within tender documents may be obtained before submission of the tender.
   2.3 Mechanisms for dialogue are established and managed between the company and the client to improve communication and facilitate conciliation.
3 Manage the administration of regulations relating to work health and safety (WHS) and welfare, workers' compensation, noise abatement and working hours.

3.1 Administration systems that facilitate the organisation conforming to its obligations and regulations under WHS and welfare, workers' compensation, noise abatement and working hours, are developed and managed.

3.2 Records demonstrating organisational compliance with legal obligations are maintained and managed.

3.3 Administrative guidelines and facilities for the proper and secure storage of organisational legal documentation are established and managed.

4 Manage company compliance with taxation and insurance requirements of federal, state and territory legislation.

4.1 Systems that support and maintain organisational capacity to meet legal obligations with regard to insurance and taxation are instigated and managed.

4.2 Personnel receive appropriate training and instruction in matters relating to insurance and taxation and are made aware of their responsibilities.

5 Manage organisational obligations and observe fair trading practice.

5.1 Practices and policies are developed and implemented which facilitate the organisation meeting its obligations to its clients, subcontractors and employees.

5.2 Codes of conduct are established and enforced for all employees and subcontractors.

5.3 Remedial action is taken where evidence of non-compliance with fair trading principles is identified.

6 Manage compliance with environmental legislation.

6.1 Mechanisms to gather information in relation to the organisational environmental management plan are established and managed.

6.2 Supply and removal of subcontract works and materials are managed and subject to constant scrutiny to ensure compliance with environmental standards.

6.3 Changes to legislation or environmental requirements are recorded and organisational activities and systems altered to ensure ongoing compliance.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - communicate with clients
  - provide information and training to staff
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
  - written skills to maintain records
- initiative and enterprise skills to conceptualise and envisage unique solutions to complex problems and situations
- facilitation skills to implement new and modified contract management systems
- literacy skills to:
  - interpret strategic and often ambiguous information to ensure logical and practical decisions
  - read and interpret legislation, contracts and other relevant documentation
- management skills to delegate tasks within specific functional guidelines and direct the activities of personnel involved in the contracts management process
- supervisory skills to monitor and oversee the performance of the contract management systems and individuals involved in the process
- technology skills to facilitate use of the organisation's software and office equipment

Required knowledge

- appropriate sector of the building and construction industry and the nature of the contracts upon which its activities are based
- factors to be considered in assessing the risk inherent in different types of building and construction projects
- financial and business administration principles commensurate with organisational needs
- human resource practices and the industry's industrial relations climate and practices
- legislative, regulatory, and administrative obligations incumbent on a building and construction contractor for licensing, WHS, welfare, workers compensation, noise abatement, working hours, taxation, insurance, fair trading and care of the environment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the development and implementation of policies, practices and administrative measures which ensure an organisation meets its legal obligations in a timely manner.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- ensure contractor licensing requirements are met
- develop and maintain relationships with appropriate legal advisors and obtain advice and clarification as required
- establish and maintain suitable communication mechanisms between the organisation and its clients
- develop and manage administrative systems to facilitate compliance with legislation
- develop and manage appropriate record-keeping procedures and storage of legal documentation
- ensure relevant personnel are informed, trained and updated regarding legal requirements and consequences of non-compliance
- manage organisational activities and systems to ensure ongoing legal compliance.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or
Australian standards' requirements.

Resource implications for assessment include:

- documentation normally available in either a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- copies of appropriate awards and workplace agreements
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further
learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

_range statement_

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Laws relating to establishing and licensing of a building contractor**

- Builders Registration Act 1939 and the Home Building Contracts Act 1991 in Western Australia

**Regulations**

- federal, state or territory environmental protection legislation
- local government Acts and the by-laws derived from them
- state and federal industrial relations legislation
- state codes of practice applicable to the various regulations
- state laws, such as the Workers Compensation and Rehabilitation Act 1981 in Western Australia
- state WHS legislation and regulations.
Legal obligations with regard to insurance and taxation include:

- appropriate business and project insurances
- Fringe Benefits Tax Act 1986
- Goods and Services Tax Act 1999
- Income Tax Assessment Act 1987
- Insurance Contracts Act 1984
- pay-as-you-go (PAYG) taxes
- payroll tax
- stamp duty
- workers’ compensation.

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**
REQUIRED SKILLS AND KNOWLEDGE

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - numeracy skills to apply measurements and make calculations
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- bricklaying and blocklaying materials
- calculation of and techniques for preparing mixes
- construction terminology
- hazards associated with the use of bricklaying and blocklaying tools, plant and equipment
- job safety analysis (JSA) and safe work method statements
- manual handling techniques
- materials storage and environmentally friendly waste management
- MSDS
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- techniques for bricklaying and blocklaying tasks
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- demonstrate safe and effective use of tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum:
  - on a ground level work site, manually relocate a pallet of bricks and associated mortar, aggregate and cement from a storage site in proximity to a specified work area and set out to reflect the laying sequence for a job requiring the blending of bricks (by colour and/or texture)
  - using manual and mechanical means, relocate a pallet of bricks to a raised platform
  - set up a cement mixer and mix a quantity of mortar to Australian standard AS3700 M3 standard, using the bucket gauging technique.

Context of and specific resources

This competency is to be assessed using standard
EVIDENCE GUIDE

for assessment

and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.
EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational
RANGE STATEMENT

or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to handling and preparing bricklaying and blocklaying materials
- relevant Australian standards
- safe work procedures related to handling and preparing bricklaying and blocklaying materials
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:
- emergency procedures, including emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - underground services, including water, gas, electricity and communications
  - work site visitors and the public
  - working at heights
RANGE STATEMENT

- working in confined spaces
- working in proximity to others
- working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

Tools and equipment:

- bolsters
- brick grabs
- brooms
- builders' lines
- concrete mixers
- hammers (brickies, club and scutch)
- hoses
- jointing tools
- line blocks
- line pins
- masonry saws
- measuring tapes and rules
- mortar boards
- profiles
- rakes
- shovels
- spirit levels
- straight edges
- trowels
- wheelbarrows

may include:

- brick buggies
- elevators
- forklifts
- materials hoists
- pallet trolleys
- scaffolds.
RANGE STATEMENT

Bricklaying and blocklaying tasks:
- include all clay brick (wire cut/pressed) and concrete block (hollow and solid) masonry work
- may be performed on a new construction site, an existing structure being renovated or extended or an existing structure subject to service restoration or maintenance.

Materials include:
- aggregates
- cement, lime and waterproofing materials
- clay bricks
- masonry blocks
- reinforcing materials
- sealants
- timber and plyboard.

Environmental requirements include:
- clean-up protection
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Bricklaying and blocklaying materials and components may be sorted according to:
- ease of identification
- task sequence and job allocation
- type, size, colour and texture.

Mechanical handling includes:
- elevators
- forklifts
- materials hoists
- pallet trolleys.

Sorted and stacked materials may be protected by:
- covering
- tying and banding
- barricading
- signage
- securing (hazardous materials).

Dust suppression procedures include:
- covering
- spraying with water
- using vacuum cleaner.

Waste materials include:
- banding straps
- broken of damaged materials or components
- cardboard, plastic, paper and loose material
- packing pieces.

</table>
| 1. Prepare for work. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied. |
| 2. Identify hand and power tools. | 2.1. Types and functions of bricklaying and blocklaying hand and power tools, plant and equipment to be used in the bricklaying and blocklaying work are identified.  
2.2. Methods of operation of hand and power tools are identified from specifications, standards and manufacturers' instructions.  
2.3. Specific OHS requirements for specific hand and power tools are identified and applied.  
2.4. Personal protective equipment required for the operation of the tools is identified in accordance with regulatory and workplace requirements. |
| 3. Select tools for work. | 3.1. Tools and personal protective equipment are selected consistent with job requirements and bricklaying and blocklaying tasks.  
3.2. Tools, including leads and hoses, are checked for tags, serviceability and safety and any faults are reported to supervisor.  
3.3. Power tools guards, guides and controls are checked and maintained in accordance with manufacturer recommendations.  
3.4. Equipment to hold or support material during operation is selected and inspected for faults.  
3.5. Pre-operational checks, including lubricants, hydraulic fluid and water are completed, where required, according to manufacturer recommendations. |
| 4. Use tools. | 4.1. Power and compressed air supply to work area are connected in accordance with regulatory |
ELEMENT | PERFORMANCE CRITERIA

| requirements and codes of practice. | 4.2. Start up and shut down procedures are observed.
| 4.3. Tools are used safely and effectively according to manufacturer recommendations and regulatory requirements. | 4.4. Tools are safely located when not in use.
5. Identify and select plant and equipment. | 5.1. Function and limitations of plant and equipment to be used in the bricklaying and blocklaying work are identified.
| 5.2. Method of operation of plant and equipment is identified from specifications, standards and manufacturers’ instructions. | 5.3. OHS requirements for specific plant and equipment, including requirements for guarding, guiding and controls, are identified and applied.
| 5.4. Personal protective equipment required for the operation of plant and equipment is identified in accordance with regulatory and workplace requirements. | 5.5. Items of plant and equipment are selected consistent with hazard minimisation and needs of the job.
| 5.6. Plant and equipment are checked for safety, and faults are reported to supervisor. | 5.7. OHS requirements for operating and using plant and equipment are recognised and adhered to.
6. Use plant and equipment. | 6.1. Start up and shut down procedures are observed.
| 6.2. Plant and equipment are used safely and effectively according to manufacturer recommendations and statutory and regulatory authority requirements. | 6.3. Plant and equipment are safely switched and located when not in use.
7. Clean up. | 7.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
| 7.2. Machinery, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - drawings and specifications
    - manufacturers' instructions
    - other relevant documentation
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - numeracy skills to apply measurements and make calculations
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- applications, limitations and method of operation and maintenance of hand and power tools, plant and equipment applicable to bricklaying and blocklaying tasks
- construction terminology
- hazards associated with the use of bricklaying and blocklaying tools, plant and equipment
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
REQUIRED SKILLS AND KNOWLEDGE

- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- use prescribed brick and blocklaying tools and equipment
- set up a cement mixer and mix mortar for the next task
- construct a brick wall 600mm high and at least 1200mm long in stretcher bond with a round iron joint finish with all halves to be hand cut and scutched
- use a jig saw to develop an arch centre or curved wall template
- use a brick saw to cut:
  - a 110mm bat
  - a 170mm (3/4) bat
  - a queen closure
  - a split
EVIDENCE GUIDE

- a compound mitre
- use a block saw to cut 10 of each 200 and 100 series blocks to various sizes.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
EVIDENCE GUIDE

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.
RANGE STATEMENT

Information includes:
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to the use of bricklaying and blocklaying hand and power tools, plant and equipment
- relevant Australian standards
- safe work procedures related to the use of bricklaying and blocklaying hand and power tools, plant and equipment
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:
- emergency procedures, including emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - traffic control
  - trip hazards
  - underground services, including water, gas, electricity and communications
RANGE STATEMENT

- work site visitors and the public
- working at heights
- working in proximity to others
- working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

Environmental requirements include:
- clean-up protection
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Hand and power tools, plant and equipment:
- include those required to facilitate the effective laying of bricks and blocks and include:
  - bolsters
  - brick grabs
  - brooms
  - builders’ lines
  - concrete mixers
  - hammers (brickies, club and scutch)
  - hoses
  - jig saws
  - jointing tools
  - line blocks
  - line pins
  - masonry saws
  - measuring tapes and rules
  - mortar boards
  - profiles
  - rakes
  - shovels
  - spirit levels
  - straight edges
RANGE STATEMENT

- trowels
- wheelbarrows
- may include:
  - bricksaws
  - circular saws
  - elevators
  - materials hoists
  - scaffolds
  - small petrol or diesel engines, compressors or mixers.

*Bricklaying and blocklaying tasks:*

- include all clay brick (wire cut/pressed) and concrete block (hollow and solid) masonry work
- may be performed on a new construction site, an existing structure being renovated or extended or an existing structure subject to service restoration or maintenance.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and applications of materials for laying pavers
- construction terminology
- corner geometry
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- paving bonds and patterns, joints and finishing
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- techniques for laying pavers
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, pave a level area of 3m x 5m with clay pavers, using sand as a bedding material on compacted crushed rock (closed finish with sand brushed in); and pave an area of 3m x 5m over a fall with clay bricks, incorporating control joints and using mortar as a bedding material on concrete (mortar joints finish), ensuring:
  - correct identification of requirement and finishing of the tasks
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge
EVIDENCE GUIDE

will usually be conducted in an off-site context. Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the
EVIDENCE GUIDE

workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
RANGE STATEMENT

- organisation work specifications and requirements

- clean-up protection
- noise and dust
- vibration
- waste management.

**Statutory and regulatory authorities**

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Paved areas**

- cycle and walking tracks
- footpaths
- malls
- patios
- platforms
- ramps and inclined surfaces
- roads
- sports arenas.

**Substrate**

- compacted crushed rock
- concrete.

**Bedding material**

- adhesives
- bedding sand
- cement mortar
- mortar with adhesive additive.

**Joints finished**

- closed joints
- closed joints with sand brushed in
- mortar joints.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for work. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information to determine bricklaying and blocklaying tasks.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. Materials appropriate to work application, including required fire resistance rating, are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied. |
| 2. Set out brickwork/blockwork. | 2.1. Bricks/ blocks are identified, selected and checked for conformity with specifications and compliance with standards.  
2.2. Work platform is erected in accordance with regulatory and workplace requirements.  
2.3. Location and structural details of brickwork/blockwork are identified from plans and job specifications.  
2.4. Base brickwork below floor construction is set out to location, dimensions and specifications in compliance with standards.  
2.5. Brickwork/blockwork is set out to location and dimensions from drawings and specifications. |
| 3. Construct base brickwork/blockwork. | 3.1. Mortar mix is prepared and checked for conformity and bricks/blocks laid to set out to specifications and standards.  
3.2. Brickwork/blockwork gauge is determined and set |
**ELEMENT** | **PERFORMANCE CRITERIA**

out rod is prepared. | 
3.3. Base brickwork/blockwork is constructed for veneer construction to requirements of regulations and specifications. |
3.4. Sub-floor ventilation is installed in accordance with specifications. |
4.1. Structural frame is checked to ensure it is ready for *brick or block veneer construction* maintaining minimum cavity. |
4.2. Damp proof courses are installed to specifications and in accordance with standards. |
4.3. Ventilation for veneer construction is built to specifications and requirements of standards. |
4.4. Wall ties are positioned and correctly fixed to framework to standards. |
4.5. Openings are constructed and flashings installed to job specifications. |
4.6. Cavities are kept clear of mortar droppings and bridging. |
4.7. Lintels are installed to job specifications. |
4.8. Top brickwork/blockwork is constructed to eaves/gable level in accordance with standards. |
4.9. Veneer gable is constructed as required by plans and specifications. |
4.10. Walls are built to gauge straight and true in plumb, line and level within standards tolerance. |
4.11. Control joints are formed in accordance with locations on job drawings, specifications and standards. |
4.12. Weepholes, brick/block reinforcing, vermin proofing and wall flashing are located and built in to job specifications. |
4.13. Sill bricks are cut where required and laid to line in accordance with job specifications. |
5. Rake/rule joints and clean face. | 
5.1. Joints of laid brickwork/blockwork are raked or ruled to correct depth and profile in accordance with job specifications. |
5.2. Brickwork/blockwork is brushed down prior to drying to remove unwanted mortar and face is cleaned. |
5.3. Excess mortar is removed from brick/blockwork surfaces and cavities are cleaned free of mortar and
ELEMENT | PERFORMANCE CRITERIA
--- | ---
6. Clean up. | debris in accordance with manufacturer recommendations, job specifications and standards.

6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - numeracy skills to apply measurements and make calculations
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- brick and block expansion and growth, control and articulation joints
REQUIRED SKILLS AND KNOWLEDGE

- brick bond patterns
- characteristics and applications of materials for masonry veneer construction, including fire control and separation required by the Building Code of Australia (BCA) and other legislation
- construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- techniques of masonry veneer construction, including gable and eaves construction, damp proofing, flashings and ventilation, vermin control, anti-termite measures, floor, wall and roof members, tying components, timber shrinkage, sub-floor construction, lintels and load bearing components
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
EVIDENCE GUIDE

- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, given the plans and specifications, construct a section of a brick veneer building, including set out and gauge brickwork to a base; damp proof course (DPC) if applicable, weepholes, air vents, control joints and veneer ties; lintels and flashings; brick gables; and brick sills and flashings; ensuring:
  - correct identification of requirement and finishing of the task
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification, ensuring correct selection and use of fire-rated materials and methods of construction.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related
**EVIDENCE GUIDE**

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in
EVIDENCE GUIDE

Relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to carrying out masonry veneer construction
- relevant Australian standards
- safe work procedures related to carrying out masonry veneer construction
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Bricklaying and blocklaying tasks:

- include all clay brick (wire cut/pressed) and concrete block (hollow and solid) masonry work
RANGE STATEMENT

- performed on a new construction site, an existing structure being renovated or extended or an existing structure subject to service restoration or maintenance.
- emergency procedures, including emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - underground services, including water, gas, electricity and communications
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

Tools and equipment:
- bolsters
- brick grabs
- brooms
RANGE STATEMENT

- buckets
- builders’ lines
- concrete mixers
- dumpy levels
- elevators
- hammers (brickies, club and scutch)
- hoses
- jig saws
- jointing tools
- line blocks
- line pins
- mason’s squares
- masonry saws
- measuring tapes and rules
- mortar boards
- plumb rules
- margin or raking tools
- profiles
- shovels
- spirit levels
- straight edges
- string lines
- trowels
- wheelbarrows
- may include:
  - brick buggies
  - elevators
  - forklifts
  - materials hoists
  - pallet trolleys
  - scaffolds
  - small petrol or diesel engines and compressors.

**Quality requirements** include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

**Materials** include:

- aggregates
RANGE STATEMENT

- cement
- clay bricks
- lime
- masonry blocks
- reinforcing materials
- waterproofing materials.

Environmental requirements include:
- clean-up protection
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Location brickwork laid may be on a:
- slab
- suspended floor.

Brick or block veneer construction includes:
- straight, square and plumb brick/block, wall ties and reinforcement, dampcourse and flashings, installation of sills to door and window openings and lintels installed over openings and sill flashings
- methods include ensuring compliance with incipient spread of fire requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for work. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to determine bricklaying and blocklaying tasks.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. Materials appropriate to the work application, including required fire resistance rating, are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied. |
| 2. Set out brickwork/blockwork. | 2.1. Bricks and/or blocks are identified, selected and checked for conformity with specifications and compliance with standards.  
2.2. Work platform is erected in accordance with regulatory and workplace requirements.  
2.3. Location and structural details of brickwork/blockwork are identified from job drawings and job specifications.  
2.4. Base brickwork below floor construction is set out to location, dimensions and specifications in compliance with standards.  
2.5. Load bearing brickwork, including engaged piers, dwarf walls, isolated piers and corbelling are set out to job drawings and specifications.  
2.6. Cavity brick wall is set out to requirements of job drawings. |
| 3. Construct base | 3.1. Mortar mix is prepared and checked for conformity |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
brickwork/blockwork. | and bricks/blocks are laid to set out according to specifications and standards.
3.2. Brickwork/blockwork gauge is determined and set out rod is prepared.
3.3. Base brickwork/blockwork is constructed for cavity construction to requirements of regulations and specifications.

4. Position door and window frames. | 4.1. Window frames are located and built in to cavity walls to specification, and are protected from mortar droppings during construction.
4.2. Door jambs are located, built in and fixed to cavity walls and single leaf walls according to job drawings and specifications.

5. Construct brick walls. | 5.1. **Brick or block cavity construction** walls are constructed to job specifications and standards.
5.2. Damp proof courses and flashings are laid/built in to job specifications.
5.3. Ventilation for solid brick construction is built to requirements of job specification and regulations.
5.4. Walls are to be straight and true in plumb, line and level within standard tolerances.
5.5. Wall ties are positioned to comply with standards.
5.6. Openings are constructed and flashing is installed to job specifications.
5.7. Lintels are installed to job specifications.
5.8. Control joints are formed in accordance with locations on job drawings and standards.
5.9. Weepholes, brick reinforcing, vermin proofing and wall flashings are located and built in to job specifications.
5.10. Gables and parapets are constructed by plans and specifications.
5.11. Sill bricks are cut and laid to line in accordance with job specifications.
5.12. Tie down and lateral support systems for ceiling/roof structures are installed to walls in accordance with plans, specifications and standards.

6. Rake or rule joints. | 6.1. Joints of laid brickwork/blockwork are raked or ruled to correct depth and profile in accordance with job specifications.
6.2. Brickwork/blockwork is brushed down prior to
ELEMENT | PERFORMANCE CRITERIA
--- | ---
drying to remove unwanted mortar. 6.3. Excess mortar is removed from brick/blockwork surfaces and cavities are cleaned free of mortar and debris in accordance with manufacturer recommendations, job specifications and standards.

7. Clean up. 7.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

7.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for work. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information to determine bricklaying and blocklaying tasks.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied. |
| 2. Set out brickwork/blockwork. | 2.1. Work platform is erected in accordance with regulatory and workplace requirements and brick and block stair construction requirements.  
2.2. Location and relative level of prepared footing are checked from job drawings and specifications.  
2.3. Rise and going of flight and individual steps are calculated to codes and workplace requirements.  
2.4. Flight and individual steps are set out from calculations and job drawings. |
| 3. Lay bricks/blocks forming steps and wing walls. | 3.1. Mortar mix is prepared and checked for conformity and bricks/blocks are laid to set out according to specifications, standards and codes.  
3.2. Base brickwork is constructed to specifications and requirements of standards and codes.  
3.3. Steps are formed square, level, plumb and true and laid to specified bond.  
3.4. Profile of steps is constructed to bond and design, aligned and plumb to specifications. |

4. Clean up.

| 4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification. |
| 4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
    - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental
REQUIRED SKILLS AND KNOWLEDGE

abilities

- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- brick and block expansion and growth, control and articulation joints
- brick bond patterns
- characteristics and applications of materials for masonry steps and stairs construction
- construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- techniques of masonry steps and stairs construction
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, construct a flight of stairs with a minimum of three pre-cast treads, and construct a flight of three solid masonry treads with a parallel wing wall on one side, ensuring:
  - correct identification of requirement and finishing of the tasks
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.
EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances
EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements
RANGE STATEMENT

pertaining to constructing masonry steps and stairs
- relevant Australian standards
- safe work procedures related to constructing masonry steps and stairs
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

- include all clay brick (wire cut/pressed) and concrete block (hollow and solid) masonry work
- may be performed on a new construction site, an existing structure being renovated or extended or an existing structure subject to service restoration or maintenance.

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - underground services, including water, gas, electricity and communications
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working with dangerous materials
RANGE STATEMENT

- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

Tools and equipment:

- include:
  - bolsters
  - brick grabs
  - brooms
  - buckets
  - builders’ lines
  - concrete mixers
  - dumpy levels
  - elevators
  - hammers (brickies, club and scutch)
  - hoses
  - jig saws
  - jointing tools
  - line blocks
  - line pins
  - mason's squares
  - masonry saws
  - measuring tapes and rules
  - mortar boards
  - plumb rules
  - margin or raking tools
  - profiles
  - shovels
  - spirit levels
  - straight edges
  - string lines
  - trowels
  - wheelbarrows

- may include:
  - brick buggies
  - elevators
RANGE STATEMENT

- forklifts
- materials hoists
- pallet trolleys
- scaffolds
- small petrol or diesel engines or compressors.

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:
- aggregates
- cement
- clay bricks
- lime
- masonry blocks
- pre-cast concrete steps
- waterproofing materials.

Environmental requirements include:
- clean-up protection
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Brick and block stair construction includes:
- internal and external construction of steps and stairs
- stairs involving straight flights, which may incorporate landings.

<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for work. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information to determine bricklaying and blocklaying tasks.  
  1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
  1.3. Signage and barricade requirements are identified and implemented.  
  1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.  
  1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
  1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
  1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied. |
| 2. Prepare materials and work site. | 2.1. Work platform is erected in accordance with regulatory and workplace requirements.  
  2.2. Bricks/blocks are selected according to quality requirements and specifications.  
  2.3. Materials for mortar are selected to requirements of specification, standards and codes.  
  2.4. Location of blockwork/brickwork is set out on reinforced concrete footing slab in accordance with dimensions and details from job drawings.  
  2.5. Mortar is mixed in accordance with job specifications, standards and codes.  
  2.6. Brickwork/blockwork gauge is determined and set out rod is prepared. |
| 3. Lay bricks/blocks. | 3.1. Mortar mix is prepared and checked for conformity and applied evenly to job and set out location.  
  3.2. Bricks/blocks are located to job set out according to specifications, standards and codes.  
  3.3. Bricks/blocks walls are to be straight and true in |
ELEMENT  PERFORMANCE CRITERIA
plumb, line and level within standard tolerances and codes.

3.4. Bricks/blocks are laid maintaining stretcher bond throughout construction to specifications, standards and codes and using appropriate joints in brick and block walls and corners.

3.5. Bricks are cut.

3.6. Corners are formed maintaining bond and perpendicular intersection of both surfaces.

3.7. Horizontal reinforcement is placed and laid to bed joints to specifications, where applicable.

3.8. Brickwork/blockwork is laid and completed to job drawings, specifications, standards and codes.

4.1. Excess mortar is removed from brick/blockwork surfaces and cavities are cleaned free of mortar and debris in accordance with manufacturer recommendations, job specifications, standards and codes.

4.2. Joints of laid brickwork/blockwork are raked, struck or ruled to correct profile and depth to job specifications.

4.3. Brickwork/blockwork is brushed down prior to drying to remove unwanted mortar.

5. Clean up.

5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, in brick and in block, construct a wall between profiles to a line, including an internal corner, an external corner, and a stopped end to a minimum height of 1200mm (without toothing), ensuring:
  - correct identification of requirement and finishing of the tasks
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory
EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured
EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
REQUIRED SKILLS AND KNOWLEDGE

- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- follow instructions
- read and interpret:
  - documentation from a variety of sources
  - plans, specifications and drawings
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- brick and block expansion and growth, control and articulation joints
- brick bond patterns (including corners, piers and junctions), types of joints and finishing
- characteristics and applications of materials for multi-thickness walls and piers construction
- construction terminology
- corner geometry
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- techniques of multi-thickness walls and piers construction
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, construct three brick walls including one English bond, one Flemish bond and one other type with each to be a minimum of 230mm thick and 600mm high and contain at least one return corner; plus construct an isolated pier in brick using an appropriate bond of a minimum 470mm x 470mm, ensuring:
  - correct identification of requirement and finishing of the tasks
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge
EVIDENCE GUIDE

will usually be conducted in an off-site context. Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the
EVIDENCE GUIDE

workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
RANGE STATEMENT

  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - underground services, including water, gas, electricity and communications
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working with dangerous materials
  - organisational first aid
  - personal protective clothing and equipment prescribed under legislation, regulations and
RANGE STATEMENT

workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

Tools and equipment:
- include:
  - bolsters
  - brick grabs
  - buckets
  - builder's squares
  - builders' lines
  - concrete mixers
  - dumpy levels
  - elevators
  - hammers (brickies, club and scutch)
  - hoses
  - jointing tools
  - line blocks
  - line pins
  - mason's squares
  - masonry saws
  - measuring tapes and rules
  - mortar boards
  - plumb rules
  - margin or raking tools
  - profiles
  - shovels
  - spirit levels
  - straight edges
  - string lines
  - trowels
  - wheelbarrows
- may include:
  - brick buggies
  - forklifts
  - materials hoists
  - pallet trolleys
  - scaffolds
  - small petrol or diesel engines, compressors
RANGE STATEMENT

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:
- aggregates
- cement
- clay bricks
- lime
- reinforcing materials
- waterproofing materials.

Environmental requirements include:
- clean-up protection
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Location includes:
- a new construction site
- an existing structure being renovated or extended
- an existing structure subject to service restoration or maintenance.

Multi-thickness brickwork includes:
- installing reinforcement as specified
- installing wall ties and lateral support systems as specified
- laying bricks to a designed brick featured face, straight, square and plumb brick/block as specified
- laying bricks to a specified bond to provide a designed structural stability, openings, fences, retaining walls, walls, columns and attached piers.

Bond types include:
- colonial (English and Flemish)
- English
- English garden wall
- Flemish
- stretcher for all clay brick (wire cut/pressed) masonry work.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for work. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information to determine laying of glass blockwork.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Plant, **tools and equipment** selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. **Materials** appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. **Environmental requirements** are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied. |
| 2. Prepare for installation. | 2.1. Location and dimensions of glass blockwork are determined from plans and specifications.  
2.2. Work platform is erected in accordance with regulatory authorities’ and workplace requirements.  
2.3. Area for set out is located and base and abutting surfaces are checked for level and plumb, and are finished to specifications.  
2.4. Surface area preparation for blockwork installation is checked to be clean, dry and in accordance with manufacturer recommendations, plans and specifications.  
2.5. Wall or section of blockwork is set out to base details according to plans and specifications.  
2.6. Mortar mix is prepared and checked for conformity to specifications and standards. |
| 3. Install glass blocks. | 3.1. If required by specifications, frame is installed onto the base and fixed into position in accordance with manufacturer requirements.  
3.2. Mortar mix is applied according to manufacturer |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
 | recommendations, standards, plans and specifications.
3.3. *Glass blocks* are laid to set out line, plumb, level and to design pattern in accordance with manufacturer recommendations, plans and specifications.
3.4. Glass blockwork installation is completed to standards, plans and specifications.
3.5. Glass blockwork joints are tool finished to achieve specified finish in accordance with manufacturer recommendations, standards, plans and specifications.
3.6. Excess mortar mix is removed from glass blockwork and surfaces are cleaned in accordance with manufacturer recommendations, standards, plans and specifications.

4. Clean up.
4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
REQUIRED SKILLS AND KNOWLEDGE

- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics, applications and limitations of materials for the installation of glass blockwork
- construction terminology
- hazards associated with the installation of glass blockwork
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- techniques for installing glass blockwork
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, calculate material requirements, prepare, set out and install a panel of glass blocks, at least 1.2m x 1.2m, into a masonry wall, ensuring:
  - correct identification of requirement and installation and finishing of the panel
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.
EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances
EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements
RANGE STATEMENT

Glass blockwork may be performed on:

Glass blockwork may be performed on:

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

pertaining to installing glass blockwork

- relevant Australian standards
- safe work procedures related to installing glass blockwork
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.
- a new construction site
- an existing structure being renovated or extended
- an existing structure subject to service restoration or maintenance.

- emergency procedures related to this unit include emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - traffic control
  - trip hazards
  - underground services, including water, gas, electricity and communications
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - working with dangerous materials
  - organisational first aid
  - personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
  - use of firefighting equipment
RANGE STATEMENT

- use of tools and equipment
- workplace environment and safety.

Tools and equipment:

- bolsters
- brooms
- builders’ lines
- concrete mixers
- hooked end tool (Frenchman)
- hammers
- jig saws
- jointing tools
- line blocks
- line pins
- masonry saws
- measuring tapes and rules
- mortar boards
- profiles
- rubber mallets
- shovels
- spirit levels
- sponges
- straight edges
- trowels
- wheelbarrows

- elevators
- forklifts
- materials hoists
- pallet trolleys
- scaffolds.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:

- glass blocks
- mortar
- reinforcing materials and spacers
- sealants
RANGE STATEMENT

Environmental requirements include:
- waterproofing materials.
- clean-up protection
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Glass blocks:
- are for ornamental rather than structural purpose
- are hollow glass blocks of standard size (190mm x 190mm)
- may be clear or coloured
- may be laid flat or curved direct to a base or fixed into a frame for installation.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
REQUIRED SKILLS AND KNOWLEDGE

- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and applications of materials for the installation of flashings and DPC
- construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- techniques for installing flashings and DPC
- waterproofing methods
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, install flashings of suitable materials for the following construction situations: step flashings and/or DPC to cavity brickwork including internal and external corners, window and door heads and vertical flashings; and stepped and tray flashings to gables and/or parapets, ensuring:
  - correct identification of requirement and finishing of the tasks
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

- working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

Tools and equipment include:

- brooms
- brushes
- buckets
- concrete mixers
- electric drills
- hammers (brickies, club and scutch)
- hoses
- knives or cutting blades
- measuring tapes and rules
- margin or raking tools
- rollers
- scaffolds
- shovels
- spirit levels
- trowels
- vacuum cleaner
- wheelbarrows.

Type of construction include:

- blockwork
- brickwork
- reinforced in situ concrete and pre-cast concrete
- stonework.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Damp proofing materials include:

- aluminium sheeting
- bituminous sheeting
- emulsions
- lead and polyurethane sheeting
- polyethylene sheeting.
RANGE STATEMENT

Environmental requirements include:
- clean-up protection
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Surface preparation includes:
- chipping or scraping of protrusions
- cleaning free of dust.

Flashing or damp proof course includes:
- cavities
- cavity gutters
- lintels
- roofs
- windows.

Prepared for application includes:
- checking quality and blends of sand used in mortar materials
- mixing
- stirring
- batching and mixing
- cutting sheet material to length
- folding materials to shape.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for work. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information to determine the required **brick and blocklaying tasks**.  
1.2. **Safety (OHS)** requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Plant, **tools and equipment** selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and **quality requirements**.  
1.6. **Materials** appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. **Environmental requirements** are identified for the project in accordance with environmental plans and **statutory and regulatory authority** obligations, and are applied. |
| 2. Set out first course. | 2.1. Location and line of brickwork/blockwork wall are set out on concrete footing/slab to job drawings.  
2.2. Span of **masonry arch** is determined from prepared allotted arch centre plus 4mm.  
2.3. Arch spans are set out to location for first course. |
| 3. Construct wall to arch level. | 3.1. Mortar mix is prepared and bricks/blocks are laid to form wall to set out.  
3.2. All work is carried out to specifications and standards.  
3.3. Gauge of abutting walls is maintained within standard tolerance at each course level.  
3.4. Plumb and alignment of vertical wall face are maintained.  
3.5. bricks are cut.  
3.6. Bricks/blocks are laid level and to line over length of wall.  
3.7. Abutment jambs/piers are laid vertical up to |
<table>
<thead>
<tr>
<th>ELEMENT</th>
</tr>
</thead>
<tbody>
<tr>
<td>PERFORMANCE CRITERIA</td>
</tr>
</tbody>
</table>

3.8. Bricks/blocks are laid in stretcher bond to springing line of arch with perpendicular joints maintained in vertical line.

4.1. Arch centre is set out and curve is drawn up in accordance with specifications and plan.

4.2. Plan is transferred to material and cut to shape.

5. Set up arch centre.

5.1. Height to springing line is determined and height to crown of arch is confirmed to be within standard tolerance.

5.2. Height of toms and wedges or adjustable metal props are determined to set up and support timber arch centre.

5.3. Supports are adjusted to ensure arch centre is level at right angles to wall face and level across springing line.

5.4. Props, toms, packers and wedges are located for easy removal.

5.5. Position of central key brick/block is established for gauged arch and tape used to mark gauge.

6. Cut and lay bricks/blocks to form arch.

6.1. Bricks and blocks are cut and laid on centre to form arch to specifications.

6.2. Joints are maintained to equal size and parallel on the extrados of an arch.

6.3. Same size wedge shape is maintained on face.

6.4. Centreline of key brick/block wedge is maintained through vertical centre line of arch.

6.5. Even joint thickness is maintained around extrados for cut brickwork and blockwork.

6.6. All bricks are cut and laid to maintain even joints.

6.7. All joints are struck evenly to depth and shape to specifications.

7. Clean up.

7.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

7.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- brick and block expansion and growth, control and articulation joints
- brick bond patterns, types of joints and finishing
- characteristics and applications of materials for masonry arch construction
- construction and arch terminology
- geometric calculations and drawing
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
REQUIRED SKILLS AND KNOWLEDGE

- types of masonry arches and techniques of construction
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, construct five arches to specification of which three are to be in brick and two in block, including bull's eye, segmental and Gothic with the construction of the arch centre for one of the arches.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the
EVIDENCE GUIDE

mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at
EVIDENCE GUIDE

the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to constructing masonry arches
- relevant Australian standards
RANGE STATEMENT

- safe work procedures related to constructing masonry arches
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.
- include all clay brick (wire cut/pressed) and concrete block (hollow and solid) masonry work
- may be performed on a new construction site, an existing structure being renovated or extended or an existing structure subject to service restoration or maintenance.
- emergency procedures, including emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - underground services, including water, gas, electricity and communications
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working with dangerous materials
  - organisational first aid
  - personal protective clothing and equipment prescribed under legislation, regulations and procedures, and project safety plan and may include:

Bricklaying and blocklaying tasks:

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:
RANGE STATEMENT

workplace policies and practices
• use of firefighting equipment
• use of tools and equipment
• workplace environment and safety.

Tools and equipment:
• include:
  • adjustable metal props
  • bolsters
  • buckets
  • builder's squares
  • builders’ lines
  • concrete mixers
  • dumpy levels
  • hammers (brickies, club and scutch)
  • hoses
  • jig saws
  • jointing tools
  • line blocks
  • line pins
  • mason’s squares
  • masonry saws
  • measuring tapes and rules
  • mortar boards
  • packers and wedges
  • plumb rules
  • margin or raking tools
  • profiles
  • shovels
  • spirit levels
  • straight edges
  • string lines
  • timber and centre
  • timber toms
  • trowels
  • wheelbarrows

• may include:
  • scaffolds
  • forklifts
  • pallet trolleys
RANGE STATEMENT

- brick buggies
- small petrol or diesel engines, compressors or mixers.

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:
- aggregates
- cement and lime
- clay bricks
- masonry blocks
- plywood
- reinforcing materials
- timber
- waterproofing materials.

Environmental requirements include:
- clean-up protection
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Masonry arches include:
- arch rings gauged and bonded
- bull's eye and wheel
- camber/square
- elliptical
- four centred
- Gothic (equilateral, Lancet and modified)
- multi-ring arches
- segmental
- Tudor.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for work. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information to determine the required bricklaying and blocklaying tasks.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied. |
| 2. Set out curve. | 2.1. Key plan curve points are plotted from job drawings and all trammel centres are established on footing slab for construction of the curved masonry wall.  
2.2. Curve of wall is planned to specified location from trammel or plotted points and marked on footing slab. |
| 3. Lay first course. | 3.1. Mortar is mixed to specifications and spread evenly to the established wall location.  
3.2. Bricks/blocks are laid to planned set out for line and specified bond according to job specifications.  
3.3. Work is carried out to job specifications and standards. |
| 4. Lay wall. | 4.1. Gauge is maintained within standard tolerance at every course level.  
4.2. Vertical face alignment is maintained.  
4.3. Bricks are cut.  
4.4. Bricks/blocks are laid level over the length of the wall to the established plan profile. |

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
  - report faults
  - use language and concepts appropriate to cultural differences
REQUIRED SKILLS AND KNOWLEDGE

- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- brick and block expansion and growth, control and articulation joints
- brick bond patterns, applications to arcs and finishing
- characteristics and applications of materials for masonry curved wall construction
- circle geometric calculations - tangents, normal and arcs
- construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- techniques of masonry curved wall construction, including radius set out
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, construct a curved wall using an arc centre and trammel (up to 2.4m radius), construct a 4 metre serpentine curved wall using the plotted points and template technique, ensuring:
  - correct identification of requirement and finishing of the tasks
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory
EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured
EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified

9.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- brick expansion and growth, control and articulation joints
- characteristics and applications of materials for constructing fireplaces and
REQUIRED SKILLS AND KNOWLEDGE

- chimneys
- construction terminology
- flashing
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- principles of heat, fire and drawing of smoke
- processes for the calculation of material requirements
- quality requirements
- techniques for constructing fireplaces and chimneys
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
EVIDENCE GUIDE

- communicate and work effectively and safely with others
- as a minimum, given the plans and specifications, calculate the materials required and construct a brick fireplace and chimney, ensuring:
  - correct identification of requirement and finishing of the tasks
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of
EVIDENCE GUIDE

the Construction, Plumbing and Services Training Package

• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to constructing fireplaces and chimneys
- relevant Australian standards
- safe work procedures related to constructing fireplaces and chimneys
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Bricklaying and blocklaying tasks:

- include all clay brick (wire cut/pressed) and concrete block (hollow and solid) masonry work
- may be performed on a new construction site, an existing structure being renovated or extended or an existing structure subject to service restoration or maintenance.

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
RANGE STATEMENT

- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - underground services, including water, gas, electricity and communications
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working with dangerous materials
  - organisational first aid
  - personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environment and safety.

**Tools and equipment:**

- bolsters
- brick grabs
- brooms
- buckets
- builders' lines
- cement mixers
- elevators
- hammers (brickies, club and scutch)
- hoses
- jig saws
- line blocks
- line pins
- masonry saws
**RANGE STATEMENT**

- measuring tapes and rules
- mortar boards
- margin or raking tools
- profiles
- shovels
- spirit levels
- straight edges
- trowels
- wheelbarrows
- may include:
  - elevators
  - scaffolds
  - materials hoists
  - forklifts
  - pallet trolleys
  - brick buggies
  - small petrol or diesel engines or compressors.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- where specified
- workplace operations and procedures.

**Materials:**
- are to include:
  - aggregates
  - cement
  - clay bricks (wire cut or pressed)
  - fire-rated masonry blocks
  - lime
  - refractory bricks
- may be stone.

**Environmental requirements** include:
- clean-up protection
- noise and dust
- vibration
- waste management.

**Statutory and regulatory authorities** include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.
RANGE STATEMENT

Fireplaces and chimneys include:

- brick and block veneer
- solid brick, block and stone wall structured buildings.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

## ELEMENT | PERFORMANCE CRITERIA
--- | ---
1. Prepare for work. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information to determine the required bricklaying and blocklaying tasks.
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.
1.3. Signage and barricade requirements are identified and implemented.
1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.
1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.
1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.
2. Set out masonry structures. | 2.1. Location and structural details of masonry structures are determined from plans and specifications.
2.2. Work platform is erected in accordance with regulatory and workplace requirements.
2.3. Set out area is correctly located and footing is checked for conformity to dimensions and location as per job specifications.
2.4. Masonry structure is set out from drawings and specifications.
2.5. Mortar materials are prepared and mixed in accordance with specifications.
3. Construct load bearing walls. | 3.1. Masonry load bearing wall structure is laid to set out for base and specified bond in accordance with specifications.
3.2. Structural masonry wall is constructed maintaining bond, and is completed to job specifications.
3.3. Walls are to be straight, plumb and level within standard tolerances.
## ELEMENT | PERFORMANCE CRITERIA

Required Skills and Knowledge

REQUIRE SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - numeracy skills to apply measurements and make calculations
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

**Required knowledge**

Required knowledge for this unit is:

- articulated and pier construction
- bonding patterns and block bonding techniques
- brick expansion and growth
- characteristics and applications of materials for constructing masonry structural systems
REQUIRED SKILLS AND KNOWLEDGE

- construction terminology
- control joints
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements for masonry structural systems
- reinforcing of structures and core filling of blockwork
- techniques for constructing masonry structural systems
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, given the plans and specifications, construct a block wall, including:
  - confirming that starter bars are correctly positioned
  - reinforcing with horizontal and vertical steel
  - cleaning eyes and tie downs
  - cleaning cores (for installation of formwork and pouring of concrete)
  - mixing, placing and compacting concrete grout
  - finishing wall to specifications
  - a load bearing column (390mm x 390mm) of a minimum of 1m high, including a control joint and a service opening for a door jamb with a bond beam lintel
  - and ensuring:
EVIDENCE GUIDE

- correct identification of requirement and finishing of the tasks
- correct selection and use of appropriate processes, tools and equipment
- completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
EVIDENCE GUIDE

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.
RANGE STATEMENT

**Information** includes:
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to constructing masonry structural systems
- relevant Australian standards
- safe work procedures related to constructing masonry structural systems
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

**Bricklaying and blocklaying tasks:**
- include all clay brick (wire cut/pressed) and concrete block (hollow and solid) masonry work
- may be performed on a new construction site, an existing structure being renovated or extended or an existing structure subject to service restoration or maintenance.

**Safety (OHS)** is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:
- emergency procedures, including emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
RANGE STATEMENT

- surrounding structures
- traffic control
- trip hazards
- underground services, including water, gas, electricity and communications
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

Tools and equipment include:

- bolsters
- bolt cutters
- brick grabs
- brooms
- buckets
- builders’ lines
- concrete mixers
- dumpy levels
- elevators
- explosive power tools
- hammers (brickies, club and scutch)
- hoses
- jig saws
- line blocks
- line pins
- masonry saws
- measuring tapes and rules
- mortar boards
- pincers
- plumb rule
- margin or raking tools
RANGE STATEMENT

- profiles
- shovels
- spirit levels
- steel tying tools
- straight edges
- string line
- trowels
- wheelbarrows
- may include:
  - brick buggies
  - elevators
  - forklifts
  - materials hoists
  - pallet trolleys
  - scaffolds
  - small petrol or diesel engines, compressors or mixers.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

**Materials** include:
- aggregates
- cement
- clay bricks (wire cut or pressed)
- lime
- masonry blocks
- non-shrink grout
- sealants
- steel reinforcing materials
- steel ties
- waterproofing materials.

**Environmental requirements** include:
- clean-up protection
- noise and dust
- vibration
- waste management.

**Statutory and regulatory authorities** include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Masonry structure** includes:
- articulated masonry joints
RANGE STATEMENT

- retaining walls
- walls, columns and surrounds of service openings.

Load bearing walls include:
- reinforced masonry retaining walls
- walls directly supporting roof
- walls/bracing walls for wind loads.

Structural masonry includes:
- lateral support systems and reinforcement
- specified wall ties.

Piers include:
- column at a control joint
- corner column
- end of wall column
- straight wall column.

Articulation joints include:
- combined flexible panel and control joint
- compressed foam filler rods
- compressed foam joint filler
- compressed foam joint strips
- flexible panel
- full height control joint.

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
REQUIRED SKILLS AND KNOWLEDGE

- use a range of mobile technology, such as two-way radio and mobile phones
- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- brick expansion and growth, control and articulation joints
- characteristics and applications of materials for installing fire-rated masonry
- construction terminology
- fire rating of buildings
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- principles of heat and effects on materials
- processes for the calculation of material requirements
- quality requirements for fire-rated masonry construction
- techniques for installing fire-rated masonry
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment
This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, construct a fire-resistant masonry wall of sufficient dimension to incorporate a fire-rated steel door jamb and service penetration, including the installation of appropriate fire-rated insulation between the wall and roof covering and fire seal strip between the structure and the cladding, ensuring:
  - correct identification of requirement and finishing of the structure
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification.

Context of and specific resources for assessment
This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge
EVIDENCE GUIDE

will usually be conducted in an off-site context.
Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
RANGE STATEMENT

- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to installing fire-rated masonry construction
- relevant Australian standards
- safe work procedures related to installing fire-rated masonry construction
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Bricklaying and blocklaying tasks:

- include all clay brick (wire cut/pressed) and concrete block (hollow and solid) masonry work
- may be performed on a new construction site, an existing structure being renovated or extended or an existing structure subject to service restoration or maintenance.

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - underground services, including water, gas, electricity and communications
  - work site visitors and the public
RANGE STATEMENT

- working at heights
- working in confined spaces
- working in proximity to others
- working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

**Tools and equipment** include:

- bolsters
- brooms
- buckets
- builders’ lines
- concrete mixers
- hammers (brickies, club and scutch)
- hoses
- line blocks
- line pins
- masonry saws
- measuring tapes and rules
- mortar boards
- profiles
- shovels
- spirit levels
- straight edges
- trowels
- wheelbarrows

- may include:
  - brick buggies
  - elevators
  - forklifts
  - materials hoists
  - pallet trolleys
  - scaffolds
  - small petrol or diesel engines or compressors.
RANGE STATEMENT

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:
- fire-resistant masonry blocks
- fire seals and insulation (rockwools and sealing strips)
- mortar.

Environmental requirements include:
- clean-up protection
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Fire-resistant construction includes:
- ceilings
- concrete walls
- masonry walls
- timber and steel framing.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.
REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction terminology
- decorative brickwork materials
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements for decorative brickwork
- techniques for constructing decorative brickwork
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, construct a wall of 3 course corbel to decorative features; construct a 90° and a 135° corner using squints, dog toothing and mitre to a minimum of 600mm high; cut and lay brick on edge coping to 90° and 135° corner; using standard bricks, squints and plinths, lay return corner sills to 90° and 135° corners and construct a herring bone panel of 900 x 1200mm, ensuring:
  - correct identification of requirement and finishing of the tasks
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role
EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
RANGE STATEMENT

- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to constructing decorative brickwork
- relevant Australian standards
- safe work procedures related to constructing decorative brickwork
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Bricklaying and blocklaying tasks:

- include all clay brick (wire cut/pressed) and concrete block (hollow and solid) masonry work
- may be performed on a new construction site, an existing structure being renovated or extended or an existing structure subject to service restoration or maintenance.
- emergency procedures, including emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - underground services, including water, gas, electricity and communications

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:
RANGE STATEMENT

- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

Tools and equipment:

- bolsters
- brick grabs
- brooms
- builders’ lines
- concrete mixers
- elevators
- hammers (brickies, club and scutch)
- hoses
- jig saws
- jointing tools
- line blocks
- line pins
- masonry saws
- measuring tapes and rules
- mortar boards
- margin or raking tools
- profiles
- shovels
- spirit levels
- straight edges
- trowels
- wheelbarrows
- may include:
  - brick buggies
  - forklifts
RANGE STATEMENT

- materials hoists
- pallet trolleys
- scaffolds.

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:
- aggregates
- cement
- clay bricks
- lime
- masonry blocks
- reinforcing materials
- sealants
- timber and plyboard
- waterproofing materials.

Environmental requirements include:
- clean-up protection
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Decorative brickwork includes:
- angles
- corbelling
- irregular corner junctions (special bricks, plinth and sill finishes)
- panelling
- protrusions.

Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for work. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained using suitable information sources, confirmed and applied for restoration of brickwork structures.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied. |
| 2. Prepare work location. | 2.1. Materials and existing brickwork, including type of bonds, are checked for consideration of colour wash, and composition of mortar stopping mix and mixing putty for beading.  
2.2. Work platform is erected in accordance with regulatory authorities’ requirements.  
2.3. Work area and surrounds are isolated by use of barricades and signage or fall protection in accordance with regulatory and job requirements.  
2.4. Loose or broken bricks are removed and reinstalled individually and mortar is removed from joints in brickwork by raking out mortar to specified depth.  
2.5. Surface of work area is cleaned and prepared for application.  
2.6. Surface of work area is colour washed consistent with brick colour.  
2.7. Position of bed and cross joints is determined, measured and struck with chalk line. |
**ELEMENT** | **PERFORMANCE CRITERIA**
---|---
2.8. *Mortar* is prepared to determined composition, colour and mix for stopping application to brickwork.
2.9. Mortar stopping mix is applied to ensure joints are full and brickwork is re-pointed to meet job requirements.
2.10. Jointer tool is used to form an indent key to receive putty point.

3. Apply putty point material to bed joints.
3.1. Materials are identified, selected and prepared to determined composition and consistency used for pointing or beading putty in accordance with job requirements.
3.2. Pointing putty is applied with the use of jointer tool to fill indent and form joints.
3.3. Surplus pointing putty present on horizontal and vertical joints is removed with the aid of a Frenchman tool to form finite shape and edges to tuck pointing.
3.4. Tuck pointed work area is completed, allowed to dry and any imperfections gently removed and lightly brushed clean.

4. Clean up.
4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
REQUIRED SKILLS AND KNOWLEDGE

- follow instructions
- read and interpret:
  - documentation from a variety of sources
  - drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- brick expansion, growth and control joints
- characteristics and applications of materials for tuck pointing of brickwork
- construction terminology
- finishing of brick joints
- heritage brickwork materials and bonding techniques
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- quality requirements for tuck pointing to brickwork
- techniques for tuck pointing of brickwork
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, tuck point a new or existing area of brickwork of at least 1 square metre, ensuring:
  - correct identification of requirement and finishing of the task
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

**Range Statement**

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements
RANGE STATEMENT

pertaining to carrying out tuck pointing to brickwork
- relevant Australian standards
- safe work procedures related to carrying out tuck pointing to brickwork
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.
- types and composition of mortar
- types of bonding
- types of bricks (length and width, height, types of clay, colour and surface finish).
- emergency procedures, including emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - underground services, including water, gas, electricity and communications
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working with dangerous materials
  - organisational first aid
  - personal protective clothing and equipment prescribed under legislation, regulations and
RANGE STATEMENT
workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

Tools and equipment:
- includes:
  - brushes
  - buckets
  - float
  - hooked end tool (Frenchman)
  - gauging equipment
  - hammers (brickies, club and scutch)
  - hawks
  - jointer tools
  - line blocks
  - line pins
  - measuring tapes and rules
  - plugging chisels
  - margin or raking tools
  - pointing trowels
  - profiles
  - scaffolds
  - sieve
  - spirit levels
  - sponges
  - squares
  - straight bevelled edges
  - straight edges
  - string lines
- may include:
  - concrete mixers
  - small petrol or diesel engines, compressors or mixers
  - wheelbarrows.

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:
- colouring agents and pigments
RANGE STATEMENT

- mortar
- slaked rock lime.

Environmental requirements include:
- clean-up protection
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Type of bonds include:
- colonial
- Dutch
- English
- English cross
- Flemish
- header
- stretcher.

Mortar will vary in accordance with:
- its compatibility with the composition of each type of brick
- particular adhesive ability, stability and durability.

panels. | for conformity to dimensions and design specifications.
6.2. Wall panels are checked for conformity to dimension and in accordance with design specifications.
6.3. AAC wall panels are installed vertically for load bearing applications in accordance with manufacturer recommendations and engineer's design specifications or horizontally for cladding purposes.
6.4. Control joints are installed in accordance with manufacturer recommendations.
6.5. Excess adhesive is removed from work surface and cleaned free of debris in accordance with manufacturer recommendations and job specifications.
6.6.
7. Clean up.
7.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
7.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.
7.3.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:
- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
REQUIRED SKILLS AND KNOWLEDGE

- documentation from a variety of sources
- plans, specifications and drawings
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and applications of AAC products and materials
- construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- mechanical lifting
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements of AAC products
- techniques for installing AAC products
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace.
EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, given plans and specifications, construct an AAC block and panel building section to include damp proof course; a base laid in mortar; walls of AAC blocks laid in running bond using adhesive, incorporating an opening and a lintel; and a floor and wall of AAC panels (including reinforcement), ensuring:
  - correct identification of requirement and finishing of the structure
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe
EVIDENCE GUIDE

work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and
EVIDENCE GUIDE

numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to installing AAC products
- relevant Australian standards
- safe work procedures related to installing AAC products
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Installation of AAC products may be performed on:

- a new construction site
- an existing structure being renovated or extended
- an existing structure subject to service
RANGE STATEMENT

*Safety (OHS)* is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - underground services, including water, gas, electricity and communications
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

*Tools and equipment:*

- AAC adhesive trowels
- adhesive drills
- band saws
- bolsters
- brooms
- buckets
RANGE STATEMENT

- builders’ lines
- caulking guns
- concrete mixers
- dust masks and respirators
- hammers (brickies, club and scutch)
- hand saws
- hoses
- line blocks
- line pins
- masonry saws
- measuring tapes and rules
- mortar boards
- profiles
- shovels
- spirit levels
- straight edges
- wheelbarrows

- may include:
  - elevators
  - forklifts
  - materials hoists
  - mechanical lifting equipment
  - pallet trolleys
  - planks
  - scaffolds
  - small petrol or diesel engines or compressors.

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:
- AAC products
- adhesives
- mortar.

Environmental requirements include:
- clean-up protection
- noise and dust
- vibration
- waste management.
RANGE STATEMENT

Statutory and regulatory authorities include:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

AAC blocks include:

- reinforced AAC products (steel mesh, panels, lintels and treads in a range of strength and grades)
- unreinforced AAC products (blocks).

Fixing ties and brackets include:

- angle brackets
- control joint ties
- flat junction brackets
- joist hanger support brackets
- sliding joint ties
- tension ties
- wall ties.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare. 1.1 Work instructions and operational details are obtained, confirmed and applied from relevant information to undertake planning and preparation.

1.2 Safety (OHS) requirements are followed in accordance with safety plans and policies.

1.3 Signage and barricade requirements are identified and implemented.

1.4 Plant and equipment, is selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.

1.5 Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.

1.6 Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.

1.7 Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.

2 Identify and select hand, power and pneumatic tools. 2.1 Hand, power and pneumatic tools, their functions, operations and limitations are identified and selected.

2.2 OHS requirements for using hand, power and pneumatic tools are recognised and adhered to.
2.3 Lubricants, hydraulic fluid and water are checked according to manufacturer recommendations.

3 Use tools.

3.1 Hand tools used are appropriate to the task and materials and are in accordance with OHS requirements.

3.2 Power and pneumatic tools are safely and effectively used in accordance with manufacturer recommendations and state or territory OHS requirements.

3.3 Tools are sharpened and maintained according to manufacturer recommendations.

4 Identify, select and use plant and equipment.

4.1 Plant and equipment are selected and used consistent with OHS requirements and the needs of the job.

4.2 Lubricants, hydraulic fluid and water are checked according to manufacturer recommendations.

4.3 Plant and equipment are maintained in accordance with manufacturer recommendations and standard work practices.

5 Clean up.

5.1 Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

5.2 Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - numeracy skills to apply measurements and make calculations
  - organisational skills, including the ability to plan and set out work
  - planning and organising skills to prepare for work tasks
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- carpentry materials
- carpentry tool use techniques
- construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements of carpentry tools and equipment
- relevant Acts, regulations and codes of practice
- tools and equipment safety manuals and instructions
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- identify and select hand tools for given tasks
- safely use and maintain a minimum of rules, tapes, squares, hammers, hand saws, hand plane and chisels for given tasks
- identify power and pneumatic tools for a given task
- safely use a minimum of a power saw, electric plane, impact power drill, nail gun and compressor or equivalent types of equipment for given tasks
- maintain equipment according to manufacturer’s recommendations or organisational requirements.
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.
Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to using carpentry tools and equipment
- relevant Australian standards
- safe work procedures related to using carpentry tools and equipment
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

**Planning and preparation** include:

- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.

**Safety (OHS)** is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control

  - working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

**Plant and equipment** include:
- 240v power supplied
- compressor
- generator
- hand held or small single person operated equipment
- pneumatic driven.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

**Materials** include:
- bricks
- concrete components
- concrete masonry units
- glass
- insulation
- joinery units
- metal sheeting
- paints and sealants
- plaster or fibre cement sheeting
- reconstituted timber products
- reinforcement materials
- scaffolding components
- structural steel sections and components
- timber.

**Environmental requirements** include:
- clean-up protection
- noise and dust
- vibration
- waste management.

**Statutory and regulatory authorities** include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.
Hand, power and pneumatic tools
include:

- hand tools:
  - cutting, planing, boring and shaping
  - fixing, fastening and percussion tools
  - holding tools
  - setting out, marking out and levelling tools
- power tools (portable and static):
  - electrical and pneumatic operated tools
  - gas driven tools
  - hoses
  - leads.

<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information to undertake planning and preparation.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied. |
| 2. Erect formwork. | 2.1. Design of footing and/or slab on ground is identified from job drawings and specifications, and is checked to be in accordance with legislation, regulations and codes of practice.  
2.2. Formwork is set out to requirements of drawings and specifications.  
2.3. Fixing and fasteners are selected consistent with construction requirements of the job.  
2.4. Formwork shutters and/or edge boxing are constructed and erected to site requirements and specifications.  
2.5. Formwork support is braced to job requirements and specifications.  
2.6. Block-outs and cast-in services are installed to specified locations.  
2.7. Release agents are applied to formwork face, where specified, to manufacturer specifications. |
| 3. Strip formwork. | 3.1. Edge boxing and bracing/strutting support are removed sequentially and safely. |
ELEMENT PERFORMANCE CRITERIA

3.2. Timber components are de-nailed, cleaned and stored or stacked safely for reuse or removal from site.

3.3. Steel components are cleaned, oiled and stored or stacked to manufacturer's maintenance recommendations.

3.4. Damaged formwork components are safely discarded after stripping.

4. Clean up.

4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - numeracy skills to apply measurements and make calculations
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental
REQUIRED SKILLS AND KNOWLEDGE

abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:
- construction terminology
- formwork materials
- formwork techniques
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for setting out and measuring
- processes for calculating material requirements
- quality requirements for formwork
- requirements of application and requirements for line, level and plumb in construction projects
- termite barriers
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- form up a slab on ground a minimum of 9 square metres, incorporating an edge rebate and internal corner to specifications
- form up a step to a foundation excavation to specified masonry units.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the
EVIDENCE GUIDE

**Mandatory task requirements**

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at
EVIDENCE GUIDE

the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

• diagrams or sketches
• instructions issued by authorised organisational or external personnel
• manufacturer specifications and instructions where specified
• memos
• MSDS
• organisation work specifications and requirements
• plans and specifications
• regulatory and legislative requirements pertaining to erecting and dismantling formwork for footings and slabs on ground
RANGE STATEMENT

- relevant Australian standards
- safe work procedures related to erecting and dismantling formwork for footings and slabs on ground
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.
- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment

Planning and preparation include:

Safety (OHS) is to be in accordance with state or territory legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:
RANGE STATEMENT

- workplace environment and safety.

Tools and equipment include:
- air compressors and hoses
- automatic levels
- bevels
- chisels
- hammers
- hand saws
- laser levels
- marking equipment
- measuring tapes and rules
- nail bags
- nail guns
- pinch bars
- power drills and power saws
- power leads
- saw stools
- shovels
- spanners
- spirit levels
- squares (combination/tri)
- steel squares
- string lines.

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:
- bolts and nuts
- boxing, either timber, metal, masonry, fibre cement sheeting or reconstituted timber products
- coach screws
- metal brackets
- nails and spikes
- patented metal fasteners
- steel tie rods.

Environmental requirements include:
- clean-up protection
- noise and dust
- vibration
- waste management.

Statutory and regulatory include:
- federal, state and local authorities
RANGE STATEMENT

**authorities** include:

administering applicable Acts, regulations and
codes of practice.

**Formwork:**

- includes prefabricated or in situ and is to be
  rigid to withstand the mass of wet concrete and
  actions imposed during placement
- formwork construction must comply with
  specifications to height and level and includes
  timber, metal or prefabricated for both footings
  and slabs on ground.

**Formwork shutters and edge boxing** include:

- an edge rebate.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained, confirmed and applied from relevant information for planning and preparation purposes.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied. |
| 2. Manually handle, sort and stack carpentry materials and components. | 2.1. Carpentry materials for handling are moved to specified location, applying safe manual handling techniques.  
2.2. Carpentry materials and components are sorted to suit material type and size, stacked for ease of identification and retrieval and for task sequence and job location in accordance with job specifications.  
2.3. Carpentry materials and components are protected against physical and water damage and stored clear of access ways, and for ease of identification, retrieval and distribution. |
| 3. Prepare for mechanical handling of materials. | 3.1. Carpentry materials and components are stacked/banded for mechanical handling in accordance with the type of material and plant or equipment to be used.  
3.2. Carpentry materials and components are loaded, unloaded, moved or located at specified location. |
| 4. Clean up. | 4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification. |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
4.2. **Hazardous materials** are identified for separate handling.
4.3. **Non-toxic materials** are removed using correct procedures.
4.4. **Dust suppression** procedures are used to minimise health risk to work personnel and others.
4.5. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations

- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.
REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Required knowledge for this unit is:

- asbestos characteristics and reporting requirements
- carpentry material handling techniques
- construction terminology
- hazardous materials found in construction work sites
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- material sizes
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements and types of carpentry materials
- types, characteristics, uses and limitations of tools and equipment
- workplace and equipment safety requirements.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- safely handle, sort and stack varying lengths of timber, providing quick access and use
- safely move and stack a given quantity of sheet material
- safely handle carpentry components for one carpentry project.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement

  - workplace environment and safety.
  - banders

Planning and preparation include:

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

Tools and equipment include:
RANGE STATEMENT

- hammers
- pallets
- pinch bars
- tin snips
- wheelbarrows.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

**Materials** include:
- bricks and concrete masonry units
- concrete components
- glass
- insulation
- joinery units
- metal sheeting
- paints and sealants
- plaster or fibre cement sheeting
- reconstituted timber products
- reinforcement materials
- scaffolding components
- structural steel sections and components
- timber.

**Environmental requirements** include:
- clean-up protection
- noise and dust
- waste management.

**Statutory and regulatory authorities** include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Handling** includes:
- handling activities may require assistance of others where size or weight is a factor
- manual handling, which includes using pallets, carrying materials using correct lifting techniques and control of waste
- preparing for mechanical handling, which includes forklifts, pallet jacks and trucks
- procedures such as MSDS, calculating quantities, and stacking and storing of materials.

** Protected** includes:
- correct handling and stacking techniques without damaging the material
- protecting with covers.
RANGE STATEMENT

Hazardous materials include:
- coatings
- glues
- inflammable materials
- solvents.

Non-toxic materials include:
- general carpentry materials with appropriate labelling.

Dust suppression includes:
- keeping dust in the air to a minimum.

RANGE STATEMENT

- relevant Australian standards
- safe work procedures related to carrying out general demolition of minor building structures
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Planning and preparation include:

Safety (OHS) is to be in accordance with state or territory legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in proximity to others
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

Tools and equipment include:

- air compressors
- allen keys
- angle grinders
- brooms
- chisels
- crow bars
- elevated work platforms
- hack saws
RANGE STATEMENT

- hammers
- hand saws
- ladders
- picks
- pincers
- pinch bars
- pliers
- pneumatic and electric tools
- power leads
- power saws
- props
- saw stools and planks
- scaffolding
- shovels
- sledge hammers
- spanners
- water hoses and spray attachments
- wheelbarrows.

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:
- bonded asbestos
- brickwork
- concrete
- glass
- metal
- reconstituted timber products
- tiles
- timber.

Environmental requirements include:
- clean-up protection
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Minor building structure includes:
- detached carports
- external sections of buildings (walls, cladding, attached carports, decks and roofs)
RANGE STATEMENT

- internal sections of buildings (walling, lining, built in components and wet area)
- pergolas and patios
- retaining walls and fences
- small concrete structures (slabs, pads, paths and edge strips)
- small ground level buildings.

**Type of construction system** includes:

- blockwork
- brickwork
- concrete
- metal framing
- timber framing.

**Risks** include those relating to:

- areas below floors
- identification, relocation or disconnection of services
- loads supported by walls
- security and public health and safety
- weatherproofing of the structure.

**Existing services** include:

- electricity
- gas
- telephone and other communications
- water.

**Preparatory work** includes:

- acquisition and application of equipment, such as props
- avoidance of built-up demolished material
- engineering requirements
- fall protection
- hazardous materials removed separately
- isolation of site
- permits
- removal of combustible material
- safe work method statement
- specialist trades
- spraying water
- traffic control
- use of dust suppression blanket.

**Salvaging** includes:

- reusing, recycling or selling removed materials.

Employability skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for **planning and preparation**.  
1.2. **Safety (OHS)** requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. **Materials** appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. **Environmental requirements** are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied. |
| 2. Identify and indicate site boundaries. | 2.1. Survey pegs at corners of site are located and identified in accordance with job drawings, specifications and **site topography**.  
2.2. String lines are set accurately into position to identify **site boundary markings** in accordance with site plan and survey pegs. |
| 3. Set out first line for building alignment. | 3.1. Measurements of building line from boundary or existing building are determined from site drawings for **setting out**.  
3.2. Approximate position and length of line, plus building clearance measurement at each end, are determined for hurdle location in accordance with site plan and survey pegs.  
3.3. Pegs and hurdles/profiles are installed approximately level across and between one another with adequate provision to mark footing width on hurdle/profile in accordance with job drawings and specifications.  
3.4. Location for line is accurately marked with nails on hurdles/profiles and line is set taut into position to |
## ELEMENT | PERFORMANCE CRITERIA
---|---
4. Set out right angled corners. | 4.1. Corner of building is determined on set building line to true measurement from adjacent boundary and marked with peg in accordance with job drawings and specifications.  
   | 4.2. Right angle is set up to line from corner peg using triangulation principles.  
   | 4.3. Hurdles/profiles are installed to approximate level of other hurdles and line is set taut to right angled alignment.
5. Install other building lines. | 5.1. Hurdles for remaining building lines are installed to appropriate locations, approximately level with established hurdles in accordance with job drawings and specifications.  
   | 5.2. Measurements for remaining building lines are accurately marked and nailed on hurdles to dimensions from site drawings.  
   | 5.3. String lines are set taut into position to nailed locations on hurdles in accordance with job drawings and specifications.
6. Building lines are checked for square. | 6.1. Diagonal measurements are checked for square and lines are adjusted to provide square relationship within 5mm tolerance over minimum diagonal length of 15m.  
   | 6.2. Measurements are checked for accuracy.
7. Clean up. | 7.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.  
   | 7.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.
REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application and requirements for line, level and plumb in construction projects
- basic construction processes
- basic mathematical techniques associated with setting out
- construction plan, symbols and construction terminology
- construction terminology
- job safety analysis (JSA) and safe work method statements
- processes for interpreting engineering drawings and sketches
- processes for setting out
- project quality requirements
- setting out techniques
- site and equipment safety (OHS) requirements
- site isolation and traffic control responsibilities and authorities
- types, characteristics, technical capabilities and limitations of setting out devices.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- set out a full size L shape building on a relatively level site to specifications.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying
EVIDENCE GUIDE

safe work practices

- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to setting out
- relevant Australian standards
- safe work procedures related to setting out
- signage
- verbal or written and graphical instructions
RANGE STATEMENT

Planning and preparation include:

- work bulletins
- work schedules.
- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.

Safety (OHS) is to be in accordance with state or territory legislation, regulations, organisational safety policies and procedures, and project safety plan and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working with dangerous materials
  - organisational first aid
  - personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environment and safety.

Materials include:

- nails
- pegs
- timber.

Environmental requirements include:

- clean-up protection
- noise and dust
- waste management.

Site topography includes:

- flat
- sloping
RANGE STATEMENT

Site boundary markings include:

- steep.
- building built on line
- fence built on line
- survey pegs.

Setting out includes:

- footings, including:
  - pad
  - posts
  - slab
  - strip
  - stumps
- residential buildings, commercial buildings and other structures.

--- | ---
 | fitted and fixed to line and level.
4.4. Block or herringbone strutting is installed to deep floor joists where specified in accordance with regulations.
4.5. Blocks and trimmers are fitted and fixed around doorways and openings to provide support in accordance with specifications.
4.6. Trimmers are cut, fitted and fixed to support sheet flooring joints where specified.
5. Install flooring.
5.1. Flooring materials selected are appropriate for the intended room use and specifications.
5.2. Floor measurements are confirmed and flooring materials are cut and prepared for installation with a minimum of loss.
5.3. Flooring is installed and secured in accordance with manufacturer recommendations.
5.4. Installed flooring is completed in preparation for the next process.
6. Clean up.
6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
REQUIRED SKILLS AND KNOWLEDGE

- read and interpret:
  - documentation from a variety of sources
  - plans, specifications and drawings
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work

- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction terminology
- damp proof systems
- floor construction techniques
- flooring system installation techniques
- flooring system materials, including fire control and separation materials required by the Building Code of Australia (BCA) and other legislation
- flooring system types, characteristics, materials, uses and limitations
- imposed loads
- insulation products
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for the calculation of material requirements
- quality requirements
- regulations applicable to floor framing and flooring
- setting out and levelling techniques
- termite barriers
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete as a minimum one bearer and joist system constructed on a support system (stumps, posts or piers) applicable to local conditions, to carry external walls and internal walls parallel to joists for a full sized home or equivalent (including a bedroom, lounge, kitchen and bathroom not less than 30 square metres)
- install a tongue and groove fitted strip flooring surface and an approved wet area floor system to a bathroom area
- install a system of similar size as above with either a sheet or strip platform system.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets

  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working with dangerous materials
  - organisational first aid
  - personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices.
RANGE STATEMENT

- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

**Tools and equipment** include:
- air compressors and hoses
- clamps
- docking saws and drop saws
- hammers
- jigs/stops
- marking equipment
- masonry drills
- measuring tapes and rules
- nail bags
- nail guns
- pop riveters
- power drills
- power leads
- power saws
- power screwdrivers
- saw stools
- spanners
- spirit levels
- squares (combination/tri).

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

**Materials** include:
- bolts and nuts
- masonry anchors
- metal
- nails and spikes
- patented metal fasteners
- pop rivets
- screws
- synthetic materials
- timber.

**Environmental requirements** include:
- clean-up protection
- noise and dust
- vibration
- waste management.

**Statutory and regulatory** include:
- federal, state and local authorities
RANGE STATEMENT

**authorities** include: administering applicable Acts, regulations and codes of practice.

**Wall frame** includes:
- both load bearing and non-load bearing frames of timber and metal
- synthetic materials for construction and erection to a slab on ground and to a sub floor frame
- wall frame components, including plates, studs, noggings, trimmers, lentils and blocking
- wall framing does not include the set out of the roof on the top plate but the set out of the frame is to include allowance for the types of cladding or lining to be used.

**Load bearing** includes:
- any wall that carries a roof loading component.

**Bracing:**
- includes temporary and permanent types
- may be made of timber, metal or sheet material
- may be fixed in accordance with specifications.

Unit Sector(s)

Unit sector  Construction

Co-requisite units

Co-requisite units  Nil

Functional area

Functional area
CPCCCA3005B Construct ceiling frames

Modification History
Photovoltaic (solar) panels added to range statement
Equivalent to CPCCCA3005A

Unit Descriptor
This unit of competency specifies the outcomes required to plan, prepare, set out, construct and erect ceiling frames to accommodate ceiling joists, hanging beams, strutting beams and composite beams. It includes selection of members and setting out of the ceiling frame in conjunction with the roof members.

Application of the Unit
This unit of competency supports achievement of skills to determine materials and process, and then construct a range of ceiling frames used in the construction industry, which includes working with others and as a member of a team.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare.

1.1 Work instructions, including plans, specifications, quality requirements and operational details are obtained for planning the work and confirmed and applied from relevant information.

1.2 Safety (OHS) requirements are followed in accordance with safety plans and policies.

1.3 Signage and barricade requirements are identified and implemented.

1.4 Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.

1.5 Material quantity and quality requirements are calculated in accordance with plans and specifications.

1.6 Materials appropriate to construction of ceiling frames, including fire resistance ratings are identified, obtained, prepared, safely handled and located ready for use.

1.7 Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.

1.8 Passive and active fire control elements for ceiling frame construction and installation are identified and applied.
2 Locate ceiling joists.

2.1 *Ceiling frame components* are identified and selected in accordance with regulatory criteria.

2.2 Location of ceiling joists are set out on the top plate to specifications for spacings of roof and ceiling members.

2.3 Ceiling joists and trimmers are cut to length, placed and securely fixed to locations in accordance with specifications.

3 Install hanging beams.

3.1 Hanging beam sizes and spacings are checked in accordance with regulatory criteria.

3.2 *Hanging beams* are installed.

3.3 Hanging beams on external walls are placed alongside rafter locations where specified.

3.4 Ceiling joists are connected using appropriate *connecting methods* to hanging beams.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

4.2 Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - numeracy skills to apply measurements and make calculations
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- ceiling frame construction techniques
- ceiling framing materials, including steel and their rated fire resistance
- wall framing and roof construction, ceiling lining materials, including fire control and separation required by the National Construction Code (NCC) and other legislation
- construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
• processes for the calculation of material requirements
• quality requirements for ceiling frames
• roofing set out
• timber types, structural properties and uses, including engineered timber products
• workplace and equipment safety requirements.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:
• locate, interpret and apply relevant information, standards and specifications
• comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
• comply with organisational policies and procedures, including quality requirements
• safely and effectively use tools, plant and equipment
• communicate and work effectively and safely with others
• set out, construct and erect a ceiling incorporating a hanging beam, ceiling trimmers and strutting beam to specifications for a full size one bedroom home or equivalent (includes a bedroom, lounge, kitchen and bathroom not less than 30 square metres)
• complete construction tasks involving both timber and metal materials and components
• ensure correct selection and use of fire-rated
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and
environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Planning includes:
- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.

Information includes:
- diagrams or sketches
- instructions issued by authorised organisational or
external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to constructing ceiling frames
- relevant Australian standards
- safe work procedures related to constructing ceiling frames
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

**Safety (OHS)** is to be in accordance with state or territory legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - photovoltaic (solar) panels
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working with dangerous materials
- organisational first aid
- personal protective clothing and equipment
prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

**Tools and equipment** include:
- air compressors and hoses
- chisels
- hammers
- hand saws
- marking equipment
- measuring tapes and rules
- nail bags
- nail guns
- power drills
- power leads
- power saws
- roofing square
- saw stools
- scaffolding
- spirit levels
- squares (combination/tri)
- string lines.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

**Materials** include:
- bolts
- metal
- nails
- patented fasteners
- reconstituted timber products
- screws
- synthetic materials
- timber.

**Construction of ceiling frames**:
- is to be completed in conjunction with the roof members
• methods include ensuring compliance with incipient spread of fire requirements
• selection of hangers and composite beams will be determined by the building geometry and roof pitch.

**Environmental requirements**

- clean-up protection
- noise and dust
- vibration
- waste management.

**Statutory and regulatory authorities**

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Ceiling frame components**

- synthetic materials
- timber and metal components.

**Hanging beams**

- ceiling frame bracing, which may be included where high wind loadings are specified
- hanging beams with end bearing, which are to be positioned so that full load distribution to the supporting wall frame is achieved
- installation, which may be incorporated with strutting and/or composite beams.

**Connecting methods**

- metal straps
- patented connectors
- timber cleats.

Custom Content Section

Not applicable.
CPCCCA3006B Erect roof trusses

Modification History
Change to performance criterion
Equivalent to CPCCCA3006A
Added range item: solar panels

Unit Descriptor
This unit of competency specifies the outcomes required to select, set out, erect and brace roof trusses to accommodate roof coverings for waterproofing purposes. It includes gable, hip and valley, and hip roofing types.

Application of the Unit
This unit of competency supports achievement of skills to safely and efficiently erect pre-built roof trusses for gable, hip and valley, hip and flat roof construction projects, which includes working with others and as a member of a team.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare. 1.1 Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation purposes.

1.2 Safety (OHS) requirements are followed in accordance with safety plans and policies.

1.3 Signage and barricade requirements are identified and implemented.

1.4 Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.

1.5 Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.

1.6 Materials appropriate to the work application are identified, obtained, checked to ensure fitness for purpose, prepared, safely handled and located ready for use according to Australian standards.

1.7 Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.
2 Erect roof trusses.

2.1 Location of roof trusses for hip and valley roofs are set out on wall top plates to plan layout and specifications.

2.2 Steel frames are temporarily earthed during erection and are connected to permanent earthing system upon completion.

2.3 Roof trusses are erected and fixed, including temporary bracing, to set out positions in correct sequence to line at apex and plumb.

2.4 Top chord is installed above wall plate to be constant height above wall plate.

2.5 Ceiling trimming and creeper rafter members are fixed to specifications.

2.6 Bottom chord of truss is used to provide lateral support for internal walls.

2.7 Roof bracing is provided through hip construction, valley construction, diagonal metal tension or timber bracing or a combination of these, and fixed to specification.

2.8 Lateral restraints to truss chords are fixed in position to manufacturer specifications.

3 Clean up.

3.1 Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

3.2 Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for the calculation of material requirements
- quality requirements for roof trusses
- roof bevels
- roof calculations for lengths, quantities and pitch
• roof load transfer
• roof shape and geometry
• roof truss erection and construction techniques
• roof truss materials and installation, including fire control and separation materials required by the National Construction Code (NCC) and other legislation
• roof types and truss components
• roofing regulations
• techniques for lifting and positioning of trusses
• temporary and permanent bracing
• timber types, structural properties and uses, including engineered timber products
• truss set out
• workplace and equipment safety requirements.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- set out and erect a roof comprising a minimum of one hip end, a valley and enough standard trusses to incorporate bracing for a full size roof in timber and metal.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.
Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

- string lines
- welding equipment.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

**Materials** include:
- bolts
- bracing material
- nails
- patented fasteners
- screws
- slotted brackets for truss movement
- timber and metal trusses.

**Environmental requirements** include:
- clean-up protection
- noise and dust
- vibration
- waste management.

**Statutory and regulatory authorities** include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Roof trusses** can be:
- timber or metal
- fixed to timber or steel wall plates.

**Hip and valley roofs**:
- include scotch valleys and hip ends
- may include Dutch gables.
**Roof bracing** includes:

- elementary bracing principles for various shaped roofs.

### Required Skills and Knowledge

#### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills for this unit are:

- **communication skills to:**
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- **numeracy skills to apply measurements and make calculations**
- **organisational skills, including the ability to plan and set out work**
- **teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities**
- **technological skills to:**
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.
REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Required knowledge for this unit is:

- ceiling framing
- construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- pitched roof construction techniques
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for the calculation of material requirements
- quality requirements for pitched roofs
- roof calculations for lengths, quantities and pitch
- roof construction and ceiling lining materials, including fire control and separation material required by the Building Code of Australia (BCA) and other legislation
- roof geometry
- roof set out
- roof types
- roofing materials
- roofing regulations
- timber types, structural properties and uses including engineered timber products
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.
EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- set out, construct and erect a flat roof under 10 (for a full sized one bedroom home or equivalent (including a bedroom, lounge, kitchen and bathroom not less than 30 square metres)
- set out, construct and erect a scotch valley, broken hip and valley, hip and valley roof incorporating a gable end for a full sized one bedroom home or equivalent (including a bedroom, lounge, kitchen and bathroom not less than 30 square metres), including set out of a pattern rafter with creeper reductions and methods of roof bevels and roof member lengths.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
EVIDENCE GUIDE

- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured
EVIDENCE GUIDE

learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to constructing a pitched roof
- relevant Australian standards
- safe work procedures related to constructing a pitched roof
- signage
- verbal or written and graphical instructions
RANGE STATEMENT

Planning and preparation include:

- work bulletins
- work schedules
- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - photovoltaic (solar) panels
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working with dangerous materials
  - organisational first aid
  - personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environment and safety
- tools and equipment include:
  - air compressors and hoses
  - bevels
  - chisels
  - hammers

Safety (OHS) is to be in accordance with state or territory legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:
RANGE STATEMENT

- hand saws
- marking equipment
- measuring tapes and rules
- nail bags
- nail guns
- power drills
- power saws and power leads
- protractors
- saw stools
- scaffolding
- spirit levels
- squares (combination/tri)
- stair clips and tables
- steel squares and fence
- string lines.

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:
- bolts and nails
- patented fasteners
- screws
- timber.

Environmental requirements include:
- clean-up protection
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Pattern rafter includes:
- determining pitch and plumb cut for common rafters
- height above birdsmouth
- length of common rafter for pitch of roof.

Ridge boards include:
- abutment joints scarfed or butt jointed
- those marked for rafter positions from wall plates.

Bevels and lengths:
- can be ascertained by geometry, tables, applied method, steel square, direct method or trigonometry
RANGE STATEMENT

- lengths may be determined by tables, scale, direct method, steel square or trigonometry.

Strutting and purlins include:
- accurate and close fitting joints
- patented systems.

Functional area

Functional area
CPCCCA3008B Construct eaves

Modification History
Photovoltaic (solar) panels added to range statement
Equivalent to CPCCCA3008A

Unit Descriptor
This unit of competency specifies the outcomes required to prepare, set out and construct eaves, including the cutting and fixing of fascias and barges to provide a finish between the wall and the roof. It includes boxed eaves and the finish to gable ends.

Application of the Unit
This unit of competency supports achievement of skills constructing eaves for roof finishing in a range of construction projects, which includes working with others and as a member of a team.

Licensing/Regulatory Information
Not Applicable

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare 1.1 Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation purposes.

1.2 *Safety (OHS)* requirements are followed in accordance with safety plans and policies.

1.3 Signage and barricade requirements are identified and implemented.

1.4 Plant, *tools and equipment* selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.

1.5 Material quantity requirements are calculated in accordance with plans, specifications and *quality requirements*.

1.6 *Materials* appropriate to the work application including required fire resistance rating are identified, obtained, prepared, safely handled and located ready for use.

1.7 *Environmental requirements* are identified for the project in accordance with environmental plans and *statutory and regulatory authority* obligations, and are applied.

1.8 Passive and active fire control elements for eaves
construction are identified and applied.

2 Install fascia and barge

2.1 Overhang of rafters is marked and cut to line, plumb and angle.

2.2 Gable ends are trimmed for overhang where a verge rafter is not used.

2.3 Fascia is fitted and fixed to roof structure overhang to line and level.

3 Construct framework for eaves or soffits

3.1 Framework structure for eaves type are identified, and eaves design is established and set out to drawings and specifications.

3.2 Timber framework members are set out, marked and cut to lengths in accordance with methods of joining and proposed framework structure.

3.3 Boxed eaves constructed with soffit bearers are fixed to wall frame or supported by hangers from rafters, to line and level.

3.4 Boxed eaves structure is installed, clear of top of masonry walls in veneer construction to allow for frame shrinkage and settlement.

3.5 Eaves structure members are securely fixed, including back blocking and trimmers.

4 Line and clad eaves and soffits

4.1 Eaves cladding and sheeting material is marked and cut to shape to suit task application and jointing methods.

4.2 Eaves lining, cladding and sheeting are fitted, joined and fixed in accordance with type of material, task application and specifications.

4.3 Mouldings are fitted and fixed to specifications to finish eaves.

4.4 Sloping eaves are fitted to underside of rafters or framing for fixing and joining of material.
5 Clean up

5.1 Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

5.2 Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction terminology
- eaves construction techniques, including fire control and separation required by the National Construction Code (NCC) and other legislation
- eaves materials, including their rated fire resistance
- job safety analysis (JSA) and safe work method statements
- levelling techniques
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for the calculation of material requirements
- quality requirements for eaves construction
- roof geometry and construction
- safe use of scaffolding
- timber types, structural properties and uses, including engineered timber products
- wall framing construction
- workplace and equipment safety requirements.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:
- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- completion of marking and cutting of roof members to line to accommodate plumb fascia and barge for three metres of overhand barge eaves, three metres of boxed eaves and three metres of raking eaves, ensuring correct selection and use of fire-rated
materials and methods of construction, each to include:
- an apex junction on the barge
- a junction between the barge and the plumb fascia
- a junction at the valley
- an eaves junction at the hip to a brick wall.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and
correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** includes:
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where
specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to constructing eaves
- relevant Australian standards
- safe work procedures related to constructing eaves
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

**Planning and preparation** include:
- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.

**Safety (OHS)** is to be in accordance with state or territory legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - photovoltaic (solar) panels
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
• working with dangerous materials
• organisational first aid
• personal protective clothing and equipment
  prescribed under legislation, regulations and
  workplace policies and practices
• use of firefighting equipment
• use of tools and equipment
• workplace environment and safety.

**Tools and equipment** include:

• air compressors and hoses
• bevels
• chisels
• hammers
• hand saws
• marking equipment
• measuring tapes and rules
• nail bags
• nail guns
• power drills
• power saws and power leads
• protractors
• saw stools
• scaffolding
• spirit levels
• squares (combination/tri)
• stair clips and tables
• steel squares and fence
• string lines.

**Quality requirements** include
relevant regulations, including:

• Australian standards
• internal company quality policy and standards
• manufacturer specifications, where specified
• workplace operations and procedures.

**Materials** include:

• beads
• fibre cement sheeting
• joining mould
• metal
• plaster
• quads
- reconstituted timber products
- timber
- timber battens
- timber lining boards.

**Environmental requirements**
include:

- clean-up protection
- noise and dust
- vibration
- waste management.

**Statutory and regulatory authorities**
include:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Gable ends**:

- can be boxed or raked and raked eaves
- includes exposed rafters or soffit finish.

**Fascia (and fascia gutter and barges)** include:

- methods include ensuring compliance with incipient spread of fire requirements methods
- timber or metal and overhang types, including conventional fascia gutter and concealed.

**Eaves design**:

- includes sloping soffits and boxed eaves
- may incorporate verandas, concealed gutters and open eaves.

**Joined** includes:

- jointing methods involving plastic, timber or metal moulds.

3.5. Trimmers are fitted to gable ends to take gable end rafter and barge board.
3.6. Valley boards are cut and fixed.
4. Clean up.
4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
REQUIRED SKILLS AND KNOWLEDGE

- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- ceiling framing
- construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- pitched roof construction techniques, including fire control and separation required by the Building Code of Australia (BCA) and other legislation
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for the calculation of material requirements
- quality requirements for advanced roofs
- roof calculations for lengths, quantities and pitch
- roof geometry
- roof set out
- roof types and design
- roofing materials, including their rated fire resistance
- roofing regulations
- timber types, structural properties and uses, including engineered timber products
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete the roof to be constructed, which must include a hip end other than square on plan (hexagonal or octagonal), for a full size project ensuring correct selection and use of fire-rated materials and methods of construction.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
EVIDENCE GUIDE

- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice,
EVIDENCE GUIDE

with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to constructing advanced roofs
RANGE STATEMENT

- relevant Australian standards
- safe work procedures related to constructing advanced roofs
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Planning and preparation include:

- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.

Safety (OHS) is to be in accordance with state or territory legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working with dangerous materials
  - organisational first aid
  - personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environment and safety.
RANGE STATEMENT

Tools and equipment include:
- air compressors and hoses
- bevels
- chisels
- hammers
- hand saws
- marking equipment
- measuring tapes and rules
- nail bags
- nail guns
- power drills
- power saws and power leads
- protractors
- saw stools
- scaffolding
- spirit levels
- squares (combination/tri)
- stair clips and tables
- steel squares and fences
- string lines.

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:
- bolts
- metal
- nails
- patented fasteners
- screws
- timber.

Environmental requirements include:
- clean-up protection
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Advanced roof construction:
- is to include the major roof and the additional minor roof components for the same building
- types include a junction and a hip end other than square on plan and include hexagonal,
RANGE STATEMENT

- octagonal, conical, pyramidal, splayed ends, equal and unequal spans, unequal pitch, Dutch gable, gambrel and mansard
- methods include ensuring compliance with incipient spread of fire requirements.

**Pattern rafter** includes determining:
- height above birdsmouth
- length of common rafter for pitch of roof
- pitch and plumb cut for common rafters.

**Ridge boards** include:
- abutment joints scarf or butt jointed
- those marked for rafter positions from wall plates.

**Bevels and lengths:**
- determination of bevels may be ascertained by geometry, tables, applied method, steel square, direct method or trigonometry
- lengths may be determined by tables, scale, direct method, steel square or trigonometry.

**Purlins and struts** include:
- patented systems and joints, which are to be accurate and close fitting.

| 2. Install window units to frame. | 2.1. Window opening size is checked to be greater than overall window frame.  
2.2. Reveals are joined and fixed securely to frames where specified.  
2.3. Window unit is located to suit brickwork and eaves finish for veneer construction, whichever is applicable.  
2.4. Window unit is positioned in place so that head/sill are level and stiles are plumb and in wind, ensuring reveals or frame are finished flush with face of inside wall lining.  
2.5. Window is packed and fixed to wall frame through/to studs, in accordance with specified fixing and fastening methods. |
| 3. Replace window units/door frames. | 3.1. Architraves and nosing are removed.  
3.2. Sill bricks or cladding are removed where specified.  
3.3. Fasteners are cut, packing removed and flashing detached from frame.  
3.4. Window unit/ door frame is removed. |
ELEMENT  |  PERFORMANCE CRITERIA
--- | ---
3.5. Window unit/door frame and *window components* are installed to plumb, level and wind.
3.6. Architraves and mouldings are replaced.
4. Prepare door opening, and construct and fix jamb.
   4.1. Door frame opening size is checked to be greater than the overall door jamb width and height, allowing for plumbing of stiles, thickness of floor covering, levelling of door head and level of floor.
   4.2. Jamb stiles are marked and cut to length allowing for clearances according to specifications.
   4.3. Head is trenched to accommodate jamb stiles allowing for clearance according to specification.
   4.4. Jamb frame is assembled, squared and braced with rebates flush.
   4.5. Joints and rebates are cleaned and finished to quality requirements.
5. Install door and door unit.
   5.1. *Door* unit is positioned in place so that the head/sill is level and stiles are plumb and in wind, ensuring reveals or frame finished flush with face of inside wall lining.
   5.2. Door is fitted to jamb allowing for clearances according to specifications with lock stile door backed off to facilitate correct operation.
   5.3. Hinges are marked out on door and jamb.
   5.4. Hinges are fitted to door and jamb.
   5.5. Final adjustments of door are made.
   5.6. *Door furniture components* are fitted and fixed to manufacturer specifications.
6. Clean up.
   6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
   6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - numeracy skills to apply measurements and make calculations
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction terminology
- flashing requirements and installation techniques
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for setting out
- processes for the calculation of material requirements
- quality requirements for windows and doors
- window and door installation and replacement techniques
- window and door materials
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- install one standard window or glazed sliding door unit to specifications
- replace one standard window or glazed sliding door unit to specifications
- construct and fit one standard external rebated door jamb/frame to specifications
- fit and hang one standard door, including the door furniture and a pair of doors with door jambs to specifications.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory
EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured
EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
RANGE STATEMENT

- plans and specifications
- regulatory and legislative requirements pertaining to installing and replacing windows and doors
- relevant Australian standards
- safe work procedures related to installing and replacing windows and doors
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Planning and preparation include:

- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.

Safety (OHS) is to be in accordance with state or territory legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working with dangerous materials
  - organisational first aid
  - personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
RANGE STATEMENT

- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

**Tools and equipment** include:

- air compressors and hoses
- bevels
- chisels
- hammers
- hand saws
- marking equipment
- measuring tapes and rules
- nail bags
- nail guns
- power drills
- power leads
- power saws
- protractors
- saw stools
- scaffolding
- spirit levels
- squares (combination/tri)
- stair clips and tables
- steel squares and fences
- string lines.

**Quality requirements** include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

**Materials** include:

- barrel bolts
- cabin hooks
- closers
- dead bolts
- flash bolts
- flashings
- handles
- hinges (butt and parliament)
- latches
- locks
- metal
- night latches
- passage sets
RANGE STATEMENT

Environmental requirements include:

- clean-up protection
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Windows include:

- all size windows
- casement, double hung, hopper, straight and sliding, including glazed sliding doors, curved and bay.

Reveals:

- may or may not be fitted with windows.

Door frames:

- may be fixed first and then the door installed or doors may be fixed to the frame prior to installation
- doors may be hung to timber or metal frames.

Window components include:

- reveal
- sill
- trimmers.

Doors include:

- flush panel, framed and panelled, and glazed
- door units are to cover hinged door units and include standard doors, sliding, flywire, combination window/door units, door sidelight units (glazed or unglazed) and internal doors
- door jambs, door stiles and door sills.

Door furniture components include:

- grips, latches/deadlocks, push plates and closers
- handles and locks.

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation purposes.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Tools and equipment selected to carry out window refurbishment are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied. |
| 2. Refurbish casement windows. | 2.1. Sash fittings are removed.  
2.2. Sash is removed.  
2.3. New sash is fitted to correct margins and hung.  
2.4. Window components and furniture are fitted to manufacturer specifications. |
| 3. Refurbish double hung windows. | 3.1. Sashes are removed from the frame in correct sequence.  
3.2. New sashes are fitted, where specified, to correct margins ensuring waterproofing to bottom rail, and sash is maintained.  
3.3. Sash cords/spiral balances and frame components are replaced.  
3.4. Window furniture is replaced. |
| 4. Clean up. | 4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.  
4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with |

  - organisational first aid
  - personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environment and safety.
  - chisels

Tools and equipment include:
RANGE STATEMENT

- clamps
- cutting knives
- docking saws and drop saws
- hammers
- hand saws
- marking equipment
- measuring tapes and rules
- mouses
- pincers
- power drills
- power leads
- power planers
- power routers
- putty knives and paint scrapers
- saw stools
- screwdrivers
- small pinch bars
- spirit levels
- squares (combination/tri)
- straight edges
- work benches.

Window refurbishment:

- is to include casement and double hung windows
- casement windows include hopper and sliding windows
- operation can be by spiral balances or by weights and cords.

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:
- cord
- glass
- hinges
- nails
- screws
- stays
- timber
- window furniture.

Environmental requirements

- clean-up protection
RANGE STATEMENT

include:
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Window components and furniture includes:
- frame and sash
- window furniture, including hinges, cords, weights, spiral balances, locks, stays, winders, handles and knobs.

Frame includes:
- parting beads
- pocket pieces
- stop beads.

- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
RANGE STATEMENT

- use of tools and equipment
- workplace environment and safety.

**Tools and equipment** include:
- chisels
- clamps
- cutting knives
- docking saws/drop saws
- hammers
- hand saws
- marking equipment
- measuring tapes and rules
- mouses
- pincers
- power drills
- power leads
- power planers
- power routers
- putty knives and paint scrapers
- saw stools
- screwdrivers
- small pinch bars
- spirit levels
- squares (combination/tri)
- straight edges
- work benches.

**Wet areas** include:
- bathrooms
- en suites
- food preparation areas
- kitchens
- laundries
- showers
- toilets.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

**Materials** include:
- clouts
- flashing material
- glues
- nails
- screws
RANGE STATEMENT

- timber
- waterproofing agents.

Environmental requirements include:
- clean-up protection
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Fitments include:
- grab rails
- kitchen sink units
- laundry trough units
- shaving cabinets
- sink units
- toilets
- towel rails
- vanities.

Fixtures include:
- baths checked into wall
- free standing baths
- shower bases (poly marble, pressed metal or concrete).

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
REQUIRED SKILLS AND KNOWLEDGE

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- commonly used timber profiles
- construction terminology
- geometry for raking mouldings, stairs and roofing
- job safety analysis (JSA) and safe work method statements
- lining, panelling and moulding materials
- lining, panelling and moulding techniques
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for the calculation of material requirements
- quality requirements of lining, panelling and moulding
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment

A person who demonstrates competency in this
EVIDENCE GUIDE

and evidence required to demonstrate competency in this unit

unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete lining one wall to a minimum of 3 metres by 2.4 metres, with lining boards including one opening to specifications
- complete lining one wall to a minimum of 3 metres by 2.4 metres, with sheet panelling including one opening to specifications
- complete fitting profiled architraves to a minimum of one door or one window or a combination of both, with specified margins and tight fitting mitre joints
- complete cutting and fixing a profiled skirting with a minimum of one internal scribed joint and one external mitre joint with tight fitting joints
- complete scribing and mitring a Scotia, quad and colonial architrave with a minimum of one internal joint and one external mitre joint with tight fitting joints
- construct a pelmet with two return ends able to be fixed and removed upon completion
- construct a raking mould using either an internal scribed or external mitre joint with tight fitting joints.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory
EVIDENCE GUIDE

or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured
EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
RANGE STATEMENT

- plans and specifications
- regulatory and legislative requirements pertaining to installing lining, panelling and moulding
- relevant Australian standards
- safe work procedures related to installing lining, panelling and moulding
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Planning and preparation include:

Safety (OHS) is to be in accordance with state or territory legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working with dangerous materials
  - organisational first aid
  - personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
RANGE STATEMENT

- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

Tools and equipment include:

- air compressors and hoses
- bevels
- chisels
- coping saws
- corking guns
- cramps
- hammers
- hand planes
- hand saws
- marking equipment
- measuring tapes and rules
- moulding planes
- nail guns
- power drills
- power leads
- power planers
- power saws
- rebate planes
- routers
- saw stools
- spirit levels
- squares (combination/tri)
- straight edges
- string lines.

Lining of framed walling or battened surfaces provides a finished surface and includes:

- all moulding applications where joining occurs at surface intersections and involves change of levels and mouldings running at a slope or rake.
- junctions of surfaces, which may be at right angles or obtuse or acute angles
- lining boards, which may be vertical, horizontal or raked.

Moulding includes:

- beading (flat, quad, cover strips and nosings)
- bull nosed
- multi-curved
- ornate period profile
- Scotia
- splayed
RANGE STATEMENT

**Quality requirements** include relevant regulations, including:
- Australian standards
- Internal company quality policy and standards
- Manufacturer specifications, where specified
- Workplace operations and procedures.

**Materials** include:
- Lining, panelling, mouldings, nails, screws, adhesives and gap fillers
- Lining and panelling sheet materials, including lining boards, veneer panelling, plywood, hardboard, MDF board, particle board and fibre cement board.

**Environmental requirements** include:
- Clean-up protection
- Noise and dust
- Vibration
- Waste management.

**Statutory and regulatory authorities** include:
- Federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Surfaces** include:
- Floors, walls, ceilings, windows, door frames and jambs, built-in cupboards, built-in robes, fitments and stairs
- Preparation of surfaces may involve:
  - Fixing of battens to surface
  - Trimming of frame members to line
  - Fixing of additional noggings
  - Packing of frame members
  - Wedging of frame members.

**Architraves** include:
- May incorporate a plinth block.

**Edging** includes:
- Architrave
- Cornice
- Raking moulds
- Skirting.

**Joints** include:
- Butt or moulds (of plastic, metal or timber) incorporated in the joint or surface fixed above the joints.

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- set out and assemble a minimum of 9 square metres of full height partitioning, including the set out of a corner which is internal/external and a T intersection, and include a window and door panel to square and plumb in accordance with job specifications.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
EVIDENCE GUIDE

- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice,
EVIDENCE GUIDE

with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to assembling partitions
RANGE STATEMENT

- relevant Australian standards
- safe work procedures related to assembling partitions
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Planning and preparation include:

- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.
RANGE STATEMENT

**Tools and equipment** include:
- clamps
- compressors
- crimping tools
- docking saws
- drop saws
- explosive power tools
- hammers
- laser levelling equipment
- levels and power leads
- marking equipment
- masonry drills
- measuring tapes and rules
- nail guns
- pop riveters
- power drills
- saw stools
- scaffolding
- screw guns
- spirit levels
- squares (combination/tri)
- steel squares
- straight edges
- string lines
- templates
- tin snips.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

**Materials** include:
- internal lining
- nails, screws, pop rivets and patented fasteners
- proprietary partition systems
- timber or metal.

**Environmental requirements** include:
- clean-up protection
- noise and dust
- vibration
- waste management.

**Statutory and regulatory authorities** include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.
RANGE STATEMENT

Set out includes:

- the use and fixing of tracks or plates.

Partitions:

- can be non-structural timber, metal or fire-rated, including:
  - cladding with plasterboard
  - fibre cement board
  - plastic
  - reconstituted timber products
- types of partitions include:
  - pre-glazed panels
  - lined or unlined door units
  - modular and custom window units
  - framed or solid.

ELEMENT | PERFORMANCE CRITERIA
--- | ---
3.3. Treads and **risers** are fixed to the stringers.
3.4. Tie bolts are located and secured to maintain stair width where specified.
3.5. Bracing and lateral ties are fixed to newels in accordance with specifications to maintain rigidity of stair structure where specified.
4. Fit handrails, balustrade and finish.
4.1. Material for handrails and balusters are marked and cut to length.
4.2. **Handrails and balusters** are fitted and fixed in accordance with regulations.
4.3. Non-slip strips are installed to treads, where specified.
5. Clean up.
5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
  - report faults
  - use language and concepts appropriate to cultural differences
REQUIRED SKILLS AND KNOWLEDGE

- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application and requirements for line, level and plumb in construction projects
- construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for setting out and measuring
- processes for calculating material requirements
- quality requirements of timber stairs
- stair building materials
- stair construction techniques
- stair types
- stair regulations
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete the setting out and construction of full size stairs (free standing or against a wall), including a landing, handrail and balustrade to a minimum height of 1.2 metres, in accordance with regulations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at
EVIDENCE GUIDE

the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to constructing timber external stairs
RANGE STATEMENT

- relevant Australian standards
- safe work procedures related to constructing timber external stairs
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Planning and preparation include:

- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.

Safety (OHS) is to be in accordance with state or territory legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working with dangerous materials
  - organisational first aid
  - personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environment and safety.
RANGE STATEMENT

**Tools and equipment** include:
- clamps
- compressors
- crimping tools
- docking saws
- drop saws
- explosive power tools
- hammers
- laser levelling equipment
- levels and power leads
- marking equipment
- masonry drills
- measuring tapes and rules

- pop riveters
- power drills
- saw stools
- scaffolding
- screw guns
- spirit levels
- squares (combination/tri)
- steel squares
- straight edges
- string lines
- templates
- tin snips.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

**Materials** include:
- anti-slip products
- coach screws
- masonry anchors
- metal brackets
- patented metal fasteners and connectors
- steel tie rods
- timber and nails, including bolts and nuts
- wall plugs.

**Environmental requirements** include:
- clean-up protection
- noise and dust
- vibration

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare

1.1 Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation purposes.

1.2 Safety (OHS) requirements are followed in accordance with safety plans and policies.

1.3 Signage and barricade requirements are identified and implemented.

1.4 Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.

1.5 Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.

1.6 Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.

1.7 Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.

2 Straighten and prepare exterior walls

2.1 Timber frame is checked for straightness and studs are trimmed or packed to provide true surface across studs.

2.2 Additional rows of nogging are fitted and fixed to line, flush with wall face and plumb, where specified to facilitate exterior cladding.
3 Fix edge finishing, flashing and insulation

3.1 Weatherproofing, vapour barrier and flashing material are cut and fitted into position and secured to specifications.

3.2 Location of edge finishing, joiners, corner moulds and flashing is prepared to length and position, and secured to specifications.

3.3 Wall insulation is cut and fixed where specified.

4 Set out, cut and fix horizontal weatherboards

4.1 Cover for weatherboards is determined from recommended lap, type and profile of board and height of wall.

4.2 Gauge rod is produced.

4.3 Stop locations of each board or starting board are marked on face to determined or specified position.

4.4 Boards are cut to fit length of wall faces.

4.5 Butt joints of timber boards are joined at centre of studs with joint flush to face and line.

4.6 Other boards are joined using manufacturer recommended joining profiles and fitted to specification.

4.7 Material is pre-drilled subject to splitting, and fixed at end junction or butt joints to avoid splitting.

4.8 Internal and external corners are finished to manufacturer recommendations and job specifications.

4.9 Timber weatherboards, where specified, are prepared with nominated primer to cover overlaps and end joints.

5 Fix panelling

5.1 Starting position of first panel is determined in accordance with specified design and finished effect against windows, doors and corners.

5.2 Panelling is cut to fit height of wall.

5.3 Abutting joints of panelling are fixed to manufacturer specification and requirements for covering flashing.
5.4 Panelling is cut, fitted and fixed to manufacturer recommendations and job specification, maintaining plumb and level.

6 Clean up

6.1 Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

6.2 Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - numeracy skills to apply measurements and make calculations
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction terminology
- exterior cladding materials and techniques
- flashing and sarking
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for the calculation of material requirements
- quality requirements of exterior cladding
- safe use of scaffolding
- wall frame construction
- workplace and equipment safety requirements.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- produce a storey/set out rod for a full height wall using a weatherboard of a given profile or end cover
- fix weatherboards to a height of at least six rows, incorporating an internal and external corner with stops, together with flashings and sarking for a window and a door
- install a minimum of two different types of panels, incorporating an internal and external corner with stops, vertical and horizontal joints, together with
context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and
environments.

Validity and sufficiency of evidence requires that:

- competence will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
plans and specifications
regulatory and legislative requirements pertaining to installing exterior cladding
relevant Australian standards
safe work procedures related to installing exterior cladding
signage
verbal or written and graphical instructions
work bulletins
work schedules.

Planning and preparation include:

- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.

Safety (OHS) is to be in accordance with state or territory legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - personnel
  - photovoltaic (solar) panels
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working with dangerous materials
  - organisational first aid
  - personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

**Tools and equipment**

- air compressors and hoses
- angle grinders
- chalk lines
- chisels
- fibre cement sheet cutters
- hammers
- hand saws
- levelling equipment
- marking equipment
- measuring tapes and rules
- nail bags
- nail guns
- power drills
- power leads
- power planers
- power saws
- power screwdrivers
- saw stools
- scaffolding
- spanners
- spirit levels
- squares (combination/tri)
- string lines
- tin snips.

**Quality requirements**

- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

**Materials**

- aluminium weatherboards
- chamfer boards
- fibre cement sheet panels, sheets and planks
- flashing and sarking
- manufactured cladding materials (strips, sheets, boards and planks)
- metal panelling
- nails and screws
- patented metal fasteners, clips and joiners
- primer
- reconstituted timber products
- tempered hardboard strips
- timber weatherboards
- tongue and grooved timber boards
- vinyl weatherboards and cladding.

**Environmental requirements**

include:
- clean-up protection
- noise and dust
- vibration
- waste management.

**Statutory and regulatory authorities**

include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Exterior cladding**

includes:
- fibre cement sheet
- hardboard
- metal
- plastic
- roof sheeting
- timber.

**Weatherproofing, vapour barrier and flashing**

are in accordance with:
- manufacturer specifications
- regulations.

**Weatherboards:**

- may be fixed horizontal, vertical, diagonal or raked
- internal/external corners and joints between boards can be determined by the material being used, manufacturer recommendations and job specifications
- effective cover of weatherboard is determined by weatherboard profile or type
- gauge rod is to be used for weatherboard set out.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  
Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation purposes.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied. |
| 2. Set out formwork. | 2.1. Design of stairs and/or ramps and method of joining formwork are identified from job drawings and specifications, and are checked to be in accordance with legislation, regulations and codes of practice.  
2.2. Exit and ground finish levels are determined from plans, specifications and site inspection.  
2.3. Rise, going and pitch of stairs and ramp are determined from plans, specifications, site inspection, rise measurements and requirements of Building Code of Australia (BCA).  
2.4. Full size set out of stairs and ramp is calculated and made to determine rise, going and pitch of stairs to provide location of landings, stringers, treads and posts where specified.  
2.5. Location of stair, ramp and newels are determined from plans, specifications and pitch of stairs or full size set out.  
2.6. Location of footings are set out to layout of designed stairs and ramp from plans, specifications or full size set out. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application and requirements for line, level and plumb in construction projects
- construction terminology
- formwork materials and techniques
REQUIRED SKILLS AND KNOWLEDGE

- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for setting out and measuring
- processes for calculating material requirements
- quality requirements for formwork for stairs and ramps
- regulations on stair construction for safe use, including disability access
- stair and ramp construction
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely
EVIDENCE GUIDE

with others

- complete a site assessment to determine levels and stair dimensions
- apply the height and going of stairs to construct, erect and dismantle the formwork for a flight of stairs (free standing or against a wall), including a landing, with a minimum rise of flight of 1800mm
- complete the construction, erection and dismantling of a ramp with a rise of 400mm.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
EVIDENCE GUIDE

- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to constructing, erecting and dismantling formwork for stairs and ramps
- relevant Australian standards
- safe work procedures related to constructing, erecting and dismantling formwork for stairs and ramps
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

**Planning and preparation** include:

- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.

**Safety (OHS)** is to be in accordance with state or territory legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
RANGE STATEMENT

- traffic control
- use of firefighting equipment
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in proximity to others
- workplace environment and safety.

Tools and equipment include:

- air compressors and hoses
- automatic levels
- chisels
- explosive power tools
- grinders
- hammers
- hand saws
- laser levels
- marking equipment
- measuring tapes and rules
- nail bags
- nail guns
- optical levelling equipment
- pinch bars
- power drills
- power leads
- power saws
- props
- saw stools
- scaffolding
- shovels
- spanners
- spirit levels
- squares (combination/tri)
- steel squares and bevels
- string lines.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:

- bolts and nuts
- boxing (either timber, metal, masonry, fibre cement sheeting and reconstituted timber
RANGE STATEMENT

- coach screws
- masonry anchors
- metal brackets
- nails and spikes
- patented metal fasteners
- steel tie rods.

Environmental requirements include:
- clean-up protection
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Stairs and/or ramps include:
- either free standing or against a wall, including within a stairwell and incorporating structural steel for support of newels, handrails and landings
- may be straight, curved or geometrical.

Formwork:
- includes prefabricated or in situ, but is to be rigid to withstand the mass of wet concrete and actions imposed during placement
- for construction of formwork it is critical to comply with regulations and specifications for height, level and loadings
- includes timber, metal and can use prefabricated components.

Calculated:
- can be using simple mathematics or trigonometry.

</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation purposes.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied. |
| 2. Erect formwork. | 2.1. Work area is cleared and surface prepared for safe erection of formwork for suspended slabs, piers and shutters.  
2.2. Formwork is set out to requirements of plans and specifications.  
2.3. Formwork is assembled to plans, specifications and class of surface finish, with support system set to correct height level and line.  
2.4. Bracing of formwork is placed according to support plans and specifications to maintain rigidity and stability.  
2.5. Formwork support system is sequentially erected according to initial set out to job specifications.  
2.6. Formwork shutters and/or edge boxing is constructed to designed form requirements and specified dimensions.  
2.7. Block-outs and cast-in services are installed to specified locations.  
2.8. Debris, sawdust and other waste materials are |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
removed from completed formwork in accordance with waste management policy for the site.
2.9. Release agent is applied to formwork face to manufacturer specifications where specified.
3. Strip formwork.
3.1. Formwork and bracing/strutting support are removed sequentially and safely.
3.2. Timber components are de-nailed, cleaned and stored or stacked safely for reuse or removal from site.
3.3. Steel components are cleaned, oiled and stored or stacked to manufacturers' maintenance recommendations.
3.4. Damaged formwork components are safely discarded after stripping.
4. Clean up.
4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:
- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
  - report faults
REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application and requirements for line, level and plumb in construction projects
- concrete properties
- construction terminology
- formwork materials and techniques
- hydraulic pressures applied to formwork
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for setting out and measuring
- processes for calculating material requirements
- purpose, application and properties of commonly used release agents
- quality requirements of formwork to suspended slabs, columns, beams and walls
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- set out and erect suspended slab formwork (slab size a minimum of 30 square metres), incorporating a beam and two different types of columns with a specified formwork system at a minimum height of 2.4 metres.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the

  - personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
  - use of firefighting equipment

Planning and preparation include:

Safety (OHS) is to be in accordance with state or territory legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:
RANGE STATEMENT

- use of tools and equipment
- workplace environment and safety.

**Tools and equipment** include:

- air compressors and hoses
- automatic levels
- chisels
- hammers
- hand saws
- ladders and scaffolding
- marking equipment
- measuring tapes and rules
- nail bags
- nail guns
- pinch bars
- power drills
- power grinders
- power leads
- power saws
- proprietary formwork equipment
- saw stools
- shovels
- spanners
- spirit levels
- squares (combination/tri)
- steel squares
- string lines.

**Quality requirements** include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

**Materials** include:

- formwork componentry, including:
  - bolts and nuts
  - coach screws
  - masonry anchors
  - metal brackets
  - nails and spikes
  - patented metal fasteners
  - steel tie rods
  - timber.

**Environmental requirements**

- clean-up protection
### RANGE STATEMENT

- **Explain**:  
  - noise and dust  
  - vibration  
  - waste management.

**Statutory and regulatory authorities** include:

4. Locate and install penetrations. | 4.1. Locations and dimensions of penetrations are set out in accordance with designated tolerance from engineering drawings.
| 4.2. *Penetrations, block-outs and cast-in services* are constructed where required to engineering drawings.
| 4.3. Penetrations are installed to requirements of engineering drawings.
5. Conduct jump system. | 5.1. External prefabricated system wall shutters are erected and fixed to engineer's and manufacturer specifications.
| 5.2. Shutters are loosened and stripped according to manufacturers' and OHS requirements.
| 5.3. Rigger is communicated with to activate electrical/hydraulic jacking of the system to the new position.
| 5.4. Trailing platforms are installed to engineer's specifications.
| 5.5. Formwork is dismantled in accordance with manufacturer and engineer's specifications.
6. Clean up. | 6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
| 6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
REQUIRED SKILLS AND KNOWLEDGE

- enable clear and direct communication, using questioning to identify and
  confirm requirements, share information, listen and understand
- follow instructions
- read and interpret:
  - documentation from a variety of sources
  - plans, specifications and drawings
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a
  range of cultural and ethnic backgrounds and with varying physical and mental
  abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- common formwork faults, problems and suitable rectifications
- concrete characteristics and properties in formwork
- construction terminology
- electrical/hydraulic jacking systems
- formwork materials and techniques
- hydraulic pressures applied to formwork
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for the calculation of material requirements
- quality requirements for jump form formwork
- workplace and equipment safety requirements.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete, as part of a team, the erection and dismantling of jump form formwork for one operation.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
EVIDENCE GUIDE

- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability
EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to erecting and dismantling jump form formwork
- relevant Australian standards
- safe work procedures related to erecting and
RANGE STATEMENT

dismantling jump form formwork
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.
- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.

Planning and preparation

include:

Safety (OHS) is to be in accordance with state or territory legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - personnel
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working with dangerous materials
  - organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

Tools and equipment

include:

- air compressors and hoses
- chisels
RANGE STATEMENT

- hammers
- levelling equipment
- measuring tapes and rules
- nail bags
- pneumatic wrenches
- power drills
- power leads
- proprietary jump form formwork
- spanners
- spirit levels.

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:
- formwork system components and bolts.

Environmental requirements include:
- clean-up protection
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Formwork:
- includes prefabricated or in situ, but is to be rigid to withstand the mass of wet concrete and actions imposed during placement
- for construction of formwork it is critical to comply with regulations and specifications for height, level and loadings
- includes timber, metal and includes prefabricated components.

Jump form formwork:
- is formwork which is initially erected and then moved (jumped) up to its next position as a whole system
- may apply to cores, walls, silos, chimneys or lift shafts.

Penetrations, block-outs and cast-in services:
- make provision for services by other contractors
- may be construction of timber, metal, styrene foam or prefabricated.

Unit Descriptor

Unit descriptor
This unit of competency specifies the outcomes required to erect and dismantle slip form formwork to form wall structures where the formwork process is continuous. It includes curved or straight slip form formwork.

Application of the Unit

Application of the unit
This unit of competency supports achievement of skills for erecting and taking down slip form formwork for placing of concrete in a range of construction projects. Slip form formwork requires work as a member of a mixed trades team, including carpenters, riggers, electricians, concreters and steel fixers.

Licensing/Regulatory Information

--- | ---
4. Locate and install penetrations. | 4.1. Locations and dimensions of penetrations are set out in accordance with designated tolerance from engineering drawings.  
4.2. **Penetrations, block-outs and cast-in services** are constructed where required to engineering drawings.  
4.3. Penetrations are installed to requirements of engineering drawings.  
5. Conduct slip system. | 5.1. External prefabricated system wall shutters are erected and fixed to engineer's and manufacturer specifications.  
5.2. Shutters are loosened and stripped according to manufacturer's and OHS requirements.  
5.3. Rigger is communicated with to activate electrical/hydraulic jacking of the system to the new position.  
5.4. Trailing platforms are installed to engineer's specifications.  
5.5. Formwork is dismantled in accordance with manufacturer and engineer's specifications.  
6. Clean up. | 6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.  
6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and
REQUIRED SKILLS AND KNOWLEDGE

- confirm requirements, share information, listen and understand
- follow instructions
- read and interpret:
  - documentation from a variety of sources
  - plans, specifications and drawings
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:
- common formwork faults, problems and suitable rectifications
- concrete properties
- construction terminology
- electrical/hydraulic jacking systems
- formwork materials and techniques
- hydraulic pressures applied to formwork
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for the calculation of material requirements
- quality requirements for slip form formwork
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete, as part of a team, the erection and dismantling of the slip form formwork for one operation.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
EVIDENCE GUIDE

- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability
EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

1.4. **Tools and equipment** selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. **Environmental requirements** are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied. |
| 2. Conduct levelling procedures using rise and fall method. | 2.1. Instrument is accurately set up and tested for operation before commencing levelling activities.  
2.2. Datum point is set up or located.  
2.3. Readings are taken to datum and at nominated or selected stations, to project specifications.  
2.4. Backsights, intermediate sights and foresights are identified and levels are booked.  
2.5. Instrument is transferred to another location and the process is repeated to project specifications.  
2.6. Accuracy of readings is established using rise and fall method of calculation.  
2.7. Reduced levels for all stations are identified from the level book calculations. |
| 3. Conduct levelling procedures using height of instrument method. | 3.1. Instrument is accurately set up and tested for operation before levelling, including levelling equipment/device tolerance checks.  
3.2. Datum point is set up or located.  
3.3. **Level readings** are taken to datum and the interim... |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
 | reduced level is established.
 | 3.4. Readings are taken at nominated or selected stations to project specifications.
 | 3.5. Instrument is transferred to another location and the process is repeated to project specifications.
 | 3.6. Reduced levels are calculated using height of instrument method.
 | 3.7. Reduced levels for all stations are identified from the calculations and *heights and levels recorded*.
 | 4. Calculate distances using stadia lines.
 | 4.1. Cross hair readings are checked for accuracy using stadia lines.
 | 4.2. Distances are calculated from instrument to stations using staff, stadia lines and identified factor of the levelling instrument.
 | 5. Clean up.
 | 5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
 | 5.2. Tools and equipment are cleaned, checked, *levelling devices maintained* and stored in accordance with manufacturer recommendations and standard work practices.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- basic levelling
- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
REQUIRED SKILLS AND KNOWLEDGE

- plans, specifications and drawings
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application and requirements for line, level and plumb in construction projects
- basic construction and levelling processes
- construction plan, symbols and construction terminology
- construction terminology
- job safety analysis (JSA) and safe work method statements
- levelling device types, characteristics, technical capabilities and limitations
- levelling techniques commonly used in construction work
- processes for interpreting engineering drawings and sketches
- processes for setting out
- project quality requirements
- site and equipment safety (OHS) requirements
- site isolation and traffic control responsibilities and authorities.
# Evidence Guide

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- set up and test levelling equipment
- transfer levels and record differences in height undertaking a closed traverse using both the rise and fall method and the height of instrument method on a minimum of three projects
- confirm accuracy of the readings taken, including set up and movement of device in two locations
- accurately record the results of each levelling procedure to organisational requirements
- calculate distances using an optical levelling instrument and levelling staff.

### Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge
EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the
EVIDENCE GUIDE

workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
RANGE STATEMENT

- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to the conduct of basic demolition processes
- relevant Australian standards
- safe work procedures related to the conduct of basic demolition processes
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Safety (OHS) is to be in accordance with state or territory legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - personnel
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
RANGE STATEMENT

**Tools and equipment** include:
- workplace environment and safety.
- automatic level and levelling staff
- bolt cutters
- chalk lines
- hammers
- laser levels
- laser targets
- marking equipment
- measuring tapes and rules
- plumb bobs
- saw stools
- saws
- signage for laser levelling
- spirit levels and straight edges
- string lines
- water levels
- wooden and steel pegs.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

**Environmental requirements** include:
- clean-up management
- waste management.

**Statutory and regulatory authorities** include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Levelling activities** include:
- approximate distances and the transfer of the data points
- location of services
- positioning offsets and recovery pegs for construction projects or for use in determining quantity from calculations.
- recording ground levels at respective critical set out points
- recording heights or levels
- recording slab or pad levels for placement of steel columns or masonry piers
- recording or checking levels in drainage
- setting up devices
- shooting levels for concrete slabs.
RANGE STATEMENT

- shooting levels for excavation/footings
- sloping blocks
- transferring levels/heights for formwork
- those undertaken in a team arrangement.

**Levelling** procedures include:
- closed traverse.

**Levelling equipment/device tolerance checks** include:
- a two peg test for automatic level
- reverse readings for spirit level.

**Level readings** include:
- datum backsight, foresight and intermediate sight from stations with known or unknown reduced levels, using height of instrument and rise and fall calculations.

**Heights and levels recorded** may be by:
- chalk or nail mark
- datum/survey peg
- drawing or sketch
- marks on vertical surface
- verbal or written instructions.

**Levelling devices maintained**: include:
- authorised servicing
- cleaning
- monitoring, recording and reporting faults
- may include the conduct of authorised minor replacements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Gather information. | 1.1. Details of project requirements are obtained from information supplied for planning and preparation of estimating and costing.  
1.2. Details of products and services to be provided are compiled.  
1.3. Delivery point and methods of transportation are determined where necessary.  
1.4. Details are recorded in accordance with enterprise practice. |
| 2. Estimate materials, time and labour. | 2.1. Types, quantities and quality requirements of materials required for the construction project are estimated, including meeting environmental requirements.  
2.2. Labour requirements to achieve construction outcomes and/or perform required services are estimated.  
2.3. Time requirements to construct and/or perform required services are estimated. |
| 3. Calculate costs. | 3.1. Total materials, labour and overhead cost allowances are calculated in accordance with enterprise procedures.  
3.2. Total job cost is calculated, including overheads and mark-up percentages.  
3.3. Final cost is calculated. |
| 4. Document details and verify where necessary. | 4.1. Details of costs and charges are documented in accordance with enterprise practice.  
4.2. Costs, calculations or other details are verified in accordance with enterprise practice.  
4.3. Details are documented for future reference in accordance with enterprise practice. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills
REQUIRED SKILLS AND KNOWLEDGE

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults

  - use and interpret non-verbal communication, such as hand signals
  - written skills to record details of project, including costs and charges
- numeracy skills to apply calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- construction materials
- construction terminology
- costing techniques and procedures
- job safety analysis (JSA) and safe work method statements
- labour rates and overheads
- material sizes
- plans, specifications and drawings
- processes for calculating material requirements
- quality requirements
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- document and communicate work-related information, including work orders, specifications, products, materials and labour requirements, costing calculations for products, materials and labour, and special conditions for a specified construction project
- estimate and cost a specified project, including:
  - estimate quantities of material required
  - determine types and amount of labour required to complete the work
  - estimate time required to complete the work
  - estimate overheads associated with the project.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements

where specified
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and specifications
- relevant Australian standards
- safe work procedures related to carrying out basic estimation
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Planning and preparation include:
- gathering and basic analysis of project plans and specifications
- confirmatory work site inspection and determination of work requirements.

Estimation and costing includes:
- overhead allowances
- labour and materials
- use of calculators and/or computers running appropriate software for estimating and calculating necessary details.

Quality requirements include:
- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Materials for estimation and job costing include:
- bagged materials
- bricks
- building elements, such as roof trusses, lining materials, flooring materials, prefabricated elements, boxed, drummed and tinned materials
- other sheet materials applicable to construction
- reconstituted timber products
- sand
- soil and aggregates
- timber.

Environmental requirements include:
- clean-up management
- waste management.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**
REQUIRED SKILLS AND KNOWLEDGE

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - establish and communicate deadlines
  - follow supervisor's instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - report variations or difficulties in performance and additional support required
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record resource use
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - numeracy skills to apply measurements and make calculations
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- basic understanding of sustainability on a construction work site
- common construction industry terminology and interpersonal communication requirements
- construction industry quality requirements
- construction industry size, scope of work and national economic importance
- environmental and resource hazards/risks, including compliance with relevant legislation associated with the environment, job specifications and procedures
- federal, state, and territory environmental or sustainability legislation, regulations and codes of practice relevant to this sector and applicable to own work role, e.g. Building Code of Australia (BCA)
- job safety analysis (JSA) and safe work method statements
- relevant environmental and resource efficiency systems and practices
- relevant industrial awards and enterprise agreements
REQUIRED SKILLS AND KNOWLEDGE

- relevant legislation, regulations and workplace requirements relating to provisions covering discrimination and equal employment opportunity
- site meeting procedures
- typical site/team work structure, methods and communication processes.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant construction industry information, standards and specifications
- comply with site safety plans and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- communicate and work effectively and safely with others
- explain to others scope, employment and economic importance of the construction industry
- locate and identify documentation on site employment conditions and source of these conditions
- set personal and team work goals and participate in site meetings
- respond to personal conflict situations
- identify personal development needs and apply learning to future work tasks
- follow workplace procedures according to instructions given and report information only at own level of responsibility, including:
  - complying with environmental/sustainability legislation, and organisational and procedural requirements relevant to specific daily responsibilities
  - use of tools, such as an inspection checklist
EVIDENCE GUIDE

to collect and measure relevant information on resource and energy consumption

- participating in and supporting improved environmental use of resources
- recognising efficiency processes involving work practices and reporting as required.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements

Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and
RANGE STATEMENT

regional contexts) may also be included.  

Construction job roles include:

- bricklaying and blocklaying
- carpentry
- concreting
- demolition
- dogging
- formwork and falsework
- painting and decorating
- rigging
- roof tiling
- scaffolding
- solid plastering
- steelfixing
- wall and ceiling lining
- wall and floor tiling
- waterproofing.

Construction employment conditions include coverage of:

- AWAs
- bulletins and newsletters
- enterprise agreements
- industrial awards
- industry and workplace codes of practice
- workplace agreements.

Organisational requirements include:

- access and equity principles and practice
- anti-discrimination and related policy
- business and performance plans
- ethical standards
- goals and objectives
- legal and organisation policy, guidelines and requirements
- quality
- systems and processes.

Responsibilities and duties include:

- job description and employment arrangements
- organisation's policy relevant to work role
- skills training and competencies
- supervision and accountability requirements, including OHS
- team structures.

Safe work methods and practices

- access to site amenities, such as drinking
RANGE STATEMENT

include:

- water and toilets
- day to day observation of OHS policies and procedures
- emergency procedures and use of basic firefighting equipment
- general requirements for safe use of plant and equipment
- general requirements for use of personal protective equipment and clothing
- housekeeping to ensure a clean, tidy and safer work area
- no drugs and alcohol at work
- preventing bullying and harassment
- risk assessment
- smoking in designated areas
- storage and disposal of waste and debris according to established procedures and environmental protection requirements.

Australian government and state and territory OHS legislative requirements include:

- Australian standards
- construction industry OHS standards and guidelines
- duty of care
- health and safety representatives, committees and supervisors
- licences, tickets or certificates of competency
- National Code of Practice for Induction Training for Construction Work
- national safety standards
- OHS and welfare Acts and regulations
- safety codes of practice, and JSA and safe work method statements.

Work group members include:

- coach or mentor
- employee representative
- peers, work colleagues, team, enterprise and other members of the organisation
- supervisor or manager.

Personal protective equipment includes:

- caps
- dust masks and respirators
- ear muffs and plugs
- gloves
- hard hats
RANGE STATEMENT

- high visibility vests
- jackets
- overalls
- safety glasses/goggles
- steel capped boots.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

**Information** includes:
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements
- relevant Australian standards
- safe work procedures or equivalent
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

**Teams:**
- is a generic term that refers to the site work organisation
- may be known/titled locally as crews, gangs, shifts or other industrially and historically acceptable term.

**Learning needs** and development processes include competency achievement/maintenance processes, which include:
- assessment processes
- formal vocational education and training
- on-the-job training and job rotation
- recognition of prior learning
- refresher training.

**Environmental and resource efficiency issues** include:
- minimisation of environmental risks and maximisation of opportunities to improve environmental performance and to promote more efficient production and consumption of natural resources on the work site, for
RANGE STATEMENT

example by minimising waste, through participation in or use of a waste minimisation system

- using resources efficiently, including reducing material usage and supporting efficient energy and water use, such as:
  - air testing pipes
  - efficient fittings
  - insulation
  - site management to minimise stormwater pollution
  - strategic use of materials to reduce off-cuts and wastage
  - tool maintenance
  - transportation
  - using alternative practices, procedures and materials/products that reduce or eliminate resource consumption.

Appropriate techniques for recording resource use include:

- examination and documentation of resources on work site
- examination and measurement of resources, materials and products from suppliers
- examination of relevant information and data on efficiency and resource reduction
- instructions and reports from other parties involved in the process of identifying and implementing improvements.

Environmental hazards include:

- substances (e.g. resource, waste, by-product) that are dangerous to living things in the environment, such as humans, animals, plants and water, including storage, handling and disposal of the following substances:
  - toxic
  - corrosive
  - flammable
  - explosive
  - may be infectious or have other dangerous characteristics.

Environmental requirements are to cover workplace quality management and include:

- clean-up protection
- stormwater protection
- waste management.
RANGE STATEMENT

Suggestions for sustainable use of resources includes ideas that help to:

- ensure appropriate use of materials and make recommendations to others to use sustainable products and practices
- identify alternative sources of energy or energy conservation
- improve energy and water efficiency
- prevent and minimise risks and maximise opportunities, such as use of solar or grey water, and other alternative forms of energy/resources where appropriate
- reduce emissions of greenhouse gases by reducing waste, transportation and use of non-renewable resources, such as energy, water, fuel, and materials
- use alternative products/materials, procedures and installation techniques to support efficiency and sustainability
- use renewable, recyclable, reusable and recoverable resources (energy, water, materials/products and waste).

Compliance with environmental requirements includes:

- meeting relevant acts, laws, by-laws and regulations or best practice to support compliance in environmental performance and sustainability at each level as required (such as Environmental Protection, Biodiversity Conservation Act, BCA), including:
  - federal
  - industry
  - international
  - local government
  - organisation
  - reporting breaches
  - state and territory.

Designated personnel to be contacted are determined by the enterprise and include:

- managers
- supervisors
- other senior personnel assigned to particular work site roles, such as safety officer.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
1. Identify task requirements. | 1.1. Task requirements are determined or confirmed and clarified to ensure correct interpretation of specifications or requirements.
2. Plan steps to complete tasks. | 2.1. Task is interpreted and relevant steps are identified to ensure efficient conduct of work, and in accordance with safety (OHS), environmental requirements and quality requirements.  
2.2. Steps are planned in conjunction with others.
3. Organise work. | 3.1. Work activity is organised with other involved personnel to ensure safe and appropriate sequencing of tasks.  
3.2. All necessary documentation related to job planning progress is completed and recorded in accordance with workplace requirements.
4. Review planning and organising process. | 4.1. Planning and organising of work activities is reviewed to establish the effectiveness of the process.  
4.2. Ideas for improvement are suggested and implemented in future planning and organising of work activities.

Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine or confirm and clarify task requirements  
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand  
  - plan steps and organise work activities with others  
  - use language and concepts appropriate to cultural differences  
  - use and interpret non-verbal communication, such as hand signals  
  - written skills to complete workplace documentation  
  - evaluating own actions and make judgements about performance and necessary
REQUIRED SKILLS AND KNOWLEDGE

improvements

- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- interpret information relevant to the work activity including plans, specifications and drawings and documentation from a variety of sources
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.
  - using time management techniques to organise and prioritise work.

Required knowledge

Required knowledge for this unit is:

- work activity that needs to be planned and organised
- work safety, environmental and quality requirements
- workplace personnel that are to be involved in planning and organising tasks
- workplace reporting requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to plan and organise a variety of work activities. Evidence should be collected over a period of time in a range of general construction relevant contexts and include dealings with an appropriate range of situations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.
EVIDENCE GUIDE

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.
EVIDENCE GUIDE

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working with dangerous materials
- organisational first aid
RANGE STATEMENT

- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

Environmental requirements include:
- clean-up management
- noise and dust
- vibration
- waste management.

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Gather, convey and receive information. | 1.1. Verbal and written instructions are gathered, received and responded to with correct actions.  
1.2. Instructions are conveyed accurately.  
1.3. Work *signage interpretation* and other *safety (OHS)* requirements are responded to with correct action.  
1.4. *Information* is conveyed in English, and the information is *interpreted* and message *confirmed*.  
1.5. Questions are used to gain additional information and to clarify understanding, using appropriate *communication transfer* techniques. |
| 2. Carry out face-to-face routine communication. | 2.1. Routine instructions and messages are received and followed.  
2.2. Workplace procedures are carried out to company requirements in *communication with others*.  
2.3. Information from a range of sources is accessed and interpreted using a variety of *communication modes*.  
2.4. Information is selected and sequenced correctly.  
2.5. Verbal and written reporting is completed where required. |
| 3. Apply visual communication. | 3.1. Visual communication is used that follows accepted industry practice or social conventions.  
3.2. Attention of communicating parties is obtained, confirmed and/or acknowledged.  
3.3. Intention of the visual communication is clarified and confirmed at each step.  
3.4. Visual communication that is unclear or ambiguous is questioned or visually cancelled.  
3.5. Instances of unclear visual communication are followed up to avoid repeated problems. |
| 4. Participate in simple on-site meeting processes. | 4.1. Correct process for on site meetings is identified and followed to predetermined or agreed procedures.  
4.2. Responses are sought and provided to others in the group.  
4.3. Constructive contributions are made.  
4.4. Goals or outcomes are identified and/or recorded. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to communicate with others to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret:
    - signage and other relevant documentation
    - simple instructions and messages
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to complete records and reports as required
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - numeracy skills to apply measurements and make calculations
  - organisational skills, including the ability to plan and set out work
  - participating in meetings
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- bulletins
- checklists
- communication devices
- company procedures
- construction terminology
- emergency procedures
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS) and materials handling methods
- memos
- OHS requirements
- project quality requirements
REQUIRED SKILLS AND KNOWLEDGE

- signage
- work instructions
- workplace policies.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use communication equipment
- communicate and work effectively and safely with others
- interpret all signage accurately
- complete tasks successfully following instruction
- convey pieces of information to other workers accurately
- fill out workplace documents accurately
- frame questions at an on-site meeting in a range of contexts or occasions over time.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.
EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances
EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Signage interpretation includes:

- directional signs
- facility or location signs and hazards
- site safety signs
- traffic signs.

Safety (OHS) is to be in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and
RANGE STATEMENT

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements
- relevant Australian standards
- safe work procedures or equivalent
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Interpretation of information includes:

- bulletins
- checklists
- company procedures and regulations
- delivery dockets
- emergency procedures
- induction procedures
- industrial agreements
- instructions
- job safety analysis (JSA) and safe work method statements
- maps
- MSDS
- OHS requirements
- quality requirements
- work schedules
- workplace policies.

Communication transfer includes use of telephones (including mobile) and written communication, and includes:

- email
- facsimile
- internet
- two-way radios.

Communication with others includes:

- contractors
- co-workers
RANGE STATEMENT

- supervisors
- the public
- trainers.

Communication modes includes:
- active listening
- group interaction
- interpreting signage
- meetings
- questioning
- verbal and written.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:
REQUIRED SKILLS AND KNOWLEDGE

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record measurements, calculations and quantities
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements, calculations and geometry
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- basic calculators
- communication devices
- company procedures
- construction terminology
- job safety analysis (JSA) and safe work method statements
- measuring, calculating, geometry and determination of quantities
- processes for care of measuring equipment
- project quality requirements
- site and equipment safety (OHS) requirements
- tolerances.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- complete measurements, calculations and determination of quantities for different projects of varying complexity in a range of contexts or occasions over time
- calculate each of the following using a realistic construction task or example:
  - length
  - perimeter
  - circumference
  - area
  - volume
  - number
  - ratio
  - percentage
  - conversion of metres to millimetres and millimetres to metres
  - measure using a rule or tape measure five separate tasks within 1mm accuracy.
EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.
EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace.
- where the assessment is part of a structured learning experience, the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
RANGE STATEMENT

- manufacturer specifications and instructions
- maps
- material safety data sheets (MSDS)
- memos
- organisation's work specifications and requirements
- plans and specifications
- regulatory and legislative requirements
- relevant Australian standards
- safe work procedures or equivalent
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Safety (OHS) is to be in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan and may include:

- clothing and equipment
- handling of materials
- hazard control
- hazardous materials and substances
- organisational first aid
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

Equipment includes:

- calculators and laser equipment
- rulers
- tape measures
- trundle wheels.

Measurements are to:

- be in metric scale
- cover all necessary calculations.

Areas and volumes include:

- calculating regular and irregular shapes, such as rectangles, squares, circles, triangles, trapeziums, cubes, cones, pyramids and cylinders that represent calculations taken in a construction environment.

Calculation factors:

- include length, area, weight, height, width, depth, volume, mass, scales, ratios, perimeters, quantities, numbers, grade, percentages, addition, subtraction, multiplication and division
- are to be performed manually and with the aid of a calculator.
RANGE STATEMENT

*Material quantities* are to be:

- calculated in either packed, bulk, loose or compacted states
- converted to volumes in the other states.

Unit Descriptor
This unit of competency specifies the outcomes required for tilt-up work induction training within the construction industry. Licensing requirements will apply to this unit of competency depending on the regulatory requirements of each jurisdiction.

Application of the Unit
This unit of competency supports achievement of tilt-up work knowledge required prior to entering tilt-up workplaces. It meets the needs of workers requiring tilt-up work induction training according to legislative requirements.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

1. **Identify tilt-up construction and risk management processes.**
   - 1.1 Relationship is identified between each *stage of the tilt-up construction process* and the following stage, and typical faults, problems, hazards and possible effects if design and safety requirements are not met.
   - 1.2 Basic principles of risk management and duty holders responsible are identified.
   - 1.3 Minimum requirements for a safe work method statement for each task as outlined in the *national code of practice*, and the duty holder responsible for its preparation and compliance are identified.
   - 1.4 Minimum requirements are identified for a work plan and/or work health and safety (WHS) management plan for tilt-up construction, as outlined in the national code of practice.
   - 1.5 Available *skill training* opportunities relevant to own work, role and responsibilities are identified.

2. **Identify information relating to safe tilt-up construction.**
   - 2.1 *Regulatory information* relevant to own work, role and responsibilities is identified.
   - 2.2 Roles and responsibilities of self and others relevant to own work and role in tilt-up construction are identified.
   - 2.3 General work procedures, *documentation, drawings and plans* for carrying out the tilt-up construction process relevant to own work, role and responsibilities are identified.
   - 2.4 General safety requirements for *equipment and tools* used in the tilt-up construction process relevant to own work, role and responsibilities are identified.

3. **Identify procedures to maintain safety of self and others.**
   - 3.1 Communication with others is undertaken to establish that key safety requirements have been met for preceding stages of tilt-up construction.
   - 3.2 General procedures for responding to, rectifying and reporting faults, problems and hazards relevant to own work, role and responsibilities are identified.
3.3 Methods and procedures used to control tilt-up construction hazards are identified, including the content of the work plan and/or WHS management plan and safe work method statements relevant to own work, role and responsibilities.

3.4 Sequence of tasks and activities relevant to own work is identified and adequacy of the associated safe work method statement is reviewed by conducting a job safety analysis.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication and interpersonal skills to:
  - contribute to the discussion of workplace hazards and risks
  - ask effective questions
  - collaborate with colleagues
  - relay information to others
  - report on WHS issues
- language and literacy skills to understand plans and procedures, including WHS requirements, such as:
  - safety signs and symbols
  - safe work method statements
  - safe working procedures

Required knowledge

- construction terminology
- hazard identification and risk control related to tilt-up work
- job safety analysis (JSA) and safe work method statements (SWMS)
- requirements for planning, preparing and carrying out the tilt-up construction process as relevant to own work, role and responsibilities
- safety equipment used on construction work sites
- stages in the tilt-up construction process
- WHS standards, legislative requirements and codes of practice related to tilt-up work
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

Competency is to be assessed only after completion of the General Induction Training Program specified by the National Code of Practice for Induction for Construction Work.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence must confirm understanding and knowledge of the following:

- relevant legal responsibilities, codes of practice and standards for tilt-up construction work
- the range of common tilt-up construction hazards and procedures for the assessment of risks and application of the hierarchy of control
- an understanding of job safety analysis and safe work method statements.

**Context of and specific resources for assessment**

The relevant WHS authority may have specific requirements concerning the expertise necessary to be a subject expert for assessment of this unit. Assessment must be made according to any such requirements.

Procedures and documentation should cover those used in the workplace.

Resources must be available to support the program including:

- relevant standards, regulations and code of practice for tilt-up construction
- Australian standards AS3850 and AS3600
- participant materials and other information
- drawings and specifications
- tilt-up slab related plans
- safe load tables
- safe work method statements
- JSA materials.

A range of assessment tools and resources should be used to suit the learning preferences or special learning needs of individual participants.
**Method of assessment**

Assessment methods may include more than one of the following:

- practical assessment
- oral questioning
- written test
- work-based activities
- problem solving scenarios
- simulated project based activity.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Stages of the tilt-up construction process cover:**

- design and manufacture
- handling, storage and transportation
- cranage and erection
- temporary bracing, stabilisation and incorporation of concrete panels
- demolition

**National code of practice** refers to:

- National Code of Practice for Precast, Tilt-Up and Concrete Elements in Building Construction.

**Skills training** opportunities could include completing further training, including:

- CPCCBC4022A Supervise tilt-up work
- CPCCCO3028A Carry out tilt panel construction
- CPCRI3015A Perform advanced tilt-up slab erection

**Regulatory information** includes general WHS requirements, such as:

- Australian standards AS3850 and AS3600
- duty holder responsibilities
- emergency procedures
- relevant standards, regulations and codes of practice for tilt-up and pre-cast concrete construction
- training, supervision and risk management in the context of tilt-up and pre-cast concrete construction.

**Documentation, drawings and plans** include:
- design provisions and drawings
- erection and crane drawings and documentation
- JSA documentation
- marking plan and shop drawings
- prefabricators and engineers’ inspection reports and statements
- safe work method statements
- specifications
- transport management plan
- work plan and/or WHS management plan.

**Equipment and tools** include:
- bracing
- cranes
- elevated work platforms
- manual tools
- mobile scaffolding
- portable electric and pneumatic tools
- props
- rigging equipment
- rigging gear
- safety net and static lines.

**Hazards** include anything with the potential to cause injury, harm or ill health, such as:
- environmental factors, e.g. wind, temperature, noise and lighting
- overhead or underground services
- trees, buildings and structures
- uneven or unstable ground
- unstable panels during lifting.

**Safe work method statement** is a statement that:
- describes how safety measures will be implemented to do the work safely
- describes the control measures that will be applied to the work activities
- identifies work activities assessed as having safety risk or risks
- includes a description of the equipment used in the work, the qualifications of the personnel doing the
work, and the training required to do the work safely
• states the safety risk or risks.

**Job safety analysis** is:

• a technique that breaks a task into steps
• identifies the hazards and appropriate control measures for each step.

**Unit Sector(s)**

**Functional area**

**Unit sector** Construction

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify types of drawings and their functions. | 1.1. Main types of *plans and drawings* used in the construction sector of the industry are identified.  
1.2. *Key features* and functions of each type of drawing are identified.  
1.3. *Quality requirements* of company operations are recognised and adhered to.  
1.4. *Environmental requirements* and controls are identified from job plans, specifications and environmental plan. |
| 2. Recognise amendments. | 2.1. Title panel of *project documentation* is checked to verify latest amendments to drawing.  
2.2. Amendments to *specifications* are checked to ensure currency of *information* and conveyed to others where appropriate. |
| 3. Recognise commonly used symbols and abbreviations. | 3.1. Construction symbols and abbreviations are recognised.  
3.2. Legend is located on project drawings, and symbols and abbreviations are correctly interpreted. |
| 4. Locate and identify key features on a site plan. | 4.1. Orientation of the plan with the site is achieved.  
4.2. Key features of the site are identified and located.  
4.3. Access to site is gained and services, main features, contours and datum are identified. |
| 5. Identify project requirements. | 5.1. Dimensions for project and nominated locations are identified.  
5.2. Construction types and dimensions for nominated locations are identified.  
5.3. Environmental controls and locations are identified.  
5.4. Location, dimensions and tolerances for ancillary works are identified. |
| 6. Read and interpret job specifications. | 6.1. Job specifications are identified from drawings, notes and descriptions.  
6.2. Standards of work, finishes and tolerances are identified from the project specifications.  
6.3. *Material attributes* are identified from specifications. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials

- numeracy skills to apply measurements and make calculations, including heights, areas, volumes and grades

- organisational skills, including the ability to plan and set out work

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- basic calculations of heights, areas, volumes and grades
- commonly used construction symbols and abbreviations
- construction terminology
- drawing conventions
- features of plans and elevations, including direction, scale, key, contours, symbols and abbreviations
- job safety analysis (JSA) and safe work method statements
- key features of formal job specifications
- processes for application of scales in plan preparation and interpretation
- project quality requirements
- site and equipment safety (OHS) requirements
- techniques for orienting/confirming the orientation of a plan.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- communicate and work effectively and safely with others
- for a minimum of two different projects, read and interpret the project plans, including:
  - confirmation of amendment status and drawings confirmed ‘for construction’
  - orientation of plans to the ground
  - six key features on both the plan and the site
  - confirmation of six items of information from the title block of the project plans
  - six construction dimensions, levels and locations from the project plans
  - six ancillary works dimensions, levels and locations from the project plans
- for a minimum of two formal specifications, identify the dimensions, material requirements and processes to be followed.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements.
EVIDENCE GUIDE

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
EVIDENCE GUIDE

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Plans and drawings include:
- construction plans
- cross-sectional plans
- dimensions and notes
- illustrations
- longitudinal plans
RANGE STATEMENT

- project specifications
- site plans
- structural detail and specification providing illustrations and dimensions.

**Key features** of plans and specifications include:

- characteristics
- compatibility
- construction
- location
- pattern dimension
- quantities
- sizes
- type of product or service.

**Quality requirements** include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

**Environmental requirements** include:

- clean-up management
- waste management.

**Project documentation** includes:

- contracts
- drawings
- schedule of rates
- specifications
- standard procedures and practices
- supplementary specifications
- work schedules.

**Specifications** include:

- detail relating to materials and quality of work, quality assurance, nominated subcontractors, and provision of site access/facilities
- details relating to performance, including:
  - characteristics
  - material types
  - standards of work
  - tolerances
  - treatments and finishes.

**Information** includes:

- diagrams or sketches and graphics
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- maps
RANGE STATEMENT

- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements.
- plans and specifications
- regulatory and legislative requirements pertaining to operations and the environment
- relevant Australian standards
- safe work procedures related to construction site operations
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

*Material attributes* include:

- characteristics
- construction requirements
- treatments and finishes
- types.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills for this unit are:

- communication skills to:
  - assist machine operator
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - numeracy skills to apply measurements and make calculations
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental
REQUIRED SKILLS AND KNOWLEDGE

- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:
- commonly used in-ground services and identification by relevant markers
- construction terminology
- excavation materials
- excavation techniques
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- regulatory requirements for excavation support for safe access
- safe work with common plant used on construction industry sites
- types, characteristics, uses and limitations of tools and equipment
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- determine from an existing set out, a mark out and then excavate site as part of an overall project to job specifications without damaging services.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
EVIDENCE GUIDE

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete
EVIDENCE GUIDE

confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- maps
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to carrying out excavations
- relevant Australian standards
RANGE STATEMENT

Planning and preparation include:

- safe work procedures related to carrying out excavations
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.
- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.
- automatic levels

Tools and equipment include:
RANGE STATEMENT

- brooms
- buckets
- crow bars
- hammers
- hoses
- laser levels
- levels
- measuring tapes and rules
- picks
- profiles
- saws
- set out pegs
- shovels
- staff
- straight edges
- string lines
- wheelbarrows.

Materials include:
- nails
- pegs
- sheet material shoring (timber and metal)
- timber.

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Environmental requirements include:
- clean-up management
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Set out includes:
- identification of services that can be damaged or impede excavation
- marking out of the project.

Excavations include:
- extension of existing structures, to provide provisions for new services and to modify or repair existing services
- provisions for footings/slabs to new structures
- shoring (timber, metal or piling)
RANGE STATEMENT

- those being undertaken on sloping ground, flat ground, wet ground, dry ground, loose ground or any type of foundation material, with mechanical assistance possibly required for rock
- trench/excavation support using sheet material.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
1. Gather information. | 1.1. Details of requirements are obtained and understood through discussion with customer or from information supplied.
 | 1.2. *Plans and specifications* are accessed and site is inspected to confirm full requirements.
 | 1.3. Details of products and services to be provided are developed and checked for availability and as fit for purpose.
 | 1.4. Delivery point and methods of transportation are determined where necessary.
 | 1.5. Details are accurately recorded and checked in accordance with workplace procedures.
2. Estimate materials, labour and time. | 2.1. Work, including preparatory tasks, is planned and sequenced to cover all necessary activity.
 | 2.2. *Types and quantities of materials* required for product work are estimated based on availability, fitness for purpose and current costs.
 | 2.3. Labour requirements to perform work are estimated to complete the work activity.
 | 2.4. Time requirements to perform work are accurately estimated and checked with appropriate personnel.
3. Calculate costs. | 3.1. Total materials, *labour and overhead costs* are calculated in accordance with workplace procedures and statutory requirements.
 | 3.2. Total work cost is calculated, including overheads and mark-up percentages set by appropriate personnel.
 | 3.3. Final cost for work is calculated and checked for accuracy.
4. Document and verify details. | 4.1. Details of costs and charges are clearly and accurately documented in accordance with workplace procedures.
 | 4.2. Costs, calculations or other details are verified in accordance with workplace procedures and current costing data.
 | 4.3. Quotation/tender documentation is prepared and verified.
 | 4.4. *Costing documents* are accurately completed for future reference in accordance with workplace procedures.
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- accessing current costing data
- accurately calculating labour costs
- accurately calculating material quantities
- producing accurate written costing information
- reading and interpreting drawings and material specifications.

Required knowledge

Required knowledge for this unit is:

- application of GST
- construction terminology
- environmental and sustainability requirements
- estimating and calculating processes
- impact of time on wages and other costs
- international system of units (SI) system of measurements relevant to the construction industry
- process of estimating and costing construction work
- quality requirements of construction projects
- relevant statutory and authority requirements related to estimating and costing work
- relevant tendering and contracting documentation
- safe work method statements
- sources of information and the processes for calculating material requirements
- standards applicable to the work to be undertaken, e.g. Australian standards and the Building Code of Australia.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications to the estimation and costing of work
- as a minimum, estimate and cost three varied jobs, including:
  - estimate quantities of material required
  - determine the types and amount of labour required to complete the work
  - estimate time required to complete the work
  - estimate overheads associated with the job
  - a written quotation/tender for each of the work requirements.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying
EVIDENCE GUIDE

- safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Plans and specifications include:
- sketches or drawings
- statements of requirements, including environmental requirements relating to the acquisition, use and disposal of materials
- materials lists and quantity schedules
- building codes
- materials specifications, including specifications of material reuse and recycling.

Types and quantities of materials include consumables such as:
- aluminium and steel framing and steel reinforcing
- bricks, masonry blocks and pavers
- cement, sand, aggregates and bonding agents
- decorative finishing materials, such as wallpaper, laminates, gilding materials, lacquers and polishes
- fixings, fastenings and adhesives
RANGE STATEMENT

- fuel and lubricants
- paint, solvents and cleaning agents
- tiles and glass
- timber, plywoods, fibreboard and composites
- wall and ceiling lining materials, plaster and platers products and external claddings.

Labour and overhead costs include:

- labour costs, such as:
  - personal protective equipment
  - site facilities
  - wages and on-costs
- overhead costs, such as:
  - administration
  - insurance
  - local government fees and charges
  - plant and equipment hire
  - transport
  - use of communication technology
  - waste removal fees.

Costing documents include:

- job sheets
- materials list and estimates
- quotations and tenders
- work schedules.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - numeracy skills to apply measurements and make calculations
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
REQUIRED SKILLS AND KNOWLEDGE

- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

**Required knowledge**

Required knowledge for this unit is:

- carpentry materials
- carpentry materials handling techniques
- construction terminology
- hazardous materials
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- material sizes
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- types, characteristics, uses and limitations of tools and equipment
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- safely handle, sort and stack varying lengths of timber, providing quick access and use
- safely move and stack a given quantity of sheet material
- safely handle other building and construction components and materials for one construction project.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
EVIDENCE GUIDE

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and
EVIDENCE GUIDE

separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements
RANGE STATEMENT

pertaining to handling construction materials

- relevant Australian standards
- safe work procedures related to handling construction materials
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Planning and preparation include:

- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working with dangerous materials
  - organisational first aid
  - personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
  - use of firefighting equipment
  - use of tools and equipment
RANGE STATEMENT

**Tools and equipment** include:
- banders
- hammers
- pallets
- pinch bars
- scaffolding
- tin snips
- wheelbarrows.

**Materials:**
- timber, reconstituted timber products and other building and sheet materials applicable to building and construction, bricks, bagged materials, sand, soil and aggregates
- may include:
  - building elements such as roof trusses, lining materials, flooring materials, prefabricated elements, boxed, drummed and tinned materials, concrete masonry units, joinery units, floor and wall tiles, roofing tiles, steel sections/components, insulation and glass.

**Environmental requirements** include:
- clean-up management
- noise and dust
- vibration
- waste management.

**Statutory and regulatory authorities** include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Manual handling** includes:
- carrying materials using correct shifting techniques
- control of waste
- using pallets.

**Preparing for manual handling** includes:
- forklifts
- pallet jacks
- trucks.

**Hazardous materials** include:
- solvents, glues, coatings and inflammable materials
- non-toxic materials, including general building and construction materials.
RANGE STATEMENT

Handling procedures include:
- MSDS, calculation of quantities, stacking and storing of materials
- handling activities may require assistance of others where size or weight is a factor.

Dust suppression procedures include:
- keeping dust in the air to a minimum.

Protection of material includes:
- correct handling and stacking techniques without damaging the material
- protecting with covers.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Plan and prepare.  1.1 Work instructions and operational details are obtained, confirmed and applied from relevant information for planning and preparation.

1.2 Safety (OHS) requirements are followed in accordance with safety plans and policies.

1.3 Signage and barricade requirements are identified and implemented.

1.4 Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.

1.5 Environmental requirements are identified in accordance with environmental plans and statutory and regulatory authority obligations and are applied.

2 Identify and select hand, power and pneumatic tools.  2.1 Hand tools and power and pneumatic tools, their functions, operations and limitations are identified and selected.

2.2 OHS requirements for using hand, power and pneumatic tools are recognised and adhered to.

2.3 Pre-operational checks, including lubricants, hydraulic fluid and water, are completed according to manufacturer recommendations.

3 Use tools.  3.1 Hand tools used are appropriate to the task and materials, and are in accordance with OHS requirements.

3.2 Power and pneumatic tools are safely and effectively used in accordance with manufacturer recommendations and state or territory OHS requirements.

3.3 Tools are sharpened and maintained.
4 Identify, select and use plant and equipment.

4.1 **Plant and equipment** are selected and used consistent with OHS requirements and the needs of the job.

4.2 Pre-operational checks, including lubricants, hydraulic fluid and water, are completed according to manufacturer recommendations.

4.3 Plant and equipment are maintained in accordance with manufacturer recommendations and standard work practices.

5 Clean up.

5.1 Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

5.2 Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction terminology
- construction tool use techniques
- job safety analysis (JSA) and safe work method statements
- plans, specifications and drawings
- quality requirements
- relevant Acts, regulations and codes of practice
- safety manuals and instructions of tools and equipment
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use a representative range of tools, plant and equipment used in the workplace
- communicate and work effectively and safely with others
- identify and select hand tools for given tasks
- safely use and maintain a minimum of rule, tape, square, hammer, hand saw, hand plane, chisel, shovel, wheelbarrow, sledge hammer, pick, mattock, crow bar and pinch bar for given tasks
- identify power and pneumatic tools, including electrical and compressed air safety, for a given task.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets

Required Skills and Knowledge
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - numeracy skills to apply measurements and make calculations
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application and requirements for line, level and plumb in construction projects
- basic construction processes
- basic mathematical techniques associated with levelling
- construction terminology
- job safety analysis (JSA) and safe work method statements
- levelling device types, characteristics, technical capabilities and limitations
- levelling techniques related to essential tasks
- processes for interpreting engineering drawings and sketches
- processes for setting out
- project quality requirements
- site and equipment safety (OHS) requirements
REQUIRED SKILLS AND KNOWLEDGE

- site isolation and traffic control responsibilities and authorities
- symbols and construction terminology of construction plans.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- transfer levels and record differences in height on one project to job specifications using:
  - a spirit level and straight edge
  - levelling with water technique
  - laser levelling devices
  - optical levelling devices
- confirm accuracy of the readings taken for all above, including set-up and movement of device in two locations
- conduct a two peg test with an automatic level to confirm that instrument meets manufacturers' tolerances
- accurately record the results of each levelling procedure to organisational requirements.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role.
EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- maps
- material safety data sheets (MSDS)
RANGE STATEMENT

- memos
- organisation work specifications and requirements.
- plans and specifications
- relevant Australian standards
- safe work procedures related to performing levelling
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

**Basic levelling activities** include:

- setting up of devices
- recording of heights or level and the transfer of data points
- transferring levels/heights for formwork
- shooting levels for concrete slabs
- recording ground levels at respective critical set out points
- recording slab or pad levels for placement of steel columns or masonry piers
- recording or checking levels in drainage
- positioning offsets and recovery pegs for construction projects.

**Safety (OHS)** is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
RANGE STATEMENT

- working at heights
- working in confined spaces
- working in proximity to others
- working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

Tools and equipment include:

- chalk lines
- hammers
- marking equipment
- measuring tapes and rules, spirit levels and straight edges
- plumb bobs
- saws, bolt cutters and saw stools
- signage for laser levelling
- string lines and laser targets
- water levels, laser levels, optical levels and automatic levels
- wooden and steel pegs.

Environmental requirements include:

- clean-up management
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Heights or levels may be indicated by:

- chalk or nail mark and marks on vertical surface
- datum and survey peg
- drawing or sketch
- verbal or written instructions.

Levelling procedures:

- include open or closed traverse using height of instrument or rise and fall methods of reduction
- may be completed in a team arrangement.

Levelling devices:

- spirit level, levelling using water, laser level, optical level, string line, tape
RANGE STATEMENT

measure, automatic level, survey pegs, levelling staff and plumb bob

- may include:
  - boning rods, inclinometers and batter pegs/boards.

**Levelling device tolerance checks**

- reverse readings for spirit level
- two peg test for automatic level.

**Levelling device operator maintenance:**

- includes:
  - authorised servicing
  - cleaning
  - monitoring, recording and reporting of faults
- may include conduct of authorised minor replacements.

CPCCCM2006B Apply basic levelling procedures

Modification History

Minor editorial and formatting changes
Equivalent to CPCCCM2006A

Unit Descriptor

This unit of competency specifies the outcomes required to carry out levelling in a single plane for the purpose of establishing correct and accurate set-out of building components. It includes the set-up, testing and use of levelling devices, and establishing and transferring heights using a range of levelling equipment.

Application of the Unit

This unit of competency supports achievement of skills to undertake levelling work using a variety of methods and equipment commonly used in the construction industry, which includes working with others and as a member of a team.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare.
   1.1 Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information to prepare for basic levelling activities.
   1.2 Safety (OHS) requirements are followed in accordance with safety plans and policies.
   1.3 Signage and barricade requirements are identified and implemented.
   1.4 Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.
   1.5 Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.

2 Set up and use levelling device.
   2.1 Heights or levels to be transferred/established are identified from project plans or instructions for levelling procedures.
   2.2 Levelling devices are set up and tested in accordance with manufacturer instructions, including levelling device tolerance checks.
   2.3 Levelling staffs are accurately applied.
   2.4 Levels are shot and heights transferred to required location and marked and/or recorded to job
2.5 Results of levelling procedure are documented to organisational requirements.

3 Clean up.

3.1 Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

3.2 Tools and equipment are cleaned, checked, maintained, including levelling device operator maintenance, and stored in accordance with manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials

- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application and requirements for line, level and plumb in construction projects
- basic construction processes
- basic mathematical techniques associated with levelling
- construction terminology
- job safety analysis (JSA) and safe work method statements
- levelling device types, characteristics, technical capabilities and limitations
- levelling techniques related to essential tasks
- processes for interpreting engineering drawings and sketches
- processes for setting out
- project quality requirements
- site and equipment safety (OHS) requirements
- site isolation and traffic control responsibilities and authorities
- symbols and construction terminology of construction plans.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:
- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- transfer levels and record differences in height on one project to job specifications using:
  - a spirit level and straight edge
  - levelling with water technique
  - laser levelling devices
  - optical levelling devices
- confirm accuracy of the readings taken for all above, including set-up and movement of device in
two locations
- conduct a two peg test with an automatic level to confirm that instrument meets manufacturers’ tolerances
- accurately record the results of each levelling procedure to organisational requirements.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning...
knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- maps
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements.
- plans and specifications
- relevant Australian standards
- safe work procedures related to performing levelling
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Basic levelling activities may include:

- setting up of devices
- recording of heights or level and the transfer of data points
- transferring levels/heights for formwork
- shooting levels for concrete slabs
- recording ground levels at respective critical set out points
- recording slab or pad levels for placement of steel columns or masonry piers
- recording or checking levels in drainage
- positioning offsets and recovery pegs for construction projects.

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
• trip hazards
• work site visitors and the public
• working at heights
• working in confined spaces
• working in proximity to others
• working with dangerous materials
• organisational first aid
• personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
• use of firefighting equipment
• use of tools and equipment
• workplace environment and safety.

**Tools and equipment** may include:

- chalk lines
- hammers
- marking equipment
- measuring tapes and rules, spirit levels and straight edges
- plumb bobs
- saws, bolt cutters and saw stools
- signage for laser levelling
- string lines and laser targets
- water levels, laser levels, optical levels and automatic levels
- wooden and steel pegs.

**Environmental requirements** include:

- clean-up management
- waste management.

**Statutory and regulatory authorities** include:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Heights or levels** may be indicated by:

- chalk or nail mark and marks on vertical surface
- datum and survey peg
- drawing or sketch
- verbal or written instructions.

**Levelling procedures:**

- include open or closed traverse using height of
instrument or rise and fall methods of reduction
may be completed in a team arrangement.

**Levelling devices** may include:
- automatic level
- inclinometers
- laser level
- levelling staff
- levelling using water
- optical level
- string line
- survey pegs
- tape measure
- batter pegs or boards
- plumb bob.

**Levelling device tolerance checks** may include:
- reverse readings for spirit level
- two peg test for automatic level.

**Levelling device operator maintenance**: includes:
- authorised servicing
- cleaning
- monitoring, recording and reporting of faults
- may include conduct of authorised minor replacements.

Modification History
Minor changes made to range statement, including addition of photovoltaic (solar) panels
Equivalent to CPCCCM2007A

Unit Descriptor
This unit of competency specifies the outcomes required to apply safe and effective operation of explosive power tools (EPT), used to fasten materials or fix fasteners to bases. It includes both direct action and indirect action explosive powered fastening tools.

Application of the Unit
This unit of competency supports achievement of skills to safely and effectively use a range of EPT used in the construction industry.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Plan and prepare.  1.1 Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation.

1.2 Safety (OHS) requirements are followed in accordance with safety plans and policies.

1.3 Signage and barricade requirements are identified and implemented.

1.4 Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.

1.5 Material quantity requirements are calculated in accordance with plans and specifications.

1.6 Materials appropriate to work application are identified, obtained, prepared, safely handled and located ready for use.

1.7 Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.

2 Set out fasteners.  2.1 Minimum distances for set out from edge of substrate material are adhered to in accordance with legislation, regulations and codes of practice.

2.2 Material is located and temporarily held or fixed into designed position according to detailed drawings.

3 Use EPT.  3.1 EPT is checked for operation according to manufacturer specifications and safety (OHS) requirements for use of EPT.

3.2 Fastener is selected according to requirements of job.

3.3 Charge is selected to assessed requirements for material, base and penetration.
3.4 **Attachments** and accessories are installed to EPT in accordance with manufacturer specifications and safety (OHS) requirements.

3.5 **Fastener and charge** in EPT are located to manufacturer specifications.

3.6 EPT operation is carried out and fastener is fixed into place in accordance with manufacturer recommendations, legislation, regulations and codes of practice.

3.7 Fastening penetration is checked and appropriate depth into material is applied.

3.8 Power regulating device is adjusted for conditions.

3.9 Misfire procedures are carried out according to manufacturer recommendations, legislation, regulations and codes of practice.

3.10 Temporary holding and fixings are removed without damage to material.

4 Secure and store equipment and charges.

4.1 Charges are stored in designated container in accordance with legislation, regulations and codes of practice and used charges are recorded.

4.2 Unused fasteners, the EPT and attachments are stored in a carry case in line with manufacturer recommendations.

4.3 Logbook is checked and maintenance recorded according to manufacturer recommendations.

5 Maintain EPT and kit.

5.1 Safety features of tools are checked for serviceability in accordance with manufacturer operating manual.

5.2 Tools are cleaned and lubricated to manufacturer recommendations.

5.3 Periodic maintenance service is carried out to manufacturer specifications.

5.4 Diminished stocks of charges and fasteners are replenished to designed effectiveness of EPT kit.
6 **Clean up.**

6.1 Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

6.2 Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record maintenance in logbook
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - numeracy skills to apply measurements and make calculations
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction terminology
- EPT materials
- EPT charges and fasteners
- equipment safety manuals and instructions
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- relevant Acts, regulations and codes of practice
- security and storage procedures for equipment and charges
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:
- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- fix metal or timber to a steel, concrete or masonry base on one project of each to job specifications, including:
  - completion of stripping and assembly of the tool
  - completing log of serviceability
  - maintaining and cleaning
- selecting charges and fasteners applicable to base material and material being fixed
- misfire procedures
- using attachments
- complying with storage and security regulations and OHS requirements for the working environment
- selecting signage
- test fire.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to
confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

*Information includes:*

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to using EPT
- relevant Australian standards
- safe work procedures related to using EPT
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

**Planning and preparation** include:

- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.

**Safety (OHS)** is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - photovoltaic (solar) panels
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
• working at heights
• working in confined spaces
• working in proximity to others
• working with dangerous materials
• organisational first aid
• personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
• use of firefighting equipment
• use of tools and equipment
• workplace environment and safety.

**Tools and equipment** may include:
• direct action EPT
• indirect action EPT
• clamps and levels.

**Materials** include:
• timber
• metals
• patented fasteners.

**Environmental requirements** include:
• clean-up management
• noise and dust
• vibration
• waste management.

**Statutory and regulatory authorities** include:
• federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Minimum distance for set out of fasteners** is to be in accordance with:
• regulated minimum distances
• bases, including concrete, masonry or steel.

**Use of EPT** includes:
• stripping and assembling tools
• completing log of serviceability
• maintaining and cleaning tools
• selecting charges and fasteners applicable to the base material and material being fixed
• misfire procedures
• using attachments
• complying with storage and security regulations
and OHS requirements for the working environment
- selecting signage
- test fire.

**Attachments** include:
- channel, rebate and other manufacturer attachments.

**Fastener and charge** include:
- firing a test shot with misfire procedures, complying with the regulated safety procedure for misfire.

### Required Skills and Knowledge

#### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record maintenance in logbooks
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - numeracy skills to apply measurements and make calculations
REQUIRED SKILLS AND KNOWLEDGE

- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- relevant Acts, regulations and codes of practice
- scaffolding equipment
- scaffolding techniques
- shifting devices
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete planning, erection and dismantling of a modular scaffolding system, in accordance with JSA and safe work method statements and regulations, including a minimum of:
  - three bays (one with a return)
  - one lift with ladder
  - fall and edge protection.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.
EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances
EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

• diagrams or sketches
• engineers' design specifications and manufacturer specifications and instructions, where specified
• instructions issued by authorised organisational or external personnel
• memos
• MSDS
• regulatory and legislative requirements pertaining to erecting and dismantling restricted height scaffolding
RANGE STATEMENT

- relevant Australian standards
- safe work procedures related to erecting and dismantling restricted height scaffolding
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- work site inspection, equipment defect identification, assessment of conditions and hazards, and determination of work requirements
- erection of scaffolding to a maximum height of 4 metres, including placement, sequencing, squaring, levelling and the reverse for dismantling
- establishment of footings, including review of JSAs to determine bearing capacity of ground or working surfaces
- alteration and repair, which may be required due to storm damage, accidents, misuse and process changes.

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
RANGE STATEMENT

- working in proximity to others
- working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

**Tools and equipment** include:

- aluminium modular scaffolding equipment
- hammers
- ladders
- scaffolding planks
- shovels and spanners
- spirit levels
- steel box spanners
- tape measures.

**Scaffolding** type and quantity requirements:

- types of restricted height scaffolding may include systems scaffolding, A frame, H frame, tube and coupler, and aluminium (and modular to a maximum height of 4 metres).

**Quality requirements** include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

**Environmental requirements** include:

- clean-up protection
- noise and dust
- waste management.

**Statutory and regulatory authorities include:**

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Purpose for scaffolding** includes:

- work platforms for various occupational applications.

**Unit Sector(s)**

**Unit sector** Construction

Functional area

Functional area
CPCCCM2008B Erect and dismantle restricted height scaffolding

Modification History
Photovoltaic (solar) panels added to range statement
Equivalent to CPCCCM2008A

Unit Descriptor
This unit of competency specifies the outcomes required to erect and dismantle restricted height scaffolding to provide work platforms for various occupational applications. It includes placement of safety barriers and only involves modular scaffolding restricted to a height of 4 metres.

Application of the Unit
This unit of competency supports achievement of skills to handle, erect and dismantle a range of restricted height scaffolding systems, which may include working with others and as a member of a team.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare.

1.1 Work instructions, including plans, specifications, quality requirements and operational details, are obtained from relevant sources of information, confirmed and applied for planning and preparation purposes.

1.2 Workplace health and safety (WHS) requirements are followed in accordance with safety plans and policies.

1.3 Signage and barricade requirements are identified and implemented.

1.4 Plant, tools and equipment are selected to carry out tasks consistent with job requirements, are checked for serviceability, and any faults are rectified or reported prior to commencement.

1.5 Scaffolding quantity requirements are calculated in accordance with plans, specifications and quality requirements.

1.6 Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.

1.7 Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.
2 Erect scaffolding. 2.1 **Purpose for scaffolding** is confirmed and associated work tasks are identified.

2.2 Expected loading on scaffold and supporting structure is determined using load tables.

2.3 Site access and egress routes are identified.

2.4 Scaffolding and components are selected and inspected with damaged components labelled and rejected or repaired.

2.5 Adequate footing is established in accordance with Australian standard for scaffolding.

2.6 Scaffolding is erected in accordance with regulations, planned hazard prevention and control measures, acceptable safe work practices and manufacturer requirements.

3 Inspect, repair and alter scaffolding. 3.1 Critical structural and safety areas of scaffolding are inspected for damage, corrosion and wear.

3.2 Current use of scaffolding is checked for compliance with type of scaffolding equipment.

3.3 Inspection log and handover are completed.

3.4 Scaffolding is reviewed to determine if changes or modifications were scheduled as per original planning.

3.5 Alteration or repair is carried out where specified.

4 Dismantle scaffolding. 4.1 Scaffolding is dismantled using reverse procedure as for erection.

5 Clean up. 5.1 Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

5.2 Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record maintenance in logbooks
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - numeracy skills to apply measurements and make calculations
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- relevant Acts, regulations and codes of practice
- scaffolding equipment
- scaffolding techniques
- shifting devices
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete planning, erection and dismantling of a modular scaffolding system, in accordance with JSA and safe work method statements and regulations, including a minimum of:
  - three bays (one with a return)
  - one lift with ladder
  - fall and edge protection.
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.
Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** includes:

- diagrams or sketches
- engineers’ design specifications and manufacturer specifications and instructions, where specified
- instructions issued by authorised organisational or external personnel
- memos
- MSDS
- regulatory and legislative requirements pertaining to erecting and dismantling restricted height
scaffolding
- relevant Australian standards
- safe work procedures related to erecting and dismantling restricted height scaffolding
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- work site inspection, equipment defect identification, assessment of conditions and hazards, and determination of work requirements
- erection of scaffolding to a maximum height of 4 metres, including placement, sequencing, squaring, levelling and the reverse for dismantling
- establishment of footings, including review of JSAs to determine bearing capacity of ground or working surfaces
- alteration and repair, which may be required due to storm damage, accidents, misuse and process changes.

Workplace health and safety is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
  - safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
    - earth leakage boxes
    - lighting
    - photovoltaic (solar) panels
    - power cables, including overhead service trays, cables and conduits
    - restricted access barriers
    - surrounding structures
    - traffic control
    - trip hazards
    - work site visitors and the public
    - working at heights
    - working in confined spaces
- working in proximity to others
- working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
REQUIRED SKILLS AND KNOWLEDGE

- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- basic demolition processes and techniques
- construction terminology
- hazards associated with the conduct of manual demolition tasks
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- quality requirements
- types, characteristics, uses and limitations of tools and equipment involved in the conduct of manual demolition processes
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, given a site demolition plan and instructions, remove the fixtures and fittings, ceiling, and external and internal non-load bearing walls; and clean up, disposing or salvaging materials, ensuring:
  - correct identification of requirement and conduct of demolition
  - confirmation that wall or structure is not load bearing
  - identification and correct response to services
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes.
EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.
**EVIDENCE GUIDE**

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
RANGE STATEMENT

- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to the conduct of basic demolition processes
- relevant Australian standards
- safe work procedures related to the conduct of basic demolition processes
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Basic demolition processes include:

- dismantling or demolishing and removing materials and component parts of a building using only hand tools and small plant and equipment.
- emergency procedures, including emergency shutdown and stopping of equipment, extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - overhead lines and cables
  - restricted access barriers
  - surrounding structures
  - traffic control
  - underground services and utilities
  - work site visitors and the public
  - working at heights
  - working in confined spaces

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:
RANGE STATEMENT

- working in proximity to others
- working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

**Tools and equipment** include:

- bars (crow and pinch), bolt cutters, sledgehammers, spanners and wrenches, chisels, hacksaws, handsaws, hammers and pliers
- picks and mattocks
- power drills and saws, pneumatic tools, concrete saws, angle grinders, compressors and electric testers
- shovels, spades, brooms and wheelbarrows
- signs and barricades
- water hoses and attachments
- scaffolds and elevated work platforms.

**Environmental requirements** include:

- clean-up protection
- noise and dust
- sedimentation control
- vibration
- waste management.

**Statutory and regulatory authorities** include:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Site demolition plan** includes:

- documentation of the demolition process
- safe work practices.

**Construction type** includes:

- brickwork, blockwork, brick veneer and concrete
- timber framed and light steel framed structures.

**Preparation of work areas** include:

- assessing conditions of work site and surrounds
- communicating with those who may be affected by the demolition task
- identifying hazardous materials
- identifying positions of hoses and cables, clear of hazards
RANGE STATEMENT

Services include:
- locating signage and barricades
- providing site safety.
- electricity
- gas
- telephone and computer/communication
- water.

Demolition tasks can be performed on:
- existing structure being renovated or extended, which involves complete or partial removal of components
- new construction site.

Building components include:
- concrete/masonry areas, including:
  - edge strips
  - pads
  - paths
  - retaining walls and fences
  - slabs
- external sections of buildings, including:
  - attached structures, carports and sheds
  - non-load bearing walls
  - patios and decks
- fixtures and fittings
- internal sections of buildings, including:
  - built-in components
  - ceilings
  - cladding
  - flooring
  - non-load bearing partition walling
  - wet area components.

Functional area

Functional area
CPCCCM2010B Work safely at heights

Modification History
Photovoltaic (solar) panels added to range statement
Equivalent to CPCCCM2010A

Unit Descriptor
This unit of competency specifies the outcomes required to work safely on construction sites where the work activity involves working above 1.5 metres from ground level and where fall protection measures are required.

Application of the Unit
Construction work is undertaken on domestic and commercial work sites within new construction, renovation or refurbishment, and maintenance.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Identify work area requirements.

1.1 Site of proposed work at heights is identified from relevant information.

1.2 Method of accessing work area is identified.

1.3 Tasks to be completed are identified from work orders and supervisor instructions.

1.4 Fall protection equipment is identified if required by site job workplace health and safety (WHS) analysis and statutory and regulatory requirements.

1.5 Approved methods of moving tools and equipment to work area are identified to minimise potential of falling objects, removal of scaffold components, inappropriate carrying of materials on ladders, and excessive bending or twisting in pass-up situations.

2 Access work area.

2.1 Fall protection equipment where required is correctly fitted, adjusted and anchored.

2.2 Arrangements are made to appropriately install required equipment taking account of all potential hazards.

2.3 Appropriate methods are used to access work area for self, tools and equipment, and materials.

2.4 Tools and materials are placed to eliminate or at least minimise the risk of items being knocked down.

3 Conduct work tasks.

3.1 Work is conducted following workplace approved procedures.

3.2 Fall protection equipment is kept in place and adjusted appropriately to cater for movement during work.

3.3 Scaffold components and fall barriers are kept in place during work.

3.4 Egress from work area is completed following work site supervisor approved methods for self, tools, materials and environmental requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- quality requirements
- types, characteristics, uses and limitation of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the
workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- select and use appropriate height access and fall protection equipment and work methods, including inspecting fall protection equipment, scaffold and fall barriers for faults
- apply knowledge of industry products to identify:
  - manual handling risks
  - types of lifting and support structures approved for use
- modify work activities to cater for variations in work site procedures, contexts and environment and use appropriate behaviour for safe work at heights
- use safe handling requirements, based on information provided, for equipment, products and materials.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.
Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Work at heights includes:
- assessment of conditions and hazards
- determination of work requirements
- identification of equipment defects
- inspection of work sites.

Information includes:
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- material safety data sheets (MSDS)
- memos
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Workplace health and safety is to be in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan and may include:
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of
operational risk assessment and treatments associated with:

- earth leakage boxes
- lighting
- photovoltaic (solar) panels
- power cables, including overhead service trays, cables and conduits
- restricted access barriers
- surrounding structures
- traffic control
- trip hazards
- work site visitors and the public
- working in confined spaces
- working in proximity to others
- working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- relevant OHS legislation applying in the jurisdiction where work is carried out, including:
  - AS6001 - 1999 Working platforms for domestic application
  - AS1576 - Scaffolding
  - AS/NZS4576 - 1995 Guidelines for scaffolding
  - use of tools and equipment
  - workplace environment and safety.

**Statutory and regulatory authorities** include:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Hazards** include:

- air temperature
- construction activity involving other workers and contractors
- dust and vapours
- electrical equipment
- energy sources
- equipment and materials
- hazardous materials
- light
- manual handling
- moisture
- noise
- photovoltaic (solar) panels
- stationary and moving plant
- work at heights.

**Tools and equipment** include:
- air compressors and hoses
- hand and power tools
- nail guns
- power leads
- scaffolding.

**Materials** include:
- materials used on the construction work site.

**Environmental requirements** include:
- clean-up management
- noise and dust
- vibration
- waste management.

CPCCCMM3001C Operate elevated work platforms

Modification History
Prerequisite unit identifier code updated
Equivalent to CPCCCMM3001B

Unit Descriptor
Unit descriptor
This unit of competency specifies the outcomes required to safely and effectively operate some types of elevated work platforms (EWPs) in a variety of different terrains and situations to access isolated work areas. The unit includes locating, setting up, operating and shutting down EWPs.

In addition to achievement of this competency, an EWP operator may need to obtain additional certification of training and experience before being allowed to operate the equipment.

Application of the Unit
Application of the unit
This unit of competency assists in the safe and effective operation of electrical, hydraulic or mechanical EWPs. The unit does not cover powered telescoping devices, hinged devices or articulated devices, or any combination of these used to support a platform on which personnel, equipment and materials may be elevated to perform work and which has a boom length of 11 metres or more. An OHS authority Certificate of Competency may be required to operate boom type EWPs of 11 metres or more in some jurisdictions.

Licensing/Regulatory Information

Pre-Requisites

CPCCCM2010B  Work safely at heights
CPCCCOHS2001A  Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information

Employability skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1. Work planning and preparation are conducted using plans, specifications, quality requirements and operational details, obtained, confirmed and applied from relevant information.  
1.2. Safety (OHS) requirements for the types of EWP to be operated are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Plant, tools and equipment and personal protective equipment are selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.  
1.5. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.6. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied. |
| 2. Conduct routine checks of platform. | 2.1. Power source is determined and connected to platform equipment according to manufacturer specifications.  
2.2. Routine pre-operational equipment checks are carried out in accordance with checklist from operator's manual or manufacturer specifications.  
2.3. Equipment is switched on in accordance with start up procedures and controls are checked for correct operation and ease of movement.  
2.4. Emergency safety devices are checked to comply with instructions from operator's manual and checked for manual operation.  
2.5. Work location is checked for level ground or floor surface to determine stabilising and safe working area requirements. |
| 3. Locate equipment in place for work application. | 3.1. Platform is positioned for work application and stabilisers are engaged to set equipment base level into place according to safe operating procedures.  
3.2. Tools, equipment and materials are placed into bucket or on platform according to job application |
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 4. Elevate platform to work location. | 4.1. **Harness** is fitted securely and lanyard connected to attachment point.  
4.2. **EWP operation** and controls are operated to manufacturer recommendations and platform is elevated to work position.  
4.3. Power is switched off where specified and locking devices are engaged according to operator's manual.  
4.4. Work is carried out to job specification and safety (OHS) requirements of operator's manual. |
| 5. Lower platform and shut down. | 5.1. Controls are operated to manufacturer recommendations and platform is lowered to down position.  
5.2. Shut down procedures are carried out to operator's manual and equipment is switched off. |
| 6. Clean up. | 6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.  
6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.  
6.3. Work completion procedures are applied and relevant personnel notified that work is finished. |

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
REQUIRED SKILLS AND KNOWLEDGE

- documentation from a variety of sources
- drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to complete inspection log and handover
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- designs, functions and operational limitations of EWP equipment
- EWP equipment types and OHS authority certification of competency requirements
- EWP techniques
- fault finding and identification
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of load mass requirements
- quality requirements
- relevant Acts, regulations and codes of practice
- safe working at heights
- signalling methods and communications
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete set up and operation of a range of EWPs as listed in the range statement, including all functions.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
EVIDENCE GUIDE

- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability
EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Work planning and preparation include:

- assessment of conditions and hazards
- consideration that EWPs must not be operated anywhere with overhead powerlines above, or within specified clearance distances set out in documentation such as Electrical Safety - Power line NO GO Zones, unless permission has been obtained from the power authority and a JSA has been developed
- determination of work requirements
- equipment defect identification
- work site inspection.

Information includes:

- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
RANGE STATEMENT

where specified
• MSDS
• memos
• regulatory and legislative requirements pertaining to EWPs
• relevant Australian standards
• safe work procedures related to operating EWPs, including the safe working load written on the EWP which must be checked to ensure it is not exceeded
• signage
• verbal or written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:
• procedures related to equipment operation, including emergency shutdown and stopping, extinguishing equipment fires, organisational first aid requirements and evacuation
• handling of materials
• hazard control
• hazardous materials and substances
• organisational first aid
• personal protective clothing and equipment
• use of firefighting equipment
• use of tools and equipment
• workplace environment and safety.

Types of EWP:
• EWPs include scissor lifts, boom and knuckle boom lifts with a boom length under 11 metres
• EWPs are classified as:
  • trailer mounted boom lift (TL)
  • self-propelled boom lift (BL)
  • vertical lift (VL)
  • scissor lift (SL)
  • truck-mounted boom lift (TM), which is not covered by this unit of competency.

Tools and equipment include:
• EWPs, extension leads, logbooks, service manuals, operation manuals, safety harnesses and lanyards
• special attachments, which may have to be installed if equipment is to be shifted with the EWP, as lifting loads via cables and ropes
RANGE STATEMENT

**Personal protective equipment** includes:
- that prescribed under legislation, regulations, codes of practice and workplace policies and practices.

**Environmental requirements** include:
- clean-up protection
- noise and dust
- sedimentation control
- vibration
- waste management.

**Statutory and regulatory authorities** include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Emergency safety devices** include:
- bleed valves
- electronic override
- emergency descent devices
- ground controls
- hydraulic accumulators.

**Safe operating procedures** include:
- conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working with dangerous materials
  - not using slab terrain EWPs on any surface other than concrete or level asphalt.

**Harnesses** include:
- energy or shock absorbers that must be used with all fall arrest lanyard, harness and inertia reel systems
- full body rescue harness
- lanyards and inertia reels, which should be attached to the harness installed so that the
RANGE STATEMENT

The maximum distance a person equipped with a harness would free fall before the fall arrest system takes effect is 2 metres.

**EWP operation** includes:

- boom up and down
- operate attachments
- operate outriggers
- slew left and right
- telescope in and out.

| 1. Plan and prepare. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Plant, tools and equipment are selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.  
1.5. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied. |
| 2. Apply safe work practices. | 2.1. Relevant authorities are contacted to identify electrical sources and type.  
2.2. Plant is positioned according to work method statement and job safety analyses (JSAs).  
2.3. Plant procedures are followed to comply with work method statement and JSAs.  
2.4. Work is conducted in or around the power source, service or asset.  
2.5. Personnel, plant and equipment are retracted from powered area following safe work method statement and JSAs. |
| 3. Clean up. | 3.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.  
3.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.  
3.3. Work completion procedures are applied and relevant personnel are notified that work is finished. |

### Required Skills and Knowledge
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify electrical source and type from relevant authorities
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - numeracy skills to apply measurements and make calculations
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction terminology
- electrical safety on construction work sites
- first aid including cardiopulmonary resuscitation (CPR)
- JSA and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- quality requirements
- site specific emergency procedures
- types, characteristics, uses and limitations of plant, tools and equipment
REQUIRED SKILLS AND KNOWLEDGE

- working at heights
- working with electrical power techniques
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- contact relevant authorities
- apply work method statements and JSAs to oversee plant positioning and operation for one project, including erection and/or placement of barriers and safeguards.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context. Assessment is to comply with relevant regulatory or Australian standards’ requirements. Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the
EVIDENCE GUIDE

mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at
EVIDENCE GUIDE

the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** includes:

- verbal or written and graphical instructions
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to working safely around power
RANGE STATEMENT

- relevant Australian standards
- safe work procedures related to working safely around power
- signage
- work bulletins
- work schedules.

Planning and preparation include:

- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working with dangerous materials
  - organisational first aid
  - personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environment and safety.

Signage and barricade

- barricades
RANGE STATEMENT

**requirements** include:

- isolation
- other physical barriers
- site safety signage.

**Plant** includes:

- back hoes
- booms
- cranes
- EWPs
- excavators
- scaffold.

**Tools and equipment** include:

- those associated with the task at hand.

**Environmental requirements** include:

- clean-up protection
- noise and dust
- vibration
- waste management.

**Statutory and regulatory authorities**: include federal, state and local authorities administering applicable Acts, regulations and codes of practice

- must include federal, state and local electrical authorities.

**Electrical sources** include:

- distribution towers
- generators
- poles
- sub-stations
- temporary services
- train and tram assets
- transmission towers
- underground and overhead wires
- underground conductors
- all other services, sources and assets.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Plant, tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Erect and strip simple formwork. | 2.1. Subgrade is prepared.  
2.2. Formwork design is identified from drawings.  
2.3. Formwork is erected safely on commencement.  
2.4. Form release agent is applied to erected formwork where specified.  
2.5. Timber components are de-nailed following stripping of formwork.  
2.6. Components are cleaned, stacked and stored for reuse or bundled for removal.  
2.7. Formwork components are removed from site. |
| 3. Place and tie reinforcement. | 3.1. Reinforcing components are handled and positioned safely.  
3.2. Reinforcing bars and mesh are positioned.  
3.3. Bar chairs and spacers are positioned, with minimum edge cover. |
| 4. Place concrete. | 4.1. Formwork or excavation is cleaned of excess material and debris prior to concrete placement.  
4.2. Concrete is safely transported by wheelbarrow.  
4.3. Pump line/chute is controlled and concrete placed. |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
| 4.4. Concrete is placed in formwork to specified depth. |
| 4.5. Concrete is screeded to the alignment of formwork and project specified datums. |
| 4.6. Surface of concrete is finished in accordance with specifications. |
| 5. Clean up. |
| 5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations and codes of practice and job specification. |
| 5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - evaluating own actions and making judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - recognising procedures, following instructions, responding to change and...
REQUIRED SKILLS AND KNOWLEDGE

contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems

• teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

• technological skills to:
  • use a range of mobile technology, such as two-way radio and mobile phones
  • voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

• concrete materials
• concreting techniques
• general construction terminology
• job safety analysis (JSA) and safe work method statements
• levelling techniques
• material safety data sheets (MSDS)
• materials storage and environmentally friendly waste management
• plans, drawings and specifications
• processes for the calculation of material requirements
• quality requirements
• simple formwork and reinforcing componentry
• types, characteristics, uses and limitations of plant, tools and equipment
• workplace and equipment safety requirements.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- prepare subgrade; erect formwork; cut, place and tie reinforcement; place and hand screed concrete for a slab of (4 square metres is recommended) and a minimum depth of 100mm to the required finished level and job specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
EVIDENCE GUIDE

- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice,
EVIDENCE GUIDE

with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to concreting
- relevant Australian standards
- safe work procedures relating to concreting
- signage
RANGE STATEMENT

Planning and preparation include:

- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Tools and equipment:

- include:
RANGE STATEMENT

- brooms
- chutes
- edging tools
- shovels
- trowels
- wheelbarrows
- may include:
  - bull floats
  - hand floats
  - kibbles
  - line pumps
  - stipple devices
  - trowelling machines.

**Quality requirements** include:
- internal company quality policy and standards
- manufacturer specifications where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

**Materials**:  
- include:
  - bar chairs
  - bracing
  - edge form/boards
  - fabric sheet mesh
  - pegs
  - spacers
- may include reinforcing bars.

**Environmental requirements** include:
- clean-up management
- dust and noise
- stormwater management
- vibration
- waste management.

**Simple formwork** includes:
- timber or steel edge form to a maximum of 100mm in depth.

**Simple reinforcing** includes:
- bar chairs
- fabric sheet mesh
- spacers
- may include:
RANGE STATEMENT

- reinforcing bars
- trench mesh.

Simple forms of concrete:
- include slabs (not requiring internal beams and piers)
- may include:
  - beam thickeners
  - channels
  - garden edges
  - pathways
  - post holes
  - simple concrete aprons.

Concreting includes:
- finishing of concrete
- floating of the concrete
- placing of concrete
- screeding, limited to include a hand screed.

Placing of concrete involves movement of concrete from the truck to the work and:
- chutes
- wheelbarrows
- may include:
  - kibbles
  - pump lines.

Finishing of concrete includes:
- broomed
- hand floating
- power floating
- sponged
- stipple device finish
- trowelled
- trowelling machine finish
- wood floated
- other project specified finish.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant **information**, confirmed and applied for **planning and preparation** purposes.  
1.2. **Safety (OHS)** requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Plant, **tools and equipment** selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Materials quantity requirements are calculated in accordance with plans, specifications and **quality requirements**.  
1.6. **Materials** appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. **Environmental requirements** are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Prepare concreting materials. | 2.1. Location of steel reinforcement and formwork is determined from drawings and reinforcement schedule.  
2.2. **Reinforcement** is checked against reinforcement drawings and specifications.  
2.3. **Formwork** components and materials are selected consistent with job.  
2.4. Fixing and fasteners are selected and used consistent with requirements of the job. |
| 3. Set out for concrete work. | 3.1. String lines are set accurately from existing pegs.  
3.2. Grades are checked to ensure correct fall.  
3.3. Services are identified and protected to prevent damage. |
| 4. Construct and install reinforcement. | 4.1. Reinforcing fabric and bars are cut and bent as required to project drawings and specifications.  
4.2. Fabric and bars are tied or fixed to configuration from project drawings and specifications.  
4.3. Stiffening rods are attached to panels as required to facilitate handling.  
4.4. Reinforcement material is located in formwork and
ELEMENT               PERFORMANCE CRITERIA

placed on bar chairs/spacers as determined from drawings, noting clearance from formwork.

4.5. *Cast-in items* are located and secured.

5. Erect formwork.

5.1. Work area is cleared and surface prepared for safe erection of formwork.

5.2. Formwork is set out to requirements of drawings and specifications.

5.3. Formwork is assembled and erected to specifications.

5.4. Debris, sawdust and other waste material are safely removed from formwork.

5.5. Form release agent is applied to manufacturer specifications.

6. Carry out concrete work.

6.1. *Concrete is transported* correctly with wheelbarrow and discharged into formwork, using correct manual handling techniques.

6.2. Discharge of concrete from concrete pump line and/or chute into the formwork is controlled correctly.

6.3. *Concrete is placed* correctly to instruction and screeded to specified levels and grades.

6.4. Concrete is compacted to specification using immersion vibrator or other specified method.

6.5. *Concrete is finished* and *curing* process applied to specifications.

6.6. Control joints are positioned and installed to specification and to current Australian standard or codes.

6.7. Dowel joints are positioned to specification.

6.8. Concrete surface is adequately covered and protected.

7. Strip formwork.

7.1. Edge boxing and braces are removed carefully, safely and sequentially.

7.2. Timber components are denailed, cleaned and stored or stacked.

7.3. Steel components are cleaned, oiled and stored or stacked.

7.4. Damaged formwork components are discarded after stripping.

7.5. Screens are safely cleaned before movement, where applicable.
ELEMENT  PERFORMANCE CRITERIA

8. Clean up.

8.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

8.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - evaluating own actions and making judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
  - teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
REQUIRED SKILLS AND KNOWLEDGE

- use a range of mobile technology, such as two-way radio and mobile phones
- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:
- concrete characteristics and properties
- concreting principles
- equipment types, characteristics, technical capabilities and limitations
- formwork
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials handling methods
- operational, maintenance and basic diagnostic procedures
- processes for interpreting engineering drawings
- quality requirements
- site and equipment safety requirements
- site isolation and traffic control responsibilities and authorities
- steel reinforcement characteristics
- structural technology.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- complete at least three concreting projects (each a minimum of two cubic metres of concrete), incorporating a minimum of two different finishes with at least one project containing angled formwork and bent reinforcement and all projects being completed to job specifications.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
EVIDENCE GUIDE

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and
EVIDENCE GUIDE

separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

• diagrams or sketches
• instructions issued by authorised organisational or external personnel
• manufacturer specifications and instructions, where specified
• MSDS
• memos
• regulatory and legislative requirements pertaining to carrying out concrete work
• relevant Australian standards
• safe work procedures relating to concreting
RANGE STATEMENT

Planning and preparation include:

- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.
RANGE STATEMENT

**Tools and equipment** include:
- bolt cutters
- brushes
- buckets
- chutes
- curing agent applicator
- edging tools
- floats
- hammers
- hoses
- kibble
- mesh guillotine
- nips
- rakes
- reinforcement benders
- rods
- screeds
- short handle shovels
- shutters
- sponges
- steam generator
- tarpaulins
- tremmies
- trowels
- vibrators
- wheelbarrows.

**Quality requirements** include:
- internal company quality policy and standards
- manufacturer specifications where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

**Materials** include:
- bar chairs
- cement
- concrete blend
- curing compounds
- form release agents
- formwork components
- membranes
- pre-mix concrete
- sand
- steel reinforcing
RANGE STATEMENT

- vapour barriers
- water.

Environmental requirements include:
- clean-up management
- dust and noise
- stormwater management
- vibration
- waste management.

Reinforcement components include:
- ligatures
- mesh
- reinforcement bars and rods.

Formwork includes:
- expanded polystyrene
- fibreglass
- masonry
- plywood
- steel shutters
- structural cardboard
- timber.

Cast-in items include:
- services and fixtures tied to the reinforcement.

Concreting work includes:
- beams
- columns
- footings
- footpaths
- lintels
- pads
- ramps
- repairing of kerb and channel
- slabs on ground
- stairs
- structural members
- suspended slab
- walls.

Transporting of concrete includes:
- crane and kibble
- pre-mix truck
- pumping equipment
- wheelbarrow.

Placing of concrete includes:
- kibble
- pumping equipment
- shovelling
- tremmies
RANGE STATEMENT

- truck placed
- vibrating
- wheelbarrow.

**Concreting finishing** techniques include:

- broom finished
- brushed
- bull float
- mechanical trowelling machine
- steel trowel
- wood float.

**Curing** includes:

- applied moisture
- coating with a membrane
- curing compound
- flooding
- plastic sheeting
- steam.

CPCCCO2021A Handle concreting materials

Modification History
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.
- Changes to performance criteria, range statement, evidence requirements and methods of assessment
- Range of other minor editorial changes
Not equivalent to CPCCCO2011A Handle concreting materials

Unit Descriptor
This unit of competency specifies the outcomes required to safely manually handle and store concreting materials and components in preparation for concreting work, while also applying environmental management principles.
The unit includes identifying and safely handling hazardous materials and waste according to safety data sheets (SDS). It may also include working with others and as a member of a team.

Application of the Unit
This unit of competency applies to a range of domestic and commercial construction sites where concreting materials are required.

Licensing/Regulatory Information
Licensing, legislative, regulatory or certification requirements apply to concreting work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. **Plan and prepare.**
   1.1 Work instructions, *work health and safety (WHS) requirements* and other *information* relevant to the work are identified, confirmed and applied for *planning and preparation* purposes.

   1.2 *Tools and equipment* consistent with job requirements are selected and checked for serviceability, and faults are rectified and reported before work begins.

   1.3 Material quantity requirements are identified and calculated according to plans, specifications and *quality requirements*.

   1.4 *Materials* appropriate to the work application are obtained, prepared, safely handled and located ready for use.

   1.5 *Environmental requirements* are identified for the project according to environmental plans and regulatory obligations.

2. **Handle and sort concrete materials and components.**
   2.1 On delivery to site, *concrete materials and components* are checked for conformity to material schedule, plans and specifications.

   2.2 Concrete materials and components are moved to specified location applying safe *handling procedures*.

   2.3 Concrete materials and components are stacked or stockpiled for ease of identification and retrieval in line with task sequence and job location and according to job specifications.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to respond to change, such as differences in work site, and environmental and quality requirements
- numeracy skills to calculate and confirm correct quantities of materials for work tasks
- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report work site hazards to appropriate personnel, including faults in tools, equipment or materials
  - use language and concepts appropriate to cultural differences
- reading skills to:
  - interpret documentation, including drawings and specifications
  - understand written instructions, procedures and signage
  - interpret manufacturer instructions for handling tools and equipment
- writing skills to complete pre-operational checklists and simple equipment fault forms

Required knowledge

- general construction terminology
- manual handling techniques for concrete materials
- plans, drawings and specifications
- procedures for the safe handling and storage of materials, and disposal of hazardous materials
- processes for calculating material requirements
- types, characteristics, uses and limitations of tools and equipment
- types, location and use of relevant safety resources and information:
  - job safety analyses (JSA) and safe work method statements (SWMS)
  - safety data sheets
  - signage and barricades
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by performing a range of tasks in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- safely handle a range of hazardous and non-hazardous concreting materials and components in preparation for concreting work to commence
- identify and follow appropriate environmental and waste management policies and procedures for the treatment of hazardous and non-hazardous concreting materials
- locate, interpret and apply relevant information, standards and specifications relating to handling concrete materials
- comply with site safety plan and WHS procedures applicable to the work site and workplace operations
- comply with organisational policies and procedures relating to handling concrete materials while maintaining quality requirements
- safely and effectively operate and use plant, tools and equipment required to handle concreting materials
- communicate and work effectively and safely with others.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the mandatory task requirements
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• safety data sheets.

**Method of assessment**
Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:
• direct observation of tasks in real or simulated work conditions
• questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Guidance information for assessment**
This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

**Range Statement**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety requirements** must comply with state and territory legislation and regulations and project safety plan, and may include:
• assistance of others or the use of manual or mechanical lifting devices with handling activities where size, weight or other issues, such as disability, are a factor
• emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
• hazard control
• hazardous materials and substances, including cement and curing agents
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - signage and restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working outdoors in warm climates
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Information may include:**
- instructions issued by authorised organisational and external personnel
- memos
- regulatory and legislative requirements relating to handling concreting materials, including Australian standards
- safe work procedures relating to handling concreting materials
- safety data sheets
- signage
- verbal, written and diagrammatical instructions, including manufacturer specifications and instructions where specified
- work bulletins
- work schedules, plans and specifications.

**Planning and preparation must include:**
- assessing conditions and hazards
- determining work requirements and safety plans and procedures
- identifying and rectifying equipment defects
- inspecting work sites.

**Tools and equipment may include:**
- brooms
- rakes
- shovels
- tarpaulins and covers
- wheel barrows.
**Quality requirements** must include:

- relevant regulations that include:
  - Australian standards
  - internal organisational quality policy and standards
  - manufacturer specifications
  - workplace operations and procedures.

**Materials:**

- include:
  - aggregates
  - cement
  - form release agents
  - non-toxic materials, including general concreting materials
  - sand
  - water

- may include:
  - additives
  - curing compound
  - oxides.

**Environmental requirements** may include:

- clean-up management
- dust suppression, including:
  - covering
  - keeping dust in the air to a minimum
  - spraying with water
  - using a vacuum cleaner
- noise control
- stormwater management
- vibration management
- waste management.

**Concrete materials and components:**

- must include:
  - bar chairs
  - bracing
  - plastic membrane
  - reinforcement mesh
  - spacers
  - steel and timber formwork

- may include:
  - bar steel
  - decking
  - key joints
  - push-pull props
  - reinforcement bars
Handling procedures must include:

- scaffolding
- support props
- tilt panels.

- following SDS
- manual handling, including:
  - carrying materials using correct lifting techniques
  - controlling waste
  - using pallets.

CPCCCO2022A Use and maintain concreting plant, tools and equipment

Modification History
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.
- Changes to unit title, elements, performance criteria, range statement, required skills, methods of assessment, guidance information for assessment
- Range of other minor editorial changes
Not equivalent to CPCCCO2012A Use concreting tools and equipment

Unit Descriptor
This unit of competency specifies the outcomes required to safely select and use concreting plant, tools and equipment for the completion of general concreting tasks. The unit includes the use of hand tools, power tools, small plant and equipment. It may also include working with others and as a member of a team.

Application of the Unit
This unit of competency supports the role of those working with concrete on residential, commercial and civil construction sites.

Licensing/Regulatory Information
Licensing, legislative, regulatory or certification requirements apply to concreting work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare. 1.1 Work instructions, **work health and safety (WHS) requirements** and other **information** relevant to the work are identified, confirmed with **relevant personnel** and applied to **planning and preparation**.

1.2 **Plant, tools and equipment** consistent with job requirements are selected and **checked for serviceability**, and faults are rectified and reported before work begins.

1.3 Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.

1.4 Material quantity requirements are identified, calculated and confirmed according to plans, specifications and **quality requirements**.

1.5 **Environmental requirements** are identified for the project according to environmental plans and regulatory requirements.

2 Use plant, tools and equipment. 2.1 Hand tools are used that are appropriate to the task and materials according to WHS requirements.

2.2 Plant, tools and equipment are safely and effectively used according to manufacturer recommendations and WHS requirements.
3 Clean up.

3.1 Work area is cleared and materials disposed of, reused or recycled according to regulations, codes of practice and job specifications.

3.2 Plant, tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to respond to change, such as differences in work site, and environmental and quality requirements
- numeracy skills to:
  - calculate and confirm correct quantities of materials for work tasks
  - check levels of lubricants in tools
- oral communication skills to:
  - enable clear and direct communication regarding work instructions, using questioning to identify and confirm requirements, and share information
  - report work site hazards to appropriate personnel, including faults in tools, equipment or materials
  - use language and concepts appropriate to cultural differences
- reading skills to:
  - interpret documentation, including specifications
  - interpret manufacturer instructions for safely handling tools and equipment
  - understand written instructions, procedures and signage
- writing skills to complete equipment fault forms

Required knowledge

- environmentally friendly waste management practices applicable to the task
- general construction terminology
- processes for calculating material requirements
- quality requirements relating to each stage of the concreting process
- processes for the storage of plant, tools, equipment and material
- properties of concrete
- requirements of legislation, regulations and codes of practice that apply to the use and maintenance of concreting plant, tools and equipment, including WHS requirements
- types, location and use of relevant safety information:
  - job safety analyses (JSA) and safe work method statements (SWMS)
  - safety data sheets (SDS)
  - safety manuals and instructions for plant, tools and equipment
  - safety signage
  - environmental and work site safety plans
- types, uses and limitations of concreting plant, tools and equipment, including when to
use particular items for different stages of concreting tasks
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by observation of correct identification, use and maintenance of concreting plant, tools and equipment appropriate to requirements in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- identify, select, use and maintain a range of concreting plant, tools and equipment in a minimum of two different work environments or conditions
- locate, interpret and apply relevant information, including manufacturer requirements for the appropriate use and maintenance of plant, tools and equipment
- comply with site safety plan and procedures
- comply with organisational policies and procedures relating to using and maintaining plant, tools and equipment while maintaining quality requirements outlined in job specifications
- safely and effectively operate and use plant, tools and equipment
- communicate and work effectively and safely with others.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the mandatory task requirements
- plant, tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and
addressing hazards and emergencies
  • relevant information, such as safety data sheets.

Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:
  • direct observation of tasks in real or simulated work conditions
  • questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
  • review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:
  • CPCCCO3041A Place concrete
  • CPCCCO3042A Finish concrete
  • CPCCCO3043A Cure concrete.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety requirements** must comply with state and territory legislation and regulations and project safety plan, and may
  • assistance of others or the use of manual or mechanical lifting devices with handling activities where size, weight or other issues, such as disability, are a factor
  • availability of SDS for substances to be used
  • emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation
include:

- procedures
- hazard control
- hazardous materials and substances
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - signage and restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working outdoors in warm climates
  - use of firefighting equipment
  - use of plant, tools and equipment
  - workplace environmental requirements and safety.

Information may include:

- instructions issued by authorised organisational and external personnel
- memos
- regulatory and legislative requirements relating to using concreting plant, tools and equipment, including Australian standards
- safe work procedures relating to using concreting plant, tools and equipment
- SDS for substances to be used
- signage
- verbal, written and diagrammatic instructions, including manufacturer specifications and instructions where specified
- work bulletins
- work schedules, plans and specifications.

Relevant personnel may include:

- client
- colleague
- project manager
- supervisor.

Planning and include:

- inspecting work sites and assessing conditions and hazards
preparation must include:

- determining work requirements and safety plans and procedures
- identifying and rectifying equipment defects.

Plant, tools and equipment may include:

- hand tools, including:
  - bolt cutters
  - crow bars
  - cutting knives
  - edging tools
  - floats
  - grinders
  - hammers
  - jointers
  - kneel boards
  - levelling equipment
  - long handled shovels
  - measuring tapes
  - nail bags
  - picks
  - pinch bars
  - pliers
  - rakes
  - sledge hammers
  - steel fixing reels
  - string lines
  - wire brushes
- screeds:
  - air or petrol driven
  - laser
  - magnesium
  - mechanical
  - rolling
- trowels:
  - frezno
  - magnesium trowels
  - ride-on trowelling machine with pans or blades
  - steel trowels
  - stick trowels
  - walk behind trowels
- power tools:
  - 240v power supplied electrically operated portable and
static power tools and leads
- plant and equipment:
  - compressors
  - elevated work platforms (EWPs)
  - scissor lifts
  - vibrators.

Checked for serviceability includes ensuring:
- lubricants, hydraulic fluid and water are checked according to manufacturer recommendations
- power tool guards, retaining bolts, couplings, gauges and controls are checked and maintained according to manufacturer recommendations
- tools, leads and hoses are checked for tags, serviceability and safety, and faults are reported.

Quality requirements must include:
- internal organisational quality policy and standards
- manufacturer specifications, where specified
- relevant regulations and Australian standards
- workplace operations and procedures.

Environmental requirements may include:
- clean-up management
- dust and noise control
- stormwater management
- vibration management
- waste management.

Maintenance must be appropriate to the tool, plant and equipment and include:
- cleaning
- fault checking and rectification or referral to appropriate person
- lubrication
- sharpening.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:
- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - evaluating own actions and making judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
  - teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
REQUIRED SKILLS AND KNOWLEDGE

- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- concrete repairing materials and techniques
- concrete structures
- control joints
- formwork and reinforcement
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- levelling techniques
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- mortar mix composition and additives
- placing and finishing of concrete
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- remove a section or whole defective area, cleaning and preparing the effected area and applying the necessary bonding
- identify and apply the correct rectification method and top coat to a minimum of one square metre of affected area for three of the minor repairs and one major repair listed in the range statement.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.
EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances
EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to repairing concrete
- relevant Australian standards
- safe work procedures relating to repairing
RANGE STATEMENT

- concrete
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
### RANGE STATEMENT

**Tools and equipment** include:
- brooms
- concrete mixers
- floats
- grinders
- hoses
- polishers
- power trowels
- rollers
- screeds
- shovels
- trowels
- water blasters
- wheelbarrows.

**Quality requirements** include:
- internal company quality policy and standards
- manufacturer specifications where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

**Materials**:
- may include concrete

**Environmental requirements** include:
- clean-up management
- dust and noise
- stormwater management
- vibration
- waste management.

**Types of surface which may require repair** include:
- beams
- columns
- concrete aprons
- pathways
- ramps
- slabs
- stairs
- walls.

**Repair work** includes:
- dowelling
- drilling
- formwork
RANGE STATEMENT

- patching
- replacing concrete
- resurfacing
- self-levelling compounds.

**Major repairs** include:
- cracks (wet, live and dormant)
- non-bonding of new to old interfaces
- non-compliant surfaces
- subsidence.

**General repairs** involve:
- acid etching/cleaning
- bonded toppings
- levelling compounds
- mortars
- slippery surfaces
- topping existing concrete
- un-bonded toppings.

**Dusting** is a fault where:
- concrete is too soft as a result of poor curing
- where the surface is breaking up.

**Damaged or blistered concrete** includes:
- blow holes
- dusting
- rain damage
- spalling
- stamped concrete defects
- stencilled concrete defects
- wavy or uneven surfaces.

Unit Sector(s)

Unit sector Construction

Co-requisite units

Co-requisite units Nil
Functional area

Functional area
CPCCCO3035A Assess and specify concrete supply requirements

Modification History

New unit.
This version first released with CPC08 Construction and Property Services Training Package Version 9.

Unit Descriptor

This unit of competency specifies the outcomes required to evaluate concreting projects and determine the type and volume of concrete supply to be sourced in preparation for concreting work. It may include working with others and as a member of a team.

Application of the Unit

This unit of competency applies to concreting work in such areas as multi-storey car parks, public footpaths and residential or commercial construction projects.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements apply to concreting work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites

CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria  Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

---

Elements and Performance Criteria

1. **Assess concreting site and nature of work.**
   1.1 Site plans are reviewed and general size and nature of required concreting work are determined.
   1.2 Project specifications for concreting work are assessed and requirements for each area or feature are categorised according to differences in required **concrete material** properties.
   1.3 Delivery method for concrete supply at different locations and heights is determined and implications for required concrete material properties are assessed.

2. **Assess properties of concrete supply required.**
   2.1 Strength grade designation (MPa) of concrete supply for different areas and features of concrete work is confirmed from project documentation and consultation with relevant personnel, as required.
   2.2 **Variable components of, and additives** to, concrete mix for different areas and features of concrete work are confirmed from project documentation and consultation with relevant personnel, as required.
   2.3 **Concrete specifications** to be met at on-site delivery are identified from project documentation and consultation with relevant personnel as required.
   2.4 **Concrete specifications** for each area and feature are specified for supplier according to project specifications and relevant standards.
| 3 | Determine total volumes and cost of supply of different types of concrete. | 3.1 | Dimensions of each area or feature of concreting work are interpreted from detailed site drawings and specifications. |
|   |                                                                         | 3.2 | Volume of concrete required for each area or feature is calculated according to industry standards and workplace and project requirements. |
|   |                                                                         | 3.3 | Total volumes of concrete supply for areas and features requiring identical properties are calculated. |
|   |                                                                         | 3.4 | Total cost of required concrete is estimated according to workplace procedures. |

| 4 | Determine concrete delivery schedule. | 4.1 | Concrete delivery locations and site access and egress details are confirmed in consultation with relevant project personnel. |
|   |                                       | 4.2 | Project timelines and sequencing of work are assessed and concrete delivery schedule calculated to ensure continuous and timely supply. |
|   |                                       | 4.3 | Supplier specifications for volumes of different concrete mixes are developed. |
|   |                                       | 4.4 | Delivery schedule is confirmed with relevant project personnel, adjusted as required, and finalised for inclusion with concrete specifications. |

| 5 | Finalise specifications for concrete supply. | 5.1 | Specifications are reviewed and checked for accuracy of concrete mix details for different areas and features. |
|   |                                             | 5.2 | Individual area and feature dimensions and volume calculations are reviewed and checked for accuracy. |
|   |                                             | 5.3 | Total volumes of concrete supply for areas and features requiring identical properties are reviewed and checked for accuracy. |
|   |                                             | 5.4 | Team members and supervisor or manager are consulted for feedback on specifications, as required, according to workplace procedures. |
|   |                                             | 5.5 | Supplier specifications are processed according to workplace procedures. |
5.6 Concrete order including delivery schedule is placed with supplier and order acceptance is confirmed.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to develop and build understanding of concrete materials and supply volumes required for different types of concreting work
- numeracy skills to calculate areas and volumes of concreting projects
- oral communication skills to consult with team members and other relevant personnel regarding specifications for concreting work
- reading skills to interpret plans, specifications and concrete manufacturer information
- writing skills to prepare specifications for concrete supply

Required knowledge

- concrete additives and the effect on concrete curing, finishing and performance
- external factors affecting concrete curing, finishing and performance, and strategies for managing them, including:
  - delivery temperature
  - use of additives
- regulations and standards relating to concrete supply:
  - AS 1379 Specification and supply of concrete
  - AS 2758 Aggregate and rock for engineering purposes
  - AS 3582 Supplementary cementitious materials for use with Portland cement
  - AS 3600 Concrete structures
  - AS 3972 Portland and blended cements
- slump-test measurements required at delivery for different concrete mixes
- types, properties and limitations of different types of concrete
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by performing a range of tasks in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- assess concrete material requirements for three different types of concreting projects, including a multi-story car park; for each project, specify the types and volumes of concrete required to ensure job specifications and quality requirements are met
- prepare concrete delivery schedules
- prepare specifications for concrete supply according to workplace requirements.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the mandatory task requirements
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- safety data sheets (SDS).

Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:

- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Guidance information for assessment**

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Concrete material** must include:
- normal class with strength grades in the range N20 to N50
- special class with strength grades in the range S20 to S100.

**Variable components and additives** may include:
- level of air entrainment
- maximum size of aggregate
- methods to ensure coolness of concrete, such as addition of liquid nitrogen
- proportion of cement.

**Concrete specifications** must include:
- required temperature of concrete
- slump-test measurement, which must be:
  - fit for purpose:
    - ramp or slope
    - slab
  - consistent with:
    - formwork
    - placement method

- reinforcements.
CPCCCO3036A Plan concrete work and brief team

Modification History
New unit.
This version first released with CPC08 Construction and Property Services Training Package Version 9.

Unit Descriptor
This unit of competency specifies the outcomes required to assess the size and scope of a concreting job, identify the resources required to complete the project on time and within budget, and communicate requirements to team members in preparation for concreting work to commence.

Application of the Unit
This unit of competency supports those who plan and prepare for concreting tasks. The person may be a nominated member of a team, or the team supervisor of concreters working on residential, commercial or civil construction sites.

Licensing/Regulatory Information
Licensing, legislative, regulatory or certification requirements apply to concreting work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Assess concreting site and scope of work.
   1.1 Site plans are reviewed and size and complexity of concreting tasks are evaluated.
   1.2 Site access and egress information and traffic management plan are assessed and additional provisions or changes negotiated as required.
   1.3 Provisions for site storage and amenities are assessed and additional provisions or changes are negotiated as required.
   1.4 Concurrent work of other construction teams is assessed and communication channels established or confirmed.
   1.5 **Work specifications** are assessed and **project stages** identified and sequenced to meet project timelines for completion.
   1.6 **Work health and safety (WHS)** and **environmental requirements** are confirmed and applied to planning.

2. Determine and source team.
   2.1 Dimensions of each pour are confirmed, predicted weather conditions assessed, and basic person-hour requirements for concreting work are then calculated.
   2.2 **Specialised skill requirements** for different project stages are determined and skills of available team members assessed to identify skill shortages.
   2.3 Additional team members with required skills are recruited within required timeframe to ensure prompt start to work.
2.4 Team members are allocated to tasks and human resource requirements for all project stages are checked and confirmed as complete.

3 Plan concrete pour.

3.1 *Material requirements* are calculated, documented and sourced in preparation for work to commence on time and on budget.

3.2 Type of concrete and curing time in predicted weather conditions are assessed for each pour and tasks are scheduled to meet project requirements.

3.3 *Plant, tools and equipment* required for each project stage are identified, documented and sourced in line with task schedule to ensure availability on site.

3.4 Safe work method statements (SWMS) are developed or adapted for individual tasks according to workplace procedures and safety requirements.

3.5 Potential risks, hazards and contingencies are assessed and management strategies developed.

4 Brief team members.

4.1 Site tour and induction for site safety and environmental requirements are arranged or conducted according to project and workplace requirements.

4.2 Details of task allocations and scheduling are explained and discussed and team understanding of work requirements is confirmed.

4.3 Concurrent work of other construction teams and communication channels are explained to team members and their understanding is confirmed.

4.4 Provisions for dealing with risks, hazards and contingencies are explained and understanding of team members is confirmed.

4.5 Team members are encouraged to clarify work requirements and suggest process improvements at all stages.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to develop and build understanding of:
  - types of concrete materials
  - properties and behaviour of concrete in different environmental conditions
- numeracy skills to calculate dimensions of pour and resource requirements
- oral communication skills to:
  - brief team members on work specifications and requirements
  - liaise with site personnel
- reading skills to interpret site plans and work specifications
- writing skills to develop or adapt SWMS

Required knowledge

- project management principles and strategies relevant to concrete work
- regulations and standards relevant to concrete work:
  - AS 3600 Concrete structures
  - environmental
  - WHS
- risks, hazards and contingencies relevant to concrete work and effective management strategies
- role and responsibilities of construction site personnel
- skills, plant, tools, equipment and materials required for concrete work
- terminology used on construction sites in relation to concreting and other trades
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by performing the mandated tasks in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- predict the number of resources and time required to complete three separate concrete projects, each measuring a minimum of 100 square metres, and identify skill requirements for each project
- identify and source appropriately skilled workers to complete the concreting work
- brief the concreting team on the work to be completed and quality requirements of the finished work.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- support materials appropriate to activity.

Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:

- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third
parties, such as existing supervisors, team leaders or specialist training staff.

**Guidance information for assessment**

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

---

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work specifications** may include:

- instructions issued by authorised organisational and external personnel
- regulatory and legislative requirements relating to concrete work, including Australian standards
- safety data sheets (SDS) for substances to be used
- verbal, written and diagrammatic instructions, including manufacturer specifications and instructions where specified
- work schedules, plans and specifications.

**Project stages** must include:

- fitting personal protective equipment (PPE)
- selecting and checking tools and equipment
- site preparation:
  - excavation
  - formwork
  - subgrade
- delivery
- pouring
- compaction
- levelling
- finishing
Work health and safety requirements must include:

- curing
- site clean-up.
- assistance of others or the use of manual or mechanical lifting devices with handling activities where size, weight or other issues, such as disability, are a factor
- emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
- hazard control
- hazardous materials and substances
- PPE prescribed under legislation, regulations and workplace policies and practices relevant to concrete work
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - signage and restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working outdoors in warm climates
  - use of plant, tools and equipment.

Environmental requirements must include:

- clean-up management
- dust and noise control
- stormwater management
- vibration management
- waste management.

Specialised skill requirements must include:

- decorative concreting
- cutting and coring
- concrete repairs.

Material requirements must include:

- concrete additives
- reinforcements.

Plant, tools and equipment must include combinations of the

- hand tools, including:
  - bolt cutters
  - crow bars
following relevant to the tasks:

- cutting knives
- edging tools
- floats
- grinders
- hammers
- jointers
- kneel boards
- levelling equipment
- long handled shovels
- marking tools
- measuring tapes
- nail bags
- picks
- pinch bars
- pliers
- rakes
- sledge hammers
- steel fixing reels
- string lines
- wire brushes
- trowels:
  - frezno
  - magnesium trowels
  - ride-on trowelling machine with pans or blades
  - stick trowels
  - walk behind trowels
- power tools
- plant and equipment:
  - compressors
  - material shifting equipment
  - vibrators.

CPCCCO3041A Place concrete

Modification History
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.
- Changes to descriptor, elements and performance criteria, required skills and knowledge, critical aspects for assessment, and methods of assessment
- Range of other minor editorial changes
Not equivalent to CPCCCO3021A Place concrete.

Unit Descriptor
This unit of competency specifies the outcomes required to place concrete into prepared formwork or foundations to establish a strong base for further building work. The unit includes calculating the volume of concrete required for the concrete pour, moving concrete from truck to pour location, and placing and screeding concrete.

Application of the Unit
This unit of competency supports the role of concreters working on residential, commercial or civil construction sites.

Licensing/Regulatory Information
Licensing, legislative, regulatory or certification requirements apply to concreting work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare.  
   1.1 Work instructions, **work health and safety (WHS) requirements** and other **information** relevant to the work are identified, confirmed and applied for **planning and preparation** purposes.
   1.2 **Plant, tools and equipment** consistent with job requirements are selected and checked for serviceability, and faults are rectified and reported before work begins.
   1.3 Material quantity requirements, including the volume of concrete required, are identified and calculated according to plans, specifications and **quality requirements**.
   1.4 Materials appropriate to the work application are obtained, prepared, safely handled and located ready for use.
   1.5 Time required for concrete pour is estimated based on size of area to be concreted, **volume of concrete required**, and level of complexity of concrete pour.
   1.6 **Environmental requirements** are identified for the project according to environmental plans and regulatory requirements.

2 Define and prepare location for concrete placement.  
   2.1 **Location** of concrete placement is determined from plans and specifications.
   2.2 Implications for concrete placement near existing structures are discussed with **relevant personnel** and appropriate processes are implemented to ensure
separation or connection.

2.3 Location for placement is checked to be free of debris and waste.

2.4 Safe working area is maintained around pour location using barriers and signage consistent with WHS regulations.

2.5 Plant, tools and equipment are obtained and checked to suit planned placement.

3 Receive and dispatch concrete.

3.1 Delivery advice is checked for accuracy against ordered material.

3.2 Access to the site is cleared.

3.3 Concrete delivery vehicle is directed to location of discharge.

3.4 Concrete is discharged via chute into appropriate receptacle.

4 Place concrete.

4.1 Concrete is placed in horizontal layers into location according to indicated levels.

4.2 Height of vertical drop of concrete is minimised to avoid segregation of concrete materials.

4.3 Poured concrete is consolidated during process using approved compaction or vibration method.

4.4 Measurements and calculations are conducted throughout the pour to ensure sufficient concrete is delivered to fill the required area and orders are placed for shortfall as required.

4.5 Finished levels are checked against datum using appropriate levelling device.

4.6 Concrete is screeded to correct levels and grades using appropriate straight edged tool or formwork mounted screed.
5 Clean up.

5.1 Work area is cleared and materials disposed of, reused or recycled according to regulations, codes of practice and job specification.

5.2 Plant, tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - evaluate own actions and make judgments about performance and necessary improvements
  - respond to change, such as differences in work site, and environmental and quality requirements
- numeracy skills to:
  - estimate time required to place concrete
  - calculate and confirm correct quantities of materials and volume of concrete required for work tasks at various times throughout the concrete pour
- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report work site hazards to appropriate personnel, including faults in tools, equipment or materials
  - use language and concepts appropriate to cultural differences
- reading skills to:
  - interpret documentation, including drawings and specifications
  - interpret manufacturer instructions for safely handling tools, equipment and materials
  - understand written instructions, procedures and signage
- writing skills to complete pre-operational checklists and simple equipment fault forms

Required knowledge

- concreting placement techniques:
  - cold joints and how to manage them effectively
  - compaction techniques
  - concrete reinforcement techniques
  - levelling techniques
  - placing concrete level and multi-level areas
- processes for calculating material requirements at various times throughout the concrete pour
- processes for material storage and environmentally friendly waste management
- properties of concrete, including the importance of maintaining the slump specified in the plans and specifications of the job in order to minimise waste, delay and faults in placing
concrete

- quality requirements relating to placing concrete
- types and applications of concrete materials
- types, characteristics, uses and limitations of plant, tools and equipment relevant to placing concrete
- types, location and use of relevant safety resources and information:
  - job safety analyses (JSA) and safe work method statements (SWMS)
  - safety data sheets (SDS)
  - signage and barricades
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by performing a range of tasks in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to place concrete at five different placement sites, each measuring at least 100 square metres with a minimum of three sites requiring consideration for planned load bearing walls or columns, set down or wet areas in the slab, and multiple levels and temporary formwork.

The evidence provided should demonstrate the ability to:

- calculate time required for concrete pour
- estimate required volume of concrete prior to the concrete pour; and conduct relevant checks and calculations near the end of concrete pour and adjust volume of concrete as necessary
- place, screed to level, and compact concrete in a safe and effective way, using appropriate combinations of listed tools and equipment and in the timeframe provided
- locate, interpret and apply relevant information, standards and specifications relating to placing concrete
- comply with site safety plans and procedures
- comply with organisational policies and procedures relating to placing concrete while ensuring the required level of quality
- safely and effectively operate and use plant, tools and equipment required to place concrete
- communicate and work effectively and safely with others.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
realistic tasks or simulated tasks covering the mandatory task requirements
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to placing concrete
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- safety data sheets.

**Method of assessment**

Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:

- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Guidance information for assessment**

This unit could be assessed on its own or in combination with other units relevant to the job function for example:

- CPCCCO2022A Use and maintain concreting plant, tools and equipment.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety**

- assistance of others or the use of manual or mechanical lifting
Requirements must comply with state and territory legislation and regulations and project safety plan, and may include:

- Devices with handling activities where size, weight or other issues, such as disability, are a factor
- Emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
- Hazard control
- Hazardous materials and substances
- Personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- Safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - Earth leakage boxes
  - Lighting
  - Power cables, including overhead service trays, cables and conduits
  - Signage and restricted access barriers
  - Surrounding structures
  - Traffic control
  - Trip hazards
  - Work site visitors and the public
  - Working at heights
  - Working in confined spaces
  - Working in proximity to others
  - Working outdoors in warm climates
  - Use of firefighting equipment
  - Use of tools and equipment
  - Workplace environmental requirements and safety.

Information may include:

- Instructions issued by authorised organisational and external personnel
- Memos
- Regulatory and legislative requirements relating to placing concrete, including Australian standards
- Safe work procedures relating to placing concrete
- Safety data sheets
- Signage
- Verbal, written and diagrammatic instructions, including manufacturer specifications and instructions where specified
- Work bulletins
- Work schedules, plans and specifications.

Planning and preparation must include:

- Assessing conditions and hazards
- Calculating time required to complete task
- Identifying and rectifying equipment defects
Plant, tools and equipment:

- inspecting work sites.
- must include:
  - chutes
  - measuring tapes and rules
  - screed boards
  - shovels
  - trowels
- may include:
  - brooms
  - compressors
  - concrete placing booms
  - kibbles
  - line pumps
  - mechanised dumpers
  - rakes
  - stipple devices
  - trowelling machines
  - vibrators
  - wheelbarrows.

Quality requirements must include:
- internal organisational quality policy and standards
- manufacturer specifications where specified
- relevant regulations and Australian standards
- workplace operations and procedures.

Environmental requirements may include:
- clean-up management
- dust and noise control
- stormwater management
- vibration management
- waste management.

Location must include:
- single slab
- multi-level slab
- set down and wet areas
- temporary formwork.

Relevant personnel may include:
- architect
- client
- site manager or supervisor
- stonemason.

Concrete delivery may include:
- crane and kibble
- pre-mix truck
- wheelbarrow.

Appropriate receptacle
- hopper
may include: • kibble
• pump
• wheelbarrow.

Placing of concrete may include:
• kibble
• pumping equipment
• shovelling
• tremmies
• truck-placed
• vibrating
• wheelbarrows.

Levels are indicated by:
• level pegs
• lines
• markers.

Methods to avoid segregation of concrete may include:
• using a tremmie, minimise the height of a vertical drop (no greater than 2 metres high for 20MPA at 80 slump)
• using pumps with a flexible hose.

Finishing techniques may include:
• broom finished
• brushed
• mechanical trowelling
• steel trowelling
• wood float.

Screeding:
• must include a hand screed
• may include:
  • a mechanical vibrating screed
  • magic screeds.

Unit Sector(s)
Concreting

Custom Content Section

CPCCCO3042A Finish concrete

Modification History
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.
- Changes to elements and performance criteria, range statement, critical aspects for assessment, and methods of assessment
- Range of other minor editorial changes
Not equivalent to CPCCCO3022A Finish concrete

Unit Descriptor
This unit of competency specifies the outcomes required to finish concrete surfaces that have been placed and screeded in line with specified finish requirements. The unit includes both manual and mechanical finishing techniques. It may also include working with others and as a member of a team.

Application of the Unit
This unit of competency supports the attainment of the understanding and skills to finish concrete on commercial, residential and civil construction sites.

Licensing/Regulatory Information
Licensing, legislative, regulatory or certification requirements apply to concreting work in different states and territories. Candidates are advised to consult with the relevant regulatory authorities.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare.

1.1 Work instructions, *work health and safety (WHS)* requirements and other information relevant to the work are identified, confirmed and applied for planning and preparation purposes.

1.2 Plant, *tools and equipment* consistent with job requirements are selected and checked for serviceability, and faults are rectified and reported before work begins.

1.3 Material quantity requirements are identified and calculated according to plans, specifications and *quality requirements*.

1.4 Materials appropriate to the work application are obtained, prepared, safely handled and located ready for use.

1.5 *Environmental requirements* are identified for the project according to environmental plans and regulatory requirements.

2 Apply concrete finishing techniques.

2.1 Bull float is applied immediately after initial screeding while concrete is still plastic, to assist in maintaining a level surface consistent with drawings and specifications and to remove screeding lines and inaccuracies.

2.2 Surface of concrete is assessed during the curing process and level surface is maintained to allow manual and mechanical trowelling to be applied.

2.3 Concrete is observed and left untouched until bleed water has come to the surface and evaporated.
2.4 Strength of setting concrete is assessed using a basic thumb test to ensure weight of mechanical trowel and operator can be accommodated.

2.5 Mechanical trowelling is applied and reapplied in multiple overlapping lines, to consolidate and densify the setting concrete surface.

2.6 Control joints are installed, *edges finished* and concrete trowelled to specifications.

2.7 Concrete is *finished* according to job specifications.

3 Clean up.

3.1 Work area is cleared and materials disposed of, reused or recycled according to regulations, codes of practice and job specification.

3.2 Plant, tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - evaluate own actions and make judgments about performance and necessary improvements
  - respond to change, such as differences in work site, and environmental and quality requirements
- numeracy skills to:
  - check levels of lubricants in tools
  - calculate and confirm correct quantities of materials for work tasks
- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report work site hazards to appropriate personnel, including faults in tools, equipment or materials
  - use language and concepts appropriate to cultural differences
- reading skills to:
  - interpret documentation, including drawings and specifications
  - interpret manufacturer instructions for safely handling tools and equipment
  - understand written instructions, procedures and signage
- writing skills to complete pre-operational checklists and simple equipment fault forms

Required knowledge

- concreting levelling and finishing techniques
- processes for calculating material requirements
- processes for material storage and environmentally friendly waste management
- properties of concrete to be able to correctly identify when finishing techniques should be applied to minimise waste, delay and faults in finishing concrete
- quality requirements and techniques that will result in the required concrete finish
- types, characteristics, uses and limitations of plant, tools and equipment relating to finishing concrete
- types, location and use of relevant safety resources and information:
  - job safety analyses (JSA) and safe work method statements (SWMS)
  - safety data sheets (SDS)
  - signage and barricades
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by undertaking a range of tasks in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to finish five different concrete surfaces, each measuring at least 100 square metres, according to job specifications.

The evidence provided should demonstrate the ability to:

- identify the appropriate time to apply finishing concrete techniques to ensure minimal delay and waste and that finished concrete meets job specifications
- correctly use relevant hand and power tools
- locate, interpret and apply relevant information, standards and specifications relating to finishing concrete
- comply with site safety plans and procedures
- comply with organisational policies and procedures relating to finishing concrete while maintaining quality requirements outlined in job specifications
- safely and effectively operate and use plant, tools and equipment required to finish concrete
- communicate and work effectively and safely with others.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
• support materials appropriate to finishing concrete
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• safety data sheets.

Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using a combination of the following methods:
• direct observation of tasks in real or simulated work conditions
• questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function for example:
• CPCCCO2022A Use and maintain concreting plant, tools and equipment.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.
