4.2 Replacement components are checked and fitted periodically and as required according to specification.

4.3 Maintenance and repair of devices are conducted observing manufacturer and authorities' requirements.

5 **Restore work area.**

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

5.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to test, commission and maintain high, medium and low hazard backflow prevention devices in water services
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- basic hydraulics and mechanics relevant to backflow prevention devices in water services
- characteristics and applications of the materials and backflow prevention devices
- effective isolation procedures
• job safety analysis (JSA) and safe work method statements (SWMS)
• process of testing, commissioning and maintaining backflow prevention devices
• processes for accessing information and for calculating material requirements
• properties of water, including pressure and flow rates
• relationship with other service controls and devices
• relevant statutory requirements related to testing and commissioning backflow prevention devices
• SI system of measurements
• standards applicable to the service
• testing equipment and techniques
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to the commissioning of backflow prevention devices
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- as a minimum, the ability to test and commission at least:
  - two different double check valves
  - a single (testable) check valve
  - two different registered air gaps (including two different orifice sizes and inlet pressures)
  - two different types of pressure type vacuum breakers
  - two different reduced pressure zone devices, indicating the ongoing maintenance requirements for each of them, ensuring:
    - application of sustainability principles and concepts
    - correct identification of location, design and details of proposed service
    - correct selection and use of appropriate processes, tools and equipment
    - completion of all work to specification
    - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and
environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- identifying and testing for electrical hazards
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
• hazardous materials and substances
• service lines
• surrounding structures and facilities
• trip hazards
• use of tools and equipment
• work site visitors and the public
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

**Environmental requirements** cover water quality management and may include:
• clean-up protection
• stormwater protection
• waste management.

**Quality assurance requirements** may include:
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

**Statutory and regulatory authorities** include:
• commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:
• hand and power tools
• approved and calibrated test equipment.

**Backflow prevention devices** may include:
• single check valves
• double check valves
• pressure type vacuum breakers
• reduced pressure zone devices
• registered air gaps (RAG)
• registered break tanks (RBT).

**Information** may include:
• charts and hand drawings
• instructions issued by authorised organisational or
external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards, including:
  - AS/NZS3500 National plumbing and drainage
- safe work procedures relating to commissioning backflow prevention devices
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Materials** may include:
- approved backflow prevention devices.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
  - efficient water use
  - efficient energy retention
  - selecting appropriate components and material to ensure minimal environmental impact.

Custom Content Section

Not applicable.
CPCPWT4023A Commission and maintain hot and heated water temperature control devices

Modification History
Changes to unit title, descriptor, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPWT4013A

Unit Descriptor
This unit of competency specifies the outcomes required to test, commission and maintain hot and/or heated water temperature control devices, including thermostatic mixing valves in water services.
It covers preparation for work, identification of testing and commissioning requirements, physical testing and commissioning of devices, maintenance of devices and completion of work finalisation processes.

Application of the Unit
Site location for work application will be residential or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria  Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

---

Elements and Performance Criteria

1  Prepare for work.

1.1 Plans and specifications are obtained.

1.2 *Work health and safety* (WHS) and *environmental requirements* associated with testing, commissioning and maintaining hot and/or heated water temperature control devices are adhered to throughout the work.

1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’* requirements.

1.5 *Tools and equipment* for testing, commissioning and maintaining hot and/or heated water temperature control device, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient commissioning of hot and/or heated water temperature control devices.

2  Identify testing and commissioning requirements.

2.1 Service and system testing and commissioning requirements are identified from job specifications and according to standards, using relevant *information*.

2.2 Hot and/or heated water temperature control device specifications and necessary *materials* are identified according to standards, authorities' requirements and job specifications.
3 Test and commission device.

3.1 Service and system are checked to ensure device is appropriate and installed according to standards, job specifications, manufacturer recommendations and authorities' requirements.

3.2 Operation of device is tested for correct flow rate, operation and compliance with specifications, manufacturer recommendations and authorities' requirements, and adjusted as required.

3.3 Documentation is completed according to regulating authorities' requirements.

3.4 Sustainability principles and concepts are observed when preparing for and undertaking work process.

4 Maintain device.

4.1 Maintenance requirements are identified from manufacturer specifications or authorities' requirements.

4.2 Replacement components are checked and fitted periodically and as required according to specification.

4.3 Maintenance of valves is conducted observing manufacturer and authorities' requirements.

5 Restore work area.

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

5.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to test, commission and maintain hot and/or heated water temperature control devices, including thermostatic mixing valves, in hot and/or heated water systems and appliances requiring temperature control
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

**Required knowledge**

- bacteria in water and its effect on health
- basic hydraulics and mechanics relevant to water temperature control devices and their installation
• characteristics and applications of different types of hot and/or heated water temperature control valves and devices
• characteristics of materials
• effective isolation procedures
• job safety analysis (JSA) and safe work method statements (SWMS)
• process of commissioning hot and/or heated water temperature control devices
• processes for accessing information and for calculating material requirements
• properties of water, including pressure and flow rates
• relevant statutory requirements related to commissioning hot and/or heated water temperature control devices
• SI system of measurements
• standards applicable to the service
• testing techniques
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to commission hot and/or heated water temperature devices
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- as a minimum, the ability to test, commission and maintain three different types of thermostatic mixing valve, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed service
  - correct selection of valve for given application
  - completion of all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - application of sustainability principles and concepts
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will
usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a
number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- All assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. CPCSFS5001A Define scope and hazard level of fire systems design projects

Modification History
Not Applicable

Unit Descriptor

| Unit descriptor | This unit of competency specifies the outcomes required to interpret briefs and specifications for fire systems design projects, and define the scope and hazard level of the project with reference to relevant legislation, codes and standards. Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body. |

Application of the Unit

| Application of the unit | This unit of competency supports the role of fire systems' designers who need to determine the nature and purpose of the client's or fire engineer's fire systems design concept. The work involves establishing the building classification and hazard level and the legislation, codes and standards that must be applied to the detailed design for fire systems. Fire systems designs are limited to those within the deemed-to-satisfy provisions of the Building Code of Australia or detailed fire systems designs for alternative solutions designed by fire engineers. This unit does not apply to fire systems for special hazard locations. |

Licensing/Regulatory Information

Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- operating computer software packages and systems, including:
  - word processing
REQUIRED SKILLS AND KNOWLEDGE

- spreadsheet
- email
- internet
- proprietary project management software
- parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT

- language and literacy skills for:
  - listening to and communicating clearly with clients and contractors
  - participating in meetings, such as negotiations with fire engineering consultant, architect or builder
  - researching current relevant legislation, codes and standards
  - reading and interpreting drawings, including architectural and structural

- developing constructive and cooperative working relationships with project team members, workplace colleagues and clients
- initiating and running meetings with lead contractor and other service contractors
- project management
- organising own work, including creating personal systems and checklists for planning, managing and checking work
- lateral thinking and problem solving
- maintaining concentration, focus and attention to detail for long periods
- managing detailed input to concurrent fire systems design projects at different stages of the process and with diverse sets of regulatory requirements

Required knowledge

- fire science, including:
  - fire behaviour and dynamics
  - impact of fire on structures and materials
  - products of combustion
  - fire control strategies
  - fire retardants
  - fire detection technologies
  - fire suppression technologies
  - fire containment

- human psychology, especially fire avoidance behaviour
- fire engineering principles, including:
  - engineered solutions
  - innovative fire systems
  - fire modelling
- computer software functions and operation, including:
REQUIRED SKILLS AND KNOWLEDGE

- word processing
- spreadsheet
- email
- internet
- proprietary project management software
- parametric modelling software, such as Navis-Works or MEP-REVIT
- relevant current legislation, codes and standards, including:
  - building Acts
  - building regulations
  - infrastructure supply regulations
  - the Building Code of Australia
  - Australian standards for fire systems
  - international standards for fire systems
  - other fire systems standards commonly required by building insurers
- fire systems' technology and components, including:
  - water-based systems, including:
    - wet pipe sprinkler systems
    - deluge and drencher systems
    - dry pipe sprinkler systems
    - pre-action sprinkler systems
    - early suppression fast response (ESFR)
    - hydrants, hose reels and monitors
    - water supply tanks
    - fire pump sets
    - detection and warning systems, including:
      - emergency warning and intercommunications systems (EWIS)
      - fire detection and alarm systems
      - smoke control systems
      - emergency lighting systems
- purpose and operation of fire systems, including:
  - layout
  - system operation
  - performance requirements
  - maintenance standards
  - system activation and operation
- passive fire safety elements:
  - identification of passive elements
  - impact of fire systems design on passive elements
## REQUIRED SKILLS AND KNOWLEDGE

- Specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- Characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- Interconnection of fire systems, including:
  - Cause and effect matrix
  - Interface with other services
- Basic principles of structural engineering
- Characteristics of building materials
- Construction industry terminology
# Evidence Guide

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the determination and establishment of the scope of a range of fire systems design projects. This would involve correctly interpreting design concepts, briefs and specifications, establishing building classifications, and identifying the relevant applicable legislation, codes and standards.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular the person should demonstrate:

- the ability to read and interpret a range of design documents, including concept briefs, design briefs, drawings, plans and specifications
- an understanding of hazard levels and building classifications
- an understanding of the extent of legislation, codes, standards, as well as regulatory and insurance requirements, that may apply to fire systems design projects of different types and in different locations, including:
  - low-rise buildings
  - medium-rise buildings
  - high-rise buildings (over 25 metres)
  - buildings over 45 metres in height
- the ability to conduct research to determine which particular legislation, codes, standards, regulatory and insurance requirements apply to

### Context of and specific resources for assessment

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- design briefs, drawings, plans and specifications
- copies of codes, standards, legislation and regulatory requirements
- access to information and communications technology - hardware and software.

### Method of assessment

Assessment must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

### Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in...
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Fire systems design projects may include:

- different types of buildings, including:
  - residential
  - commercial
  - industrial
  - mixed classification
- projects in different locations, including:
  - local
  - involving more than one state or territory
  - international
- several types of fire systems, including:
  - water-based systems:
    - wet pipe sprinkler systems
    - deluge and drencher systems
    - dry pipe sprinkler systems
    - pre-action sprinkler systems
    - early suppression fast response (ESFR)
  - hydrants, hose reels and monitors
  - water supply tanks
  - fire pump sets
  - detection and warning systems:
    - emergency warning and intercommunications systems (EWIS)
    - fire detection and alarm systems
  - smoke control systems
RANGE STATEMENT

| Building classifications may include: | • classifications in the Building Code of Australia:  
| | • occupancy classes  
| | • multiple classifications  
| | • parts with more than one classification  
| | • fire hazard properties of materials and smoke growth rate  
| | • classifications specified in relevant Australian or international standards  
| | • classifications relating to standards or codes applied by building insurers. |

| Codes and standards may include: | • the Building Code of Australia  
| | • Australian standards for fire systems  
| | • international standards for fire systems. |

| Regulatory requirements may include: | • relevant current legislation, including:  
| | • building Acts  
| | • building regulations  
| | • infrastructure supply regulations  
| | • relevant state, territory and local legislation. |

| 1. Gather and interpret project initiation documentation. | 1.1. *Fire systems* design briefs, plans and specifications are gathered and checked for currency and completeness.  
1.2. The specific requirements of *engineered or innovative solutions*, designed and specified by fire engineers, are interpreted.  
1.3. *Relevant drawings, plans and schedules for the building project* are requested, obtained and filed according to workplace and project procedures.  
1.4. Impacts of building construction and the installation of other services on fire systems design are assessed to pre-empt possible issues. |
| 2. Research the detailed requirements of relevant legislation and regulatory processes. | 2.1. *Legislation* impacting on design compliance in different project locations is investigated and variations in requirements are interpreted and noted.  
2.2. *Regulatory requirements* impacting on fire systems designs and project processes in different locations are investigated and specific requirements are interpreted and noted. |
| 3. Research the detailed requirements of applicable codes and standards. | 3.1. Applicable *codes and standards* are gathered and checked for currency.  
3.2. Requirements relating to specific fire systems in different *types of buildings and situations* are researched and interpreted.  
3.3. In situations where more than one code or standard is applicable, the most rigorous requirements are determined and applied. |
| 4. Consult and negotiate to clarify and finalise project details. | 4.1. The interpretation of the required fire systems design and intended layout and interconnection are confirmed with relevant personnel.  
4.2. Consultation and negotiations are undertaken with relevant personnel to resolve conflicts between the design brief and regulatory or insurance requirements.  
4.3. Consultation and negotiations are undertaken with relevant personnel to resolve conflicts between the design brief, the requirements of building construction, and the installation of the fire systems and other services.  
4.4. Aesthetic requirements relating to the location of fire system components and installation methods are

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- accurate measuring
- accurate naming and filing of drawings, including:
  - formal document control
  - formal amendments, including:
    - history
    - transmittal notices
- editing and creating drawings, including:
  - layout
  - section
  - detail
  - external references
  - freezing layers
- operating computer software packages and systems, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
  - parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
- numeracy skills for calculating dimensions
- language and literacy skills for:
  - listening to and communicating clearly with colleagues and contractors
  - participating in meetings, such as negotiations with fire engineering consultant, architect, builder or other service contractors
  - researching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
  - letter writing, especially to formalise:
### REQUIRED SKILLS AND KNOWLEDGE

- recognition of conflicts and errors on drawings supplied by other service contractors
- agreements with other services, for example whichever service is fitted last must fit around existing services
- updating knowledge of products, software systems and technology
- reading and interpreting drawings, plans and specifications, including:
  - architectural
  - structural
  - mechanical
  - hydraulic
  - electrical
- researching and evaluating competing technologies in new products and systems
- developing constructive and cooperative working relationships with project team members, workplace colleagues and clients
- negotiation and conflict management
- initiating and running meetings with lead contractor and other service contractors
- project management
- organising own work, including creating personal systems and checklists for planning, managing and checking work
- lateral thinking and problem solving
- maintaining concentration, focus and attention to detail for long periods

#### Required knowledge

- workplace design tools and processes
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- fire science, including:
  - fire behaviour and dynamics
  - impact of fire on structures and materials
  - products of combustion
  - fire control strategies
  - fire retardants
  - fire detection technologies
  - fire suppression technologies
  - fire containment
- fire engineering principles, including:
  - engineered solutions
  - innovative fire systems
  - fire modelling
REQUIRED SKILLS AND KNOWLEDGE

- parametric modelling software, such as Navis-Works or MEP-REVIT
- computer software functions and operation, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
- relevant current legislation, codes and standards, including:
  - building Acts
  - building regulations
  - infrastructure supply regulations
  - the Building Code of Australia
  - Australian standards for fire systems
  - international standards for fire systems
  - other fire system standards commonly required by building insurers
- regulatory requirements, systems and processes
- protection requirements for different buildings
- fire systems' technology and components, including:
  - water-based systems, including:
    - wet pipe sprinkler systems
    - deluge and drencher systems
    - dry pipe sprinkler systems
    - pre-action sprinkler systems
    - early suppression fast response (ESFR)
  - hydrants, hose reels and monitors
  - water supply tanks
  - fire pump sets
  - detection and warning systems, including:
    - emergency warning and intercommunications systems (EWIS)
    - fire detection and alarm systems
    - smoke control systems
    - emergency lighting systems
- purpose and operation of fire systems, including:
  - layout
  - system operation
  - performance requirements
  - maintenance standards
  - system activation and operation
REQUIRED SKILLS AND KNOWLEDGE

- passive fire safety elements:
  - identification of passive elements
  - impact of fire systems design on passive elements
  - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- interconnection of fire systems, including:
  - cause and effect matrix
  - interface with other services
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology
- roles and responsibilities of relevant building project personnel, including:
  - architect
  - lead contractor
  - mechanical engineer
  - hydraulic engineer
  - electrical engineer
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems and other services
- installation methods, including:
  - access requirements
  - health and safety requirements
- fluid mechanics and hydraulics relating to:
  - water supply
  - pressure
  - pump selection
  - tank selection
  - pressure vessels
  - pipe range
- sustainability requirements and ratings, including:
  - energy conservation
  - water conservation

Evidence Guide
## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the establishment of the detailed design requirements of a range of fire systems design projects, including discretionary client requirements. The activity should also include researching and interpreting the specifics of applicable legislation, regulatory processes and relevant codes and standards for a range of types of buildings in different project locations.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular the person should demonstrate:

- an ability to interpret the detailed requirements of fire systems design specifications
- an understanding of the extent of compliance requirements and procedures to which fire systems design projects are subject, for a range of projects, including:
  - low-rise buildings
  - medium-rise buildings
  - high-rise buildings (over 25 metres)
  - buildings over 45 metres in height
- the ability to discern mandatory and discretionary requirements and to research the detailed compliance requirements for a range of fire systems design projects in different locations
- the ability to gather, research and interpret information that may differ in only the slightest of details from one design or location to

#### Context of and specific resources for assessment

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- design briefs, drawings, plans and specifications
- copies of codes, standards, legislation and regulatory requirements
- access to information and communications technology hardware and software.

#### Method of assessment

Assessment must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

#### Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as practical take into account the language, literacy and numeracy capacity of the candidate in
### Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Fire systems** may include:
- water-based systems, including:
  - wet pipe sprinkler systems
  - deluge and drencher systems
  - dry pipe sprinkler systems
  - pre-action sprinkler systems
  - early suppression fast response (ESFR)
  - hydrants, hose reels and monitors
- detection and warning systems, including:
  - emergency warning and intercommunications systems (EWIS)
  - fire detection and alarm systems
  - smoke control systems
  - emergency lighting systems.

**Engineered or innovative solutions** may include those defined in the Building Code of Australia as:
- 'solutions which comply with the Performance Requirements other than by reason of satisfying the Deemed-to-Satisfy Provisions'.

**Relevant drawings, plans and schedules for the building project** may include:
- drawings, including:
  - architectural
  - structural
  - mechanical
  - hydraulic
  - electrical
  - layout
  - section

Unit Descriptor

| Unit descriptor | This unit of competency specifies the outcomes required to ensure a quality result for the detailed design of fire systems through meticulous work organisation, planning and methodology. Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body. |

Application of the Unit

| Application of the unit | This unit of competency supports the role of fire systems' designers who manage their own work and take responsibility for ensuring that detailed designs of fire systems are produced within required timeframes and to the standards required for approval of such designs. Fire systems designs are limited to those within the deemed-to-satisfy provisions of the Building Code of Australia or detailed fire systems designs for alternative solutions designed by fire engineers. This unit does not apply to fire systems for special hazard locations. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Establish relevant project management details.** | **1.1.** *Project management roles*, responsibilities and lines of communication for *fire systems* design projects are identified and agreed with project team members in line with project timelines.  
**1.2.** Relevant project scheduling and sequencing information is identified and confirmed.  
**1.3.** Project file-sharing and communication systems and tools are identified and any necessary familiarisation activities are undertaken to ensure efficient and effective operation. |
| **2. Establish procedures for initiating fire systems design projects.** | **2.1.** Project and file-naming systems are established according to workplace and project requirements.  
**2.2.** Efficient and effective document filing and storage systems are established according to workplace and project requirements.  
**2.3.** Systems for efficient tracking and filing of project communications are established according to workplace and project requirements.  
**2.4.** A system is established for ensuring that relevant *project documentation* is requested, received, named and filed according to workplace procedures. |
| **3. Develop a plan for setting up fire systems design projects.** | **3.1.** Procedures for setting up correct CAD backgrounds are established according to workplace and project requirements.  
**3.2.** Systematic processes for identifying and importing the correct layer drawings into CAD are established according to workplace and project requirements.  
**3.3.** Systematic processes for naming, notating and filing drawings are established according to workplace and project requirements. |
| **4. Develop a plan and methodology for designing fire systems.** | **4.1.** Steps and timeframes in the design process for fire systems are established according to workplace and project requirements.  
**4.2.** Workplace quality assurance checks to ensure accuracy and validity of design are determined and procedures are established to ensure that these are conducted.  
**4.3.** Stages where *regulatory or other approval* is required for the design are determined and procedures are established to ensure that these are obtained. |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
5. Develop a plan and methodology for finalising fire systems design projects. | 5.1. Steps and timeframes in the fabrication support process are established according to workplace and project requirements.
5.2. Steps and timeframes in the installation support process are established according to workplace and project requirements.
5.3. **Final drawing and documentation requirements** are established according to workplace and project requirements.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- accurate naming and filing of drawings, including:
  - formal document control
  - formal amendments, including:

  - electrical engineer
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems and other services
- contractual processes

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Overview of assessment | This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures. |
### EVIDENCE GUIDE

| This unit could be assessed as an activity involving the development of a project plan and methodology for several different types of fire systems design projects. This should include the establishment of team member responsibilities, administrative and communications procedures, document management, scheduling, timelines and arrangements for project finalisation activities. |

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular the person should demonstrate:

- an understanding of the roles of project team members
- appropriate consultation and negotiation with project team members, including lead contractor, architect and other services' designers and installation contractors
- an understanding of project management processes and the ability to use project management tools effectively for scheduling, communications and file sharing
- the ability to plan, organise and conduct fire systems design activities, including installation support and finalisation in line with project timelines, and compliance and quality requirements for a range of fire systems design projects, including:
  - low-rise buildings
  - medium-rise buildings
  - high-rise buildings (over 25 metres)
  - buildings over 45 metres in height.

### Context of and specific resources for assessment

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- project documentation, including plans, schedules, design briefs and specifications
- copies of codes, standards, legislation and

Unit Descriptor

| Unit description | This unit of competency specifies the outcomes required to research, evaluate and select existing, new and incoming technologies and components for fire system detection and suppression systems. The unit also involves developing a broad understanding of the range of products available and their application, operation, performance and interaction. Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body. |

Application of the Unit

| Application of the unit | This unit of competency supports the work of fire systems' designers and certifiers who need to: 
  - understand the characteristics, operation and interaction of fire system technologies and components 
  - select and assess fire system technologies and components. 
Fire systems are limited to those within the deemed-to-satisfy provisions of the Building Code of Australia or alternative solutions designed by fire engineers. This unit does not apply to fire systems for special hazard locations. |

2.4. Fire detection and occupant warning system failures are analysed and appropriate design solutions are proposed.  
2.5. Suitable and cost-effective fire detection and occupant warning system technologies and components are selected for a range of buildings and situations. |
| 3. Analyse and specify the interaction of fire systems. | 3.1. The required interactions for effective operation of fire systems in different types of buildings and situations are analysed and specified.  
3.2. The interfaces that affect interactions between fire systems in different types of buildings and situations are identified and examined.  
3.3. Suitable fire detection and suppression systems are selected for a range of buildings and situations and the interactions and interfaces required for effective performance are specified. |
**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- analytical skills to assess performance features and suitability of system technologies and components
- operating computer software packages and systems, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary hydraulic calculation software
  - proprietary estimating software
  - parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
- language and literacy skills for:
  - listening to and communicating clearly with colleagues, installers, suppliers and contractors
  - researching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
  - updating knowledge of products, software systems and technology
  - reading and interpreting drawings, plans and specifications, including:
    - architectural
    - structural
    - mechanical
    - hydraulic
    - electrical
  - researching and evaluating competing technologies in new products and systems
- numeracy skills to evaluate cost-effectiveness of various systems and components
- developing constructive and cooperative working relationships with project team members, workplace colleagues, suppliers, installers, manufacturers and industry professionals who may supply information relevant to research and evaluation activities
- organising own work, including creating personal systems and checklists for planning, managing and checking work

**Required knowledge**
## REQUIRED SKILLS AND KNOWLEDGE

- workplace design tools and processes
- fire science, including:
  - fire behaviour and dynamics
  - impact of fire on structures and materials
  - products of combustion
  - fire control strategies
  - fire retardants
  - fire detection technologies
  - fire suppression technologies
  - fire containment
- computer software functions and operation, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary hydraulic calculation software
  - proprietary estimating software
  - parametric modelling software, such as Navis-Works or MEP-REVIT
- relevant current legislation, codes and standards, including:
  - building Acts
  - building regulations
  - infrastructure supply regulations
  - the Building Code of Australia
  - Australian standards for fire systems
  - international standards for fire systems
  - other fire system standards commonly required by building insurers
- fire systems’ technology and components, including:
  - water-based systems, including:
    - wet pipe sprinkler systems
    - deluge and drencher systems
    - dry pipe sprinkler systems
    - pre-action sprinkler systems
    - early suppression fast response (ESFR)
    - hydrants, hose reels and monitors
    - water supply tanks
    - fire pump sets
    - detection and warning systems, including:
      - emergency warning and intercommunications systems (EWIS)
### REQUIRED SKILLS AND KNOWLEDGE

- fire detection and alarm systems
- smoke control systems
- emergency lighting systems
- purpose and operation of fire systems, including:
  - layout
  - high hazard products
  - system operation
  - performance requirements
  - maintenance standards
  - system activation and operation
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- interconnection of fire systems, including:
  - cause and effect matrix
  - interface with other services
- water supplies, including:
  - common water sources
  - conservation requirements
  - in-ground reticulation
  - booster configurations
- fluid mechanics and hydraulics relating to:
  - water supply
  - pressure
  - pump selection
  - tank selection
  - pressure vessels
  - pipe range
- sustainability requirements and ratings, including:
  - energy conservation
  - water conservation
- principles of organic and inorganic chemistry
- principles of physical sciences, including:
  - Boyle's Law
  - Charles' Law
  - Dalton's Law
  - Henry's Law
- principles of thermodynamics, including:
  - effects of heat
REQUIRED SKILLS AND KNOWLEDGE

- stratification of gases
- smoke and heat dynamics
- electrical and electronics theory, including:
  - units used to measure current (AC and DC), power, capacitance, inductance and sound attenuation
  - effects of AC and DC current in series and parallel circuit paths that includes resistive, inductive and capacitive loads
  - relationship between voltage drops around a circuit and applied voltage
  - definition of voltage ratings as defined in communication and electrical safety regulations, including extra low voltage, low voltage and hazardous voltages
  - layout of electrical wiring systems to meet communication and electrical safety regulations applicable to fire detection and warning systems
  - basic operation of common electronic and electrical components used in fire detection and warning systems
  - basic operation of communication protocols on addressable systems, peripheral devices (printers) and high-level interfaces to other communication devices used in fire detection and warning systems
- communication technologies, including:
  - data transfer
  - networking
  - communication protocols
  - radio frequency technologies
- acoustics and speech intelligibility for occupant warning systems
- human psychology, especially fire avoidance behaviour
- financial management, including:
  - budgeting
  - cost-effectiveness

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Overview of assessment | This unit of competency could be assessed in the workplace or a close simulation of the workplace |
### EVIDENCE GUIDE

<table>
<thead>
<tr>

## EVIDENCE GUIDE

| Context of and specific resources for assessment | Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- design briefs, drawings, plans and specifications
- manufacturer specifications and performance data for a range of fire detection and suppression systems technologies and components
- copies of codes, standards, legislation and regulatory requirements
- access to information and communications technology - hardware and software. |

| Method of assessment | Assessment must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments. |

| Guidance information for assessment | Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed. |
## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### 1.1. Technologies and components for fire suppression systems may include:
- wet pipe sprinkler systems and components
- dry pipe sprinkler systems and components
- pre-action sprinkler systems and components
- early suppression fast response (ESFR) sprinkler systems and components
- fire control panels
- hydrants
- hose reels
- monitors
- water supply tanks
- fire pump sets
- valves.

**Relevant legislation, codes and standards** may include:
- building Acts and regulations
- the Building Code of Australia (BCA)
- Australian standards for fire systems
- international standards for fire systems
- codes and standards required by building insurers.

**Performance characteristics and limitations of fire suppression systems** may include:
- system activation and operation
- effect of fire, heat and smoke of component materials
- interaction with other systems and services.

**Technologies and components available for fire detection and occupant warning systems** may include:
- emergency warning and intercommunications systems (EWIS)
- fire detection and alarm systems
- smoke control systems
- emergency lighting systems
- fire control panels.

**1.2. Performance characteristics and**
- system activation and operation
- effect of fire, heat and smoke on component

CPCSFS5006A Create detailed designs for fire sprinkler systems

Modification History
Not Applicable

Unit Descriptor

| Unit descriptor | This unit of competency specifies the outcomes required to obtain, process and set up drawings for the detailed design of fire sprinkler systems. The unit also involves assessing and selecting component requirements, setting out the locations of components, and creating final notated drawings.

Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body. |

Application of the Unit

| Application of the unit | This unit of competency supports the role of fire systems’ designers with responsibility for creating detailed designs for sprinkler fire suppression systems.

Fire systems designs are limited to those within the deemed-to-satisfy provisions of the Building Code of Australia or detailed fire systems designs for alternative solutions designed by fire engineers. This unit does not apply to fire systems for special hazard locations. |

Licensing/Regulatory Information

Refer to Unit Descriptor
Pre-Requisites

| Prerequisite units | Nil |

Employability Skills Information

| Employability skills | This unit contains employability skills. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Set up fire systems design drawings. | 1.1. Relevant *project drawings and documentation* are requested, received, named and filed according to workplace procedures.  
1.2. Drawings are cleaned to leave minimal essential information.  
1.3. Layers showing designs of other services are imported into clean architectural or structural drawings.  
1.4. Details from drawings of the floor of the level above are added, if these affect the design.  
1.5. The detailed design drawings are named, filed and backed up according to workplace procedures. |
| 2. Lay out the fire sprinkler system design. | 2.1. A site visit is conducted if possible to confirm dimensions and assess installation risks and constraints.  
2.2. The exact location of sprinklers is determined and notated on the drawing according to relevant *codes and standards*.  
2.3. The most efficient and workable layout and location of sprinkler system components are determined and notated on the drawing according to workplace procedures.  
2.4. Dimensions are calculated, checked and notated on the drawing according to workplace procedures. |
| 3. Submit drawings for approval and finalise design process. | 3.1. Fire sprinkler system design drawings are submitted to relevant personnel within the scheduled timeframe.  
3.2. Required amendments to design drawings are made or negotiated as required.  
3.3. Final approved design drawings are processed and distributed according to project and workplace requirements.  
3.4. *Fittings and components* are selected and ordered according to project and workplace requirements. |

## Required Skills and Knowledge

| REQUIRED SKILLS AND KNOWLEDGE |
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

**Required skills**

- accurate measuring
- accurate naming and filing of drawings, including:
  - formal document control
  - formal amendments, including:
    - history
    - transmittal notices
- editing and creating drawings, including:
  - layout
  - section
  - detail
  - external references
  - freezing layers
- operating computer software packages and systems, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
  - proprietary hydraulic calculation software
  - parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
- numeracy skills for:
  - calculating dimensions and pipe lengths
  - performing fluid mechanic calculations
- language and literacy skills for:
  - listening to and communicating clearly with colleagues, installers, suppliers and contractors
  - participating in meetings, such as negotiations with fire engineering consultant, architect, builder or other service contractors
  - researching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
  - letter writing, especially to formalise:
  - recognition of conflicts and errors on drawings supplied by other service contractors
  - agreements with other services, for example whichever service is fitted last must fit around existing services
### REQUIRED SKILLS AND KNOWLEDGE

- updating knowledge of products, software systems and technology
- reading and interpreting drawings, plans and specifications, including:
  - architectural
  - structural
  - mechanical
  - hydraulic
  - electrical
- researching and evaluating competing technologies in new products and systems
- developing constructive and cooperative working relationships with project team members, workplace colleagues, suppliers, installers and clients
- negotiation and conflict management
- initiating and running meetings with lead contractor and other service contractors
- organising own work, including creating personal systems and checklists for planning, managing and checking work
- lateral thinking and problem solving
- maintaining concentration, focus and attention to detail for long periods
- managing detailed input to concurrent fire systems design projects at different stages of the process and with diverse sets of regulatory requirements

### Required knowledge

- workplace design tools and processes
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- fire science, including:
  - fire behaviour and dynamics
  - impact of fire on structures and materials
  - products of combustion
  - fire control strategies
  - fire retardants
  - fire detection technologies
  - fire suppression technologies
  - fire containment
- computer software functions and operation, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
REQUIRED SKILLS AND KNOWLEDGE

- proprietary hydraulic calculation software
- parametric modelling software, such as Navis-Works or MEP-REVIT
- relevant current legislation, codes and standards, including:
  - building Acts
  - building regulations
  - infrastructure supply regulations
  - the Building Code of Australia
  - Australian standards for fire systems
  - international standards for fire systems
  - other fire system standards commonly required by building insurers
- protection requirements for different buildings
- fire systems' technology and components for water-based systems, including:
  - wet pipe sprinkler systems
  - deluge and drencher systems
  - dry pipe sprinkler systems
  - pre-action sprinkler systems
  - early suppression fast response (ESFR)
- purpose and operation of fire systems, including:
  - layout
  - system operation
  - performance requirements
  - maintenance standards
  - system activation and operation
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- passive fire safety elements:
  - identification of passive elements
  - impact of fire systems design on passive elements
  - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- interconnection of fire systems, including:
  - cause and effect matrix
  - interface with other services
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology
- roles and responsibilities of relevant building project personnel, including:
  - architect
### REQUIRED SKILLS AND KNOWLEDGE

- lead contractor
- mechanical engineer
- hydraulic engineer
- electrical engineer
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems and other services
- installation methods, including:
  - access requirements
  - health and safety requirements
- fluid mechanics and hydraulics relating to pipe range
- sustainability requirements and ratings, including:
  - energy conservation
  - water conservation
- pipe fabrication methods and constraints
- mathematical principles, equations and calculation methods, including:
  - financial calculations, for example to assess cost-effectiveness of fire systems
  - trigonometry, for example to amend dimensions of pipe allowing for fittings
  - flow calculations, including:
    - area of operations
    - discharge rates and quantities
    - discharge times
    - pressure gain and loss
    - K-factors
  - pressure, temperature and volume relationship
  - Hazen-Williams equation
  - Darcy-Weisbach equation
  - computational fluid dynamics
- principles of organic and inorganic chemistry
- principles of physical sciences, including:
  - Boyle's Law
  - Charles' Law
  - Dalton's Law
  - Henry's Law
- principles of thermodynamics, including:
  - effects of heat
  - stratification of gases
  - smoke and heat dynamics
### REQUIRED SKILLS AND KNOWLEDGE

- human psychology, especially fire avoidance behaviour
- contractual processes
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the effective performance and application of principles relating to the design of fire sprinkler systems for a range of different types of buildings.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular the person should demonstrate:

- the ability to:
  - read and interpret a range of design drawings
  - create, manipulate, save, file and share design drawings
  - identify, interpret and apply relevant current legislation, codes, standards and regulatory requirements impacting on fire sprinkler system designs
  - interpret and apply fire engineer's designs for alternative solutions
  - an understanding of technical issues impacting on fire sprinkler system designs
  - an understanding of the relevant regulatory approval and fire systems design certification processes
  - the ability to produce fully compliant designs for fire sprinkler systems which also meet client requirements, including:
    - wet pipe
    - dry pipe

**Context of and specific resources for assessment**

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- design briefs, drawings, plans and specifications
- copies of codes, standards, legislation and regulatory requirements
- access to information and communications technology - hardware and software
- access to relevant manufacturer's information regarding fittings and components.

**Method of assessment**

Assessment must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

**Guidance information for assessment**

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to
### EVIDENCE GUIDE

modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

### Range Statement

#### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Project drawings and documentation** may include:

- architectural
- structural
- mechanical
- electrical
- hydraulic
- fire engineer’s or estimator’s specifications.

**Codes and standards** may include:

- the Building Code of Australia
- current relevant Australian standards for fire systems
- current relevant international standards for fire systems
- codes and standards stipulated by the building insurer.

**Efficient and workable layout and location** relate to:

- selection of cost-effective components and materials
- consideration of:
  - penetrations
  - conflict with other services
  - occupational health and safety risks
  - access constraints
  - installation problems

</thead>
<tbody>
<tr>
<td></td>
<td>aesthetic requirements</td>
</tr>
<tr>
<td></td>
<td>efficiencies to facilitate work on site and reduce labour costing.</td>
</tr>
</tbody>
</table>

### Sprinkler system components may include:

- discharge nozzles
- pipework
- brackets
- system valves
- zone valves
- fire panels
- specific components for:
  - wet pipe sprinkler systems
  - deluge and drencher systems
  - dry pipe sprinkler systems
  - pre-action sprinkler systems
  - early suppression fast response (ESFR) systems.

### Negotiations regarding amendments to design drawings may arise due to:

- non-compliance with applicable legislation, codes and standards
- impact on installation risks and constraints
- impact on cost-effectiveness.

### Fittings and components may include:

- hangers
- sprinkler heads
- elbows
- tees
- control valves.

CPCSFS5007A Create detailed designs for hydrant and hose reel systems

Modification History

Not Applicable

Unit Descriptor

| Unit descriptor | This unit of competency specifies the outcomes required to obtain, process and set up drawings for the detailed design of hydrant and hose reel systems. The unit also involves assessing and selecting component requirements, setting out the locations of components and creating final notated drawings.

Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body. |

Application of the Unit

| Application of the unit | This unit of competency supports the role of fire systems’ designers with responsibility for creating detailed designs for hydrant and hose reel fire suppression systems.

Fire systems designs are limited to those within the deemed-to-satisfy provisions of the Building Code of Australia or detailed fire systems designs for alternative solutions designed by fire engineers. This unit does not apply to fire systems for special hazard locations. |

Licensing/Regulatory Information

Refer to Unit Descriptor
Pre-Requisites

| Prerequisite units | Nil |

Employability Skills Information

| Employability skills | This unit contains employability skills. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Set up fire systems design drawings. | 1.1. Relevant *project drawings and documentation* are requested, received, named and filed according to workplace procedures.  
1.2. Drawings are cleaned to leave minimal essential information.  
1.3. Layers showing designs of other services are imported into clean architectural or structural drawings.  
1.4. Details from drawings of the floor of the level above are added, if these affect the design.  
1.5. The detailed design drawings are named, filed and backed up according to workplace procedures. |
| 2. Lay out the hydrant and hose reel design. | 2.1. A site visit is conducted if possible to confirm dimensions and assess installation risks and constraints.  
2.2. The exact location of hydrants and hose reels is determined and notated on the drawing according to relevant *codes and standards*.  
2.3. The most efficient and workable layout and location of hydrant and hose reel system components are determined and notated on the drawing according to workplace procedures.  
2.4. Dimensions are calculated, checked and notated on the drawing according to workplace procedures. |
| 3. Submit drawings for approval and finalise design process. | 3.1. Fire hydrant and hose reel system design drawings are submitted to relevant personnel within the scheduled timeframe.  
3.2. Required amendments to design drawings are made or *negotiated* as required.  
3.3. Final approved design drawings are processed and distributed according to project and workplace requirements.  
3.4. Fittings and components are selected and ordered according to project and workplace requirements. |

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

**Required skills**

- accurate measuring
- accurate naming and filing of drawings, including:
  - formal document control
  - formal amendments, including:
    - history
    - transmittal notices
- editing and creating drawings, including:
  - layout
  - section
  - detail
  - external references
  - freezing layers
- operating computer software packages and systems, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
  - proprietary hydraulic calculation software
  - parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
- numeracy skills for:
  - calculating dimensions, pipe lengths and piping friction loss
  - performing fluid mechanic calculations
- language and literacy skills for:
  - listening to and communicating clearly with colleagues, installers, suppliers and contractors
  - participating in meetings, such as negotiations with fire engineering consultant, architect, builder or other service contractors
  - researching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
  - letter writing, especially to formalise:
    - recognition of conflicts and errors on drawings supplied by other service contractors
    - agreements with other services, for example whichever service is fitted last must fit around existing services
**REQUIRED SKILLS AND KNOWLEDGE**

- updating knowledge of products, software systems and technology
- reading and interpreting drawings, plans and specifications, including:
  - architectural
  - structural
  - mechanical
  - hydraulic
  - electrical
- researching and evaluating competing technologies in new products and systems
- report writing
- developing constructive and cooperative working relationships with project team members, workplace colleagues, suppliers, installers and clients
- negotiation and conflict management
- initiating and running meetings with lead contractor and other service contractors
- organising own work, including creating personal systems and checklists for planning, managing and checking work
- lateral thinking and problem solving
- maintaining concentration, focus and attention to detail for long periods
- managing detailed input to concurrent fire systems design projects at different stages of the process and with diverse sets of regulatory requirements

**Required knowledge**

- workplace design tools and processes
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- fire science, including:
  - fire behaviour and dynamics
  - impact of fire on structures and materials
  - products of combustion
  - fire control strategies
  - fire retardants
  - fire detection technologies
  - fire suppression technologies
  - fire containment
- computer software functions and operation, including:
  - word processing
  - spreadsheet
  - email
  - internet
**REQUIRED SKILLS AND KNOWLEDGE**

- proprietary project management software
- proprietary hydraulic calculation software
- relevant current legislation, codes and standards, including:
  - building Acts
  - building regulations
  - infrastructure supply regulations
  - the Building Code of Australia
  - Australian standards for fire systems
  - international standards for fire systems
  - other fire system standards commonly required by building insurers
- protection requirements for different buildings
  - fire systems' technology and components for hydrant and hose reel systems
- purpose and operation of fire systems, including:
  - layout
  - special products and hazards
  - system operation
  - performance requirements
  - maintenance standards
  - system activation and operation
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- passive fire safety elements:
  - identification of passive elements
  - impact of fire systems design on passive elements
  - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- interconnection of fire systems, including:
  - cause and effect matrix
  - interface with other services
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology
- roles and responsibilities of relevant building project personnel, including:
  - architect
  - lead contractor
  - mechanical engineer
  - hydraulic engineer
  - electrical engineer
- on-site issues that can arise during the construction phase and impose changes to
## REQUIRED SKILLS AND KNOWLEDGE

- the designs of fire systems and other services
- installation methods, including:
  - access requirements
  - health and safety requirements
- sustainability requirements and ratings, including:
  - energy conservation
  - water conservation
- pipe fabrication methods and constraints
- mathematic principles, equations and calculation methods, including:
  - financial calculations, for example to assess cost-effectiveness of fire systems
  - trigonometry, for example to amend dimensions of pipe allowing for fittings
  - flow calculations, including:
    - area of operations
    - discharge rates and quantities
    - discharge times
    - pressure gain and loss
    - K-factors
    - pressure, temperature and volume relationship
    - Hazen-Williams equation
    - Darcy-Weisbach equation
    - computational fluid dynamics
- basic principles of organic and inorganic chemistry
- principles of physical sciences, including:
  - Boyle’s Law
  - Charles’ Law
  - Dalton’s Law
  - Henry’s Law
- basic principles of thermodynamics, including:
  - effects of heat
  - stratification of gases
  - smoke and heat dynamics
- human psychology, especially fire avoidance behaviour
- contractual processes
## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the effective performance and application of principles relating to the design of hydrant and hose reel systems for a range of different types of buildings.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular the person should demonstrate:

- the ability to:
  - read and interpret a range of design drawings
  - use workplace design tools to create, manipulate, save or file, and share design drawings
  - identify, interpret and apply relevant current legislation, codes, standards and regulatory requirements impacting on hydrant and hose reel system designs
  - interpret and apply fire engineer's designs for alternative solutions
  - an understanding of technical issues impacting on hydrant and hose reel designs
  - an understanding of the relevant regulatory approval and fire systems design certification processes
  - the ability to produce designs for hydrant and hose reel systems which comply with applicable legislation, regulations, codes and standards, and meet client requirements, in a

### Range Statement

#### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **Project drawings and documentation** may include: | • architectural  
• structural  
• mechanical  
• electrical  
• hydraulic  
• fire engineer's or estimator's specifications. |
| **Codes and standards** may include: | • the Building Code of Australia  
• current relevant Australian standards for fire systems  
• current relevant international standards for fire systems  
• codes and standards stipulated by the building insurer. |
| **Efficient and workable layout and location** relate to: | • selection of cost-effective components and materials  
• consideration of:  
  • penetrations, especially through passive fire safety elements  
  • conflict with other services  
  • occupational health and safety risks  
  • access constraints  
  • installation problems  
  • aesthetic requirements  
  • efficiencies to facilitate work on site and reduce labour costing. |
| **Hydrant and hose reel system** | • hose reels |
### RANGE STATEMENT

**components** may include:
- hydrant valves
- booster valves.

**Negotiations** regarding amendments to design drawings may arise due to:
- non-compliance with applicable legislation, codes and standards
- impact on installation risks and constraints
- impact on cost-effectiveness.

  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
  - proprietary estimating software
  - parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
- using BASIC computer programming language to write logic for electronic system interfaces
- numeracy skills for calculating:
  - voltage drops
  - battery capacity
REQUIRED SKILLS AND KNOWLEDGE

- battery back-up
- power supplies
- cabling sizes and types
- language and literacy skills for:
  - listening to and communicating clearly with colleagues, installers, suppliers and contractors
  - participating in meetings, such as negotiations with fire engineering consultant, architect, builder or other service contractors
  - researching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
  - letter writing, especially to formalise:
  - recognition of conflicts and errors on drawings supplied by other service contractors
  - agreements with other services, for example whichever service is fitted last must fit around existing services
  - updating knowledge of products, software systems and technology
  - reading and interpreting drawings, plans and specifications, including:
    - architectural
    - structural
    - mechanical
    - hydraulic
    - electrical
    - researching and evaluating competing technologies in new products and systems
- developing constructive and cooperative working relationships with project team members, workplace colleagues, suppliers, installers and clients
- negotiation and conflict management
- initiating and running meetings with lead contractor and other service contractors
- organising own work, including creating personal systems and checklists for planning, managing and checking work
- lateral thinking and problem solving
- maintaining concentration, focus and attention to detail for long periods
- managing detailed input to concurrent fire systems design projects at different stages of the process and with diverse sets of regulatory requirements

Required knowledge

- workplace design tools and processes
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- fire science, including:
REQUIRED SKILLS AND KNOWLEDGE

- fire behaviour and dynamics
- impact of fire on structures and materials
- products of combustion
- fire control strategies
- fire retardants
- fire detection technologies
- fire suppression technologies
- fire containment

- computer software functions and operation, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
  - proprietary estimating software
  - parametric modelling software, such as Navis-Works or MEP-REVIT

- BASIC computer programming language

- relevant current legislation, codes and standards, including:
  - building Acts
  - building regulations
  - infrastructure supply regulations
  - the Building Code of Australia
  - Australian standards for fire systems
  - international standards for fire systems
  - other fire system standards commonly required by building insurers

- protection requirements for different buildings

- fire detection and warning systems technology and components, including:
  - emergency warning and intercommunications systems (EWIS)
  - fire detection and alarm systems
  - smoke control systems
  - emergency lighting systems

- purpose and operation of fire systems, including:
  - layout
  - special products and hazards
  - system operation
  - performance requirements
  - maintenance standards
  - system activation and operation
**REQUIRED SKILLS AND KNOWLEDGE**

- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- passive fire safety elements:
  - identification of passive elements
  - impact of fire systems design on passive elements
  - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- interconnection of fire systems, including:
  - cause and effect matrix
  - interface with other services
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology
- roles and responsibilities of relevant building project personnel, including:
  - architect
  - lead contractor
  - mechanical engineer
  - hydraulic engineer
  - electrical engineer
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems and other services
- installation methods, including:
  - access requirements
  - health and safety requirements
- sustainability requirements and ratings, including:
  - energy conservation
  - water conservation
- mathematic principles, equations and calculation methods, including:
  - financial calculations, for example to assess cost-effectiveness of fire systems
  - electrical calculations, including:
    - voltage drops
    - battery capacity
    - battery back-up
    - power supplies
    - cabling sizes and types
- electrical and electronics theory, including:
  - units used to measure current (AC and DC), power, capacitance, inductance and sound attenuation
REQUIRED SKILLS AND KNOWLEDGE

- effects of AC and DC current in series and parallel circuit paths that includes resistive, inductive and capacitive loads
- relationship between voltage drops around a circuit and applied voltage
- definition of voltage ratings as defined in communication and electrical safety regulations, including extra low voltage, low voltage and hazardous voltages
- layout of electrical wiring systems to meet communication and electrical safety regulations applicable to fire detection and warning systems
- basic operation of common electronic and electrical components used in fire detection and warning systems
- basic operation of communication protocols on addressable systems, peripheral devices (printers) and high-level interfaces to other communication devices used in fire detection and warning systems
- communication technologies, including:
  - data transfer
  - networking
  - communication protocols
  - radio frequency technologies
- acoustics and speech intelligibility for occupant warning systems
- human psychology, especially fire avoidance behaviour
- financial management, including:
  - budgeting
  - cost-effectiveness
- contractual processes

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity.

EVIDENCE GUIDE

| specifications                                                                 |
|                                                                              |
| - copies of relevant codes, standards, legislation and regulatory requirements |
| - access to relevant information and communications technology - hardware and software |
| - access to relevant manufacturer's information regarding fittings and components. |

Method of assessment

Assessment must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating
### RANGE STATEMENT

conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **Project drawings and documentation** may include: | • architectural  
| | • structural  
| | • mechanical  
| | • electrical  
| | • hydraulic  
| | • water-based fire suppression systems  
| | • fire engineer's or estimator's specifications.  |
| **Codes and standards** may include: | • the Building Code of Australia  
| | • current relevant Australian standards for fire systems  
| | • current relevant international standards for fire systems  
| | • codes and standards stipulated by the building insurer.  |
| **Efficient and workable layout and location** relate to: | • selection of cost-effective components and materials  
| | • consideration of:  
| | • penetrations  
| | • conflict with other services  
| | • interfaces with other services  
| | • occupational health and safety risks  
| | • access constraints  
| | • installation problems  
| | • aesthetic requirements  
| | • efficiencies to facilitate work on site and reduce labour costing.  |
| **Detection and warning system components** may include: | • components for:  
| | • emergency warning and intercommunications systems (EWIS)  
| | • fire detection and alarm systems  
| | • smoke control systems  
| | • emergency lighting systems  
| | • fire alarm and control panels:  
| | • conventional  
| | • addressable  
| | • detectors, including:  |
### RANGE STATEMENT

- heat
- smoke
- flame sensing
- spot
- projected beam
- aspiration type
- power source
- batteries
- cabling.

**Electrical calculations** may include the calculation of:

- the voltage drop in a wiring path given the required electrical parameters
- battery capacity requirements given the required performance parameters
- power supply and battery charge capacity requirements given the required performance parameters
- *Cable Services Australia (CSA)* cable size and cabling medium type given the required electrical performance parameters
- total power supply consumption requirements of field equipment in normal and active (alarm) state given the required electrical performance parameters of equipment installed
- the number of points, circuits and zones on a system given the required performance parameters of a wiring path.

**Negotiations** regarding amendments to design drawings may arise due to:

- non-compliance with applicable legislation, codes and standards
- impact on installation risks and constraints
- impact on cost-effectiveness.

**Fittings and components** may include:

- smoke alarms
- smoke detectors
- manual call buttons
- fire alarm panels
- fireproof cable
- batteries
- amplifiers
- speakers
- emergency lighting.

### Competency field

| Competency field |  |
CPCSFS5009A Create detailed designs for fire systems’ water supplies

Modification History
Not Applicable

Unit Descriptor

| Unit descriptor | This unit of competency specifies the outcomes required to obtain, process and set up drawings for the detailed design of water supplies for fire systems. The unit also involves assessing and selecting component requirements, setting out the locations of components and creating final notated drawings. Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body. |

Application of the Unit

| Application of the unit | This unit of competency supports the role of fire systems’ designers with responsibility for creating detailed designs for water supplies for fire systems. Fire systems designs are limited to those within the deemed-to-satisfy provisions of the Building Code of Australia or detailed fire systems designs for alternative solutions designed by fire engineers. This unit does not apply to fire systems for special hazard locations. |

Licensing/Regulatory Information
Refer to Unit Descriptor

Employability Skills Information

| Employability skills | This unit contains employability skills. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Confirm water-based fire systems designs. | 1.1. Relevant *project drawings and documentation* are requested, received, named and filed according to workplace procedures.  
1.2. A site visit is conducted if possible to confirm details and dimensions and to assess water supply installation risks and constraints.  
1.3. The exact location of *fire system components* is notated on detailed design drawings according to relevant *codes and standards*.  
1.4. The detailed design drawings are named, filed and backed up according to workplace procedures. |
| 2. Calculate pipe sizes and pump and tank requirements. | 2.1. Hydraulic calculations are completed to assess correct pressure requirements for the effective operation of water-based fire systems.  
2.2. Water flow and pressure test results are conducted and/or analysed to establish the minimum levels of available supply.  
2.3. Shortfalls in pressure are determined and the sizes of pumps and tanks required are calculated.  
2.4. Options for cost-effective and efficient solutions are considered with reference to manufacturer specifications for the performance of components and according to workplace policies. |
| 3. Lay out the water supply design. | 3.1. The most *efficient and workable layout and location of water supply components* are determined and notated on the drawings according to workplace procedures.  
3.2. Dimensions are calculated, checked and notated on the drawings according to workplace procedures. |
| 4. Submit drawings for approval and finalise design process. | 4.1. Water supply design drawings are submitted to relevant personnel within the scheduled timeframe.  
4.2. Required amendments to design drawings are made or *negotiated* as required.  
4.3. Final approved design drawings are processed and distributed according to project and workplace requirements.  
4.4. Fittings and components are selected and ordered according to project and workplace requirements. |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- accurate measuring
- accurate naming and filing of drawings, including:
  - formal document control
  - formal amendments, including:
    - history
    - transmittal notices
- editing and creating drawings, including:
  - layout
  - section
  - detail
  - external references
  - freezing layers
- operating computer software packages and systems, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
  - proprietary hydraulic calculation software
  - parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
- numeracy skills for:
  - calculating:
    - dimensions
    - pipe lengths
    - piping friction loss
    - tank size
    - pump capacity
    - motor output
  - performing fluid mechanic calculations
- language and literacy skills for:
  - listening to and communicating clearly with colleagues, installers, suppliers and contractors
  - participating in meetings, such as negotiations with fire engineering

## Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the effective performance and application of principles relating to the design of water supplies for fire systems for a range of different types of buildings.

## Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular the person should demonstrate:

- an understanding of fluid dynamics, hydraulics and the calculations required for the design of water supplies for fire systems
- the ability to:
  - read and interpret a range of design drawings
  - create, manipulate, save, file and share design drawings
  - identify, interpret and apply relevant current legislation, codes, standards and regulatory requirements impacting on the design of water supplies for fire systems
  - interpret and apply fire engineer's designs for alternative solutions
- the ability to produce fully compliant designs which meet requirements for water supplies for fire systems in a range of types of buildings, including:
  - low-rise buildings

### Context of and specific resources for assessment

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- Design briefs, drawings, plans and specifications
- Copies of codes, standards, legislation and regulatory requirements
- Access to information and communications technology - hardware and software
- Access to manufacturer's information regarding fittings and components.

### Method of assessment

Assessment must:
- Satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- Include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- Reinforce the integration of employability skills with workplace tasks and job roles
- Confirm that competency is verified and able to be transferred to other circumstances and environments.

### Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.
Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **Project drawings and documentation may include:** | • proposed water-based fire systems designs  
• mechanical  
• electrical  
• hydraulic. |
| --- | --- |
| **Fire system components may include:** | • discharge nozzles  
• pipework  
• system valves  
• zone valves  
• fire panels  
• hose reels  
• hydrant valves  
• booster valves. |
| **Codes and standards may include:** | • the Building Code of Australia  
• current relevant Australian standards for fire systems  
• current relevant international standards for fire systems  
• codes and standards stipulated by the building insurer. |
| **Efficient and workable layout and location relate to:** | • consideration of a range of sustainable options for producing the required water pressure for water-based fire systems  
• selection of cost-effective components and materials  
• consideration of:  
  • penetrations, especially through passive fire safety elements  
  • conflict with other services  
  • occupational health and safety risks  
  • access constraints |

- protection requirements for different buildings
- fire systems’ technology and components, including water-based systems, such as:
  - wet pipe sprinkler systems
  - deluge and drencher systems
  - dry pipe sprinkler systems
  - pre-action sprinkler systems
  - early suppression fast response (ESFR)
- purpose and operation of fire systems, including:
  - layout
  - special products and hazards
  - system operation
  - performance requirements
  - maintenance standards
  - system activation and operation
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- interconnection of fire systems, including:
  - cause and effect matrix
  - interface with other services
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology
- roles and responsibilities of relevant building project personnel, including:
  - architect
  - lead contractor
  - mechanical engineer
  - hydraulic engineer
  - electrical engineer
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems and other services
REQUIRED SKILLS AND KNOWLEDGE

- installation methods, including:
  - access requirements
  - health and safety requirements
- water supplies, including:
  - common water sources
  - conservation requirements
  - in-ground reticulation
  - booster configurations
- fluid mechanics and hydraulics relating to pipe range
- sustainability requirements and ratings, including:
  - energy conservation
  - water conservation
- pipe fabrication methods and constraints
- mathematic principles, equations and calculation methods, including:
  - financial calculations, for example to assess cost-effectiveness of fire systems
  - trigonometry, for example to amend dimensions of pipe allowing for fittings

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the production of pipe fabrication documentation for a range of fire sprinkler system design projects.

Critical aspects for assessment and evidence required to demonstrate competency in this

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this.

### Context of and specific resources for assessment

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- design briefs, drawings, plans and specifications
- copies of codes, standards, legislation and regulatory requirements
## EVIDENCE GUIDE

- access to information and communications technology - hardware and software
- access to manufacturer's information.

### Method of assessment

Assessment must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

### Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### On-site health and safety risks
- manual handling
### RANGE STATEMENT

| may include: | • confined spaces  
| Constraints relating to access | • working at height.  
| may include: | • height of pipe  
| On-site installation locations | • length of pipe  
| may include: | • distance from beams  
| | • distance from walls.  

| may include: | • ceiling space  
| Current accurate drawings and documentation must be obtained from consultants, lead contractor and other service contractors and should include: | • roof space  
| | • under-floor  
| | • under-soffit.  

| may include: | • architectural  
| Fittings and components may include: | • structural  
| | • mechanical  
| | • electrical  
| | • hydraulic  
| | • fire engineer's or estimator's specifications if available.  

| may include: | • hangers  
| Pipe specifications may include: | • sprinkler heads  
| | • elbows  
| | • tees  
| | • pumps  
| | • tanks.  

| may include: | • length  
| | • dimension  
| | • pap size  
| | • thread  
| | • material, including:  
| | • black steel  
| | • galvanised  
| | • hot dip galvanised  
| | • flange.

Unit Descriptor

| Unit descriptor | This unit of competency specifies the outcomes required to develop detailed drawings and notes for the fire systems installation team from approved detailed fire systems design drawings. The unit also covers the outcomes required to assist and support the installation team when changes to detailed designs may be required owing to contingencies encountered on-site. Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body. |

Application of the Unit

| Application of the unit | This unit of competency supports the role of fire systems’ designers whose work involves the preparation of detailed documentation to support the installation of fire systems and the provision of trouble-shooting advice and drawings for solutions to on-site issues. Fire systems designs are limited to those within the deemed-to-satisfy provisions of the Building Code of Australia or detailed fire systems designs for alternative solutions designed by fire engineers. This unit does not apply to fire systems for special hazard locations. |

Licensing/Regulatory Information
Refer to Unit Descriptor
Pre-Requisites

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Produce installation drawings and documentation. | 1.1. Approved detailed design drawings of fire systems are checked to ensure that *installation implications* of required changes have been addressed.  
1.2. Approved detailed design drawings of fire systems are used to create installation drawings.  
1.3. Detailed design specifications of fire systems are used to notate the installation drawings with the location of specific components of the fire system. |
| 2. Review drawings prior to installation. | 2.1. Ongoing changes to detailed structural or other services’ design drawings are regularly *monitored* and recorded.  
2.2. The impact of structural and other services design changes on fire systems design and installation is considered and appropriate solutions are proposed and negotiated with relevant project team members, as required.  
2.3. Fire systems installation drawings and documentation are amended to incorporate accepted solutions according to workplace and project procedures. |
| 3. Resolve on-site installation problems. | 3.1. Notifications of *on-site installation issues* are recorded, prioritised and considered in line with project timeframes.  
3.2. Appropriate solutions are proposed and negotiated with relevant project team members, as required.  
3.3. Fire systems installation drawings and documentation are amended to incorporate accepted solutions.  
3.4. Solutions are communicated to on-site fire system installation team members and amended documentation is supplied according to workplace and project procedures. |

## Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.
# REQUIRED SKILLS AND KNOWLEDGE

## Required skills

- accurate measuring
- accurate naming and filing of drawings, including:
  - formal document control
  - formal amendments, including:
    - history
    - transmittal notices
- editing and creating drawings, including:
  - layout
  - section
  - detail
  - external references
  - freezing layers
- parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
- fluent detailed hand-drawing and sketching ability to convey information to on-site workers
- numeracy skills for performing relevant system calculations
- language and literacy skills for:
  - listening to and communicating clearly with colleagues, installers, suppliers and contractors
  - participating in meetings, such as negotiations with fire engineering consultant, architect, builder or other service contractors
  - letter writing, especially to formalise:
    - recognition of conflicts and errors on drawings supplied by other service contractors
    - agreements with other services, for example whichever service is fitted last must fit around existing services
  - reading and interpreting drawings, plans and specifications, including:
    - architectural
    - structural
    - mechanical
    - hydraulic
    - electrical
- developing constructive and cooperative working relationships with project team members, workplace colleagues, suppliers, installers and clients
- negotiation and conflict management
- initiating and running meetings with lead contractor and other service contractors
- organising own work, including creating personal systems and checklists for
## REQUIRED SKILLS AND KNOWLEDGE

- planning, managing and checking work
- lateral thinking and problem solving
- maintaining concentration, focus and attention to detail for long periods
- managing detailed input to concurrent fire systems design projects at different stages of the process and with diverse sets of regulatory requirements

## Required knowledge

- workplace design tools and processes
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- fire science, including:
  - fire behaviour and dynamics
  - impact of fire on structures and materials
  - products of combustion
  - fire control strategies
  - fire retardants
  - fire detection technologies
  - fire suppression technologies
  - fire containment
- parametric modelling software, such as Navis-Works or MEP-REVIT
- computer software functions and operation, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
- relevant current legislation, codes and standards, including:
  - building Acts
  - building regulations
  - infrastructure supply regulations
  - the Building Code of Australia
  - Australian standards for fire systems
  - international standards for fire systems
  - other fire system standards commonly required by building insurers
- protection requirements for different buildings
- fire systems' technology and components, such as:
  - water-based systems, including:
  - wet pipe sprinkler systems
  - deluge and drencher systems
REQUIRED SKILLS AND KNOWLEDGE

- dry pipe sprinkler systems
- pre-action sprinkler systems
- early suppression fast response (ESFR)
- hydrants, hose reels and monitors
- water supply tanks
- fire pump sets
- detection and warning systems, including:
  - emergency warning and intercommunications systems (EWIS)
  - fire detection and alarm systems
  - smoke control systems
  - emergency lighting systems
- purpose and operation of fire systems, including:
  - layout
  - special products and hazards
  - system operation
  - performance requirements
  - maintenance standards
  - system activation and operation
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- interconnection of fire systems, including:
  - cause and effect matrix
  - interface with other services
- passive fire safety elements:
  - identification of passive elements
  - impact of fire systems design on passive elements
  - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology
- roles and responsibilities of relevant building project personnel, including:
  - architect
  - lead contractor
  - mechanical engineer
  - hydraulic engineer
  - electrical engineer
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems and other services
REQUIRED SKILLS AND KNOWLEDGE

- installation methods, including:
  - access requirements
  - health and safety requirements

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

System performance requirements may include:

- for water-based systems:
  - speed of response
  - time taken to reach full-flow conditions
  - area of coverage
  - nozzle locations
  - droplet profile and characteristics
  - duration of response
- for detection and warning systems:
  - correct sensors
  - sensitivity to fire size
  - speed of detection and response
  - fire location coverage.

Commissioning procedures and specifications may include:

- procedures listed in Australian standards, such as:
  - AS2118.1-2006 Section 15
  - AS1670.1-2004 Section 7
  - AS2118 Automatic fire sprinkler systems
  - AS2419 Fire hydrant installations
  - U.S. National Fire Protection Association (NFPA) codes
  - material safety data sheets (MSDS)
  - manufacturer recommendations.

Standard operating procedures may include:

- site-specific workplace standard operating procedures

CPCSFS5014A Conduct annual fire systems certification inspections

Modification History
Not Applicable

Unit Descriptor

| Unit descriptor | This unit of competency specifies the outcomes required to assess all types of fire systems in all types of buildings to ensure that the systems comply with applicable legislation and will perform in the event of a fire. Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body. |

Application of the Unit

| Application of the unit | This unit of competency supports the role of annual certifiers of fire systems with responsibility for inspecting existing fire systems; assessing their compliance with the relevant applicable legislation, codes and standards; and advising whether they continue to perform to current fire safety standards. |

Licensing/Regulatory Information

Pre-Requisites

| Prerequisite units | Nil |

Employability Skills Information

| Employability skills | This unit contains employability skills. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for annual fire systems certification inspections. | 1.1. Annual fire systems inspections are scheduled in a timely manner and in consultation with relevant stakeholders, as required.  
1.2. Current building plans are obtained and reviewed and modifications made to the building since the last inspection are identified and noted.  
1.3. Information regarding the current and historical legislation, codes and standards applicable to fire systems is reviewed and used to inform inspection planning.  
1.4. Information regarding the validity of fire systems' compliance documentation is reviewed and used to inform inspection planning.  
1.5. Fire systems certification inspections are planned to ensure efficient and comprehensive implementation. |
| 2. Conduct annual fire systems certification inspections. | 2.1. Fire systems are inspected concurrently in each area of the building in accordance with organisational and regulatory requirements.  
2.2. Each aspect of each fire system is assessed for compliance with the applicable current and historical legislation, codes and standards and findings are documented.  
2.3. The current performance level of each fire system is assessed and recorded.  
2.4. Advice is sought from relevant professional personnel, as required and according to workplace and regulatory procedures. |
| 3. Produce annual fire systems certification reports and communicate findings. | 3.1. The findings of inspections are analysed and works required to address shortfalls in fire systems' compliance or performance are identified and recorded according to regulatory requirements.  
3.2. Reports and certificates are produced and processed according to regulatory requirements.  
3.3. The findings of the report are communicated to relevant stakeholders according to regulatory requirements, and works required to rectify fire systems are carefully explained. |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- operating computer software packages and systems, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
- language and literacy skills for:
  - listening to and communicating clearly with stakeholders, colleagues and contractors
  - explaining the gravity of fire systems inspection findings to owner
  - researching, accessing, reading, interpreting and applying relevant current and historical legislation, codes and standards
  - letter writing
  - updating knowledge of products, software systems and technology
  - reading and interpreting drawings, plans and specifications, including:
    - architectural
    - structural
    - fire systems design
    - block plans
    - tactical fire plans
    - report writing
- developing constructive and cooperative working relationships with stakeholders, colleagues and clients
- negotiation and conflict management
- organising own work, including creating personal systems and checklists for planning, managing and checking work
- inspecting multiple fire systems (with different applicable standards) concurrently, including:
  - attention to detail
  - visual acuity to perceive, for example that the distance between sprinklers is too great
- maintaining a professional detached authority

### Required knowledge

- auditing processes and protocols
### REQUIRED SKILLS AND KNOWLEDGE

- **fire science, including:**
  - fire behaviour and dynamics
  - impact of fire on structures and materials
  - products of combustion
  - fire control strategies
  - fire retardants
  - fire detection technologies
  - fire suppression technologies
  - fire containment
- **fire engineering principles, including:**
  - engineered solutions
  - innovative fire systems
  - fire modelling
- **computer software functions and operation, including:**
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
- **relevant current and historical legislation, codes and standards, including:**
  - building Acts
  - building regulations
  - infrastructure supply regulations
  - the Building Code of Australia
  - Australian standards for fire systems
  - international standards for fire systems
  - other fire system standards commonly required by building insurers
- **protection requirements for different buildings**
- **fire systems' technology and components, including:**
  - water-based systems, including:
    - wet pipe sprinkler systems
    - deluge and drencher systems
    - dry pipe sprinkler systems
    - pre-action sprinkler systems
    - early suppression fast response (ESFR)
  - hydrants, hose reels and monitors
  - water supply tanks
  - fire pump sets
### REQUIRED SKILLS AND KNOWLEDGE

- detection and warning systems, including:
- emergency warning and intercommunications systems (EWIS)
- fire detection and alarm systems
- smoke control systems
- emergency lighting systems
- special hazard fire systems, including:
  - foam systems (low expansion, medium expansion and high expansion)
  - gaseous agent systems (carbon dioxide, inert gas and halocarbon gases)
  - water spray systems (deluge, medium/high velocity water spray and high speed deluge)
- chemical powder systems
- wet chemical systems
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- interconnection of fire systems, including:
  - cause and effect matrix
  - interface with other services
- passive fire safety elements:
  - identification of passive elements
  - requirements for safeguarding the integrity of passive fire element performance where penetrations have been made
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology
- sustainability requirements and ratings, including:
  - energy conservation
  - water conservation
- human psychology, especially fire avoidance behaviour
- contractual processes

### Evidence Guide

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.
EVIDENCE GUIDE

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving preparing for, conducting and reporting on annual fire systems inspections for a range of types of fire systems in a variety of buildings with different construction and modification histories.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular the person should demonstrate:

- an understanding of the range of relevant current and historical legislation, codes, standards and regulatory requirements for the certification of existing fire systems
- an understanding of the function and operation of the full range of fire systems, including water-based fire systems, detection and warning systems and special hazard fire systems used in a wide variety of types of buildings, including:
  - low-rise buildings
  - medium-rise buildings
  - high-rise buildings (over 25 metres)
  - buildings over 45 metres in height
- the ability to apply the relevant current and historical compliance requirements to annual inspections of a range of fire systems installed and modified at different dates, in a variety of types of buildings
- the visual acuity required to perceive anomalies in fire systems' compliance arising from building modifications, repairs or adjustments; or a lack of fire systems maintenance
- the ability to report and communicate findings effectively to ensure that the

## Context of and specific resources for assessment

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- documents, drawings, plans and specifications
- copies of codes, standards, legislation and regulatory requirements
- access to information and communications technology - hardware and software.

## Method of assessment

Assessment must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

## Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.
Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Fire systems** may include:

- water-based systems, including:
  - wet pipe sprinkler systems
  - deluge and drencher systems
  - dry pipe sprinkler systems
  - pre-action sprinkler systems
  - early suppression fast response (ESFR)
  - hydrants, hose reels and monitors
  - water supply tanks
  - fire pump sets
- detection and warning systems, including:
  - emergency warning and intercommunications systems (EWIS)
  - fire detection and alarm systems
  - smoke control systems
  - emergency lighting systems
- special hazard fire systems, including:
  - foam systems (low expansion, medium expansion and high expansion)
  - gaseous agent systems (carbon dioxide, inert gas and halocarbon gases)
  - water spray systems (deluge, medium/high velocity water spray and high speed deluge)
  - chemical systems, including:
    - powder
    - wet chemical.

**Relevant stakeholders** may include:

- owners
- agents
- occupants
- local authority.

**Current and historical legislation, codes and standards**

- current, or earlier versions of:
  - the Building Code of Australia
## RANGE STATEMENT

| may include: | • relevant Australian standards for fire systems  
|             | • relevant international standards for fire systems  
|             | • codes and standards stipulated by the regulatory authority or building insurer  
|             | • obsolete legislation, regulations, codes and standards.  

### Compliance documentation may include:

- fire safety schedules  
- inspection and testing logbooks  
- maintenance, repair and replacement documentation.

### Relevant professional personnel may include:

- fire engineer  
- fire brigade personnel  
- building surveyor  
- persons with regulatory authority  
- architect  
- structural engineer  
- fire systems’ designer.

CPCSFS7001A Define scope of and initiate special hazard fire systems design projects

Modification History

Not Applicable
## Unit Descriptor

| Unit descriptor | This unit of competency specifies the outcomes required to define the scope of a project to design a complex special hazard fire system and put in place mechanisms to support the design work.  
The unit addresses the careful clarification of the special hazards project's scope, including an assessment of the level of risk attached to the equipment or facility for which the fire system is being designed, and the development of fire risk solutions. The unit covers the conduct of a thorough analysis of any relevant standards as well as of the project brief itself.  
Processes to guide and manage the special hazard fire systems design project are also covered. The development of a fire systems design project is subject to significant complexities due to the typical requirement to integrate multiple fire suppression and detection systems.  
Special hazard fire systems include gaseous, foam and water spray solutions which offer protection for life safety, and to facilities and equipment vital to business operation and success.  
Special hazard fire systems may fall outside the ambit of the Building Code of Australia. Client requirements may specify use of the U.S. National Fire Protection Association (NFPA) standards.  
Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body. |

## Application of the Unit

| Application of the unit | This unit of competency supports the attainment of skills and knowledge necessary for the effective and efficient scoping of special hazard fire suppression and detection systems in preparation for the technical development of the design. |

    - history
    - transmittal notices
- editing and creating drawings, including:
  - layout
  - section
  - detail
  - external references
  - freezing layers
- fluent detailed hand-drawing and sketching ability to convey information to on-site workers
- operating computer software packages and systems, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
  - proprietary hydraulic calculation software
  - proprietary estimating software
  - parametric modelling software
- using BASIC computer programming language to write logic for electronic system interfaces
- numeracy skills for:
  - calculating:
  - dimensions
### REQUIRED SKILLS AND KNOWLEDGE

- pipe lengths
- piping friction loss
- pump capacity
- motor output
- performing calculations for electrical systems:
  - voltage drops
  - battery capacity
  - battery back-up
  - power supplies
  - performing fluid mechanic calculations
- language and literacy skills for:
  - listening to and communicating clearly with colleagues, fitters, suppliers and contractors
  - participating in meetings, such as negotiations with fire engineering consultant, architect, builder or other service contractor
  - researching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
  - letter writing, especially to formalise:
  - recognition of conflicts and errors on drawings supplied by other service contractors
  - agreements with other services, for example whichever service is fitted last must fit around existing services
  - reading and interpreting drawings, including:
    - architectural
    - structural
    - mechanical
    - hydraulic
    - electrical
    - report writing
- developing constructive and cooperative working relationships with project team members, workplace colleagues, suppliers, fitters and clients
- negotiation and conflict management
- initiating and running meetings with lead contractor and other service contractors
- project management
- organising own work, including creating personal systems and checklists for planning, managing and checking work
- lateral thinking and problem solving
- maintaining concentration, focus and attention to detail for long periods
- managing detailed input to concurrent fire systems design projects at different stages of the process and with diverse sets of regulatory requirements
## REQUIRED SKILLS AND KNOWLEDGE

### Required knowledge

- workplace design tools and processes
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- fire science, including:
  - fire behaviour and dynamics
  - impact of fire on structures and materials
  - products of combustion
  - fire control strategies
  - fire retardants
  - fire detection technologies
  - fire suppression technologies
  - fire containment
- fire engineering principles, including:
  - engineered solutions
  - innovative fire systems
  - fire modelling
- proprietary fire engineering and modelling programs
- parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
- computer software functions and operation, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
  - proprietary hydraulic calculation software
  - proprietary estimating software
- relevant current legislation, codes and standards, including:
  - building Acts
  - building regulations
  - infrastructure supply regulations
  - the Building Code of Australia
  - Australian standards for fire systems
  - other fire system standards commonly required by building insurers
- protection requirements for different buildings, including the existence of special zones, the egress requirements of occupants, and the construction materials used
- passive fire safety elements:
REQUIRED SKILLS AND KNOWLEDGE

- identification of passive elements
- impact of fire systems design on passive elements
- specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design

- fire systems' technology and components, including:
  - water-based systems, including:
    - wet pipe sprinkler systems
    - deluge and drencher systems
    - dry pipe sprinkler systems
    - pre-action sprinkler systems
  - early suppression fast response (ESFR)
  - hydrants, hose reels and monitors
  - water supply tanks
  - fire pump sets
  - detection and warning systems, including:
    - emergency warning and intercommunications systems (EWIS)
  - fire detection and alarm systems
  - smoke control systems
  - emergency lighting systems
  - special hazard fire systems, including:
    - foam systems (low expansion, medium expansion and high expansion)
    - gaseous agent systems (carbon dioxide, inert gas and halocarbon gases)
    - water spray systems (deluge, medium/high velocity water spray and high speed deluge)
    - chemical systems, including:
      - powder
      - wet chemical

- purpose and operation of fire systems, including:
  - layout
  - special products and hazards
  - system operation
  - performance requirements
  - maintenance standards
  - system activation and operation

- characteristics and limitations of products and materials used in fire systems and issues relating to material capability

- interconnection of fire systems, including:
  - cause and effect matrix
**REQUIRED SKILLS AND KNOWLEDGE**

- interface with other services
- instruments used in commissioning and measuring fire system performance
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology
- roles and responsibilities of relevant building project personnel, including:
  - architect
  - lead contractor
  - mechanical engineer
  - hydraulic engineer
  - electrical engineer
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems and other services
- installation methods, including:
  - access requirements
  - health and safety requirements
- water supplies, including:
  - common water sources
  - conservation requirements
  - in-ground reticulation
  - booster configurations
- fluid mechanics and hydraulics relating to:
  - water supply
  - pressure
  - pump selection
  - tank selection
  - pressure vessels
  - pipe range
- sustainability requirements and ratings, including:
  - energy conservation
  - water conservation
- pipe fabrication methods and constraints
- mathematic principles, equations and calculation methods, including:
  - financial calculations, for example to assess cost-effectiveness of fire systems
  - trigonometry, for example to amend dimensions of pipe allowing for fittings
  - flow calculations, including:
    - area of operations
    - discharge rates and quantities
## REQUIRED SKILLS AND KNOWLEDGE

- discharge times
- pressure gain and loss
- K-factors
- pressure, temperature and volume relationship
- Hazen-Williams equation
- Darcy-Weisbach equation
- computational fluid dynamics
- electrical calculations (alarm systems), including:
  - voltage drops
  - battery sizes
  - battery back-up
  - power supplies
  - cabling range
  - system calculations for gas or special hazard fire systems
- principles of organic and inorganic chemistry, including basic chemical reactions and substances
- principles of basic physics, including an understanding of:
  - Boyle's Law
  - Charles' Law
  - Dalton's Law
  - Henry's Law
- principles of thermodynamics, including:
  - effects of heat
  - stratification of gases
  - smoke and heat dynamics
- electrical and electronics theory, including:
  - units used to measure current (AC and DC), power, capacitance, inductance and sound attenuation
  - effects of AC and DC current in series and parallel circuit paths that includes resistive, inductive and capacitive loads
  - relationship between voltage drops around a circuit and applied voltage
  - definition of voltage ratings as defined in communication and electrical safety regulations, including extra low voltage, low voltage and hazardous voltages
  - layout of electrical wiring systems to meet communication and electrical safety regulations applicable to fire detection and warning systems
  - basic operation of common electronic and electrical components used in fire detection and warning systems
  - basic operation of communication protocols on addressable systems,
REQUIRED SKILLS AND KNOWLEDGE

- peripheral devices (printers) and high-level interfaces to other communication devices used in fire detection and warning systems
- acoustics and speech intelligibility for occupant warning systems
- human psychology, especially fire avoidance behaviour
- organisational frameworks and functions, including:
  - industry associations
  - enterprises
  - government bodies
- financial management, including:
  - budgeting
  - cost-effectiveness
- contractual processes
- risk management processes

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the determination of the scope of and initiation of a range of fire systems designs for special hazards projects. This entails establishing effective project management processes; correctly interpreting design concepts, briefs or specifications; and conducting risk management processes to ensure the selection of appropriate fire detection and suppression systems that reflect client requirements and are compliant with relevant codes, standards and legislation.

Critical aspects for assessment

A person who demonstrates competency in this
EVIDENCE GUIDE

and evidence required to demonstrate competency in this unit

| Unit must be able to provide evidence of the required skills and knowledge specified within this unit. |
| In particular the person should demonstrate: |
| • project management skills to coordinate, schedule, resource and oversee the completion of special hazard projects |
| • the ability to read and interpret a range of design documents, including concept briefs, design briefs, drawings, plans and specifications |
| • knowledge of fire sciences sufficient to ensure the design of compliant and effective systems that address the specific conditions of the projects being undertaken |
| • an understanding of and ability to apply legislation, codes, standards, and regulatory and insurance requirements that may apply to special hazard fire systems design projects, including U.S. NFPA standards |
| • the ability to conduct risk assessment processes. |

Context of and specific resources for assessment

| Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards’ requirements. |
| Resource implications for assessment include: |
| • access to Australian and international codes and standards |
| • access to legislation relevant to the jurisdiction |
| • project documentation, including design brief, design drawings, specifications, construction schedules and other supporting documents |
| • research resources, including product information and data |
| • theoretical texts and other information to support the assessment of the unit’s required skills and knowledge |
| • relevant computer software packages and suitable hardware. |

Method of assessment

| Assessment methods must: |
EVIDENCE GUIDE

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Fire systems design projects:

- are defined as those projects that are developed as a fire risk solution to offer protection against business interruption by providing fire protection to specific equipment or facility, whose performance-based principles are often outside the ambit of the Building Code of
### RANGE STATEMENT

<table>
<thead>
<tr>
<th>Australia</th>
</tr>
</thead>
</table>
| *must respond to the requirements specified by the client or the client's insuring body and may include the application of international standards for fire systems.*  
|  
| **Project documentation** includes: |  
| *fire engineer's design concepts and recommendations*  
*construction drawings and plans*  
*specific layout plans for other services, including plumbing, electrical and air conditioning.*  
|  
| **Structural characteristics of the building or facility include:** |  
| *fabrication methods used*  
*size and layout.*  
|  
| **Equipment or facility that will require special hazard fire systems includes that which stores high value or high risk assets, including:** |  
| *data centres*  
*computer rooms*  
*electrical substations*  
*documents (e.g. libraries and archives) and other collections (e.g. art galleries and museums)*  
*fuel and gas storage and refineries*  
*aeroplane hangars*  
*chemical factories*  
*warehouses containing highly volatile materials*  
*any other storage facility for very high value individual items that would be destroyed by water-based fire suppression systems.*  
|  
| **Regulatory requirements and applicable standards:** |  
| *will typically include references to U.S. NFPA standards, including:*  
*NFPA 2001 Clean Agent Fire Extinguishing Systems*  
*NFPA 11 Low, Medium and High Expansion Foam Systems*  
*NFPA 13 The Installation of Sprinkler Systems*  
*NFPA 15 Water Spray Fixed Systems for Fire Protection*  
*NFPA 16 Deluge Foam-Water Sprinkler and Foam-Water Spray Systems*  
*NFPA 750 Water Mist Fire Protection*

CPCSFS7002A Analyse, design and evaluate complex special hazard fire systems

Modification History

Not Applicable
Unit Descriptor

Unit descriptor
This unit of competency specifies the outcomes required to analyse options for the design of special hazard fire systems, design their components, and evaluate the designs prior to sign-off by clients.

Special hazard fire systems include gaseous, foam and water spray solutions which offer protection for life safety, and to facilities and equipment vital to business operation and success.

Special hazard systems may fall outside the ambit of the Building Code of Australia. Client requirements may specify use of the U.S. National Fire Protection Association (NFPA) standards.

The development of a fire systems design project is subject to significant complexities due to the typical requirement to integrate multiple fire suppression and detection systems.

Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body.

Application of the Unit

Application of the unit
This unit of competency supports the attainment of skills and knowledge necessary for the effective and efficient design of special hazard fire suppression and detection systems.

Licensing/Regulatory Information

Refer to Unit Descriptor
Pre-Requisites

| Prerequisite units | Nil |

Employability Skills Information

| Employability skills | This unit contains employability skills. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Select appropriate special hazard fire suppression solutions. | 1.1. Research is conducted to determine the appropriate fire suppression solutions to address the building or facility's risk profile and the special hazard standards that have been identified for use.  
1.2. A cost-benefit and efficiency analysis of the range of fire suppression systems is conducted.  
1.3. Recommendations for the selection of preferred solutions are made to the appropriate personnel. |
| 2. Select appropriate special hazard fire detection and occupant warning solutions. | 2.1. Research is conducted to determine the appropriate fire detection and occupant warning solutions to address the building or facility's risk profile, ambient conditions and the selected fire suppression solution.  
2.2. A cost-benefit and efficiency analysis of the range of fire detection and warning systems is conducted.  
2.3. Recommendations for the selection of preferred solutions are made to the appropriate personnel. |
| 3. Set up special hazard fire systems design drawing. | 3.1. Relevant project drawings and documentation are requested, received, named and filed according to workplace procedures.  
3.2. Drawings are cleaned to leave minimal essential information.  
3.3. Layers showing designs of other services are imported into clean architectural or structural drawings.  
3.4. Details from drawings of floor or building adjacent to the areas under design consideration are added if these affect the design.  
3.5. The detailed design drawing is named, filed and backed up according to workplace procedures. |
| 4. Lay out the special hazard system design. | 4.1. A site visit is conducted if possible to confirm dimensions and assess installation risks and constraints.  
4.2. The interactions between the various systems are identified and planned.  
4.3. The exact locations of sprinklers and other fittings are determined and notated on the drawing according to relevant codes and standards.  
4.4. The most efficient and workable layout and location of system components are determined and notated on the drawing. |
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>4.5. Dimensions are calculated, checked and notated on the drawing.</td>
<td></td>
</tr>
</tbody>
</table>
| 5. Calculate the requirements for the special hazard solutions. | 5.1. *Calculations* to identify and confirm the required capacity of the special hazards systems are undertaken.  
5.2. *Infrastructure* to support the special hazard solution is identified and quantified.  
5.3. Shortfalls in water pressure are determined and the sizes of pumps and tanks required for water spray systems are calculated. |
| 6. Evaluate and implement special hazard fire system solutions. | 6.1. The components of the special hazard fire system solution are gathered from relevant *expert personnel* as required.  
6.2. Special hazard system design drawings are evaluated for efficiency and effectiveness.  
6.3. Design drawings are submitted to relevant personnel within the scheduled timeframe.  
6.4. Required amendments to design drawings are made or *negotiated* as required.  
6.5. Final approved design drawings are processed and distributed according to project and workplace requirements.  
6.6. *Fittings and components* are selected and ordered. |

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- accurate measuring  
- accurate naming and filing of drawings, including:  
  - formal document control  
  - formal amendments, including:  
  - history  
  - transmittal notices  
- editing and creating drawings, including:
### REQUIRED SKILLS AND KNOWLEDGE

- layout

- external references
- freezing layers
- fluent detailed hand-drawing and sketching ability to convey information to on-site workers
- operating computer software packages and systems, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
  - proprietary hydraulic calculation software
  - proprietary estimating software
  - parametric modelling software
- numeracy skills for:
  - calculating:
    - dimensions
    - pipe lengths
    - piping friction loss
    - pump capacity
    - motor output
  - performing calculations for electrical systems:
    - voltage drops
    - battery capacity
    - battery back-up
    - power supplies
  - performing fluid mechanic calculations
  - determining cost-benefit of solutions
- language and literacy skills for:
  - listening to and communicating clearly with colleagues, fitters, suppliers and contractors
  - participating in meetings, such as negotiations with fire engineering consultant, architect, builder or other service contractor
  - researching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
  - letter writing, especially to formalise:
    - recognition of conflicts and errors on drawings supplied by other service

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the
### EVIDENCE GUIDE

**Assessment Guidelines for the Training Package.**

| Overview of assessment | This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the analysis, design and evaluation of complex special hazard fire systems, including the application of appropriate codes and standards in accordance with the design requirements of the client. |
|---|---|

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular, the person should demonstrate:

- knowledge of fire sciences sufficient to ensure the design of compliant and effective systems that address the specific conditions of the projects being undertaken
- numeracy skills sufficient to ensure accurate calculations of system capacities and performance
- the ability to read and interpret a range of design documents, including concept briefs, design briefs, drawings, plans and specifications
- an understanding of and ability to apply legislation, codes, standards, and regulatory and insurance requirements that may apply to special hazard fire systems design projects, including U.S. NFPA standards
- the ability to research appropriate special hazard fire detection and warning systems
- the ability to produce accurate technical drawings of the layout for the special hazard design
- the ability to design integrated solutions encompassing fire detection, warning and suppression components for special hazard fire |
**EVIDENCE GUIDE**

| systems as they apply to at least three different types of hazards requiring the application of different technical solutions. |

**Context of and specific resources for assessment**

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- access to relevant Australian and international codes and standards
- access to legislation relevant to the jurisdiction
- project documentation, including design brief, design drawings, specifications, construction schedules and other supporting documents
- research resources, including product information and data
- theoretical texts and other information to support the assessment of the unit’s required skills and knowledge
- relevant computer software packages and suitable hardware.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

**Guidance information for assessment**

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment.
**EVIDENCE GUIDE**

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

---

**Range Statement**

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Fire suppression solutions**

- gaseous agent systems, including:
  - carbon dioxide
  - inert gases
  - halocarbon systems
  - FM-200
  - FE-25
  - Inergen
- foam systems, including:
  - low expansion foams
  - medium expansion foams
  - high expansion foams
- water spray systems, including:
  - deluge systems
  - medium and high velocity water spray systems
  - high speed deluge systems.

**The risk profile** of the building or facility will reflect the usage of the building, including:

- the need to protect people
- the value of the goods stored
- the susceptibility of the stored goods to water or other forms of damage.

**The special hazard standards**

- U.S. NFPA standards, including:

</table>
## RANGE STATEMENT

**Efficient and workable layout and location** relate to:
- penetrations
- conflict with other services
- occupational health and safety risks
- access constraints
- installation problems
- aesthetic requirements
- efficiencies to facilitate work on site
- reduction of labour costing.

**System components** may include:
- discharge nozzles
- pipework
- brackets
- system valves
- zone valves
- fire panels.

**Calculations** that relate to the various forms of special hazard systems include:
- water-spray system calculations
- hydraulic calculations to assess pressure requirements and confirm pipe sizes
- gaseous system calculations
- foam system calculations.

**Infrastructure** for special hazard solutions include:
- pipework
- storage containers
- delivery systems for the suppression agent (e.g. foam, gas or water)
- tanks.

Large and complex projects may use **expert personnel** to:
- design sub-components of a total solution, for example electrical components.

**Negotiated changes** may be made due to:
- non-compliance with applicable legislation, codes and standards
- impact on installation risks and constraints
- impact on cost-effectiveness.

**Fittings and components** may include:
- hangers
- sprinkler heads
- elbows
- tees
- pumps
- tanks
- control valves.
### Unit Sector(s)

CPCSFS7003A Develop and submit tenders for fire systems design solutions

Modification History
Not Applicable

Unit Descriptor

| Unit descriptor | This unit of competency specifies the outcomes required to research, plan and prepare tenders for the design and implementation of cost-effective fire systems design solutions.

The design and implementation of fire systems design projects occur in a competitive commercial environment. It is not sufficient to design effective and technically compliant fire systems design solutions for clients. It is also essential that the solutions are cost-effective and can be commercially competitive.

Client requirements may specify use of the U.S. National Fire Protection Association (NFPA) standards.

Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body. |

Application of the Unit

| Application of the unit | This unit of competency supports the attainment of skills and knowledge necessary to research, plan, cost and tender for the design, fabrication and installation of efficient, effective and compliant fire suppression and detection systems. |

Licensing/Regulatory Information
Refer to Unit Descriptor

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Research fire system component capacities and costs. | 1.1. *Industry networks and mechanisms* are used to maintain current understanding of developments in fire system technology.  
1.2. Research is conducted into changes to the *relevant legislation, codes and standards* for the fire systems design sector to maintain currency of knowledge.  
1.3. Research is conducted to identify the capacity, performance characteristics and cost of alternative components of the range of appropriate *fire suppression and detection solutions*.  
1.4. A cost-benefit and efficiency analysis of the range of fire suppression and detection systems is conducted.  
1.5. The proposed project's *documentation and drawings* are fully scrutinised and assessed. |
| 2. Prepare estimate of labour costs. | 2.1. The skill profile and number of personnel required to design and install the proposed fire system are identified.  
2.2. *Options* for securing the required personnel are analysed.  
2.3. The types and numbers of appropriate on-site personnel are identified and the time required on site is estimated.  
2.4. Labour costs are calculated with allowance for the full range of on-costs and cost changes during the life of the project. |
| 3. Prepare estimate of material costs. | 3.1. The quantities of selected fittings and materials are calculated.  
3.2. Cost estimates for the purchase and fabrication of the project's fittings and materials from internal and external suppliers are negotiated, secured and analysed.  
3.3. Cost estimates for the use, purchase or hire of required plant or equipment to support the design and installation process are negotiated, secured and analysed. |
| 4. Prepare estimate of other project costs and margins. | 4.1. Cost estimates of *overhead costs* are identified and estimated for the project.  
4.2. The required profit margin is identified in line with the company's strategic requirements and policies. |
| 5. Prepare business | 5.1. Total project resource requirements and costs are |
### ELEMENT

<table>
<thead>
<tr>

<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| proposal or tender. | analysed and synthesised for inclusion in the business proposal or tender.  
5.2. The business proposal or tender requirements are analysed and applied in the development of the tender.  
5.3. Legal, financial or accounting expertise is sought as required in the preparation of the business proposal or tender and in line with company policies and procedures.  
5.4. The business proposal or tender is finalised in line with company policies and procedures and the requirements of the project brief. |

6. Finalise and support the bid process.  
6.1. The business proposal or tender is submitted within required timeframe.  
6.2. Responses are provided to the potential client in response to queries in a professional manner and in line with company policies and procedures.  
6.3. Negotiations regarding proposed services, timelines or price are conducted as required and in a professional manner and in line with company policies and procedures.  
6.4. The business proposal or tender bid process is finalised in a professional manner and in line with company policies and procedures. |

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- accurate measuring  
- numeracy skills for:  
  - financial calculations:  
  - labour costs  
  - overhead costs  
  - profit margins  
  - water-based system calculations:
## REQUIRED SKILLS AND KNOWLEDGE

- dimensions
- pipe lengths
- piping friction loss
- pump capacity
- motor output
- electrical system calculations:
  - dimensions
  - voltage drops
  - battery capacity
  - battery back-up
  - power supplies

- language and literacy skills for:
  - participating in meetings, such as negotiations with client, fire engineering consultant, architect, builder or other service contractor
  - researching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
  - preparing documentation, including to formalise tender responses and contracts
  - updating knowledge of products, software systems and technology
  - reading and interpreting drawings, plans and specifications, including:
    - architectural
    - structural
    - mechanical
    - hydraulic
    - electrical

- computer skills for:
  - word processing
  - spreadsheets
  - estimating and costing
  - researching and evaluating competing technologies in new products and systems

### Required knowledge

- computer software functions and operation, including relevant proprietary software
- relevant current legislation, codes and standards, including:
  - building Acts
  - building regulations
  - infrastructure supply regulations
REQUIRED SKILLS AND KNOWLEDGE

- the Building Code of Australia
- Australian standards for fire systems
- international standards for fire systems
- other fire system standards commonly required by building insurers
- passive fire safety elements:
  - identification of passive elements
  - impact of fire systems design on passive elements
  - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- fire systems' technology and components, including:
  - water-based systems, including:
    - wet pipe sprinkler systems
    - deluge and drencher systems
    - dry pipe sprinkler systems
    - pre-action sprinkler systems
    - early suppression fast response (ESFR)
    - hydrants, hose reels and monitors
  - water supply tanks
  - fire pump sets
  - detection and warning systems, including:
    - emergency warning and intercommunications systems (EWIS)
    - fire detection and alarm systems
    - smoke control systems
    - emergency lighting systems
  - special hazard fire systems, including:
    - foam systems (low expansion, medium expansion and high expansion)
    - gaseous agent systems (carbon dioxide, inert gas and halocarbon gases)
    - water spray systems (deluge, medium/high velocity water spray and high speed deluge)
    - chemical systems, including:
      - powder
      - wet chemical
  - characteristics and limitations of products and materials used in fire systems and issues relating to material capability
  - interconnection of fire systems, including:
    - cause and effect matrix
    - interface with other services
  - tendering processes, including:
### REQUIRED SKILLS AND KNOWLEDGE

- interpretation of bid requirements
- interpretation of contractual requirements

---

### Evidence Guide

#### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the development and submission of tenders for fire systems design projects. This entails researching the capacities of a range of fire system components, preparing detailed schedules of costs for labour and materials, identifying and applying profit margins, and preparing the business proposal or tender response. Integral to the process is the capacity to work with the potential client, build relationships and conduct negotiations leading up to the finalisation of the tender or bid process.

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular the person should demonstrate:

- knowledge of tendering, bid and contractual processes
- numeracy skills sufficient to ensure accurate calculations of system capacities and performance and their costs
- the ability to read and interpret a range of design documents, including concept briefs,

Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Industry networks and mechanisms include:

- participation in professional associations
- reviewing industry websites
- subscribing to and reading professional journals
- attendance at industry workshops and conferences
- attendance at vendor presentations and displays of new fittings and components.

Relevant legislation, codes and standards include:

- building Acts
- building regulations
- infrastructure supply regulations
- the Building Code of Australia

CPCSUS4001A Implement and monitor environmentally sustainable work practices

Modification History
Not Applicable

Unit Descriptor
Unit descriptor
This unit of competency specifies the outcomes required to effectively analyse, implement and monitor environmentally sustainable work practices and their effectiveness on a work site, including contributing to consumer environmental efficiency.

Application of the Unit
Application of the unit
This unit of competency supports the needs of those with responsibility for a specific area or site of work, or those who lead a work group or team by using processes and techniques necessary to implement and monitor environmentally sustainable work practices, including the development of processes and tools.

The context of this competency applies to all sectors of the construction industry. It may be applied to all sections of an organisation, including a work site, designated work area, in transit and/or an office.

 | communicated to key personnel and stakeholders.
4.2. Strategies are evaluated.
4.3. New targets are set and new tools and strategies investigated and applied.
4.4. Successful strategies are promoted and, where possible, participants rewarded.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to source/identify the latest industry environmental sustainability concepts and technologies
- applying learning to future opportunities
- change management skills
- communication skills to:
  - answer questions
  - clarify and acknowledge suggestions relating to work requirements and environmental efficiency with stakeholders
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret:
    - documentation
    - environmental and resource efficiency requirements
  - support information flow between various internal and external stakeholders to resolve and report on environmental and resource efficiency issues
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- creating tools to measure and monitor improvements and report on outcomes to stakeholders
- innovation skills to identify improvements, apply knowledge about resource use to organisational activities and customer service, and develop resource efficiency tools
- numeracy skills to analyse data on company and stakeholder resource consumption and waste product volumes
REQUIRED SKILLS AND KNOWLEDGE

- problem solving skills to recognise and analyse problems, including:
  - devising approaches
  - implementing and reflecting on environmental and water, energy or resource efficiency management policies and procedures relevant to work site to improve environmental sustainability
  - share alternative approaches as required
- skills to relate to different genders and people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities
- technology skills, including the ability to:
  - operate and shut down equipment
  - where relevant, use software systems for recording and filing documentation for measurement and improvement of resource usage and consumption.

Required knowledge

Required knowledge for this unit is:

- how tradespersons can contribute to environmental sustainability
- knowledge of compliance requirements for all relevant environmental and sustainability legislation, regulations and codes of practice including resource hazards and risks associated with work site:
  - supervision
  - job specifications
  - strategies and procedures to maximise opportunities and minimise impacts relevant to stakeholders and personal area of responsibility
- relevant knowledge of environmental, resource and energy/water efficiency issues, systems and procedures specific to industry practice
- knowledge of best practice approaches and quality assurance systems relevant to area of responsibility and industry
- ability to identify and advise on water/energy efficiency opportunities for stakeholders and key personnel
- supply chain procedures
- OHS issues and requirements
- organisational structure and reporting channels and procedures
- terms and conditions of employment, including policies and procedures, such as:
  - daily tasks
  - equal opportunity
  - work area responsibilities
  - worker, supervisor and employer rights.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by analysing and monitoring effective sustainable work practices on a construction project work site.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- implement and monitor integrated environmental and resource efficiency management policies and procedures within a work site, including:
  - access, collect, analyse and organise information from a number of sources to provide information, advice and tools or resources for improvement opportunities to stakeholders and key personnel
  - identify possible areas for improved practices and resource efficiency for stakeholders
  - communicate benefits of changing practices to work team and customers
  - implement new approaches and improvement plans, including planning and organising activities for staff and stakeholders in relation to:
    - measurement of current use
    - devising strategies to improve environmental and resource efficiency issues
    - reporting as required ensuring appropriate action is taken within work site in relation to environmental and sustainability compliance and potential
EVIDENCE GUIDE

- monitor and evaluate improvement plans and efficiency targets, using evaluation and monitoring tools and technology to potentially revise and adjust approaches and strategies to ensure continuous improvement.

Evidence that could be used, reflecting the requirements of the unit of competency and work being performed as evidence, include:

- reports of activities of work group in relation to:
  - measurement of resources and efficiency
  - development of improvement strategies
- work plans outlining approaches to improved practices, with documented benchmarks
- invoices from stakeholders specifying materials recommended for improved efficiency and those actually used
- quotes and tenders
- lists of environmental hazards, risks and inefficiencies, and opportunities for improvements identified in the work site
- work samples, tools, techniques or simulated activities and the outcomes.

Processes may include:

- relevant authenticated correspondence
- way in which advice is sought and suggestions made about improvements from stakeholders and key personnel
- evidence of implementation of programs, such as:
  - green building program
  - supply chain program for purchasing sustainable products
  - environmental site management framework or product recommendations
- notes on understanding external benchmarks and support for particular benchmarks to be used, with expected outcomes and including approaches to recommend products and practices to stakeholders for improving their resource use.
EVIDENCE GUIDE

Resource implications for assessment must include:

- observation by the assessor over a period of time and in a range of situations and/or evidence provided to the assessor in written or verbal form, including:
  - implementing tools and techniques
  - review of work site and stakeholders/key personnel to assess and measure resource use, hazards and compliance
  - application of learning to future activities
  - recommended products and practices to stakeholders
- access to a range of information and resources for assessment as listed in the range statement, such as:
  - environmental and sustainability legislation
  - compliance documentation
  - organisational and procedural requirements or organisation plans
  - work supervision and work site documentation, including personnel and responsibilities
  - quotes, tenders, invoices.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
EVIDENCE GUIDE

- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be
EVIDENCE GUIDE

obtained from relevant authenticated
documentation from third parties, such as existing
supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different
work environments and situations that may affect performance. Bold italicised
wording, if used in the performance criteria, is detailed below. Essential operating
conditions that may be present with training and assessment (depending on the work
situation, needs of the candidate, accessibility of the item, and local industry and
regional contexts) may also be included.

Compliance includes:

- meeting relevant Acts, laws, by-laws and
  regulations, codes of practice or best practice
to support compliance in environmental
performance and sustainability at each level as
required (such as Environmental Protection,
Biodiversity Conservation Act and Building
Code of Australia)

  levels include:
  - federal
  - industry
  - international
  - local government
  - organisation
  - reporting breaches
  - state and territory.

Environmental and resource
efficiency includes:

- approaches of industry associations, such as:
  - Australian Building Greenhouse Rating
  - green plumbers
  - green purchasing
  - Housing Industry Association (HIA)
    GreenSmart
  - ISO 14001 Environmental Management
    Systems
  - lifecycle thinking
  - Master Builders Association of Victoria
RANGE STATEMENT

Green Living, Leadership in Energy and Environmental Design (LEED), or Green Building Council of Australia (GBCA) Green Star environmental rating system

- National Australian Building Environmental Rating Scheme (NABERS)
- product stewardship
- supply chain management
- Victoria Stormwater Management Guidelines of the Environment Protection Authority (EPA)

- implementing and using alternative practices, procedures or materials to reduce or eliminate resource consumption on work site
- recommendations to stakeholders, including:
  - addressing environmental and resource sustainability initiatives, such as an environmental framework, action plan, recommendations, surveys and audits with stakeholders and key personnel
  - efficient water use (e.g. rainwater tanks, grey water sprinkler systems or timers)
  - energy use (e.g. equipment/appliances installed; equipment, appliance and tool maintenance; transporting materials; heating and cooling; and building efficiency)
  - environmental site management
  - evaluating and implementing most appropriate waste treatment, including waste to landfill, recycling, re-use, recoverable resources and wastewater treatment through site management
  - improving resource, energy and water efficiency
  - including environmental performance in tender and quote specifications
  - initiating and maintaining appropriate work site procedures for operational energy consumption, including stationary and non-stationary (transport) energy
  - preventing and minimising risks and maximising opportunities on work site and
RANGE STATEMENT

for stakeholders
- reducing emissions of greenhouse gases
- reducing material usage
- reducing stormwater pollution
- reducing use of non-renewable resources
- types of products and materials used
- reference to standards, guidelines, industry association standards, codes of practice and best practice approaches such as:
  - federal government standards, including five-star rating for all new homes.

Stakeholders, key personnel and specialists (individuals and groups) both within and external to the organisation who have direct or indirect interest in the organisation's conduct, actions, products and services, include:
- clients
- employees at all levels of the organisation
- government
- investors
- key personnel within the organisation
- local community
- specialists outside the organisation who may have particular technical expertise
- suppliers
- other organisations.

Purchasing strategies include:
- influencing stakeholders to take up environmental sustainability approaches and products
- researching and participating in programs, such as a supply chain program to purchase sustainable products (such as radial timber, sustainable timber, and low flow fittings and appliances).

Techniques and tools include:
- accessing the skills of others as appropriate to the specific industry context
- environmental site management plans
- examination of invoices from suppliers
- examination of relevant information and data
- integration of environmental and sustainability specifications in quotes and tenders
- measurements made under different conditions
- recommendation of sustainable products and practices to stakeholders.

Suggestions include:
- eliminating the use of hazardous and toxic materials
RANGE STATEMENT

- expressing green purchasing power through using and recommending a selection of suppliers with improved environmental performance (e.g. green power, lifecycle thinking, product stewardship, energy or water efficiency)
- ideas that help to improve energy and water efficiency
- making more efficient use of resources, materials, energy and water
- maximising opportunities to use renewable, recyclable, reusable and recoverable resources (energy, water, materials, products and waste)
- preventing and minimising risks and maximising opportunities, such as use of renewable energy such as solar or grey water, and other alternative forms of water, energy and resources
- recommending and using alternative sustainable products, materials, procedures, practices and installation techniques
- reducing emissions of greenhouse gases by reducing waste and transport
- reducing the consumption of non-renewable resources, such as water, fuel, and materials
- seeking alternative sources of water and energy or encouraging conservation.

Unit Sector(s)

Unit sector: Construction

Co-requisite units

Co-requisite units: Nil
Functional area

Functional area
CPCSUS4002A Use building science principles to construct energy efficient buildings

Modification History

New unit.
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

Unit Descriptor

This unit of competency specifies the outcomes required to incorporate building science principles into the construction of energy efficient buildings.
The unit is relevant for those involved in the construction of energy efficient buildings. It requires the ability to use constructive thinking and problem-solving processes to identify appropriate solutions.
The unit also requires consultation with others.

Application of the Unit

This unit of competency applies to those who apply building science principles to the construction of new buildings in the residential and commercial building sector.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

| 1 | Define performance measures and expectations of the building envelope. | 1.1 Relevant stakeholders are consulted to identify expected type of use for the building and energy efficiency expectations of its owners or occupiers. |
|   |                                                                         | 1.2 Durability expectations of the building are identified and factored into decisions relating to construction methods and materials to be used. |
|   |                                                                         | 1.3 Occupants’ indoor activities and health and safety considerations are identified to inform recommendations of building products, materials and systems. |
|   |                                                                         | 1.4 Environmental and climatic conditions impacting the building are researched and extreme weather conditions are noted for planning and construction purposes to determine resiliency opportunities. |
|   |                                                                         | 1.5 Relevant legislation, standards, regulations and codes are consulted to identify minimum energy efficient standards to be met. |
|   |                                                                         | 1.6 Relevant domestic and international codes, standards and examples of best practice that meet or exceed current energy efficient standards are consulted to reflect client expectations. |

| 2 | Review building methods and construction materials for energy efficiency. | 2.1 Building science principles supporting energy efficiency are reviewed with reference to contemporary information sources. |
|   |                                                                         | 2.2 Embodied energy of the specified product or materials is reviewed in relation to the energy efficiency. |
expectations of the client.

2.3 Heating, ventilation and air conditioning (HVAC) systems are researched to identify best contemporary practice that delivers high levels of energy efficiency while minimising risks of inadequate ventilation and poor indoor air quality for occupants.

2.4 Mechanical ventilation systems and equipment to aid air flows are reviewed for appropriateness and operational costs.

2.5 Materials for interior and exterior moisture and vapour barriers are researched to identify best contemporary practice that delivers high levels of energy efficiency, durability and appropriateness for the building envelope.

3 Evaluate and select building design and construction methods and materials for energy efficiency.

3.1 Site location and building position are identified and maximised for energy efficiency according to environmental factors, climatic conditions and identified use of building.

3.2 Planned opportunities for heat, air and moisture flows throughout the building are identified and assessed against energy efficiency expectations.

3.3 Planned cavities in the building are identified and strategies for sealing or minimising unwanted air leakages are developed.

3.4 HVAC systems are evaluated and selected for the site to use minimal energy while minimising risks of inadequate ventilation and poor indoor air quality for occupants.

3.5 Mechanical ventilation systems and equipment are evaluated and selected for appropriateness to the site and operational costs.

3.6 Materials for interior and exterior barriers are evaluated and selected for energy efficiency, durability and appropriateness for building site.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - evaluate own actions and make judgments about performance and necessary improvements
  - respond to change, such as differences in current work site environmental and sustainability requirements
- numeracy skills to measure and interpret energy efficiency readings presented in numerical or graphical formats
- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm expectations, and share information
  - report hazards involved in the work
  - use language and concepts appropriate to cultural differences
- reading skills to:
  - conduct own research into current building and construction methodologies and new materials technology
  - interpret documentation, including drawings and specifications
  - understand written instructions, procedures and signage
- writing skills to provide recommendations regarding ways to improve energy efficiency outcomes of buildings

Required knowledge

- application and limitations of energy efficient construction materials
- general construction terminology
- impacts of different climate zones and environmental conditions on the built environment
- processes for the evaluation of energy efficiencies in buildings
- theories and principles of energy efficiency applied to buildings and construction processes
- types, uses and limitations of different construction materials and the role of embodied energy when selecting construction materials and products for energy efficient buildings
- work health and safety (WHS) requirements in different jurisdictions
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by performing a range of tasks in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- apply building science methodologies as outlined in this unit to the construction of two new construction projects
- undertake research into a range of energy efficient design and construction methods for the two new construction projects with a specific focus on:
  - energy efficient heating, ventilation and air conditioning systems
  - energy efficient materials and construction methods
- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and WHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- communicate and work effectively and safely with others.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
workplace instructions relating to safe work practices and addressing hazards and emergencies
- research resources, including industry-related systems information
- safety data sheets.

Method of assessment
Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:
- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment
This unit could be assessed on its own or in combination with other units relevant to the job function.
Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.
Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant stakeholders may include:
- architects
- builders
- building owners or investors
- building designers
- developers
- engineers
Extreme weather conditions may include:

- cyclonic activity
- extreme heat and risk of fire
- heavy rain and flooding
- storm weather.

Regulations and codes must include:

- local planning codes and regulations
- National Construction Code.

Contemporary information sources may include:

- local and international research into building science methods
- systems theory and analysis
- manufacturer websites and technical data for energy efficient construction materials and systems.

Cavities may include:

- gaps around ceiling down lights
- gaps around insulating material
- gaps under and around doors
- openings for floor or ceiling ducts used to transmit heating or cooling
- wall, floor or ceiling cracks
- window seals.

Construction

Custom Content Section

Not applicable.
CPCSUS4003A Maximise energy efficiency through applied trade skills

Modification History

New unit.
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

Unit Descriptor

This unit of competency specifies the outcomes required to undertake a trade using techniques and practices aimed at achieving high levels of energy efficiency in the finished work. Energy efficiency requirements may be specified by legislation or building codes, or commissioned by a client or a site manager. The unit may include working with others and as a member of a team.

Application of the Unit

This unit of competency applies to builders and tradespeople who identify opportunities for energy efficiency gains in a building and apply energy efficiency techniques in residential and commercial construction work.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1  Identify energy efficiency aims of the project.

1.1  *Building science principles* are used to identify the *energy efficiency expectations* of the work based on plans, drawings and specifications.

1.2  *Relevant personnel and stakeholders* are consulted to confirm the *building envelope* and energy efficiency requirements of the work, and identify specific instructions on priority areas.

1.3  Limitations to achieving the energy efficiency requirements are identified and communicated to relevant personnel in order to identify appropriate solutions.

2  Prepare for task.

2.1  Products and *materials* are identified based on building science knowledge and according to project energy efficiency specifications, substitutions are checked for comparable energy efficiency characteristics, and are approved with relevant personnel before use.

2.2  Plant, tools and equipment selected to carry out tasks are consistent with building science principles and the requirements of the job to deliver energy efficient outcomes.

2.3  Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.

2.4  Material quantity requirements are calculated according to plans, specifications and energy efficiency.
2.5 Differences in standard practice to achieving energy efficient outcome are identified and factored into work plan to gain approval, and task timeframe is adjusted where appropriate.

3 Perform tasks using energy efficient techniques.

3.1 Unnecessary waste of products and materials is avoided through the use of energy efficient techniques, and greenhouse gas emissions are specifically minimised or eliminated.

3.2 Products and materials are handled and used according to manufacturer specifications to ensure energy efficiency ratings are maintained when installed.

3.3 Planned cavities and openings created in the building envelope during the project are minimised or sealed to avoid unnecessary air leakages.

3.4 Opportunities for achieving energy efficiency outcomes by minimising energy leakages are maximised by communicating with others on site when required.

4 Finalise and evaluate work.

4.1 Assessment by qualified energy assessor of work undertaken is arranged to confirm extent of energy efficiency outcomes achieved.

4.2 Improvements required in own work practices to ensure energy efficiency outcomes are identified and noted for future development.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - evaluate own actions and make judgments about performance and necessary improvements
  - respond to change such as differences in current work site environmental and sustainability requirements
- numeracy skills to calculate and confirm correct quantities of materials for work tasks
- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report hazards on the work site, including faults in tools, equipment or materials
  - use language and concepts appropriate to cultural differences
- reading skills to:
  - interpret documentation, including drawings and specifications
  - understand written instructions, procedures and signage
  - interpret manufacturer instructions for safe handling of tools and equipment
- writing skills to complete pre-operational checklists and simple equipment fault forms

Required knowledge

- general construction terminology
- introductory awareness of building science and energy efficiency principles
- procedures for the safe handling and storage of materials, and environmentally friendly disposal of materials
- processes for calculating material requirements
- quality requirements relevant to the task
- types, characteristics, uses and limitations of tools and equipment
- types, location and use of relevant safety information, such as:
  - job safety analyses (JSA) and safe work method statements
  - safety data sheets
  - safety manuals and instructions for tools, plant and equipment
  - signage
  - environmental and work site safety plans
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by performing a range of tasks in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- undertake three different tasks within the relevant trade specification, using principles or techniques that are designed to maximise the energy efficiency characteristics of the building or project
- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and work health and safety (WHS) legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality, environmental and sustainability requirements
- safely and effectively operate and use tools, plant and equipment and handle materials and components
- communicate and work effectively and safely with others.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and
addressing hazards and emergencies

- research resources, including industry-related systems information
- safety data sheets.

**Method of assessment**

Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:

- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Guidance information for assessment**

This unit could be assessed on its own or in combination with other units relevant to the job function, such as

- CPCCCM1012A Work effectively and sustainably in the construction industry
- CPCSUS4001A Implement and monitor environmentally sustainable work practices

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Building science principles** must include:

- building envelope
- effective ventilation
- heat, air and moisture flows:
  - conduction
- convection
- radiation
- interaction between occupants, building components and systems, and the environment both indoors and out
- moisture management.
- acoustic insulation between zones and rooms
- achieving relevant energy efficient requirements in the National Construction Code, and other relevant codes and regulations
- achieving or maintaining a home energy rating, commercial building rating, or equivalent energy rating or industry standards and regulations
- effectively selecting and using thermal mass
- energy conservation
- minimising infiltration
- minimising the heat loss and maximising the heat gain based on the requirements of the building reflective of the climatic zones
- minimising thermal bridging
- passive solar design approach
- reducing or minimising energy costs and consumption to heat and cool the building
- thermal resistance
- ventilation, heat and energy recovery
- zero energy homes.

Relevant personnel and stakeholders may include:
- architect
- builder
- developer
- draftsperson
- energy assessor
- energy modeller
- facility manager
- heating, ventilation and air conditioning (HVAC) designer
- HVAC engineer
- manufacturer
- other trades working at the site
- owner
- project manager
- site manager
- supplier.

Building envelope must include:
- building enclosure or shell
- the area separating the internal conditioned air from the outside unconditioned air
- the roof, walls, windows and doors.

**Materials** may include:
- building and construction materials, including:
  - aerated autoclaved concrete products
  - bricks
  - cement
  - concrete
  - mortar
  - plaster
  - plasterboard
  - plumbing
  - roofing materials
  - steel
  - timber
- building envelope - ceiling, floor, windows and wall insulating materials:
  - air barriers
  - batts
  - expanded polystyrene
  - joining tape
  - reflective foils
  - sealant
  - vapour barriers.

**Energy efficient techniques** may include:
- advanced framing or optimal value engineering for energy efficient framing
- appropriate selection and installation of insulation without compressing it
- conserving energy by effectively sealing the building envelope to minimise air leakage (exfiltration and infiltration) in the building envelope, shell or enclosure
- effectively installing windows and flashing without breaking the building envelope
- effectively selecting and installing thermal insulation
- minimising embodied energy
- sealing, insulating and minimising duct leakage
- sealing leaky joints
- selecting recycled materials to minimise production energy
- sourcing materials or products locally to minimise transport energy.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- effective management of different points of view and dissenting stakeholders
- flexible communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret complex and formal documents, such as policy and legislation
  - suit different audiences and support information flow between various internal and external stakeholders, using language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
  - written skills to prepare written reports requiring:
    - precision of expression
    - language and structures suited to the intended audience
- innovation and problem solving skills to:
  - analyse problems
  - apply knowledge about policy to devise policies and procedures around environmental and water, energy and resource efficiency and new technologies
  - identify improvements and customer service
  - research, analyse and present information and techniques
  - respond to diversity, including the ability to relate to different genders and people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities
  - team work for consultation and validation of policies and procedures
  - technology skills for use of software systems, communication, and creating documents and reports.

Required knowledge

Required knowledge for this unit is:

- benchmarking against best practice approaches and support for new approaches
- knowledge of best practice approaches relevant to industry and work area
- knowledge of environmental or sustainability legislation, regulations, compliance and codes of practice applicable to industry and organisation
- knowledge of policy development processes and practices and other relevant organisational policies, procedures and protocols
- principles, practices and available products, tools, technology and techniques of sustainability management relevant to the particular industry context
REQUIRED SKILLS AND KNOWLEDGE

- Quality assurance systems relevant to own organisation
- Relevant products, technology, systems and procedures to aid in the achievement of sustainability in the workplace, including environmental and energy efficiency products, technology, issues, systems and procedures specific to industry practice
- Sustainability principles and concepts
- Terms and conditions of employment, including:
  - Equity and diversity principles
  - OHS implications of policy being developed
  - Policies and procedures
  - Work area responsibilities
  - Worker, supervisor and employer rights
- Understanding of how the business can contribute to environmental sustainability.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by developing policies and relevant procedures for implementing sustainable work practices on a construction project work site.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- develop enterprise policy for integrated sustainability, ensuring that developed policies comply with legislative requirements, and contain an implementation strategy that has been devised, implemented and reviewed showing a measurable improvement using chosen benchmark indicators
- review the policy after implementation
- communicate with relevant stakeholders
- develop and monitor policies
- communicate with relevant internal and external stakeholders to discuss possible approaches to policy development and implementation, and contribute to the resolution of disputes amongst them
- gather information from a number of sources (including regulatory sources, relevant personnel and organisational specifications) to plan and develop policies
- plan the policy development process, including meetings with stakeholders and key personnel
- develop and monitor policies for analysing data on organisation resource consumption
- use software systems for recording and filing documentation for measurement of current usage, and using word processing and other basic software
EVIDENCE GUIDE

to:
- interpret charts, flowcharts, graphs and other visual data and information
- report.

Items that could be used as evidence include:
- inefficiencies or opportunities for improvements identified in the workplace
- case studies
- work documents from meetings or simulated activities
- portfolios of evidence on policy processes, including continuous improvement outcomes
- new approaches improved continuously over time.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- specifications of particular workplace roles and work area, equipment, systems, organisational structures and documentation
- documentation on resources used, and hazards and compliance requirements for benchmarking and continuous improvement.

Access to a range of information and resources for assessment as listed in the range statement (such as compliance obligations, organisational plans and work responsibilities).

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
EVIDENCE GUIDE

- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating
RANGE STATEMENT

conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of sustainability policy includes:

- addressing sustainability initiatives through reference to standards, guidelines and approaches, such as
  - federal government standards, including five-star rating for all new homes
  - ecological foot printing
  - Energy Efficiency Opportunities Bill
  - Victoria Stormwater Management Guidelines of Environment Protection Agency
  - global reporting initiative
  - green purchasing programs to purchase sustainable products
  - greenhouse challenge
  - approaches of industry associations, such as:
    - Housing Industry Association (HIA) GreenSmart
    - Australian Building Greenhouse Rating
    - green plumbers
    - Master Builders Association of Victoria
    - Green Living, Leadership in Energy and Environmental Design (LEED), or Green Building Council of Australia (GBCA) Green Star environmental rating system
    - ISO 14001 Environmental Management Systems
    - lifecycle thinking
    - National Australian Building Environmental Rating Scheme (NABERS)
    - product stewardship
    - supply chain management to influence suppliers to take up sustainability approaches
    - sustainability action plans or frameworks
    - sustainability covenants and compacts
    - triple bottom line reporting
RANGE STATEMENT

- integrated approach to sustainability that includes environmental, economic and social aspects, or a narrower one to focus on each aspect individually
- investigation of the particular business and market context of the industry or organisation
- meeting relevant Acts, laws, by-laws and regulations or best practice to support compliance in environmental performance and sustainability at each level as required (such as Environmental Protection, Biodiversity Conservation Act, Building Code of Australia) and reporting breaches
- levels include:
  - federal
  - industry
  - international
  - organisation
  - state and territory
- parts of the organisation to which it is to apply, including whether it is for the whole organisation, one site, one work area or combinations of these
- site management.

Stakeholders include:

- individuals and groups both within and external to the organisation that have direct or indirect interest in the organisation's conduct, actions, products and services, including:
  - clients
  - employees at all levels of the organisation
  - government
  - investors
  - key personnel within the organisation, and specialists outside it who may have particular technical expertise
  - local community
  - suppliers
  - other organisations.

Strategies include:

- efficient use of resources, energy and water
- environmental site management to minimise stormwater pollution
- installation of efficient appliances, techniques
RANGE STATEMENT

and recommendations for consumer use and opportunities
- maximising the use of recycled, renewable, reusable and reclaimed resource opportunities
- preventing and minimising risks and maximising opportunities for business and stakeholders, such as:
  - promotional activities
  - purchasing of carbon credits or green power
  - raising awareness among stakeholders through product advice and user recommendations
  - reduce the consumption of non-renewable resources
  - reducing emissions of greenhouse gases
  - reducing or eliminating the use of hazardous and toxic materials
  - resource, water and energy audits included in quote or tender
  - training of staff in principles and techniques of sustainability
  - use of solar or renewable energies and water
  - waste treatment initiatives (materials and resources, water).

Co-requisite units  Nil

Functional area
Functional area
CPCSUS5002A Develop action plans to retrofit existing buildings for energy efficiency

Modification History

New unit.
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

Unit Descriptor

This unit of competency specifies the outcomes required when planning to improve the energy efficiency of an existing building.

Application of the Unit

This unit of competency applies to those involved in the design or development of retro fits for energy efficiency, including building designers, tradespeople and building project managers.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Commence retro-fit planning processes.
   1.1 Client requirements and expectations for the specific use of the building and the energy efficient retro-fit priorities are discussed and incorporated into planning.
   1.2 Energy assessment is initiated or report from a prior assessment is reviewed and discussed with key stakeholders to determine energy conservation measures.
   1.3 Client is provided with overview of recommended processes and information relevant to generating an energy efficient retro fit.

2. Identify and evaluate opportunities to improve energy conservation and efficiency of the existing building.
   2.1 Recommendations from energy efficiency assessor are reviewed and evaluated for input into the retro-fit action plan.
   2.2 Limitations and obstacles involved in the energy efficiency upgrade of the building are identified and appropriate solutions developed.
   2.3 Risks of retrofitting existing building for improved energy efficiency are identified and managed, including possible installation of mechanical ventilation systems.
   2.4 Strategies that provide a measurable increase in the operational energy efficiency of the existing building are developed and costed.
   2.5 Structural adequacy of the existing building is assessed to determine appropriateness of retro-fit solutions for energy efficiency.
3 Research and select energy efficient materials, products and systems.

3.1 **Materials**, products and systems appropriate to the existing building are researched for energy efficiency specifications.

3.2 Manufacturer representatives and literature are consulted to identify installation and operational specifications.

3.3 Compliance requirements for selecting and installing materials, products and systems are understood and adhered to.

3.4 Thermal and acoustic insulation of the building and quality of installation are assessed where appropriate to determine energy efficiency rating and appropriate solutions to improve insulating properties of the building.

4 Finalise retro-fit action plan.

4.1 **Final retro-fit action plan** is developed according to organisational procedures.

4.2 Projected **benefits** of undertaking each of the proposed retro fit measures are explained to client.

4.3 Client sign-off is obtained and **documentation** of agreed plan is finalised.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to evaluate information from a variety of sources to inform advice to clients on retrofitting buildings for energy efficiency
- numeracy skills to:
  - calculate and confirm correct quantities of materials for work tasks
  - prepare costings for proposed project work
- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - use language and concepts appropriate to cultural differences
- reading skills to:
  - interpret documentation, including drawings and specifications
  - research and interpret manufacturer product information
- writing skills to develop recommendations and reports for clients

Required knowledge

- building science principles and their application to the retrofitting of existing buildings for improved energy efficiency
- compliance requirements relating to construction materials and methods, including:
  - Australian standards
  - environmental and sustainability requirements, including:
    - energy efficiency
    - fire resistance, including resistance from bushfire attack
  - National Construction Code deemed-to-satisfy requirements
- energy efficiency ratings available for buildings, and their meaning
- general construction terminology
- processes for calculating material requirements
- risks of completely sealing the building envelope and ways to mitigate them
- types, characteristics, uses and limitations of materials, products and systems used when retrofitting for energy efficiency
- types, uses and limitations of previously used materials
- types, uses and limitations of renewable sources of energy
- types, location and use of relevant safety information, such as:
  - job safety analyses (JSA) and safe work method statements
• environmental and work site safety plans
• safety data sheets (SDS)

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by performing a range of tasks in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

• develop an action plan to retrofit and improve the energy efficiency of either one existing residential building or one existing commercial building, providing evidence of the following:
  • engaging in a team environment working with stakeholders across multiple disciplines, such as engaging or leading an integrated project design or delivery of a project
  • research undertaken to identify appropriate products, materials and systems for use in the retrofit
  • evaluation of risks involved in the retrofit and identification of appropriate solutions to avoid risks or hazards to occupants and others
  • written action plan for the retrofit of the building which responds to identified client requirements and expectations, as well as research undertaken into energy efficiency opportunities and recommended systems, materials and products to be used in the retrofit with relevant costings and timelines
  • locate, interpret and apply relevant information, standards and specifications to ensure the development of compliant action plans that meet client expectations and organisational policies and procedures
  • comply with work health and safety (WHS) legislation, regulations and codes of practice applicable to workplace operations.

Context of and specific

Assessment of this unit:
resources for assessment

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- research resources, including industry-related systems information
- safety data sheets.

Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:

- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, such as:

- CPPHSA4001A Assess household energy use

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Client requirements and expectations** may include:
- enhanced health and safety outcomes for occupants through improved air quality and selection of materials
- improved building durability
- increased return on investment through higher resale or higher rental income
- reduction in energy bills following retrofit.

**Energy assessment:**
- can include financial and non-financial benefits of retrofitting the building to improve energy efficiency
- can include recommendations that will improve the energy efficiency of the building
- identifies existing energy rating of a building using a variety of testing and assessment methods.

**Information** must include:
- energy efficient materials and installation methods
- regulations, codes and standards governing energy efficient construction.

**Limitations and obstacles** may include:
- budget constraints
- condition of existing building
- local council planning provisions, including land overlays and requirements relating to neighbourhood character
- orientation of the existing building
- original design and construction of existing building
- position of existing services to the building
- presence of protected vegetation adjacent to existing building
- protection of existing building under heritage listing
- proximity of other buildings or structures.

**Solutions** may include:
- engaging experts in heritage construction to advise on appropriate solutions for heritage listed buildings undergoing energy efficiency upgrades
- repairing parts of the existing structure before commencing energy efficiency retro fit
- repositioning services to the building
- seeking permission from relevant authorities to remove large trees that may inappropriately overshadow the building and reduce energy efficiency opportunities
- selecting and using economical and effective energy efficient systems and materials.

**Risks** must include:
- risks associated with completely sealing the building envelope, such as:
  - air pressure differentials
  - combustion
  - moisture and mould
  - poor indoor air quality.

**Strategies** may include:
- changing light fittings to LEDs
- installing motion sensor lighting
- replacing insulation in ceilings, walls or floors
- sealing building envelope to reduce unwanted air leakage
- sealing openable windows
- repositioning the heating system
- installing solar photovoltaic systems
- replacing electric hot water system with gas or solar hot water system.

**Materials** may include:
- aerated autoclaved concrete products
- bricks and mortar
- concrete blocks
- insulating materials
- plasterboard
- reflective paints
- slabs
- timber
- window frames and glass.

**Final retro-fit action plan** must address:
- client expectations
- costings
- material use
- other resourcing
- risk management
- timelines.

**Benefits** may include:
- improved levels of comfort for the occupants
- increased air changes per hour to improve indoor air quality
- increased durability of the building
- potential for improved return on investment
- reduction in and prevention of mould
- reduction in heating and cooling costs.

**Documentation** may include:
- applications for permits and service connections
- copies of plans, drawings and specifications
- environmental applications.

CPCSUS5003A Manage energy efficient building methods and strategies

Modification History

New unit.
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

Unit Descriptor
This unit of competency specifies the outcomes required to ensure that energy efficient building methods and strategies are supported by employees and contractors working on a new or existing residential or commercial building designed to satisfy energy efficiency ratings and requirements.
The unit provides the skills required to ensure that work undertaken to construct an energy efficient building or to retrofit an existing building for improved energy efficiency is performed as designed and reflects energy efficient specifications.
The unit covers developing a culture of energy efficient work practices.

Application of the Unit
This unit of competency supports builders and site managers overseeing the construction or retrofit of buildings designed to meet energy efficient ratings or improve the energy efficiency characteristics of a building.

Licensing/Regulatory Information
No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare to construct an energy efficient building.

1.1 Relevant stakeholders are consulted to identify the purpose for which the building is to be used and the energy efficiency expectations of its owners or occupiers.

1.2 Plans, drawings and specifications are reviewed to identify energy efficient requirements of finished building or works.

1.3 Project is resourced with appropriately skilled tradespeople with energy efficiency competency.

1.4 Works to be undertaken are scheduled to support energy efficient building strategy.

1.5 Construction materials and products are costed, selected and sourced to conform to and meet energy efficiency expectations of the building or works.

1.6 Strategies for the disposal or reuse of waste materials are developed for the project.

1.7 Impact of energy efficient project on timelines and budget is communicated to owner or occupier and other stakeholders.

2 Communicate and monitor energy efficiency awareness among tradespeople.

2.1 Trades and other works on the building project are briefed with expectations for techniques to be used, quality of works to be undertaken, and energy efficiency outcomes required.

2.2 Sealing of building envelope is assessed for capacity to maximise energy efficiency and improvements are made.
in sealing the building envelope before other works continue.

2.3 Requirements to maintain energy efficient techniques are communicated to subsequent trades to ensure benefits of the work are not lost.

2.4 Alterations to works, construction methods and selected materials are evaluated against project energy efficiency expectations, and impact on energy efficiency is quantified to assist in decision-making processes.

3 Evaluate and communicate energy efficiency outcomes.

3.1 Works undertaken are assessed for adherence to energy efficiency processes.

3.2 Hand held thermal imaging assessment of building or works is conducted to determine presence of unwanted heat and air leakages, and findings are addressed where necessary.

3.3 Duct testing is conducted where appropriate to identify location of leakages and works are implemented to address findings where necessary.

3.4 External rating of energy efficiency, including star ratings, is sought from recognised expert to verify efficiency of construction.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - evaluate own actions and make judgments about performance and necessary improvements
  - respond to change, such as differences in current work site energy efficiency requirements
- numeracy skills to calculate and confirm correct quantities of materials for work tasks
- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report hazards on the work site, including faults in tools, equipment or materials
  - use language and concepts appropriate to cultural differences
- reading skills to:
  - conduct own research into current building and construction methodologies and new materials technology
  - interpret documentation, including drawings and specifications
  - follow written instructions, procedures and signage
- writing skills to develop reports and recommendations about energy efficient projects

Required knowledge

- approaches to waste management consistent with principles of energy efficiency, including processes for minimising and reusing materials
- benchmarks to meet standards and rating systems (such as star rating) for energy efficiency
- compliance requirements relating to construction materials and methods, including:
  - Australian standards
  - energy efficiency and sustainability requirements in different jurisdictions
  - National Construction Code deemed-to-satisfy requirements
- general construction terminology
- impacts of different climate zones and environmental conditions on the built environment
- performance characteristics and benefits of energy efficiency policies, practices, products and services
- processes for constructing different building types
- processes for evaluating energy efficiencies in buildings
- theories and principles of energy efficiency applied to buildings and construction processes
- types, uses and limitations of different construction materials
- use and limitations of new and advanced construction materials that improve the energy efficiency of buildings
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by performing a range of tasks in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- implement energy efficient building methods and management strategies for two building and construction projects, including:
  - resourcing the project with appropriately skilled tradespeople competent in energy efficient works
  - using energy efficient products and materials aligned with the energy efficient aims for the building envelope
  - clearly communicating to trades and other relevant stakeholders the energy efficiency techniques and strategies to be used in order to achieve building energy expectations
  - conducting appropriate performance testing of the construction to determine adherence to energy efficiency methodologies and techniques
- locate, interpret and apply relevant energy efficiency related compliance requirements applicable to the building and construction projects
- locate, interpret and monitor the application of relevant work health and safety (WHS) legislation, regulations and codes of practice applicable to the work site
- comply with organisational policies and procedures relating to managing energy efficiency building methods and strategies, including standards.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.
Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- research resources, including industry-related systems information
- safety data sheets.

**Method of assessment**

Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:

- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Guidance information for assessment**

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate,
accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant stakeholders** may include:
- architects
- builders
- building owners or investors
- designers
- developers
- engineers
- facility managers
- occupants.

**Construction materials and products** may include:
- cladding
- floors
- framing
- heating, ventilation and air conditioning (HVAC) systems
- insulation
- interior and exterior paints
- interior and exterior wall materials
- lights and lighting systems
- plaster
- roof materials
- types and uses of water tanks and recyclable grey water systems
- windows.

**Techniques to be used to support energy efficiency** may include:
- protecting the air barrier by minimising and sealing gaps using advanced framing techniques to increase construction productivity, reduce thermal bridging and increase operational energy efficiency
- installing insulation on the outside of the frame and in the roof, walls and floor
- reducing the effect of thermal bridging
- selecting appropriately sized HVAC system, which considers the tightness of the structure and incorporates heat or energy recovery systems as appropriate for ventilation
- using air or vapour barriers to ensure the entire building envelope is sealed, separating the inside environment from the outside
- using thicker insulation to improve the building’s thermal performance.

**Evaluated** may involve:
- occupier
- owner or developer
- relevant trades.

AHCLSC307A Implement a retaining wall project

Modification History
Not Applicable

Unit Descriptor

| Unit descriptor | This unit covers the process of implementing a retaining wall project and defines the standard required to: set out and prepare site according to plan specifications; establish survey benchmarks; excavate and profile soil levels; install and assemble components of a retaining wall; use tools and equipment for retaining wall projects; verify completed works meet the design plan and specifications. This standard forms a part of the training and assessment necessary to obtain the industry license. |

Application of the Unit

| Application of the unit | This unit applies to landscapers involved in the process of implementation of a retaining wall project. The work is likely to be under limited supervision, with checking only related to overall progress. |

| 1. Prepare for retaining wall project | 1.1. Requirements of the retaining wall project are clarified with client/supervisor.  
1.2. Equipment and material resource requirements are identified according to the scope of the construction work.  
1.3. The environmental implications of the proposed work are identified.  
1.4. Occupational Health and Safety (OHS) hazards are identified, risks assessed and reported to the supervisor.  
1.5. Personal Protective Equipment (PPE) is selected, used and maintained according to procedures  
1.6. Delivery of materials to site is organised according to workplace priorities. |
| 2. Mark out site for retaining wall | 2.1. Site bunting is erected and safety signage is placed where appropriate.  
2.2. Services are determined and located from site plans.  
2.3. The position of the retaining wall is marked out according to site and construction plans.  
2.4. The location and depth of excavations are determined from site and construction plans.  
2.5. Profiles are established to conform to the tolerances designated by the construction plans.  
2.6. Survey benchmarks are established. |
| 3. Construct retaining wall | 3.1. Retaining wall components are assembled /installed according to plan specifications.  
3.2. Appropriate drainage is installed according to plan.  
3.3. Tools, equipment and machinery are used safely in accordance with enterprise safe operating procedures and OHS requirements. |
| 4. Check quality of work and clean up site | 4.1. Quality of finished works is inspected to ensure the standard of the finished project is in accordance with design drawings and specifications.  
4.2. The work site is cleaned down in an environmentally safe and sensitive manner  
4.3. Tools and equipment are cleaned and stored according to enterprise guidelines. |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- read and interpret documentation associated with retaining wall projects
- calculate material and resource requirements
- establish survey benchmarks
- install and assemble components of a retaining wall
- coordinate a team to achieve optimum performance
- document results clearly and concisely
- identify hazards and assess risk
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- landscape retaining wall materials
- landscape retaining wall construction techniques
- set out techniques
- work schedule programming
- possible causes of disruption to work activities and their effect on quality and time schedules
- methods and practices for maintaining and repairing retaining walls
- the range, use and availability of materials, equipment and machinery that may be required for the project
- OHS issues, legislative requirements and codes of practice
- state based licensing
- local council regulations
- WorkCover regulations.
## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</th>
</tr>

Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Establish documentation standards | 1.1. Identify organisational requirements for information entry, storage, output, and quality of document design and production  
1.2. Evaluate organisation's present and future information technology capability in terms of its effect on document design and production  
1.3. Identify types of documents used and required by the organisation  
1.4. Establish documentation standards and design tasks for organisational documents in accordance with information, budget and technology requirements |
| 2. Manage template design and development | 2.1. Ensure standard formats and templates suit the purpose, audience and information requirements of each document  
2.2. Ensure document templates enhance readability and appearance, and meet organisational requirements for style and layout  
2.3. Test templates, obtain organisational and user feedback, and make amendments as necessary to ensure maximum efficiency and quality of presentation |
| 3. Develop standard text for documents | 3.1. Evaluate complex technical functions of software for their usefulness in automating aspects of standard document production  
3.2. Match requirements of each document with software functions to allow efficient production of documents  
3.3. Test macros to ensure they meet the requirements of each document in accordance with documentation standards |
| 4. Develop and implement strategies to ensure the use of standard documentation | 4.1. Prepare explanatory notes for the use of standard templates and macros using content, format and language style to suit existing and future users  
4.2. Develop and implement training on the use of standard templates and macros and adjust the content and level of detail to suit user needs  
4.3. Produce, circulate, name and store master files and print copies of templates and macros in accordance with organisational requirements |
| 5. Develop and implement strategies | 5.1. Monitor use of standard documentation templates and macros, and evaluate the quality of documents |
ELEMENT | PERFORMANCE CRITERIA
---|---
for maintenance and continuous improvement of standard documentation | produced against documentation standards 5.2. Review documentation standards against the changing needs of the organisation, and plan and implement improvements in accordance with organisational procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to present complex instructions orally, to communicate ideas logically, and to explain technical concepts and designs to others
- literacy skills to:
  - read and interpret policies and procedures
  - review and select technological designs
  - consider aspects of context, purpose and audience when designing and formatting texts
- research and analysis skills to evaluate content, structure and purpose of technical texts, and to adapt task instructions to suit changes in technology
- technological skills to manage design requirements and layouts.

Required knowledge

- cost constraints
- document production processes
- functions of range of software applications, including desktop publishing, word processing and spreadsheets
- key provisions of relevant legislation and regulations from all forms of government, codes and standards that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
- organisational policies and procedures relating to document design and formatting
- sources of expertise external to the organisation or workgroup.
# Evidence Guide

## EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>Evidence of the following is essential:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• designing templates or style sheets for use in document design</td>
</tr>
<tr>
<td></td>
<td>• documenting processes and strategies to ensure implementation.</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

<table>
<thead>
<tr>
<th>Assessment must ensure:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>

### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• analysis of responses to case studies and scenarios</td>
<td></td>
</tr>
<tr>
<td>• demonstration of techniques</td>
<td></td>
</tr>
<tr>
<td>• direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate</td>
<td></td>
</tr>
<tr>
<td>• review of authenticated documents from the workplace or training environment</td>
<td></td>
</tr>
<tr>
<td>• oral or written questioning to assess knowledge of accounting procedures and techniques.</td>
<td></td>
</tr>
</tbody>
</table>

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• information and communications technology units</td>
<td></td>
</tr>
<tr>
<td>• other general administration units.</td>
<td></td>
</tr>
</tbody>
</table>
### Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Documents** may be created:
- using a range of commercial or organisational software packages:
  - databases
  - desktop publishing
  - spreadsheets
  - word processing

**Standards and design tasks** may include:
- binding
- binding media
- checking final print copy
- client requirements
- colour photocopy
- copying
- creating templates and style or procedures manual
- drafting
- drawing
- editing
- electronic or paper-based
- enterprise policies and procedures
- enterprise templates or house style conventions for margins, fonts, use of colour
- final document presentation
- formatting
- language and style of document
- liaison with external personnel
- locating and collecting appropriate information or precedents
- print quality
- production of graphics
- production of multiple and subsequent copies
- quality standards
- use of page layout software
- writing
**RANGE STATEMENT**

*Complex technical functions may include:*

- data transfer
- display features
- embedding
- exporting
- fields
- form fields
- formulae
- importing
- index
- linking
- macros
- merge criteria
- sort criteria
- table of contents

BSBCUS301B Deliver and monitor a service to customers

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
</table>
| Release 1 | This version first released with BSB07 Business Training Package version 6.0  
Revised unit. Performance criteria amended so that the learner is not required to ‘incorporate evidence of customer satisfaction in decision to modify products or services’. Required skills updated to focus on learning and development practices and compliance with policy and procedures. Replaces BSBCUS301A Deliver and monitor a service to customers |

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to identify customer needs and monitor service provided to customers. Operators may exercise discretion and judgement using appropriate theoretical knowledge of customer service to provide technical advice and support to customers over either a short or long term interaction.

Application of the Unit

This unit applies to individuals who are skilled operators and apply a broad range of competencies in various work contexts.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>

<tbody>
<tr>
<td>Elements describe the essential outcomes of a unit of competency.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</td>
</tr>
</tbody>
</table>
## Elements and Performance Criteria

| 1. Identify customer needs | 1.1 Use *appropriate interpersonal skills* to accurately identify and clarify *customer needs and expectations*
| | 1.2 Assess customer needs for urgency to determine priorities for service delivery according to *organisational requirements*
| | 1.3 Use *effective communication* to inform customers about available choices for meeting their needs and assist in the selection of preferred options
| | 1.4 Identify limitations in addressing customer needs and seek appropriate assistance from *designated individuals*
| 2. Deliver a service to customers | 2.1 Provide prompt service to customers to meet identified needs in accordance with organisational requirements
| | 2.2 Establish and maintain appropriate rapport with customers to ensure completion of quality service delivery
| | 2.3 Sensitive and courteously handle *customer complaints* in accordance with organisational requirements
| | 2.4 Provide assistance or respond to customers with *specific needs* according to organisational requirements
| | 2.5 Identify and use available *opportunities* to promote and enhance services and products to customers
| 3. Monitor and report on service delivery | 3.1 Regularly review customer satisfaction with service delivery using *verifiable evidence* according to organisational requirements
| | 3.2 Identify opportunities to enhance the quality of service and products, and pursue within organisational requirements
| | 3.3 Monitor procedural aspects of service delivery for effectiveness and suitability to customer requirements
| | 3.4 Regularly seek customer feedback and use to improve the provision of products and services
| | 3.5 Ensure reports are clear, detailed and contain recommendations focused on critical aspects of service delivery
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to identify trends and positions of products and services
- communication skills to monitor and advise on customer service strategies
- literacy skills to:
  - edit and proofread texts to ensure clarity of meaning and accuracy of grammar and punctuation
  - prepare general information and papers according to target audience
  - read and understand a variety of texts
- problem-solving skills to deal with customer enquiries or complaints
- technology skills to select and use technology appropriate to a task
- self-management skills to:
  - comply with policies and procedures
  - consistently evaluate and monitor own performance
  - seek learning opportunities.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
  - financial legislation
  - occupational health and safety (OHS)
- organisational policy and procedures for customer service including handling customer complaints
- service standards and best practice models
- public relations and product promotion
- techniques for dealing with customers, including customers with specific needs.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Evidence of the following is essential:</th>

• review of reports on customer service delivery  
• analysis of responses to case studies and scenarios  
• demonstration of techniques  
• oral or written questioning to assess knowledge of customer service strategies. |

| Guidance information for assessment | Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Appropriate interpersonal skills may include: | • listening actively to what the customer is communicating |
| | • providing an opportunity for the customer to confirm their request |
| | • questioning to clarify and confirm customer needs |
| | • seeking feedback from the customer to confirm understanding of needs |
| | • summarising and paraphrasing to check understanding of customer message |
| | • using appropriate body language. |

| Customers may include: | • corporate customers |
| | • individual members of the organisation |
| | • individual members of the public |
| | • internal or external |
| | • other agencies. |

| Customer needs and expectations may include: | • accuracy of information |
| | • advice or general information |
| | • complaints |
| | • fairness/politeness |
| | • further information |
| | • making an appointment |
| | • prices/value |
| | • purchasing organisation’s products and services |
| | • returning organisation’s products and services |
| | • specific information. |

| Organisational requirements may include: | • access and equity principles and practice |
| | • anti-discrimination and related policy |
| | • defined resource parameters |
| | • goals, objectives, plans, systems and processes |
| | • legal and organisational policies, guidelines and requirements |
| | • OHS policies, procedures and programs |
| | • payment and delivery options |
| | • pricing and discount policies |
| | • quality and continuous improvement processes and |
| **Effective communication may include:** | • giving customers full attention  
• maintaining eye contact, except where eye contact may be culturally inappropriate  
• speaking clearly and concisely  
• using active listening techniques  
• using appropriate language and tone of voice  
• using clear written information/communication  
• using non-verbal communication e.g. body language, personal presentation (for face-to-face interactions)  
• using open and/or closed questions. |
| **Designated individuals may include:** | • colleagues  
• customers  
• line management  
• supervisor. |
| **Customer complaints may include:** | • administrative errors such as incorrect invoices or prices  
• customer satisfaction with service quality  
• damaged goods or goods not delivered  
• delivery errors  
• product not delivered on time  
• service errors  
• warehouse or store room errors such as incorrect product delivered. |
| **Specific needs of customers may relate to:** | • age  
• beliefs/values  
• culture  
• disability  
• gender  
• language  
• religious/spiritual observances. |
| **Opportunities to promote and enhance services and products may include:** | • extending time lines  
• packaging procedures  
• procedures for delivery of goods  
• returns policy  
• system for recording complaints  
• updating customer service charter. |
| **Verifiable evidence may include:** | • customer satisfaction questionnaires  
• audit documentation and reports |
- quality assurance data
- returned goods
- lapsed customers
- service calls
- complaints.

BSBFIM501A Manage budgets and financial plans

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to undertake financial management within a work team in an organisation. This includes planning and implementing financial management approaches, supporting team members whose role involves aspects of financial operations, monitoring and controlling finances, and reviewing and evaluating effectiveness of financial management processes in line with the financial objectives of the work team and the organisation. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit addresses the requirement for managers to ensure that financial resources are used effectively. This is done by ensuring access to budget/s and ongoing monitoring expenditure against the budget/s. The unit applies to managers working in small and large business environments and not for profit organisations. |

Licensing/Regulatory Information
Not applicable.

Pre-Requisites

| Prerequisite units |  |
Employability Skills Information

| Employability skills | This unit contains employability skills. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan financial management approaches | 1.1. Access *budget/financial plans* for the work team  
1.2. Clarify *budget/financial plans* with *relevant personnel* within the organisation to ensure that documented outcomes are achievable, accurate and comprehensible  
1.3. Negotiate any changes required to be made to *budget/financial plans* with relevant personnel within the organisation  
1.4. Prepare *contingency plans* in the event that initial plans need to be varied |
| 2. Implement financial management approaches | 2.1. Disseminate relevant details of the agreed *budget/financial plans* to team members  
2.2. Provide *support* to ensure that team members can competently perform *required roles* associated with the management of finances  
2.3. Determine and access *resources and systems* to manage financial management processes within the work team |
| 3. Monitor and control finances | 3.1. Implement *processes* to monitor actual expenditure and to control costs across the work team  
3.2. Monitor expenditure and costs on an agreed cyclical basis to identify cost variations and expenditure overruns  
3.3. Implement, monitor and modify contingency plans as required to maintain financial objectives  
3.4. *Report* on budget and expenditure in accordance with organisational protocols |
| 4. Review and evaluate financial management processes | 4.1. Collect and collate for analysis, *data and information on the effectiveness of financial management processes* within the work team  
4.2. Analyse data and information on the effectiveness of financial management processes within the work team and identify, document and recommend any improvements to existing processes  
4.3. Implement and monitor agreed improvements in line with financial objectives of the work team and the organisation |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- numeracy skills to read and understand a budget and to update a budget
- technology skills to use software associated with financial record keeping.

### Required knowledge

- basic accounting principles
- organisational requirements related to financial management
- relevant legislation and current requirements of the Australian Taxation Office, including GST
- requirements for organisational record keeping and auditing
- principles and techniques involved in:
  - budgeting
  - cash flows
  - electronic spreadsheets
  - GST
  - ledgers and financial statements
  - profit and loss statements.
Evidence Guide

BSBHRM402A Recruit, select and induct staff

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to execute tasks associated with the recruitment cycle.  
| | No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals with a role in recruitment, selection and induction functions who work under the direction of a human resources manager.  
| | It is not assumed that the individuals addressed by this unit have staff who report to them, although this may be the case.  
| | Performance of the work described in this unit will be underpinned by in depth knowledge of the work of the organisation, and how recruitment and selection practices fit with other human resource functions. |

Licensing/Regulatory Information

</thead>
</table>
| 1. Determine job descriptions | 1.1. Clarify timelines and requirement for appointment  
1.2. Assist with preparation of *job descriptions* which accurately reflect the role requirements in accordance with organisational procedures and legislation, codes and national standards and occupational health and safety (OHS) considerations  
1.3. Consult with relevant personnel about job descriptions  
1.4. Ensure that job descriptions do not contravene legislative requirements  
1.5. Obtain approvals to advertise position |
| 2. Plan for selection | 2.1. *Advertise* vacancies for *staffing requirements* in accordance with organisational policies and procedures  
2.2. Consult with relevant personnel to convene selection panel and to develop interview questions  
2.3. Short list applicants  
2.4. Ensure that interview questions do not breach legislative requirements  
2.5. Schedule interviews and advise relevant personnel of times, dates and venues |
| 3. Assess and select applicants | 3.1. Participate in interview process and assess candidates against agreed selection criteria  
3.2. Discuss assessment with other selection panel members  
3.3. Correct any biases or deviations from agreed procedures and negotiate for preferred candidate  
3.4. Contact referees for referee reports  
3.5. Prepare selection report and make recommendations to senior personnel for appointment  
3.6. Advise unsuccessful candidates of outcomes and respond to any queries  
3.7. Complete all necessary documentation in accordance with organisational procedures  
3.8. Secure agreement of preferred candidate |
| 4. Appoint and induct successful candidate | 4.1. Provide successful candidate with employment contract and other documentation  
4.2. Advise managers and staff of starting date and make |
**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
 | necessary administrative arrangements for pay and employee record keeping
 | 4.3. Advise manager and work team of new appointment
 | 4.4. Arrange induction in accordance with organisational policy

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to use networks to source suitable applicants, to listen to and understand what is being said in interviews, and to advise on the outcomes of the selection process
- literacy skills to work with job descriptions to devise suitable questions for interviews, to prepare letters for unsuccessful applicants and to make job offers
- organising and scheduling skills to arrange interviews and venues.

**Required knowledge**

- documentation required for recruitment and selection
- human resource functions, human resource life cycle and the place of recruitment and selection in that life cycle
- principles of equity, diversity and relevant legislation.
- range of interviewing techniques and other selection processes and their application.
**Evidence Guide**

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:
- demonstrated ability to work with job descriptions to source and select suitable staff
- interviewing and other selection techniques that demonstrate awareness of equal opportunity and anti-discrimination requirements
- knowledge of the human resource life cycle.

**Context of and specific resources for assessment**

Assessment must ensure:
- access to an appropriate range of documentation and resources normally used in the workplace.

**Method of assessment**

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
- analysis of responses to case studies and scenarios
- assessment of written reports on recruitment and selection
- demonstration of selection techniques
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of interviewing techniques
- review of advertisements for staffing vacancies
- review of documentation provided to successful candidate
- oral or written questioning to assess knowledge of selection processes.

**Guidance information for assessment**

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:
- other units from the Certificate IV in Human Resources.
### Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **Job descriptions** may include: | attributes<br>competencies required by staff<br>job or person specifications<br>job title and purpose of position<br>necessary skills and knowledge<br>qualifications<br>selection criteria<br>tasks or duties associated with the position |
| **Legislation, codes and national standards** may include: | award and enterprise agreements, and relevant industrial instruments<br>relevant industry codes of practice<br>relevant legislation from all levels of government that affects business operation, especially in regard to OHS and environmental issues, equal opportunity, industrial relations and anti-discrimination |
| **Occupational health and safety (OHS) considerations** may include: | establishment and maintenance of OHS training, records, induction processes<br>performance against OHS legislation and organisation's OHS system, especially policies, procedures and work instructions |
| **Advertising** may include: | electronic or print<br>internal or external<br>outsourcing |
| **Staffing requirements** may include: | permanent, temporary, full-time, part-time or casual |

BSBITS401B Maintain business technology

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
</table>
| Release 1 | This version first released with BSB07 Business Training Package version 6.0.  
Revised unit. Required skills updated to focus on learning and development practices and compliance with policy and procedures.  
Replaces BSBITS401A Maintain business technology |

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to maintain the effectiveness of business technology in the workplace. It includes maintaining existing technology and planning for future technology requirements.

Application of the Unit

This unit applies to individuals with a broad knowledge of business technology who contribute well developed skills in creating solutions to maintenance and upgrade issues with existing technology. They may have responsibility to provide guidance or to delegate aspects of these tasks to others.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

</tbody>
</table>
## Elements and Performance Criteria

| 1. Maintain performance of hardware and software | 1.1 Monitor and evaluate system effectiveness to ensure it meets *organisational and system requirements*
1.2 Use operating system, drive and disk structure, reports and files to identify performance problems
1.3 *Maintain disk drives and peripherals* according to manufacturers’ and organisational requirements
1.4 Replace *consumables* in accordance with manufacturers’ and organisational requirements |
| --- | --- |
| 2. Provide basic system administration | 2.1 Carry out system back-up procedure at regular intervals according to organisational and system requirements
2.2 Install and operate *software* applications in accordance with developers’ and organisational requirements
2.3 Maintain and update security access procedures in line with organisational requirements
2.4 Ensure that licence for use of software is used, checked and recorded in accordance with organisational requirements
2.5 Regularly maintain and update virus programs in accordance with organisational requirements |
| 3. Identify future technology requirements | 3.1 Maintain knowledge of current and new *technology* by regularly accessing *sources of information*
3.2 Identify and develop *improved technology systems* using feedback from clients and colleagues
3.3 Assess existing technology against newly available technology to determine future needs and priorities
3.4 Identify and select new technologies to achieve and maintain continuous organisational development
3.5 Obtain management and budget approval for new selected technologies |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to explain the operation and troubleshooting of technology in the work environment
- literacy skills to interpret and evaluate the purposes and objectives of various uses of technology; to display logical organisation of written information
- problem-solving skills to address routine and non-routine faults with hardware and software
- research and analytical skills to analyse and identify organisation’s future technology requirements.

Required knowledge

- costs and benefits of technology maintenance strategies
- general features and capabilities of current industry accepted hardware and software products
- principles of environmental sustainable practice in implementing business technology
- importance of back-up and security procedures; maintenance and diagnostic procedures; licensing, installation and purchasing procedures
- key provisions of relevant legislation from all forms of government that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
  - environmental issues
  - occupational health and safety (OHS).
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| 1. Prepare to produce documents | 1.1. Use safe work practices to ensure *ergonomic, work organisation*, energy and resource *conservation requirements* are addressed  
1.2. Identify *document* purpose, audience and presentation requirements, and clarify with relevant personnel as required  
1.3. Identify *organisational* and task *requirements* for document layout and design |
| 2. Produce documents | 2.1. *Format* document using appropriate *software functions* to adjust page layout to meet information requirements, in accordance with organisational style and presentation requirements  
2.2. Use system features to identify and manipulate *screen display options and controls*  
2.3. Use manuals, user documentation and online help to overcome problems with document presentation and production |
| 3. Finalise documents | 3.1. Ensure final document is previewed, *checked, adjusted and printed* in accordance with organisational and task requirements  
3.2. Ensure document is prepared within *designated time lines* and organisational requirements  
3.3. *Name and store document* in accordance with organisational requirements and exit application without information loss/damage |
**Required Skills and Knowledge**

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- communication skills to clarify document requirements
- editing and proofreading skills to check own work for accuracy
- keyboarding skills to enter text and numerical data
- literacy skills to read and understand organisation's procedures, and to use basic models to produce a range of correspondence
- problem-solving skills to solve routine problems.

### Required knowledge

- formatting styles and their effect on formatting, readability and appearance of documents
- purpose, use and function of word processing software
- organisational requirements for ergonomics, work periods and breaks, and conservation techniques
- organisational style guide.
Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</table>
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Ergonomic requirements

- avoiding radiation from computer screens
- chair height, seat and back adjustment
- document holder
- footrest
- keyboard and mouse position
- lighting
- noise minimisation
- posture
- screen position
- workstation height and layout

### Work organisation requirements

- exercise breaks
- mix of repetitive and other activities
- rest periods

### Conservation requirements

- disposing of non-confidential waste paper in recycling bins
- double-sided paper use
- re-using paper for rough drafts (observing confidentiality requirements)
- utilising power-save options for equipment

### Documents

- agendas
- briefing papers
- envelopes
- faxes
- labels
- letters
- mail merges
- memos
- minutes
- short reports
- simple one-page flyers
- standard form letters

### Organisational requirements

- company colour scheme
## RANGE STATEMENT

**include:**
- company logo
- consistent corporate image
- content restrictions
- established guidelines and procedures for document production
- house styles
- observing copyright legislation
- organisation name, time, date, document title, filename etc. in header/footer
- templates

**Formatting** may include:
- alignment on page
- columns
- company logo/letterhead
- enhancements to format - borders, patterns and colours
- enhancements to text - colour, size, orientation
- headers/footers
- margins
- page orientation

**Software functions** may include:
- default settings
- document protection
- grammar check
- headers/footers
- indent
- line spacing
- page numbers
- page set up
- paragraph formatting
- spell check
- tabs
- text formatting

**Screen display options and controls** may include:
- layout view
- maximise/minimise
- normal view
- page view
- print preview
- ruler
- toolbars
- zoom percentage
## RANGE STATEMENT

**Checking** may include:
- accuracy of information
- consistency of layout
- ensuring instructions with regard to content and format have been followed
- grammar
- proofreading
- spelling, electronically and manually

**Printing** may include:
- basic print settings
- multiple copies
- odd or even pages
- print preview
- printer setup
- specified pages
- whole document

**Designated time lines** may include:
- organisational time line e.g. deadline requirements
- time line agreed with internal/external client
- time line agreed with supervisor/person requiring document/s

**Naming and storing documents** may include:
- appropriate file type
- authorised access
- file names according to organisational procedure e.g. numbers rather than names
- file names which are easily identifiable in relation to the content
- file/directory names which identify the operator, author, section, date etc.
- filing locations
- organisational policy for backing up files
- organisational policy for filing hard copies of documents
- security
- storage in folders/sub-folders
- storage on hard/floppy disk drives, CD-ROM, tape back-up

# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Select and prepare resources | 1.1. Adjust workspace, furniture and equipment to suit user ergonomic, work organisation and occupational health and safety (OHS) requirements  
1.2. Use energy and resource conservation techniques to minimise wastage in accordance with organisational and statutory requirements  
1.3. Identify spreadsheet task requirements and clarify with relevant personnel as required |
| 2. Create simple spreadsheets | 2.1. Ensure data is entered, checked and amended in accordance with organisational and task requirements, to maintain consistency of design and layout  
2.2. Format spreadsheet using software functions, to adjust page and cell layout to meet information requirements, in accordance with organisational style and presentation requirements  
2.3. Ensure formulae are used and tested to confirm output meets task requirements, in consultation with appropriate personnel as required  
2.4. Use manuals, user documentation and online help to overcome problems with spreadsheet design and production |
| 3. Produce simple charts | 3.1. Select chart type and design that enables valid representation of numerical data and meets organisational and task requirements  
3.2. Create chart using appropriate data range in the spreadsheet  
3.3. Modify chart type and layout using formatting features |
| 4. Finalise spreadsheets | 4.1. Ensure spreadsheet and any accompanying charts are previewed, adjusted and printed in accordance with organisational and task requirements  
4.2. Ensure data input meets designated time lines and organisational requirements for speed and accuracy  
4.3. Name and store spreadsheet in accordance with organisational requirements and exit the application without data loss/damage |
## Required Skills and Knowledge

<table>
<thead>
<tr>
<th>REQUIRED SKILLS AND KNOWLEDGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>This section describes the skills and knowledge required for this unit.</td>
</tr>
</tbody>
</table>

**Required skills**

- communication skills to clarify requirements of spreadsheet
- editing and proofreading skills to check own work for accuracy
- keyboarding skills to enter text and numerical data
- literacy skills to read and understand organisation’s procedures, and to use basic models to produce a range of spreadsheets
- numeracy skills to create and use spreadsheet formulae.

**Required knowledge**

- formatting of workplace documents
- organisational requirements for ergonomic standards, work periods and breaks, and conservation techniques
- organisational guidelines on spreadsheet manipulation and processing
- purpose and range of use of spreadsheet functions.
Evidence Guide

<table>
<thead>
<tr>
<th>EVIDENCE GUIDE</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</td>
</tr>
</tbody>
</table>

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- designing a minimum of two spreadsheets
- using cell-based formulae
- creating charts using relevant data
- knowledge of purpose and range of use of spreadsheet functions.

#### Context of and specific resources for assessment

Assessment must ensure:

- access to an actual workplace or simulated environment
- access to office equipment and resources
- access to examples of spreadsheets and simple formulae.

#### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- review of final spreadsheets
- analysis of responses to case studies and scenarios
- demonstration of techniques
- oral or written questioning to assess knowledge of spreadsheet software functions.

#### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- general administration units
- other IT use units.
Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **Ergonomic requirements may include:** | • avoiding radiation from computer screens  
• chair height, seat and back adjustment  
• document holder  
• footrest  
• keyboard and mouse position  
• lighting  
• noise minimisation  
• posture  
• screen position  
• workstation height and layout |
| **Work organisation requirements may include:** | • exercise breaks  
• mix of repetitive and other activities  
• rest periods |
| **Conservation techniques may include:** | • double-sided paper use  
• recycling used and shredded paper  
• re-using paper for rough drafts (observing confidentiality requirements)  
• utilising power-save options for equipment |
| **Spreadsheet task requirements may include:** | • data entry  
• output  
• presentation  
• storage |
| **Data may include:** | • numbers  
• text |
| **Checking may include:** | • accuracy of data  
• accuracy of formulae with calculator  
• ensuring instructions with regard to content and format have been followed  
• proofreading  
• spelling, electronically and manually |
| **Formatting may include:** | • alignment on page  
• efficiency of formulae |
**RANGE STATEMENT**

- enhancements to format - borders, patterns and colours
- enhancements to text
- headers/footers
- use of absolute and relative cell addresses
- use of cell addresses in formulae

**Software functions** may include:
- adding/deleting columns/rows
- formatting cells
- formatting text
- headers/footers
- sizing columns/rows

**Formulae** may include:
- absolute cell referencing and/or mixed references
- average
- division
- maximum
- minimum
- multiplication
- subtraction
- sum
- combinations of above

**Chart types** may include:
- area
- bar
- column
- exploded pie
- line
- pie and 3-D pie
- scatter/bubble
- stacked/multiple bar
- stacked, 3-D column

**Features** may include:
- axes
- axis title
- borders
- chart title
- colours
- data labels
- data tables
- fills
- gridlines
- legend
## RANGE STATEMENT

| Printing may include: | • fit on one page  
| | • fit specific number of pages  
| | • with formulae  
| | • with values  
| Designated time lines may include: | • organisational time line e.g. financial requirements  
| | • time line agreed with internal/external client  
| | • time line agreed with supervisor/person requiring spreadsheet  
| Storing data may include: | • authorised access  
| | • filing locations  
| | • organisational policy for backing up files  
| | • organisational policy for filing hard copies of spreadsheets  
| | • security  
| | • storage in electronic folders/sub-folders  
| | • storage on CD-ROM, zip drives, USB memory

BSBITU301A Create and use databases

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to create simple two table relational databases with reports and queries, for the storage and retrieval of information. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals employed in a range of work environments who develop and use simple databases to store and retrieve data. They may provide administrative support within an enterprise, or may be independently responsible for the storage and retrieval of data relating to their own work roles. |

Licensing/Regulatory Information
Not applicable.

### Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Create a simple database</td>
<td>1.1. Design a simple database, with at least two tables, using a <strong>database application, basic design principles, software functions and simple formulae</strong>&lt;br&gt;1.2. Develop a table with fields and attributes according to database usage, as well as <strong>data</strong> considerations and user requirements&lt;br&gt;1.3. Create a primary key for each table&lt;br&gt;1.4. Modify table layout and field attributes as required&lt;br&gt;1.5. Create a relationship between the two tables&lt;br&gt;1.6. <strong>Check and amend data</strong> entered, in accordance with organisational and task requirements</td>
</tr>
<tr>
<td>2. Create reports and queries</td>
<td>2.1. Determine information output, database tables to be used and <strong>report layout</strong> to meet task requirements&lt;br&gt;2.2. Determine data groupings, search and sort criteria to meet task requirements&lt;br&gt;2.3. Run reports and queries to check that results and formulae provide the required data&lt;br&gt;2.4. Modify reports to include or exclude additional requirements</td>
</tr>
<tr>
<td>3. Use database</td>
<td>3.1. Ensure data input meets <strong>designated time lines</strong> and organisational requirements for speed and accuracy&lt;br&gt;3.2. Use manuals, user documentation and online help to overcome problems with database design and production&lt;br&gt;3.3. Preview, adjust and <strong>print</strong> database reports or forms in accordance with organisational and task requirements&lt;br&gt;3.4. Name and <strong>store databases</strong>, in accordance with organisational requirements, and exit application without data loss or damage&lt;br&gt;3.5. Prepare and distribute reports to appropriate person in a suitable format</td>
</tr>
</tbody>
</table>
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- numeracy skills to create simple queries and to use simple formulae
- planning and organising skills to develop effective databases
- problem-solving skills to address inconsistencies in data and issues in database, and to query structures.

### Required knowledge

- key provisions of relevant legislation from all forms of government, standards and codes that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
  - occupational health and safety
- organisational requirements relating to data entry, storage and presentation.
Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

# Range Statement

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Database applications may include:
- commercial database applications
- organisational specific database applications

### Basic design principles may include:
- naming conventions
- data layout
- formatting
- database use
- required output
- reporting and presentation requirements

### Software functions may include:
- adding, deleting, moving, re-labelling fields
- altering field widths
- calculating, using formula
- data protection
- field definitions and attributes
- formatting fields
- formatting text
- headers and footers
- inserting and deleting blank lines and spaces
- repeating (if available)
- table, form and report wizards

### Simple formulae may include:
- average
- count
- division
- maximum
- minimum
- multiplication
- subtraction
- sum
- combinations of above

### Data may include:
- numbers
- text

### Checking and amending data may include:
- accuracy of data
### RANGE STATEMENT

**May include:**

- accuracy of formulae with calculator
- ensuring instructions with regard to content and format have been followed
- outcome of sorting or filtering
- proofreading
- spelling, electronically and manually

**Report layout may include:**

- alignment on page
- columns
- enhancements to format - borders, patterns and colours
- enhancements to text
- formatting provided through use of a wizard or other automated process
- headers/footers
- logical ordering of data
- tables

**Designated time lines may include:**

- time line agreed with internal or external client
- time line agreed with supervisor or person requiring database

**Printing may include:**

- forms
- queries
- records
- reports
- tables

**Storing databases may include:**

- authorised access
- filing locations
- naming conventions
- organisational policy for backing up files
- organisational policy for filing hard copies of databases
- security
- storage in electronic folders and sub-folders
- storage on disk drives, CD-ROM, back-up tapes

BSBMGT502B Manage people performance

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to manage the performance of staff who report to them directly. Development of key result areas and key performance indicators and standards, coupled with regular and timely coaching and feedback, provide the basis for performance management. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to all managers and team leaders who manage people. It covers work allocation and the methods to review performance, reward excellence and provide feedback where there is a need for improvement. The unit makes the link between performance management and performance development, and reinforces both functions as a key requirement for effective managers. This is a unit that all managers/prospective managers who have responsibility for other employees should strongly consider undertaking. |

Licensing/Regulatory Information

Employability Skills Information

| Employability skills | This unit contains employability skills. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Allocate work | 1.1. Consult relevant groups and individuals on work to be allocated and resources available  
1.2. Develop work plans in accordance with operational plans  
1.3. Allocate work in a way that is efficient, cost effective and outcome focussed  
1.4. Confirm *performance standards, Code of Conduct* and work outputs with relevant teams and individuals  
1.5. Develop and agree *performance indicators* with relevant staff prior to commencement of work  
1.6. Conduct *risk analysis* in accordance with the organisational risk management plan and legal requirements |
| 2. Assess performance | 2.1. Design *performance management* and review processes to ensure consistency with organisational objectives and policies  
2.2. Train participants in the performance management and review process  
2.3. Conduct performance management in accordance with organisational protocols and time lines  
2.4. Monitor and evaluate performance on a continuous basis |
| 3. Provide feedback | 3.1. Provide informal feedback to staff on a regular basis  
3.2. Advise relevant people where there is poor performance and take necessary actions  
3.3. Provide on-the-job coaching when necessary to improve performance and to confirm *excellence in performance*  
3.4. Document performance in accordance with the organisational performance management system  
3.5. Conduct formal structured feedback sessions as necessary and in accordance with organisational policy |
| 4. Manage follow up | 4.1. Write and agree performance improvement and development plans in accordance with organisational policies  
4.2. Seek assistance from human resources specialists where appropriate  
4.3. Reinforce excellence in performance through recognition and continuous feedback |
### ELEMENT | PERFORMANCE CRITERIA
--- | ---
4.4. Monitor and coach individuals with poor performance
4.5. Provide support services where necessary
4.6. Counsel individuals who continue to perform below expectations and implement the disciplinary process if necessary
4.7. **Terminate** staff in accordance with legal and organisational requirements where serious misconduct occurs or ongoing poor performance continues

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

#### Required skills

- Communication skills to articulate expected standards of performance, to provide effective feedback and to coach staff who need development
- Risk management skills to analyse, identify and develop mitigation strategies for identified risks
- Planning and organisation skills to ensure a planned and objective approach to the performance management system.

#### Required knowledge

- Relevant legislation from all levels of government that affects business operation, especially in regard to occupational health and safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- Relevant awards and certified agreements
- Performance measurement systems utilised within the organisation
- Unlawful dismissal rules and due process
- Staff development options and information.

BSBMGT515A Manage operational plan

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to develop and monitor implementation of the operational plan to provide efficient and effective workplace practices within the organisation's productivity and profitability plans. Management at a strategic level requires systems and procedures to be developed and implemented to facilitate the organisation's operational plan. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to people who manage the work of others and operate within the parameters of a broader strategic and/or business plan. The task of the manager at this level is to develop and implement an operational plan to ensure that the objectives and strategies outlined in the strategic and/or business plan are met by work teams. However in some larger organisations operational plans may be developed by a strategic planning unit. At this level work will normally be carried out within complex and diverse methods and procedures, which require the exercise of considerable discretion and judgement, using a range of problem solving and decision making strategies. |

Licensing/Regulatory Information
Not applicable.

</table>
| 1. Develop operational plan | 1.1. Research, analyse and document *resource requirements* and develop an operational plan in consultation with *relevant personnel, colleagues and specialist resource managers*  
1.2. Develop and/or implement *consultation processes* as an integral part of the operational planning process  
1.3. Ensure details of the operational plan include the development of *key performance indicators* to measure organisational performance  
1.4. Develop and implement *contingency plans* at appropriate stages of operational planning  
1.5. Ensure the development and presentation of proposals for resource requirements is supported by a variety of information sources and seek specialist advice as required  
1.6. Obtain approval for plan from relevant parties and ensure understanding among work teams involved |
| 2. Plan and manage resource acquisition | 2.1. Develop and implement strategies to ensure that employees are recruited and/or inducted within the organisation's human resources management policies and practices  
2.2. Develop and implement strategies to ensure that physical resources and services are acquired in accordance with the *organisation's policies, practices and procedures* |
| 3. Monitor and review operational performance | 3.1. Develop, monitor and review performance systems and processes to assess progress in achieving profit and productivity plans and targets  
3.2. Analyse and interpret budget and actual financial information to monitor and review profit and productivity performance  
3.3. Identify areas of under performance, recommend solutions, and take prompt action to rectify the situation  
3.4. Plan and implement systems to ensure that mentoring and coaching are provided to support individuals and teams to effectively, economically and safely use resources  
3.5. Negotiate recommendations for variations to operational plans and gain approval from *designated persons/groups* |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
3.6. Develop and implement systems to ensure that procedures and records associated with documenting performance are managed in accordance with organisational requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to access and use workplace information and to write a succinct and practical plan
- technology skills to use software to produce and monitor the plan against performance indicators
- planning and organisational skills
- coaching skills to work with people with poor performance
- numeracy skills to allocate and manage financial resources.

Required knowledge

- models and methods for operational plans
- budgeting processes
- alternative approaches to improving resource usage and eliminating resource inefficiencies and waste.
Evidence Guide

BSBMKG414A Undertake marketing activities

Modification History

Unit Descriptor
This unit describes the performance outcomes, skills and knowledge required to plan, implement and manage basic marketing and promotional activities. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Application of the Unit
This unit covers general and basic marketing and promotional activities that do not require detailed or complex planning or implementation. It could be undertaken as part of a broader role of a person in a small enterprise, or as part of a marketing plan for a larger enterprise.

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

3 Review marketing activities

3.1 Measure and document outcomes of marketing activities

3.2 Review marketing activities against expected outcomes and document identified improvements

3.3 Prepare reports of marketing activities and communicate to relevant enterprise personnel

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

literacy skills to read a variety of texts, to prepare general information and papers, and to write formal and informal letters according to target audience

planning skills to develop implementation schedules

problem-solving skills to address issues which may affect plans and their implementation.

Required knowledge

key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:

anti-discrimination legislation

ethical principles

codes of practice

privacy laws

environmental issues

occupational health and safety

organisational policies and procedures

specific product knowledge related to goods and services being marketed.
Evidence Guide
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:
- planning and implementing marketing activities
- reviewing the effectiveness of the marketing plan
- documenting the activities and processes worked with
- knowledge of relevant legislation.

**Context of and specific resources for assessment**

Assessment must ensure:
- access to an actual workplace or simulated environment
- access to office equipment and resources
- examples of goods/services to be marketed
- examples of marketing plans.

**Method of assessment**

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- review of work activity plans for marketing activities
- analysis of responses to case studies and scenarios
- demonstration of techniques
- observation of presentations
- oral or written questioning to assess knowledge of marketing techniques and strategies
- analysis of documentation outlining the outcomes of marketing activities
review of marketing activities reports.

**Guidance information for assessment**

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:
other marketing, advertising or public relations units.

**Range Statement**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Need** may be determined by:

- analysis of sales figures and other performance data
- analysis of client information
- direction from relevant enterprise personnel
- development of new products and services

**Marketing activities** may include:

- attendance at trade shows, conferences and other events
- basic advertising
- development and distribution of general promotional and informational materials
- development and distribution of samples, case studies, testimonials and other evidence of enterprise activity
- development of displays and signs
- development of media releases, articles and media background information
- information sessions for clients, suppliers and stakeholders
- online information
- telephone promotions

**Outcomes** may include:

- projections for potential client inquiries
- projections for detailed potential client follow-up
- projections for sales and service levels

**Analysis** may include:

- market definition, statistics and basic research
- basic market segmentation
- target audience profiles

**Work activity plans** may include:

- human resource plans
- plans for other required resources
financial plans

time plans

detailed implementation plans (covering the how/what/when of activities)

activity monitoring and evaluation plans

**Relevant enterprise personnel** might include:

- coordinators
- owners
- managers
- section leaders
- supervisors
- team leaders

**Resources** may include:

- human resources
- finance
- resource contributions from suppliers and/or partners

**Relevant personnel performing specific marketing functions** may include:

- administrators
- copywriters
- desktop publishers
- external consultants
- graphic artists and designers
- marketing specialists
- printers, sign writers and other tradespeople

**Unit Sector(s)**

- empty
- empt

**Competency field**

- Business Development - Marketing
- Business Development - Marketing
BSBOHS201A Participate in OHS processes

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to participate in workplace occupational health and safety (OHS) processes to protect workers own health and safety, and that of others. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals who require a fundamental knowledge of OHS to carry out their own work which may be in a defined context under direct supervision or with some individual responsibility. This unit has broad applicability across industries and workplace contexts. |

Licensing/Regulatory Information
Not applicable.

Pre-Requisites

<table>

| **1. Work safely** | 1.1. Follow established *safety procedures* when conducting work  
1.2. Carry out pre-start systems and equipment checks in accordance with workplace procedures |
| **2. Implement workplace safety requirements** | 2.1. Identify *designated persons* for reporting queries and concerns about safety in the workplace  
2.2. Identify existing and potential *hazards* in the workplace, report them to designated persons and record them in accordance with workplace procedures  
2.3. Identify and implement workplace procedures and work instructions for controlling risks  
2.4. Report *emergency incidents* and injuries to designated persons |
| **3. Participate in OHS consultative processes** | 3.1. Contribute to workplace meetings, inspections or other consultative activities  
3.2. Raise OHS issues with designated persons in accordance with organisational procedures  
3.3. Take actions to eliminate workplace hazards or to reduce *risks* |
| **4. Follow safety procedures** | 4.1. Identify and report emergency incidents  
4.2. Follow organisational procedures for responding to emergency incidents |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- literacy skills to interpret safety signs, symbols and notices
- problem-solving skills to analyse options in an emergency situation.

### Required knowledge

- responsibilities of employers and employees under relevant health and safety legislation
- emergency procedures including procedures for fires and accidents
- commonly used hazard signs and safety symbols.
### Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Overview of assessment | Evidence of the following is essential:
|------------------------|-----------------------------------------------------------------------------------------------
|                        | • accurately following all relevant safety procedures                                         |
|                        | • identifying and reporting hazards to designated personnel                                    |
|                        | • knowledge of relevant health and safety legislation                                           |
|                        | • knowledge of relevant materials, equipment and work processes.                                |

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety procedures may include:

- completing required documentation
- local, state and federal legislation
- Materials Safety Data Sheets (MSDSs)
- National Health and Medical Research Council guidelines
- following OH&S guidelines relevant to workplace
- maintenance and use of cleaning apparatus in a work environment, such as:
  - disposing of spilled substances, dangerous products, ‘sharps’ and waste correctly
  - maintaining stocks of cleaning equipment (eg. disposable gloves, liquid repellent aprons, disinfectant)
  - sterilising and/or disposing of cleaning equipment
  - using appropriate cleaning equipment to clean spillages and breakages
  - wearing protective clothing, protective eye wear when in contact with body fluids or chemicals that may splash
  - using and storing toxic and hazardous materials correctly
  - keeping workplace clean and tidy
  - office practice manual
  - displaying health and safety brochures, magazines and other material
  - undergoing operator training when using new equipment or processes
- special guidelines in a medical setting:
  - RACGP Code of Practice for the Management of Health Information in General Practice
  - RACGP Entry Standards for General
## RANGE STATEMENT

### Designated persons may include:

- designated health and safety officers
- health and safety representatives
- supervisors
- managers
- team leaders
- other persons authorised or nominated by the enterprise or industry

### Hazards may include anything which is a source of:

- potential harm in terms of human injury or ill health
- damage to property
- damage to the environment
- potential harm in terms of human injury or ill health including:
  - toxic or hazardous materials
  - hazardous work processes
  - unsafe work practices
  - hazardous equipment
  - unstable personnel
- potential harm in a medical setting:
  - blood
  - breakage / spillage
  - drug hold-ups
  - needle sticks
  - medical emergencies (eg. Falls, bleeding, seizures, fainting, collapses, panic attack, psychosis)
  - spread of infection
- potential sources of infection:
  - breakages
  - contaminated waste
  - patients with colds, flu and other infectious diseases
  - sharps (eg. needles, scalpel blades)
  - spillage
  - used dressings, bandages and equipment
  - unsterilised/poorly sterilised equipment and

BSBOHS403B Identify hazards and assess OHS risks

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to identify hazards and to assess occupational health and safety (OHS) risks in the workplace. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals with supervisory responsibilities in managing OHS in the workplace who identify hazards and assess risks using developed processes and tools. The unit also introduces basic incident analysis as an important skill underlying incident investigation, which is addressed in greater complexity in BSBOHS508B Participate in the investigation of incidents. |

Licensing/Regulatory Information
Not applicable.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities across all levels of an organisation
- information management skills to evaluate OHS data
- interpersonal skills to establish rapport and to build networks with a range of internal and external stakeholders
- organisational and time management skills to sequence tasks and meet timelines
- research and data analysis skills to evaluate interactions between employees, their activities, equipment, environment and work systems
- technology skills to access internal and external OHS data.

### Required knowledge

- basic principles of incident causation and injury processes
- legislative requirements for:
  - consultation and communication
  - information and data collection
  - notification of incidents
  - record keeping
  - reporting of incidents
  - specific hazards
- organisational culture as it impacts on the workgroup
- organisational policies and procedures for managing OHS
- organisational work processes for managing OHS
- appropriate data collection methods for OHS issues
- concepts of risks, factors that affect risk and difference between a hazard and a risk
- internal and external sources for OHS information and data
- principles and practices of systematic approaches to managing OHS
- principles, tools and techniques to identify and control workplace hazards and to manage risks in the OHS context
- relevant state/territory and commonwealth OHS legislation, codes of practice and standards
- roles and responsibilities of personnel as specified in relevant OHS legislation
- sources of OHS data.
### Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- Evidence of the following is essential:
  - identification, analysis and evaluation of multiple workplace hazards using appropriate techniques and tools in a workplace
  - knowledge of relevant state/territory and commonwealth OHS legislation, codes of practice and standards.

**Context of and specific resources for assessment**

- Assessment must ensure:
  - access to an actual or simulated workplace
  - access to office equipment and resources
  - access to relevant legislation, standards and guidelines
  - access to relevant OHS documentation and records.

**Method of assessment**

- A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
  - analysis of responses to case studies and scenarios
  - demonstration of techniques used to identify, analyse and evaluate OHS hazards and risks
  - demonstration of the application of OHS legislation in conducting hazard identification and risk management activities
  - direct questioning combined with review of portfolios of evidence and third party reports of on-the-job performance by the candidate
  - oral or written questioning to assess knowledge of concepts of risks, factors that affect risk and difference between a hazard and a risk
  - review of techniques/tools used to identify hazards
  - evaluation of a risk assessment tools selected and used to identify key factors contributing to risk
  - review of risk prioritisation
  - review of hazard register.
| Guidance information for assessment | Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:  
• BSBOHS404B Contribute to the implementation of strategies to control OHS risk. |
Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Appropriate techniques may include: | • examination of relevant information and data  
• inspections  
• interviews  
• simulations  
• timeline of actions and events  
• use of accident models |
| --- | --- |
| **Incidents** may include: | • an event resulting in or having a potential for:  
• injury  
• ill health  
• damage  
• or loss |
| **Actions and events** may include: | • all actions and events that may have contributed to the occurrence or severity of the incident, including:  
• design decisions  
• systems  
• people  
• tools  
• equipment  
• materials  
• fixtures  
• time and nature of the injury |
| **Hazards** may include: | • sources or situations with a potential for harm in terms of:  
• injury  
• ill health  
• damage to property  
• damage to the environment  
• or a combination of the above |
| **Workplace sources of information and data** may | • audits  
• hazard, incident and investigation reports |
## RANGE STATEMENT

**include:**
- incident investigations
- legislation, standards, manufacturers’ manuals and specifications available at the workplace
- material safety data sheets (MSDSs) and registers
- minutes of meetings
- reports
- workplace inspections

**External sources of information and data may include:**
- employer groups
- industry bodies
- OHS professional bodies
- OHS specialists
- Australian Standards
- manufacturers’ manuals and specifications
- regulatory authorities (for other relevant legislation such as acts, regulations, codes of practice)
- unions
- websites, journals and newsletters

**Stakeholders may include:**
- community
- employees
- health and safety, and other employee representatives
- managers
- OHS committees
- supervisors

**Key personnel may include:**
- managers from other areas
- people involved in OHS decision making or who are impacted by decisions

**OHS specialists may include:**
- ergonomists
- health professionals
- injury management advisors
- occupational hygienists

**Techniques and tools may include:**
- body mapping
- hazard identification procedures based on checklists
- interviews
- MSDSs
- workplace processes such as ‘walk throughs’, surveys and inspections
RANGE STATEMENT

**Hazard identification procedures** may include:
- identifying employee concerns, such as through a hazard reporting system
- input of managers, OHS representatives, OHS committee and others through consultative processes
- job and work system analysis (JSA)
- reviews of:
  - hazard and incident reports
  - investigations
  - OHS records
  - plant and equipment maintenance records
  - registers of hazardous substances and dangerous goods

**Risk assessment tools** may include:
- checklists
- matrix nomograms
- codes of practice
- standards
- guidelines

**Hazard register** may include:
- a list of hazards
- location of hazards
- range of possible scenarios or circumstances under which hazards may cause injury or damage
- results of a risk analysis related to the hazards

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- consultation and negotiation skills to develop risk management plans and implement risk controls effectively
- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities across all levels of an organisation
- evaluation skills to analyse the effectiveness of own performance in implementing strategies chosen to control OHS risks
- information management skills to evaluate OHS data
- interpersonal skills to establish rapport and build networks with a range of internal and external stakeholders
- literacy skills to prepare reports for a range of target groups
- organisational and time management skills to sequence tasks and meet timelines
- research and data analysis skills to assess resources required to systematically manage OHS and to analyse relevant workplace information and data
- research and data analysis skills to evaluate interactions between employees, their activities, equipment, environment and work systems
- technology skills to access internal and external OHS data.

### Required knowledge

- appropriate data collection methods for OHS purposes
- characteristics, mode of action and measurement of major hazard types
- concepts of risks, factors that affect risk and difference between a hazard and a risk
- internal and external sources for OHS information and data
- legislative requirements for:
  - consultation and communication
  - information and data collection
  - notification of incidents
  - record keeping
  - reporting of incidents
  - specific hazards
- organisational culture as it impacts on the workgroup
- organisational policies and procedures for managing OHS
- organisational work processes and structure
- principles and practices of systematic approaches to managing OHS
- principles of incident causation and injury processes
- principles of the hierarchy of control
- principles, tools and techniques to identify and control workplace hazards and
### REQUIRED SKILLS AND KNOWLEDGE

- manage risks in the OHS context
- relevant state/territory and commonwealth OHS legislation, codes of practice and standards
- requirements for individual fitting, use, maintenance and storage of a range of PPE items
- roles and responsibilities of personnel as specified in relevant OHS legislation
- sources of OHS data
- standard industry controls for a range of hazards.
Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **Hazard register** may include: | • a list of hazards  
• location of hazards  
• range of possible scenarios or circumstances under which hazards may cause injury or damage  
• results of the risk analysis related to the hazards |
|---|---|
| **Hazards** may include: | • sources of potential harm in terms of human injury, ill health, damage to property, damage to the environment, or a combination of these, including:  
• biological  
• chemical  
• environment  
• mechanical and/or electrical  
• physical  
• psychosocial  
• radiological  
• nuclear |
| **Risks** may include: | • the chance of something occurring that will result in injury or damage measured in terms of consequences (injury or damage) and likelihood of the consequence |
| **Principles of the hierarchy of control** may include: | • eliminating hazards  
• and where this is not practicable, minimising risk by:  
• substitution  
• isolating hazard from personnel  
• using engineering controls  
• using administrative controls (such as procedures, training)  
• using PPE |
# RANGE STATEMENT

**Stakeholders** may include:
- community
- employees
- health and safety, and other employee representatives
- managers
- OHS committees
- supervisors

**Key personnel** may include:
- managers from other areas
- people involved in OHS decision making or who are impacted by decisions

**OHS specialists** may include:
- ergonomists
- health professionals
- injury management advisors
- occupational hygienists

**Technical advisors** may include:
- engineers (design, acoustic, safety, mechanical, civil)
- legal practitioners
- maintenance and tradespeople
- workplace trainers and assessors

**Factors that may limit effectiveness of controls** may include:
- cultural diversity
- language
- literacy and numeracy
- shift work and rostering arrangements
- training required
- workplace culture related to OHS, including commitment by managers and supervisors, and compliance with procedures and training
- workplace organisational structures (for example geographic, hierarchical)

**Actions required to achieve change** may include:
- development of new procedures or revision of existing procedures
- purchase of equipment or modification of equipment
- training

**Personal protective equipment** may include:
- equipment designed to be worn by a person to provide protection from hazards such as:
  - clothing and footwear
  - face and eye protection
  - hand protection
  - head protection
**RANGE STATEMENT**

<table>

BSBOHS504B Apply principles of OHS risk management

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to use a generic approach to identify hazards, and to assess and control occupational health and safety (OHS) risks. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals with managerial responsibility for providing a systematic approach to hazard identification, risk assessment and risk control, with the emphasis on elimination or, where this is not possible, minimisation of risk. It also includes conceptual models for understanding the nature of hazards. The unit provides a basis for the hazard specific competencies in BSBOHS505C Manage hazards in the work environment, and BSBOHS506B Monitor and facilitate the management of hazards associated with plant. This unit is underpinned by BSBOHS403B Identify hazards and assess OHS risks, and BSBOHS404B Contribute to the implementation of strategies to control OHS risk. A more advanced approach to risk assessment, which identifies the separate elements of risk analysis and risk evaluation, is provided in BSBOHS603B Analyse and evaluate OHS risk. |

Licensing/Regulatory Information

Not applicable.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Access sources of information and data to identify hazards | 1.1. Access *external sources of information and data* to assist in identifying *hazards*  
1.2. Review *workplace sources of information and data* to access and assist in identification of hazards  
1.3. Seek input from *stakeholders, key personnel* and *OHS specialists*  
1.4. Conduct formal and informal research to ensure currency of information with *workplace issues* |
| 2. Analyse the work environment to identify hazards | 2.1. Define, document and communicate *occasions when action for hazard identification is required*  
2.2. Source *tools* to assist in analysing potential hazards  
2.3. Examine *task demands* and *task environment* for impact on the person to identify situations with a potential for injury or ill health  
2.4. Examine workforce structure, organisation of work and work relationships to identify situations with a potential for injury or ill health  
2.5. Examine work environment for *agents* with a potential for injury or ill health  
2.6. Seek input from stakeholders to clarify and confirm issues |
| 3. Assess risk associated with hazards | 3.1. Identify *factors contributing to risk*  
3.2. Identify current risk controls for each hazard  
3.3. Evaluate adequacy of current controls (if any), taking account of *relevant standards* and knowledge  
3.4. Identify discrepancies between current controls and required quality of control  
3.5. *Prioritise* hazards requiring further control action  
3.6. Document method and outcomes of *risk assessment* |
| 4. Control risk associated with hazards | 4.1. Develop a range of control options in consultation with stakeholders, taking account of the outcomes of the risk assessment and the *hierarchy of control*  
4.2. Identify potential *factors impacting on the effectiveness of controls*  
4.3. Seek advice from OHS specialists and key personnel if required  
4.4. Identify and seek appropriate authority and relevant resources to initiate and maintain controls  
4.5. Identify and document actions required to achieve |
<table>

Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

### Required skills

- **analytical skills to:**
  - identify areas for OHS risk improvement
  - analyse relevant workplace information and data
  - contribute to the assessment of the resources needed to systematically manage OHS and, where appropriate, access resources
  - attention to detail when making observations and recording outcomes

- **research skills to access relevant OHS information and data**

- **numeracy skills to carry out simple arithmetical calculations (e.g. % change), and to produce graphs of workplace information and data to identify trends and recognise limitations**

- **communication skills to:**
  - conduct effective formal and informal meetings and to communicate effectively with personnel at all levels of the organisation, OHS specialists and, as required, emergency services personnel
  - prepare reports for a range of target groups including OHS committee, OHS representatives, managers and supervisors
  - use language and literacy skills appropriate to the workgroup and the task
  - consultation and negotiation skills to develop plans and to implement and monitor designated actions
  - project management skills to achieve change in OHS matters
  - organisational skills to manage own tasks within a timeframe
  - information technology skills to access and enter internal and external information and data on OHS and to use a range of communication media

### Required knowledge

- organisational behaviour and culture as it impacts on OHS and on change
- basic physiology relevant to understanding mode of action of physical, biological and chemical agents on the body and how they produce harm
- basic principles of incident causation and injury processes
- characteristics, mode of action and units of measurement of major hazard types
- concept of common law duty of care
- difference between hazard and risk
- ethics related to professional practice
- how the characteristics and composition of the workforce impact on risk and the systematic approach to managing OHS, for example:
  - communication skills
### REQUIRED SKILLS AND KNOWLEDGE

- cultural background/workplace diversity
- gender
- labour market changes
- language, literacy and numeracy
- structure and organisation of workforce e.g. part-time, casual and contract workers, shift rosters, geographical location
- workers with specific needs
- internal and external sources of OHS information and data
- language, literacy and cultural profile of the workgroup
- legislative requirements for OHS information and data, and consultation
- limitations of generic hazard and risk checklists, and risk ranking processes
- methods of providing evidence of compliance with OHS legislation
- nature of workplace processes (including work flow, planning and control) and hazards relevant to the particular workplace
- organisational culture as it impacts on the workgroup
- organisational OHS policies and procedures
- other function areas that impact on the management of OHS
- principles and practices of systematic approaches to managing OHS
- professional liability in relation to providing advice
- requirements under hazard specific OHS legislation and codes of practice
- risk as a measure of uncertainty and the factors that affect risk
- roles and responsibilities under OHS legislation of employees, including supervisors and contractors
- standard industry controls for a range of hazards
- state/territory and commonwealth OHS legislation (acts, regulations, codes of practice, associated standards and guidance material) including prescriptive and performance approaches and links to other relevant legislation such as industrial relations, equal employment opportunity, workers compensation, rehabilitation
- structure and forms of legislation including regulations, codes of practice, associated standards and guidance material
- types of hazard identification tools, including job safety analysis (JSA)
Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | Evidence of the following is essential:  
- products used in:  
  - the application of a risk management approach to identifying hazards  
  - assessing OHS risk  
  - controlling OHS risk  
  - how these products were developed and implemented  
  - knowledge of relevant OHS legislation (acts, regulations, codes of practice, associated standards and guidance material. |
| Context of and specific resources for assessment | Assessment must ensure:  
- access to workplace or simulated workplace  
- access to workplace documentation  
- access to office equipment and resources  
- access to relevant legislation, standards and guidelines relating to risks found in the workplace. |
| Method of assessment | A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:  
- analysis of responses to case studies and scenarios  
- assessment of written reports on the effectiveness of the hazard identification, risk assessment, control and management actions taken  
- demonstration of techniques used to identify hazards, assess associated risks, control monitor and evaluate risks  
- direct questioning combined with review of portfolios of evidence and third party reports of on-the-job performance by the candidate  
- observation of performance in role plays  
- observation of presentations  
- oral or written questioning to assess knowledge of |
## EVIDENCE GUIDE

| the OHS information system | • review of action plans  
|                           | • written reports on hazard identification and risk management activities, matrices and measurements undertaken. |

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**External sources of information and data** may include:

- databases with national and state injury data such as National Industrial Chemicals Notification and Assessment Scheme (NICNAS)
- employer groups
- industry bodies
- journals and websites
- legislation, codes of practice and standards
- manufacturers’ manual and specifications
- OHS regulatory authorities
- OHS specialists
- unions.

**Hazards** may include:

- source or a situation with a potential for harm in terms of human injury or ill health
- damage to property
- damage to the environment
- or a combination of these.

**Workplace sources of information and data** may include:

- audits
- employees
- hazard, incident and investigation reports
- manufacturers’ manuals and specifications
- material safety data sheets (MSDSs)
- minutes of meetings
- OHS representatives
- reports
- workplace inspections.

**Stakeholders** include:

- employees
- health and safety, and other employee representatives
- managers
- OHS committees
- supervisors.
<table>
<thead>
<tr>
<th>RANGE STATEMENT</th>
</tr>
</thead>
</table>
| **Key personnel** may include: | • managers from other areas  
• people involved in OHS decision making or who are affected by OHS decisions |
| **OHS specialists** may include: | • engineers  
• ergonomists  
• occupational hygienists  
• organisational psychologists  
• toxicologists  
• workplace injury and return to work advisors. |
| **Workplace issues** may include: | • changes in equipment, including technology  
• changes in social, political or community environment  
• changes in work organisation, including:  
  • contracting  
  • hire arrangements  
  • casualisation  
  • supervisory arrangements  
  • outworkers  
  • rosters  
  • shift work  
  • work hours  
  • work relations  
• changes in work practice  
• changes to legislation and standards  
• new knowledge on hazards  
• outcomes of court rulings. |
| **Occasions when action for hazard identification is required** may include: | • at design or pre-purchase of buildings, equipment and materials  
• at regular intervals during normal operations  
• before changes are made to workplace, equipment, work processes or work arrangements  
• commissioning or pre-implementation of new processes or practices  
• following an incident report  
• new forms of work and organisation of work  
• planning major tasks or activities, such as equipment shut-downs  
• prior to disposal of equipment, buildings or materials |
<table>
<thead>
<tr>
<th>RANGE STATEMENT</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>when new knowledge becomes available.</td>
<td></td>
</tr>
</tbody>
</table>

**Tools** may include:
- audits
- cause and effect diagrams
- JSA
- surveys.

**Task demands** may include:
- arousal and alertness
- machine pacing or time pressure to complete a task
- physical or physiological demands
- repetitive nature of task
- required precision or accuracy.

**Task environment** may include:
- air quality
- lighting
- noise
- thermal

**Agents** may be:
- biological
- chemical
- ergonomic
- nuclear
- physical
- psychosocial
- radiological.

**Factors contributing to risk** may include those associated with:
- equipment
- frequency and duration of exposure
- individual/operator
- number of people exposed/involved
- task
- work environment
- work organisation.

**Relevant standards** may include:
- Australian and industry standards
- codes of practice
- current knowledge related to the specific hazard and controls
- current practice in the industry
- legislation.

**Prioritising** hazards requiring further control action may include:
- other recognised processes
- specially designed tools
- standard ranking tools.

**Risk assessment** includes
- factors contributing to risk
### RANGE STATEMENT

**identification of:**
- current controls and their adequacy
- discrepancy between current control and required standard
- prioritisation or ranking of a number of risks, where appropriate.

**Hierarchy of control** may include:
- eliminating hazards
- and where this is not practicable, minimising risk by:
  - substitution
  - isolating the hazard from personnel
  - using engineering controls
  - using administrative controls (e.g. procedures, training)
  - using personal protective equipment (PPE).

**Factors impacting on the effectiveness of controls** may include:
- cultural diversity
- language
- literacy and numeracy levels
- shift work and rostering arrangements
- training required
- workplace culture related to OHS including commitment by managers and supervisors and compliance with procedures and training
- workplace organisational structures (size of organisation, geographic, hierarchical).

**Risk register** may include:
- list of hazards, their location and people exposed
- possible control measures and dates for implementation
- range of possible scenarios or circumstances under which the hazards may cause injury or damage
- results of the risk analysis related to the hazards.

BSBOHS603B Analyse and evaluate OHS risk

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to conduct a formal risk assessment comprising analysis and evaluation of occupational health and safety (OHS) risk. It has been designed to be consistent with the Australian Standard, AS/NZS 4360: 2004 Risk management.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit addresses the knowledge, processes and techniques necessary to analyse and evaluate OHS risk as part of the risk management process.

OHS risk analysis involves defining the range of consequences, assessing the effectiveness of existing controls and deciding the likelihood of each consequence, and combining these in some way to obtain a level of risk. Risk evaluation is the comparison of pre established criteria for tolerance and the subsequent ranking of risks requiring control.

The situation to be analysed and evaluated may involve a single task or a process comprising a series of tasks.

Application of this unit must be consistent with the pertinent sections of the Australian Standard, AS/NZS 4360: 2004 Risk management. |
Licensing/Regulatory Information

| 1. Define parameters of the OHS risk study | 1.1. Access information and data on the hazard identification process and the context of the OHS risk  
1.2. Establish the scope of the OHS risk study  
1.3. Divide the activity to be analysed into logical and manageable elements  
1.4. Define and document the method of OHS risk analysis |
| 2. Analyse the OHS risk of a task or process | 2.1. Clarify the nature of the hazard including the process of injury or damage  
2.2. Identify the need for further information using monitoring activities  
2.3. Communicate information and data about the OHS risk to stakeholders  
2.4. Consult and involve a range of stakeholders in the analysis  
2.5. Identify and evaluate existing controls and their effectiveness, taking account of relevant standards  
2.6. Determine specific scenarios to be considered  
2.7. Determine the range of possible consequence/s from the various scenarios  
2.8. Determine the likelihood of the occurrence of the consequence/s  
2.9. Undertake steps to ensure comprehensive analysis of information, data and techniques  
2.10. Rank OHS risks in order of level of risk  
2.11. Consult OHS specialist advisors if required |
| 3. Evaluate OHS risk of a task or process | 3.1. Access and reference relevant legislation, codes of practice and standards  
3.2. Consult stakeholders in determining criteria for OHS risk evaluation  
3.3. Compare outcomes of OHS risk analysis with criteria to identify risks requiring further risk control and risks deemed as low as reasonably achievable  
3.4. Document process and outcomes of analysis and evaluation in a manner that is accessible and facilitates understanding by stakeholders  
3.5. Document outcomes to include explanation of the legal ramifications of decision making based on risk prioritisation |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- **analytical skills** to:
  - identify areas for improvement with OHS incidents
  - analyse relevant workplace information and data, and to make observations of workplace tasks and interactions between people, their activities, equipment, environment and systems
  - contribute to the assessment of resources needed to systematically manage OHS and, where appropriate, access resources
  - contribute to the strategic OHS performance of the organisation
  - attention to detail when making observations and recording outcomes
  - numeracy skills to carry out simple arithmetical calculations (e.g. % change) and to produce graphs of workplace information and data, to identify trends and recognise limitations of information and data
  - research skills to access relevant OHS information and data to interpret information and data, to identify areas for improvement
  - communication skills to:
    - conduct effective formal and informal meetings and to communicate effectively with personnel at all levels of the organisation, OHS specialists and, as required, emergency services personnel
    - write policies, procedures and plans
    - use language and literacy skills appropriate to the workgroup and the task
    - data gathering skills such as brainstorming, polling, interviewing
    - consultation and negotiation skills to develop plans, and to implement and monitor designated actions
    - project management skills to achieve continuous improvement and action processes in OHS matters
    - organisational skills to manage own tasks within a timeframe
    - information technology skills to access and enter internal and external information and data on OHS and to use a range of media.

### Required knowledge

- benefits, limitations and use of a range of communication strategies and tools appropriate to the workplace
- difference between hazard and risk
- ethics related to professional practice
- formal and informal communication and consultation processes, and key personnel related to communication
- how the characteristics and composition of the workforce impact on risk and the

### REQUIRED SKILLS AND KNOWLEDGE

- state/territory and commonwealth OHS legislation (acts, regulations, codes of practice, associated standards and guidance material) including prescriptive and performance approaches and links to other relevant legislation such as industrial relations, equal employment opportunity, workers compensation, rehabilitation
- structure and forms of legislation including regulations, codes of practice, associated standards and guidance material
- toxicology of hazardous materials and potential health effects in the workplace
- types of hazard identification tools including job system analysis (JSA).
### Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Evidence of the following is essential:</th>
</tr>
</thead>
</table>
| **Critical aspects for assessment and evidence required to demonstrate competency in this unit** | - OHS risk analysis and evaluation of a number of tasks as part of an OHS risk management process, either in an actual workplace, simulation exercise or scenario  
- products developed for management of these OHS processes  
- how these products were developed  
- use of the products  
- knowledge of pertinent sections of relevant Australian and other standards. |

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th>Assessment must ensure:</th>
</tr>
</thead>
</table>
| **Method of assessment** | access to actual workplace/s and stakeholder groups  
access to office equipment and resources  
access to relevant legislation, standards and guidelines  
access to workplace documentation  
access to reports from other parties consulted in conducting risk analysis and evaluation. |

<table>
<thead>
<tr>
<th><strong>Method of assessment</strong></th>
<th>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</th>
</tr>
</thead>
</table>
|                        | - analysis of responses to case studies and scenarios  
- demonstration of techniques used to identify, analyse, evaluate, control and monitor risks  
- direct questioning combined with review of portfolios of evidence and third party reports of on-the-job performance by the candidate  
- observation of performance in role plays  
- observation of presentations  
- oral or written questioning  
- review information and data communicated to stakeholders about the OHS risk |
| EVIDENCE GUIDE                                      | • evaluation of ranking of OHS risks  
|                                                   | • assessment of comparison of outcomes of OHS risk analysis with criteria 
|                                                   | • review of documentation of process and outcomes of analysis and evaluation of OHS risk of a task or process. |
| Guidance information for assessment               | Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example: 
|                                                   | • other OHS units |
## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>
<tr>
<th><strong>Hazards</strong> may include:</th>
<th>• source or situation with a potential for harm in terms of human injury or ill health, damage to property or the environment, or a combination of these</th>
</tr>
</thead>
</table>
| **Context** may include: | • activities  
  • controls currently in place  
  • internal and external factors that impact on OHS risk  
  • level of documentation required  
  • stakeholders  
  • workplace |
| **Scope of OHS risk study** may include: | • activities, job role, area, location to be analysed  
  • who will use the output and for what purpose  
  • why it is being done |
| **Monitoring activities** may include: | • air monitoring  
  • medical monitoring  
  • noise monitoring |
| **Information and data about the OHS risk** may include: | • mode/s of action of the hazard causing injury or damage  
  • outcomes of OHS risk analysis |
| **Stakeholders** may include: | • customers/users of the product or process  
  • employees and their representatives  
  • managers, including boards of management  
  • the community |
| **Controls** may include: | • actions implementing risk management decisions  
  • monitoring  
  • programs or policies  
  • re-evaluation and compliance with decisions |
| **Relevant standards** may include: | • Australian and industry standards  
  • codes of practice and guidance material |

### Comprehensive analysis of information and data may include:
- engineering modelling
- experience with enterprise, own/other industries
- past records
- published literature
- research within exposed groups
- specialist and expert groups

### Comprehensive analysis of techniques may include:
- broad consultation
- multidisciplinary focus groups
- processes and techniques used by specialists, such as modelling, fault tree and Hazard and Operability Studies (HazOps)
- questionnaires
- structured interviews

### OHS specialist advisors may include:
- engineers
- ergonomists
- occupational hygienists
- safety professionals
- occupational health practitioners
- psychologists
- people skilled in applying advanced risk analysis processes, such as modelling, fault tree, HazOps and Management Oversight and Risk Tree (MORT)
- toxicologists

### Documentation of risk analysis may include:
- description of methods used
- groups involved/consulted
- description of consequences and their likelihood
- information and data used in estimates
- assumptions
- effectiveness of existing controls
- uncertainty in analysis
- factors affecting level of risk
- further information/data and/or investigation required
### RANGE STATEMENT

**Documentation of risk evaluation** may include:

- criteria determined
- descriptions of method used to determine the criteria
- groups consulted/involved
- list of risks and schedule for action
- statement of the legal ramifications of decision making based on risk prioritisation

BSBPMG404A Apply quality management techniques

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to enhance project outcomes through contributing to quality planning, applying quality policies and procedures and contributing to continuous improvement within projects. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

© Commonwealth of Australia, 2017
Artibus Innovation
Application of the Unit

This unit applies to a project team member working under the direction of a project manager with other project team members. The individual may be operating within an organisation or as a consultant. The skills should be applied in the context of multiple complex projects, with the individual operating as part of a specialist project management team.

In the context of this unit a complex project is defined as a project which involves:

- the need for a comprehensive and multi faceted project plan
- the need for a formal internal or external communications strategy
- a dedicated and diverse project budget
- multiple administrative components
- multiple operational components
- a wide range of stakeholders
- a project operations team.

The functions performed by a worker managing a straightforward project or a section of a larger project where project management is not the main focus of the job role are covered by BSBPMG510A Manage projects.

Licensing/Regulatory Information

Not applicable.

# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Contribute to quality planning | 1.1. Contribute to determining quality requirements of project stakeholders  
1.2. Contribute to establishing quantifiable quality criteria for project outcomes and objectives  
1.3. Source *information* to locate and interpret quality policy and procedures  
1.4. Contribute to the development of quality requirements in the project plan and processes |
| 2. Apply quality policies and procedures | 2.1. Undertake work under *delegated authority* to implement *quality assurance* within the project in accordance with agreed quality standards and guidelines  
2.2. Maintain records and documentation in accordance with set procedures to facilitate *quality control* and to provide an audit trail  
2.3. Document and evaluate results of project activities and product performance to determine compliance with agreed quality standards  
2.4. Report shortfalls in quality outcomes to *others* to enable appropriate action to be initiated |
| 3. Contribute to continuous improvement process | 3.1. Participate in the ongoing review of project outcomes to determine the effectiveness of quality management activities  
3.2. Report quality management issues and responses to others for application in future projects |
# Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

## Required skills

- literacy skills to work with quality documents and project records, and to produce records for quality control and auditing purposes
- organisational skills and attention to detail to monitor compliance with agreed standards
- teamwork and communication skills to communicate quality issues.

## Required knowledge

- quality auditing processes and requirements
- quality standards and their place in the project life cycle.
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:
- application of quality management and continuous improvement techniques in relation to multiple complex projects
- knowledge of quality auditing processes and requirements.

#### Context of and specific resources for assessment

Assessment must ensure:
- access to examples of project management documentation used for quality control purposes
- access to project team records.

#### Method of assessment

A range of assessment methods should be used to assess practical skill and knowledge. The following assessment methods are appropriate for this unit:
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge of strategies for managing project quality and their application to different situations
- analysis of responses to case studies and scenarios which present issues and problems in project quality management
- review of records documented and maintained
- evaluation of documented results of project activities and product performance
- evaluation of reports developed about shortfalls in quality outcomes.

#### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:
- other units from the Certificate IV in Project Management.
## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Information may include: | • designated standard operating procedures and regulations  
|                         | • organisation and project standards  
|                         | • organisational quality management policy and guidelines as applied to specific requirements of a project  
|                         | • project quality guidelines and instructions  |

| Delegated authority means: | • carried out under limited guidance and supervision  
|                           | • subject to frequent change in a multi-disciplinary environment  
|                           | • within agreed authorisation and limits  
|                           | • within established organisational framework, procedures and routines  |

| Quality assurance may include: | • project finalisation process to capture lessons learned and to enable continuous improvement  
|                                | • systematic review of the project management process to ensure compliance with organisational policy and guidelines  |

| Quality control may include: | • inspections and audits in compliance with guidelines  
|                              | • monitoring conformance with the specification  
|                              | • recommending ways to eliminate causes of unsatisfactory performance of products or processes  
|                              | • regular inspection by the individual or the monitoring of inspections by internal or external agents  
|                              | • reporting of variances  |

| Others may include: | • higher project authority  
|                    | • project manager  
|                    | • project specialists or other personnel  
|                    | • team members  |

| 1. Assist with risk analysis and planning | 1.1. Contribute to identifying and prioritising potential risks throughout the project life cycle  
1.2. Provide input, within delegated authority, to develop risk management strategies and risk management plans within established guidelines  
1.3. Establish *risk analysis methods, techniques and tools* to assist in the analysis of risks  
1.4. Ensure reporting mechanisms for risks are planned for and agreed to |
| 2. Conduct risk control activities | 2.1. Undertake control activities in accordance with agreed project and risk management plans to achieve project objectives  
2.2. Measure progress and act on perceived, potential or actual risks within authority or report to others for response  
2.3. Contribute to the implementation of agreed risk approaches and the amendment of plans to reflect the changing environment  
2.4. Identify and report *opportunities* for action in the same way as risks |
| 3. Contribute to assessing risk management outcomes | 3.1. Contribute to the ongoing *review* of project outcomes to determine the effectiveness of risk management activities by accessing project *records* and other available information  
3.2. Report risk management issues and responses to others for lessons learned or application in future projects |
# Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

### Required skills

- planning, organising and analytical skills to assist with risk analysis, risk management planning and review of risk management outcomes
- communication and teamwork skills to contribute to collective processes for risk management
- initiative and enterprise to think laterally about risks and how they might occur.

### Required knowledge

- risk management framework and risk management processes.
## Evidence Guide

**Range Statement**

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Delegated authority means: | • subject to frequent change in a multi-disciplinary environment  
| | • under limited guidance and supervision  
| | • within agreed authorisation and limits  
| | • within established organisational framework, procedures and routines  
| **Risk analysis methods, techniques and tools may include:** | • using personal experience and/or subject matter experts  
| | • assisting in qualitative and/or quantitative risk analysis, such as schedule simulation, decision analysis, contingency planning and alternative strategy development  
| | • using specialist risk analysis tool/s to assist in the decision making process  
| **Others may include:** | • higher project authorities  
| | • project manager  
| | • project specialists or personnel  
| | • team members  
| **Opportunities may include:** | • better means of achieving a result  
| | • changes in the project or broader environment that offer scope for rescheduling activities to better effect  
| | • efficiencies or methods to work more effectively, such as ways of shortening an activity  
| | • initial project activities that reveal entirely different sets of priorities for example, product development, research and policy development  
| | • responses to changing commercial/competitive conditions  
| **Reviews may include evaluations of:** | • agreed major milestones, for example phases and sub-contracts  
| | • change of key personnel  
| | • delivery of major deliverables  

**RANGE STATEMENT**

- finalisation of project and other agreed milestones

*Records* may include:

- lists of potential risk events (risk register/log)
- project and/or organisation files and records
- risk analysis and reappraisal
- risk diaries, incident logs, occurrence reports and other such documentation
- risk management lessons learned
- risk management plan

BSBPMG504A Manage project costs

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to identify, analyse and refine project costs to produce a budget, and to use this budget as the principal mechanism to control project cost. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |
Application of the Unit

This unit applies to an individual who is clearly and solely responsible for the management and leadership of a complex project, either as an employee of an organisation or an external consultant.

In the context of this unit a complex project is defined as a project which involves:
- the need for a comprehensive and multi-faceted project plan
- the need for a formal internal or external communications strategy
- a dedicated and diverse project budget
- multiple administrative components
- multiple operational components
- a wide range of stakeholders
- a project operations team.

The functions performed by a program manager to manage costs within multiple projects are addressed in BSBPMG604A Direct cost management of a project program.

Licensing/Regulatory Information

</tr>
</thead>
</table>
| 1. Determine project costs | 1.1. Determine resource requirements for individual tasks, with input from stakeholders and guidance of others  
1.2. Estimate **project costs** to enable budgets to be developed and implement agreed cost management processes  
1.3. Develop and implement a cost management plan, within **delegated authority**, to ensure clarity of understanding and ongoing management of project finances |
| 2. Monitor and control project costs | 2.1. Implement agreed **financial management processes and procedures** to monitor actual expenditure and to control costs  
2.2. Select and use cost analysis methods and tools to identify cost variations, evaluate options and recommend actions to a higher project authority  
2.3. Implement, monitor and modify agreed actions to maintain financial and overall project objectives throughout the project lifecycle |
| 3. Conduct financial completion activities | 3.1. Conduct appropriate activities to signify financial completion  
3.2. Review project outcomes using available **records** and information to determine the effectiveness of cost management processes and procedures  
3.3. Review cost management issues and identify improvements |
Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- numeracy and budgeting skills to monitor expenditure and manage costs
- technology skills to use software for recording expenditure and reporting on finances
- analytical skills to evaluate processes and recommend improvements.

**Required knowledge**

- budgeting processes, tools and techniques
- methods and tools for costing and cost analysis.
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **Others** may include: | • relevant project authority  
| | • program manager  
| | • project specialists or other personnel  
| | • team members  
| **Project costs** are estimated to a level of accuracy available considering: | • availability of information at the time  
| | • contingencies to allow for identified risks and uncertainty  
| | • organisational requirements, for example overhead and profit margin  
| | • stage of the project life cycle  
| **Delegated authority** means that activities will: | • be conducted routinely or as changing circumstances dictate  
| | • be done independently within broad guidance or by taking the lead of a team  
| | • involve consultation with other project members, teams and internal stakeholders  
| | • involve the selection, use and supervision of appropriate time management methods, tools and techniques  
| | • take into account internal organisational change and external environmental change  
| **Financial management processes and procedures** may include: | • approval processes  
| | • communication and reporting processes  
| | • financial authorisations/delegations  
| | • invoice procedures  
| **Reviewing** may include evaluations of: | • agreed major milestones, for example phases and sub-contracts  
| | • change of key personnel  
| | • delivery of major deliverables  
| | • finalisation of project and other agreed milestones  
| **Records** may include: | • budgets, commitment and expenditure  
| | • cost management lessons learned

BSBPMG505A Manage project quality

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor                           | This unit describes the performance outcomes, skills and knowledge required to manage quality within projects. It covers determining quality requirements, implementing quality assurance processes, and using review and evaluation to make quality improvements in current and future projects.
|                                           | No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit                   | This unit applies to an individual who is clearly and solely responsible for the management and leadership of a complex project, either as an employee of an organisation or an external consultant.
|                                           | In the context of this unit a complex project is defined as a project which involves:
|                                           | • the need for a comprehensive and multi faceted project plan
|                                           | • the need for a formal internal or external communications strategy
|                                           | • a dedicated and diverse project budget
|                                           | • multiple administrative components
|                                           | • multiple operational components
|                                           | • a wide range of stakeholders
|                                           | • a project operations team.
|                                           | The functions performed by a program manager to manage quality within multiple projects are addressed in BSBPMG605A Direct quality management of a project program. |

Employability Skills Information

| Employability skills | This unit contains employability skills. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Determine quality requirements | 1.1. Determine *quality objectives*, standards and levels, with input from stakeholders and guidance of a higher project authority, to establish the basis for quality outcomes and a *quality management plan*
| | 1.2. Select and use established *quality management methods, techniques and tools* to determine preferred mix of quality, capability, cost and time
| | 1.3. Identify quality criteria, obtain agreement from a higher project authority and communicate to stakeholders, to ensure clarity of understanding and achievement of quality and overall project objectives
| | 1.4. Include agreed quality requirements in the project plan and implement as basis for performance measurement |
| 2. Implement quality assurance processes | 2.1. Measure and document results of project activities and product performance throughout the project life cycle to determine compliance with agreed quality standards
| | 2.2. Identify causes of unsatisfactory results, in consultation with client, and recommend appropriate actions to a higher project authority to enable continuous improvement in quality outcomes
| | 2.3. Conduct inspections of quality processes and *quality control* results to determine compliance of quality standards to overall quality objectives
| | 2.4. Maintain a quality management system to enable effective recording and communication of quality issues and outcomes to a higher project authority and stakeholders |
| 3. Implement project quality improvements | 3.1. Review processes and implement agreed changes continually throughout the project life cycle to ensure continuous quality improvement
| | 3.2. Review project outcomes against performance criteria to determine the effectiveness of quality management processes and procedures
| | 3.3. Identify and document lessons learned and recommended *improvements*, and pass on to higher project authority for application in future projects |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills
- literacy skills to develop quality objectives and criteria
- communication and leadership skills to motivate staff, convey expectations and ensure outcomes are met
- analytical skills to monitor achievement of project outcomes against quality criteria
- coaching and mentoring skills to boost performance.

### Required knowledge
- quality management theory, techniques, tools and methodologies
- roles and responsibilities in project management
- methods for managing and improving performance
- relevant legislation codes and national standards:
  - award and enterprise agreements and industrial instruments
  - industry codes of practice
  - legislation from all levels of government that affects business operation, especially in regard to occupational health and safety and environmental issues, equal opportunity, industrial relations and anti-discrimination.
# Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- demonstrated evidence of successfully managing project staff so that quality outcomes were achieved on multiple complex projects
- knowledge of a range of quality management tools, techniques and methodologies.

## Context of and specific resources for assessment

Assessment must ensure:

- access to project documentation which includes quality criteria and evidence of quality monitoring and improvement practices
- consideration of feedback from project stakeholders regarding project quality management.

## Method of assessment

This unit applies to an individual who is clearly and solely responsible for the management and leadership of a complex project, either as an employee of an organisation or an external consultant.

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge of strategies for managing project quality and their application to different situations
- analysis of candidate responses in addressing case studies and scenarios which present project quality management issues and problems
- review of project plan quality requirements
- review of implementation of agreed changes
- evaluation of review of project outcomes against performance criteria.

## Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Diploma of Project Management.
## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Quality objectives may include: | • negotiated trade-offs between cost, schedule and performance  
|                           | • requirements from a higher project authority  
|                           | • requirements from the client and other stakeholders  
|                           | • those quality aspects which may impact on customer satisfaction  |
| Quality management plan may include: | • authorisations and responsibilities for quality control  
|                           | • continuous improvement  
|                           | • established processes  
|                           | • quality assurance  |
| Quality management methods, techniques and tools may include: | • benchmarking  
|                           | • brainstorming  
|                           | • charting processes  
|                           | • control charts  
|                           | • defining control  
|                           | • flowcharts  
|                           | • group work activities  
|                           | • histograms  
|                           | • pareto charts  
|                           | • processes that limit and/or indicate variation  
|                           | • ranking candidates  
|                           | • run charts  
|                           | • scattergrams  
|                           | • undertaking benefit/cost analysis  |
| Quality control may include: | • monitoring conformance with specifications  
|                           | • monitoring of regular inspections by internal or external agents  
|                           | • recommending ways to eliminate causes of unsatisfactory performance of products or processes  |
**RANGE STATEMENT**

**Improvements** may include:
- formal practices, such as total quality management or continuous improvement
- improvement by less formal processes that enhance both the product quality and processes of the project, for example client surveys to determine client satisfaction with project team performance

BSBPMG507A Manage project communications

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to link people, ideas and information at all stages in the project life cycle. Project communications management ensures the timely and appropriate generation, collection, dissemination, storage and disposal of project information through formal structures and processes. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |
## Application of the Unit

| Application of the unit | This unit applies to an individual who is clearly and solely responsible for the management and leadership of a complex project, either as an employee of an organisation or an external consultant. In the context of this unit a complex project is defined as a project which involves:  
- the need for a comprehensive and multi faceted project plan  
- the need for a formal internal or external communications strategy  
- a dedicated and diverse project budget  
- multiple administrative components  
- multiple operational components  
- a wide range of stakeholders  
- a project operations team. The functions performed by a program manager to manage communications within multiple projects are addressed in BSBPMG607A Direct communications management of a project program. |

| 1. Plan communications processes | 1.1. Identify, document and analyse information requirements, with input from stakeholders and guidance from a higher project authority, as the basis for communications planning  
1.2. Develop, within delegated authority, an agreed communications management plan to ensure clarity of understanding and achievement of project objectives throughout the project life cycle  
1.3. Establish and maintain designated project management information system (PMIS) to ensure the quality, validity, timeliness and integrity of information and communication |
| 2. Manage project information | 2.1. Manage the generation, gathering, storage, retrieval, analysis and dissemination of information by project staff and stakeholders within established systems and procedures to aid decision making processes throughout the project life cycle  
2.2. Implement, modify, monitor and control designated information validation processes to optimise quality and accuracy of data  
2.3. Implement and maintain agreed communication networks between project staff, client and other stakeholders to ensure effective communications at appropriate levels throughout the project life cycle  
2.4. Identify communication and information management system problems and report them to a higher project authority |
| 3. Assess communications management outcomes | 3.1. Conduct finalisation activities to ensure agreed ownership of, and responsibility for, information collected  
3.2. Review project outcomes to determine the effectiveness of management information and communications processes and procedures  
3.3. Identify and document lessons learned and recommended improvements, and pass on to higher project authority for application in future projects |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- literacy skills to write reports and communicate key issues
- technology skills to facilitate effective communication
- organisational skills to manage information
- analytical skills to review project outcomes.

### Required knowledge

- project life cycle and the place of communications within it
- project management information systems and their various applications.
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Delegated authority** means that activities may:

- be conducted routinely or as changing circumstances dictate
- be done independently within broad guidance or by taking the lead of a team
- involve consultation with other project members, teams and internal stakeholders
- involve the selection, use and supervision of appropriate communications management methods and tools
- take into account internal organisational change and external environmental change

**Project management information system** is a means for communicating knowledge about the project and provides a systematic approach to the storing, searching and retrieval of information relevant to the project and may include:

- complex computer-based systems
- modified systems to cater for unique project requirements
- simple manual systems

**Communication networks** may include:

- client organisation and end users
- formal networks
- informal networks
- organisation's communication networks
- specific networks

BSBPMG508A Manage project risk

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to manage risk within a project to avoid adverse effects on project outcomes. It covers determining, monitoring and controlling project risks, and assessing risk management outcomes.
No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to an individual who is clearly and solely responsible for the management and leadership of a complex project, either as an employee of an organisation or an external consultant.
In the context of this unit a complex project is defined as a project which involves:
• the need for a comprehensive and multi-faceted project plan
• the need for a formal internal or external communications strategy
• a dedicated and diverse project budget
• multiple administrative components
• multiple operational components
• a wide range of stakeholders
• a project operations team.
The functions performed by a program manager to manage risk within multiple projects are addressed in BSBPMG608A Direct risk management of a project program. |

| 1. Determine project risks | 1.1. Identify, document and analyse *risks*, in consultation with stakeholders and higher project authority, as the basis for risk planning  
1.2. Use established *risk management techniques and tools*, within *delegated authority*, to analyse risks, assess options and recommend preferred risk approaches  
1.3. Develop risk management plans, secure agreement of stakeholders and communicate plans to ensure clarity of understanding and ongoing management of risk factors  
1.4. Establish designated *risk management processes and procedures* to enable effective management and communication of risk events, responses and results |
| 2. Monitor and control project risks | 2.1. Manage project in accordance with established project and risk management plans to ensure a common approach to the achievement of objectives  
2.2. Monitor progress against project plans to identify variances and *recommend responses* to a higher project authority for remedial action  
2.3. Implement agreed risk responses and modify plans to reflect changing project objectives in an environment of uncertainty |
| 3. Assess risk management outcomes | 3.1. Review project outcomes to determine effectiveness of risk management processes and procedures  
3.2. Identify and document risk issues and recommended improvements, and pass on to higher project authority for application in future projects |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- literacy skills to write risk management plans
- problem-solving skills to control risks
- lateral thinking skills to identify risks
- planning and organisational skills to monitor project progress
- analytical skills to review project outcomes in terms of risk management.

### Required knowledge

- risk management framework
- risk management techniques, tools and approaches.
Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:
- demonstrated evidence of effective risk management for multiple complex projects
- knowledge of risk management techniques, strategies and tools.

#### Context of and specific resources for assessment

Assessment must ensure:
- access to workplace risk management documentation
- consideration of feedback from project stakeholders as to how risks were managed.

#### Method of assessment

A range of assessment methods should be used to assess practical skill and knowledge. The following examples are appropriate for this unit:
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge of the risk management framework
- analysis of responses in addressing case studies and scenarios which present project scope management issues and problems
- review of risk management plans
- evaluation of monitoring of progress against project plans
- assessment of identified and documented risk issues and recommended improvements.

#### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:
- other units in the Diploma of Project Management.
## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Risks** may be:
- actual
- likely/probable
- perceived
- potential

**Risk management techniques and tools** may include:
- calling upon personal experience and/or subject matter experts
- conducting or supervising qualitative and/or quantitative risk analysis, such as schedule simulation, decision analysis, contingency planning and alternative strategy development
- using specialist risk analysis tools to assist in the decision making process

**Delegated authority** refers to planning and activities that may:
- be conducted routinely or as changing circumstances dictate
- be done independently within broad guidance or by taking the lead of a team
- involve consultation with other project members, teams and internal stakeholders
- involve the selection, use and supervision of appropriate risk management methods, tools and techniques

**Risk management processes and procedures** may include:
- communication with stakeholders, dispute resolution and modification procedures
- implementation of risk control trigger mechanisms
- measurement of actual progress against planned milestones
- recording and reporting of major variance
- setting key milestones at significant points during the project and at completion

**Recommended responses to variations** may be made:
- in consultation with project team members, section heads, project manager and stakeholders
- independently or with higher project authority
### RANGE STATEMENT

- endorsement if necessary
- regularly throughout the project life cycle
- taking into account internal organisational change and external environmental change

BSBSLS403A Present a sales solution

Modification History

Unit Descriptor
This unit describes the performance outcomes, skills and knowledge required to present a sales solution which responds to the specific buying needs of the client. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Application of the Unit
This unit applies to individuals who are skilled in using specific sales techniques to present a sales solution to meet buyer needs. They may provide advice and support about aspects of sales solutions to support a sales team.

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information
This unit contains employability skills.
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
</table>
| 1 Prepare for presentation | 1.1 Obtain and organise **products** for use within a sales presentation  
1.2 Review product information to ensure familiarity with products  
1.3 Identify sales tactic options, and assess and choose them in terms of their ability to meet the needs and preferences of the prospect  
1.4 Consider a variety of sales solutions and prepare to meet buyer needs  
1.5 Identify and select **sales aids**  
1.6 Identify alternatives for prospects and assess them in relation to anticipated buyer needs |
| 2 Present a sales solution | 2.1 Use gestures, posture, body language, facial expressions and voice to create a supportive selling environment  
2.2 Apply listening skills to determine buyer needs  
2.3 Use open-ended questions to identify buyer needs, preferences, motives and objections  
2.4 Adjust presentation to match the needs and preferences of the buyer |
2.5 Use persuasive communication techniques to secure buyer interest

2.6 Demonstrate and explain products to enhance buyer retention

2.7 Ensure the presentation communicates the key features of the product and emphasises benefits in relation to identified buyer needs

2.8 Obtain and present proof of benefits through product purchase

2.9 Utilise sales aids to build buyer understanding of how the product is aligned with needs

3 Manage buyer resistance

3.1 Utilise probing to identify the source of buyer resistance

3.2 Identify the strengths and limitations of buyer resistance strategies

3.3 Elect and implement a strategy for managing buyer resistance

3.4 Ensure strategy selected addresses the source of buyer resistance
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- Communication skills to question clients to determine client needs and preferences and to use persuasive and assertive language in promoting product features and benefits
- Conflict resolution skills to manage customer dissatisfaction
- Negotiation skills to manage buyer resistance
- Presentation skills to demonstrate how product benefits and key features fulfil buyers' needs
- Research skills to use sales statistics to support a verbal argument
- Technological skills to use equipment to aid presentation of sales information.

**Required knowledge**

- Detailed product knowledge, including product:
  - Advantages and disadvantages
  - Features
  - Service benefits
  - Materials and aids which can be used to support presentations
  - Principles of achieving an effective sales presentation mix
  - Identification and overview knowledge of key provisions of relevant legislation from all levels of government that affects business operations, codes of practice and national standards, such as:
    - Anti-discrimination
    - Ethical principles
    - Consumer protection
    - Contract law
    - Privacy laws
    - Trade Practices Act
  - Statistical methods to demonstrate sales performance.
Evidence Guide
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:
- presentation of sales solutions that respond to specific buying needs and highlight major features of product/s
- principles of achieving an effective sales presentation mix.

**Context of and specific resources for assessment**

Assessment must ensure:
- access to an actual workplace or simulated environment
- access to product information
- access to office equipment, machines and sales support materials to make a presentation.

**Method of assessment**

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
- analysis of responses to case studies and scenarios
- observations of presentations of sales solutions
- direct questioning combined with portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge of sales tactic options, proposed sales solutions and ways to overcome buyer resistance
- observation of persuasive communication techniques and listening skills used when presenting a sales solution
- review of sales aids identified and selected
- evaluation of strategies implemented to manage buyer resistance.
Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- BSBPRO401A Develop product knowledge
- BSBSLS404A Secure prospect commitment

Range Statement
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Products** may include: goods
ideas
services

**Sales aids** may include: drawings
electronic media
graphs
models
photographs
printed materials
product itself
product samples
transparencies
whiteboards

**Proof of benefits** may include: anecdotes and examples
comparisons
statistics
testimony

**Source of buyer resistance** may include: company resistance
no perceived need
price resistance
salesperson resistance
service dissatisfaction
timing issues
uncertainty about the product

**Buyer resistance strategies** may include: assertive messages
boomerang
checking perceptions
direct denial
incentives offer
indirect denial
requesting additional information from buyers
open and closed questions
superior benefit
trial offer

BSBSLS404A Secure prospect commitment

Modification History

Unit Descriptor
This unit describes the performance outcomes, skills and knowledge required to use sales processes associated with securing prospect commitment to proceed with a sale.
No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Application of the Unit
This unit applies to individuals in a sales related position in a small, medium or large enterprise across a wide variety of industries who secure a prospects commitment to purchase a product or service. They may contribute to securing prospect commitment individually or as a supporting member of a larger sales team.

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information
This unit contains employability skills.
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

an assertive manner

3 Finalise the agreement

3.1 Outline a summary of the agreement to the buyer

3.2 Confirm the buyer's decision

3.3 Ensure process and completion of the sales transaction comply with organisational requirements

3.4 Prepare and complete sales documents

3.5 Ensure advice on financing arrangements is accurate, matches the buyer's financial situation, and complies with organisational requirements

3.6 Identify and present cross selling opportunities to the buyer

3.7 Express a desire to continue the sales relationship and conduct future sales transactions
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

conflict resolution skills to manage client dissatisfaction and criticism
customer service skills to determine client needs and preferences
interpersonal skills to develop rapport and build relationships with clients
literacy and numeracy skills to prepare sales documentation, process sales transactions and calculate financing arrangements.

Required knowledge

detailed product knowledge, including product:
advantages and disadvantages
features
service benefits

identification and overview knowledge of key provisions of relevant legislation from all levels of government that affects business operations, codes of practice and national standards, such as:
anti-discrimination
ethical principles
consumer protection
contract law
privacy laws
Trade Practices Act

principles of sales closure techniques.

Evidence Guide
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- **Critical aspects for assessment and evidence required to demonstrate competency in this unit**: Evidence of the following is essential:
  - sales situations where the candidate clearly identifies and appropriately responds to buying signals before trialling closes, negotiating sale conditions and securing the sale
  - knowledge of principles of sales closure techniques.

- **Context of and specific resources for assessment**: Assessment must ensure:
  - access to an actual workplace or simulated environment
  - access to appropriate documentation and resources normally used in the workplace.

- **Method of assessment**: A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
  - analysis of responses to case studies and scenarios
  - observations of interactions with prospects when securing commitment
  - direct questioning combined with portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
  - oral or written questioning to assess knowledge of verbal and non-verbal buying signals, trial closes, proposed sales solutions and ways to overcome buyer resistance
  - observation of strategies used to secure a sale
  - review of cross selling opportunities presented to the buyer
  - review of completed sales documents
  - assessment of advice provided on financing arrangements.
Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- BSBPRO401A Develop product knowledge
- BSBLS403A Present a sales solution
- BSBLS406A Self-manage sales performance

Range Statement
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Verbal buying signals** may include: confirmaions
questions
statement of requirement by prospect

**Non-verbal buying signals** may include: close examination of the product by the prospect
moving closer to where a product is to be installed
smiling and nodding

**Trial closes** may include: question or paraphrase that focuses the interaction on a minor point related to sale of the product that might lead to closing the sale

**Products** may include: goods
ideas
services

**Formal close** may include: inducement
narrative close
request by the salesperson to the prospect to agree to purchase the product/service
offering alternative choices
summary of product benefits

**Conditions** may include: client loyalty
delivery
length of contract
payment options
price

</thead>
</table>
### Employability Skills Information

| Employability skills | This unit contains employability skills. |

### Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify and implement business legal requirements | 1.1. Identify and research possible options for the business legal structure using appropriate sources  
1.2. Determine legislation and regulatory requirements affecting the operations of the business under its chosen structure  
1.3. Develop and implement procedures to ensure full compliance with relevant legislation and regulatory requirements |
| 2. Comply with legislation, codes and regulatory requirements | 2.1. Establish systems to ensure the legal rights and responsibilities of the business are identified and the business is adequately protected, specifically in relation to occupational health and safety (OHS), business registration and environmental requirements  
2.2. Identify taxation principles and requirements relative to the business and follow procedures to ensure compliance  
2.3. Identify and carefully maintain legal documents and maintain and update relevant records to ensure their ongoing security and accessibility  
2.4. Monitor the provision of products and services of the business to protect legal rights and to comply with legal responsibilities  
2.5. Conduct investigations to identify areas of non-compliance with legal and regulatory requirements and take corrective action where necessary |
| 3. Negotiate and arrange contracts | 3.1. Seek legal advice on contractual rights and obligations, if required, to clarify business liabilities  
3.2. Investigate and assess potential products/services to determine procurement rights and to ensure protection of business interests where applicable  
3.3. Negotiate and secure contractual procurement rights for goods and services including contracts with relevant people, as required, in accordance with the business plan  
3.4. Identify insurance requirements and acquire adequate cover  
3.5. Identify options for leasing/ownership of business premises and complete contractual arrangements in accordance with the business plan |
### Required Skills and Knowledge

#### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication, reporting, record keeping and consultation skills to operate the business
- literacy skills to interpret legal requirements, to develop policies and procedures and to analyse compliance information
- research skills to investigate legal structures, and taxation and insurance requirements
- time management skills to prioritise tasks and to meet key dates.

#### Required knowledge

- business registration and licensing requirements
- commonwealth, state/territory and local government legislative requirements relating to business operation, especially in regard to OHS and environmental issues, equal employment opportunity, industrial relations, anti-discrimination, taxation
- creation and termination of relevant legal contracts
- cultural differences and legal implications
- duty of care imposed by Law of Torts
- legal rights and obligations of alternative ownership structures
- record keeping to meet minimum legal and taxation requirements
- relevant consumer legislation
- relevant industry codes of practice
- relevant insurance requirements and products.
# Evidence Guide

## EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:
- implementation of a systematic approach to identifying, managing and meeting legal and business requirements within culturally appropriate contexts
- interpreting compliance data and formulating appropriate action
- knowledge of relevant legislation.

## Context of and specific resources for assessment

Assessment must ensure:
- access to relevant documentation
- candidate's individual circumstances and work in the context of establishing or running a small business, are the basis for assessment.

## Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
- portfolio of evidence including contracts negotiated and arranged
- oral or written questioning to assess knowledge of relevant consumer legislation
- review of procedures developed and implemented to ensure full compliance with relevant legislation and regulatory requirements
- review of insurance cover acquired.

## Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:
- BSBSMB402A Plan small business finances
- BSBSMB404A Undertake small business planning.
**Range Statement**

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Options for the business legal structure** may include:

- company
- cooperative
- corporation
- government owned enterprise
- partnership
- profit or not-for-profit legal structure
- sole trader
- trust

**Options for the business legal structure** may be influenced by:

- confidentiality
- contractual requirements
- family/community/cultural expectations
- ownership transfer
- partnership considerations
- preferences of owners/stakeholders
- protection of stakeholders and assets
- requirements of financial backers
- superannuation
- taxation

**Appropriate sources** may include:

- business advisers
- financial planners
- government agencies
- industry/trade associations
- mentors
- professional advisers (e.g. solicitors, accountants)

**Legislation and regulatory requirements** may include:

- local, state/territory, commonwealth and international legislation, regulations and codes of practice affecting business operations such as:
  - relevant Acts and regulations
  - industry and OHS codes of practice
  - business registrations and licences

## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Implement financial plan | 1.1. Identify **financial information** requirements and obtain **specialist services**, as required, to profitably operate and extend the business in accordance with the business plan  
1.2. Produce financial budgets/projections, including **cash flow** estimates, as required for each forward period, and distribute to **relevant people** in accordance with legal requirements  
1.3. Negotiate, secure and manage business capital to best enable implementation of the business plan and to meet the requirements of **financial backers**  
1.4. Develop and maintain strategies to enable adequate financial provision for taxation in accordance with legal requirements  
1.5. Develop, monitor and maintain client **credit policies**, including contingencies for debtors in default, to maximise **cash flow**  
1.6. Select key performance indicators to enable ongoing monitoring of financial performance  
1.7. Record and communicate financial procedures to relevant people to facilitate implementation of the business plan |
| 2. Monitor financial performance | 2.1. Regularly monitor and report on financial performance targets and analyse data to establish the extent to which the **financial plan** has been met  
2.2. Monitor marketing and operational strategies for their effects on the financial plan  
2.3. Calculate and evaluate **financial ratios** according to own/industry benchmarks  
2.4. Assess financial plan to determine whether variations or alternative plans are needed, and change as required |
**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

<table>

</table>
**Evidence Guide**

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- Evidence of the following is essential:
  - development, implementation and review of strategies for the ongoing management of finance
  - maintenance of day-to-day financial management of the business as well as implementation of broad financial strategies
  - knowledge of purpose of financial reports.

**Context of and specific resources for assessment**

- Assessment must ensure:
  - access to relevant documentation
  - candidate’s individual circumstances and work in the context of establishing or running a small business, are the basis for assessment.

**Method of assessment**

- A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
  - portfolio of evidence including financial reports
  - preparation and review of financial ratios
  - review of cash flow projections
  - analysis of development, monitoring and maintenance of client credit policies
  - oral or written questioning to assess knowledge of principles for preparation of balance sheets and their interpretation.

**Guidance information for assessment**

- Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:
  - BSBSMB402A Plan small business finances
  - BSBSMB405A Monitor and manage small business operations.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Financial plan may include:
- analysis of sales by product/service, identifying where they were sold and to whom
- cash flow estimates for each forward period
- current financial state of the enterprise (or owner/operator)
- estimates of profit and loss projections for each forward period
- financial performance to date (if applicable)
- likely return on investment
- monthly, quarterly or annual returns
- non-recurring assets calculations
- profit, turnover, capital and equity targets
- projected profit targets, pricing strategies, margins
- projections of likely financial results (budgeting)
- projections, which may vary depending on the importance of such information and the stage in the life of the business
- resources required to implement the proposed marketing and production strategies (staff, materials, plant and equipment)
- review of financial inputs required (sources and forms of finance)
- risks and measures to manage or minimise risks
- working, fixed, debt and equity capital
- working in conjunction with external consultants e.g. investment analysts, accountants, financiers

Financial information may include:
- accrual of staff leave/entitlements
- asset management strategies which may include:
  - owning, leasing, sharing, syndicating
  - maintaining and deploying assets
- asset registers
- balance sheets
- bookkeeping/accounting/stock/job costing records
### RANGE STATEMENT

- business activity statements
- business capital
- cash book
- cash flow forecasts
- financial budgets
- financial indicators, which may be short-, medium- and/or long-term
- payroll records, superannuation entitlements
- profit and loss statements
- ratios for profitability, liquidity/efficiency/financial structure
- risk management
- statements/forecasts
- taxation returns including goods and services tax

### Specialist services may include:

- accountants
- business brokers/business consultants
- government agencies
- industry/trade associations
- lawyers and providers of legal advice
- mentors
- online gateways
- providers of training in accounting software

### Cash flow may include:

- anticipated payments
- anticipated receipts
- customer credit policy/debt recovery
- taxation provisions

### Relevant people may include:

- family members
- financial backers
- franchise agency
- owner/operator
- partners
- regulatory bodies
- trade or industry associations

### Financial backers may include:

- financiers/banks/lending institutions
- leasing and hire purchase financiers
- providers of venture capital
- shareholders/partners/owners/family/friends

### Credit policies may include:

- collateral
- credit limits
- credit references
### RANGE STATEMENT

- debt collection
- payment options
- proof of Indigenous identity
- trading terms

**Financial ratios** may include:

- current ratio
- days debtors outstanding
- days stock on hand
- expense percentages
- gross profit percentage
- liquid ratio
- net profit percentage
- proprietary/debt ratio
- return on investment/return on total assets
- staff productivity measures
- stock turn rates

BSBWOR401A Establish effective workplace relationships

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to collect, analyse and communicate information and to use that information to develop and maintain effective working relationships and networks, with particular regard to communication and representation. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | Frontline managers play an important role in developing and maintaining positive relationships in internal and external environments so that customers, suppliers and the organisation achieve planned outputs and outcomes. They play a prominent part in motivating, mentoring, coaching and developing team cohesion through providing leadership for the team and forming the bridge between the management of the organisation and team members. At this level, work will normally be carried out within routine and non routine methods and procedures, which require planning and evaluation, and leadership and guidance of others. |

Licensing/Regulatory Information
Not applicable.

### Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Collect, analyse and communicate information and ideas | 1.1. Collect relevant *information* from appropriate sources and analyse and share with the work team to improve work performance  
1.2. Communicate ideas and information in a manner which is appropriate and sensitive to the cultural and social diversity of the audience and any specific needs  
1.3. Implement *consultation processes* to encourage employees to contribute to issues related to their work, and promptly relay feedback to the work team in regard to outcomes  
1.4. Seek and value contributions from internal and external sources in developing and refining new ideas and approaches  
1.5. Implement *processes* to ensure that issues raised are resolved promptly or referred to *relevant personnel* as required |
| 2. Develop trust and confidence | 2.1. Treat all internal and external contacts with integrity, respect and empathy  
2.2. Use the *organisation's social, ethical and business standards* to develop and maintain effective relationships  
2.3. Gain and maintain the trust and confidence of *colleagues, customers and suppliers* through competent performance  
2.4. Adjust interpersonal styles and methods to meet organisation's social and cultural environment  
2.5. Encourage other members of the work team to follow examples set, according to *organisation's policies and procedures* |
| 3. Develop and maintain networks and relationships | 3.1. Use *networks* to identify and build relationships  
3.2. Use networks and other work relationships to provide identifiable benefits for the team and organisation |
| 4. Manage difficulties into positive outcomes | 4.1. Identify and analyse difficulties, and take action to rectify the situation within the requirements of the organisation and relevant legislation  
4.2. Guide and support colleagues to resolve work difficulties  
4.3. Regularly review and improve *workplace outcomes* |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
in consultation with relevant personnel
4.4. Manage *poor work performance* within the organisation's processes
4.5. Manage conflict constructively within the organisation's processes

### Required Skills and Knowledge

#### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

**Required skills**
- coaching and mentoring skills to provide support to colleagues
- literacy skills to research, analyse, interpret and report information
- relationship management and communication skills to:
  - deal with people openly and fairly
  - forge effective relationships with internal and/or external people, and to develop and maintain these networks
  - gain the trust and confidence of colleagues
  - respond to unexpected demands from a range of people
  - use supportive and consultative processes effectively.

**Required knowledge**
- relevant legislation from all levels of government that affects business operation, especially in regard to occupational health and safety (OHS), and environmental issues, equal opportunity, industrial relations and anti-discrimination
- theory associated with managing work relationships to achieve planned outcomes:
  - developing trust and confidence
  - maintaining consistent behaviour in work relationships
  - understanding the cultural and social environment
  - identifying and assessing interpersonal styles
  - establishing, building and maintaining networks
  - identifying and resolving problems
  - resolving conflict
  - managing poor work performance
  - monitoring, analysing and introducing ways to improve work relationships.
# Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- range of methods and techniques for communicating information and ideas to a range of stakeholders
- range of methods and techniques for developing positive work relationships that build trust and confidence in the team
- accessing and analysing information to achieve planned outcomes
- techniques for resolving problems and conflicts and dealing with poor performance
- knowledge of the theory associated with managing work relationships to achieve planned outcomes.

### Context of and specific resources for assessment

Assessment must ensure:

- access to appropriate documentation and resources normally used in the workplace.

### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- demonstration of techniques in managing poor performance and communicating effectively
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of performance in role plays
- observation of presentations
- oral or written questioning to assess knowledge of relevant legislation
- review of consultation processes implemented to encourage employees to contribute to issues related to their work
- review of documentation outlining reviewing of workplace outcomes.

### Guidance information for

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

# Range Statement

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Information may include: | • data appropriate to work roles and organisational policies that is shared and retrieved in writing or verbally, electronically or manually such as:  
| • archived, filed and historical background data  
| • individual and team performance data  
| • marketing and customer related data  
| • planning and organisational documents including the outcomes of continuous improvement and quality assurance  
| • policies and procedures |

| Consultation processes may include: | • feedback to the work team and relevant personnel in relation to outcomes of the consultation process  
| • opportunities for all employees to contribute to ideas and information about organisational issues |

| Processes to ensure that issues raised are resolved promptly or referred may include: | • conducting informal meetings  
| • coordinating surveys or questionnaires  
| • distributing newsletters or reports  
| • exchanging informal dialogue with relevant personnel  
| • participating in planned organisational activities |

| Relevant personnel may include: | • managers  
| • OHS committee and other people with specialist responsibilities  
| • other employees  
| • supervisors  
| • union representatives/groups |

| Organisation’s social, ethical and business standards may refer to: | • implied standards such as honesty and respect relative to the organisational culture and generally accepted within the wider |

BSBWOR402A Promote team effectiveness

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to promote teamwork. It involves developing team plans to meet expected outcomes, leading the work team, and proactively working with the management of the organisation.
|                | No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | Frontline managers have an important leadership role in the development of efficient and effective work teams. They play a prominent part in team planning, supervising the performance of the team and developing team cohesion. They provide leadership for the team and bridge the gap between the management of the organisation and the team members. As such they must 'manage up' as well as manage their team/s. |

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to facilitate all aspects of teamwork within the organisation. It involves taking a leadership role in the development of team plans, leading and facilitating teamwork and actively engaging with the management of the organisation.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to managers and addresses the need for managers to facilitate work teams and to build a positive culture within work teams. The unit takes a systematic and planned approach to developing teams. It includes the soft skills as well as more structured approaches to the management of teams.

At this level, work will normally be carried out within complex and diverse methods and procedures which require the exercise of considerable discretion and judgement, using a range of problem solving and decision making strategies. |

## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Establish team performance plan | 1.1. *Consult* team members to establish a common understanding of team purpose, roles, responsibilities and *accountabilities* in accordance with organisational goals, plans and objectives  
1.2. Develop *performance plans* to establish expected outcomes, outputs, key performance indicators and goals for work team  
1.3. *Support* team members in meeting expected performance outcomes |
| 2. Develop and facilitate team cohesion | 2.1. Develop *strategies* to ensure team members have input into planning, decision making and operational aspects of work team  
2.2. Develop *policies and procedures* to ensure team members take responsibility for own work and assist others to undertake required roles and responsibilities  
2.3. Provide feedback to team members to encourage, value and reward individual and team efforts and contributions  
2.4. Develop *processes* to ensure that issues, concerns and problems identified by team members are recognised and addressed |
| 3. Facilitate teamwork | 3.1. Encourage team members and individuals to participate in and to take responsibility for team activities, including communication processes  
3.2. Support the team in identifying and resolving work performance problems  
3.3. Ensure own contribution to work team serves as a role model for others and enhances the organisation's image for all stakeholders |
| 4. Liaise with stakeholders | 4.1. Establish and maintain open communication processes with all stakeholders  
4.2. Communicate information from *line manager/management* to the team  
4.3. Communicate unresolved issues, concerns and problems raised by team members and follow-up with line manager/management and other relevant stakeholders  
4.4. Evaluate and take necessary corrective action regarding unresolved issues, concerns and problems raised by internal or external stakeholders |
## Required Skills and Knowledge

<table>
<thead>
<tr>
<th>REQUIRED SKILLS AND KNOWLEDGE</th>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **Consultation** may refer to: | • conducting meetings, interviews, brainstorming sessions, email/intranet communications, newsletters or other processes and devices which ensure that all employees have the opportunity to contribute to team and individual performance plans  
• mechanisms used to provide feedback to the work team in relation to outcomes of consultation |
| **Accountabilities** may refer to: | • responsibilities as defined in position descriptions, codes of conduct/behaviour, duty statements or similar  
• statement of conduct outlining responsibilities/actions/performance |
| **Performance plans** may refer to: | • individual performance plans linked to team goals  
• team plans based on work assignments and responsibilities |
| **Outcomes, outputs, key performance indicators** may refer to agreed: | • changes in work roles and responsibilities  
• improved individual and team, performance and participation  
• improvements to systems, operations  
• measures for monitoring and evaluating the efficiency or effectiveness of systems or services  
• quality standards and expectations  
• targets for productivity improvements such as reduced downtime, higher production levels, decreases in absenteeism  
• targets for training and development |
| **Support** may include: | • Coaching  
• Mentoring  
• Training and development opportunities  
• Clarification of roles and expectations |
## RANGE STATEMENT

</table>
| 1. Plan documents | 1.1. Determine *the purposes* of documents  
1.2. Choose *appropriate formats* for documents  
1.3. Establish *means of communication*  
1.4. Determine *requirements of documents*  
1.5. Determine *categories and logical sequences of data, information and knowledge* to achieve document objectives  
1.6. Develop overview of structure and content of documents |
| 2. Draft text | 2.1. Review and organise available data, information and knowledge according to proposed structure and content  
2.2. Ensure data, information and knowledge is aggregated, interpreted and summarised to prepare text that satisfies document purposes and objectives  
2.3. Include graphics as appropriate  
2.4. Identify gaps in required data and information, and collect additional material from *relevant enterprise personnel*  
2.5. Draft text according to document requirements and genre  
2.6. Use language appropriate to the audience |
| 3. Prepare final text | 3.1. Review draft text to ensure document objectives are achieved and requirements are met  
3.2. Check grammar, spelling and style for accuracy and punctuation  
3.3. Ensure draft text is approved by *relevant* enterprise personnel  
3.4. Process text amendments as required |
| 4. Produce document | 4.1. Choose basic *design elements* for documents appropriate to audience and purpose  
4.2. Use word processing software to apply basic design elements to text  
4.3. Check documents to ensure all requirements are met |
Required Skills and Knowledge

REQUIRE SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to clarify requirements of documents
- literacy skills to edit and proofread documents; to create documents with a complex, organised structure of linked paragraphs which use simple and complex syntactic structure
- numeracy skills to collate and present data, graphs and annotated references
- problem-solving skills to use processes flexibly and interchangeably.

Required knowledge

- enterprise style guide/house style
- formatting styles and their impact on formatting, readability and appearance of documents
- organisational requirements for ergonomics, work periods and breaks, and resource conservation techniques
- rules and conventions for written English, as defined by general and specialist dictionaries and books about grammar.
Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Employability Skills Information

Employability Skills

This unit contains Employability Skills

Elements and Performance Criteria Pre-Content

Elements define the essential outcomes of a unit of competency.

The Performance Criteria specify the level of performance required to demonstrate achievement of the Element. Terms in italics are elaborated in the Range Statement.
Elements and Performance Criteria

**ELEMENT**  
1. *Communicate effectively with clients and staff*

**PERFORMANCE CRITERIA**

1.1 Identify and use appropriate communication strategies to:
   - establish rapport
   - exchange information
   - facilitate resolution of issues
   - defuse potentially difficult situations

1.2 Conduct interviews according to established procedures

1.3 Give feedback and advice in a way which reflects current identified good practice

1.4 Demonstrate respect for individual, cultural and social differences, needs and rights in communicating with clients and colleagues

1.5 If communication break down occurs, respond appropriately and refer to other staff or specialist services if required to ensure duty of care responsibilities are met

1.6 Respond to enquiries in a manner that promotes achievement of mutual outcomes

1.7 Respect and consider differences in views in a way that values and encourages the contributions of others

1.8 Ensure communication represents the organisation effectively where appropriate
ELEMENT

2. Contribute to the implementation of effective communication strategies

PERFORMANCE CRITERIA

2.1 Implement strategies to check on the effectiveness of communication with clients and colleagues

2.2 Facilitate access to interpretive and translation services as required

2.3 Regularly review established channels of communication to ensure clients and colleagues are informed of relevant information in a timely way

2.4 Provide coaching in effective communication to colleagues and clients as required

2.5 Maintain relevant work-related networks and relationships as required to ensure client needs and organisation objectives are met

3. Use specific communication techniques to maintain constructive interaction

3.1 Put in place strategies to develop a trusting relationship that will enable negotiation of communication barriers

3.2 Use communication skills and processes to identify and address barriers to communication and facilitate identification of individual issues

3.3 Use effective skills in listening and providing feedback to ensure stories are heard and to support exploration and validation of issues raised

3.4 Seek agreement on processes to be followed to address issues within scope of own abilities, skills and work role

3.5 Make referral for conflict resolution and mediation as appropriate
ELEMENT  

4. Facilitate discussions

PERFORMANCE CRITERIA

4.1 Provide opportunities to fully explore all relevant issues

4.2 Routinely use strategies that encourage all group members to participate equally, including seeking and acknowledging contributions from all members

4.3 Routinely contribute to and follow objectives and agendas for meetings and discussions

4.4 Provide relevant information to groups as appropriate to facilitate outcomes

4.5 Evaluate group communication strategies to promote ongoing participation of all parties

4.6 Implement strategies to ensure the specific communication needs of individuals within the group are identified and addressed

5. Identify communication strategies to build relationships with clients who are involuntary or present communication challenges

PERFORMANCE CRITERIA

5.1 Identify and address specific communication barriers such as:

- closed or unreceptive attitudes
- mistrust or misunderstanding of people, organisations, systems and/or processes
- emotional states, such as fear, anger and frustration

5.2 Identify areas of mistrust or conflict that may require resolution

5.3 Identify the need to include additional parties
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Essential knowledge:

It is critical that the candidate demonstrate knowledge of:

- Effective communication strategies and techniques to address barriers and build and maintain relationships
- Recognition of communication styles of individuals
- Basic group dynamics and facilitation of group discussion

The candidate must also be able to demonstrate relevant knowledge required to effectively perform task skills; task management skills; contingency management skills and job/role environment skills as outlined in elements and performance criteria, such as knowledge of:

- Cross cultural communication protocols
- Non-verbal communication strategies
- Communication techniques to maintain constructive interactions
- Barriers to communication

Essential skills:

It is critical that the candidate demonstrate the ability to:

- Provide evidence that all communication with clients and colleagues is appropriate to individual needs and the situation and promotes achievement of organisation objectives
- Use strategies to meet particular communication needs/difficulties
- Address individual issues in a timely way and in a manner which maintains the integrity of the individual
- Know when to provide referrals to conflict resolution and mediation

In addition, the candidate must be able to effectively do the task outlined in elements and performance criteria of this unit, manage the task and manage contingencies in the context of the identified work role.

These include the ability to:
REQUIRED SKILLS AND KNOWLEDGE

- Apply a full range of communication techniques including:
  - reflective and active listening, respectful responding, empathy, feedback and rapport
  - addressing communication barriers through application of a range of strategies
  - recognition of non-verbal triggers
  - clarification of boundaries of work role
- Apply oral communication skills required to fulfil job roles as specified by the organisation/service:
  - skills in asking questions, providing clear information, listening to and understanding workplace instructions, and clarifying workplace instructions when necessary
  - service/organisation may require competence in English or community language, depending on client group

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate this unit of competency:

- The individual being assessed must provide evidence of specified essential knowledge as well as skills
- This unit will be most appropriately assessed in a work context or in simulated work environment and under the normal range of work conditions
- Assessment is recommended to be on more than one occasion and must include the range of clients who access the service
EVIDENCE GUIDE

Access and equity considerations:

- All workers in community services should be aware of access, equity and human rights issues in relation to their own area of work
- All workers should develop their ability to work in a culturally diverse environment
- In recognition of particular issues facing Aboriginal and Torres Strait Islander communities, workers should be aware of cultural, historical and current issues impacting on Aboriginal and Torres Strait Islander people
- Assessors and trainers must take into account relevant access and equity issues, in particular relating to factors impacting on Aboriginal and/or Torres Strait Islander clients and communities

Context of and specific resources for assessment:

- This unit can be assessed independently, however holistic assessment practice with other community services units of competency is encouraged
- Resources required for assessment include access to relevant workplace or simulated realistic workplace setting where assessment may take place

Method of assessment:

- Assessment may include observation, questioning and evidence gathered from the workplace and/or simulated work environment, including written work

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.
RANGE STATEMENT

Communicate effectively includes:

- Effective use of questioning, speaking, and listening and non-verbal communication techniques
- Identifying and evaluating what is occurring within an interaction in a non-judgemental way
- Making decisions about appropriate words, behaviour, posture
- Using clarifying, summarising questions
- Putting together a response that is culturally appropriate
- Expressing an individual perspective
- Expressing own philosophy, ideology and background and exploring the impact of this on the communication
- Exploring and unpacking problems
- Using active and reflective listening appropriately
- Providing sufficient time to enable stories to be told
- Providing summarising and reflective responses in conflict situations
- Confirming that required information is accessed or message communicated

Non-verbal communication includes:

- Gestures
- Posture
- Facial expression

Interviews may include:

- Discussion of staffing issues
- Routine information collection
- Maintaining confidentiality
- Evidential-based
- Non disclosure
- Disclosure
RANGE STATEMENT

Established procedures may refer to:

- Commonwealth and State legislation
- International conventions relating to the rights of individuals
- Organisation policy and procedures
- Relevant program standards
- Duty of care and ethical practice

Presentation of information includes:

- Clarity
- Appropriate sequencing
- Delivery within an appropriate time
- Utilising media to enhance presentation, if appropriate
- Addressing audience needs

Opportunities will include:

- Allowing sufficient time to hear individual stories
- Encouraging a full exploration of issues
- Encouraging validation of individual issues

Additional parties may include:

- Trusted friends
- Case workers
- Family members
- Nominated adults

4.5 Costs and time lines are analysed to evaluate and improve future marketing initiatives.
4.6 Conclusions are prepared from verifiable evidence and advice is provided on future marketing initiatives.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills:

- ability to communicate with and relate to a range of people from diverse social, economic and cultural backgrounds and with varying physical and mental abilities
- analytical skills to interpret documents such as legislation, regulations and property documentation
- application of risk management strategies associated with advising clients on approaches to marketing properties for sale
- computing skills to access agency databases, send and receive emails and complete standard forms online
- decision making and problem solving skills to analyse situations and make ethical marketing decisions consistent with legislative and ethical requirements
- literacy skills to access and interpret a variety of texts, including legislation, regulations and rules of ethics; prepare general information and papers; prepare marketing materials and marketing plans; and complete standard forms
- negotiation skills to assist sellers to decide on marketing activities, budgets and timeframes
- numeracy skills to calculate and interpret data, such as costs of marketing activities and to ensure compliance with agreed marketing budgets
- planning, organising and scheduling skills to implement marketing plans
- research skills to identify and locate documents and information relating to preparing marketing plans for specified properties.

Required knowledge and understanding:

- ethical standards associated with marketing properties for sale
- factors considered in review of effectiveness of marketing strategy, plan, activities and materials
- factors influencing choice of marketing strategy
- marketing activities, including:
  - advertising, including print and electronic media
REQUIRED SKILLS AND KNOWLEDGE

- agency property guides
- brochures
- direct marketing
- business-to-business marketing
- inspections
- mail-outs
- networking
- open house
- signboards
- seminars
- targeting markets by service type
- internet and online advertising, including web pages, virtual tours and online directories
- marketing budget
- marketing materials
- marketing plan
- marketing strategies for:
  - businesses
  - commercial properties
  - development properties, including subdivision and multi-unit sites
  - industrial properties
  - residential properties
  - retail properties
  - rural properties
- principles underpinning effective marketing materials
- relevant federal, and state or territory legislation and local government regulations relating to:
  - anti-discrimination and equal employment opportunity
  - consumer protection, fair trading and trade practices
  - employment and industrial relations
  - financial services
  - OHS
  - privacy
  - property sales
- risks and risk management strategies
- strategies if properties prove difficult to sell.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment

This unit of competency could be assessed through practical demonstration of marketing properties and businesses for sale. Targeted written (including alternative formats where necessary) or verbal questioning to assess the candidate’s underpinning knowledge would provide additional supporting evidence of competence. The demonstration and questioning would include collecting evidence of the candidate’s knowledge and application of ethical standards and relevant federal, and state or territory legislation and regulations. This assessment may be carried out in a simulated or workplace environment.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- implementing marketing activities for the sale of all types of property in line with agency practice, ethical standards and legislative requirements
- knowledge of agency practice, ethical standards and legislative requirements associated with marketing all types of property for sale
- planning and developing marketing plans for the sale of all types of property in line with agency practice, ethical standards and legislative requirements
- preparing marketing materials for the sale of all types of property in line with agency practice, ethical standards and legislative requirements
- reviewing and reporting on marketing activities associated with the sale of all types of businesses and property.

Context of and specific resources for assessment

Resource implications for assessment include:

- access to suitable simulated or real opportunities and resources to demonstrate competence
- assessment instruments that may include personal planner and assessment record book
- access to a registered provider of assessment services.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or
assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the language and literacy capacity of the candidate and the work being performed.

Validity and sufficiency of evidence require that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision of competence only taken at the point when the assessor has complete confidence in the person’s competence
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence
- where assessment is for the purpose of recognition (RCC/RPL), the evidence provided will need to be current and show that it represents competency demonstrated over a period of time
- assessment can be through simulated project-based activity and must include evidence relating to each of the elements in this unit.

In all cases where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge. Questioning will be undertaken in such a manner as is appropriate to the language and literacy levels of the candidate and any cultural issues that may affect responses to the questions, and will reflect the requirements of the competency and the work being performed.

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.
**Buyer profile** may include:
- buyer's property requirements
- buying intentions
- financial capacity
- timeframe for purchase.

**Marketing activities** may include:
- advertising, including print and electronic media
- agency property guide
- brochures
- business-to-business marketing
- direct marketing
- inspections
- mail-outs
- networking
- open house
- seminars
- signboards
- targeting markets by service type
- internet and online advertising, including web pages, virtual tours and online directories.

**Marketing plan** may include:
- advertising and promotional materials prepared and scheduled
- advertising budget
- aims and objectives
- inspection of property by agency sales consultants
- inspections scheduled
- property listed in agency property guide
- prospective buyers contacted
- sale board prepared and ordered as per schedule
- seller advised of advertising and marketing procedures and costs
- target group identified for marketing plan
- timeframe for marketing activities
- seller advised on optimal property presentation
- web-based advertising arranged.

**Persons** may include:
- agency principal
- business broker
- licensed real estate agent
- real estate representative
- stock and station agent
- support staff.

**Monitoring of marketing activities** may include:
- enquiry records
- expenditure
- feedback from prospective buyers
### Information on progress

May include:

- feedback from sales consultants
- feedback from seller.
- agency input into marketing of property
- approaches and enquiries of interest regarding the property
- costings
- perception of levels of interest and worth of current marketing strategies
- possible changes in marketing activities and plan
- strategies used in marketing and promoting the property.
- revising advertising budget
- modifying advertising copy and promotional materials
- involving other agencies.

### Strategies if property proves difficult to sell

May include:

- checklists
- notes
- qualitative and quantitative data
- records
- testimonies.

</table>
| 1 Qualify buyer. | 1.1 *Enquiries from potential buyers* regarding purchase of property are handled promptly to enable high quality service delivery according to agency requirements.  
1.2 *Appropriate rapport* is established with potential buyer.  
1.3 *Buyer requirements* are clarified and accurately assessed using *appropriate interpersonal communication techniques*.  
1.4 *Factors likely to influence the purchase of properties* are identified and used to confirm buyer intentions.  
1.5 *Customer due diligence* is undertaken according to agency practice and legislative requirements.  
1.6 Potential buyers are provided with suitable information about available and prospective listings and assisted to find listing that best matches their requirements.  
1.7 Potential buyers are assisted in making a decision to view properties using information obtained from sellers and buyers.  
1.8 Qualified prospects are recorded to provide an opportunity to maximise future marketing activities. |
| 2 Arrange property inspection for potential buyer. | 2.1 Appointments are made for property inspections in line with agency practice, ethical standards and *legislative requirements*.  
2.2 Preparations are made for property inspection in line with agency practice.  
2.3 *Promotional material* on the property is used to describe main sales features of the property.  
2.4 *Effective questioning techniques* are used to clarify buyer interest in the property.  
2.5 *Records of inspections* are accurately completed in line with agency practice. |
| 3 Deliver effective sales presentation. | 3.1 *Factors affecting the successful conclusion of the sale* are identified and addressed in the sales presentation.  
3.2 *Key decision makers* are identified to ensure that their needs and concerns are met in the sales presentation.  
3.3 Main features of property are matched to buyers' stated needs and motivation.  
3.4 Relevant legal and financial information is used to |
ELEMENT | PERFORMANCE CRITERIA
---|---
support the sales presentation.

3.5 Effective communication and *presentation skills* are used to create buyer interest and focus buyer attention on the property.

3.6 Buyer is given time and space to evaluate property while time is used to maximum advantage to promote property.

3.7 Buyer is encouraged to clarify key aspects of property before a decision is made to purchase property.

3.8 Buyer questions are answered fully and honestly.

3.9 Details of offer to purchase property submitted by buyer are confirmed and documented.

4 Submit offer and negotiate property sale.

4.1 Offer from buyer is submitted to seller in line with agency practice, ethical standards and legislative requirements.

4.2 Professional agency advice is provided to seller that incorporates declared knowledge of buyer's motivation.

4.3 Negotiations are conducted with buyer according to seller response to offer.

4.4 Negotiations are conducted in a professional manner, including showing respect for seller and buyer in line with agency practice, ethical standards and legislative requirements.

4.5 *Effective negotiation techniques* are used to persuade and reach agreement between seller and buyer.

4.6 Alternative offers are discussed and their viability assessed.

4.7 *Effective techniques are used for dealing with conflict and breaking deadlocks* where required.

4.8 *Effective techniques are used for closing sale.*

4.9 Mutually agreed price and conditions of sale are established and confirmed with seller and buyer.

4.10 Relevant *sale of property documentation* is explained to seller and buyer in line with agency and statutory requirements for finalisation of the property transaction.

4.11 Documented, agreed price and conditions of sale are made accessible that provide an accurate record of agreement and meet agency and statutory requirements for finalisation of the property transaction.

5 Maintain

5.1 Seller confidence in agency marketing activities is
ELEMENT

communication with seller.

6 Manage contract to settlement.

PERFORMANCE CRITERIA

5.2 Communication is diarised to provide an accurate and objective record of progress reports to seller.

6.1 Settlement requirements are identified and checked with relevant parties to minimise misunderstanding or breaches of contract in line with agency practice and legislative requirements.

6.2 Requests from buyer to inspect property prior to settlement are facilitated in line with agency practice and legislative requirements.

6.3 Information on buyer and seller responsibilities with regard to building and content insurance prior to settlement is provided in line with agency practice and legislative requirements.

6.4 Procedures for holding and release of deposit moneys during the settlement period are implemented in line with agency policy and legislative requirements.

6.5 Settlement within the contract's legal framework is ensured by liaison with settlement agents and other assisting professionals representing the seller and buyer.

6.6 Progress of settlement agents and other assisting professionals is monitored in line with agency practice.

6.7 Contingency plans are prepared in consultation with relevant legal agents to avoid the possibility of one or more parties to the transaction being unable to fulfil contractual obligations.

6.8 Appropriate procedures are implemented if any party to the transaction is unable to fulfil contractual obligations.

6.9 Effective communication techniques are used in liaising with seller, buyer and other parties representing the seller and buyer through the settlement process.

7 Prepare documentation for agency disbursements.

7.1 Settlement financial transactions are checked for accuracy against contractual documentation, and agency fees are calculated and safeguarded during disbursement activities.

7.2 Authorised agency disbursements are obtained within contractual, agency and statutory requirements.

7.3 Financial systems are updated to reflect authorised
ELEMENT

PERFORMANCE CRITERIA

transactions.

7.4 Agency fees are calculated and safeguarded during disbursement activities.

7.5 Due and proper attention is paid to obtaining required authorisations, signatures and identifications prior to disbursement.

8 Decide on future contacts with prospects.

8.1 Nature of future contacts with prospects is assessed in the light of likely agency-client interaction to a given point in time.

8.2 Business correspondence records are held on file to provide justification for the continuation or termination of contract, and are communicated without prejudice to the parties involved.

9 Maintain client relationships.

9.1 Future business relations are established by mutual evaluation of seller and buyer satisfaction with services provided.

9.2 Business records and databases are updated to facilitate networking and informed marketing strategy planning.

Required Skills and Knowledge

  - rights of sellers and buyers if either party is unable to settle on the due date
- techniques for identifying needs and motivation of buyers
- trust accounting in real estate.

Evidence Guide

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment  This unit of competency could be assessed through practical demonstration of selling different types of property using general real estate sales procedures and techniques in line with agency practice, ethical standards and legislative requirements affecting the sale of property. Targeted written (including alternative formats where necessary) or verbal
questioning to assess the candidate's underpinning knowledge would provide additional supporting evidence of competence. The demonstration and questioning would include collecting evidence of the candidate's knowledge and application of ethical standards and relevant federal, and state or territory legislation and regulations. This assessment may be carried out in a simulated or workplace environment.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- arranging and conducting property inspections for potential buyers
- completing standard and statutory documentation associated with the sale of property
- knowledge and application of approaches for qualifying buyers
- knowledge of agency practice, ethical standards and legislative requirements affecting the sale of property and requirements associated with the transfer of ownership required for the legal sale of all types of property and businesses
- knowledge of consumer protection principles that impact on the sale of property
- maintaining business records associated with the sale of property
- maintaining communications with sellers and buyers throughout the sale process
- negotiating the sale of property with sellers and buyers
- planning and delivering effective sales presentations to facilitate the sale of property
- knowledge of agency practice and legislative requirements associated with agency disbursements
- managing contracts for sale of property to settlement
- monitoring the lodgement of documents for the correct transfer of ownership required for a legal sale of all types of property and businesses
- preparing documentation for agency disbursements.

Context of and specific resources for assessment

Resource implications for assessment include:

- access to suitable simulated or real opportunities and resources to demonstrate competence
- assessment instruments that may include personal planner and assessment record book
- access to a registered provider of assessment services.
Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the language and literacy capacity of the candidate and the work being performed.

Validity and sufficiency of evidence require that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision of competence only taken at the point when the assessor has complete confidence in the person's competence
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence
- where assessment is for the purpose of recognition (RCC/RPL), the evidence provided will need to be current and show that it represents competency demonstrated over a period of time
- assessment can be through simulated project-based activity and must include evidence relating to each of the elements in this unit.

In all cases where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge. Questioning will be undertaken in such a manner as is appropriate to the language and literacy levels of the candidate and any cultural issues that may affect responses to the questions, and will reflect the requirements of the competency and the work being performed.
Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

**Enquiries from potential buyers** may be received through:
- email
- inspections
- office
- open houses
- referral
- telephone
- website.

**Appropriate rapport** relates to use of techniques that:
- establish and build confidence and trust in the agency and its representatives
- make the buyer feel valued
- promote and maintain an effective relationship with the buyer.

**Buyer requirements** may include:
- access to transport and facilities
- finance
- location
- price
- purpose of purchase, such as for:
  - business
  - holiday
  - investment
  - private residence
- settlement period
- size of property
- style of property.

**Appropriate interpersonal communication techniques** may include:
- active listening
- providing an opportunity for the seller or buyer to clarify their understanding of the sales process
- soft questioning and seeking feedback from sellers or buyers to confirm own understanding of their needs and expectations
- summarising and paraphrasing to check understanding of seller or buyer message
Factors likely to influence the purchase of properties may include:

- using appropriate body language.
- buying intentions
- capacity to purchase
- financial limits
- motives
- needs
- preferences.

Customer due diligence may include:

- availability of finance
- identity verification
- record keeping requirements
- reporting requirements.

Legislative requirements may include:

- relevant federal, and state or territory legislation and local government regulations relating to:
  - anti-discrimination and equal employment opportunity
  - anti-money laundering
  - consumer protection, fair trading and trade practices
  - employment and industrial relations
  - financial services
  - OHS
  - privacy
  - property sales.

Promotional materials may include:

- agent and agency profile
- brochures and pamphlets
- posters
- property descriptions
- web page entry.

Effective questioning techniques may include:

- active listening
- clear questions
- different question types
- reflection
- using silences.

Records of inspection may include:

- buyer's reaction to property
- buyer requirements
- name and contact details of potential buyers.

Factors affecting the successful conclusion of a sale may include:

- area and environment in which the property is located
- availability of comparable properties
- marketing preferences of seller
- circumstances of seller and buyer
- professional skills and resources of agent.
Key decision makers may include:

- state of the market for type of property
- type and condition of property.

- business associates
- buyer’s agent
- family members and friends of buyer
- providers of professional advice, including:
  - accountants
  - building advisers
  - financial advisers
  - legal representatives
  - property advisers
- spouse or partner.

Presentation skills may include:

- active listening
- appearance
- body language
- use of information technology, such as website, virtual tours and online databases
- use of support and promotional materials
- voice.

Effective negotiation techniques may include:

- analytical skills
- listening techniques
- non-verbal communication skills
- personal attributes
- presentation techniques
- questioning techniques
- speaking skills.

Effective techniques for dealing with conflict and breaking deadlocks may include:

- calling in a third party
- clarifying the positions of both parties
- deferring the decision
- preparing a compromise
- restating the position
- summarising the progress to date.

Effective techniques for closing sale may include:

- alternate option close
- assumption close
- competition close
- customer close
- deal or concession close
- direct close
- indirect close
- summary-of-benefits close
- time-driven close.
Sale of property documentation may include:

- contract of sale or real estate, contract note and contract for the sale of businesses
- declaration of selling agent
- financial statement to buyer
- receipt for deposit
- vendor's statement and trading statement.

Settlement requirements may include:

- buyer settlement responsibilities, including:
  - anything the new lender requires, such as a notice of acquisition or a disbursement order
  - bank cheques for the balance of purchase money, plus or minus adjustments
- seller settlement responsibilities, including:
  - any other documents necessary to provide a clear title to the buyer, such as discharge of mortgage, withdrawal of caveats change of name declaration
  - disconnection of services, such as water, gas, electricity and telephone
  - keys
  - notify rating and taxing authorities of sale
  - other services
  - title
  - transfer of land
  - value of land and chattels.

Deposit moneys may refer to:

- capacity of agent to hold
- capacity of agent to release to seller
- procedures for receipt and banking.

Settlement agents and other assisting professionals may include:

- accountants
- conveyancers
- financiers and financial institutions
- landlords and managing agents
- legal advisers
- licensed settlement agents.

| 2 Prepare asset management plan. | 2.1 Asset management plan is prepared that facilitates achievement of identified aims and objectives.  
2.2 Operational and maintenance *schedule* detailing a range of activities and time lines is incorporated into asset management plan.  
2.3 Asset management plan is presented to *client* for review according to organisational requirements.  
2.4 Quality assurance goals and strategies related to implementation of the plan are communicated using established *communication channels*.  
2.5 Monitoring and reporting arrangements for asset management plan are established and documented in line with client requirements.  
2.6 Financial, physical and human resource requirements are identified and arranged according to asset management plan and organisational requirements.  
2.7 Roles and responsibilities for establishing and maintaining *asset register* are identified and documented according to client and legislative requirements. |
| 3 Review and evaluate asset management plan. | 3.1 *Maintenance strategies* and plans are reviewed and evaluated in consultation with client and relevant people using appropriate *communication techniques*.  
3.2 Systematic review processes and established *evaluation methods* are identified and used to assess planning processes and outcomes.  
3.3 Evaluation results are prepared in required format, style |
ELEMENT           PERFORMANCE CRITERIA

and structure and presented to relevant people within agreed timeframes.

3.4 Recommendations for improvement of plan are presented to relevant people according to organisational procedures.

3.5 Business equipment and technology are used to securely maintain documentation according to legislative and organisational procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills:

- analytical skills to interpret documentation, analyse risk, estimate costings and budget needs, and review and evaluate plan
- communication skills to negotiate and consult with relevant people
- computing skills to access the internet and web pages, prepare and complete online forms, lodge electronic documents and search online databases
- interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and varying physical and mental abilities
- literacy skills to interpret written and oral information
- organisational skills to schedule and meet time lines and client requirements, organise resource and support processes, and plan and document strategies to manage assets
- technical skills to develop schedules and document plans.

Required knowledge and understanding:

- building codes and relevant Australian standards
- building control legislation
- building practices in relevant property types
- building services and operation methods and practices
- customer needs and preferences for different property types
- industry performance benchmarks
- limitations of work role, responsibility and professional abilities
- maintenance procedures, including vendor specifications
- monitoring and evaluation systems
- OHS issues and requirements
REQUIRED SKILLS AND KNOWLEDGE

- organisational and professional procedures, ethical practices and business standards
- relevant federal and state or territory legislation and local government regulations related to:
  - anti-discrimination
  - consumer protection
  - environmental issues
  - equal employment opportunity (EEO)
  - financial probity
  - franchise and business structures
  - industrial relations
  - OHS
  - privacy
  - property sales, leasing and management
- standards for building equipment operation.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment

This unit of competency could be assessed through practical demonstration of planning for the management of assets. Targeted written (including alternative formats where necessary) or verbal questioning to assess the candidate's underpinning knowledge would provide additional supporting evidence of competence. The demonstration and questioning would include collecting evidence of the candidate's knowledge and application of ethical standards and relevant federal, and state or territory legislation and regulations. This assessment may be carried out in a simulated or workplace environment.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- determining asset performance needs using industry benchmarks and consideration of risk
- documenting resource and support arrangements, incorporating expected costs, and processes for
development and maintenance of an asset register and operational and maintenance schedules

- evaluating the asset management plan through consultation with interested parties
- knowledge of organisation’s practices, ethical standards and legislative requirements associated with planning for the management of assets
- preparing a detailed asset management plan which incorporates strategies for risk management, resource needs, monitoring and reporting arrangements and quality assurance.

Context of and specific resources for assessment

Resource implications for assessment include:

- a registered provider of assessment services
- assessment materials and tools
- candidate special requirements
- competency standards
- cost and time considerations
- suitable assessment venue and equipment.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the language and literacy capacity of the candidate and the work being performed.

Validity and sufficiency of evidence require that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision of competence only taken at the point when the assessor has complete confidence in the person’s competence
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence
- where assessment is for the purpose of recognition (RCC/RPL), the evidence provided will need to be current and show that it represents competency demonstrated over a period of time
• assessment can be through simulated project-based activity and must include evidence relating to each of the elements in this unit.

In all cases activity and must include evidence relating to each of the where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge. Questioning will be undertaken in such a manner as is appropriate to the language and literacy levels of the candidate and any cultural issues that may affect responses to the questions, and will reflect the requirements of the competency and the work being performed.
Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

**Assets** may be static or dynamic and include:
- buildings
- business and marketing contracts
- equipment
- furniture
- goodwill
- land
- property
- vehicles.

**Relevant people** may include:
- agents
- clients
- designated OHS representatives
- emergency personnel
- engineers and technicians
- government personnel
- installers
- legal representatives
- management and colleagues
- members of industry associations
- property owners
- site personnel
- subcontractors
- technical experts
- tenants.

**Organisational requirements** may be outlined and reflected in:
- access and equity principles and practice guidelines
- business and performance plans
- complaint and dispute resolution procedures
- goals, objectives, plans, systems and processes
- legal and ethical requirements and codes of practice
- mission statements and strategic plans
- OHS policies, procedures and programs
- policies and procedures in relation to client service
- quality and continuous improvement processes and
Risk may relate to:
- industry special risks
- loss of profits
- machinery malfunction
- OHS
- public liability
- trade practices issues.

Legislative requirements may be outlined and reflected in:
- Australian standards, and quality assurance and certification requirements
- award and enterprise agreements
- codes of practice covering the market sector and industry, financial transactions, taxation, environment, construction, land use, native title, zoning, utilities use (water, gas and electricity), and contract or common law
- environmental and zoning laws affecting access security, access and property use
- general duty of care to clients
- home building requirements
- local regulations and by-laws
- privacy laws applying to owners, contractors and tenants
- relevant federal, and state or territory legislation that affects organisational operation, including:
  - anti-discrimination and diversity
  - environmental issues
  - EEO
  - industrial relations
  - OHS
- strata, community and company titles
- tenancy agreements
- trade practices laws and guidelines.

Industry benchmarks may include:
- discounted cash flow
- employment rates
- industry association performance index
- inflation rate
- internal rate of return
- life cycle costing
- published vacancy factors
- tenancy mix.

Asset performance criteria may include:
- age
- condition assessment
• cost
• depreciation
• down time
• emergency operation and backup
• functionality
• life span
• maintenance requirements and cost
• replacement
• security
• service levels.

*Schedules* may be:

• charts
• computerised
• paper-based
• prepared for daily, weekly, monthly or annual timeframes
• to-do lists
• wall-mounted planning boards
• work diary.

*Clients* may include:

• building supervisors
• company management
• fund managers
• fund providers
• government and legal instruments or agencies
• institutions
• insurers
• internal and external property groups
• legal advisers
• private investors
• property agents
• property owners
• risk assessors.

*Communication channels* may include:

• direct line supervision paths
• lateral supervision paths
• organisational communication protocols and procedures
• organisational networks.

*Asset register* may include:

• air conditioning
• cleaning
• heating
• security systems
• telecommunications systems
• utilities
• ventilation
Maintenance strategies may relate to:

- vertical services
- waste management.
- cleaning
- electrical
- emergency lighting
- evacuation
- fire lighting
- garden
- housekeeping
- painting
- pests
- plumbing
- sanitary disposal
- security
- vertical movement
- waste disposal
- weather proofing.

Communication techniques may include:

- active listening
- clear presentation of options
- consultation methods
- culturally inclusive and sensitive engagement techniques
- questioning to clarify and confirm understanding
- seeking feedback
- two-way interaction
- using language and concepts appropriate to cultural differences
- verbal or non-verbal language.

Evaluation methods could be qualitative or quantitative and may include:

- checklists
- cost data analysis
- expert and peer review
- interviews
- observation
- questionnaires
- review of quality assurance data.

Business equipment and technology may include:

- data storage devices
- email
- facsimile machines
- internet, extranet and intranet
- photocopiers
- printers
- scanners
- software applications, such as databases and word applications
- work computers.

CPPDSM6002A Conduct a property investment feasibility study

Modification History
Not Applicable

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to conduct an assessment of investment feasibility. It requires the ability to identify objectives and techniques to undertake the study, use valid and reliable research techniques to analyse information, and report study findings and conclusions.

The unit may form part of the licensing requirements for persons engaged in property operations and development in those States and Territories where these activities are regulated.

Application of the Unit

Application of the unit This unit of competency supports the work of those involved in conducting assessments of investment feasibility.

Licensing/Regulatory Information

Employability Skills Information

Employability skills The required outcomes described in this unit of competency contain applicable facets of employability skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged, will assist in identifying employability skills requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Establish study requirements. | 1. Aims and objectives of investment feasibility study are clearly established according to client and organisational requirements.  
1.2 Study objectives and time lines are negotiated and agreed in consultation with relevant people.  
1.3 Relevant documentation and legislative requirements are gathered and reviewed to identify critical requirements of the study.  
1.4 Initial comparisons with similar properties are made to allow effective comparison with client expectations according to organisational requirements.  
1.5 Situations requiring specialist advice are identified and support is sought as required according to organisational requirements.  |
| 2 Access relevant information. | 2.1 Relevant information is gathered and organised in a format suitable for analysis and interpretation.  
2.2 Market information is accessed and evaluated in terms of validity, reliability and relevance according to identified analysis requirements.  
2.3 Relevant people are consulted to gather additional information using appropriate communication techniques.  
2.4 Environment is scanned to identify and assess factors that may impact on study according to organisational requirements.  
2.5 Reliable methods for gathering information are used according to organisational requirements, making efficient use of time and resources.  |
| 3 Analyse information. | 3.1 Quantitative and qualitative analysis is undertaken of comparative market data using standard financial analysis techniques.  
3.2 Economic trends and market developments are identified and evaluated in terms of potential implications and impact on study objectives.  
3.3 Factors increasing or diminishing investment risk are identified, analysed and discussed with client.  
3.4 Sound reasoning is applied to ensure consistency of interpretations based on available information.  |
| 4 Formulate investment scenarios. | 4.1 Alternative investment scenarios are developed to meet study requirements according to organisational requirements.  |
ELEMENT

PERFORMANCE CRITERIA

4.2 Consultative processes are used to obtain views of industry experts as required.

4.3 Scenarios are verified against prescribed criteria and analysed to minimise subjective assessment.

4.4 Sensitivity analysis is performed on data to identify degree of convergence within identified industry and market benchmarks.

4.5 Property trends and market conditions are identified and evaluated against study requirements.

5 Document feasibility study.

5.1 Feasibility study is presented in appropriate format, style and structure using suitable business equipment and technology.

5.2 Report is prepared and distributed to relevant people within agreed timeframes according to organisational requirements.

5.3 Conclusions are documented that are verifiable, current and sufficiently detailed to meet identified client and organisational requirements.

5.4 Information is securely maintained with due regard to client confidentiality, and legislative and organisational requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills:

- communication skills to negotiate client requirements and consult with industry experts and other relevant people
- computing skills to access the internet and web pages, prepare and complete online forms, lodge electronic documents and search online databases
- interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and varying physical and mental abilities
- literacy skills to interpret written and oral information
- organisational skills to plan and schedule time lines and objectives and to manage project processes
- problem solving skills to determine factors that may affect property markets and evaluate risk
REQUIRED SKILLS AND KNOWLEDGE

- research skills to source, analyse and interpret property and market information
- technical skills to use software for planning and scheduling tasks, use financial and assessment software and spreadsheets, and access market information.

Required knowledge and understanding:

- alternative property uses
- building control legislation, codes and relevant Australian standards
- business and industry property networks
- current property and investment market
- investment risk factors and relationship to return expectations
- limitations of work role, responsibility and professional abilities
- OHS issues and requirements
- organisational and professional procedures, ethical practices and business standards
- project assessment methods
- relevant federal and state or territory legislation and local government regulations related to:
  - anti-discrimination
  - consumer protection
  - environmental issues
  - equal employment opportunity (EEO)
  - financial probity
  - franchise and business structures
  - industrial relations
  - OHS
  - privacy
  - property sales, leasing and management
- sources of industry and market information
- types of property markets
- value management.

Evidence Guide

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment
This unit of competency could be assessed through practical demonstration of conducting an assessment of
investment feasibility. Targeted written (including alternative formats where necessary) or verbal questioning to assess the candidate's underpinning knowledge would provide additional supporting evidence of competence. The demonstration and questioning would include collecting evidence of the candidate's knowledge and application of ethical standards and relevant federal, and state or territory legislation and regulations. This assessment may be carried out in a simulated or workplace environment.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- analysing market information to identify economic trends, market developments and risk factors
- documenting and presenting investment feasibility study using appropriate business equipment and technology
- formulating investment scenarios against industry benchmarks
- knowledge of organisation's practices, ethical standards and legislative requirements associated with conducting an assessment of investment feasibility
- sourcing documentation and information through consultation to establish study aims and objectives, and make initial comparisons of similar properties
- sourcing market and environmental information to identify factors affecting study.

Context of and specific resources for assessment

Resource implications for assessment include:

- a registered provider of assessment services
- assessment materials and tools
- candidate special requirements
- competency standards
- cost and time considerations
- suitable assessment venue and equipment
- workplace documentation.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the language and literacy capacity of the candidate and the work being performed.
Validity and sufficiency of evidence require that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision of competence only taken at the point when the assessor has complete confidence in the person's competence
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence
- where assessment is for the purpose of recognition (RCC/RPL), the evidence provided will need to be current and show that it represents competency demonstrated over a period of time
- assessment can be through simulated project-based activity and must include evidence relating to each of the elements in this unit.

In all cases activity and must include evidence relating to each of the where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge. Questioning will be undertaken in such a manner as is appropriate to the language and literacy levels of the candidate and any cultural issues that may affect responses to the questions, and will reflect the requirements of the competency and the work being performed.
Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

**Investment** may relate to:
- concepts and plans
- strategies and placement of capital in property for investment
- productive use of property and assets
- customer service outcomes.

**Clients** may include:
- financial institutions
- fund managers
- individuals
- internal and external property groups
- investment organisations.

**Organisational requirements** may be outlined and reflected in:
- access and equity principles and practice guidelines
- business and performance plans
- complaint and dispute resolution procedures
- goals, objectives, plans, systems and processes
- legal and ethical requirements and codes of practice
- mission statements and strategic plans
- OHS policies, procedures and programs
- policies and procedures in relation to client service
- quality and continuous improvement processes and standards
- quality assurance and procedure manuals.

**Relevant people** may include:
- accountants
- agents
- clients
- government personnel
- interested parties
- legal representatives
- management and colleagues
- members of industry associations
- taxation specialists.

**Relevant documentation** may relate to:
- building codes
- current and planned property or site developments
- deposited, survey and other plans and maps
- depreciation schedules
- land title and zoning
- leasing rates
- legal status
- management policy and procedures
- marketing services
- performance of comparable properties
- permits
- rates notices
- sales information
- taxation papers
- tenancy and other contracts or leases.

**Legislative requirements** may be outlined and reflected in:

- Australian standards
- general duty of care to clients
- home building requirements
- privacy requirements
- relevant federal, and state or territory legislation that affects organisational operation, including:
  - anti-discrimination and diversity
  - environmental issues
  - EEO
  - industrial relations
  - OHS
- relevant industry codes of practice covering the market sector and industry, financial transactions, taxation, environment, construction, land use, native title, zoning, utilities use (water, gas and electricity), and contract or common law
- strata, community and company titles
- tenancy agreements
- trade practices laws and guidelines.

**Client expectations** may relate to:

- immediate capital gains
- long-term capital gains.

**Specialist advice** may be sought from:

- architects
- bankers and financiers
- developers
- investment consultants
- land economists
- members of industry associations
- planners
- real estate agents
Information sources may include:

- solicitors
- taxation and accounting practitioners
- valuers.

**Analysis** may include:

- computer modeling
- examination of cash flows and other financial projections
- examination of collected data
- quantitative and qualitative analysis
- probability analysis
- time series recognition.

**Communication techniques** may include:

- active listening
- clear presentation of options
- consultation methods
- culturally inclusive and sensitive engagement techniques
- questioning to clarify and confirm understanding
- seeking feedback
- two-way interaction
- using language and concepts appropriate to cultural differences
- verbal or non-verbal language.

**Comparative market data** may include:

- best practice information
- national and international benchmarking
- inter-organisation comparison data.

Factors that may influence complexity of feasibility study may include:

- constraints on use
- existing land use and ownership
- government zoning and restrictions
- project financing
- staging of investment or development
- structure of leases
- type and number of tenants.

**Risk** may relate to:

- asset allocation and investment spread
- borrowing risk
- gearing
- economics
• lifestyle choices
• market and property sector risks, including:
  • fluctuations in economic cycle
  • interest rates
  • stock market
• organisational risk
• risk factors and client return expectations
• volatility of income and capital.

Consultative processes may include:
• face-to-face meetings
• telephone, facsimile and written communication.

Benchmarks may include:
• building operational costs
• business strategy parameters
• economic parameters
• financial constraints
• historical operational costs
• industry published building occupation data
• market expectations
• research data
• statutory costs.

Market conditions may relate to:
• availability of alternatives
• business confidence
• economic conditions
• level of competition.

Business equipment and technology may include:
• computers
• data storage devices
• email
• facsimile machines
• internet, extranet and intranet
• photocopiers
• printers
• scanners
• software applications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills:

- analytical skills to interpret documentation, evaluate plan, analyse risk and estimate costings and budget needs
- communication skills to include relevant people in the planning process, discuss issues that may impact on others and receive feedback
- computing skills to access the internet and web pages, prepare and complete online forms, lodge electronic documents and search online databases
- interpersonal skills to obtain feedback that enables a review and evaluation of plan and to relate to people from a range of social, cultural and ethnic backgrounds and varying physical and mental abilities
- leadership skills to take a leading role in a variety of situations and pursue new challenges and opportunities
- literacy skills to access and interpret relevant information and prepare required documentation and information for those involved in implementation activities
- problem solving skills to identify potential barriers to implementation of the plan and establish contingencies
- research skills to collect reliable and valid information and match forecasting models and techniques with specific asset or facility requirements
- technical skills to design facilities or asset management plan, schedule tasks and report outcomes.

Required knowledge and understanding:

- building services and operation methods and practices
- financial analysis and forecasting principles
- impact analysis and investment scenario planning
- industry benchmarks for maintenance procedures
- industry performance benchmarks, including use and application of value analysis and benchmarking techniques
- long-range and annual facility planning techniques and practices
REQUIRED SKILLS AND KNOWLEDGE

- organisational and professional procedures, ethical practices and business standards
- organisational quality systems, such as recording systems and strategic planning processes
- principles and practices of performance measurement, including review and evaluation procedures, processes and techniques
- principles and processes of objective setting
- relevant federal and state or territory legislation and local government regulations related to:
  - anti-discrimination
  - consumer protection
  - environmental issues
  - equal employment opportunity (EEO)
  - financial probity
  - franchise and business structures
  - industrial relations
  - OHS
  - privacy
  - property sales, leasing and management.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment

This unit of competency could be assessed through practical demonstration of developing and implementing a facilities management plan. Targeted written (including alternative formats where necessary) or verbal questioning to assess the candidate's underpinning knowledge would provide additional supporting evidence of competence. The demonstration and questioning would include collecting evidence of the candidate's knowledge and application of ethical standards and relevant federal, and state or territory legislation and regulations. This assessment may be carried out in a simulated or workplace environment.

Critical aspects for assessment and evidence required to demonstrate

A person who demonstrates competency in this unit must be able to provide evidence of:
competency in this unit

- conducting a life cycle assessment and planning appropriate investment and disposal strategies for incorporation into facilities management plan
- determining facilities and asset management requirements using industry benchmarks and risk assessment strategies
- evaluating the facilities management plan and making recommendations for immediate action or modification of the plan
- identifying resource requirements, communicating roles and responsibilities and designing an implementation strategy for the plan
- knowledge of organisation's practices, ethical standards and legislative requirements associated with developing and implementing facilities management plans
- preparing a facilities management plan incorporating quality systems and reporting procedures.

Context of and specific resources for assessment

Resource implications for assessment include:

- a registered provider of assessment services
- assessment materials and tools
- candidate special requirements
- competency standards
- cost and time considerations
- suitable assessment venue and equipment
- workplace documentation.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the language and literacy capacity of the candidate and the work being performed.

Validity and sufficiency of evidence require that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision of competence only taken at the point when the assessor has complete confidence in the person's competence
- all assessment that is part of a structured learning experience must include a combination of direct, indirect
and supplementary evidence

- where assessment is for the purpose of recognition (RCC/RPL), the evidence provided will need to be current and show that it represents competency demonstrated over a period of time
- assessment can be through simulated project-based activity and must include evidence relating to each of the elements in this unit.

In all cases activity and must include evidence relating to each of the where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge. Questioning will be undertaken in such a manner as is appropriate to the language and literacy levels of the candidate and any cultural issues that may affect responses to the questions, and will reflect the requirements of the competency and the work being performed.
Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

**Facilities may include:**
- car parking
- child care centres
- community facilities
- educational facilities
- meeting places
- offices
- security facilities
- sport and recreation venues.

**Relevant people may include:**
- agents
- clients
- colleagues
- designated OHS representatives
- emergency personnel
- engineers and technicians
- government personnel
- installers
- legal representatives
- members of industry associations
- property owners
- site personnel
- subcontractors
- supervisors
- technical experts
- tenants
- tradespeople.

**Industry benchmarks may relate to:**
- discounted cash flows
- employment rates
- industry association performance index
- inflation rate
- internal rates of return
- life cycle costings
- published vacancy factors
Assets may be static or dynamic and include:

- tenancy mix.
- buildings
- business and marketing contracts
- equipment
- furniture
- goodwill
- land
- property
- vehicles.

Organisational requirements may be outlined and reflected in:

- access and equity principles and practice guidelines
- business and performance plans
- complaint and dispute resolution procedures
- emergency and evacuation procedures
- employer and employee rights and responsibilities
- goals, objectives, plans, systems and processes
- legal and ethical requirements and codes of practice
- mission statements and strategic plans
- OHS policies, procedures and programs
- policies and procedures in relation to client service
- policies and procedures relating to own role and responsibility
- quality and continuous improvement processes and standards
- quality assurance and procedure manuals
- records and information systems and processes.

Legislative requirements may be outlined and reflected in:

- Australian standards
- codes of practice covering the market sector and industry, financial transactions, taxation, environment, construction, land use, native title, zoning, utilities use (water, gas and electricity), and contract or common law
- consumer protection
- environmental and zoning laws affecting access security, access and property use
- freedom of information relevant federal, and state or territory legislation that affects organisational operation, including:
  - OHS
  - environmental issues
  - EEO
  - industrial relations
  - anti-discrimination and diversity
- home building requirements
Facilities management plan may include:

- local regulations and by-laws
- privacy laws applying to owners, contractors and tenants
- public health
- quality assurance and certification requirements
- strata, community and company titles
- tenancy agreements
- trade practices laws and guidelines.

Quality assurance goals and strategies may relate to:

- asset management process and practice recommendations
- building and engineering maintenance plans
- environment plans and guidelines
- funding strategies
- life cycle management plans
- long-term capital and maintenance financial forecasts
- performance benchmarking recommendations and measurement processes
- planning guidelines
- quality standards
- risk management processes and practices
- utilities plans and infrastructure such as energy, water and sewerage.

Life cycle analysis may include:

- computer modelling
- examination of cash flows and other financial projections
- quantitative and qualitative analysis
- probability analysis
- time series recognition.
Information relating to implementation of facilities management plan may include:

- a formal structure against which progress can be evaluated
- acquisition and disposal strategies
- budgets and timetables that enable the commitment of resources at appropriate points
- consultation strategies to involve stakeholders
- contingency plans to cater for changes or significant difficulties
- objectives, scope and expected benefits
- quality assurance procedures
- specifications
- transition plans.

Communication channels may include:

- direct line supervision paths
- lateral supervision paths
- organisational communication protocols and procedures
- organisational networks.

Roles and responsibilities may be influenced by:

- codes of conduct
- job description and employment arrangements
- organisational policies relevant to work role
- skills, training and competencies
- supervision and accountability requirements, including OHS
- team structures.

Feedback strategies may include:

- clients and their legal representatives
- management and colleagues
- documentation and reports
- formal and informal communication
- regular meetings.

Evaluation methods could be qualitative or quantitative and may relate to:

- checklists
- cost data analysis
- expert and peer review
- interviews
- observation
- questionnaires
- review of quality assurance data.

Unit Sector(s)

Unit sector Property development, sales and management
Competency field

Competency field  Property operations and development
CPPFES2006A Prepare for installation and servicing operations

Modification History
Revised unit
Element structure and performance criteria expanded to reflect workplace requirements
Skills and knowledge requirements and the range statement updated
Unit based on PRMPFES06C Prepare for installation and servicing operations

Unit Descriptor
This unit of competency specifies the outcomes required for a service technician in the field to select and use tools and equipment to install and service fire protection equipment, systems and products. It also covers access to information given in relevant Australian standards to carry out servicing procedures. Knowledge of the legal and regulatory framework relating to installation and servicing operations is required, as all preparatory work must be completed according to relevant legislative, industry and organisational requirements, including policies and procedures relating to occupational health and safety (OHS), ozone depleting substances (ODS) and synthetic greenhouse gases (SGG). The unit supports one or more extinguishing agent handling licences prescribed under the Ozone Protection and Synthetic Greenhouse Gas Management Act 1989.

Application of the Unit
This unit of competency supports fire service technicians involved in non-trade installation or servicing of fire protection equipment.

Licensing/Regulatory Information
Different states and territories may have regulatory mechanisms that apply to this unit. Candidates are advised to check for regulatory limitations.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Apply rules and regulations to service operations.
   1.1 Requirements of relevant rules and regulations are confirmed and applied to work procedures.
   1.2 Knowledge of ODS and SGG emission and legislative and industry requirements is applied when preparing for installation and servicing operations.
   1.3 Potential and actual breaches of legislative and industry requirements are identified and action is taken according to organisational policies and procedures and ODS and SGG requirements.

2. Use Australian standards to access information in relation to installation and servicing procedures for fire protection equipment.
   2.1 Current Australian standards are identified according to fire protection equipment installation and servicing procedures.
   2.2 Information is accessed according to required work procedures.
   2.3 Key principles from Australian standards relating to work procedures are interpreted and legislative, organisational and customer requirements are met.

3. Manage service vehicle.
   3.1 Safety of service vehicles is monitored according to organisational requirements and manufacturers’ specifications.
   3.2 Relevant items are safely stored according to organisational policies and procedures, and load carrying capacity of the service vehicle.
   3.3 Motor vehicles are driven and maintained according to
organisational requirements.

4 Prepare work area for installation or servicing procedure.

4.1 Surface and surrounding work area are assessed for hazards.

4.2 Intended work area is prepared for installation or servicing procedure according to organisational requirements and OHS policies and procedures.

5 Identify, select and use tools and equipment effectively to perform installation and servicing procedures on fire protection equipment.

5.1 Relevant tools and equipment are identified to suit the required installation or servicing procedure.

5.2 Hardware for product installation is identified that is suitable to specific building surface or particular servicing procedure.

5.3 Relevant tools and equipment for installation or servicing procedure are used according to organisational requirements, and ODS, SGG and OHS policies and procedures.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- language and literacy skills to access and use information
- observation skills to:
  - identify hazards in the work area in preparation for service operation
  - identify and remove debris in work area caused by installation or servicing operation
- planning and organising skills to:
  - estimate time to complete activities
  - prioritise tasks
- skills to work safely when:
  - selecting and using equipment
  - selecting suitable fixing (hardware) for building surface to support items being fixed according to manufacturers’ technical documents for the hardware
  - using tools and equipment

Required knowledge

- action to take when a breach of health, safety or other policy occurs
- appropriate tools and equipment to select for fire protection equipment installation and servicing operations
- awareness of on-site work permit requirements
- definition of terms used in Australian standards, such as:
  - commentary
  - informative
  - referenced document
  - shall
  - should
- federal, state or territory legislation that affects organisational operations, including:
  - anti-discrimination and diversity
  - equal employment opportunity
- implications of not applying legislative requirements to job functions
- key features of legislation, regulations, codes and standards applicable to fire protection equipment installation and servicing procedures, including:
  - purpose, function and structure of Australian standards
  - Building Code of Australia (BCA)
  - occupancy permits
• service manuals and bulletins from manufacturers
• licence requirements for handling ODS and SGG agents
• maintenance requirements for hand and power tools and equipment, including basic daily maintenance procedures for service vehicle
• methods for:
  • converting basic units of measurement and pressure
  • holding work when using power tools
  • using detection equipment for finding hidden utilities
  • using liquid adhesives for attaching location signs
  • preventing ODS and SGG emissions as specified in code of practice
• reasons for preventing ODS and SGG emissions
• reasons and methods for ensuring vehicle stock levels are constantly maintained
• safety requirements for using tools and equipment
• types and purposes of relevant hardware items
• types of electrical safeguards used to protect persons and property
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>This unit of competency could be assessed by observation of practical demonstration of preparations for installation and servicing operations.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Critical aspects for assessment and evidence required to demonstrate competency in this unit</td>
<td>A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified in this unit. In particular the person should demonstrate the ability to:</td>
</tr>
<tr>
<td></td>
<td>• locate, interpret and apply relevant information, standards and specifications</td>
</tr>
<tr>
<td></td>
<td>• comply with site safety plan, OHS regulations and ODS and SGG regulations (where required) and state and territory legislation applicable to workplace operations</td>
</tr>
<tr>
<td></td>
<td>• comply with organisational policies and procedures, including quality requirements</td>
</tr>
<tr>
<td></td>
<td>• communicate and work effectively and safely with others</td>
</tr>
<tr>
<td></td>
<td>• in a minimum of two different settings:</td>
</tr>
<tr>
<td></td>
<td>• adhere to safety procedures during preparation procedures</td>
</tr>
<tr>
<td></td>
<td>• complete workplace housekeeping requirements</td>
</tr>
<tr>
<td></td>
<td>• create records and documentation</td>
</tr>
<tr>
<td></td>
<td>• demonstrate knowledge of the BCA, occupancy permits and service manuals and bulletins from manufacturers</td>
</tr>
<tr>
<td></td>
<td>• identify and interpret Australian standards relevant to installation and servicing operations</td>
</tr>
<tr>
<td></td>
<td>• identify, select and use tools, equipment and hardware required to perform installation and servicing operations</td>
</tr>
<tr>
<td></td>
<td>• identify risk reduction measures</td>
</tr>
<tr>
<td></td>
<td>• identify, select and assemble hardware</td>
</tr>
<tr>
<td></td>
<td>• prepare work area for installation and servicing operations</td>
</tr>
<tr>
<td></td>
<td>• manage service vehicles.</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards’ requirements. Resource implications for assessment include:

- actual or simulated work environment
- necessary tools, specialist equipment, manuals, spare parts and relevant documentation, including Australian standards
<table>
<thead>
<tr>
<th>Method of assessment</th>
<th>Assessment methods must:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>satisfy the endorsed Assessment Guidelines of the Property Services Training Package</td>
</tr>
<tr>
<td></td>
<td>include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application</td>
</tr>
<tr>
<td></td>
<td>reinforce the integration of employability skills with workplace tasks and job roles</td>
</tr>
<tr>
<td></td>
<td>confirm that competency is verified and able to be transferred to other circumstances and environments.</td>
</tr>
</tbody>
</table>

| Guidance information for assessment | Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support. |
|------------------------------------| Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed. |
|                                    | This unit could be assessed on its own or in combination with other units relevant to the job function, for example: |
|                                    | • CPPFES2004A Identify types of installed fire safety equipment and systems |
|                                    | • CPPFES2005A Demonstrate first attack firefighting equipment. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Rules and regulations may include: | • building surveyor requirements, such as occupancy permit  
• dangerous goods regulations  
• environmental regulations  
• fire protection industry codes of practice  
• licensing arrangements, such as extinguishing agent handling licence  
• ODS and SGG legislation, codes and regulations, such as Ozone Protection and Synthetic Greenhouse Gas Management Amendment Regulations, 1995  
• OHS legislation, codes and regulations  
• relevant Australian standards, such as:  
  • AS 1851 Maintenance of fire protection systems and equipment  
  • AS 2444 Portable fire extinguishers and fire blankets – Selection and location  
  • note: Australian standards are frequently revised and users must always check for currency and amendments  
• relevant federal, state and territory building Acts, regulations and codes, including the BCA  
• other relevant legislation relating to fire protection equipment, including:  
  • international shipping codes  
  • marine codes for different Australian States  
• requirements of Australian petroleum industry. |
|-----------------------------------------------|
| Requirements may be confirmed with: | • colleagues  
• managers  
• supervisors  
• team leaders. |
| Work procedures may include: | • assignment instructions  
• equipment manufacturers’ requirements  
• instructions from colleagues, supervisors and managers  
• personal protective equipment (PPE) requirements  
• reporting and documentation requirements  
• specific customer requirements  
• work instructions to prevent the emission of ODS and SGG in the workplace. |
### ODS and SGG extinguishing agents may include:

Note list format:
**product name** (other names) **use**

Check the latest amendments to the Ozone Protection and Synthetic Greenhouse Gas Management Act for the current list of ODS and SGG extinguishing agents.

<table>
<thead>
<tr>
<th>ODS and SGG extinguishing agents commonly used in Australia:</th>
</tr>
</thead>
<tbody>
<tr>
<td>- FM200 (FE-227 Heptafluoropropane, HFC-227ea) used as a total flooding extinguishing agent and as a replacement for Halon 1301</td>
</tr>
<tr>
<td>- Halon 1211 (BCF, Halon 1211 BCF, Bromochlorodifluoromethane) used as a streaming agent – requires a special permit in Australia</td>
</tr>
<tr>
<td>- Halon 1301 (BTM, Halon 1301 BTM, Bromotrifluoromethane) used as a total flooding agent – requires a special permit in Australia</td>
</tr>
<tr>
<td>- NAF-P-III (HCFC Blend C) used as a streaming agent</td>
</tr>
<tr>
<td>- NAF-P-IV (HCFC Blend E) used as a streaming agent</td>
</tr>
<tr>
<td>- NAF-S-III (HCFC Blend A) used as a total flooding agent</td>
</tr>
<tr>
<td>- SF6 (Sulfurhexafluoride) used as an inerting agent in sealed high voltage switchgear</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>ODS and SGG extinguishing agents <strong>not commonly</strong> used in Australia:</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Blitz III (HCFC Blend D) used in flooding systems</td>
</tr>
<tr>
<td>- CFC-11 (Trichlorofluoromethane) may be found as a propellant in some powder fire extinguishers (this product is banned in Australia but may be found on incoming foreign vessels)</td>
</tr>
<tr>
<td>- FC-2-1-8 (CEA-308) used in flooding systems</td>
</tr>
<tr>
<td>- FC-3-1-10 (CEA-410) used in flooding systems</td>
</tr>
<tr>
<td>- FC-5-1-14 (CEA-614) used as a streaming agent</td>
</tr>
<tr>
<td>- FE-13 (Trifluoromethane, HFC-23) used as a total flooding agent</td>
</tr>
<tr>
<td>- FE-241 (Chlorotetrafluoroethane, HCFC-124) used as a total flooding agent for non-occupied spaces and as a streaming agent</td>
</tr>
<tr>
<td>- FE-25 (Pentafluoroethane, HFC-125) used in inerting and explosion suppression applications</td>
</tr>
<tr>
<td>- FE-36 (Hexafluoropropane, HFC-236fa) used in portable fire extinguishers – is a replacement for Halon 1211 and Halon 1301</td>
</tr>
<tr>
<td>- FM100 (HBFC-22B1) used in portable fire extinguishers</td>
</tr>
<tr>
<td>- Halon 2402 (Dibromotetrafluoroethane) limited use in military systems – requires a special permit in Australia</td>
</tr>
<tr>
<td>- Halotron I (HCFC Blend B or HCFC-123) used as a total flooding agent and streaming agent</td>
</tr>
<tr>
<td>- Halotron II (blend of HFC-143a and HFC-125) used as a total flooding agent and as a replacement for Halon 1301</td>
</tr>
</tbody>
</table>
| Potential and actual breaches of legislative and industry requirements may include: | • actions by fire protection technicians, such as:
| | • failing to:
| | • carry out work procedures correctly
| | • complete documentation accurately
| | • report a system or component fault or malfunction to appropriate personnel
| | • making alterations to procedures, equipment or systems without prior authorisation from an approved authority
| | • performing:
| | • unauthorised work
| | • work without appropriate qualification(s) or training
| | • working in an unsafe manner
| | • documentation anomalies observed by fire protection technicians, such as:
| | • incorrect or incomplete information or documentation
| | • missing documentation
| | • signed by unauthorised personnel
| | • equipment or system is identified as no longer fit for purpose, due to:
| | • component or system faults or malfunctions
| | • changes to:
| | • building structure
| | • site usage or occupancy
| | • protected asset
| | • fire protection equipment or systems not matching ‘as built’ or installation drawings.
| Action may include: | • advising customer
| | • documenting non-compliance
| | • making equipment safe
| | • reporting, as required.
| Organisational policies and procedures may be located in quality assurance and/or procedures manuals and relate to: | • documentation and information systems and processes
| | • legal and organisational policies and guidelines, including personnel practices and guidelines outlining work roles, responsibilities and delegations
| | • legislation relevant to service operations
| | • ODS and SGG policies, procedures and programs

- HCFC-22 (Chlorodifluoromethane) used as a propellant in some powder fire extinguishers (this product is banned in Australia but may be found on incoming foreign vessels)
- HFC-134a (Unsymmetric tetrafluoroethane) used as a propellant in some powder fire extinguishers.
- OHS policies, procedures and programs
- using electronic job scheduling and communication devices.

**Australian standards** are:
- often referenced in state or federal legislation
- published documents developed by technical committees representing the stakeholders
- set out specifications and procedures designed to ensure that a material, product, method or service is fit for its purpose and consistently performs or is performed in the way intended.

**Fire protection equipment** may include:
- delivery lay flat fire hoses
- dry powder fire-suppression systems
- fire alarm monitoring systems
- fire and smoke control features of heating, ventilation and air conditioning systems
- fire blankets and containers
- fire detection systems
- fire hose reels
- fire hydrant installations
- fire pumpsets
- fire sprinklers
- fixed aerosol fire-extinguishing systems
- foam fire-suppression systems
- gaseous fire-suppression systems
- medium and high velocity water spray systems
- passive fire and smoke containment systems
- portable fire extinguishers
- portable foam-generating equipment
- pyrogenic fire-suppression systems
- smoke and heat alarms
- sound and intercom warning systems
- water mist fire-suppression systems
- wet chemical fire-suppression systems
- wheeled fire extinguishers.

**Customer requirements** may include:
- confirming or varying service instructions
- copy or details of occupancy permit
- following sign-in and sign-out procedures for entry to or exit from premises
- providing non-routine or urgent services
- providing routine services
- providing written or verbal confirmation of services provided and future maintenance schedule
- sighting work permits.

**Hazards** may include:
- environmental, such as improper use of hazardous materials and
<table>

procedures may include:

- labels
- nozzles
- pressure indicators
- seals and gaskets
- service tags
- trigger pins
- valves
- hand tools, including:
  - hammers
  - pliers
  - screwdrivers
  - spanners
  - spirit levels
- manual-handling aids, including:
  - hand trucks
  - hooks
  - lifting magnets and lifting straps
  - suction grips
  - trolleys
  - wheelbarrows
- non-licensed mechanical-handling aids, including:
  - cranes
  - hoists
  - manually-operated forklifts and pallet trucks
- power tools, including:
  - battery powered drills
  - hammer drills
  - nail guns
- servicing tools and equipment, including:
  - hydrostatic test equipment
  - recharging and pressurising equipment
  - safety equipment
  - scales
  - service tag punch.

**Hardware** relevant to the wall surface and type of product to be installed or serviced may include:

- bolts
- double-sided tape
- explosive powered fasteners
- hanging brackets
- identifying signs
- liquid adhesives
- locks
- locksets
- nails
- plugs
- screws.

**Building surface** may include:
- autoclaved aerated concrete (AAC) wall, such as:
  - Besser concrete block
  - Hebel block wall
  - brick wall
  - concrete
  - plasterboard
  - rendered brick
  - steel sheeting
  - structural steel members
  - tiled wall.

Not applicable.
CPPFES2025A Inspect, test and maintain gaseous fire-suppression systems

Modification History
Revised unit
Unit updated and equivalent to PRMPFES25C Inspect, test and maintain gaseous fire suppression systems

Unit Descriptor
This unit of competency specifies the outcomes required to complete mechanical inspection, testing and maintenance tasks on installed gaseous fire-suppression systems.

Application of the Unit
This unit of competency supports fire protection technicians responsible for inspecting, testing and maintaining gaseous fire-suppression systems. This unit does not apply to any installation, replacement, maintenance and repair functions that are restricted to licensed trades or occupations (subject to relevant state and territory regulations).

Licensing/Regulatory Information
Work in this area must be completed according to relevant legislative, industry, customer and organisational requirements, including policies and procedures relating to occupational health and safety (OHS), and where needed, to ozone depleting substances (ODS) and synthetic greenhouse gases (SGG) emissions.
The unit supports one or more extinguishing agent handling licences prescribed under the Ozone Protection and Synthetic Greenhouse Gas Management Act 1989.
Different states and territories may have regulatory mechanisms that apply to this unit.
Candidates are advised to check for regulatory limitations.
This unit does not cover all the requirements of AS 1851 Maintenance of fire protection systems and equipment.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Apply rules and regulations to service operations.
   1.1 Requirements of relevant *rules and regulations* are confirmed and applied to *work procedures*.
   1.2 Knowledge of *ODS and SGG materials* and legislative and industry requirements is applied when inspecting and testing gaseous fire-suppression systems.
   1.3 Knowledge of operation of fire protection systems is applied to determine system *key functional requirements* and operation within design limitations.
   1.4 *Compliance requirements are checked* and *action is taken* according to *organisational policies and procedures*.

2 Research layout and components of gaseous fire-suppression system to be inspected.
   2.1 Relevant *gaseous fire-suppression system information* is gathered.
   2.2 Gaseous fire-suppression system application and method of operation are identified.
   2.3 Gaseous fire-suppression system *components* are identified and located on *installation drawings*.
   2.4 *Isolation devices* and interface controls to other systems are identified and located on installation drawings.

3 Prepare to inspect, test and maintain gaseous fire-suppression
   3.1 Necessary *work permits* are obtained prior to entering customer premises.
   3.2 Relevant persons and occupants are advised of intended tests and associated procedures.
3.3 System and surrounding work area are assessed for hazards and relevant precautions are taken.

3.4 Relevant tools, equipment and testing devices are identified and assembled according to work procedures and organisational requirements.

3.5 Alarm signalling equipment (ASE) is switched to test mode in back-to-base facilities.

3.6 Equipment is physically isolated to ensure testing or maintenance procedures do not cause discharge of extinguishing agent.

3.7 Equipment and interface controls to other systems are electrically isolated to ensure no alarms or actions are unduly generated.

3.8 Test equipment is installed and calibrated to verify operation of components and system.

4 Inspect and test installed gaseous fire-suppression system.

4.1 System components are identified and located on site, and exact correspondence of system layout to installation drawings is verified and anomalies reported.

4.2 Mechanical inspection tasks specified for maintenance schedule periods in relevant maintenance information are safely completed.

4.3 Mechanical test tasks specified for maintenance schedule periods in relevant maintenance information are safely completed.

4.4 Inspection and testing results are recorded and faulty equipment is reported according to organisational and legislative requirements.

4.5 Relevant documentation is completed according to organisational and customer requirements.

5 Conduct preventive maintenance on installed gaseous fire-suppression system.

5.1 Mechanical preventive maintenance tasks specified for maintenance schedule periods and described in relevant maintenance information are safely completed.

5.2 Faulty equipment is repaired or replaced according to organisational, legislative and customer requirements.

# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>This unit of competency could be assessed by observation of at least two different practical demonstrations of inspecting, testing and maintaining gaseous fire-suppression systems at customers’ premises.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Critical aspects for assessment and evidence required to demonstrate competency in this unit</td>
<td>A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified in this unit. In particular the person should demonstrate the ability to: • locate, interpret and apply relevant information, standards and specifications • comply with OHS and ODS and SGG regulations (where required), and state and territory legislation applicable to workplace operations • comply with organisational policies and procedures, including quality requirements • communicate and work effectively and safely with others. Competency must be demonstrated in a minimum of two different settings, including: • identifying potential hazards and risks • identifying risk-reduction measures • adhering to safety procedures during inspect, test and maintain procedures • identifying installed gaseous fire-suppression systems • identifying and locating system components • identifying, selecting and using tools, equipment and materials effectively to perform inspect, test and maintain procedures on an installed gaseous fire-suppression system • matching installed system to installation drawings • identifying isolation devices and interface controls to other systems • switching alarm signalling equipment to test mode • physically isolating equipment and gaseous fire-suppression systems • electrically isolating equipment and interface controls to other systems • installing and calibrating test equipment • completing specified mechanical inspection tasks, documenting</td>
</tr>
</tbody>
</table>
results and reporting faulty equipment
- completing specified mechanical test tasks, documenting results and reporting faulty equipment
- completing specified mechanical preventive maintenance tasks, repairing or replacing faulty equipment, and documenting results
- reinstating system to operational state
- completing workplace housekeeping requirements.

| Context of and specific resources for assessment | Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards’ requirements. Resource implications for assessment include:
| - access to customer premises or a simulated workplace environment
| - assessment documentation
| - necessary tools, specialist equipment, manuals and relevant documentation, including ODS and SGG policies and work procedures
| - training and assessment record books. |

| Method of assessment | Assessment methods must:
| - satisfy the endorsed Assessment Guidelines of the Property Services Training Package
| - include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
| - reinforce the integration of employability skills with workplace tasks and job roles
| - confirm that competency is verified and able to be transferred to other circumstances and environments. |

| Guidance information for assessment | Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.
Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.
This unit could be assessed on its own or in combination with other units relevant to the job function. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Key functional requirements** relate to interpreting the system

- gaseous flooding discharge time and holding time, and factors that can effect these key design requirements, including:
- nozzle location
| Functions within design limitations, such as:                           | • openings in protected enclosure  
|                                                                 | • orifices  
|                                                                 | • pipe blockages  
|                                                                 | • system is total flooding or local gaseous system suppression of fire mechanism in relation to fire triangle  
|                                                                 | • understanding of environmental and occupational hazards caused by gaseous agents. |

| Checking system compliance requirements may include:                  | • applying inspection, test and survey requirements according to Australian standards  
|                                                                 | • reviewing documentation to verify that installed systems comply with relevant rules and regulations. |

| Action may include:                                                  | • advising customer  
|                                                                 | • documenting non-compliance  
|                                                                 | • making equipment safe  
|                                                                 | • reporting, as required. |

| Organisational policies and procedures may be located in quality assurance and procedures manuals relating to: | • documentation and information systems and processes  
|                                                                 | • legal and organisational policies and guidelines, including personnel practices and guidelines outlining work roles, responsibilities and delegations  
|                                                                 | • legislation relevant to service operations  
|                                                                 | • ODS and SGG policies, procedures and programs  
|                                                                 | • OHS policies, procedures and programs  
|                                                                 | • use of electronic job scheduling and communication devices. |

| Gaseous fire-suppression systems may include:                        | • synthetic gaseous fire-extinguishing agents (liquefied), such as:  
|                                                                 | • ODS and SGG materials  
|                                                                 | • Novec 1230  
|                                                                 | • inert gaseous fire-extinguishing agents (non-liquefied), such as:  
|                                                                 | • Inergen  
|                                                                 | • Argonite  
|                                                                 | • nitrogen  
|                                                                 | • carbon dioxide. |

| Gaseous fire-suppression system information may include:             | • as installed drawings  
|                                                                 | • Australian standards  
|                                                                 | • design drawings  
|                                                                 | • manufacturers’ manuals. |

| Components may include:                                            | • actuators:  
|                                                                 | • mechanical  
|                                                                 | • pyrotechnic  
|                                                                 | • solenoid  
|                                                                 | • fire alarm system interface components, such as:  
|                                                                 | • anti-tamper switches |
- Gaseous system controls and indicators on control and indicating equipment (CIE), such as fire indicating panels (FIP) approved to:
  - AS 1603 Automatic fire detection and alarm systems
  - AS 4428 Fire detection, warning, control and intercom systems – control and indicating equipment
- Positional monitoring switches
- Pressure switches
- Remote gas control points
- Warning system equipment, such as:
  - Alarm bells
  - Warning lights and strobes
  - Warning speakers.

**Installation drawings** may include:
- Installation drawings that meet the requirements of AS 4214 Gaseous fire extinguishing systems, and fire alarm standards:
  - In AS 1670.1 Fire detection, warning, control and intercom systems – System design, installation and commissioning – Fire
  - In AS 1670.4 Fire detection, warning, control and intercom systems – System design, installation and commissioning – Sound systems and intercom systems for emergency purposes
- Including:
  - ‘for construction’ drawings
  - ‘as installed’ or ‘as built’ drawings.

**Isolation devices** may include:
- CIE, including:
  - FIP
  - Gas control panels
  - Mechanical isolation devices
  - Pneumatic isolation devices.

**Work permits** may include permits to:
- Ensure that specific OHS requirements are met before entering a work site
- Enter a restricted area within a work site
- Enter a work site
- Enter a work site at specific times.

**Hazards** may include:
- Environmental hazards, such as improper use of ODS and SGG, hazardous materials and other chemicals
- Environmental risks from ODS and SGG emissions that could be caused by:
  - Conducting interface tests between actuators, CIE and fire alarm system during inspect, test and maintain procedures
  - Installing and removing container valve assembly, manifold
connection components and actuators
- servicing and maintaining container valve assemblies
- transporting, storing and manual handling ODS and SGG containers
- equipment in a work site
- ergonomic, such as incorrect manual-handling methods
- hazards associated with electrical or mechanical faults
- obstructive, such as blocked access to emergency entry or exit points
- people in a work site
- sources of potential harm
- situations with a potential to cause loss
- work methods, plans and procedures.

### Customer requirements may include:
- confirming or varying service instructions
- following sign-in and sign-out procedures for entry to or exit from premises
- providing non-routine or urgent services
- providing routine services
- sighting work permits
- written or verbal confirmation of services provided and future maintenance schedule.

### Mechanical preventive maintenance tasks may include:
- actions to complete routine mechanical maintenance tasks according to AS 1851, such as:
  - checking operation of mechanical container actuator and lubricating as necessary
  - checking operation of remote mechanical release system and lubricating as necessary
  - checking operation of automatic mechanical release system and lubricating as necessary
  - replacing pyrotechnic container actuator that will exceed its listed lifetime prior to next scheduled maintenance
  - cleaning dampers and nozzles that are subject to deposit of contaminants, such as cooking oil, hot wax, etc.
- actions to conduct non-routine maintenance, such as general isolation to CIE so that building works can be done, then resetting systems after works are completed.

### Reinstall process may involve:
- confirming all interface actuators are isolated and appropriate signage, documentation and lock-off are in place
- removing transport caps on actuator outlets, plugs and locking devices according to manufacturer and organisational requirements
- re-installing pneumatic actuators and pilot and slave tubes and fittings according to finalised design documentation and installation drawings
- checking pneumatic actuator and pilot and slave tubes connection are free from kinks and physically checking for tightness
- re-installing electrical and mechanical actuators according to finalised design documentation and installation drawings
- physically checking tightness of electrical and mechanical actuators, and that they are correctly set to operate
- re-installing manual actuators according to finalised design documentation and installation drawings
- physically checking tightness of manual actuators, and that they are correctly set to operate with safety device engaged
- activating all interfaced actuators and removing signage, documentation and lock-off for functional testing
- advising relevant persons that system is fully operational and providing appropriate technical, maintenance or handover instructions on operation of system
- leaving work site clean and tidy with materials disposed of or recycled according to state or territory legislative and industry requirements.

### Unit Sector(s)

Fire protection equipment

### Custom Content Section

Not applicable.
Modification History

Revised unit
Unit updated and equivalent to PRMPFES43A Prevent ozone depleting substance and synthetic greenhouse gas emissions

Unit Descriptor
This unit of competency specifies the outcomes required to identify and describe agreements, protocols, legislation, regulations, codes of practice and handling licences developed to reduce ozone layer depletion and global warming.

Application of the Unit
This unit of competency supports individuals responsible for:

- complying with legal, industry, regulatory and licensing requirements relating to ozone depleting substance (ODS) and synthetic greenhouse gas (SGG) extinguishing agents used in fire protection
- considering the impact of work practices in the fire protection industry on ozone layer depletion and global warming
- proposing changes to reduce the risk of accidental emissions that contribute to ozone layer depletion and global warming.

Licensing/Regulatory Information
The unit supports one or more fire protection industry extinguishing agent handling licences (EAHL) prescribed under the Ozone Protection and Synthetic Greenhouse Gas Management Act 1989.
Different states and territories may have regulatory mechanisms that apply to this unit. Candidates are advised to check for regulatory limitations.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. **Apply rules and regulations to the use of ODS and SGG extinguishing agents.**
   
   1.1 Requirements of relevant *rules and regulations* are confirmed and applied to *work procedures* to prevent ODS and SGG emissions.
   
   1.2 *Compliance requirements are checked* and *action* is taken according to organisational policies and procedures, ODS and SGG policies and procedures, and best practice requirements.

2. **Identify ODS and SGG handling licences, trading authorisations and usage permits.**
   
   2.1 Types of ODS and SGG *extinguishing agent handling licences*, licence requirements and *entitlements of licensees* are identified.
   
   2.2 Extinguishant trading authorisations are identified.
   
   2.3 Halon special permit usage requirements are identified.

3. **Apply an understanding of ozone layer depletion and global warming.**
   
   3.1 Role and functions of *ozone layer* are identified and explained.
   
   3.2 Factors involved with, and effects of, *global warming* are identified and described.
   
   3.3 *ODS and SGG extinguishing agents* used in fire protection industry are identified by type.
   
   3.4 *Effect of ozone depletion and global warming* on human health, environment and fire protection industry work practices is described.
   
   3.5 Relevant fire protection industry ODS and SGG work practices are identified.
3.6 Improvements to ODS and SGG work practices are identified and proposed to reduce the risk of accidental emissions.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- language, literacy and numeracy skills to:
  - communicate with others clearly and concisely, verbally and in writing
  - read and comply with work industry regulations and codes of practice
  - interpret information
- initiative and enterprise skills to:
  - seek advice on license requirements
  - apply understanding of ozone layer depletion and global warming to change and improve fire protection industry work practices
  - identify and act upon learning opportunities
- technology skills to use technology to access information

Required knowledge

- effect of ozone layer
- actions to take where a breach of ODS and SGG policies and procedures occurs
- effect of:
  - ODS and SGG emissions on ozone depletion and global warming
  - ozone depletion and global warming on environment and human health
  - factors involved in global warming
  - implications of not applying ODS and SGG legislative requirements to the workplace
- key features of:
  - legislation, regulations and standards applicable to ozone protection in the fire protection industry
  - fire protection industry codes of practice
  - ODS and SGG substances used in the fire protection industry
  - ODS and SGG EAHL features and requirements, authorisations and permit requirements
  - relevant federal, state or territory legislation that affects organisational operations
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>This unit of competency could be assessed by oral or written questioning covering:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• underpinning knowledge of the effects of ODS and SGG emissions and current arrangements</td>
</tr>
<tr>
<td></td>
<td>• workplace examples of action taken to reduce risk of emissions and responses to potential or actual breaches of legislation.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified in this unit.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>In particular the person should demonstrate the ability to: [\begin{itemize} \item apply understanding of ozone layer depletion and global warming for: \item discuss the effect of ODS and SGG emissions on the ozone layer and global warming \item describe the impact of ozone depletion and global warming on human health and the environment \item assess impact on fire protection industry work practices \item propose changes to fire protection industry work practices to meet ODS and SGG legal requirements \item take action to respond to potential and actual breaches of ODS and SGG regulations \item locate, interpret and explain: \item ODS and SGG legal requirements for handling extinguishing agents in the fire protection industry \item EAHL types, associated responsibilities, usage permits and trading authorisations \item agreements, protocols, regulatory requirements, fire protection industry code of practice, and Australian standards relevant to EAHL. \end{itemize}]</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th>Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards’ requirements.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Resource implications for assessment include: [\begin{itemize} \item assessment documentation \item necessary legislation and regulatory documents, manuals, textbooks and other relevant documentation \end{itemize}]</td>
</tr>
</tbody>
</table>
### Method of assessment

<table>
<thead>
<tr>
<th align="left">Training methods must:</th>
</tr>
</thead>
<tbody>
<tr>
<td align="left">• satisfy the endorsed Assessment Guidelines of the Property Services Training Package</td>
</tr>
<tr>
<td align="left">• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application</td>
</tr>
<tr>
<td align="left">• reinforce the integration of employability skills with workplace tasks and job roles</td>
</tr>
<tr>
<td align="left">• confirm that competency is verified and able to be transferred to other circumstances and environments.</td>
</tr>
</tbody>
</table>

### Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

This unit could be assessed on its own or in combination with other units relevant to the job function.

---

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Rules and regulations may include:**

- dangerous goods regulations
- environmental regulations
- fire protection industry codes of practice
- licensing arrangements, such as EAHL
- manufacturers’ system manuals
- ODS and SGG legislation, codes and regulations, including penalties and policing
- OHS legislation, regulations and codes
- other relevant legislation relating to fire protection equipment, including:
  - international shipping codes
| Requirements may be confirmed with: | • colleagues  
• managers  
• supervisors  
• team leaders. |
|-------------------------------------|----------------------------------------------------------|
| Work procedures may include:        | • assignment instructions  
• equipment manufacturers’ requirements  
• instructions from colleagues, supervisor or manager  
• personal protective equipment requirements  
• reporting and documentation requirements  
• specific customer requirements. |
| Checking compliance requirements may include ensuring that: | • persons trading in ODS and SGG hold the appropriate trading authorisation or ODS and SGG permit  
• scope of work to be undertaken is covered by the appropriate license. |
| Action may include:                 | • advising customer  
• documenting non-compliance  
• making equipment safe  
• reporting, as required. |
| Types of extinguishing agent handling licence include: | • control systems installation, commissioning and decommissioning  
• fixed system installation and decommissioning  
• fixed system testing and maintenance  
• portable fire extinguisher maintenance  
• recovery, reclamation, fill and recycling  
• warehouse maintenance. |
| Entitlements of licensees include:  | • portable fire extinguisher maintenance licence entitles holder:  
  • to charge and recharge a portable fire extinguisher with non-ODS and SGG agent  
  • note: a reclaim and refill licence is required to charge or recharge a portable extinguisher with ODS or SGG  
  • repair the extinguisher valve  
  • fixed system installation and decommissioning licence entitles |
holder to:
- install and decommission a gaseous fire-extinguishing system (fire protection equipment) including to:
  - install and disconnect actuation devices (mechanisms) to and from container valves
  - install and disconnect gaseous agent containers
  - install and disconnect interconnections to other gaseous system containers
  - install and disconnect ancillary equipment connections to manifold and pipework
  - attach and remove transport equipment, such as valve outlet and actuator port caps, plugs and locking devices installed to prevent accidental discharge
  - commission actuation control devices set to operate and engage safety devices as needed and decommission these devices
- fixed system testing and maintenance licence entitles holder to:
  - test and maintain a gaseous fire-extinguishing system (fire protection equipment), including to:
    - test actuation release systems
    - disconnect and reconnect actuation devices (mechanisms)
    - disconnect and reconnect interconnections to other gaseous system containers
    - disconnect and reconnect ancillary equipment connections from containers to manifold and pipework
    - test actuation devices (mechanisms)
    - perform tests and maintenance on any fire detection and alarm system, including any remote operation panel and actuation and control system that interfaces with or forms part of a gaseous fire-extinguishing system
    - perform tests and maintenance on gaseous agent containers and ancillary equipment connections from containers to manifold and pipework
- recovery, reclamation, fill and recycling licence entitles holder to:
  - recover, reclaim, fill and recycle an extinguishing agent into and from a fire extinguisher and gaseous fire-extinguishing system container, from and to a bulk agent container
- warehouse maintenance licence entitles holder to:
  - monitor for leakage stocks of extinguishing agent bulk agent containers in a warehouse and, as needed, to transfer extinguishing agent from a leaking storage container
  - control systems installation, commissioning and
decommissioning licence entitles holder to:
- install, commission and decommission a fire detection and alarm system, including any remote operation panel and actuation and control system that interfaces with or forms part of a gaseous fire-extinguishing system.

**Ozone layer** facts include:
- composed of ozone (O₃), which is a form of oxygen in which the oxygen molecule contains three atoms of oxygen instead of the usual two
- ozone forms less than 0.4 parts per million of the atmosphere
- about 90% of ozone is in upper part of atmosphere (stratosphere)
- most ozone is in the layer from 20 to 25 km above the earth’s surface.

**Global warming** involves:
- carbon dioxide found in small quantities (about 350 parts per million) in the atmosphere
- carbon dioxide trapping infra red (heat) radiation and warming the atmosphere – the greenhouse effect.

**ODS and SGG extinguishing agents** may include:

<table>
<thead>
<tr>
<th>Note list format: product name (other names) use</th>
<th>Check the latest amendments to the Ozone Protection and Synthetic Greenhouse Gas Management Act for the current list of ODS and SGG extinguishing agents.</th>

<td>- FE-13 (Trifluoromethane, HFC-23) used as a total flooding</td>
<td></td>
</tr>
</tbody>
</table>
agent
- FE-241 (Chlorotetrafluoroethane, HCFC-124) used as a total flooding agent for non-occupied spaces and as a streaming agent
- FE-25 (Pentafluoroethane, HFC-125) used in inerting and explosion suppression applications
- FE-36 (Hexafluoropropane, HFC-236fa) used in portable fire extinguishers – is a replacement for Halon 1211 and Halon 1301
- FM100 (HBFC-22B1) used in portable fire extinguishers
- Halon 2402 (Dibromotetrafluoroethane) limited use in military systems – requires a special permit in Australia
- Halotron I (HCFC Blend B or HCFC-123) used as a total flooding agent and streaming agent
- Halotron II (blend of HFC-143a and HFC-125) used as a total flooding agent and as a replacement for Halon 1301
- HCFC-22 (Chlorodifluoromethane) used as a propellant in some powder fire extinguishers (this product is banned in Australia but may be found on incoming foreign vessels)
- HFC-134a (Unsymmetric tetrafluoroethane) used as a propellant in some powder fire extinguishers.

**Effect of ozone depletion and global warming on human health and the environment may include:**
- changes to work practices, including those in the fire protection industry
- constraints on:
  - aquatic ecosystems
  - human immune system
- increased:
  - incidence of photochemical smog
  - risk of:
    - cataracts
    - skin cancer
  - inhibited growth of plants
  - reduced production of agriculture.

**Unit Sector(s)**

Fire protection equipment
Custom Content Section

Not applicable.
CPPFES2047A Inspect and test control and indicating equipment

Modification History
Revised unit
Unit updated and equivalent to PRMPFES47A Inspect and test control and indicating equipment

Unit Descriptor
This unit of competency specifies the outcomes required to complete routine monthly and six-monthly inspect and test procedures to verify that control and indicating equipment (CIE) for a fire alarm system functions as intended. The unit involves working safely, isolating and resetting CIE, conducting compliance tests, visually inspecting, identifying non-compliance defects, and fulfilling mandatory reporting requirements.

Application of the Unit
This unit of competency supports fire protection technicians responsible for inspecting CIE and routinely testing their operational functions to ensure that fire alarm systems are working as intended.

Licensing/Regulatory Information
The unit supports one or more extinguishing agent handling licences (EAHL) prescribed under the Ozone Protection and Synthetic Greenhouse Gas Management Act 1989. Licence to practise: The skills and knowledge described in this unit do not require an electrical licence or an Australian Communications and Media Authority cabling licence to practise.
Service technicians are not permitted to undertake any installation, replacement, maintenance and repair functions that are restricted to licensed trades or occupations (subject to relevant state and territory regulations).
Different states and territories may have regulatory mechanisms that apply to this unit. Candidates are advised to check for regulatory limitations.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan to conduct routine monthly or six-monthly inspect and test operations on CIE.

1.1 Occupational health and safety (OHS) policies and procedures for a given work area are obtained and reviewed.

1.2 Established OHS requirements, risk control measures for ozone depleting substance (ODS) and synthetic greenhouse gas (SGG) emission, and organisational requirements are followed in preparation for maintenance activity.

1.3 Safety hazards are noted, and established risk control measures for on-site work are implemented.

1.4 Work permits are organised prior to entering customer premises.

1.5 Relevant persons are consulted to coordinate work effectively with other work site staff.

1.6 Locations of system components and materials are determined from specifications and installation drawings.

1.7 Inspection and test procedures are arranged to suit CIE according to legislative and industry requirements, Australian standards, job schedule and manufacturers’ instructions.

1.8 Documentation needed to conduct tests is confirmed according to work procedures and job requirements.

1.9 Tools, equipment and test devices are checked for correct operation and safety according to work procedures and job requirements.
## Inspect CIE

1. **ODS, SGG and OHS policies and procedures are followed and risk control measures are applied when inspecting CIE.**

2. **CIE functions to be used to conduct routine tests according to relevant Australian standard, are identified in manufacturers’ instructions.**

3. **Alarm zone circuits, plant and other system interfaces to be isolated to allow conduct of maintenance activity are identified according to OHS, ODS and SGG extinguishing agent emission requirements and work procedures.**

4. **Circuits and actuators to be isolated are identified.**

5. **Visual inspections are conducted according to relevant Australian standard for monthly and six-monthly testing.**

6. **CIE inspection results are validated against requirements according to relevant Australian standard.**

## Test CIE

1. **ODS, SGG and OHS policies and procedures are followed and risk control measures are applied when testing CIE.**

2. **Circuits, actuators, back-to-base facilities and other system interfaces are isolated according to work procedures.**

3. **Alarm zone circuits, plant and other system interfaces are confirmed as isolated to make sure system cannot be activated during testing.**

4. **Monthly and six-monthly tests are performed according to AS 1851, with CIE and components checked to confirm functionality according to manufacturers’ instructions, system finalised design documentation and organisational requirements.**

5. **Methods for dealing with unexpected situations are discussed with relevant persons and documented.**

6. **Approval of authorised relevant persons is obtained in order to deal safely with unexpected situations.**

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- customer service skills
- language, literacy and numeracy skills to:
  - communicate with others clearly and concisely, verbally and in writing
  - document test results and non-compliance defects neatly and legibly
  - read and comply with work instructions and specifications
  - read and interpret final design documentation and manufacturers’ instructions
  - read and record measurements
- planning and organising skills to:
  - estimate time to complete activities
  - prioritise tasks
- skills to work safely when:
  - applying workplace housekeeping procedures
  - identifying work area hazards in preparation for inspection and test procedures
  - removing debris caused by inspect and test operations in the work area
  - selecting and using tools, equipment and materials for specific tasks
- interpersonal skills to relate to people from a range of social and cultural backgrounds
- technical skills to:
  - check routine service details of fire alarm system components and materials
  - identify and isolate zone circuits, plant, back-to-base facilities, actuators and other system interfaces
  - perform routine monthly and six-monthly inspect and test procedures according to AS 1851 Maintenance of fire protection systems and equipment
  - physically isolate actuators to inhibit operation
  - reset CIE to operational state
  - test actuators for operation and reset to operational state
  - verify compliance and functionality of CIE against monthly and six-monthly schedules in AS 1851 Maintenance of fire protection systems and equipment

Required knowledge

- action to take when a breach of OHS, ODS and SGG or other policy occurs
- awareness of on-site work permit requirements
- common controls and indicators on CIE
- detection and warning components connected to CIE
- environmental conditions that cause actuators to create false alarms
- federal, state or territory legislation that affects organisational operations, including:
  - anti-discrimination and diversity
• equal employment opportunity
• industrial relations issues relevant to inspecting and testing CIE
• key features of legislation, regulations, codes and standards applicable to inspecting and testing CIE, including:
  • implications of not applying legislative requirements to job functions
  • intent of Australian standard AS 1851 Maintenance of fire protection systems and equipment, in relation to CIE inspect and test operations
• key functional differences between a conventional and addressable CIE
• key operational principles of CIE specifically interfaced to fire-suppression systems
• local controls (LC), local control stations (LCS), aural alarms, visual warning devices (VWD) and actuators on fire-suppression systems interfaced to CIE
• methodology used to conduct AS 1851 Maintenance of fire protection systems and equipment, monthly and six-monthly maintenance schedules relevant to conventional and addressable CIE
• operation of actuators
• safety requirements for using tools, equipment and materials
• tools, equipment and materials for conducting monthly and six-monthly inspect and test procedures on CIE according to AS 1851 procedures
• types of electrical safeguards used to protect persons and property
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

This unit of competency could be assessed by observation of at least two practical demonstrations of inspecting and testing CIE specifically interfaced to different fire-suppression systems:

- conventional fire indicating panels and microprocessor analogue fire indicating panel fire detection systems
- fire alarm systems that comply with AS 1670 Fire detection, warning, control and intercom systems – Fire
- emergency warning and intercommunication systems that comply with AS 1670.4 Fire detection, warning, control and intercom systems - System design, installation and commissioning - Sound systems and intercom systems for emergency purposes
- fire alarm systems interfaced with activating mechanisms of a fire-suppression system.

The type of CIE interfaced to fire-suppression systems tested should correlate to the workplace setting of the candidate.

## Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified in this unit.

In particular the person should demonstrate the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations, ODS and SGG regulations (where required), and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- communicate and work effectively and safely with others
- organise work permits
- adhere to safety procedures during inspect and test procedures
- identify risk-reduction measures
- identify and locate system components and materials
- identify, select and use tools, equipment and test equipment
- identify and isolate alarm zone circuits, back-to-base facilities, actuators, plant and other system interfaces
- confirm that circuits, plant and other system interfaces are isolated
- complete mandatory and optional test and verification
<table>

</tr>
</tbody>
</table>
| Maintenance activity may include: | • actions to conduct routine maintenance according to AS 1851 Maintenance of fire protection systems and equipment  
• actions to conduct non-routine maintenance, such as general isolation of a system to allow building works to be completed and subsequent resetting of the system after works completed. |
| Hazards may include: | • environmental, including:  
• improper use of hazardous material and other chemicals  
• improper use or emission of ODS and SGG; emissions may be caused by:  
  • conducting interface tests during commissioning, servicing and decommissioning procedures between container activating mechanisms, CIE and fire alarm system  
  • installing and removing container valve assembly, manifold connection components and activating mechanisms  
  • servicing and maintaining container valve assemblies  
  • transporting, storing and manually handling containers containing ODS and SGG agents  
• ergonomic, such as incorrect manual-handling methods  
• obstructive, such as blocked access to emergency entry or exit points  
• any situation with a potential to cause loss  
• any source of potential harm  
• equipment in a work site  
• hazards associated with electrical or mechanical faults  
• people in a work site  
• work methods, plans and procedures. |
| Work permits may include permits to: | • enter a work site  
• enter a work site at specific times  
• enter a restricted area within a work site  
• ensure that specific OHS requirements are met before entering a work site. |
| Relevant persons may include: | • building owners or nominated representatives  
• colleagues  
• customers  
• managers  
• supervisors |
team leaders.

System components and materials may include:
- colour graphic visual display units (VDUs)
- fire indicator panel components
- mimic panels
- remote indicating equipment, such as:
  - standby batteries
  - sub-fire indicator panels
- fire detection equipment, such as:
  - data gathering control units
  - analogue and analogue addressable smoke, heat and gas detectors
- warning system equipment, such as:
  - alarm bells
  - mimic and location panels
  - warning and strobe lights
  - warning speakers
- fire-suppression systems equipment, such as:
  - actuators, such as pneumatic, electrical, mechanical and manual operation
  - container discharge valves
  - fittings, including hose fittings
  - flexible discharge hoses
  - pilot and slave tubes
- interface equipment to other fire protection and building services systems, such as:
  - door system release controls
  - electrical interface relays and contacts
  - flow switches and pressure switches
  - optical couplers
  - utility shutdown devices
  - solenoid valves and other activating mechanisms
  - interface communication devices, such as:
    - remote public address (PA) system outputs
    - two-way radios
    - warden intercommunication phones.

Installation drawings may include:
- installation drawings that meet the requirements of AS 4214 Gaseous fire extinguishing systems, and AS 1670 Fire detection, warning, control and intercom systems, parts 1 and 4, including:
  - ‘for construction’ drawings
  - ‘as installed’ and ‘as built’ drawings.
Control and indicating equipment may include:

- fire indicating panels (FIP) approved to AS 1603 Automatic fire detection and alarm systems or AS 4428 Fire detection, warning, control and intercom systems – control and indicating equipment
- equipment specifically interfaced to fire-suppression systems:
  - actuation circuit supervision indicators
  - alarm operation requirements
  - discharge time delays
  - dual zone operations
  - inhibit discharge switches
  - inoperative status indicators
  - shutdown operations
  - system operation indicators
  - system warning indications.

Legislative and industry requirements may include:

- building surveyor requirements, such as occupancy permits
- dangerous goods regulations
- environmental regulations, including ODS and SGG legislation, codes and regulations
- fire protection industry codes of good practice
- licensing arrangements, such as EAHL
- manufacturers’ system manuals
- OHS legislation, codes and regulations
- relevant federal, state and territory building Acts, regulations and codes, such as:
  - Ozone Protection and Synthetic Greenhouse Gas Management Act 1989
  - Building Code of Australia (BCA)
- relevant Australian standards, such as:
  - AS 1603 Automatic fire detection and alarm systems
  - AS 1670 Fire detection, warning, control and intercom systems, parts 1 and 4
  - AS 1851 Maintenance of fire protection systems and equipment
  - AS 4214 Gaseous fire extinguishing systems
  - AS 4428 Fire detection, warning, control and intercom systems – control and indicating equipment
- note: Australian standards are frequently revised and users must always check for currency and amendments
- other relevant legislation relating to fire protection equipment, including:
  - international shipping codes
  - marine codes for different Australian States
### Documentation may include:

- corrective action reports
- customer recommendation forms
- equipment recommendation forms
- expense claims
- job cards
- maintenance record system
- manufacturers’ system documentation
- product documentation
- service agreements
- service test record logbooks
- test results and test reports.

### Work procedures may include:

- assignment instructions
- equipment manufacturers’ requirements
- instructions from colleagues, supervisors and managers
- ODS, SGG and OHS requirements
- PPE requirements
- reporting and documentation requirements
- specific customer requirements.

### Tools, equipment and test devices may include:

- hand tools, including:
  - hammers
  - pliers
  - screwdrivers
  - spanners
  - spirit levels
- fire equipment spare parts, including:
  - anti-tamper seals
  - batteries
  - bulbs and globes
  - service tags
- manual-handling aids, including:
  - hand trucks
  - lifting straps
  - trolleys
- power tools, including:
  - battery powered drills
  - hammer drills
- servicing tools and test devices, including:
  - barcode readers
  - electrical multimeters
<table>

</tr>
</tbody>
</table>

**System interfaces** may include:

- building management systems
- building warning systems
- controls for pressurisation systems, air conditioning system shutdowns and smoke spills
- operating signals between CIE and building services systems, such as utility shutdown devices.

**ODS and SGG extinguishing agents** may include:

- ODS and SGG extinguishing agents **commonly** used in Australia:
  - FM200 (FE-227 Heptafluoropropane, HFC-227ea) used as a total flooding extinguishing agent and as a replacement for Halon 1301
  - Halon 1211 (BCF, Halon 1211 BCF, Bromochlorodifluoromethane) used as a streaming agent – requires a special permit in Australia
  - Halon 1301 (BTM, Halon 1301 BTM, Bromotrifluoromethane) used as a total flooding agent – requires a special permit in Australia
  - NAF-P-III (HCFC Blend C) used as a streaming agent
  - NAF-P-IV (HCFC Blend E) used as a streaming agent
  - NAF-S-III (HCFC Blend A) used as a total flooding agent
  - SF6 (Sulfurhexafluoride) used as an inerting agent in sealed high voltage switchgear

- ODS and SGG extinguishing agents **not commonly** used in Australia:
  - Blitz III (HCFC Blend D) used in flooding systems
  - CFC-11 (Trichlorofluoromethane) may be found as a propellant in some powder fire extinguishers (this product is banned in Australia but may be found on incoming foreign vessels)
  - FC-2-1-8 (CEA-308) used in flooding systems
  - FC-3-1-10 (CEA-410) used in flooding systems
  - FC-5-1-14 (CEA-614) used as a streaming agent
  - FE-13 (Trifluoromethane, HFC-23) used as a total flooding agent
  - FE-241 (Chlorotetrafluoroethane, HCFC-124) used as a total
| Actuators (also known as actuation control devices) may include: | • electrical operation: signal generated from CIE panel as part of a fire alarm detection system  
• manual operation: by direct push lever or pull cable system  
• mechanical operation: via signal from local control station or fire detector  
• pneumatic operation: from fire detector (typically heat). |
|---|---|
| Back-to-base facilities include: | • monitoring equipment which is connected by alarm signalling equipment (ASE) from CIE to a communication path (telephone line or radio link) to a monitoring centre  
• monitoring centres can be operated by or on behalf of a fire authority for the purposes of mobilising and directing firefighting resources to the site where the CIE is installed. |
| Finalised design documentation may include: | • documentation that meets the requirements of AS 4214 Gaseous fire extinguishing systems, and AS 1670 Fire detection, warning, control and intercom systems, parts 1 and 4, including:  
• system concentration and calculations  
• technical bulletins  
• material safety data sheets on agents and equipment  
• manufacturers’ information. |

Unit Descriptor

Descriptor

This unit of competency describes the skills and knowledge required to recognise and respond to life threatening emergencies using basic life support measures only.

Application of the Unit

The skills and knowledge described here enable a first aider to provide an initial response to an emergency in line with practised actions, Australian Resuscitation Council (ARC) Guidelines, guidelines of Australian national peak clinical bodies and State/Territory legislation and regulations. Application should be contextualised as required to reflect workplace and community requirements relating to specific risks and hazards and associated injuries. Training Package users should ensure that implementation is consistent with State/Territory requirements for currency.

Elements and Performance Criteria Pre-Content

Elements define the essential outcomes of a unit of competency. The Performance Criteria specify the level of performance required to demonstrate achievement of the Element. Terms in italics are elaborated in the Range Statement.

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Respond in an emergency situation | 1.1 Recognise emergency situation and identify *hazards* to health and safety of self and others  
1.2 Minimise immediate risk to self and casualty health and safety by controlling any hazard in accordance with work health and safety requirements  
1.3 Assess casualty and identify injuries, illnesses and conditions  
1.4 Assess the need for assistance |
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 2. Apply identified first aid procedures | 2.1 Reassure casualty in a caring and calm manner and make comfortable using available resources  
2.2 Determine and explain relevant first aid procedures to provide comfort  
2.3 Seek consent from casualty prior to applying first aid management  
2.4 Respond to the casualty in a culturally aware, sensitive and respectful manner  
2.5 Use *identified first aid procedures* as required in accordance with established first aid principles, ARC Guidelines, guidelines of Australian national peak clinical bodies and State/Territory legislation and regulations  
2.6 Use safe manual handling techniques as required |
| 3. Communicate details of the incident | 3.1 Request ambulance support and/or appropriate medical assistance according to circumstances  
3.2 Accurately convey observation of casualty’s condition and management activities to ambulance services/relieving personnel  
3.3 Adopt a communication style to match the casualty’s level of consciousness  
3.4 Accurately assess and report details of casualty’s physical condition, changes in condition, management and responses to management in line with established procedures  
3.5 Maintain confidentiality of records and information in line with privacy principles and statutory and/or organisation policies |
| 4. Evaluate own performance | 4.1 Seek feedback from *appropriate clinical expert*  
4.2 Recognise the possible psychological impacts on rescuers of involvement in critical incidents  
4.3 Participate in debriefing/evaluation to improve future response and address individual needs |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Essential knowledge:

The candidate must be able to demonstrate essential knowledge required to effectively do the task outlined in elements and performance criteria of this unit, manage the task and manage contingencies in the context of the identified work role.

This includes knowledge of:

- ARC guidelines, guidelines of Australian national peak clinical bodies and State/Territory legislation and regulations, including requirements for currency
- Awareness of stress management techniques and available support
- Basic anatomy and physiology relating to:
  - absence of:
    - normal breathing
    - response/consciousness
  - choking/airway obstruction
  - severe bleeding
  - shock
- Chain of survival
- Duty of care requirements
- First aid procedures for:
  - airway management
  - bleeding control
  - care of unconscious
  - casualty that is unresponsive/unconscious and not breathing normally
  - chest pain
  - infection control as it relates to standard precautions
  - respiratory distress, including asthma
  - severe allergic reaction
  - shock
- How to access emergency response support services/personnel
- Need to be culturally aware, sensitive and respectful
- Own skills and limitations
- Privacy and confidentiality requirements
- Relevant workplace hazards
REQUIRED SKILLS AND KNOWLEDGE

- Understanding of the use of an Automated External Defibrillator (AED), including when to use and when not to

*Essential skills:*

It is critical that the candidate demonstrate the ability to effectively do the task outlined in elements and performance criteria of this unit, manage the task and manage contingencies in the context of the identified work role

This includes the ability to:

- Assess vital signs and response of casualty
- Call an ambulance and/or medical assistance, according to circumstances and report casualty’s condition
- Demonstrate first aid casualty management principles:
  - assess and minimise danger
  - check for response
  - maintain casualty's airway, breathing and circulation
- Demonstrate:
  - consideration of the welfare of the casualty
  - control of external bleeding
  - correct procedures for CPR on a resuscitation manikin (i.e. as per units HLT CPR211A Perform CPR)
  - implementation of standard precautions
  - safe manual handling of casualty
- Identify and minimise hazards to health and safety of self and others in the immediate workplace or community environment
- Plan an appropriate first aid response in line with established first aid principles, ARC Guidelines and guidelines of Australian national peak clinical bodies and State/Territory legislation and regulations and respond to contingencies in line with own skills
- Report details of emergency incident and first aid provided

Evidence Guide

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.
EVIDENCE GUIDE

Critical aspects of assessment:

- The individual being assessed must provide evidence of specified essential knowledge and essential skills
- Competence should be demonstrated working individually and as part of a first aid team.
- Consistency of performance should be demonstrated over the required range of situations relevant to the workplace or community setting
- Currency of knowledge and skills is to be demonstrated in line with ARC Guidelines, guidelines of Australian national peak clinical bodies and State/Territory legislation and regulations

Context and resources required for assessment:

- For assessment purposes, demonstration of skills in CPR procedures requires using a model of the human body (resuscitation manikin) in line with ARC Guidelines
- Demonstration of first aid procedures for severe bleeding must be demonstrated using standard precautions and first aid equipment including trauma dressings

Access and equity considerations:

- All workers in the health industry should be aware of access and equity issues in relation to their own area of work
- All workers should develop their ability to work in a culturally diverse environment
- In recognition of particular health issues facing Aboriginal and Torres Strait Islander communities, workers should be aware of cultural, historical and current issues impacting on health of Aboriginal and Torres Strait Islander people
- Assessors and trainers must take into account relevant access and equity issues, in particular relating to factors impacting on health of Aboriginal and/or Torres Strait Islander clients and communities

Related unit:

- This unit stands alone and incorporates the content of unit HLTCPHR211A Perform CPR
Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Condition of the casualty must include, but is not limited to:
- Severe bleeding
- Absence of:
  - Response/consciousness
  - Normal breathing
- Choking/airway obstruction
- Severe allergic reaction

Identified first aid procedures must include:
- Airway management
- Cardiopulmonary Resuscitation (CPR)
- Control severe bleeding
- Provide assistance with self-administered medications, such as auto-injector, bronchodilator and space device in line with State/Territory legislation and regulations and any available medical/pharmaceutical instructions
- Care of the unconscious person

Resources and equipment are used appropriate to the risk to be met and may include:
- AED (if available)
- Auto-injector
- Bronchodilator and space device
- First aid kit
- Resuscitation mask or barrier

A hazard is:
A source or situation with the potential for harm in terms of human injury or ill-health, damage to property, the environment, or a combination of these
RANGE STATEMENT

Appropriate clinical expert may include:

- Ambulance officer/paramedic
- Appropriately qualified health care professional

Unit Sector(s)

Not Applicable
HLTHIR403C Work effectively with culturally diverse clients and co-workers

Modification History

Unit Descriptor

Descriptor

This unit deals with the cultural awareness required for effective communication and cooperation with persons of diverse cultures

Application of the Unit

Application

Work will be within a prescribed range of functions involving known routines and procedures with some accountability for the quality of outcomes

The workplace context may be:

- Specific community
- Community or regional service
- Department of a large institution or organisation
- Specialised service or organisation

Application of this unit should be contextualised to reflect any requirements, issues and practices specific to each workplace

**Elements and Performance Criteria Pre-Content**

Elements define the essential outcomes of a unit of competency. The Performance Criteria specify the level of performance required to demonstrate achievement of the Element. Terms in italics are elaborated in the Range Statement.

---

**Elements and Performance Criteria**

**ELEMENT**

**PERFORMANCE CRITERIA**

1. **Reflect cultural awareness in work practice**

   1.1 Demonstrate awareness of culture as a factor in all human behaviour by using culturally appropriate work practices
   
   1.2 Use work practices that create a culturally and psychologically safe environment for all persons
   
   1.3 Review and modify work practices in consultation with persons from diverse cultural backgrounds

2. **Accept cultural diversity as a basis for effective workplace and professional relationships**

   2.1 Show respect for cultural diversity in all communication and interactions with co-workers, colleagues and clients
   
   2.2 Use specific strategies to eliminate bias and discrimination in the workplace
   
   2.3 Contribute to the development of workplace and professional relationships based on acceptance of cultural diversity
ELEMENT

3. Communicate effectively with culturally diverse persons

PERFORMANCE CRITERIA

3.1 Show respect for cultural diversity in all communication with clients, families, staff and others

3.2 Use communication constructively to develop and maintain effective relationships, mutual trust and confidence

3.3 Where language barriers exist, make efforts to communicate in the most effective way possible

3.4 Seek assistance from interpreters or other persons as required

4. Resolve cross-cultural misunderstandings

4.1 Identify issues that may cause conflict

4.2 If difficulties or misunderstandings occur, consider the impact of cultural differences

4.3 Make an effort to sensitively resolve differences, taking account of cultural considerations

4.4 Address any difficulties with appropriate people and seek assistance when required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Essential knowledge:

The candidate must be able to demonstrate essential knowledge required to effectively do the task outlined in elements and performance criteria of this unit, manage the task and manage contingencies in the context of the identified work role.

This includes knowledge of:

- Availability of resources and assistance within and external to the organisation in relation to cultural diversity issues
- Own cultural conceptions and pre-conceptions and perspective of diverse cultures
- Recognition of cultural diversity in Australian society with many individuals living in
REQUIRED SKILLS AND KNOWLEDGE

- Recognition of cultural influences and changing cultural practices in Australia and its impact on diverse communities that make up Australian society
- Recognition of culture as a dynamic social phenomenon
- Recognition of culture as a range of social practices and beliefs evolving over time
- Recognition of impact of cultural practices and experiences on personal behaviour, interpersonal relationships, perception and social expectations of others
- Recognition of the unique way individuals may experience a culture and respond to past experiences
- Recognition that the word 'normal' is a value-laden, excluding concept that often precludes acknowledgment of the diversity of people, their life experiences and situations
- The principles of equal employment opportunity, sex, race, disability, anti-discrimination and similar legislation and the implications for work and social practices
- The role and use of language and cultural interpreters

Essential skills:

It is critical that the candidate demonstrate the ability to effectively do the task outlined in elements and performance criteria of this unit, manage the task and manage contingencies in the context of the identified work role.

This includes the ability to:

- Apply culturally respectful practices in the workplace and to demonstrate respect and inclusiveness of culturally diverse people in all work practices
- Form effective workplace relationships with co-workers and colleagues of diverse backgrounds and cultures
- Participate in identifying and implementing culturally safe work practices
- Respond respectfully and sensitively to cultural beliefs and practices that may cause harm
- Sensitively and respectfully communicate with persons of diverse backgrounds and cultures
- Use basic conflict resolution and negotiation skills
- Use effective strategies to address and eliminate discrimination and bias in the workplace

Evidence Guide

EVIDENCE GUIDE
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate this competency unit:

- The individual being assessed must provide evidence of specified essential knowledge as well as skills
- This unit is most appropriately assessed in the workplace or a simulated workplace environment under the normal range of work conditions
- Assessment should be conducted on more than one occasion to cover a variety of circumstances to establish consistency
- Holistic assessment of this competency unit is encouraged, to ensure application of these skills in conjunction with specific work functions but the unit may be delivered and assessed independently

Access and equity considerations:

- All workers in the health industry should be aware of access and equity issues in relation to their own area of work
- All workers should develop their ability to work in a culturally diverse environment
- In recognition of particular health issues facing Aboriginal and Torres Strait Islander communities, workers should be aware of cultural, historical and current issues impacting on health of Aboriginal and Torres Strait Islander people
- Assessors and trainers must take into account relevant access and equity issues, in particular relating to factors impacting on health of Aboriginal and/or Torres Strait Islander clients and communities

Range Statement

RANGE STATEMENT
RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Work practices may relate to:

- Dealing with persons of diverse gender, sexuality and age
- Compliance with duty of care policies of the organisation
- Collection and provision of information
- Communication
- Provision of assistance
- Contact with families and carers
- Physical contact
- Care of deceased persons
- Handling personal belongings
- Provision of food services

Work practices that are culturally appropriate would be non-discriminatory and free of bias, stereotyping, racism and prejudice.

Cultural diversity may include:

- Ethnicity
- Race
- Language
- Cultural norms and values
- Religion
- Beliefs and customs
- Kinship and family structure and relationships
- Personal history and experience, which may have been traumatic
- Gender and gender relationships
- Age
- Disability
- Sexuality
- Special needs
RANGE STATEMENT

Communication may be:
- Verbal
- Appropriate gestures and facial and physical expressions
- Posture
- Written
- Signage
- Through an interpreter or other person

Strategies to eliminate bias and discrimination may include:
- Cross cultural work teams
- Cross cultural employee representation on committees
- Workplace free of culturally insensitive literature, posters, signage
- Inclusion in decision-making

</table>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to operate word-processing applications and perform basic operations, including creating and formatting documents, creating tables and printing labels.

Application of the Unit

This unit applies to workers who perform a range of routine tasks in the workplace using fundamental knowledge of word processing under direct supervision or with limited responsibility.

Operating a word-processing application is a core function and essential skill for most businesses.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes of a unit of competency.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</td>
</tr>
</tbody>
</table>
## Elements and Performance Criteria

| 1. Apply OHS practices | 1.1 Use workplace *ergonomic work practices* and strategies  
|                        | 1.2 Organise work area ensuring an *ergonomic work environment*  |
| 2. Create documents    | 2.1 Open word-processing application, create document and add data according to *information requirements*  
|                        | 2.2 Use document templates as required  
|                        | 2.3 Use simple *formatting tools* when creating the document  
|                        | 2.4 Save document to directory  |
| 3. Customise basic settings to meet page layout conventions | 3.1 Adjust page layout to meet information requirements  
|                        | 3.2 Open and view different toolbars  
|                        | 3.3 Change *font format* to suit the purpose of the document  
|                        | 3.4 Change alignment and line spacing according to document information requirements  
|                        | 3.5 Modify margins to suit the purpose of the document  
|                        | 3.6 Open and switch between several documents  |
| 4. Format documents    | 4.1 Use *formatting features* and styles as required  
|                        | 4.2 Highlight and copy text from another area in the document or from another active document  
|                        | 4.3 Insert headers and footers to incorporate necessary data  
|                        | 4.4 Save document in another *file format*  
|                        | 4.5 Save and close document to a *storage device*  |
| 5. Create tables       | 5.1 Insert standard table into document  
|                        | 5.2 Change cells to meet information requirements  
|                        | 5.3 Insert and delete columns and rows as necessary  
|                        | 5.4 Use formatting tools according to style requirements  |
| 6. Add images          | 6.1 Insert appropriate *images* into document and customise as necessary  
|                        | 6.2 Position and resize images to meet document formatting needs  |
| 7. Print documents     | 7.1 Preview document in print preview mode  |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - communicate with peers and supervisors
  - seek assistance and expert advice

- literacy skills to:
  - interpret user manuals and help functions
  - read and write basic workplace documents

- problem-solving skills to address common operational problems when using word-processing applications

- technical skills to:
  - operate a personal computer (PC)
  - use a keyboard to enter text and numerical data.

Required knowledge

- formatting styles and their effect on formatting, readability and appearance of documents
- organisational requirements for ergonomics, such as work periods and breaks
- organisational style guide
- purpose, use and function of word-processing software.
### Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Evidence of the ability to:</th>
</tr>
</thead>
</table>
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | • follow OHS requirements  
• create, open and retrieve documents  
• customise basic settings  
• format documents  
• create tables  
• add text, objects and images  
• save and print documents. |

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th>Assessment must ensure access to:</th>
</tr>
</thead>
</table>
| Assessment must ensure access to:                | • personal computer and printer  
• word-processing software currently used in industry  
• documents detailing organisational style guide or policy and OHS requirements  
• data suitable for use with word-processing packages  
• appropriate learning and assessment support when required. |

Where applicable, physical resources should include equipment modified for people with special needs.

<table>
<thead>
<tr>
<th>Method of assessment</th>
<th>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</th>
</tr>
</thead>
</table>
|                      | • verbal or written questioning to assess candidate’s knowledge of word-processing operations  
• direct observation of candidate creating and formatting documents  
• review of documents prepared by candidate demonstrating word-processing skills, including formatting, tables and images. |

<table>
<thead>
<tr>
<th>Guidance information for assessment</th>
<th>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</td>
</tr>
<tr>
<td>Indigenous people and other people from a non-English speaking background may need additional support.</td>
<td></td>
</tr>
<tr>
<td>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</td>
<td></td>
</tr>
</tbody>
</table>
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>
<tr>
<th>Ergonomic work practices may include:</th>
<th>pause exercises</th>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to connect to the internet, securely send and receive emails, search the internet using web browsers and interact securely and in a socially responsible manner with a range of different internet sites.

Application of the Unit

This unit applies to individuals who use business technology to perform a range of routine tasks in the workplace or home office. They use fundamental knowledge of internet connection requirements, email and web browsers to perform tasks under direct supervision or with limited responsibility.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>

<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes of a unit of competency.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</td>
</tr>
</tbody>
</table>
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>1. Connect to and access the internet</th>
<th>1.1 Connect to the internet through the existing <em>internet connection</em> and confirm functionality</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.2 Open an <em>internet browser</em> and set a home page of personal choice by setting <em>internet options</em></td>
<td></td>
</tr>
<tr>
<td>1.3 Ensure internet <em>browser software security</em></td>
<td></td>
</tr>
<tr>
<td>1.4 Adjust the display of the internet browser to suit personal requirements</td>
<td></td>
</tr>
<tr>
<td>1.5 Modify toolbar to meet user and internet browser needs</td>
<td></td>
</tr>
<tr>
<td>1.6 Access a particular website, note privacy and other conditions of use and retrieve data</td>
<td></td>
</tr>
<tr>
<td>1.7 Use <em>socially responsible behaviour</em> when sharing information on the internet</td>
<td></td>
</tr>
<tr>
<td>1.8 Enter uniform resource locator (URL) in address line of internet browser</td>
<td></td>
</tr>

<tr>
<td>2.5 Determine and set a priority and send the email message</td>
<td></td>
</tr>
<tr>
<td>2.6 Reply to and forward a received message using available features</td>
<td></td>
</tr>
<tr>
<td>2.7 Open and save an attachment to the relevant folder</td>
<td></td>
</tr>
<tr>
<td>2.8 Search for, sort and save email message using available settings</td>
<td></td>
</tr>
<tr>
<td>2.9 Adjust email accounts to restrict and quarantine possible <em>email security</em> problems</td>
<td></td>
</tr>
<tr>
<td>2.10 Print an email message as required</td>
<td></td>
</tr>
</tbody>
</table>
| 3. Search the internet | 3.1 Review organisational guidelines on internet access  
3.2 Open an internet application and locate and access a search engine on the internet and define search expressions based on the data required  
3.3 Enter appropriate key words into the search engine to locate the desired information  
3.4 Refine a search depending on outcomes of the original search  
3.5 Save search expression results and present them in a report according to the information requirements  
3.6 Create a bookmark within the internet browser or a link for the required web page for the key results  
3.7 Save the key results in a bookmark folder  
3.8 Modify the internet browser options for printing and print a web page  
3.9 Close the internet browser |
|---|---|
| 4. Access and use consumer-specific sites on the internet | 4.1 Identify, access and review information-specific sites to gain consumer information  
4.2 Identify and use internet application sites to lodge details and gain access and information  
4.3 Access and use online forms on the internet |
| 5. Undertake online transactions | 5.1 Access an online transaction site  
5.2 Ensure security of transaction site  
5.3 Enter required information into fields on merchant's website  
5.4 Ensure that pop-up dialog boxes, prompts or feedback mechanisms are completed  
5.5 Enter, check and make changes to preferred transaction options  
5.6 Complete online transaction  
5.7 Record and archive receipts according to business processes  
5.8 Close down and leave transaction process |
| 6. Conduct an advanced search | 6.1 Use search tools and advanced search features  
6.2 Use *Boolean search* techniques when required to enhance the search  
6.3 Use multiple or meta-search tools with a range of keywords  
6.4 Use search engines particular to a field of knowledge to refine the outcome  
6.5 Access related virtual community sites and newsgroups and note their objectives and operational arrangements  
6.6 Conduct a search with domain names to refine the search |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7. Use information that has been located | 7.1 Cross-reference information found by using several websites to determine accuracy of information obtained  
7.2 Check date that website was last updated or properties of website to determine currency of information  
7.3 Determine website authority by looking at copyright statements, privacy statements and organisational information  
7.4 Save and print information found in different file forms |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - communicate with peers and supervisors
  - seek assistance and expert advice
  - undertake online transactions
- literacy skills to:
  - compose email messages
  - interpret user manuals and help functions
  - read and interpret basic online documents
  - read and write basic workplace documents
- problem-solving skills to address common operational problems when using web browsers
- research skills to locate varied sources of information online
- technical skills to use:
  - digital device
  - email applications
  - internet search functions
  - peripheral hardware
  - keyboard to enter text into web browsers and email applications.

Required knowledge

- basic technical terminology related to reading help files and prompts
- basic knowledge of copyright and privacy statements
- different types of messages that occur, such as:
  - error messages
  - message to install plug-ins
- different types of search engines
- procedures for using email applications
- procedures for evaluating and assessing the authority, reliability and authenticity of information
- internet search functions
- internet speed, traffic loads related to times of accessing the internet
- internet web browsers
- makeup and structure of internet addresses
- organisational guidelines on internet and email use (web etiquette or netiquette)
- different internet search techniques
- web browser update techniques
- use of key words and bookmarks.
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Evidence of the ability to:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Critical aspects for assessment and evidence required to demonstrate competency in this unit</td>
<td>connect to and access the internet</td>

<tr>
<td></td>
<td>undertake online interactions</td>
</tr>
<tr>
<td></td>
<td>make an informed assessment of the accuracy, currency, authority and reliability of the site and information located.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th>Assessment must ensure access to:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Assessment must ensure access to:</td>
<td>use of PC or digital device with internet</td>
</tr>
<tr>
<td></td>
<td>search engines currently used in industry</td>
</tr>
<tr>
<td></td>
<td>organisational policies on internet usage</td>
</tr>
<tr>
<td></td>
<td>appropriate learning and assessment support when required.</td>
</tr>
</tbody>
</table>

Where applicable, physical resources should include equipment modified for people with special needs.

<table>
<thead>
<tr>
<th>Method of assessment</th>
<th>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>verbal or written questioning to assess candidate’s knowledge of internet access requirements, email features and search engine attributes</td>
</tr>
<tr>
<td></td>
<td>direct observation of candidate accessing the internet, using email, and searching and interacting with consumer sites using advanced search features</td>
</tr>
<tr>
<td></td>
<td>direct observation of candidate undertaking online interactions</td>
</tr>
<tr>
<td></td>
<td>review of search results, including assessment of the accuracy, currency and reliability of the site and information located.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Guidance information for assessment</th>
<th>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</td>
<td></td>
</tr>
<tr>
<td>Indigenous people and other people from a non-English speaking</td>
<td></td>
</tr>
</tbody>
</table>
background may need additional support.
In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Internet connection may include:                           | • 3G or high-speed downlink packet access (HSDPA) cellular network |
|                                                          | • 4G cellular network                                          |
|                                                          | • broadband                                                   |
|                                                          | • cable                                                      |
|                                                          | • dial-up                                                     |
|                                                          | • digital subscriber line (DSL)                               |
|                                                          | • fibre to the ‘x’ (FTTx)                                     |
|                                                          | • high-speed digital subscriber line (HSDSL)                  |
|                                                          | • integrated services digital network (ISDN) network terminating unit (NTU) |
|                                                          | • satellite                                                  |
|                                                          | • wireless modem                                             |
|                                                          | • worldwide interoperability for microwave access (WiMAX).    |

| Internet browser may include:                           | • Firefox                                                   |
|                                                          | • Galleon                                                   |
|                                                          | • Google Chrome                                             |
|                                                          | • Internet Explorer                                         |
|                                                          | • Konqueror                                                 |
|                                                          | • Lynx                                                      |
|                                                          | • Mozilla                                                   |
|                                                          | • Netscape Navigator                                        |
|                                                          | • Opera                                                     |
|                                                          | • Phoenix                                                   |

| Internet options may include:                           | • configuring:                                               |
|                                                          | • history                                                   |
|                                                          | • home page                                                 |
|                                                          | • location of temporary files                                |
|                                                          | • privacy level                                             |
|                                                          | • security level                                            |
|                                                          | • type of connection                                         |

| Browser software                                        | • application enabling                                       |
|                                                        | • cookie handling                                           |
| security may include:                        | • pop-up blocking       |
|                                            | • privacy levels        |
|                                            | • security zones        |
|                                            | • trusted sites.        |
| Socially responsible behaviour may relate to: | • not using obscene, profane, lewd, vulgar, rude, inflammatory or threatening language |
|                                            | • not publishing information that, if acted upon, could cause damage to property or persons, nor publish deliberately false or defamatory information about a person or organisation |
|                                            | • not engaging in personal attacks, including prejudicial or discriminatory attacks, not harass (distress or annoy) another person |
|                                            | • not accessing material that is profane, obscene, pornographic or paedophilic, that promotes illegal acts, or that advocates violence or discrimination |
|                                            | • not sending inappropriate emails |
|                                            | • taking responsibility for protecting personal information by not revealing personal information, including names, addresses, photographs, credit card details and telephone numbers. |
| Organisational guidelines may include:     | • content of emails     |
|                                            | • downloading information and accessing particular websites |
|                                            | • opening mail with attachments |
|                                            | • personal use of emails and internet access |
|                                            | • virus risk (MS Windows OS and Mac OS only). |
| Files may include:                         | • email messages        |
|                                            | • HTML pages            |
|                                            | • music                 |
|                                            | • PDF files             |
|                                            | • pictures              |
|                                            | • text files.           |
| Email security may relate to:              | • taking steps to restrict:  |
|                                            | • malware               |
|                                            | • phishing              |
|                                            | • spam                  |

<td>This Unit first released with <em>ICA11 Information and Communications Technology Training Package version 1.0</em></td>
</tr>
</tbody>
</table>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to operate spreadsheet applications and perform basic operations, including creating and formatting spreadsheet data, incorporating charts and objects, and customising and printing spreadsheets.

Application of the Unit

This unit applies to individuals who perform a range of routine tasks in the workplace using a fundamental knowledge of spreadsheets under direct supervision or with limited responsibility.

The use of spreadsheets for business and mathematical applications is widespread. In some cases, spreadsheets can operate as sophisticated computerised ledgers and enable the collation, manipulation and presentation of complex data.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<tbody>
<tr>
<td>Elements describe the essential outcomes of a unit of competency.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</td>
</tr>
</tbody>
</table>
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1.1 Open spreadsheet application, create spreadsheet files and enter numbers, text and symbols into cells according to information requirements</td>
<td>1.2 Enter <em>simple formulas and functions</em> using cell referencing where required</td>
<td>2.1 Adjust page <em>layout</em> to meet user requirements or special needs</td>
<td>3.1 Use formatting features as required</td>
<td>4.1 Import an object into an active spreadsheet</td>
</tr>
<tr>
<td>1.3 Correct formulas when error messages occur</td>
<td>1.4 Use a range of common tools during spreadsheet development</td>
<td>2.2 Open and view different <em>toolbars</em></td>
<td>3.2 Copy selected formatting features from another cell in the spreadsheet or from another active spreadsheet</td>
<td>4.2 Manipulate imported <em>object</em> by using formatting features</td>
</tr>
<tr>
<td>1.5 Edit columns and rows within the spreadsheet</td>
<td>1.6 Use the auto-fill function to increment data where required</td>
<td>2.3 Change <em>font settings</em> so that they are appropriate for the purpose of the document</td>
<td>3.3 Use <em>formatting tools</em> as required within the spreadsheet</td>
<td>4.3 Create a chart using selected data in the spreadsheet</td>
</tr>
<tr>
<td>1.7 Save spreadsheet to directory or folder</td>
<td>2.4 Change <em>alignment</em> options and line spacing according to spreadsheet <em>formatting features</em></td>
<td>2.5 <em>Format</em> cell to display different styles as required</td>
<td>3.4 Align information in a selected cell as required</td>
<td>4.4 Display selected data in a different chart</td>
</tr>
<tr>
<td></td>
<td>2.6 Modify margin sizes to suit the purpose of the spreadsheets</td>
<td>2.7 View multiple spreadsheets concurrently</td>
<td>3.5 Insert headers and footers using formatting features</td>
<td>4.5 Modify chart using formatting features</td>
</tr>
</tbody>
</table>
5. Print spreadsheet

| 5.1 Preview spreadsheet in print preview mode |
| 5.2 Select basic printer options |
| 5.3 Print spreadsheet or selected part of spreadsheet |
| 5.4 Submit the spreadsheet to *appropriate person* for approval or feedback |

**Required Skills and Knowledge**

*This section describes the skills and knowledge required for this unit.*

**Required skills**

- communication skills to:
  - communicate with peers and supervisors
  - seek assistance and expert advice
- literacy skills to:
  - interpret user manuals and help functions
  - read and write basic workplace documents
- numeracy skills to enter simple formulas into spreadsheet
- problem-solving skills to address common operational problems when using spreadsheet applications
- technical skills to:
  - operate a personal computer (PC)
  - use a keyboard to enter text and numerical data.

**Required knowledge**

- basic technical terminology related to reading help files and prompts
- formatting styles and their effect on formatting, readability and appearance of spreadsheets
- log-in procedures relating to accessing a PC
- purpose, use and function of spreadsheet application.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>

</tr>
<tr>
<td></td>
<td>• documents or information containing data suitable for creating spreadsheets</td>
</tr>
<tr>
<td></td>
<td>• appropriate learning and assessment support when required.</td>
</tr>
</tbody>
</table>
| Where applicable, physical resources should include equipment modified for people with special needs.

<table>
<thead>
<tr>
<th>Method of assessment</th>
<th>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• verbal or written questioning to assess candidate’s knowledge of spreadsheet operations</td>
</tr>
<tr>
<td></td>
<td>• direct observation of candidate creating and formatting spreadsheets</td>
</tr>
<tr>
<td></td>
<td>• review of spreadsheets, including formatting, formulas, objects and images.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Guidance information for assessment</th>
<th>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</td>
</tr>
<tr>
<td></td>
<td>Indigenous people and other people from a non-English speaking</td>
</tr>
</tbody>
</table>
background may need additional support.

In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Simple formulas and functions may include: | addition |
|                                           | division |
|                                           | multiplication |
|                                           | subtraction |
|                                           | application of the above to a series of cells. |

| Tools may include: | help |
|                   | search and replace |
|                   | simple formatting tools |
|                   | spell check |
|                   | undo. |

| Edit may relate to: | adding |
|                    | copying |
|                    | deleting |
|                    | moving |
|                    | pasting |
|                    | selecting. |

| Data may include: | symbols added to the document |
|                  | text added to the document. |

| Layout may include: | display modes |
|                    | orientation |
|                    | size. |

| Toolbars may contain: | buttons |
|                      | menus |
|                      | a combination of both. |

| Font settings may include: | colour |
|                           | size |
|                           | type. |

| Alignment may refer to: | centred |
|                        | justified |
|                        | left |
|                        | right. |

| Formatting features may include: | bold |
|                                  | hyphenation |

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to select, configure and use computer operating systems and basic computer hardware.

Application of the Unit

This unit applies to workers who require the information and communications technology (ICT) skills to select and install operating system software on to a specific hardware configuration. This includes configuring the operating system to work with a variety of hardware peripherals and types of ICT equipment.

The ability to communicate effectively, simplify and solve technical incompatibility conflicts and problems are key components of this ICT support role.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>

<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes of a unit of competency.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</td>
</tr>
</tbody>
</table>
### Elements and Performance Criteria

| 1. Identify operating system and hardware components | 1.1 Determine ICT *organisational requirements* and specifications  
1.2 Identify and select *operating system*  
1.3 Identify appropriate *external hardware components*  
1.4 Identify *internal hardware components* |
|----------------------------------------------------|--------------------------------------------------------------|
| 2. Install and configure operating system and application software with hardware components | 2.1 Install and configure operating system to meet organisational requirements  
2.2 Identify the functions associated with the operating system and associated boot process  
2.3 Configure *power-management settings* to minimise power consumption as an environmentally sustainable measure  
2.4 Use both the graphical user interface and the command line interface to perform basic tasks  
2.5 Install or upgrade *application software* onto the operating system and hardware configuration  
2.6 Determine the relationship between an application program, the operating system and hardware  
2.7 Identify general differences between the different *computer platforms* and their respective operating systems |
| 3. Optimise operating system and hardware components | 3.1 Optimise operating system using included tools or *third-party utilities*  
3.2 Customise the graphical user interface  
3.3 Use techniques unique to the command line interface  
3.4 Set up and configure external hardware components and check functionality  
3.5 Install drivers as appropriate and check functionality |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- **Communication skills to:**
  - communicate with peers and supervisors
  - seek assistance and expert advice
- **Literacy skills to:**
  - interpret user manuals and help functions
  - read and write basic workplace documents
- **Problem-solving skills to address common operational problems when using computer operating systems and operating computer hardware**
- **Technical skills to:**
  - apply user changes for a multi-user operating system
  - configure, use and optimise operating system
  - create users for a multi-user system
  - install and support peripheral devices
  - operate a personal computer (PC)
  - set passwords for different users
  - use PC peripheral hardware.

**Required knowledge**

- **Basic knowledge of current industry-accepted operating system, hardware and software products**
- **Compatibility of an operating system, in respect to other versions**
- **Function of single-user and multi-user operating systems**
- **Interoperability between operating systems**
- **OHS principles and responsibilities, including ergonomic principles to avoid injury associated with using computer systems.**
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>

<tr>
<td>Where applicable, physical resources should include equipment modified for people with special needs.</td>
<td></td>
</tr>
</tbody>
</table>
| **Guidance information for assessment** | Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.  
Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.  
Indigenous people and other people from a non-English speaking background may need additional support.  
In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Organisational requirements may include: | • maintenance procedures  
• OHS procedures  
• security procedures. |
|------------------------------------------|------------------------------------------------|
| External hardware components may include: | • Bluetooth device  
• fax  
• modem  
• keyboard  
• laptop  
• mobile phone  
• monitor  
• mouse  
• multimedia kit  
• PC  
• personal digital assistant (PDA), such as palmtop  
• printer  
• scanner  
• speaker  
• tape cartridge  
• universal serial bus (USB) device  
• wi-fi router. |
| Internal hardware components may include: | • cabling  
• central processing unit (CPU)  
• memory chip  
• motherboard  
• network interface card  
• sound card  
• video display card. |
| Power-management settings after a period of non-use may include: | • automatic power off  
• hibernation settings  
• monitor power-saver settings. |
| Application software may include: | • databases  
• email  
• internet browsers |
- spreadsheets
- system browsers
- word processing.

**Computer platforms may include:**
- Macintosh
- PC
- operating systems used on each.

**Third-party utilities may include:**
- backing up data
- diagnostic tools
- disk scanning
- partitioning and defragmenting
- recovery.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to operate database applications and perform basic operations.

Application of the Unit

This unit applies to individuals who create and design databases using pre-existing data (e.g. documents, spreadsheet data, and data from database tables) or create new data when creating and manipulating databases and tables.

They may provide administrative support working under direct supervision or with limited responsibility.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Elements</th>
<th>Performance Criteria</th>
</tr>
</thead>
</table>
| 1. Create database | 1.1 Open a database application and design a two-table simple relational database incorporating basic *design principles*
| | 1.2 Develop a table with fields and *attributes* according to database usage, as well as user requirements
| | 1.3 Create a primary key and establish an index for each table
| | 1.4 Modify table layout and field *attributes* as required
| | 1.5 Create a *relationship* between the two tables
| | 1.6 Add and modify data in a table according to information requirements
| | 1.7 Add and delete records as required
| | 1.8 Save and close down database to *storage area*
| 2. Customise basic settings | 2.1 Adjust *page layout* to meet user requirements
| | 2.2 Open and view different *toolbars*
| | 2.3 Format *font* as appropriate for the purpose of the database entries
| 3. Create reports | 3.1 Design reports to present data in a logical sequence
| | 3.2 Modify reports to include or exclude additional requirements
| | 3.3 Distribute reports to *appropriate person* in a suitable format
| 4. Create forms | 4.1 Use a wizard to create a simple form
| | 4.2 Open existing database and modify records through a simple form
| | 4.3 Rearrange *objects* within the form to accommodate information requirements
| 5. Retrieve information | 5.1 Access existing database and locate required records
| | 5.2 Create simple query and retrieve required information
| | 5.3 Develop query with multiple criteria and retrieve required information
| | 5.4 Select data and display appropriately
**Required Skills and Knowledge**

*This section describes the skills and knowledge required for this unit.*

**Required skills**

- communication skills to:
  - communicate with peers and supervisors
  - seek assistance and expert advice
- literacy skills to:
  - interpret user manuals and help functions
  - read and write basic workplace documents
- numeracy skills to create simple queries
- problem-solving skills to address inconsistencies in data and issues in database
- technical skills to create a simple database.

**Required knowledge**

- basic database design
- forms, reports and queries for retrieving and displaying information
- relationships between tables (cardinality)
- purpose, use and function of database software.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</table>
In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Design principles may include: | • data layout  
| | • formatting  
| | • naming conventions.  
| Attributes may include: | • data type  
| | • name  
| | • size.  
| Relationship may be: | • one-to-one  
| | • one-to-many  
| | • many-to-many.  
| Storage area may include: | • CD  
| | • DVD  
| | • external hard drive, such as universal serial bus (USB) flash drive  
| | • internal hard drive  
| | • web area.  
| Page layout may include: | • landscape  
| | • portrait.  
| Toolbars may contain: | • buttons  
| | • menus  
| | • a combination of both.  
| Font may include: | • combination of typeface and other attributes:  
| | • pitch  
| | • size  
| | • spacing character  
| | • symbol.  
| Appropriate person may include: | • authorised business representative  
| | • client  
| | • supervisor.  
| Objects may include: | • buttons  
| | • checkboxes  
| | • drop down lists  
| | • option buttons.

<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare the work | 1.1. Work instructions are used to determine job requirements, including: location, type of installation, tolerances, process, finish and quality  
1.2. Installation location and sequence are planned  
1.3. Procedures are determined for checking quality at each stage of the process  
1.4. Workplace health and safety requirements, including personal protection needs, are observed throughout the work  
1.5. Hardware, fittings and attachments are collected  
1.6. Tools and equipment suitable for installation are identified and checked for safe and effective operation  
1.7. Fixing and joining devices are selected in line with work instructions and types of materials  
1.8. Required installation aids are selected and checked for suitability for purpose |
| 2. Complete installation | 2.1. Site is prepared for installation  
2.2. Furnishing products are prepared to site requirements  
2.3. Hand and/or power tools and equipment are used in accordance with workplace requirements, including use of personal protective equipment  
2.4. Fixing methods are undertaken according to site conditions  
2.5. Installed furniture product is checked for compliance with specification  
2.6. Tops and/or appliances are installed in accordance with plans and specifications  
2.7. Hardware and decorative accessories are installed  
2.8. Work is checked against required quality standards |
| 3. Finalise operation  
clean work site | 3.1. Work site is cleaned, hand and/or power tools are checked for serviceable condition, returned and stored in accordance with workplace procedures  
3.2. Unused materials are returned and/or stored  
3.3. Waste and scrap materials are dealt with following workplace procedures |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- collect, organise and understand information related to work orders, installation plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate installation problems, avoid reworking and avoid wastage
- use the limited workplace technology related to the installation, including tools, equipment and measuring devices

### Required knowledge

- the interpretation of plan representation of furniture design
- the preparation of drawings/set-outs
- workflow in relation to furniture production
- identification of hand and/or power tools, materials, equipment, processes and procedures
Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Follow work instructions, operating procedures and inspection practices to:
  - minimise the risk of injury to self or others
  - prevent damage to goods, tools, equipment or products
  - maintain required production output and product quality
- Install four different and significant furnishing products, including at least:
  - one floor mounted, and
  - one wall mounted
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

### Resource Implications

Access to plans, hand and/or power tools, equipment, materials, woodworking machinery, furnishing products and a work area.

### Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

### Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Obtain measurements | 1.1. The purpose of obtaining measurements is clarified and confirmed  
1.2. The most appropriate method of obtaining the measurement is selected and applied  
1.3. Accurate measurements are obtained, confirmed and recorded  
1.4. Calculations required for the measurement or validation are selected and correctly applied  
1.5. Quality assurance requirements, standards and tolerances associated with enterprise operations are recognised and adhered to |
| 2. Draw site layout | 2.1. The intended use of the site is clarified and confirmed  
2.2. A site plan is prepared showing all features and measurements  
2.3. A site elevation is completed showing all features and measurements  
2.4. The details of the proposed furniture products, including all relevant dimensions are incorporated into the plan and elevation  
2.5. Unique and non-complying features which may impact on manufacture and/or installation are highlighted and referred to the appropriate party |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems
- plan and organise activities to avoid any back tracking or workflow interruptions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow
- use mathematical ideas and techniques to correctly complete measurements, calculate area, perimeter, volume, mass, scales and ratios and estimate material requirements
- use pre-checking techniques to anticipate measurement and drawing problems and avoid reworking
- use workplace technology related to measurement and drawing, including tools, equipment, calculators and measuring devices

Required knowledge

- furniture design and planning criteria
- drawing techniques, technologies and processes
- furniture installation methods, criteria and techniques
- structural geometry
- measurement techniques and equipment/tools
- the theory and practice of calculations (addition, subtraction, multiplication, division)
- conventional signs and markings for plans and drawings
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Critical Aspects of Evidence

- Identify the factors relevant to the measurements and drawings
- Communicate effectively to enable accurate calculations, measurements and drawings
- Accurately measure and record particulars for required sector sites and materials
- Draw accurate, scaled plans and elevations relevant to the site using manual or computer-aided methods
- Superimpose the furniture product accurately to scale onto the plan and elevation
- Identify and communicate on measurements and dimensions which may impact on manufacture and/or installation

### Resource Implications

Information on the site and products for measurement and calculation, suitable work area appropriate to the activity, suitable site plans/drawings and/or specifications, and measuring, calculating and recording devices.

### Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

### Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

</table>

| Unit scope | This unit applies to the measurement and drawing of site layout related to the manufacture and installation of furniture, cabinets, glass, soft furnishings, upholstery, picture framing, and floor covering products |
| Drawing | Drawing may be manual or computer aided |
| Measurements | Measurements are to be in metric scale, cover all dimensions of the site and furnishings and involve the use of rulers, tape measures, squares and service detectors. They may involve laser or equivalent technology |
| Critical dimensions that may impact on manufacture and installation include: | - the square of the structure |
| | - angles floor to walls |
| | - walls to ceiling |
| | - vertical walls |
| | - horizontal floor and ceiling |
| | - service locations and critical structural criteria |
| Calculations to include: | - area |
| | - perimeter |
| | - volume |
| | - mass |
| | - scales and ratios (ingredients/elements and triangulation) and require the application of addition |
| | - subtraction |
| | - multiplication and division processes |
| | - Calculations are to be performed both manually and with the aid of a calculator |
| Unit context | - Workplace health and safety requirements may include OH&S legislation, building codes, material safety management systems, hazardous substances and dangerous goods |

- use the limited workplace technology related to fabrication, including tools, equipment and measuring devices

**Required knowledge**

- the types, characteristics, uses and limitations of synthetic solid surface materials
- the interpretation of plan representation of furniture design
- the preparation of drawings and set-outs
- identification of hand and/or power tools, materials, machines, equipment, processes and procedures
- workflow in relation to furniture production
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Critical Aspects of Evidence | • Interpret work order and locate and apply relevant information  
|                            | • Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment  
|                            | • Follow work instructions, operating procedures and inspection processes to:  
|                            |   • minimise the risk of injury to self or others  
|                            |   • prevent damage to goods, equipment or products  
|                            |   • maintain required production output and product quality  
|                            | • Fabricate a minimum of three synthetic solid surface material products, including at least one full benchtop  
|                            | • Work effectively with others  
|                            | • Modify activities to cater for variations in workplace context and environment |

| Resource Implications       | Access to plans, hand and/or power tools, machines, equipment, materials, and a work area. |

| Method of Assessment         | Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.  
|                             | Assessment should be by direct observation of tasks and questioning on underpinning knowledge.  
|                             | Assessment should be conducted over time and may be in conjunction with assessment of other units of competency. |

| Context of Assessment        | Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines. |
## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Synthetic solid surface products | • Synthetic solid surface products are generally acrylic or polyester sheet based materials  
• There are a range of commercially licensed products, including Corian, Aztec, Trezzini and others |
|----------------------------------|------------------------------------------------------------------------------------------|
| Synthetic solid surface products are to include benchtops and may include: | • edges  
• sinks  
• bowls  
• other containers and waterproof wall treatments |
| Unit context | • OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures  
• Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements  
• Work involves reading and interpreting plans, developing set-outs, using hand and/or power tools, equipment and operating machinery |
| Tools and equipment may include, but are not limited to: | • measuring tapes or rulers  
• hammers  
• mallets  
• squares  
• bevels  
• chisels  
• planes  
• hand saws  
• power saws  
• power drills/screwdrivers  
• air compressor and hoses  
• clamps |

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for work | 1.1. Work instructions are used to determine job requirements, including: design, quality, materials, equipment and quantities  
1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work  
1.3. Material for machining is selected and inspected for appropriate quality  
1.4. Procedures are determined for minimising waste material  
1.5. Procedures are identified for maximising energy efficiency while completing the job |
| 2. Set up machines | 2.1. CNC program is set to job requirements  
2.2. Safety equipment, including emergency stops, gauges, guards and controls are checked  
2.3. Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturers’ instructions  
2.4. Machines, cutting tools and jigs are checked for safe and effective operation  
2.5. Trial runs are conducted to check machine operation and quality of finished work  
2.6. Final adjustments are made to CNC programs and equipment according to workplace procedures |
| 3. Operate machines | 3.1. Machines are operated and monitored to ensure product quality and output  
3.2. Waste quantities are checked and minimised  
3.3. Problems with the required work are identified and reported to appropriate persons  
3.4. Items that do not meet quality requirements are repaired, recycled or discarded according to workplace procedures  
3.5. Any authorised changes in working procedures are followed |
| 4. Clean up work area and maintain equipment | 4.1. Material that can be reused is collected and stored  
4.2. Waste and scrap are removed following workplace procedures  
4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with |

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- collect, organise and understand information related to CNC sizing operations, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, compute input data and estimate material requirements
- use pre-checking and inspection techniques to anticipate CNC sizing problems, avoid reworking and avoid wastage
- use the workplace technology related to CNC sizing, including machinery, tools, equipment and measuring devices

**Required knowledge**

- types, characteristics, uses and limitations of CNC sizing machines
- CNC theory, practices and techniques
- characteristics of materials used and uses of products produced
- workflow processes
- procedures for reporting materials, product or equipment faults
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Critical Aspects of Evidence

- Locate, interpret and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection practices to:
  - minimise the risk of injury to self or others
  - prevent damage to goods, equipment or products
  - maintain required production output and product quality
- Identify, set up and operate CNC sizing equipment, including the use of safety cut-outs and guards, to product a range of complex cutting patterns to its full potential
- Conduct operator maintenance on the machine and related equipment
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

### Resource Implications

CNC controlled equipment, standard operating procedures, unprocessed materials.

### Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

### Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.
# Range Statement

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>
<tr>
<th>CNC sizing machines</th>
<th>CNC sizing machines are to include CNC beam saws and may include double end profiling machines</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unit scope</td>
<td>Work involves computer programming skills, reading and interpreting drawings, stock control, setting cutting speeds, computer-aided machining operations, saw and tool maintenance</td>
</tr>
</tbody>
</table>
| Material to be sized is to include: | • solid timber  
• manufactured board  
• laminate  
• solid synthetic materials and plastics |
| Unit context              | • OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures  
• Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements  
• Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the set up and operation of machines  
• Competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components  
| Tools                     | Tools are to include machine-specific tools and may include screwdrivers, hammers and spanners |
| Personal protective equipment | Personal protective equipment is to include that prescribed under legislation, regulations and |

### Required Skills and Knowledge

#### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to CNC machining and processing centre operations, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, compute input data and estimate material requirements
- use pre-checking and inspection techniques to anticipate CNC machining and processing centre problems, avoid reworking and avoid wastage
- use the workplace technology related to CNC machining and processing centre, including machining and processing, tools, equipment and measuring devices

#### Required knowledge

- types, characteristics, uses and limitations of CNC machining and processing centres
- CNC theory, practices and techniques
- characteristics of materials used and uses of products produced
- workflow processes
- procedures for reporting materials, product or equipment faults
Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Critical Aspects of Evidence

- Locate, interpret and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection practices to:
  - minimise the risk of injury to self or others
  - prevent damage to goods, equipment or products
  - maintain required production output and product quality
- Identify, set up and operate CNC machining and processing centre equipment to complete detailed profiling, including:
  - development and application of sub-program
  - development and application of parametric program, and
  - application of CAD/CAM functions
- Conduct operator maintenance on the machining and processing centre equipment
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

### Resource Implications

- CNC controlled equipment, standard operating procedures, unprocessed materials.

### Method of Assessment

- Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.
- Assessment should be by direct observation of tasks and questioning on underpinning knowledge.
- Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

### Context of Assessment

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- research, collect, organise and understand information related to production costing including the relevant technical, commercial, industrial and accounting requirements
- communicate ideas and information to enable clarification of the production and related requirements and to present the outcomes in an appropriate manner
- plan and organise activities to avoid backtracking and re-working of solutions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly estimate and validate labour, materials and on-costs and calculate production costs
- create and apply systematic problem solving techniques to anticipate costing problems, avoid re-working and avoid wastage
- use the workplace technology related to costing, including calculators and measuring devices and computing/computer-aided systems

Required knowledge

- production systems documentation processes
- enterprise costing procedures
- mathematical formulae and processes relevant to costing
- components of labour costs
- enterprise/commercial approach to overhead costs
- enterprise/commercial approaches to warehousing and physical distribution costs
- enterprise information management processes, including storage requirements
### Evidence Guide

</tbody>
</table>

#### Critical aspects of evidence
- Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- For a significant mass production operation, determine the production and product costs using the following or equivalent steps:
  - obtain all information relevant to the determination of costs
  - interpret plans, specifications and instructions for production and materials to be used
  - estimate quantities of materials required
  - determine the types and amount of labour required to complete the work
  - estimate time required to complete the work
  - determine/calculate overheads
  - document the process and outcomes
- Work effectively with others

#### Resource implications
- Access is required to real or appropriately simulated situations involving estimation and costing of production operations and products.
- Access is required to specifications and costs of relevant equipment and materials and information on labour costs and availability, on costs, safety costs, regulations, quality standards, and enterprise procedures.
- Access is required to all necessary facilities and associated equipment, including calculators, computers and relevant software.

#### Method of assessment
- Assessment methods must confirm consistency or the potential for consistency of performance over time and in a range of workplace relevant contexts.
- Assessment should be by direct observation of performance and samples of work outcomes and questioning on underpinning knowledge.
- Assessment may be conducted over time and may be in conjunction with assessment of other units of

Required Skills and Knowledge

REQUISITE SKILL AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

**Required skills**

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise glass sizes for economical cutting and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the limited workplace technology related to the glazing of simple window and door frames

**Required knowledge**

- the qualities and characteristics of glass, including the hazards and handling requirements
- the techniques, methods, materials and process of glazing simple/complex window and door frames
- workplace safety system requirements related to the glazing simple/complex window and door frames
- relevant Australian Standards
- workflow in relation to fitting glass
- characteristics, purpose and operation of tools and equipment used in glazing simple/complex window and door frames
- identification of equipment, processes and procedures
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Critical aspects of evidence

- Interpret work order/job instruction and locate and apply relevant information to glaze/reglaze simple/complex windows and doors
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
  - minimise the risk of injury to self and others
  - prevent damage to goods, equipment and products
  - maintain required production output and product quality
- Glaze the following:
  - timber putty faced and beaded window sashes, including fixed, sliding, double hung, casement and awning sashes
  - metal channel and beaded window sashes, including fixed, sliding, double hung, casement and awning sashes
  - timber putty faced and beaded doors, including fixed, sliding, hinged, pivot and bi-fold doors
  - metal channel and beaded doors, including fixed, sliding, hinged, pivot and bi-fold doors
- Include the following for each:
  - select glass thickness and type in accordance with AS1288
  - calculate glazing clearance and cutting size
  - cut glass to AS4667 Quality requirements for cut to size and processed glass
  - select glazing tools, equipment, glazing sealants, vinyls and tapes
  - prepare working area
  - prepare glazing rebates and channels prior to installation
  - clean glass, tools, equipment and work area
  - calculate the cost of glass, glazing materials and...

<td></td>
</tr>
</tbody>
</table>

### Resource Implications
Frames, glass, fixing material, sealants, workplace operating procedures and work orders, personal protective equipment and an appropriate work area/site.

### Method of Assessment
Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment may be in conjunction with assessment of other relevant units of competency.

### Context of Assessment
Assessment may occur on the job or in a workplace simulated facility with relevant glazing equipment, materials, work instructions and deadlines.
### Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>
<tr>
<th>Unit context</th>
<th>Glaze/re-glaze</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements</td>
<td></td>
</tr>
<tr>
<td>- OHS requirements may include legislation, standards, building codes, material safety management systems and local safe operating procedures</td>
<td></td>
</tr>
<tr>
<td>- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the handling and installation of glass products</td>
<td></td>
</tr>
<tr>
<td>- Work may be performed in workplaces which are involved in on-site and off-site fabrication, installation and/or replacement of glass to commercial or residential windows, doors and other openings or to other frames</td>
<td></td>
</tr>
<tr>
<td>- Involves the installation of glass to metal and/or timber doors, windows and other frames and reglazing of existing windows and doors</td>
<td></td>
</tr>
<tr>
<td>- Residential glazing/re-glazing is confined to simple doors and windows and may include:</td>
<td></td>
</tr>
<tr>
<td>- residential windows, such as fixed, sliding, casement, awning and double hung and louvres</td>
<td></td>
</tr>
<tr>
<td>- residential doors, such as sliding, hinged, pivot and bi-fold</td>
<td></td>
</tr>
<tr>
<td>- Glazing or reglazing for non-residential situations is addressed in commercial and architectural/engineering AQF III units</td>
<td></td>
</tr>
</tbody>
</table>

| Types of glass may include but are not limited to: |
| - annealed glass  |
| - toughened glass  |
| - laminated glass  |
| - wired glass  |

**Tools and equipment are to include:**

- tungsten wheel glass cutters
- speed cutters
- cutting lubricants
- running pliers
- straight edges and squares
- tape measures
- glass handling and lifting equipment
- hack-out knives
- chisels
- putty knives
- sprig/diamond guns
- vinyl cutters and rollers
- pry bars
- sealant guns
- blade and phillips head screwdrivers
- pop rivet guns
- electric and pneumatic drills
- rubber mallets
- claw hammers
- nail punches and PPE equipment

**Materials are to include but are not limited to:**

- all forms of flat glass and acrylic glazing products
- plastic
- aluminium
- steel
- solid timber
- gaskets
- sealants
- adhesives
- glazing tapes and setting blocks

**Methods of glazing may include:**

- channel glazing
- beaded glazing and double glazing

**Personal protective equipment**

Personal protective equipment is to include that prescribed under legislation, regulation and Australian Standard policies and practices. It may include:

- gloves
### RANGE STATEMENT

- safety glasses
- gauntlets
- safety footwear
- hard hats
- aprons and overalls

### Information and procedures

- Workplace procedures relating to the glazing of simple windows and doorframes
- Australian Standards AS1288, 2208, 4667, 2047, 4666
- Equipment and material manufacturers' specifications and operational procedures
- On-site procedures and regulations relating to the handling and movement of glass
- Work instructions, including job sheets, plans, drawings and designs
- Safety standards include personal protective equipment, OHS regulations and enterprise requirements

MEM05010C Apply fabrication, forming and shaping techniques

Modification History
Not Applicable
# Unit Descriptor

| Unit descriptor | This unit of competency covers applying fabrication, forming and shaping of a wide variety of shapes and products undertaken by an Engineering Tradesperson - Fabrication using a variety of forming and shaping techniques. The fabrication, forming and shaping is done to specifications interpreted from technical drawings and job specifications using a variety of tools and equipment. |

# Application of the Unit

| Application of the unit | This unit of competency applies to fabrication, forming and shaping of plate, sheet and tubular ferrous and non-ferrous metal to specified measurements, tolerances and shapes. Skills covered by this unit are generally applied in occupational and work situations associated with steel fabrication, boilermaking or sheet metal work.  

This unit has been developed for Engineering Tradesperson - Fabrication apprenticeship training and the recognition of trade level skills in fabrication, forming and shaping.  

Predetermined standards of quality and safety are observed and work is carried out following standard operating procedures.  

This unit includes the ability to produce a wide range of shapes and products such as pipework, chamfers, cylinders, cones, angles, hoppers, ductwork, 'square to round', 'transitions', 'lobster backs' and all forms of tubular shapes, including hand rails, reticulation pipework and mufflers.  

Materials may include ferrous and non-ferrous and non-metallic materials. A variety of tools and equipment may be used including presses, shapers, benders, rollers and drop hammers.  

If heating or thermal cutting is required, MEM05007C Perform manual heating and thermal cutting should be accessed.  

Where marking off/out skills are required, then MEM12007D Mark off/out structural fabrications and shapes should be selected. Where welding is required, relevant welding units should be selected. |
This unit does not cover repetitive fabrication, bending and shaping of metal and non-metallic materials by production workers, trades assistants etc. such as where the bending or shaping equipment has been pre-set and the material to be fabricated, formed or shaped has been pre-marked up or pre-cut to size. This unit is also not intended to apply in situations where products or shapes are merely bent using hand tools or equipment.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Select and set up forming/shaping equipment for a specific operation | 1.1. Most appropriate tools and equipment are selected  
1.2. Equipment is correctly set up and adjusted for operation to standard operating procedures  
1.3. Allowances for shrinkage, thickness and inside/outside measurements are correctly made |
| 2. Operate forming/shaping equipment | 2.1. Machine is safely started up and shut down to standard operating procedures  
2.2. Material and safety guards are correctly positioned.  
2.3. Equipment is correctly operated and adjusted |
| 3. Form and shape material | 3.1. Material is levelled, straightened, rolled, pressed or bent to specifications/drawings using fabrication techniques  
3.2. Correct hot or cold forming procedures are followed  
3.3. Final form/shape is checked for compliance to specification and adjusted as necessary to standard operating procedures |

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills include:

- selecting tools and equipment
- setting up and adjusting equipment
- calculating allowances
- taking measurements
- starting up and shutting down the machine
- positioning material
- positioning safety guards
- obtaining drawings and/or specifications
- selecting the most appropriate forming/shaping process to achieve the required size and specification
- forming/shaping material to size and specification
REQUIRED SKILLS AND KNOWLEDGE

- checking the final form/shape of the object for conformance with specifications
- reworking the object to ensure conformance with specifications
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking task-related information

Required knowledge

Required knowledge includes:

- variety of hot and cold forming/shaping processes
- machines, tools and/or equipment required to perform forming/shaping processes
- reasons for selecting chosen tools, equipment and processes
- adjustments that can be made to the equipment and the effect of adjustments on the object being formed/shaped
- allowances when forming/shaping materials
- sources of data relating to allowances
- startup and shutdown procedures
- the material positioning/feeding requirements
- the location and function of all safety guards
- procedures for the forming/shaping process
- defects in formed/shaped materials
- defects that can be rectified by further work/adjustment
- hazards and control measures associated with undertaking fabrication, forming and shaping, including housekeeping
- safe work practices and procedures
# Evidence Guide

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

A person who demonstrates competency in this unit must be able to apply fabrication, forming and shaping techniques to meet specifications. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different situations and contexts. Critical aspects of assessment and evidence include:

- examining drawings and specifications to determine correct equipment to be used and sequence of fabrication, forming and shaping processes
- correctly identifying any specified tolerances
- correctly calculating allowances for shrinkage, thickness and inside/outside measurements
- setting up and safely operating equipment to ensure forming and shaping outcome is to specifications
- ensuring equipment is shut down and made safe
- carrying out hot and cold forming processes safely and to specifications including levelling, straightening, rolling, pressing or bending.

### Context of and specific resources for assessment

This unit has been developed to support training in and recognition of trade level competency in fabrication, forming and shaping as applied to a sheet metal or metal fabrication environment. Assessment should emphasise a workplace context and procedures found in the candidate's workplace.

The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

### Method of assessment

Typically, persons engaged in Engineering Tradesperson - Fabrication work are required to exercise fabrication, forming and shaping skills and techniques across a range of jobs and specifications.
EVIDENCE GUIDE

A single assessment event is not appropriate. On the job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.

The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Guidance information for assessment

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying fabrication, forming and shaping techniques or other units requiring the exercise of the skills and knowledge covered by this unit.

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:
- preparing materials  
- setting up welding equipment  
- welding with GTAW  
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures  
- using measurement skills for joint preparation and routine GTAW

Required knowledge

Look for evidence that confirms knowledge of:
- preparatory requirements  
- properties and characteristics of materials and consumables  
- equipment and equipment settings  
- fuel gas properties and applications  
- post welding treatments
**REQUIRED SKILLS AND KNOWLEDGE**

- weld characteristics
- safe welding practices
- use and application of personal protective equipment for routine GTAW
# Evidence Guide

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

A person who demonstrates competency in this unit must be able to perform routine gas tungsten arc welding (GTAW).

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

### Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with carrying out routine gas tungsten arc welding or other units requiring the exercise of the skills and knowledge covered by this unit.

### Method of assessment

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Unit Descriptor

| Unit descriptor | This unit covers installing refrigeration/air conditioning systems in commercial, industrial, marine and transport applications. |

Application of the Unit

| Application of the unit | This unit applies to refrigeration/air conditioning systems in commercial, industrial, marine and transport applications - refer to field definitions. All work is to be undertaken in accordance with all relevant Commonwealth, State or Territory legislation and regulatory requirements. Modifications and alterations are of a minor nature and do not require specification changes or technical recording, for example, the fitting of spacers, relocation of brackets, alignment of holes, etc. Work is undertaken using new or existing internal or external locations and sites. Footings, foundations, beds and frameworks are completed prior to installation. Work is undertaken autonomously or in a team environment using predetermined standards of safety, quality and workshop procedures. This unit should not be selected with Unit MEM10006B (Install machine/plant). Where extensive fitting and alignment is required, then Unit MEM18006C (Repair and fit engineering components) and Unit MEM18009B (Perform levelling and alignment of machines and engineering components) should also be selected. Where modifications involve electrical disconnection and reconnection, then Unit MEM18049C (Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.) should also be selected. |

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Inspect and prepare installation site | 1.1. Site is checked for correct location, dimension and levels, etc. using appropriate measuring equipment and standard refrigeration/air conditioning practices.  
1.2. Non-compliance with specification is reported to appropriate authority.  
1.3. Alteration/correction is undertaken with approval of appropriate authority.  
1.4. All surfaces, materials and components are prepared for use. |
| 2. Install refrigeration/air conditioning plant and equipment | 2.1. All work is carried out safely and in accordance with site procedures and to relevant standards.  
2.2. Refrigeration/air conditioning plant and equipment/components are organised for correct sequential installation.  
2.3. Refrigeration/air conditioning plant and equipment/components are installed in conformance with manufacturers' and site specifications.  
2.4. Routine modifications/alterations of the refrigeration/air conditioning plant and equipment are undertaken to standard operating procedures where required.  
2.5. Refrigeration/air conditioning plant and equipment are levelled, aligned, coupled and connected in accordance with specifications.  
2.6. The refrigeration system is charged with refrigerant and lubricant in accordance with standard operating procedures.  
2.7. The site is cleaned and cleared of all debris and left in a safe state. |
| 3. Start up refrigeration/air conditioning plant and equipment and check operation | 3.1. Start-up procedure is developed for the refrigeration/air conditioning plant and equipment.  
3.2. The refrigeration/air conditioning plant and equipment is operated and assessed for conformance to specification.  
3.3. Non-conformances and system faults are identified, and appropriate action/adjustments are taken to specification.  
3.4. All reports and documentation are completed correctly to required specifications. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking task-related information
- checking the site for correct location, dimensions and levels
- detecting and reporting non-conformance to specifications
- preparing surfaces for installation
- checking for conformance to specifications
- preparing plant for start-up
- adjusting refrigeration plant and equipment
- using appropriate tools, techniques and equipment

Required knowledge

Look for evidence that confirms knowledge of:

- procedures for non-compliances
- procedures for checking the refrigeration/air conditioning plant and associated equipment
- procedures for making alterations, corrections or adjustments to the refrigeration/air conditioning plant and associated equipment
- correct sequential installation of all components
- methods of fixing/fastening and locating/holding the components
- procedures for checking refrigeration systems for leaks
- procedures for checking refrigeration/air conditioning plant and associated equipment prior to start-up
- procedures for adjusting the refrigeration/air conditioning plant and associated equipment to specification
- codes and regulations relevant to the refrigeration/air conditioning industry including environmental and ozone and greenhouse substance legislation
- hazards and control measures associated with installing refrigeration and/or air conditioning plant and associated equipment, including housekeeping
- safe work practices and procedures
### Evidence Guide

#### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>A person who demonstrates competency in this unit must be able to install refrigeration and air conditioning plant and equipment. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Critical aspects for assessment and evidence required to demonstrate competency in this unit</td>
<td>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</td>
</tr>
</tbody>
</table>
| Context of and specific resources for assessment | This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.  

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with installing refrigeration and air conditioning plant and equipment or other units requiring the exercise of the skills and knowledge covered by this unit. |
| Method of assessment | Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan the installation of pipework and pipework assemblies | 1.1. Quantity and type of pipework and pipework assemblies are selected according to specifications.  
1.2. The appropriate sequence for the installation of pipework and pipework assemblies is determined according to the installation type and specifications and other applicable factors.  
1.3. The work area is prepared for installation of pipework and pipework assemblies. |
| 2. Prepare pipework and pipework assemblies for assembly | 2.1. Pipework is cleaned to standard operating procedures.  
2.2. Pipework and assemblies are purged to standard operating procedures.  
2.3. Pipework and assemblies are capped/sealed. |
| 3. Install pipework and assemblies | 3.1. Enclosures/hangers/support systems are installed without damage or distortion to the surrounding environment or other services.  
3.2. Pipework and assemblies are installed without damage or distortion to pipework, assemblies or surrounding environment or other services.  
3.3. Pipework is leak tested to standard operating procedures.  
3.4. All ancillary devices and materials are installed to specification according to standard operating procedures. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:
- interpreting and following information on specifications, standard operating procedures and other applicable reference documents
- planning and sequencing installation
- preparing the site
- preparing joining surfaces
REQUIRED SKILLS AND KNOWLEDGE

- purging pipework and assembly
- capping and sealing pipework and assembly
- installing enclosure/hanging/supporting assemblies
- assembling and installing pipework and ancillaries
- testing installed pipework and rectifying leaks

Required knowledge

Look for evidence that confirms knowledge of:

- installation techniques
- site and safety requirements
- cleaning procedures and the applications and precautions for using solvents/cleaning material
- purging techniques, applications and precautions
- capping/sealing pipework and assembly methods
- identification of location/layout of pipework and assemblies and application and characteristics of enclosure/hanging/supporting systems
- pipework, ancillary installation and joining procedures
- leak testing applications and uses
- regulations and legislative requirements
- hazards and control measures
- use and application of personal protective equipment
- safe work practices and procedures

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Pipework and pipework assemblies
- Ferrous, non-ferrous, plastic, etc.
- Variety of sizes and or wall thickness
- Variety of joining systems such as collars, unions, flanges, etc.

Enclosures
- Metal and PVC

Hangers and support systems
- Pipe/tube bundle support, ties, unistrut, trays, ladder racks, ducts etc.

Leak test
- Soapy water, water immersion, compressed air

Ancillary devices and materials
- Insulation materials, valve control systems, etc.

Legislation and regulations
- Building regulations, gas/fluid pipeline regulations

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Assess refrigeration system operation | 1.1. Refrigeration system operating principles and terminology are applied to assessment activities.  
1.2. All *relevant information* is obtained and correctly interpreted prior to the commencement of work on the refrigeration system.  
1.3. Refrigeration system checks are undertaken safely in accordance with standard operating procedures, relevant codes and regulations.  
1.4. Appropriate operating procedures are developed as required.  
1.5. Pressures and temperatures are correctly determined and recorded.  
1.6. Faults are correctly isolated to component level and *appropriate corrective action* is determined.  
1.7. The refrigeration system is checked for leaks.  
1.8. The refrigeration system is checked for *contamination*. |
| 2. Recover refrigerant and evacuate system | 2.1. The *refrigerant* in the system is recovered in accordance with standard operating procedures, codes and regulations.  
2.2. The refrigerant recovered from the refrigeration system is contained in accordance with the *relevant codes and regulations*.  
2.3. The refrigeration system is evacuated in accordance with standard operating procedures, codes and regulations. |
| 3. Charge the refrigeration system | 3.1. The refrigeration system is charged with the correct refrigerant in accordance with standard operating procedures.  
3.2. The appropriate lubricating oil is added to the refrigeration system in accordance with standard operating procedures.  
3.3. The refrigeration system is checked for leaks. |

## Required Skills and Knowledge

| REQUIRED SKILLS AND KNOWLEDGE |
### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- planning and sequencing operations
- developing operating procedures for equipment as required
- selecting correct refrigerant for a given system
- obtaining and interpreting drawings, instructions, specifications, procedures, codes and regulations
- testing and checking refrigeration components and systems including electrical safety checks and tests
- checking for conformance to specifications
- undertaking numerical operations within the scope of this unit
- determining pressures and temperatures
- documenting test results and procedures undertaken
- using equipment and test techniques
- identifying faulty components and system contamination
- applying safety procedures, standard operating procedures and legislative requirements to all work undertaken
- selecting appropriate materials, equipment and solutions for specific refrigeration systems

#### Required knowledge

Look for evidence that confirms knowledge of:

- operating principles of refrigeration systems
- characteristics, properties and operating specifications of each type of refrigerant
- safety precautions and work practices to be undertaken when handling or working with refrigerants
- methods of identifying stored refrigerants
- methods of identifying the type of refrigerant used in refrigeration systems
- relevant codes and regulations applying to refrigeration systems
- procedures and safety precautions for testing/checking refrigeration systems
- corrective actions for system and component faults including appropriate basic electrical safety checks
- types of leak detection equipment/techniques and their applications
- causes of contamination in refrigeration systems and their effect on refrigeration system performance
- procedures, tools and equipment to be used to clean up contaminated systems
- care and use of vacuum pumps
- tools, techniques and equipment required to carry out recovery procedures
REQUIRED SKILLS AND KNOWLEDGE

- procedures for storing/disposing of recovered refrigerant
- consequences of releasing quantities of refrigerant into the atmosphere
- procedures for charging refrigeration systems
- correct refrigerant for a range of given applications
- tools, techniques and equipment required to charge a refrigeration system with refrigerant
- precautions to be taken when charging by various methods, refrigeration systems with refrigerant
- procedures for checking level and adding lubricating oil
- properties and uses of refrigeration oil
- hazards and control measures associated with handling refrigerants, including housekeeping
- safe work practices and procedures

RIICCM210A Install trench support

Modification History
Not applicable.

Unit Descriptor
This unit covers the installation of trench support in the civil construction industry. It includes planning and preparing, installing trench shoring, removing trench shoring, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| Plan and prepare | 1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain and confirm *safety requirements* from the site safety plan and organisational policies and procedures, and apply to the allotted task  
1.3. Identify, obtain and implement *traffic control signage* requirements from the project traffic management plan  
1.4. Select plant, *tools and equipment* to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.5. Identify *environmental protection requirements* from the project environmental management plan, and confirm and apply to the allotted task |
| Install trench shoring | 2.1. Communicate with plant operator to ensure the *excavation of trenches* complies with site plan, line and depth  
2.2. Determine and prepare *shoring method*  
2.3. Set out positioning of shoring  
2.4. Position or *erect shoring* within the trench  
2.5. Secure shoring in position and check to ensure structural conformity with regulations  
2.6. Clean out excavation out by hand to job requirements  
2.7. Provide ladders for access and egress to site safety plan requirements |
| Remove trench shoring | 3.1. Release jacking mechanisms and remove ladders  
3.2. Check shoring and prepare it for lifting from the trench  
3.3. Remove shoring from trench and store it on site |
| Clean up | 4.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan  
4.2. Clean, check, maintain and store tools and equipment |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to install trench shoring:

- apply legislative, organisation and site requirements and procedures for installing trench shoring
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to install trench support:

- site and equipment safety requirements
- excavation techniques
- shoring methods and systems
- working in confined spaces
- construction techniques
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Critical aspects for assessment and evidence required to demonstrate competency in this unit</strong></td>
</tr>
<tr>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td>• knowledge of the requirements, procedures and instructions for installing trench support</td>
</tr>
<tr>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of trench support installation</td>
</tr>
<tr>
<td>• working with others to undertake and complete the installation of trench support in a way that meets all of the required outcomes</td>
</tr>
<tr>
<td>• consistent timely completion of trench support installation that safely, effectively and efficiently meets the required outcomes</td>
</tr>
<tr>
<td>• installation of trench support on two projects in trenches deeper than 1.5 metres requiring the trench support to be installed, moved along or within the trench and removed from the trench</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
</tr>
<tr>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
</tr>
<tr>
<td>• The assessment environment should not disadvantage the participant. For example,</td>
</tr>
<tr>
<td>Language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
</tr>
<tr>
<td>---------------------------------------------------</td>
</tr>
<tr>
<td>- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.</td>
</tr>
<tr>
<td>- Aboriginal people and other people from a non English speaking background may have second language issues.</td>
</tr>
<tr>
<td>- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.</td>
</tr>
</tbody>
</table>

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the trench support installation

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures |
| | manufacturer's guidelines and specifications |
| | Australian standards |
| | Employment and workplace relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |

Safety requirements may include:

- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan including: protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe operating procedures including recognising and preventing hazards associated with high voltage power lines, uneven/unstable terrain, trees, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working at heights, working in proximity to others, worksite visitors and the public
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to equipment
<table>

Application

This unit describes a participant’s skills and knowledge required to install trench support in Civil construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Unit Sector

Civil construction

Performance Evidence

Evidence is required to be collected that demonstrates a candidate’s competency in this unit. Evidence must be relevant to the roles within this sector’s work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies applicable documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient completion of trench support installation including:
  - selecting and using relevant tools/equipment
  - using shoring methods and systems
  - working in confined spaces
  - communicating effectively to confirm work requirements
- works effectively with others to undertake and complete the installation of trench support in a way that meets all of the required outcomes including:
  - using a range of communications techniques and equipment to convey information to others
  - complying with written and verbal reporting requirements and procedures
- demonstrates completion of installing trench support that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - installation of trench support in trenches deeper than 1.5 metres requiring the trench support to be installed, moved along or within the trench, and removed from the trench
Knowledge Evidence

The candidate must demonstrate knowledge of the following when installing trench support:

- accessing, interpreting and applying the organisation and site requirements and procedures for:
  - using JSAs/JSEA/safe work methods
  - achieving project quality outcomes
  - identifying and reporting on hazards related to the worksite and work activity
  - applying materials handling methods and using safety data sheets
- organising work activities
- using relevant tools and equipment safely
- equipment types, characteristics, technical capabilities and limitations
- excavation techniques
- construction techniques
- site isolation and traffic control responsibilities and authorities
- using civil construction terminology
- completing housekeeping activities
Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector’s work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector’s workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

<table>
<thead>
<tr>
<th>Industry sector</th>
<th>AQF** Level</th>
<th>Required assessor or Industry subject matter expert experience</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction</td>

</tr>
<tr>
<td>Other sectors</td>
<td>Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.</td>
<td></td>
</tr>
</tbody>
</table>

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.  
**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level.

</tbody>
</table>

Application

This unit describes a participant’s skills and knowledge required to install temporary and permanent rock anchors in Civil Construction.

This unit is appropriate for those working in operational roles.

No licensing or certification requirements apply to this unit at the time of publication.

Unit Sector

Civil construction
## Elements and Performance Criteria

1. Plan and prepare for rock anchor installation

   1.1 Access, interpret and apply rock anchor installation documentation and ensure the work activity is compliant
   1.2 Obtain, interpret and clarify work instructions before proceeding
   1.3 Confirm and apply environmental protection and safety requirements
   1.4 Obtain, interpret and implement traffic management signage requirements
   1.5 Select, and check for faults, plant, tools and equipment to carry out tasks
   1.6 Select and wear personal protective equipment appropriate for work activities
   1.7 Identify, address and report potential hazards and risks
   1.8 Obtain and interpret emergency procedures, and be prepared for fire/accident/emergency

2. Set up and prepare anchor holes

   2.1 Ensure holes are drilled to specified diameter and depth
   2.2 Ensure holes are cleaned
   2.3 Ensure bond length of holes for permanent anchors are tested for leakage to specified rate and grouted, re-drilled and retested
   2.4 Ensure holes are temporarily covered to prevent entry of foreign material

3. Install anchors to anchor holes

   3.1 Check components to verify conformity with job requirements
   3.2 Grease, sheathe and assemble anchors to specifications
   3.3 Prepare temporary anchors with spacers and fit grout tubes
   3.4 Prepare permanent anchors with spacers, fit grout tubes and prepare external polyethylene sheath
   3.5 Install anchors and sheaths to full depth, without damage and to specifications
   3.6 Set up grouting plant and flow monitoring apparatus to design requirements
   3.7 Mix and pump grout into hole

4. Set up anchorage assembly and stress anchors

   4.1 Position anchorage using packing materials
   4.2 Stress anchors to nominated loads
   4.3 Lock off anchors to nominated loads
   4.4 Install mesh to job specification
<p>| | |</p>
<table>

Performance Evidence

Evidence is required to be collected that demonstrates a candidate’s competency in this unit. Evidence must be relevant to the roles within this sector’s work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies applicable legislation, documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient installation of temporary and permanent rock anchors including:
  - using installation techniques to install both temporary and permanent rock anchors
- works effectively with others to undertake and complete the installation of temporary and permanent rock anchors tasks that meets all the required outcomes including:
  - communicating clearly and concisely with others to receive and clarify work instructions
  - using a range of communication technique and systems such as signage to advise others of work activity and exclusion zones
- demonstrates completion of installing temporary and permanent rock anchors that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - setting up and ensuring anchor holes are drilled, cleaned, tested for leakage and covered to prevent entry of foreign material
  - installing a minimum of ten (10) permanent anchor bolts, finished with mesh and shotcrete
  - installing a minimum of ten (10) temporary anchor bolts
  - stressing, locking off, cutting and sealing anchors
Knowledge Evidence

The candidate must demonstrate knowledge of installing temporary and permanent rock anchors through:

- applying organisation, site requirements and procedures for:
  - installing temporary and permanent rock anchors
  - conducting earthworks
  - carrying out foundation work
  - scaffolding and work platform installation
  - site isolation and traffic control responsibilities and authorities
  - water erosion
  - site and equipment safety requirements
- using construction principles
- interpreting engineering drawings
- identifying soil, sand, rock, clay, shale, gravel and silt types and characteristics
- identifying equipment types, characteristics, technical capabilities and limitations
- applying and monitoring operational, maintenance and basic diagnostic procedures
- interpreting and complying with safety data sheets and materials handling methods
- monitoring project quality requirements
- using civil construction terminology
- preparing and/or implementing JSA/JSEA/safe work method statements
Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit must be assessed in the context of this sector’s work environment; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,

</tbody>
</table>
Performance Evidence

Evidence is required to be collected that demonstrates a candidate’s competency in this unit. Evidence must be relevant to the roles within this sector’s work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant legislation, documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient preparation of work zone traffic management plans including:
  - accessing and interpreting plans, drawings, specifications and traffic management plan briefs
  - accessing and interpreting engineering survey information
  - accessing and interpreting hydrological, meteorological, cultural and heritage data
  - accessing and interpreting traffic analysis data
  - selecting and applying appropriate implementation techniques
  - applying engineering graphical presentation techniques
- works effectively with others to undertake and complete the preparation of work zone traffic management plans that meets all the required outcomes including:
  - complying with written and verbal reporting requirements and procedures
  - communicating clearly and concisely with others to receive and clarify work instructions
  - communicating clearly and concisely with others to coordinate work activities
- demonstrates completion of work zone traffic management plan that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - carry out risk assessments
  - interpret and analyse data
  - prepare a traffic management plan
  - determine traffic management plan capacity requirements
  - select traffic management plan options
  - size traffic management plan components
  - develop and applying traffic management plans
  - calculate flow rates, level of service, capacities and percentages
  - maintain plan and cost records
  - prepare a cost estimate
  - obtain plan approval
  - complete and submitting plan cost
  - participate in performance review of the plan process
  - provide clarification and advice to those applying the plan
  - perform a validation of the plan
Knowledge Evidence

The candidate must demonstrate knowledge in preparing work zone traffic management plans through:

- accessing, interpreting and applying legislative, organization and site requirements and procedures for:
  - risk assessment and management
  - statutory compliance
  - work health and safety
  - environmental management
  - cultural and heritage
  - quality management
  - Australian and other relevant standards
  - industry and organisational design
  - current industry best practice
  - traffic management plan options
  - traffic management plan geometrics
  - plan approvals and reviews
  - documentation, recording and reporting
  - performance reviews
  - systems close out
- potential hazards, constraints and conditions
- techniques for choosing preferred options
- team leadership techniques
- operational techniques
- traffic management plan implementation structures and capabilities
- cost estimation techniques
- principles of road user behaviour
Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector’s work environment; and,
- outcomes of this unit that occur in an office-based setting may be assessed in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector’s workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Application

This unit describes a participant’s skills and knowledge required to enter and work in confined spaces in the Resources and Infrastructure Industries. This unit is appropriate for those working in operational roles undertaking work in confined spaces.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.
# Elements and Performance Criteria

| 1 Plan and prepare for working in confined space | 1.1 Access, interpret and apply procedures for confined space entry and the environmental management plan and ensure the work activity is compliant  
1.2 Obtain, confirm, clarify and apply work instructions and agreed procedure  
1.3 Obtain, confirm, clarify and apply safety requirements  
1.4 Obtain and confirm authorisation (entry permit) meets regulatory requirements  
1.5 Confirm the emergency response procedure is with the stand-by person and understood  
1.6 Identify, obtain and implement signage and barrier requirements  
1.7 Select tools and equipment for the tasks, check for serviceability and rectify or report any faults  
1.8 Identify, confirm and apply the environmental protection requirements  
1.9 Position rescue equipment by the entry permit |
|---|---|
| 2 Work in confined space | 2.1 Gain access to confined space  
2.2 Ensure that the atmosphere is tested and monitored for harmful elements  
2.3 Correctly apply tagging and lock-out procedures  
2.4 Enter the confined space correctly  
2.5 Maintain ongoing communication with the stand-by person  
2.6 Comply with entry permit requirements  
2.7 Monitor and adhere to allocated entry time |
| 3 Exit confined space | 3.1 Exit confined space correctly  
3.2 Recover tools, equipment and materials  
3.3 Conduct inspection of the confined space  
3.4 Secure access to the confined space  
3.5 Remove tagging and lock-out  
3.6 Accurately complete confined space entry permit |
| 4 Clean up | 4.1 Clear work area and dispose of or recycle materials  
4.2 Clean, check, maintain and store tools and equipment  
4.3 Remove, clean and store barriers and signs |
Foundation Skills
Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

</tbody>
</table>

Performance Evidence

Evidence is required to be collected that demonstrates a candidate’s competency in this unit. Evidence must be relevant to the roles within this sector’s work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- demonstrates completion of entering and working in confined spaces that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - obtain appropriate entry permit and instructions for performing work in confined space
  - interpreting and applying safe work method statements
  - apply tagging and lock out
  - selecting, wearing and caring for personal protective equipment applicable to all tasks and environment identified
  - entering the confined space
  - using atmospheric monitoring devices prior to entering the confined space
  - working in the confined space
  - using atmospheric monitoring devices during confined space activity
  - applying safe materials handling methods
  - exiting the confined space
  - remove tagging and lock out
Knowledge Evidence

The candidate must demonstrate knowledge of enter and work in confined spaces through:

- identifying areas that constitute confined spaces
- complying with site and equipment safety requirements
- complying with the entry and exit procedures, risks and regulations
- types of air contaminants and toxic gases
- identifying the limitations of breathing apparatus
- identifying equipment types, characteristics, technical capabilities and limitations
- complying with site isolation and site control responsibilities and authorities
- locations of safety data sheets (SDS) information and application
- using confined space and Industry terminology
Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector’s work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector’s workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

<table>
<thead>
<tr>
<th>Industry sector</th>
<th>AQF** Level</th>
<th>Required assessor or Industry subject matter expert experience</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction</td>
<td>1</td>

</tr>
</tbody>
</table>

**Other sectors**

Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate’s competency in this unit. Evidence must be relevant to the roles within this sector’s work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- demonstrates completion of controlling traffic with a stop-slow bat that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - reading and interpreting the work instruction and planning work activity accordingly
  - positioning signage and barriers
  - directing and controlling vehicle traffic
  - directing and controlling pedestrian traffic
  - communicating to drivers and pedestrians clearly using hand signals
  - using approved communication devices such as hand held radios or phones to transmit message and report of offenders
  - removing or covering signs after work completion
Knowledge Evidence

The candidate must demonstrate knowledge of controlling traffic with stop-slow bat through:

- site and equipment safety requirements
- traffic controlling requirements and procedures
- complying with traffic management plans
- erecting traffic control signage and barricades
- communication device operations
- determine equipment types, characteristics, technical capabilities and limitations
- operational and maintenance procedures for equipment
- detailing site isolation and traffic control responsibilities and authorities
- describing the effects of travel speed and vehicle mass on stopping distances
- interpreting and implementing safe work method statement
Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector’s work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector’s workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,

Application

This unit develops a participant’s skills and knowledge required to implement a traffic management plan in Civil construction.

This unit is appropriate for those working in supervisory roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

*Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.*
## Elements and Performance Criteria

| 1 Plan and prepare to implement traffic management plan | 1.1 Access, interpret and apply traffic management documentation and ensure the work activity is compliant  
1.2 Obtain, read, interpret, clarify and confirm work requirements  
1.3 Identify, address and report potential risks, hazards and environmental issues and implement control measures  
1.4 Select and wear personal protective equipment appropriate for the work activity  
1.5 Identify, obtain and implement traffic control signage and devices  
1.6 Select, and check for faults, tools and equipment to carry out tasks  
1.7 Identify, confirm and apply environmental protection requirements  
1.8 Check the designated traffic controllers’ training and qualifications for currency  
1.9 Advise traffic controllers of the traffic flow requirements |
|---|---|
| 2 Set out the traffic guidance scheme | 2.1 Select traffic guidance scheme to suit site conditions, traffic volumes and work activities  
2.2 Determine and ensure adherence to work schedule, maximum traffic delays, signals and site communications  
2.3 Ensure signs and devices are correctly positioned on the approaches to the work area  
2.4 Ensure that signs and devices are positioned and displayed on each approach  
2.5 Ensure signs and devices are positioned and displayed laterally  
2.6 Ensure traffic is controlled effectively to protect the work crew |
| 3 Monitor traffic guidance scheme | 3.1 Ensure traffic flow is monitored and effectiveness of guidance scheme determined  
3.2 Monitor work activities and provide guidance to adjust scheme  
3.3 Apply process for dealing with traffic controllers who fail to adhere to approved procedures  
3.4 Apply procedures to deal with offending motorists |
<p>| 4 Close down traffic | 4.1 Ensure traffic is controlled to protect work crew removing |</p>
<table>
<thead>
<tr>
<th>guidance scheme</th>
<th>traffic control devices</th>
</tr>
</thead>
<tbody>
<tr>
<td>4.2</td>
<td>Ensure signs are removed in sequence to provide maximum warning during removal</td>
</tr>
<tr>
<td>4.3</td>
<td>Ensure guidance scheme details are recorded and reported as required</td>
</tr>
<tr>
<td>4.4</td>
<td>Ensure incidents are recorded and reported as required</td>
</tr>
</tbody>
</table>

| 5 Clean up     | 5.1 Ensure work area is appropriately cleared |
|                | 5.2 Ensure tools and equipment are cleaned, checked, maintained and stored |

Performance Evidence

Evidence is required to be collected that demonstrates a candidate’s competency in this unit. Evidence must be relevant to the roles within this sector’s work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- works effectively with others to undertake and complete the traffic management plans that meet all of the required outcomes including:
  - complying with written and verbal reporting requirements and procedures
  - communicating clearly and concisely with others to receive and clarify work instructions
  - communicating clearly and concisely with others to resolve coordination requirements prior to commencing and during work activities
- demonstrates completion of implementing traffic management plans that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - complying with State/Territory regulations on three separate live traffic projects, and
  - completing one (1) project controlling site construction vehicles
  - identify and select traffic guidance scheme according to conditions
  - identify and select traffic guidance scheme according to conditions select and implement signage and device requirements, position and display according to site plan
  - monitor and adjust scheme according to variances in requirements
  - apply procedures to deal with non-compliant crew and motorists

Knowledge Evidence

The candidate must demonstrate knowledge of implementing a traffic management plan through:

- accessing, interpreting and applying legislative, organization and site requirements and procedures for:
  - JSAs/JSEA/Safe work method statement
  - potential hazards and risks
  - controlling traffic
  - basic signalling
  - signs and devices
  - radio operations
- identifying equipment types, characteristics, technical capabilities and limitations
- identifying site isolation and traffic control responsibilities and authorities
- identifying quality requirements
- applying civil construction terminology
Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector’s work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector’s workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,

Application

This unit develops a participant’s skills and knowledge required to drain and dewater civil construction sites in Civil construction. This unit is appropriate for those working in operational roles. No licensing, legislation or certification requirements apply to this unit at the time of publication.

Unit Sector

Civil construction
## Elements and Performance Criteria

| 1. Plan and prepare for draining and dewatering | 1.1 Access, interpret and apply drain and dewatering documentation and ensure the work activity is compliant |
| 1.2 Obtain, read, interpret, clarify and confirm work requirements |
| 1.3 Identify, obtain and implement traffic signage requirements |
| 1.4 Select and inspect required plant, tools and equipment and rectify/report any faults |
| 1.5 Identify, clarify and apply environmental protection requirements |
| 1.6 Identify and address potential risks, hazards and environmental issues, and implement control measures |
| 1.7 Select and wear personal protective equipment appropriate for work activities |
| 2. Position sedimentation control | 2.1 Position sedimentation controls |
| 2.2 Construct sedimentation control barriers |
| 2.3 Position geo-fabrics and/or woven wire |
| 3. Remove surface water | 3.1 Establish temporary drainage systems and drain or divert surface and sub-surface water to the storm water drainage system |
| 3.2 Remove slab and site surface water and/or direct to the temporary drainage system |
| 3.3 Fill surface holes and depressions |
| 3.4 Drain surface water to drainage system using adequate fall |
| 4. Construct sump/wells | 4.1 Locate sump and/or well at the lowest point to be drained |
| 4.2 Construct sumps and/or wells |
| 5. Remove water from sumps/wells, trenches and pits | 5.1 Install surface or submersible pumps |
| 5.2 Locate surface pump as close as practicable to the sump or well |
| 5.3 Pump water to temporary drainage system |
| 5.4 Disperse discharged water |
| 6. Clean up | 6.1 Clear work area and dispose of or recycle materials |
| 6.2 Clean, check, maintain and store plant, tools and equipment |
Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate’s competency in this unit. Evidence must be relevant to the roles within this sector’s work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient completion of the draining and dewatering of a civil construction site including:
  - selecting and using the required tools and equipment
  - interpreting and applying work instructions
  - draining surface water
  - constructing sumps and wells and removing water
- works effectively with others to undertake and complete the draining and dewatering of civil construction sites that meets all of the required outcomes including:
  - using a range of communication techniques to convey information to others
  - maintaining written and verbal reporting requirements and procedures
- demonstrates completion of draining and dewatering civil construction sites that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - dewatering a trench or pit using at least one type of pump
  - establishing sedimentation controls
  - constructing a sump
  - installing surface or submersible pumps
  - pumping and dispersing water
  - draining surface water from a site using surface drains
Knowledge Evidence

The candidate must demonstrate knowledge in draining and dewatering civil construction sites through:

- identifying and applying operational, maintenance and basic diagnostic procedures
- identifying and complying with construction principles
- interpreting engineering drawings
- identifying equipment types, characteristics, technical capabilities and limitations
- identifying and complying with site isolation and traffic control responsibilities
- using and interpreting civil construction terminology

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit must be assessed in the context of this sector’s work environment; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

<table>
<thead>
<tr>
<th>Industry sector</th>
<th>AQF** Level</th>
<th>Required assessor or Industry subject matter expert experience</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction</td>
<td>1</td>
<td>1 Year</td>
</tr>
<tr>
<td></td>
<td>2</td>
<td>2 Years</td>
</tr>
<tr>
<td>Drilling, Coal Mining and Extractive (Quarrying)</td>
<td>3-6</td>
<td>3 Years</td>
</tr>
<tr>
<td>Metalliferous Mining and Civil Construction</td>
<td>3-6</td>
<td>5 Years</td>
</tr>
</tbody>
</table>

**Other sectors**

Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.*

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level**

Application

This unit describes skills and knowledge required to plan, organise and facilitate learning for individuals in a workplace, using real work activities as the basis for learning.

It applies to a person working as an entry-level trainer, teacher or facilitator or an employee, team leader or workplace supervisor responsible for guiding learning through work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Delivery and facilitation
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Elements describe the essential outcomes.</strong></td>
<td><strong>Performance criteria describe the performance needed to demonstrate achievement of the element.</strong></td>
</tr>
</tbody>
</table>
| 1. Establish effective work environment for learning | 1.1 Establish, and agree upon, the objectives and scope of the work-based learning  
1.2 Analyse work practices and routines to determine their effectiveness in meeting established learning objectives  
1.3 Identify, and address any workplace health and safety (WHS) implications of using work as the basis for learning |
| 2. Develop a work-based learning pathway | 2.1 Address contractual requirements and responsibilities for learning at work  
2.2 Arrange for the integration and monitoring of external learning activities with the work-based learning pathway  
2.3 Obtain agreement from relevant personnel to implement the work-based learning pathway |
| 3. Establish the learning-facilitation relationship | 3.1 Identify the context for learning and the individual’s learning style  
3.2 Select an appropriate technique or process to facilitate learning, and explain the basis of the technique to the learner  
3.3 Develop, document and discuss an individualised learning plan with the learner  
3.4 Access, read and interpret documentation outlining the WHS responsibilities of the various parties in the learning environment  
3.5 Monitor supervisory arrangements appropriate to learner’s levels of knowledge, skill and experience to provide support and encouragement and ensure learner’s health and safety |
| 4. Implement the work-based learning pathway | 4.1 Explain the objectives of work-based learning, and the processes involved, to the learner  
4.2 Sequence the introduction of workplace tasks, activities and processes to reflect the agreed work-based learning pathway  
4.3 Encourage learner to take responsibility for learning and to self-reflect  
4.4 Develop techniques that facilitate the learner’s transfer of skills and knowledge |
<p>| 5. Maintain and develop the learning-facilitation | 5.1 Prepare for each session |</p>
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>relationship</td>
<td>5.2 Structure learning activities to support and reinforce new learning, build on strengths, and identify areas for further development</td>
</tr>
<tr>
<td></td>
<td>5.3 Observe learner cues, and change approaches where necessary, in order to maintain momentum</td>
</tr>
<tr>
<td></td>
<td>5.4 Practise ethical behaviour at all times</td>
</tr>
<tr>
<td></td>
<td>5.5 Monitor the effectiveness of the learning/facilitation relationship through regular meetings between the parties</td>
</tr>
<tr>
<td>6. Close and evaluate the learning-facilitation relationship</td>
<td>6.1 Carry out the closure smoothly, using appropriate interpersonal and communication skills</td>
</tr>
<tr>
<td></td>
<td>6.2 Seek feedback from the learner on the outcomes achieved, and the value of the relationship</td>
</tr>
<tr>
<td></td>
<td>6.3 Evaluate effectiveness of the work-based pathway against the objectives, processes and techniques used</td>
</tr>
<tr>
<td></td>
<td>6.4 Recommend improvements to work-based practice in light of the review process</td>
</tr>
</tbody>
</table>
**Foundation Skills**

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

<table>
<thead>
<tr>
<th>Skill</th>
<th>Performance Criteria</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reading</td>
<td>1.2, 1.3, 2.1, 3.1, 3.4, 3.5, 6.3, 7.2</td>
<td>• Accesses and interprets compliance information, contractual information, WHS information, and documents relevant to learning in the workplace, in the context of consultation and continuous improvement, to apply relevance to requirements</td>
</tr>
<tr>
<td>Writing</td>
<td>1.1, 2.3, 3.3, 4.1, 6.3, 7.1, 7.3</td>
<td>• Develops and maintains documentation relevant to workplace learning, including learning plans and evaluations, in accordance with organisational and workplace requirements</td>
</tr>
</tbody>
</table>
| Oral Communication         | 2.2, 3.3, 4.2, 5.5, 6.1         | • Uses oral communication techniques to identify needs, build rapport, agree on learning plans, facilitate effective learning and monitor practice  
  • Selects appropriate vocabulary adjusting language, tone and pace to maintain effective interactions, and to build and maintain engagement with individuals or groups |
| Navigate the world of work | 1.3, 2.1, 5.4, 7.1        | • Follows organisational protocols, policies and procedures in the management of records  
  • Recognises and responds to contractual and ethical requirements associated with own role |
| Interact with others       | 1.1, 2.3, 3.5, 4.3, 6.2       | • Asks questions to clarify understanding, and seeks feedback and further information  
  • Cooperates and collaborates with others as part of routine activities to achieve team results, and to confirm outcomes meet requirements |
| Get the work done          | 1.1-1.3, 2.1-2.3, 3.1-3.5, 4.1-4.4, 5.1-5.3, 5.5, 6.1-6.3, 7.1-7.3 | • Organises and completes work according to defined requirements, taking responsibility for decisions and sequencing tasks to achieve efficient outcomes  
  • Uses systematic, analytical processes in complex, routine and non-routine situations, gathering information, and identifying and evaluating options based on organisational needs  
  • Identifies and responds to problems and opportunities for improvement, considering options for different approaches  
  • Uses information and communications technology (ICT) based tools to design work processes and to complete work tasks |

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in the elements and performance criteria of this unit, including:

- preparing and facilitating work-based learning
- providing a minimum of two examples of developing work-based learning pathways, that include:
  - identifying needs for learning
  - analysing work practices, work environment and work activities
  - organising and allocating work in a way that reflects learning needs, and provides effective learning opportunities through work processes
- conducting a learning facilitation relationship:
  - with at least two individuals
  - demonstrating communication skills and flexibility
  - demonstrating one or more of the processes, or techniques, identified.
Knowledge Evidence

The candidate must be able to demonstrate essential knowledge to effectively complete the task outlined in the elements and performance criteria of this unit. This includes knowledge of:

- systems, processes and practices within the organisation where work-based learning is taking place
- systems for identifying skill needs within the workplace
- different learning styles, and how to encourage learning for those who learn in different ways
- workplace health and safety (WHS) relating to the work role, including:
  - hazards relating to the industry and specific workplace
  - reporting requirements for hazards and incidents
  - specific procedures for work tasks
  - safe use and maintenance of relevant equipment
  - emergency procedures
  - sources of WHS information.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Conditions must be typical of those experienced in the training and assessment environment, and include access to any documentation relating to workplace procedures required by the candidate.

Assessors must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessors of this unit must hold the TAE50116 Diploma of Vocational Education and Training or the TAE50111 Diploma of Vocational Education and Training or be able to demonstrate equivalence of competencies.

TLIB3011A Set up and rig crane for lift

Modification History
Not Applicable

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to set up and rig a mobile crane for a lift, including the systematic positioning and stabilisation of the crane and its assembly. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to mobile crane operations.

Work is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles and procedures to the setting up and rigging of a crane prior to lift in a variety of operational contexts.

Licensing/Regulatory Information
Refer to Unit Descriptor

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1** Position and stabilise crane | 1.1 Crane is directed to position as per job plan to ensure safe operation in accordance with applicable Australian Standards, codes of practice and manufacturers specifications  
1.2 Ground is checked to ensure it is firm enough to bear the load  
1.3 Appropriate plates or packing are correctly used to adequately distribute the load  
1.4 Any outriggers and stabilisers are correctly deployed and positioned in accordance with manufacturers instructions and the appropriate Australian Standard and other relevant statutory regulations  
1.5 Outrigger packing is checked for adequacy prior to and after lift is taken |
| **2** Assemble crane | 2.1 The block is reeved in accordance with manufacturers instructions  
2.2 Any counterweights are installed to manufacturers specifications  
2.3 Any attachments are set up in accordance with manufacturers instructions  
2.4 A qualified rigger is consulted and other personnel are assisted as necessary to ensure efficient and safe assembly and set-up of crane  
2.5 Straight fly jibs and luffing fly jibs are assembled and fitted in accordance with manufacturers instructions |

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation and rigging of mobile cranes
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Operational procedures for crane crews
- Procedures for prioritising and multi-tasking work
- Procedures for fitting attachments and fly jibs
REQUIRED KNOWLEDGE AND SKILLS

- Company work procedures concerning the setting up and rigging of a mobile crane at a worksite
- Focus of operation of work systems and equipment
- Application of relevant agreements, codes of practice or other legislative requirements
- Procedures for the identification and correct use of equipment, processes and procedures

Required skills:

- Communicate effectively with others when setting up and rigging a crane for a lift
- Read and interpret instructions, procedures, information and signs relevant to the setting up and rigging of a crane for a lift
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the setting up and rigging of a crane for a lift
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when setting up and rigging a crane for a lift
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when setting up and rigging a crane for a lift
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor condition of equipment
- Fit fly jibs and attachments

Evidence Guide
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - applying relevant legislation and workplace procedures
  - applying procedures for fitting attachments and fly jibs
  - demonstrating an understanding of the consultation processes

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in a variety of weather conditions
- using a workcage/workbox
- using a superlift attachment (300t and over cranes)

Environment may include:
- movement of equipment, goods, materials and vehicular traffic

Customers may be:
- internal or external

Mobile crane may be involved in work in a range of industry sectors including:
- construction and demolition
- manufacturing
- waterfront
- mining
- primary industry
- utilities (electricity, gas, water)
- arboricultural
- swimming pool
- quarrying
- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion
- other vehicles and personnel

Hazard management is:
- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:
- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff
RANGE STATEMENT

Requirements for access and/or lift may include:

- dogman/rigger
- site restrictions and procedures
- authorities and permits
- hours of operation
- induction
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing

Documentation/records may include:

- site plans
- Safe Working Load (SWL) and Working Load Limit (WLL)
- operations manuals including load charts and crane and rigging manuals
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health& safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Applicable regulations and legislation may include:

- relevant state/territory regulations and licence/permit requirements pertaining to mobile cranes
RANGE STATEMENT

- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Sector(s)

Unit Descriptor

This unit involves the skills and knowledge required to carry out routine maintenance of a mobile crane, including obtaining and confirming job instructions and work specifications, coordinating the loading of gear and equipment, assessing job requirements and work areas, designing the job plan and setting up the work area. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to mobile crane operations and maintenance.

Work is performed under general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine maintenance principles and procedures to servicing and maintenance of mobile cranes in a variety of operational contexts.

This unit applies to maintenance activity on equipment used by the operator and is limited to lubrication, fluid, filter and accessory changing and checks for cracks, surface or structural faults or other damage.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Plan maintenance operations** | 1.1 Tags, service records, log books and crane manufacturers information are read prior to commencing maintenance, noting previously identified and manufacturers recommendations  
1.2 Maintenance schedules are read and maintenance tasks noted to match the schedule  
1.3 A step by step procedure is worked out to minimise time delays and to sequence maintenance processes consistent with manufacturers recommendations |
| **2 Complete pre-maintenance checks** | 2.1 Appropriate safe work area is selected for conduct of maintenance  
2.2 Required tools, consumables and equipment are identified and assembled  
2.3 Equipment is inspected for visible faults and loose or damaged components |
| **3 Identify and assess any faults found** | 3.1 Conditions found are compared with manufacturers information and intended use of crane  
3.2 Conditions noticed which may cause difficulties in the future are identified and the potential effect on the safe and efficient operation of the mobile crane is documented  
3.3 Potential fault conditions are reported to the appropriate personnel |
| **4 Conduct maintenance operations and safety check** | 4.1 Fluid replacements and lubrication operations are completed  
4.2 Fluid levels are checked and adjusted  
4.3 Mechanical components are checked for secure attachments and tensions  
4.4 Mechanical adjustments are made  
4.5 The maintenance plan is followed and appropriate adjustments are made to the plan to deal with unexpected events  
4.6 Own work and crane system operations are checked to ensure that the crane's operational condition is to the required specifications  
4.7 Tools, equipment and unused consumables are returned to the appropriate locations and waste is disposed of within workplace policy and procedures |
| **5 Complete maintenance records** | 5.1 Accurate reporting of the results of the safety check and the maintenance conducted is completed and filed in accordance with procedures, industry guidelines and any statutory requirements  
5.2 Clear reference in reports is made to any items which may not yet require maintenance but may affect the future working |
ELEMENT PERFORMANCE CRITERIA
condition or safety of the mobile crane

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant regulations, permit and licence requirements pertaining to mobile crane operational safety and maintenance
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Operational safety and maintenance procedures for crane crews
- Use, characteristics, capabilities and limitations of the lubrication and adjustment tools and equipment
- Workplace procedures for the planning of mobile crane jobs and the setting up of work areas
- Guidelines relating to the safe use of machinery and equipment
- Focus of operation of crane systems and equipment
- Application of relevant agreements, codes of practice or other legislative requirements

Required skills:
- Communicate effectively with others when maintaining a mobile crane
- Read and interpret instructions, procedures, information and signs relevant to the maintenance of a mobile crane
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the maintenance of a mobile crane
- Work collaboratively with others when maintaining a mobile crane
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Identify non-conformities which may compromise operational capability
- Implement contingency plans for unexpected maintenance issues
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
Required skills:
- Prioritise and multi-task work when maintaining a mobile crane
- Monitor work activities in terms of planned maintenance schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self, others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Identify and correctly use crane equipment and related maintenance processes and procedures
- Service equipment in terms of maintenance schedule and standard operating procedures
- Check and replenish fluids and carry out lubrication processes when maintaining a mobile crane

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

Context of and specific resources for assessment
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
EVIDENCE GUIDE

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- day or night
- in a variety of weather conditions

Environment may include:
- movement of equipment, goods, materials and vehicular traffic

Customers may be:
- internal or external

Mobile crane may be involved in work in a range of industry sectors including:
- construction and demolition
- manufacturing
- waterfront
- mining
- primary industry
- utilities (electricity, gas, water)
- arboricultural
- swimming pool
- quarrying

Maintenance may include:
- routine inspections of crane and its associated equipment
- checks prior to operations
- checks on completion of operations
RANGE STATEMENT

Routine checks/servicing may include:
- checks on completion of repairs
- checking and topping up of water levels
- replacement of oils
- replacement of air in tyres
- checking pressure, fluid leaks, temperature
- checking tightness of bolts, fixtures, attachments and fittings to ensure they are within specifications
- checking for cracks, surface or structural faults or other damage

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety checks may include:
- warning devices
- operating lights or audible cues
- braking and transmissions
- lifting devices
- steering and suspension
- windscreen wipers
- isolation switches and shut down devices
- mechanical, electrical, electronic, hydraulic or pneumatic components

Hazards may include:
- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion
- other vehicles and personnel

Hazard management is:
- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

TLIB3015A Undertake site inspection

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to undertake a site inspection in preparation for a lift requiring a mobile crane, including arranging the site inspection, clarifying customer requirements, defining job requirements and completing necessary records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to mobile crane operations and safety.

Work is performed with general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles and procedures to conduct of site inspections prior to mobile crane lifts in a variety of operational contexts.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Arrange site inspection | 1.1 Available information about customer requirements is obtained from relevant personnel  
1.2 Need for site inspection is confirmed through appropriate questioning and discussion  
1.3 Mutually acceptable meeting time is arranged with customer  
1.4 Full customer details are recorded according to workplace procedures |
| 2 Clarify customer requirements | 2.1 Customer needs and perception of job are clearly established through appropriate questioning and discussion  
2.2 Alternative job methods are suggested where applicable and a safe and cost effective method negotiated with the customer  
2.3 Clients ability to provide any necessary competent personnel is ascertained |
| 3 Define job requirements | 3.1 Information regarding load and movement requirements is accessed and any necessary measurements are taken to enable accurate estimation of job requirements  
3.2 Specific scheduling needs are ascertained taking into account legislative and customer requirements  
3.3 Information from site inspection and customer is used to identify hazards and contingencies  
3.4 Specific site and job requirements are identified  
3.5 Lift study is arranged as required to provide additional information or meet customer expectations  
3.6 Necessity to be on site during lift is assessed in line with workplace policy taking into consideration complexity of job, potential hazards and expertise of available personnel  
3.7 Need for permits/authorisations is determined |
| 4 Complete records | 4.1 Required records are updated accurately, legibly and promptly according to workplace procedures  
4.2 Records include all relevant information about the job |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
REQUIRED KNOWLEDGE AND SKILLS

- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation and safety
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Site inspection procedures and protocols
- Operational procedures for crane crews for the conduct of a site inspection for a lift using a mobile crane
- Guidelines relating to the safe use of machinery and equipment
- Focus of operation of work systems and equipment
- Application of relevant agreements, codes of practice or other legislative requirements

Required skills:

- Communicate effectively with others when conducting a site inspection for a lift using a mobile crane
- Read and interpret instructions, procedures, information and signs relevant to a site inspection for a lift using a mobile crane
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to a site inspection for a lift using a mobile crane
- Work collaboratively with others when conducting a site inspection for a lift using a mobile crane
- Plan own work including predicting consequences and identifying improvements
- Prioritise and multi-task work
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may be identified when conducting a site inspection for a lift using a mobile crane in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may occur when conducting a site inspection for a lift using a mobile crane
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
Required skills:
- Identify and correctly use equipment, processes and procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Performance is demonstrated consistently over a period of time and in a suitable range of contexts

Resources for assessment include:
- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace

In both real and simulated environments, access is required to:
- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated
EVIDENCE GUIDE

environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- day or night
- in a variety of weather conditions

Environment may include:
- movement of equipment, goods, materials and vehicular traffic

Customers may be:
- internal or external

Mobile crane may be involved in work in a range of industry sectors including:
- construction and demolition
- manufacturing
- waterfront
- mining
- primary industry
- utilities (electricity, gas, water)
- arboricultural
- swimming pool
- quarrying

Sites may include:
- building and construction sites
- demolition sites
- wharves
- tree lopping/removal sites
- mining sites

Hazards may include:
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
RANGE STATEMENT

- hazardous or dangerous materials
- traffic hazards and congestion
- other vehicles and personnel

Hazard management is:

- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:

- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff

Requirements for access and/or lift may include:

- site restrictions and procedures
- authorities and permits
- hours of operation
- induction processes
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- site plan
- Safe Working Load (SWL) and Working Load Limit (WLL)
- operations manuals including load charts and crane and rigging manuals
- induction documentation
- competency standards and training materials

Documentation/records may include:

- site plan
- Safe Working Load (SWL) and Working Load Limit (WLL)
- operations manuals including load charts and crane and rigging manuals
- induction documentation
- competency standards and training materials
RANGE STATEMENT

- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health & safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Applicable regulations and legislation may include:

- relevant state/territory regulations and licence/permit requirements pertaining to mobile cranes
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Competency Field

Competency Field: B - Equipment Checking and Maintenance
TLIF2006A Apply accident-emergency procedures

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to apply accident emergency procedures, including responding to an incident, controlling and assisting at an accident or emergency site, finalising accident-emergency processes, and completing records, reports and other required documentation in accordance with regulatory requirements and workplace procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in accordance with OH&S codes/regulations and workplace requirements.
Work is performed under limited supervision. It involves the application of regulatory requirements and workplace procedures when responding to accident/emergencies in the workplace.

Licensing/Regulatory Information
Refer to Unit Descriptor

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Respond to the incident | 1.1 Response to the incident or accident is in accordance with workplace emergency procedures and relevant regulatory requirements  
1.2 Details of the cause(s) and effects of the incident are identified and reported  
1.3 Assistance requirements for accidents and emergencies are clarified and reported immediately to the appropriate parties  
1.4 Requests for assistance are made to relevant personnel and emergency services |
| 2 Control and assist at accident or emergency site | 2.1 Site is controlled and protected until the arrival of authorised personnel  
2.2 Assistance is provided to injured persons, within the limitations of duty of care and workplace procedures  
2.3 Relevant authorities at the site are cooperated with and assisted within workplace policies |
| 3 Finalise accident-emergency process and complete records | 3.1 Relevant information is exchanged in accordance with state/territory law and workplace procedures  
3.2 Documentation and reports are completed and processed in accordance with workplace and relevant regulatory requirements |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant regulatory and code requirements applicable in accident/emergency situations
- Relevant OH&S and environmental protection policies and procedures
- Workplace procedures for accident-emergency response
- Workplace emergency, fire and accident procedures
- Site layout
- Focus of operation of work systems, equipment or management, site and organisational operating and emergency procedures
- Typical problems that can occur during a safety incident, accident or emergency and related action that can be taken
Required skills:

- Communicate effectively with others when responding to an accident or an emergency
- Read and interpret instructions, procedures and information relevant to a response to an accident or an emergency
- Interpret and follow operational instructions and prioritise work
- Negotiate and resolve issues when responding to an accident or an emergency
- Complete documentation related to a response to an accident or an emergency
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when responding to an accident or an emergency
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events that may occur when responding to an accident or an emergency
- Analyse the working environment in order to identify hazards, assess safety risks and design and implement appropriate OH&S control procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when responding to an accident or an emergency
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and appropriately apply technology, information systems and policies during a safety incident, accident or emergency
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.
EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:

- in a range of work environments
RANGE STATEMENT

Customers may be:
- by day or night
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- limited or restricted spaces
- exposed conditions
- controlled or open environments
- even or uneven surfaces
- wet or dry surfaces

Workplace hazards may include but are not restricted to:
- moving heavy loads in an unsafe work environment
- unsecured machinery, components or repaired equipment
- slippery floors
- welding equipment
- sharp tools and implements
- power tools
- moving and rotating machinery
- flammable liquids, vapours and fuel
- faulty machinery equipment handling equipment and lifting gear
- using equipment beyond safe working limits
- poor housekeeping procedures
- non-compliance with safe working procedures
- electrical wiring and systems, including exposed electrical circuits
- working at heights and in confined spaces
- toxic gases and substances
- chemicals and other harmful substances
- damaged goods, pallets and containers
- dangerous/hazardous goods

Consultative processes may involve:
- OH&S specialists
- trainers
- other employees and supervisors
- management
- union representatives
- manufacturers representatives
- supplier representatives
- customers/clients
- other maintenance, professional or technical staff

Depending on the type of organisation concerned and the
- company plans/procedures
- enterprise plans/procedures
RANGE STATEMENT

local terminology used, workplace plans/procedures may include:

organisational plans/procedures
established plans/procedures
workplace accident-emergency procedures and policies
workplace OH&S management system including hazard/safety risk control strategies
OH&S training notes and materials
journals and work related literature concerning OH&S
competency standards
customer/client instructions
customer service standards and procedures
workplace products and services information
quality assurance standards and procedures
relevant agreements, codes of practice including the national standards for services and operations
manufacturers/suppliers' specifications, advice, recommended procedures, policies and instructions
workplace guidelines on appropriate workplace language and communication strategies and interpretation of relevant information
regulations and policies relating to minimising risks to the environment and ensuring compliance with OH&S requirements
emergency procedures
relevant regulations, standards and codes of practice
hazardous substances and dangerous goods codes
relevant Australian and state/territory OH&S legislation including regulations and codes of practice relating to hazards present in the workplace or industry, including:

general duty of care under OH&S legislation and common law
requirements for the maintenance and confidentiality of records of occupational injury and disease
requirements for provision of OH&S information and training
provisions relating to health and safety representatives and/or OH&S committees
provisions relating to OH&S issue resolution
environmental protection regulations
relevant Australian standards and certification requirements including Australian Standard AS 1885.1

Competency Field F - Safety Management
TLIF2010A Apply fatigue management strategies

Modification History
Not Applicable

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to apply fatigue management strategies, including identifying and acting upon signs of fatigue and implementing appropriate strategies to minimise fatigue during work activities, in accordance with legislative and regulatory requirements. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable federal and state/territory legislation and relevant regulations covering the management of fatigue in the workplace.

Work is performed under some supervision generally within a team environment. It involves the application of the relevant regulations, codes and guidelines of the federal government and state/territory authorities concerning fatigue management during work activities and in particular when operating equipment, trains, vehicles, load shifting equipment, marine vessels and aircraft.

| 1 Identify and act upon signs of fatigue | 1.1 Potential causes of fatigue are identified and action is taken to minimise their effects in accordance with company procedures  
1.2 Personal warning signs of fatigue are recognised and necessary steps are taken in accordance with workplace procedures to ensure that effective work capability and alertness are maintained |
| 2 Implement strategies to minimise fatigue | 2.1 Workplace procedures are assessed to minimise fatigue  
2.2 Factors which increase the risk of fatigue-related accidents and safety incidents are understood and minimised  
2.3 Strategies to manage fatigue are implemented in accordance with company policy  
2.4 Lifestyle choices are made which promote the effective long-term management of fatigue  
2.5 Effective practices in combating fatigue are adopted and applied  
2.6 Personal fatigue management strategies are communicated to other relevant people  
2.7 Appropriate counter measures are planned to combat fatigue |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant codes, regulations, permit and licence requirements related to fatigue management
- Relevant OH&S regulations as they relate to fatigue
- Workplace policies and procedures related to fatigue management and the control of factors that can contribute to fatigue and fatigue-related accidents
- Sources of information on fatigue
- The risks and hazards created by fatigue in the workplace
- How fatigue affects workplace performance
- How fatigue contributes to workplace accidents
- Ways of recognising fatigue
- Strategies and ways of managing fatigue
- Causes and effects of fatigue on workers/drivers
- Factors which increase fatigue-related accidents
REQUIRED KNOWLEDGE AND SKILLS

- Lifestyles which promote the effective long-term management of fatigue

Required skills:

- Communicate effectively with others when applying fatigue management strategies
- Read and interpret instructions, procedures, regulations and signs related to fatigue management and apply them to work activities
- Recognise symptoms of fatigue and take appropriate action in accordance with fatigue management regulations and workplace procedures
- Work collaboratively with others to manage and minimise the effects of fatigue during work activities
- Adjust lifestyle patterns to ensure effective fatigue management during work activities
- Modify activities and take appropriate initiatives to manage fatigue in the workplace depending on differing work contexts, risk situations and environments
- Apply precautions and required action to minimise and control the effects of fatigue when carrying out own work functions
- Adapt to changes in rosters and standard operating procedures as they may relate to fatigue management
- Participate in identifying and meeting own learning needs on matters related to fatigue management

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Performance is demonstrated consistently over a period of time and in a suitable range of contexts

Context of and specific resources for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and
EVIDENCE GUIDE

- other/or simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Workplace may include:

- any work environment requiring safety critical operational judgements to be made and in particular when operating equipment, vehicles, load shifting equipment, trains, marine vessels and aircraft at night

The need for fatigue management in a range of industry situations including:

- operations conducted at all times but particularly at night
- typical weather conditions
- while working and/or driving at a workplace, depot, base or warehouse
- while working and/or driving at a client's workplace or worksite
- driving a motor vehicle on the open road
- driving a motor vehicle on a private road
- driving a train, locomotive or motive power unit
- operating a marine vessel in coastal or international waters
RANGE STATEMENT

Work-related factors that may contribute to fatigue include:
- operating an aircraft
- operating load shifting equipment
- operating safety critical industrial plant and equipment
- work demands such as: workload, work duration, shift pattern, time of day, frequency and duration of breaks and the type of work (such as working in isolation, repetitive tasks and boring, monotonous or under-challenging tasks)
- organisational factors such as: work environment (including temperature, ventilation, continual rhythmic vibration from equipment), payment system, trip and work scheduling, and the predictability of work

Worker/operator-related factors that may contribute to fatigue include:
- lifestyle factors such as: sleep patterns, alcohol and drug use, quantity and timing of food and drink, and opportunities for relaxation with family and friends
- working multiple jobs
- personal or biological factors such as: state of mental and/or physical health, inadequate sleep, sleep disorders, emotional stress, family responsibilities, relationship difficulties, inadequate competence to complete work tasks, and circadian rhythms

Responsibilities of individual for fatigue risk management may include:
- following the organisation's fatigue management policy and procedures
- using time away from work appropriately to rest and recover
- checking and ensuring fitness for work
- reporting symptoms of fatigue
- taking action to minimise risk when symptoms of fatigue are recognised

Schedules may include:
- rosters
- vehicle schedules
- timetabling
- workplans

Depending on the organisation, operating procedures may include:
- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information and documents may include:
- federal and state/territory regulations and guidelines concerning fatigue management in various transport and workplace situations
- workplace instructions and procedures on fatigue management
RANGE STATEMENT

- relevant OH&S regulations and procedures
- work schedules and shift rosters
- emergency procedures
- log book or record book (where required)
- records and reports of fatigue-related errors and safety incidents
- relevant standards and certification requirements
- quality assurance procedures
- relevant regulations and codes of the federal government and the state/territory regulatory authorities concerning fatigue management
- relevant state/territory road rules
- relevant rail industry safe working codes and regulations (where applicable)
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation

Applicable legislation, regulations and codes may include:

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT**

1 Follow workplace and mobile crane safety procedures for hazard identification and risk control

**PERFORMANCE CRITERIA**

1.1 Mobile crane and workplace procedures for dealing with accidents, fire and emergencies are known and followed

1.2 Mobile crane and workplace procedures for OH&S and related work instructions for controlling risks in a workplace are accurately followed

1.3 Mobile crane hazards and site hazards in the workplace are identified and appropriate action is taken to report them and to minimise or eliminate risk to personnel, workplace and the environment

1.4 Safety regulations and established mobile crane and workplace safety and hazard control practices and procedures are obtained, interpreted and applied to mobile crane operations

1.5 Where relevant, procedures and precautions necessary for entry into confined spaces in the workplace are correctly followed

1.6 Personal protection clothing and equipment is correctly used in accordance with established safety practices and procedures

1.7 Established mobile crane and workplace emergency and contingency plans are followed in the event of an emergency

2 Contribute to arrangements for management of mobile crane safety procedures and occupational health and safety

2.1 Mobile crane safety hazards and OH&S issues are identified and raised with designated personnel in accordance with workplace procedures and relevant OH&S legislation

2.2 Contributions to OH&S management in the workplace are made in accordance with workplace procedures and provisions of relevant legislation

2.3 Participative arrangements for mobile crane safety procedures and OH&S management in the workplace are contributed to within relevant workplace procedures and scope of responsibilities and competencies

3 Complete workplace and occupational health and safety records

3.1 Mobile crane and OH&S records are completed in accordance with workplace requirements

3.2 OH&S records and legal requirements for the maintenance of records of occupational injury and diseases are followed

Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.
REQUIRED KNOWLEDGE AND SKILLS

Required knowledge:

- Relevant mobile crane safety procedures
- Relevant OH&S procedures and guidelines
- Risks associated with mobile cranes, and related precautions to control the risk
- Risks associated with multiple crane operations
- Hazards associated with crane operations on a demolition site
- Hazards associated with mobile crane operations on a construction site
- Lifting personnel using a workcage/workbox
- Reporting procedures in regard to unsafe situations, fire hazards, broken or damaged equipment or fittings, sickness and accidents
- Location and use of safety alarms, emergency shut-off systems, emergency communication systems
- Signs and signals used for warnings
- Terms used in material safety data sheets (where relevant)
- HAZCHEM symbols and implications for safe work and storage
- Storage and use of hazardous substances
- Handling of broken or damaged equipment
- Manual and mechanically assisted lifting and load shifting procedures
- Transport requirements for goods within workplace
- Mobile crane and workplace emergency and evacuation procedures
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

Required skills:

- Communicate effectively with others when following mobile crane and OH&S procedures
- Read and comprehend simple statements in English
- Read and interpret relevant safety-related information including safety labels, instructions for safe work, relevant material safety data sheets, mobile crane and workplace procedures and codes of practice
- Identify containers and goods coding, ADG and IMDG markings and, where applicable, emergency information panels
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to mobile crane procedures and OH&S in the workplace
- Operate electronic communication equipment to required protocol
- Estimate the size, shape and special requirements of loads
- Work collaboratively with others when following procedures
Required skills:

- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when following mobile crane and OH&S procedures in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when following mobile crane and OH&S procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during mobile crane operations and workplace activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation, mobile crane safety procedures and workplace procedures
  - procedures for identifying mobile crane safety hazards and OH&S issues
  - appropriate action to report identified mobile crane and site hazards in the workplace to minimise or eliminate risk to personnel, workplace and the
EVIDENCE GUIDE

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The operations may be conducted:
- in a range of work environments
- by day or night
- using multiple cranes
- using a workcage/workbox

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites
- demolition sites
RANGE STATEMENT

Work may be conducted in:
- construction site
- restricted spaces
- exposed conditions
- controlled or open environments

Workplace hazards may include:
- chemicals and other harmful substances
- electrical and other overhead services
- movements of equipment, goods, vehicles
- toxic substances
- damaged packing material and containers
- broken and damaged equipment
- inflammable materials and fire hazards
- lifting practices
- waste management and disposal
- extremes in weather conditions
- lighting levels
- floor surfaces
- water hazards
- traffic flows, vehicle and equipment operation
- a range of storage areas

Personnel in the work area may include:
- workplace personnel
- site visitors
- OH&S specialists
- union representatives
- contractors
- official representatives

Participative arrangements may include:
- formal and informal meetings which deal with OH&S issues
- toolbox talks
- workplace OH&S committees
- other committees, for example, consultative, planning and purchasing
- OH&S representatives
- suggestions, requests, reports and concerns put forward by staff

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- radio/hand or whistle signals
RANGE STATEMENT

Designated personnel may include:

- workplace personnel
- supervisors
- dogman/rigger
- team leaders
- management
- occupational health and safety personnel
- other persons authorised or nominated by the organisation

Personal protective equipment may include:

- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- OH&S regulations
- mobile crane safety procedures
- workplace OH&S procedures and policies
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- ADG Code and material safety data sheets (where relevant)
- policies and procedures for entry and work in confined spaces
- manufacturers instructions concerning the use and servicing of equipment
- supplier and/or client instructions
- emergency procedures
- regulations and policies concerning noise, smoking, work station ergonomics and other critical OH&S issues
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures

Information/documents may include:

- relevant state/territory OH&S legislation and safety codes, including manual handling, noise, confined spaces, smoking, workplace ergonomics, etc.
RANGE STATEMENT

- mobile crane codes of practice
- Australian Standards
- general duty of care under OH&S legislation
- workplace relations regulations
- workers compensation regulations
- dangerous goods regulations

Competency Field

Competency Field        F - Safety Management
TLILIC2001 Licence to operate a forklift truck

Modification History
Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application
This unit specifies the skills and knowledge required to operate a forklift truck safely.

Forklift truck means a powered industrial truck equipped with lifting media made up of a mast and an elevating load carriage to which is attached a pair of fork arms or other arms that can be raised 900 mm or more above the ground, but does not include a pedestrian-operated truck or a pallet truck.

A person performing this work is required to hold a forklift truck high risk work (HRW) licence.

This unit requires a person operating a forklift truck to plan the work, conduct routine checks on a forklift truck, shift loads in a safe manner, and safely shut down and secure equipment after completing operations.

Licensing/Regulatory Information
This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations, HRW and meets Commonwealth, state and territory HRW licensing requirements.

Any alteration to this unit would result in a unit that would not be acceptable to work health and safety (WHS)/occupational health and safety (OHS) regulators for the purpose of licensing.

Pre-requisite Unit
Not applicable.
### Competency Field
LIC – Licensing

### Unit Sector
Not applicable.

### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENTS</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1 **Plan work**

1.1 Potential workplace hazards are identified

1.2 Risk control measures are identified consistent with regulatory requirements and the hierarchy of control

1.3 Appropriate forklift truck is selected in accordance with load and workplace conditions

1.4 Working area is inspected to determine appropriate paths for moving loads and forklift truck in accordance with workplace conditions

1.5 Methods for communicating are identified and confirmed in accordance with workplace procedures

2 **Conduct routine checks**

2.1 Prior to operation, forklift truck is visually checked for any damage or defects

2.2 All signage and labels are checked to ensure they are visible and legible, in accordance with the appropriate standard

2.3 All controls are located, identified and confirmed

2.4 Pre-start operational checks are carried out in accordance with manufacturer specifications and workplace procedures

2.5 Forklift truck is started in accordance with manufacturer specifications and workplace procedures, and is checked for any abnormal noise
2.6 Post-start operational checks are carried out in accordance with manufacturer specifications and workplace procedures

2.7 All forklift truck functions and safety devices are tested to their maximum in accordance with manufacturer specifications and workplace procedures

2.8 Issues, defects and damage identified during routine checks are reported and recorded in accordance with workplace procedures, and appropriate action is taken

3 Shift load

3.1 Weight of load is assessed to ensure compliance with forklift truck data plate specifications

3.2 Appropriate hazard prevention/control measures are implemented and communicated to personnel in the work area

3.3 Forklift truck is operated at a safe speed in accordance with manufacturer specifications and workplace procedures

3.4 Loads are moved and placed to ensure stability of material and avoidance of hazards

3.5 Load movement is monitored constantly to ensure safety of personnel and load, and structural stability

3.6 Unplanned and/or unsafe situations are responded to in accordance with workplace procedures and emergency plans

4 Shut down and secure forklift truck

4.1 Forklift truck is parked to avoid hazards

4.2 Forklift truck is shut down in accordance with manufacturer specifications and workplace procedures

4.3 Routine post-operational forklift truck checks are carried out in accordance with manufacturer specifications and workplace procedures

4.4 Forklift truck is secured to prevent unauthorised access/use

4.5 All defects and damage are reported and recorded in accordance with manufacturer specifications and workplace procedures, and appropriate action is taken
Foundation Skills

The language, literacy, numeracy and employment skills that are essential to performance that are not explicit in the unit are listed below.

Range of Conditions
Range is restricted to essential operating conditions and any other variables essential to the work environment. Non-essential conditions can be found in the Companion Volume Implementation Guide.

**Unit Mapping Information**

This unit is equivalent to TLILIC2001A Licence to operate a forklift truck

**Links**

Companion Volume implementation guides are found in VETNet - https://vetnet.education.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851
Assessment Requirements for TLILIC2001 Licence to operate a forklift truck

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

A person who demonstrates competency in this unit must provide evidence of safely operating a forklift truck and satisfy all of the unit elements, performance criteria and foundations skills requirements on at least one occasion including:

- applying risk assessment and hazard control strategies, including hierarchy of control as applied to safely operating a forklift truck
- carrying out post-start operational checks, which must ensure:
  - attachment movements and control functions are smooth and comply with operating requirements
  - hazard warning systems (e.g. lights and horns) are functional
  - safety devices are checked, including
    - deadman’s switch
    - emergency descent device (hydraulic)
    - reversing beepers
  - start-up is in accordance with procedures
  - steering, transmission and brake functions comply with operating requirements
- carrying out pre-start operational checks, which must include:
  - battery charge checks, as required
  - ensuring availability of logbook, records, handbook and/or operating manuals
  - fitting and interpreting forklift truck data plate
  - fluid checks
  - forklift truck attachment security checks
  - identifying approved modifications and/or attachments fitted, to manufacturer specifications in accordance with forklift truck or attachment data plate
  - locating, identifying and confirming all controls
  - safety equipment checks
  - signage and label visibility and legibility checks
  - updating records as required
- communicating with other workplace personnel through
  - using appropriate worksite protocols
  - listening
Assessment Requirements for TLILIC2001 Licence to operate a forklift truck

- making and interpreting hand signals
- questioning to confirm understanding
- signage
- verbal and non-verbal language
- written instructions
- complying with Commonwealth, state and territory work health and safety (WHS)/occupational health and safety (OHS) legislation and regulations
- conducting and monitoring safe forklift truck operations that include moving loads safely, driving and manoeuvring, picking up and placing loads at various stack heights and carrying out all functions to the maximum height and load capacity
- driving a forklift truck with load in forward and reverse, while maintaining visibility
- planning and preparing for forklift truck operations including:
  - conducting a workplace risk assessment
  - identifying hazards associated with operating a forklift truck, which must include
    - forklift truck instability (e.g. due to overloading, poor load placement, irregular loads)
    - ground conditions (e.g. condition of pavement, slopes)
    - insufficient lighting
    - overhead hazards (e.g. electric lines, service pipes)
    - traffic (e.g. pedestrians, vehicles, other plant) and the risk of collision with people, moving plant and fixed structures
    - weather conditions (e.g. wind, lightning, rain)
  - selecting hazard prevention strategies in accordance with the hierarchy of control
  - putting in place effective controls for identified hazards
  - visually checking a forklift truck for any damage or defects prior to operation including
    - evidence of damage
    - leaks
    - structural weaknesses (including paint separation or stressed welds)
- receiving and interpreting workplace instructions, safety information and emergency procedures
- shutting down a forklift truck in accordance with manufacturer specifications and workplace procedures including
  - parking in a suitable location away from dangerous areas
  - correctly positioning fork arms (tips down, tilted forward, lowered to ground)
  - selecting appropriate transmission/gear for parking (relevant to transmission type)
  - applying hand/parking brake
  - turning off engine power
  - removing ignition key as required
  - shutting off LPG gas cylinder valve as required
  - securing equipment in accordance with manufacturer specifications and against
unauthorised operation
- securing site
- ensuring access ways are clear
- identifying and segregating defective equipment and reporting to authorised personnel
- connecting batteries to charger as required
- verifying problems and equipment faults, and implementing appropriate response procedures to unplanned and/or unsafe situations including
  - environmental conditions (e.g. wind, lightning, storms)
  - failure/loss of control (e.g. brakes and steering)
  - failure of equipment (e.g. hydraulic system)
  - forklift truck instability (e.g. due to deterioration of ground condition, overloading, poor load placement, irregular loads).

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and industry standards relevant to operating a forklift truck
- Commonwealth, state or territory WHS/OHS legislation and approved codes of practice in relation to one's own responsibilities
- forklift truck characteristics and capabilities (including use of load data plates)
- forklift truck operations and safe operating techniques
- hierarchy of control:
  - elimination
  - substitution
  - isolation
  - engineering controls
  - administrative controls
  - personal protective equipment (PPE)
- methodology to determine weight of a load including the estimation or determination from labels, markings or load paperwork such as:
  - control labels
  - forklift data plates/labels
  - forklift warning decals
- organisational and workplace standards, requirements, policies and procedures for operating a forklift truck
- procedures for recording, reporting and maintaining workplace records and information
- relevant Australian and industry standards, codes of practice and guidelines to safely operate a forklift truck
• risk control measures including:
  • barricades and traffic control (e.g. traffic management plan)
  • compliance with permit condition requirements from electrical supply authority, including
    • adequate illumination
    • disconnected power
    • excavation safeguards
    • insulated electric lines
    • maintaining safety observer zone
    • movement of obstructions
    • observing limits of approach
    • pedestrian control (barricades, signs, etc.)
    • power disconnection or compliance with electrical supply authority requirements
    • safety tags on electrical switches/isolators
    • using safety observer inside exclusion zone
    • using personal protective equipment
  • selecting forklift truck to suit load and workplace conditions
  • typical routine problems encountered operating a forklift truck and equipment, and adjustments required for correction.
Assessment Conditions

Assessments must be conducted by an assessor accredited for this high risk work (HRW) licence class in the Commonwealth/state/territory where the licence will be obtained (i.e. an assessor authorised by a Commonwealth/state/territory WHS/OHS regulator).

As a minimum, assessors must satisfy applicable regulatory requirements, which may include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and all assessment must be conducted in the English language.

Assessment of performance must be undertaken in the workplace and/or under realistic workplace conditions which typically reflect:

- performing tasks/activities within timelines that would be expected in a workplace
- standard and authorised work practices, safety requirements and environmental constraints
- using full-scale equipment

Forklift truck operation assessment must be conducted in a working zone in accordance with state/territory arrangements.

If the working zone is located at a ‘live’ site, assessment should continue in all weather conditions unless the safety of the candidate or others could be compromised.

Simulators must not be used in the assessment of this unit of competency.

Accredited assessors are responsible for ensuring that candidates have access to:

- a suitable forklift truck that complies with AS 2359 Powered industrial trucks and is in a safe condition
- associated equipment appropriate to forklift truck operations
- suitable loads
- required personal protective equipment (PPE) for the purpose of Performance Assessment
- relevant workplace procedures and standards for operating a forklift truck, including:
  - approved codes of practice and guidance
  - relevant Australian and international technical standards
  - manufacturer guidelines (instructions, specifications or checklists) for the purpose of Performance Assessment
  - relevant industry standards and operating procedures (where applicable)
  - safe work method statements (SWMS), as required.

TLILIC2005 Licence to operate a boom-type elevating work platform (boom length 11 metres or more)

Modification History
Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application
This unit specifies the skills and knowledge required to safely operate a boom-type elevating work platform where the length of the boom is 11 metres or more.

Boom-type elevating work platform means a telescoping device, hinged device, or articulated device, or any combination of these, used to support a platform on which personnel, equipment and materials may be elevated.

A person performing this work is required to hold a boom-type elevating work platform high risk work (HRW) licence.

This unit requires a person operating a boom-type elevating work platform to plan the work, conduct routine checks, set up elevating work platform, operate elevating work platform, and shut down and secure elevating work platform.

Licensing/Regulatory Information
This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations, HRW and meets Commonwealth, state and territory HRW licensing requirements.

Any alteration to this unit would result in a unit that would not be acceptable to work health and safety (WHS)/occupational health and safety (OHS) regulators for the purpose of licensing.

Pre-requisite Unit
Not applicable.

Assessment Requirements for TLILIC2005 Licence to operate a boom-type elevating work platform (boom length 11 metres or more)

Modification History
Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence
A person who demonstrates competency in this unit must provide evidence of safely operating a boom type elevating work platform with a boom lengths of 11 metres or more and satisfy all of the elements, performance criteria and foundation skills requirements of the unit on at least one occasion including:

- applying appropriate mathematical procedures to estimate loads
- applying best operating practice including:
  - avoiding ground depressions
  - gently accelerating and braking
  - minimum speed
  - minimum boom/jib length
- applying emergency procedures and safety equipment, including the use of safety harnesses, energy absorbers, lanyard and anchor points
- applying hazard prevention/control measures including:
  - disconnected power
  - illumination requirements
  - insulated electric lines
  - moving obstructions
  - pedestrian controls
  - personal protective equipment
  - safety tags on electrical switches/isolators
  - using safety observer inside exclusion zone
  - suitable area for set-up
  - suitable firm and stable standing
  - traffic barricades and controls
  - trench covers
- applying relevant plant movements including:
  - articulating
  - hinging
- lowering boom
- raising boom
- slewing
- telescoping

- applying risk assessment and hazard control strategies, including hierarchy of control as applied to positioning and safely operating an elevating work platform
- assessing ground conditions to confirm site is suitable (e.g. firm, level and safe) to extend and travel the elevating work platform
- communicating with other workplace personnel through:
  - appropriate worksite protocols
  - bells
  - buzzers
  - listening
  - making and interpreting hand signals
  - questioning to confirm understanding
  - signage
  - two way radios
  - verbal and non-verbal language
  - written instructions
- complying with WHS/OHS licensing legislation
- identifying problems and equipment faults and where practicable demonstrating appropriate response procedures
- operating and controlling a boom type elevating work platform including all functions to their maximum extension within the safe working (rated) capacity including:
  - a telescoping device
  - articulated device
  - hinged device
  - or any combination of the above used to support a platform on which personnel, equipment and materials may be elevated to perform work
- positioning, stabilising, set up of elevating work platforms, including the use of outriggers/stabilisers and packing to ensure that the safest lift is performed
- receiving and interpreting workplace instructions, safety information, emergency procedures
- recording and maintaining accurate information relating to operating elevating work platform
- shutting down a boom type elevating work platform in accordance with manufacturer specifications and workplace procedures including:
  - idling engine to stabilise temperature
  - folding boom/jib into the transport position
  - removing key from ignition
  - retracting boom/jib
  - retracting outriggers/stabilisers
• turning off engine
• stabilising a boom type elevating work platform by:
  • correctly positioning plates or packing
  • deploying outriggers
  • establishing correct size plates or packing
• using and interpreting manufacturer specifications and data
• using communications signals including:
  • luff boom down – hand
  • luff boom down – whistle and/or two-way radio
  • luff boom up – hand
  • luff boom up – whistle and/two-way radio
  • stop –hand
  • stop – whistle and/or two-way radio
  • telescope out – hand
  • telescope out – whistle and/or two-way radio
  • telescope in – hand
  • telescope in – whistle and/or two-way radio
• using outriggers/stabilisers and packing to ensure safest lift is performed
• verifying problems and equipment faults and applying appropriate response procedures to unplanned and/or unsafe situations including:
  • contact with overhead electrical conductors
  • damage caused by contact with obstructions
  • environmental conditions (e.g. wind, lightning, storms, etc.)
  • failure of controls
  • illness of personnel
  • loss of power.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

• appropriate mathematical procedures for estimating loads to ensure elevating work platform is not overloaded
• Australian and industry standards relevant to operating a boom-type elevating work platform (boom length 11 metres or more)
• boom length capability including:
  • nominal reach, measured horizontally from centre point of rotation to outer edge of platform in its most extended position
- vertical distance from floor of platform to surface supporting elevating work platform with platform at its maximum height
- Commonwealth, state or territory WHS/OHS legislation, standards and codes of practice relevant to the full range of processes for the crane class
- ground stability including:
  - backfilled ground
  - bitumen
  - concrete
  - hard compacted soil
  - rock
  - rough uneven ground
  - soft soils
- elevating work platform characteristics, operations and operating techniques
- emergency procedures and safety equipment, including the use of safety harness, energy absorber, lanyard and anchor points
- hazards including:
  - environmental conditions (e.g. wind, lightning, storms, etc.)
  - ground stability (e.g. ground condition, recently filled trenches, slopes)
  - insufficient lighting
  - other specific hazards (e.g. tidal areas, chainsaws, pressure washers, dangerous materials
  - overhead hazards (e.g. electric lines, service pipes, trees, buildings etc.)
  - traffic (e.g. pedestrians, vehicles, plant)
- hierarchy of hazard identification and control:
  - elimination
  - substitution
  - isolation
  - engineering controls
  - administrative controls
  - personal protective equipment (PPE)
- procedures for recording, reporting and maintaining workplace records and information, including using the service logbook
- organisational and workplace standards, requirements, policies and procedures for conducting elevating work platform operations
- rated capacity and working load limits
- risks associated with overhead electric lines/electrical cables, ground conditions, wind, pedestrians and tipping
- systematic process of eliminating or reducing risk to personnel and property through the application of controls
- typical routine problems encountered in the process and with equipment, and adjustments required for correction.
Assessment Conditions

Assessments must be conducted by an assessor accredited for this high risk work (HRW) licence class in the Commonwealth/state/territory where the licence will be obtained (i.e. an assessor authorised by a Commonwealth/state/territory WHS/OHS regulator).

As a minimum, assessors must satisfy applicable regulatory requirements, which may include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and all assessment must be conducted in the English language.

Assessment of performance must be undertaken in the workplace and/or under realistic workplace conditions which typically reflect:

- performing tasks/activities within timelines that would be expected in a workplace
- standard and authorised work practices, safety requirements and environmental constraints
- using full-scale equipment

Boom-type elevating work platform (boom length 11 metres or more) operation assessment must be conducted in a working zone in accordance with state/territory arrangements.

If the working zone is located at a ‘live’ site, assessment should continue in all weather conditions unless the safety of the candidate or others could be compromised.

Simulators must **not** be used in the assessment of this unit of competency.

Accredited assessors are responsible for ensuring candidates have access to:

- appropriate boom-type elevating work platform (boom length 11 metres or more) and associated equipment in safe condition
- appropriate safety equipment and devices including:
  - anchor points
  - audible and visual reversing devices
  - energy absorber
  - horns/sirens
  - lanyard
  - lights as required
  - operator restraint devices (platform gate)
  - safety harness
- communications equipment including:
  - mobile phone
  - two-way radios
- required personal protective equipment (PPE) for the purpose of the Performance
Assessment

- where appropriate, relevant workplace procedures and standards for operating a boom-type elevating work platform including:
  - approved codes of practice and guidance
  - Australian Standards
  - checklists
  - industry operating procedures
  - relevant industry standards (where applicable)
  - manufacturer guidelines (instructions, specifications or checklists) for the purpose of the Performance Assessment
  - safe work method statement (SWMS), as required
  - service logbooks/logbooks
  - signage and labels
  - history record system where service and maintenance history is kept.

TLILIC2016A Licence to drive heavy rigid vehicle

Modification History

Not Applicable
Unit Descriptor

This unit involves the skills and knowledge required to obtain a licence to drive a heavy rigid vehicle. It includes systematic and efficient control of all vehicle functions, monitoring of traffic and road conditions, management of vehicle condition and performance and effective management of hazardous situations. Assessment of this unit will be undertaken within a licensing examination conducted by, or under the authority of, the relevant Heavy Vehicle Driver Licensing Authority.

Application of the Unit

Driving must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority pertaining to heavy rigid vehicles.

Driving is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a heavy rigid vehicle across a variety of driving contexts.

Licensing/Legislative Requirements

The primary legislative requirements applicable to this unit of competency are State/Territory legislation in relation to road use and driver licensing.

This unit addresses the underlying knowledge and skills necessary for the granting of a Heavy Rigid Driver Licence. Drivers may require additional training to drive particular vehicles of the class or in particular contexts.

Obtaining this competency is a necessary pre-requisite for obtaining a Heavy Rigid Driver Licence. However, it is only one of several criteria for obtaining the licence. Prospective licence applicants should check with the State/Territory driver licensing authority for other criteria (for example: licence tenure and medical fitness) to confirm compliance with other eligibility requirements before undertaking training and/or assessment.

Employability Skills Information
Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Drive the heavy rigid vehicle | 1.1 The heavy rigid vehicle is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations and manufacturers instructions  
1.2 Engine power is managed to ensure efficiency and performance and to minimise engine and gear damage  
1.3 Braking system of heavy rigid vehicle is managed and operated to ensure effective control of the vehicle under all conditions  
1.4 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving  
1.5 The heavy rigid vehicle is driven in reverse, maintaining visibility and achieving accurate positioning  
1.6 The heavy rigid vehicle is parked, shut down and secured in accordance with traffic regulations, safe and secure  
1.7 Load is safely and effectively restrained  
1.8 Where required, overwidth and overweight permit applications are undertaken in accordance with relevant regulatory requirements  
1.9 Appropriate procedures are followed in the event of a driving emergency |
| 2 Monitor traffic and road conditions | 2.1 An appropriate route of travel is observed taking into account prescribed routes  
2.2 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and ensure no injury to people or damage to property, equipment loads and facilities  
2.3 Interaction with other road users is conducted courteously and in accordance with road rules to ensure safe and efficient traffic flow |
| 3 Monitor and maintain vehicle performance | 3.1 Vehicle performance is maintained through pre-operational inspections and checks of the vehicle  
3.2 Appropriate signage, lights and the like are checked for operational effectiveness and for conformity to prescribed traffic regulations  
3.3 Performance and efficiency of vehicle operation is monitored during use |

### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Heavy rigid vehicle controls, instruments and indicators and their use
- Heavy rigid vehicle handling procedures
- Procedures to be followed in the event of a driving emergency
- Engine power management and safe driving strategies
- Efficient driving techniques
- Pre-operational checks carried out on heavy rigid vehicle and related action
- Differences between transmission types
- Principles of operation of air brakes and procedures for their use
- Map reading and navigation of the vehicle and related action (including prescribed routes)
- Driving hazards and related defensive driving techniques
- Principles of stress management when driving a vehicle
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
- Causes and effects of fatigue on drivers
- Fatigue management strategies and on-road techniques

Required skills:

- Communicate effectively with others when driving a heavy rigid vehicle
- Read and interpret instructions, procedures, information and signs relevant to when the driving of a heavy rigid vehicle
- Complete documentation related to the driving of a heavy rigid vehicle
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when driving a heavy rigid vehicle
- Monitor and anticipate traffic hazards and take appropriate action
- Apply fatigue management knowledge and techniques
- Monitor performance of the vehicle and its equipment and take appropriate action where required
- Carry out pre-operational checks
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation
  - other relevant aspects of the range statement
- Assessment of competency for this unit must be subject to the successful completion of the Mandatory Assessment Instrument as approved by the Licensing Authority

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations on road or in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including regulations, codes of practice and operation manuals
- The mandatory assessment tool provided by the Licensing Authority must be used to conduct the final assessment.
- The Licensing Authority may prescribe approved routes which must be used for the conduct of the final assessment
- Practical driving aspects must be assessed in a vehicle typical of the class as approved by the Licensing Authority. The use of simulators for driver testing is not permitted.

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
EVIDENCE GUIDE

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations on road or in the workplace
- The assessor must use the mandatory assessment tool provided by the Licensing Authority to conduct the assessment for this unit in accordance with Licensing Authority requirements
- Practical driving aspects must be assessed in a vehicle typical of the class as approved by the Licensing Authority. The use of simulators for driver testing is not permitted.

EXCEPTION
Where the candidate is already the holder of a valid Australian driver licence of the Heavy Rigid class, the Licensing Authority has already deemed the candidate to be competent against this standard for the purposes of issuing a driver licence. In this case the requirement to conduct the assessment using the Mandatory Assessment Instrument provided by the Licensing Authority is waived and the assessor may use any suitable process and materials for conducting the assessment.

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle includes:
- all heavy rigid vehicles, for example any rigid vehicle with 3 or more axles, including trucks or buses, greater than 8 tonnes GVM

Driving may be carried out in typical road transport situations, including:
- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road
- while at a depot, base or warehouse
- while at a client’s workplace or work site
- negotiating hills
- negotiating a range of more complex traffic infrastructure (for example; roundabouts, traffic lights, stalemate)

Driving must be carried out in typical road transport situations,
RANGE STATEMENT

including:

Vehicle handling procedures may include:

- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
- using air brakes
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include:

- visual check of vehicle
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes

Driving hazards may include (examples only):

- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions

Factors that can cause traffic delays and diversions may include:

- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, sporting events, etc
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Documentation/records may include:

- state/territory heavy rigid vehicle driving licence and
RANGE STATEMENT

include:

- permit requirements
- vehicle log book or record book (where required)
- relevant standards and certification requirements

Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence/permit requirements pertaining to heavy rigid vehicles
- relevant state/territory road rules
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

Unit Sector(s)

Competency Field

Competency Field LIC - Licensing Units
TLILIC3006 Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity)

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit specifies the skills and knowledge required to operate a non-slewing mobile crane safely.

Non-slewing mobile crane means a mobile crane incorporating a boom or jib that cannot be skewed, and includes:

- an articulated mobile crane
- a locomotive crane

but does not include vehicle tow trucks.

This unit applies to the activities of a person operating a non-slewing crane with a capacity exceeding 3 tonnes.

A person performing this work is required to hold a non-slewing mobile crane high risk work (HRW) licence.

This unit requires a person operating non-slewing mobile crane to plan the work, conduct routine checks, set up crane, transfer load, mobile load and shut down and secure crane.

Licensing/Regulatory Information

This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations, HRW and meets Commonwealth, state and territory HRW licensing requirements.

Any alteration to this unit would result in a unit that would not be acceptable to work health and safety (WHS)/occupational health and safety (OHS) regulators for the purpose of licensing.

Pre-requisite Unit

Not applicable.

<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1 Plan work

1.1 Potential workplace hazards are identified

1.2 Hazard control measures are identified consistent with appropriate standards to ensure the safety of personnel and equipment

1.3 Weight of load is identified and estimated in consultation with associated personnel

1.4 Crane is appropriate to the load/s and workplace conditions

1.5 Appropriate path for moving loads in work area is inspected and determined

1.6 Appropriate communications methods are identified in consultation with associated personnel

2 Conduct routine checks

2.1 Crane is visually checked for any damage or defects

2.2 Crane is accessed in a safe manner

2.3 All signage and labels are checked to ensure they are visible and legible in accordance with the appropriate standard

2.4 Routine pre-operational crane checks are carried out in accordance with procedures

2.5 All controls are located and identified

2.6 Crane service logbook is checked for compliance

2.7 Crane is started in accordance with procedures and is checked for any abnormal noises

2.8 All crane safety devices are tested in accordance with procedures

2.9 Post-start operational checks are carried out in accordance with procedures
2.10 All communications equipment is checked for serviceability

2.11 All damage and defects are reported and recorded in accordance with procedures, and appropriate action is taken

### 3 Set up crane

3.1 Ground suitability is checked

3.2 Crane is driven to work area in accordance with procedures

3.3 Crane is positioned for work application and stability in accordance with procedures

3.4 Appropriate crane configuration for work task is determined in accordance with procedures

3.5 Boom/jib and counterweight configuration data is input into crane computer as required

3.6 Appropriate hazard prevention/control measures are applied to work area in accordance with procedures

3.7 All communications equipment is tested for functionality

### 4 Transfer load

4.1 Lifts are determined within the capacity of the crane

4.2 Boom/jib and hoist block is positioned over load following directions from associated personnel

4.3 Test lift is carried out in accordance with procedures to allow for checks to be safely made, in consultation with relevant personnel

4.4 Loads are transferred using all relevant crane movements in accordance with procedures and the appropriate standard

4.5 All required communications signals are correctly interpreted in accordance with procedures and the appropriate standard

4.6 Crane is operated in accordance with procedures

4.7 Load movement is monitored constantly, to ensure safety of personnel and load, and crane stability

4.8 Unplanned and/or unsafe situations are responded to in accordance with procedures

### 5 Mobile load

5.1 Suitability of planned route for crane is checked in accordance with procedures

5.2 Crane is configured to mobile load in accordance with
procedures

5.3 Load is moved using best mobile practice in accordance with the appropriate standard

6 Shut down and secure crane

6.1 Crane boom/jib and equipment are stowed and secured as required, in accordance with procedures and the appropriate standard

6.2 Relevant motion locks and brakes are applied as required

6.3 Outriggers/stabilisers are stowed and secured as required in accordance with procedures

6.4 Crane is shut down in accordance with procedures

6.5 Routine post-operational crane checks are carried out in accordance with procedures

6.6 Plates or packing are stowed and secured as required

6.7 All damage and defects are recorded and reported in accordance with procedures, and appropriate action is taken
## Foundation Skills

The language, literacy, numeracy and employment skills that are essential to performance that are not explicit in the unit are listed below.

<table>
<thead>
<tr>
<th>Skill</th>
<th>Performance feature</th>
</tr>
</thead>
</table>
| Employment skills to:         | • operate a non-slewing mobile crane (greater than 3 tonnes capacity) in different types of workplaces transferring key principles of safe operation to different contexts  
• improve own performance in safely and efficiently operating a non-slewing mobile crane (greater than 3 tonnes capacity) by incorporating learnings from different workplaces and different conditions into current performance |
| Numeracy skills to:           | • interpret numerical information including:  
• selecting appropriate non-slewing mobile crane (greater than 3 tonnes capacity) in accordance with load and workplace conditions  
• load weight assessment, to ensure compliance with non-slewing mobile crane (greater than 3 tonnes capacity) data plate specifications  
• controlling and monitoring instrument readings |
| Language skills to:           | • use and interpret vocabulary specific to non-slewing mobile crane (greater than 3 tonnes capacity) operations and workplace procedures to communicate with other workplace personnel  
• use non-verbal feedback to support effective communication  
• use relevant two-way radio conventions |
| Literacy (reading ) skills to: | • interpret documentation that includes technical specificity including:  
• non-slewing mobile crane (greater than 3 tonnes capacity) data plate  
• plant operation manuals and manufacturer specifications  
• workplace procedures, including emergency plan  
• workplace signage and labels |
| Literacy (writing) skills to: | • accurately record and maintain information relating to operating a non-slewing mobile crane (greater than 3 tonnes capacity), including:  
• incident reports  
• vehicle checking and maintenance records |
| Self-management skills to:    | • implement risk control measures  
• initiate emergency management strategies |
Range of Conditions
Range is restricted to essential operating conditions and any other variables essential to the work environment. Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information
This unit is equivalent to TLILIC3006A Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity).

Links
Companion Volume implementation guides are found in VETNet - https://vetnet.education.gov.au/Pages/TrainingDocs.aspx?q=df41c6e-213d-43e3-874c-0b3f7036d851
Assessment Requirements for TLILIC3006 Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity)

Modification History
Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence
A person who demonstrates competency in this unit must provide evidence of safely operating a non-slewing mobile crane greater than 3 tonne capacity and satisfy all of the elements, performance criteria and foundation skills requirements of the unit on at least one occasion including:

- applying appropriate mathematical procedures to estimate loads
- applying best mobile practice including:
  - carrying load near to the ground surface
  - gently accelerating and braking (to minimise load swing)
  - minimum boom/jib length
  - minimum speed
  - using handheld taglines
- applying hazard prevention/control measures including:
  - adequate illumination
  - disconnected power
  - insulated electric lines
  - movement of obstructions
  - pedestrian barricades
  - personal protective equipment
  - safety tags on electrical switches/isolators
  - using safety observer inside exclusion zone
  - traffic barricades and control
  - trench covers
- applying risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the crane
- applying risk assessment and management procedures
- assessing ground conditions to confirm site is suitable (e.g. firm, level and safe) to operate crane
- communicating with other workplace personnel through:
  - appropriate worksite protocols
  - bells
• buzzers
• listening
• making and interpreting hand signals
• questioning to confirm understanding
• signage
• two-way radios
• verbal and non-verbal language
• written instructions
• completing the pre-operational check, positioning, stabilising, set up, operation, post-operational checks of a mobile crane including all functions to their maximum extension in the lifting and moving of loads to the safe working rated capacity of a non-slewing mobile crane greater than 3 tonnes capacity in conjunction with other relevant personnel
• complying with work health and safety WHS/OHS licensing legislation
• operating a non-slewing mobile crane greater than 3 tonnes capacity including all functions to their maximum extension in lifting and moving loads to the safe working rated capacity in conjunction with other relevant personnel while applying crane movements including:
  • telescope in and out
  • boom/jib up and down
  • articulating as required
  • raising and lowering hoist as required
• receiving and interpreting workplace instructions, safety information, emergency procedures
• recording and maintaining accurate information relating to crane operations
• shutting down a non-slewing mobile crane greater than 3 tonnes capacity in accordance with manufacturer specifications and workplace procedures including:
  • idling engine to stabilise temperature
  • retracting boom/jib/fly as required
  • retracting hoist rope and hook block
  • retracting outriggers/stabilisers as required
  • turning off engine
• stabilising a non-slewing mobile crane greater than 3 tonnes capacity by:
  • correctly positioning plates or packing
  • deploying outriggers
  • establishing correct size plates or packing
• test-lifting load just clear of lifting plane to ensure:
  • adjustments to slinging can be made in a safe manner
  • all crane equipment is functioning properly
  • load measuring equipment can be used to verify calculated weight of load
  • loads of unusual shape or weight distribution are correctly slung
• near capacity loads do not overload crane
• using and interpreting crane manufacturer specifications and data, including load charts, to enable crane to be configured for load including:
  • boom/jib
  • counterweights
  • fly-jib
• using communication signals including:
  • stop – hand
  • stop – whistle
  • hoist up – hand
  • hoist up – whistle
  • hoist down – hand
  • hoist down – whistle
  • luff boom down – hand
  • luff boom down – whistle
  • luff boom up – hand
  • luff boom up – whistle
  • telescope out – hand
  • telescope out – whistle
  • telescope in – hand
  • telescope in – whistle
  • slew/articulate right – hand
  • slew/articulate right – whistle
  • slew/articulate left – hand
  • slew/articulate left – whistle
• verifying problems and equipment faults, and applying appropriate response procedures to unplanned and/or unsafe situations including:
  • environmental conditions (e.g. wind, lightning, storms, etc.)
  • failure/loss of control (e.g. brakes and steering)
  • failure of equipment (e.g. hydraulic system)
  • obstacles and obstructions
  • unusual or difficult terrains.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:
- appropriate mathematical procedures for estimating and measuring loads
- Australian and industry standards relevant to operating a non-slewing mobile crane (greater than 3 tonnes capacity)
- Commonwealth, state or territory WHS/OHS legislation, standards and codes of practice relevant to the full range of processes for the crane class
- ground suitability including:
  - backfilled ground
  - bitumen
  - concrete
  - hard compacted soil
  - rock
  - rough uneven ground
  - soft soils
- hazards including:
  - environmental conditions (e.g. wind, lightning, storms, etc.)
  - ground stability (e.g. ground condition, recently filled trenches, slopes)
  - insufficient lighting
  - obstacles or obstruction
  - other specific hazards (e.g. dangerous materials)
  - overhead hazards (e.g. electric lines, service pipes)
  - traffic (e.g. pedestrians, vehicles, other plant)
  - unusual or difficult terrains
- hierarchy of hazard identification and control:
  - elimination
  - substitution
  - isolation
  - engineering controls
  - administrative controls
  - personal protective equipment (PPE)
- non-slewing mobile crane greater than 3 tonnes capacity characteristics and capabilities to allow the configuration of the crane to suit the range of loads
- organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- procedures for recording, reporting and maintaining workplace records and information
- rated capacity and working load limits (including using crane load charts)
- risks associated with overhead electric lines/electrical cables, ground conditions, crane tipping and demolition sites, other vehicles and personnel
- systematic process of eliminating or reducing risk to personnel and property through the application of controls
- typical routine problems encountered operating crane and equipment, and adjustments required for correction.
Assessment Conditions

Assessments must be conducted by an assessor accredited for this high risk work (HRW) licence class in the Commonwealth/state/territory where the licence will be obtained (i.e. an assessor authorised by a Commonwealth/state/territory WHS/OHS regulator).

As a minimum, assessors must satisfy applicable regulatory requirements, which may include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and all assessment must be conducted in the English language.

Assessment of performance must be undertaken in the workplace and/or under realistic workplace conditions which typically reflect:

- performing tasks/activities within timelines that would be expected in a workplace
- standard and authorised work practices, safety requirements and environmental constraints
- using full-scale equipment.

Non-slewing mobile crane (greater than 3 tonnes capacity) operation assessment must be conducted in a working zone in accordance with state/territory arrangements.

If the working zone is located at a ‘live’ site, assessment should continue in all weather conditions unless the safety of the candidate or others could be compromised.

Simulators must not be used in the assessment of this unit of competency.

Accredited assessors are responsible for ensuring candidates have access to:

- appropriate non-slewing mobile crane greater than 3 tonnes including articulated type mobile cranes, locomotive cranes and associated equipment in safe condition
- appropriate personnel to sling and direct loads including:
  - doggers
  - riggers
- communications equipment including:
  - bells
  - buzzers
  - fixed channel two-way radios
  - whistles
- controls including:
  - boom extension levers
  - hoisting and lowering levers
  - luffing levers
  - slewing levers including brake
- required personal protective equipment (PPE) for the purpose of the Performance Assessment
- safety devices including:
• audible and visual reversing devices
• horns/sirens
• lights

• signage and labels including:
  • crane data plates/labels
  • load charts
  • crane decals
  • control labels

• where appropriate, relevant workplace procedures and standards for operating a non-slewing mobile crane greater than 3 tonnes including:
  • approved codes of practice and guidance
  • Australian Standards
  • checklists
  • industry operating procedures
  • relevant industry standards (where applicable)
  • logbook
  • manufacturer guidelines (instructions, specifications or checklists) for the purpose of the Performance Assessment
  • safe work method statement (SWMS), as required
  • service logbook
  • operator restraint devices.

Companion Volume implementation guides are found in VETNet - https://vetnet.education.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851
TLILIC3008 Licence to operate a slewing mobile crane (up to 20 tonnes)

Modification History
Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application
This unit specifies the skills and knowledge required to safely operate a slewing mobile crane with a capacity up to 20 tonnes.
Slewing mobile crane means a mobile crane incorporating a boom or jib that can be slewed, but does not include:
- a front-end loader or
- a backhoe or
- an excavator or
- other earth moving equipment, when configured for crane operation.

This unit applies to the activities of a person operating slewing mobile crane with a capacity up to 20 tonnes that is a:
- non-slewing mobile crane with a capacity exceeding 3 tonnes
- reach stacker
- slewing mobile crane with a capacity of 20 tonnes or less
- vehicle loading crane with a capacity of 10 metre tonnes or more, excluding the application of load estimation and slinging techniques to move a load.

A person performing this work is required to hold a slewing mobile crane – with a capacity up to 20 tonnes high risk work (HRW) licence.

This unit requires a person operating slewing mobile crane with a capacity up to 20 tonnes to plan the work, conduct routine checks, set up crane, transfer a load, mobile load and shut down and secure the crane after completing the operation.

Licensing/Regulatory Information
This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations, HRW and meets Commonwealth, state and territory HRW licensing requirements.
Any alteration to this unit would result in a unit that would not be acceptable to work health and safety (WHS)/occupational health and safety (OHS) regulators for the purpose of licensing.

Range of Conditions
Range is restricted to essential operating conditions and any other variables essential to the work environment.
Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information
This unit is equivalent to TLILIC3008A Licence to operate a slewing mobile crane up to 20 tonnes.

Links
Companion Volume implementation guides are found in VETNet - https://vetnet.education.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851
Assessment Requirements for TLILIC3008 Licence to operate a slewing mobile crane (up to 20 tonnes)

Modification History
Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence
A person who demonstrates competency in this unit must provide evidence of safely operating a slewing mobile crane up to 20 tonnes and satisfy all of the elements, performance criteria and foundation skills requirements of the unit on at least one occasion including:

- applying appropriate mathematical procedures to estimate loads
- applying best mobile practice including:
  - boom/jib as low as possible
  - boom/jib in line with crane
  - carrying load near to ground surface
  - gently accelerating and braking (to minimise load swing)
  - facing load uphill
  - minimum boom/jib length
  - minimum speed
  - using handheld taglines
- applying hazard prevention/control measures including:
  - adequate illumination
  - disconnected power
  - insulated electric lines
  - moving obstructions
  - pedestrian barricades
  - personal protective equipment
  - using safety observer inside exclusion zone
  - safety tags on electrical switches/isolators
  - traffic barricades and control
  - trench covers
- applying risk assessment and hazard control strategies, including hierarchy of control as applied to positioning and safely operating a crane
- applying risk assessment and management procedures
- communicating with other workplace personnel through:
  - appropriate worksite protocols
• bells
• buzzers
• listening
• making and interpreting hand signals
• questioning to confirm understanding
• signage
• two-way radios
• verbal and non-verbal language
• written instructions
• whistles
• completing the pre-operational check, positioning, stabilising, set up, operation, post-operational checks of a mobile crane including all functions to their maximum extension in lifting and moving loads to the safe working rated capacity of a slewing mobile crane up to 20 tonne capacity in conjunction with other relevant personnel
• complying with WHS/OHS licensing legislation
• loading data into crane computer as required and checking operation to accurately reflect crane configuration
• operating a slewing mobile crane up to 20 tonne capacity to lift and move loads to the safe working rated capacity while applying relevant crane movements including:
  • boom/jib up and down
  • operation of outriggers/stabilisers
  • raise and lower hoist
  • slew boom/jib
  • telescope in and out
  • travel
• receiving and interpreting workplace instructions, safety information, emergency procedures
• recording and maintaining accurate information relating to crane operations
• shutting down a slewing mobile crane up to 20 tonnes capacity in accordance with manufacturer specifications and workplace procedures including:
  • idling engine to stabilise temperature
  • locking and securing cabin as required
  • positioning/securing boom/jib
  • removing key from ignition as required
  • retracting boom/jib
  • retracting hoist rope and hook block
  • retracting outriggers/stabilisers
  • securing crane for travel
  • turning off engine as required
• stabilising a slewing mobile crane by:
  • correctly positioning plates or packing
• deploying outriggers
• establishing correct size plates or packing
• test-lifting load just clear of the lifting plane to ensure:
  • adjustments to slinging can be made in a safe manner
  • all crane equipment is functioning properly
  • load measuring equipment can be used to verify calculated weight of load
  • loads of unusual shape or weight distribution are correctly slung
  • near capacity loads do not overload crane
• using and interpreting crane manufacturer specifications and data, including load charts, to enable crane to be configured for load including:
  • boom/jib
  • counterweights
  • fly-jib
• using communications signals including:
  • stop – hand
  • stop – whistle
  • hoist up – hand
  • hoist up – whistle
  • hoist down – hand
  • hoist up – whistle
  • luff boom down – hand
  • luff boom up – hand
  • luff boom up – whistle
  • telescope out – hand
  • telescope out – whistle
  • telescope in – hand
  • telescope in – whistle
  • slew left – hand
  • slew left – whistle
  • slew right – hand
  • slew right – whistle
  • travel – hand
• verifying problems and equipment faults, and applying appropriate response procedures to unplanned and/or unsafe situations including:
  • environmental conditions (e.g. wind, lightning, storms, etc.)
  • failure/loss of control (e.g. brakes and steering)
  • failure of equipment (e.g. hydraulic system)
  • obstacles and obstructions
  • unusual or difficult terrains.
Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate mathematical procedures for estimating and measuring loads
- Australian and industry standards relevant to operating a slewing mobile crane (up to 20 tonnes)
- Commonwealth, state or territory WHS/OHS legislation, standards and codes of practice relevant to the full range of processes for the crane class
- crane rated capacity and lifting gear working load limits (including use of crane load charts)
- ground suitability including:
  - backfilled ground
  - bitumen
  - concrete
  - hard compacted soil
  - rock
  - rough uneven ground
  - soft soils
- hazards including:
  - environmental conditions (e.g. wind, lightning, storms, etc.)
  - ground stability (e.g. ground condition, recently filled trenches, slopes)
  - insufficient lighting
  - obstacles or obstruction
  - other specific hazards (e.g. dangerous materials)
  - overhead hazards (e.g. electric lines, service pipes)
  - traffic (e.g. pedestrians, vehicles, other plant)
  - unusual or difficult terrains
- hierarchy of hazard identification and control:
  - elimination
  - substitution
  - isolation
  - engineering controls
  - administrative controls
  - personal protective equipment (PPE)
- mobile slewing crane characteristics and capabilities to allow crane configuration to suit a range of loads
- organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- procedures for recording, reporting and maintaining workplace records and information
- risks associated with overhead electric lines/electrical cables, wind, erection, pack up and
• crane stability, ground conditions, crane tipping and demolition sites
• systematic process of eliminating or reducing risk to personnel and property through the application of controls
• typical routine problems encountered in the process and with equipment, and adjustments required for correction.

Assessment Conditions

Assessments must be conducted by an assessor accredited for this high risk work (HRW) licence class in the Commonwealth/state/territory where the licence will be obtained (i.e. an assessor authorised by a Commonwealth/state/territory WHS/OHS regulator).

As a minimum, assessors must satisfy applicable regulatory requirements, which may include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and all assessment must be conducted in the English language.

Assessment of performance must be undertaken in the workplace and/or under realistic workplace conditions which typically reflect:
• performing tasks/activities within timelines that would be expected in a workplace
• standard and authorised work practices, safety requirements and environmental constraints
• using full-scale equipment

Slewing mobile crane (up to 20 tonnes) operation assessment must be conducted in a working zone in accordance with state/territory arrangements.

If the working zone is located at a ‘live’ site, the assessment should continue in all weather conditions unless the safety of the candidate or others could be compromised.

Simulators must not be used in the assessment of this unit of competency.

Accredited assessors are responsible for ensuring candidates have access to:
• appropriate personnel to sling and direct loads including:
  • doggers
  • riggers
• appropriate slewing mobile crane up to 20 tonnes and associated equipment in safe condition
• communications equipment including:
  • bells
  • buzzers
  • two-way radios
  • whistles
• controls including:
- boom extension levers (where fitted)
- hoisting and lowering levers
- luffing levers
- slewing levers including brake
- required personal protective equipment (PPE) for the purpose of the Performance Assessment
- safety devices including:
  - audible and visual reversing devices
  - horns/sirens
  - lights
  - operator restraint devices
- signage and labels including:
  - crane data plates/labels
  - crane decals
  - control labels
  - load charts
- where appropriate, relevant workplace procedures and standards for operating a slewing mobile crane up to 20 tonnes including:
  - approved codes of practice and guidance
  - Australian Standards
  - checklists
  - industry operating procedures
  - relevant industry standards (where applicable)
  - logbook
  - manufacturer guidelines (instructions, specifications or checklists) for the purpose of the Performance Assessment
  - service logbook.

TLILIC3008A Licence to operate a slewing mobile crane (up to 20 tonnes)

Modification History
Not Applicable

Unit Descriptor

| Unit Descriptor | This unit specifies the outcomes required to operate a slewing mobile crane (up to 20 tonnes) for licensing purposes. It encompasses the requirement for non-slewing mobile crane licence and the vehicle loading crane licence. |

Application of the Unit

| Application of the Unit | This unit requires the operator to plan the work, conduct routine checks, set up crane, transfer loads, mobile loads and shut down and secure the crane.  
This unit is based on the requirements of the National Standard for Licensing Persons Performing High Risk Work.  
This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing. |

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites
Not Applicable
Employability Skills Information

| Employability Skills | This unit contains employability skills. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency | Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan work     | 1.1 Potential workplace *hazards* are identified  
|                  | 1.2 *Hazard prevention/control measures* are identified consistent with *appropriate standards* to ensure the safety of personnel and equipment  
|                  | 1.3 The weight of the load is identified and estimated in consultation with *associated personnel*  
|                  | 1.4 *Crane* is *appropriate* to the load/s and workplace conditions  
|                  | 1.5 Appropriate path for the movement of loads in the work area is inspected and determined  
|                  | 1.6 Appropriate *communication methods* are identified with *associated personnel*                                                                 |
| 2. Conduct routine checks | 2.1 *Crane* is visually checked for any damage or defects  
|                  | 2.2 *Crane* is accessed in a safe manner  
|                  | 2.3 All *signage and labels* are visible and legible according to the *appropriate standard*  
|                  | 2.4 Routine pre-operational crane checks are carried out according to *procedures*  
|                  | 2.5 All *controls* are located and identified  
|                  | 2.6 *Crane service logbook* is checked for compliance  
|                  | 2.7 *Crane* is started according to *procedures* and checked for any abnormal noise  
|                  | 2.8 All *crane safety devices* are tested according to *procedures*  
|                  | 2.9 Post-start operational checks are carried out according to *procedures*  
|                  | 2.10 All *communication equipment* is checked for serviceability  
|                  | 2.11 All damage and defects are reported and recorded according to *procedures*, and appropriate action is taken |
| 3. Set up crane  | 3.1 *Ground suitability* is checked  
|                  | 3.2 *Crane* is driven to the work area according to *procedures*  
|                  | 3.3 *Crane* is positioned for work application and *stability* according to *procedures*  
|                  | 3.4 Appropriate *crane configuration* for work task is determined according to *procedures* (where applicable)  
<p>|                  | 3.5 Boom/jib and counterweight configuration data is input |</p>

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

#### Required skills:
- Accurately record and maintain information relating to crane operations
- Use communication techniques in the workplace including whistles, hand signals and use of two-way radios
- Use interpersonal communication skills at a level sufficient to communicate with other site personnel
- Load data into crane computer (where fitted) and check operation to accurately reflect the crane configuration
- Operate a slewing mobile crane (up to 20t capacity) for the lifting and moving of loads to the safe working rated capacity in conjunction with other associated personnel
- Apply risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the crane (particular awareness of the risks associated with overhead powerlines/electrical cables, wind, erection, pack up and crane stability)
- Use and interpret crane manufacturer's specifications and data, including load charts, to enable the crane to be configured for the load
- Verify problems and equipment faults and demonstrate appropriate response procedures

#### Required knowledge:
- Appropriate mathematical procedures for estimation and measurement of loads
- Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for the crane class
- Level of literacy to be able to read and comprehend manufacturer's instructions, procedures and safety signs
- Mobile slewing crane characteristics and capabilities to allow the configuration of the crane to suit the range of loads
- Mobile slewing crane operating techniques
- Understanding of the hierarchy of hazard identification and control
- Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- Procedures for the recording, reporting and maintenance of workplace records and information
- Rated capacity and working load limits (including use of crane load charts)
- Typical routine problems encountered in the process and with equipment and

### Evidence Guide

<table>
<thead>
<tr>
<th>EVIDENCE GUIDE</th>
</tr>
</thead>
<tbody>
<tr>
<td>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.</td>
</tr>
</tbody>
</table>

### Overview of assessment

- Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.
- State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Compliance with OH&S licensing legislation.
- Communicate and work safely with others in the work area.
- Risk assessment and management procedures (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, crane tipping and demolition sites).
- Complete the pre-operational check, positioning, stabilising, set up, operation, post-operational checks of a mobile crane including all functions to their maximum extension in the lifting and moving of loads to the safe working rated capacity of the mobile crane up to 20 tonne capacity in conjunction with other associated personnel.
- Appropriate mathematical procedures for estimation of loads.

### Context of and specific resources for assessment

- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.
- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.
- Assessors must ensure that the assessment in the
## EVIDENCE GUIDE

workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.

- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant appropriate standard requirements.
- Applicants must have access to:
  - Personal Protective Equipment (PPE) for the purpose of the Performance Assessment
  - appropriate slewing mobile crane (up to 20 tonne) and associated equipment in safe condition
  - suitable loads as specified by the endorsed Assessment Instrument
  - communication equipment (e.g. two-way radios, whistles, etc.)
  - other associated personnel to sling and direct the loads

### Method of assessment

- Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.
- Assessment may be in conjunction with the assessment of other units of competency.
- The use of 'simulators' in the assessment of this unit of competency is not acceptable.
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
- Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.

### Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OH&S regulators.
## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below.

### Hazards

May include but not limited to:
- ground stability (e.g. ground condition, recently filled trenches, slopes)
- overhead hazards (e.g. powerlines, service pipes)
- traffic (e.g. pedestrians, vehicles, other plant)
- insufficient lighting
- environmental conditions (e.g. wind, lightning, storms, etc.)
- other specific hazards (e.g. dangerous materials)

### Hazard control measures

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls. It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:
1. elimination
2. substitution
3. isolation
4. engineering control measures
5. using safe work practices
6. personal protective equipment

### Appropriate standard

May include but not limited to:
- codes of practice (mobile crane)
- legislation
- Australian standard
- manufacturer’s specifications
- industry standards (where applicable)

### Associated personnel

May include but not limited to:
- riggers
- doggers

### Appropriate

May include but not limited to:
- crane capabilities
**RANGE STATEMENT**

| Crane                        | May include a boom or jib, which is capable of being slewed (up to 20 tonnes capacity)  
|                             | The slewing mobile crane up to 20 tonnes classification encompasses the requirements for the non-slewing mobile crane classification and the vehicle loading crane classification  
|                             | NB: This excludes front-end loader, backhoe, excavator or like equipment when configured for crane operation |
| Communication method        | May include but not limited to:  
|                             | • verbal and non-verbal language  
|                             | • written instructions  
|                             | • signage  
|                             | • hand signals  
|                             | • listening  
|                             | • questioning to confirm understanding  
|                             | • appropriate worksite protocol |
| Signage and labels          | May include but not limited to:  
|                             | • crane data plates/labels  
|                             | • load charts  
|                             | • crane decals  
|                             | • control labels |
| Procedures                  | May include but not limited to:  
|                             | • manufacturer’s guidelines (instructions, specifications or checklists)  
|                             | • industry operating procedures  
|                             | • workplace procedures (work instructions, operating procedures, checklists) |
| Controls                    | May include but not limited to:  
|                             | • luffing levers  
|                             | • hoisting and lowering levers  
|                             | • slewing levers including brake  
|                             | • boom extension levers (where fitted) |
| Service logbook             | May include but not limited to:  
|                             | • any logbook |
### RANGE STATEMENT

- service book
- history record system where the service and maintenance history is kept

### Crane safety devices

May include but not limited to:
- horns/sirens
- audible and visual reversing devices
- operator restraint devices
- lights

### Communication equipment

May include but not limited to:
- two-way radios
- whistles
- bells
- buzzers

NB: where radio communication equipment is used the transmitting frequencies of the equipment must be selected to prevent interference to or from other radio equipment being used in the vicinity of the crane.

### Ground suitability

May include but not limited to:
- rough uneven ground
- backfilled ground
- soft soils
- hard compacted soil
- rock
- bitumen
- concrete

### Stability

May include but not limited to:
- deploying outriggers
- establishing correct size plates or packing
- correctly positioning plates or packing

### Crane configuration

May include but not limited to:
- boom/jib
- fly-jib
- counterweights

### Hazard prevention/control measures

May include but not limited to:
- safety tags on electrical switches/isolators
- insulated powerlines
**RANGE STATEMENT**

- safety observer used inside exclusion zone
- disconnected power
- traffic barricades and control
- pedestrian barricades
- trench covers
- movement of obstructions
- personal protective equipment
- adequate illumination

**Test lift**
The load is lifted just clear of the lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure that:
- near capacity loads do not overload the crane
- loads of unusual shape or weight distribution are correctly slung
- load measuring equipment can be used to verify the calculated weight of the load
- all crane equipment is functioning properly
- adjustments to the slinging can be made in a safe manner

**Relevant crane movements**
May include but not limited to:
- telescope in and out
- boom/jib up and down
- slew boom/jib
- operation of outriggers/stabilisers
- raise and lower hoist
- travel

**Communication signals**
May include but not limited to:
- stop - hand
- stop - whistle
- hoist up - hand
- hoist up - whistle
- hoist down - hand
- hoist down - whistle
- luff boom down - hand
- luff boom down - whistle
- luff boom up - hand
- luff boom up - whistle
- telescope out - hand
- telescope out - whistle
### RANGE STATEMENT

| • telescope in - hand       | • telescope in - whistle   |
| • slew left - hand          | • slew left - whistle      |
| • slew right - hand         | • slew right - whistle     |
| • travel - hand             |                              |

**Unplanned and/or unsafe situations**

May include but not limited to:

- failure/loss of control (e.g. brakes and steering)
- failure of equipment (e.g. hydraulic system)
- environmental conditions (e.g. wind, lightning, storms, etc.)

**Planned route**

May include but not limited to:

- unusual or difficult terrains
- obstacles or obstruction

**Best mobile practice**

May include but not limited to:

- minimum speed
- gentle acceleration and braking (to minimise load swing)
- minimum boom/jib length
- carrying the load near to the ground surface
- boom/jib in line with the crane
- boom/jib as low as possible
- load faces uphill
- use of handheld taglines

**Shut Down**

May include but not limited to:

- retracting boom/jib
- retracting hoist rope and hook block
- positioning/securing boom/jib
- retracting outriggers/stabilisers
- idling engine to stabilise temperature
- turning off engine (where applicable)
- removing key from ignition (where applicable)
- locking and securing cabin (where applicable)
Unit Sector(s)

Not Applicable
TLILIC4009 Licence to operate a slewing mobile crane (up to 60 tonnes)

Modification History
Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application
This unit specifies the skills and knowledge required to safely operate a slewing mobile crane with a capacity up to 60 tonnes. Slewing mobile crane means a mobile crane incorporating a boom or jib that can be slewed, but does not include:

- a backhoe or
- an excavator or
- a front-end loader or
- other earth moving equipment, when configured for crane operation.

This unit applies to the activities of a person operating a slewing mobile crane with a capacity up to 60 tonnes that is a:

- non-slewing mobile crane with a capacity exceeding 3 tonnes
- reach stacker
- slewing mobile crane with a capacity of 60 tonnes or less
- vehicle loading crane with a capacity of 10 metre tonnes or more, excluding the application of load estimation and slinging techniques to move a load.

A person performing this work is required to hold a slewing mobile crane with a capacity up to 60 tonnes high risk work (HRW) licence.

This unit requires a person operating a slewing mobile crane with a capacity up to 60 tonnes crane to plan work, conduct routine checks, set up crane, transfer load, mobile load and shut down and secure crane after operation.

Licensing/Regulatory Information
This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations, HRW and meets Commonwealth, state and territory HRW licensing requirements.

Any alteration to this unit would result in a unit that would not be acceptable to work health and safety (WHS)/occupational health and safety (OHS) regulators for the purpose of licensing.

Pre-requisite Unit
Not applicable.

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENTS</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1 Plan work

1.1 Potential workplace hazards are identified

1.2 Hazard control measures are identified consistent with appropriate standards to ensure the safety of personnel and equipment

1.3 Weight of load is identified and estimated in consultation with relevant personnel

1.4 The crane is appropriate to the load/s and workplace conditions

1.5 Appropriate paths for moving load/s in work area are inspected and determined

1.6 Appropriate communications methods are identified with relevant personnel

2 Conduct routine checks

2.1 Crane is visually checked for any damage or defects

2.2 Crane is accessed in a safe manner

2.3 All signage and labels are checked to ensure they are visible and legible in accordance with the appropriate standard

2.4 Routine pre-operational crane checks are carried out in accordance with procedures

2.5 All controls are located and identified

2.6 Crane service logbook is checked for compliance
2.7 Crane is started in accordance with procedures and is checked for any abnormal noises

2.8 All crane safety devices are tested in accordance with procedures

2.9 Post-start operational checks are carried out in accordance with procedures

2.10 All communications equipment is checked for serviceability

2.11 All damage and defects are reported and recorded in accordance with procedures, and appropriate action is taken

3 Set up crane

3.1 Ground suitability is checked

3.2 Crane is driven to work area in accordance with procedures

3.3 Crane is positioned for work application and stability in accordance with procedures

3.4 Appropriate crane configuration for work task is determined as required in accordance with procedures

3.5 Boom/jib and counterweight configuration data is input into the crane computer as required

3.6 Appropriate hazard prevention/control measures are applied to work area in accordance with procedures

3.7 All communications equipment is tested for functionality

4 Transfer load

4.1 Lifts are determined within the capacity of the crane

4.2 Boom/jib and hoist block is positioned over load following directions from relevant personnel

4.3 Test lift is carried out in accordance with procedures to allow for checks to be safely made, in consultation with relevant personnel

4.4 Loads are transferred using all relevant crane movements in accordance with procedures and the appropriate standard

4.5 All required communications signals are correctly interpreted in accordance with procedures and the appropriate standard

4.6 Crane is operated in accordance with procedures

4.7 Load movement is monitored constantly, to ensure safety of
personnel and load, and crane stability

4.8 Unplanned and/or unsafe situations are responded to in accordance with procedures

5 Mobile load

5.1 Suitability of planned route for crane is checked in accordance with procedures

5.2 Crane is configured to mobile load in accordance with procedures

5.3 Load is moved using best mobile practice in accordance with the appropriate standard

6 Shut down and secure crane

6.1 Crane boom/jib and equipment are stowed and secured as required in accordance with procedures and the appropriate standard

6.2 Relevant motion locks and brakes are applied as required

6.3 Outriggers/stabilisers are stowed and secured in accordance with procedures

6.4 Crane is shut down in accordance with procedures

6.5 Plates or packing are stowed and secured

6.6 Routine post-operational crane checks are carried out in accordance with procedures

6.7 All damage and defects are reported and recorded in accordance with procedures, and appropriate action is taken
Foundation Skills

The language, literacy, numeracy and employment skills that are essential to performance that are not explicit in the unit are listed below.

<table>
<thead>
<tr>
<th>Skill</th>
<th>Performance feature</th>
</tr>
</thead>
</table>
| Employment skills to:      | • operate a slewing mobile crane up to 60 tonnes capacity in different types of workplaces transferring key principles of safe operation to different contexts  
• improve own performance in safely and efficiently operating a slewing mobile crane by incorporating learnings from different workplaces and different conditions into current performance |
| Numeracy skills to:        | • interpret numerical information including:                                          
• selecting appropriate slewing mobile crane in accordance with load and workplace conditions  
• load weight assessment, to ensure compliance with slewing mobile crane data plate specifications  
• controlling and monitoring instrument readings |
| Language skills to:        | • use and interpret vocabulary specific to slewing mobile crane operations and workplace procedures to communicate with other workplace personnel  
• use non-verbal feedback to support effective communication  
• use relevant two-way radio conventions |
| Literacy (reading) skills to: | • interpret documentation that includes technical specificity including:               
• slewing mobile crane data plate  
• plant operation manuals and manufacturer specifications  
• workplace procedures, including emergency plan  
• workplace signage and labels |
| Literacy (writing) skills to: | • accurately record and maintain information relating to operating a slewing mobile crane, including:  
• incident reports  
• vehicle checking and maintenance records |
| Self-management skills to: | • implement risk control measures  
• initiate emergency management strategies |

Range of Conditions
Range is restricted to essential operating conditions and any other variables essential to the work environment. Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information
This unit is equivalent to TLILIC4009A Licence to operate a slewing mobile crane (up to 60 tonnes).

Links
Companion Volume implementation guides are found in VETNet - https://vetnet.education.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851
Assessment Requirements for TLILIC4009 Licence to operate a slewing mobile crane (up to 60 tonnes)

Modification History
Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence
A person who demonstrates competency in this unit must provide evidence of safely operating a slewing mobile crane up to 60 tonnes and satisfy all of the elements, performance criteria and foundation skills requirements of the unit on at least one occasion including:

- applying appropriate mathematical procedures to estimate loads
- applying best mobile practice including:
  - boom/jib as low as possible
  - boom/jib in line with crane
  - carrying load near to ground surface
  - gently accelerating and braking (to minimise load swing)
  - facing load uphill
  - minimum boom/jib length
  - minimum speed
  - using handheld taglines
- applying hazard prevention/control measures including:
  - adequate illumination
  - insulated electric lines
  - moving obstructions
  - pedestrian barricades
  - personal protective equipment
  - power disconnected
  - using safety observer inside exclusion zone
  - safety tags on electrical switches/isolators
  - traffic barricades and control
  - trench covers
- applying risk assessment and hazard control strategies, including hierarchy of control as applied to positioning and safely operating a crane
- applying risk assessment and management procedures
- communicating with other workplace personnel through:
  - appropriate worksite protocols
• bells
• buzzers
• listening
• making and interpreting hand signals
• questioning to confirm understanding
• signage
• two-way radios
• verbal and non-verbal language
• written instructions
• whistles

• completing the pre-operational check, positioning, stabilising, set up, operation, post-operational checks of a mobile crane including all functions to their maximum extension in the lifting and moving of loads to the safe working rated capacity of the mobile crane up to 60 tonnes capacity in conjunction with other relevant personnel
• complying with WHS/OHS licensing legislation
• loading data into crane computer as required and checking operation to accurately reflect crane configuration
• operating a slewing mobile crane up to 60 tonne capacity to lift and move loads to the safe working rated capacity while applying relevant crane movements including:
  • boom/jib up and down
  • operation of outriggers/stabilisers
  • raise and lower hoist
  • slew boom/jib
  • telescope in and out
  • travel
• receiving and interpreting workplace instructions, safety information, emergency procedures
• recording and maintaining accurate information relating to crane operations
• shutting down a slewing mobile crane up to 60 tonnes capacity in accordance with manufacturer specifications and workplace procedures including:
  • idling engine to stabilise temperature
  • locking and securing cabin as required
  • retracting boom/jib
  • retracting hoist rope and hook block
  • retracting outriggers/stabilisers
  • removing key from ignition as required
  • securing crane for travel
  • turning off engine (where applicable)
  • positioning/secureing boom/jib
• stabilising a slewing mobile crane up to 60 tonnes capacity by:
  • correctly positioning plates or packing
• deploying outriggers
• establishing correct size plates or packing
• test-lifting load just clear of lifting plane to allow for checks to be safely made in consultation with relevant personnel to ensure:
  • all crane equipment is functioning properly
  • adjustments to slinging can be made in a safe manner
  • load measuring equipment can be used to verify calculated weight of load
  • loads of unusual shape or weight distribution are correctly slung
  • near capacity loads do not overload crane
• using and interpreting crane manufacturer specifications and data, including load charts, to enable crane to be configured for load including:
  • boom/jib
  • counterweights
  • fly-jib
• using communications signals including:
  • stop – hand
  • stop – whistle
  • hoist up – hand
  • hoist up – whistle
  • hoist down - hand
  • hoist down – whistle
  • luff boom down – hand
  • luff boom down – whistle
  • luff boom up – hand
  • luff boom up – whistle
  • telescope out – hand
  • telescope out – whistle
  • telescope in – hand
  • telescope in – whistle
  • slew left – hand
  • slew left – whistle
  • slew right – hand
  • slew right – whistle
  • travel - hand
• verifying problems and equipment faults, and applying appropriate response procedures to unplanned and/or unsafe situations including:
  • environmental conditions (e.g. wind, lightning, storms, etc.)
  • failure/loss of control (e.g. brakes and steering)
  • failure of equipment (e.g. hydraulic system)
  • obstacles and obstructions
- unusual or difficult terrains.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate mathematical procedures for estimation and measurement of loads
- Australian and industry standards relevant to operating a slewing mobile crane (up to 60 tonnes)
- Commonwealth, state or territory WHS/OHS legislation, standards and codes of practice relevant to the full range of processes for the crane class
- crane rated capacity and lifting gear working load limits (including use of crane load charts)
- ground suitability including:
  - backfilled ground
  - bitumen
  - concrete
  - hard compacted soil
  - rock
  - rough uneven ground
  - soft soils
- hazards including:
  - environmental conditions (e.g. wind, lightning, storms, etc.)
  - ground stability (e.g. ground condition, recently filled trenches, slopes)
  - insufficient lighting
  - obstacles or obstruction
  - other specific hazards (e.g. dangerous materials)
  - overhead hazards (e.g. electric lines, service pipes)
  - traffic (e.g. pedestrians, vehicles, other plant)
  - unusual or difficult terrains
- hierarchy of hazard identification and control:
• elimination
• substitution
• isolation
• engineering controls
• administrative controls
• personal protective equipment (PPE)
• mobile slewing crane up to 60 tonnes capacity characteristics and capabilities to allow crane configuration to suit a range of loads
• mobile slewing crane up to 60 tonnes capacity operating techniques
• organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
• procedures for recording, reporting and maintaining workplace records and information
• risks associated with overhead electric lines/electrical cables, wind, erection, pack up and crane stability, ground conditions, crane tipping and demolition sites
• systematic process of eliminating or reducing risk to personnel and property through the application of controls
• typical routine problems encountered in the process and with equipment, and adjustments required for correction.

Assessment Conditions

Assessments must be conducted by an assessor accredited for this high risk work (HRW) licence class in the Commonwealth/state/territory where the licence will be obtained (i.e. an assessor authorised by a Commonwealth/state/territory WHS/OHS regulator).

As a minimum, assessors must satisfy applicable regulatory requirements, which may include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and all assessment must be conducted in the English language.

Assessment of performance must be undertaken in the workplace and/or under realistic workplace conditions which typically reflect:

• performing tasks/activities within timelines that would be expected in a workplace
• standard and authorised work practices, safety requirements and environmental constraints
• using full-scale equipment

Slewing mobile crane (up to 60 tonnes) operation assessment must be conducted in a working zone in accordance with state/territory arrangements.

If the working zone is located at a ‘live’ site, assessment should continue in all weather conditions unless the safety of the candidate or others could be compromised.
Simulators must not be used in the assessment of this unit of competency.

Accredited assessors are responsible for ensuring candidates have access to:

- appropriate slewing mobile crane up to 60 tonnes and associated equipment in safe condition
- communications equipment including:
  - bells
  - buzzers
  - two-way radios
  - whistles
- controls including:
  - boom extension levers (where fitted)
  - hoisting and lowering levers
  - luffing levers
  - slewing levers including brake
- operator restraint devices
- required personal protective equipment (PPE) for the purpose of the Performance Assessment
- safe work method statement (SWMS), as required
- safety devices including:
  - audible and visual reversing devices
  - horns/sirens
  - lights
- signage and labels including:
  - crane data plates/labels
  - crane decals
  - control labels
  - load charts
- where appropriate, relevant workplace procedures and standards for the operation of a slewing mobile crane up to 60 tonnes capacity including:
  - appropriate codes of practice (mobile crane)
  - Australian Standards
  - checklists
  - industry operating procedures
  - relevant industry standards (where applicable)
  - logbook
  - manufacturer guidelines (instructions, specifications or checklists) for the purpose of the Performance Assessment
  - service logbook
- where required, appropriate personnel to sling and direct the loads including:
  - doggers
  - riggers.

TLILIC4009A Licence to operate a slewing mobile crane (up to 60 tonnes)

Modification History
Not Applicable

Unit Descriptor

| Unit Descriptor | This unit specifies the outcomes required to operate a slewing mobile crane (up to 60 tonnes) for licensing purposes. It encompasses the requirement for the up to 20 tonnes licence. |

Application of the Unit

| Application of the Unit | This unit requires the operator to plan the work, conduct routine checks, set up crane, transfer loads, mobile loads and shut down and secure the crane. This unit is based on the requirements of the National Standard for Licensing Persons Performing High Risk Work. This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing. |

| 3. Set up cane | 3.1 Ground suitability is checked  
3.2 Crane is driven to the work area according to procedures  
3.3 Crane is positioned for work application and stability according to procedures  
3.4 Appropriate crane configuration for work task is determined according to procedures (where applicable)  
3.5 Boom/jib and counterweight configuration data is input into the crane computer (as required) |
### ELEMENT | PERFORMANCE CRITERIA
--- | ---
3.6 Appropriate hazard prevention/control measures are applied to the work area according to procedures
3.7 All communications equipment is tested for functionality

4. Transfer load

4.1 Lifts are determined within the capacity of the crane
4.2 Boom/jib and hoist block is positioned over load following directions from associated personnel
4.3 Test lift is carried out according to procedures
4.4 Loads are transferred using all relevant crane movements according to procedures and the appropriate standard
4.5 All required communication signals are correctly interpreted according to procedures and the appropriate standard
4.6 Crane is operated according to procedures
4.7 Load movement is monitored constantly ensuring safety to personnel and load, and crane stability
4.8 Unplanned and/or unsafe situations are responded to in line with procedures

5. Mobile load

5.1 Suitability of planned route is checked for the crane according to procedures
5.2 Crane is configured to mobile load according to procedures
5.3 Load is moved using best mobile practice according to the appropriate standard

6. Shut down and secure crane

6.1 Crane boom/jib and equipment are stowed and secured where appropriate according to procedures and the appropriate standard
6.2 Relevant motion locks and brakes are applied (where applicable)
6.3 Outriggers/stabilisers are stowed and secured according to procedures
6.4 Crane is shut down according to procedures
6.5 Plates or packing are stowed and secured
6.6 Routine post-operational crane checks are carried out according to procedures
6.7 All damage and defects are reported and recorded according to procedures, and appropriate action is taken
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills:

- Accurately record and maintain information relating to crane operations
- Use communication techniques in the workplace including whistles, hand signals and use of two-way radios
- Use interpersonal communication skills at a level sufficient to communicate with other site personnel
- Load data into crane computer (where fitted) and check operation to accurately reflect the crane configuration
- Operate a slewing mobile crane (21t up to 60t capacity) for the lifting and moving of loads to the safe working rated capacity in conjunction with other associated personnel
- Apply risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the crane (particular awareness of the risks associated with overhead powerlines/electrical cables, wind, erection, pack up and crane stability)
- Use and interpret crane manufacturer's specifications and data, including load charts, to enable the crane to be configured for the load
- Verify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge:

- Appropriate mathematical procedures for estimation and measurement of loads
- Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for the crane class
- Level of literacy to be able to read and comprehend manufacturer's instructions, procedures and safety signs
- Mobile slewing crane characteristics and capabilities to allow the configuration of the crane to suit the range of loads
- Mobile slewing crane operating techniques
- Understanding of the hierarchy of hazard identification and control
- Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- Procedures for the recording, reporting and maintenance of workplace records and information
- Rated capacity and working load limits (including use of crane load charts)
- Typical routine problems encountered in the process and with equipment and adjustments required for correction
Evidence Guide

<table>
<thead>
<tr>
<th>EVIDENCE GUIDE</th>
</tr>
</thead>
<tbody>
<tr>
<td>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.</td>
</tr>
</tbody>
</table>

**Overview of assessment**
- Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.
- State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**
- Compliance with OH&S licensing legislation.
- Effectively communicate and work safely with others in the work area.
- Risk assessment and management procedures (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, crane tipping and demolition sites).
- Effectively complete the pre-operational check, positioning, stabilising, set up, operation, post-operational checks of a mobile crane including all functions to their maximum extension in the lifting and moving of loads to the safe working rated capacity of the mobile crane up to 60 tonne capacity in conjunction with other associated personnel.
- Appropriate mathematical procedures for estimation of loads.

**Context of and specific resources for assessment**
- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.
- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.
- Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable
# EVIDENCE GUIDE

| Working area is made available to suit the assessment and the workplace. |
| Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints. |
| Assessment is to comply with relevant appropriate standard requirements. |
| Applicants must have access to: |
| - Personal Protective Equipment (PPE) for the purpose of the Performance Assessment. |
| - Appropriate slewing mobile crane (21 tonne up to 60 tonne) and associated equipment in safe condition. |
| - Suitable loads as specified by the endorsed Assessment Instrument. |
| - Communication equipment (e.g. two-way radios, whistles, etc.). |
| - Other associated personnel to sling and direct the loads. |

## Method of assessment

- Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.
- The use of 'simulators' in the assessment of this unit of competency is **not acceptable**.
- Assessment may be in conjunction with the assessment of other units of competency.
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
- Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.

## Guidance information for assessment

- Further information about endorsed Assessment Instruments may be obtained from State/territory OH&S regulators.

## Range Statement

### RANGE STATEMENT
## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below.

### RANGE STATEMENT

| Crane | May include a boom or jib, which is capable of being slewed (up to 60 tonnes capacity)  
The slewing mobile crane up to 60 tonnes classification encompasses the requirements for the up to 20 tonnes classification |
| Communication method | May include but not limited to:  
  - verbal and non-verbal language  
  - written instructions  
  - signage  
  - hand signals  
  - listening  
  - questioning to confirm understanding  
  - appropriate worksite protocol |
| Signage and labels | May include but not limited to:  
  - crane data plates/labels  
  - load charts  
  - crane decals  
  - control labels |
| Procedures | May include but not limited to:  
  - manufacturer's guidelines (instructions, specifications or checklists)  
  - industry operating procedures  
  - workplace procedures (work instructions, operating procedures, checklists) |
| Controls | May include but not limited to:  
  - luffing levers  
  - hoisting and lowering levers  
  - slewing levers including brake  
  - boom extension levers (where fitted) |
| Service logbook | May include but not limited to:  
  - any logbook  
  - service book  
  - history record system where the service and maintenance history is kept |
| Crane safety devices | May include but not limited to:  
  - storms, etc.) |

## RANGE STATEMENT

- trench covers
- movement of obstructions
- personal protective equipment
- adequate illumination

## Test lift

The load is lifted just clear of the lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure that:

- near capacity loads do not overload the crane
- loads of unusual shape or weight distribution are correctly slung
- load measuring equipment can be used to verify the calculated weight of the load
- all crane equipment is functioning properly
- adjustments to the slinging can be made in a safe manner

## Relevant crane movements

May include but not limited to:

- telescope in and out
- boom/jib up and down
- slew boom/jib
- operation of outriggers/stabilisers
- raise and lower hoist
- travel

## Communication signals

May include but not limited to:

- stop - hand
- stop - whistle
- hoist up - hand
- hoist up - whistle
- hoist down - hand
- hoist down - whistle
- luff boom down - hand
- luff boom down - whistle
- luff boom up - hand
- luff boom up - whistle
- telescope out - hand
- telescope out - whistle
- telescope in - hand
- telescope in - whistle
- slew left - hand
- slew left - whistle

### Unit Sector(s)

Not Applicable
TLILIC4010 Licence to operate a slewing mobile crane (up to 100 tonnes)

Modification History
Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application
This unit specifies the skills and knowledge required to safely operate a slewing mobile crane with a capacity up to 100 tonnes. Slewing mobile crane means a mobile crane incorporating a boom or jib that can be slewed, but does not include:

- a front-end loader or
- a backhoe or
- an excavator or
- other earth moving equipment when configured for crane operation.

This unit applies to the activities of a person operating a slewing mobile crane with a capacity up to 100 tonnes that is a:

- non-slewing mobile crane with a capacity exceeding 3 tonnes
- reach stacker
- slewing mobile crane with a capacity of 100 tonnes or less
- vehicle loading crane with a capacity of 10 metre tonnes or more, excluding the application of load estimation and slinging techniques to move a load.

A person performing this work is required to hold a slewing mobile crane with a capacity up to 100 tonnes high risk work (HRW) licence. This unit requires a person operating a slewing mobile crane with a capacity up to 100 tonnes to plan work, conduct routine checks, set up crane, transfer load, mobile load and shut down and secure crane after completing operations.

Licensing/Regulatory Information
This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations, HRW and meets Commonwealth, state and territory HRW licensing requirements.

Any alteration to this unit would result in a unit that would not be acceptable to work health and safety (WHS)/occupational health and safety (OHS) regulators for the purpose of licensing.

Pre-requisite Unit
Not applicable.
Competency Field
LIC – Licensing

Unit Sector

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENTS</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1 Plan work

1.1 Potential workplace hazards are identified

1.2 Hazard control measures are identified consistent with appropriate standards to ensure the safety of personnel and equipment

1.3 Weight of load is identified and estimated in consultation with relevant personnel

1.4 Crane is appropriate to the load/s and workplace conditions

1.5 Appropriate paths for moving load/s in work area are inspected and determined

1.6 Appropriate communications methods are identified in consultation with relevant personnel

2 Conduct routine checks

2.1 Crane is visually checked for any damage or defects

2.2 Crane is accessed in a safe manner

2.3 All signage and labels are checked to ensure they are visible and legible in accordance with the appropriate standard

2.4 Routine pre-operational crane checks are carried out in accordance with procedures

2.5 All controls are located and identified

2.6 Crane service logbook is checked for compliance

2.7 Crane is started in accordance with procedures and is checked
for any abnormal noises

2.8 All crane safety devices are tested in accordance with procedures

2.9 Post-start operational checks are carried out in accordance with procedures

2.10 All communications equipment is checked for serviceability

2.11 All damage and defects are reported and recorded in accordance with procedures, and appropriate action is taken

3 Set up crane

3.1 Ground suitability is checked

3.2 Crane is driven to work area in accordance with procedures

3.3 Crane is positioned for work application and stability in accordance with procedures

3.4 Appropriate crane configuration for work task is determined as required in accordance with procedures

3.5 Boom/jib and counterweight configuration data is input into crane computer as required

3.6 Appropriate hazard prevention/control measures are applied to work area in accordance with procedures

3.7 All communications equipment is tested for functionality

4 Transfer load

4.1 Lifts are determined within the capacity of the crane

4.2 Boom/jib and hoist block is positioned over load following directions from relevant personnel

4.3 Test lift is carried out in accordance with procedures to allow for checks to be safely made, in consultation with relevant personnel

4.4 Loads are transferred using all relevant crane movements in accordance with procedures and the appropriate standard

4.5 All required communications signals are correctly interpreted in accordance with procedures and the appropriate standard

4.6 Crane is operated in accordance with procedures

4.7 Load movement is monitored constantly, to ensure safety of personnel and load, and crane stability
4.8 Unplanned and/or unsafe situations are responded to in accordance with procedures

5 Mobile load

5.1 Suitability of planned route for crane is checked in accordance with procedures

5.2 Crane is configured to mobile load in accordance with procedures

5.3 Load is moved using best mobile practice in accordance with the appropriate standard

6 Shut down and secure crane

6.1 Crane boom/jib and equipment are stowed and secured as required in accordance with procedures and the appropriate standard

6.2 Relevant motion locks and brakes are applied as required

6.3 Outriggers/stabilisers are stowed and secured in accordance with procedures

6.4 Crane is shut down in accordance with procedures

6.5 Plates or packing are stowed and secured

6.6 Routine post-operational crane checks are carried out in accordance with procedures

6.7 All damage and defects are reported and recorded in accordance with procedures, and appropriate action is taken
## Foundation Skills

The language, literacy, numeracy and employment skills that are essential to performance that are not explicit in the unit are listed below.

<table>
<thead>
<tr>
<th>Skill</th>
<th>Performance feature</th>
</tr>
</thead>
</table>
| Employment skills to:        | • operate a slewing mobile crane up to 100 tonnes in different types of workplaces transferring key principles of safe operation to different contexts  
                               • improve own performance in safely and efficiently operating a slewing mobile crane by incorporating learning from different workplaces and different conditions into current performance |
| Numeracy skills to:          | • interpret numerical information including:  
                               • selecting appropriate slewing mobile crane in accordance with load and workplace conditions  
                               • load weight assessment, to ensure compliance with slewing mobile crane data plate specifications  
                               • controlling and monitoring instrument readings |
| Language skills to:          | • use and interpret vocabulary specific to slewing mobile crane operations and workplace procedures to communicate with other workplace personnel  
                               • use non-verbal feedback to support effective communication  
                               • use relevant two-way radio conventions |
| Literacy (reading) skills to:| • interpret documentation that includes technical specificity including:  
                               • slewing mobile crane data plate  
                               • plant operation manuals and manufacturer specifications  
                               • workplace procedures, including emergency plan  
                               • workplace signage and labels |
| Literacy (writing) skills to:| • accurately record and maintain information relating to operating a slewing mobile crane, including:  
                               • incident reports  
                               • vehicle checking and maintenance records |
| Self-management skills to:   | • implement risk control measures  
                               • initiate emergency management strategies |

## Range of Conditions
Range is restricted to essential operating conditions and any other variables essential to the work environment. Non-essential conditions can be found in the Companion Volume Implementation Guide.

**Unit Mapping Information**

This unit is equivalent to TLILIC4010A Licence to operate a slewing mobile crane (up to 100 tonnes).

**Links**

Companion Volume implementation guides are found in VETNet - https://vetnet.education.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851
Assessment Requirements for TLILIC4010 Licence to operate a slewing mobile crane (up to 100 tonnes)

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

A person who demonstrates competency in this unit must provide evidence of safely operating a slewing mobile crane up to 100 tonnes and satisfy all of the elements, performance criteria and foundation skills requirements of the unit on at least one occasion including:

- applying appropriate mathematical procedures to estimate loads
- applying best mobile practice including:
  - boom/jib as low as possible
  - boom/jib in line with crane
  - carrying load near to ground surface
  - gently accelerating and braking (to minimise load swing)
  - facing load uphill
  - minimum boom/jib length
  - minimum speed
  - using handheld taglines
- applying hazard prevention/control measures including:
  - adequate illumination
  - disconnected power
  - insulated electric lines
  - moving obstructions
  - pedestrian barricades
  - personal protective equipment
  - safety tags on electrical switches/isolators
  - using safety observer inside exclusion zone
  - traffic barricades and control
  - trench covers
- applying risk assessment and hazard control strategies, including hierarchy of control as applied to positioning and safely operating a crane
- applying risk assessment and management procedures
- completing the pre-operational check, positioning, stabilising, set up, operation, post-operational checks of a mobile crane effectively including all functions to their maximum extension in the lifting and moving of loads to the safe working rated capacity
of the mobile crane up to 100 tonne capacity in conjunction with relevant personnel

- communicating with other workplace personnel, through:
  - appropriate worksite protocols
  - bells
  - buzzers
  - hand signals
  - listening
  - making and interpreting hand signals
  - questioning to confirm understanding
  - signage
  - two-way radios
  - verbal and non-verbal language
  - written instructions
  - whistles
- complying with WHS/OHS licensing legislation
- loading data into crane computer as required and checking operation to accurately reflect crane configuration
- operating a slewing mobile crane up to 100 tonne capacity to lift and move loads to the safe working rated capacity while applying relevant crane movements including:
  - boom/jib up and down
  - operation of outriggers/stabilisers
  - raise and lower hoist
  - slew boom/jib
  - telescope in and out
  - travel
- receiving and interpreting workplace instructions, safety information, emergency procedures
- recording and maintaining accurate information relating to crane operations
- shutting down a slewing mobile crane up to 100 tonnes capacity in accordance with manufacturer specifications and workplace procedures including:
  - idling engine to stabilise temperature
  - locking and securing cabin as required
  - positioning/securing boom/jib for transport
  - removing key from ignition as required
  - retracting boom/jib
  - retracting hoist rope and hook block
  - retracting outriggers/stabilisers
  - securing crane for travel
  - turning off engine as required
- stabilising a slewing mobile crane by:
• correctly positioning plates or packing
• deploying outriggers
• establishing correct size plates or packing
• test-lifting load just clear of lifting plane to ensure:
  • adjustments to slinging can be made in a safe manner
  • all crane equipment is functioning properly
  • load measuring equipment can be used to verify calculated weight of the load
  • loads of unusual shape or weight distribution are correctly slung
  • near capacity loads do not overload crane
• using and interpreting crane manufacturer specifications and data, including load charts, to enable crane to be configured for load including:
  • boom/jib
  • counterweights
  • fly-jib
• using communications signals including:
  • stop – hand
  • stop – whistle
  • hoist up – hand
  • hoist up - whistle
  • hoist down – hand
  • hoist down - whistle
  • luff boom down – hand
  • luff boom down – whistle
  • luff boom up – hand
  • luff boom up – whistle
  • telescope out – hand
  • telescope out – whistle
  • telescope in – hand
  • telescope in – whistle
  • slew left – hand
  • slew left – whistle
  • slew right – hand
  • slew right – whistle
  • travel – hand
• verifying problems and equipment faults, and applying appropriate response procedures to unplanned and/or unsafe situations including:
  • environmental conditions (e.g. wind, lightning, storms, etc.)
  • failure of equipment (e.g. hydraulic system)
  • failure/loss of control (e.g. brakes and steering)
  • obstacles and obstructions
• unusual or difficult terrains.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

• appropriate mathematical procedures for estimating and measuring loads
• Australian and industry standards relevant to operating a slewing mobile crane (up to 100 tonnes)
• Commonwealth, state or territory WHS/OHS legislation, standards and codes of practice relevant to the full range of processes for the crane class
• crane rated capacity and lifting gear working load limits (including use of crane load charts)
• ground stability including:
  • backfilled ground
  • bitumen
  • concrete
  • hard compacted soil
  • rock
  • rough uneven ground
  • soft soils
• hazards including:
  • environmental conditions (e.g. wind, lightning, storms, etc.)
  • ground stability (e.g. ground condition, recently filled trenches, slopes)
  • insufficient lighting
  • obstacles or obstruction
  • other specific hazards (e.g. dangerous materials)
  • overhead hazards (e.g. electric lines, service pipes)
  • traffic (e.g. pedestrians, vehicles, other plant)
  • unusual or difficult terrains
• hierarchy of hazard identification and control:
- elimination
- substitution
- isolation
- engineering controls
- administrative controls
- personal protective equipment (PPE)
- mobile slewing crane characteristics and capabilities to allow crane configuration to suit the range of loads
- organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- procedures for recording, reporting and maintaining workplace records and information
- risks associated with overhead electric lines/electrical cables, wind, erection, pack up and crane stability, ground conditions, crane tipping and demolition sites
- systematic process of eliminating or reducing risk to personnel and property through the application of controls
- typical routine problems encountered in the process and with equipment, and adjustments required for correction.
Assessment Conditions

Assessments must be conducted by an assessor accredited for this high risk work (HRW) licence class in the Commonwealth/state/territory where the licence will be obtained (i.e. an assessor authorised by a Commonwealth/state/territory WHS/OHS regulator).

As a minimum, assessors must satisfy applicable regulatory requirements, which may include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and all assessment must be conducted in the English language.

Assessment of performance must be undertaken in the workplace and/or under realistic workplace conditions which typically reflect:

- performing tasks/activities within timelines that would be expected in a workplace
- standard and authorised work practices, safety requirements and environmental constraints
- using full-scale equipment

Slewing mobile crane (up to 100 tonnes) operation assessment must be conducted in a working zone in accordance with state/territory arrangements.

If the working zone is located at a ‘live’ site, assessment should continue in all weather conditions unless the safety of the candidate or others could be compromised.

Simulators must not be used in the assessment of this unit of competency.

Accredited assessors are responsible for ensuring candidates have access to:

- appropriate slewing mobile crane up to 100 tonnes in capacity and associated equipment in safe condition
- appropriate personnel to sling and direct loads including
  - doggers
  - riggers
- communications equipment including:
  - bells
  - buzzers
  - two-way radios
  - whistles
- controls including:
  - boom extension levers (where fitted)
  - hoisting and lowering levers
  - luffing levers
  - slewing levers including brake
- required personal protective equipment (PPE) for the purpose of the Performance Assessment
- safety devices including:
• audible and visual reversing devices
• horns/sirens
• lights
• operator restraint devices
• signage and labels including:
  • crane data plates/labels
  • crane decals
  • control labels
  • load charts
• where appropriate, relevant workplace procedures and standards for operating a slewing mobile crane up to 100 tonnes including:
  • approved codes of practice and guidance
  • Australian Standards
  • checklists
  • industry operating procedures
  • relevant industry standards (where applicable)
  • logbook
  • manufacturer guidelines (instructions, specifications or checklists) for the purposes of the Performance Assessment
  • safe work method statement (SWMS), as required
  • service logbook.

Companion Volume implementation guides are found in VETNet - https://vetnet.education.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851
TLILIC4011 Licence to operate a slewing mobile crane (over 100 tonnes)

Modification History
Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application
This unit specifies the skills and knowledge required to safely operate a slewing mobile crane with a capacity over 100 tonnes.
Slewing mobile crane means a mobile crane incorporating a boom or jib that can be slewed, but does not include:
- a front-end loader or
- a backhoe or
- an excavator or
- other earth moving equipment, when configured for crane operation.
This unit applies to the activities of a person operating a slewing mobile crane with a capacity over 100 tonnes that is a:
- non-slewing mobile crane with a capacity exceeding 3 tonnes
- reach stacker
- slewing mobile crane with a capacity exceeding 100 tonnes
- vehicle loading crane with a capacity of 10 metre tonnes or more, excluding the application of load estimation and slinging techniques to move a load.
A person performing this work is required to hold a slewing mobile crane with a capacity over 100 tonnes high risk work (HRW) licence.
This unit requires a person operating a slewing mobile crane with a capacity over 100 tonnes to plan work, conduct routine checks, set up crane, transfer load, mobile load and shut down and secure crane after completing operations.

Licensing/Regulatory Information
This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations, HRW and meets Commonwealth, state and territory HRW licensing requirements.
Any alteration to this unit would result in a unit that would not be acceptable to Work Health and Safety (WHS)/occupational health and safety (OHS) regulators for the purpose of licensing.

Pre-requisite Unit

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENTS</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1 Plan work

1.1 Potential workplace hazards are identified

1.2 Hazard prevention/control measures are identified consistent with appropriate standards to ensure the safety of personnel and equipment

1.3 Weight of load is identified and estimated in consultation with relevant workplace personnel

1.4 Crane is appropriate to the load/s and workplace conditions

1.5 Appropriate path for moving load/s in work area is inspected and determined

1.6 Appropriate communications methods are identified in consultation with relevant personnel

2 Conduct routine checks

2.1 Crane is visually checked for any damage or defects

2.2 Crane is accessed in a safe manner

2.3 All signage and labels are checked to ensure they are visible and legible in accordance with the appropriate standard

2.4 Routine pre-operational crane checks are carried out in accordance with procedures

2.5 All controls are located and identified

2.6 Crane service logbook is checked for compliance

2.7 Crane is started in accordance with procedures and checked for any abnormal noise
2.8 All crane safety devices are tested in accordance with procedures

2.9 Post-start operational checks are carried out in accordance with procedures

2.10 All communications equipment is checked for serviceability

2.11 All damage and defects are reported and recorded in accordance with procedures, and appropriate action is taken

3 Setup crane

3.1 Ground suitability is checked

3.2 Crane is driven to work area in accordance with procedures

3.3 Crane is positioned for work application and stability in accordance with procedures

3.4 Appropriate crane configuration for work task is determined as required in accordance with procedures

3.5 Boom/jib and counterweight configuration data is input into crane computer as required

3.6 Appropriate hazard prevention/control measures are applied to work area in accordance with procedures

3.7 All communications equipment is tested for functionality

4 Transfer load

4.1 Lifts are determined within the capacity of the crane

4.2 Boom/jib and hoist block is positioned over load following directions from relevant workplace personnel

4.3 Test lift is carried out in accordance with procedures to allow for checks to be safely made, in consultation with relevant personnel

4.4 Loads are transferred using all relevant crane movements in accordance with procedures and the appropriate standard

4.5 All required communications signals are correctly interpreted in accordance with procedures and the appropriate standard

4.6 Crane is operated in accordance with procedures

4.7 Load movement is monitored constantly, to ensure safety of personnel and load, and crane stability

4.8 Unplanned and/or unsafe situations are responded to in
accordance with procedures

5 Mobile load

5.1 Suitability of planned route for crane is checked in accordance with procedures

5.2 Crane is configured to mobile load in accordance with procedures

5.3 Load is moved using best mobile practice in accordance with the appropriate standard

6 Shut down and secure crane

6.1 Crane boom/jib and equipment are stowed and secured as required in accordance with procedures and the appropriate standard

6.2 Relevant motion locks and brakes are applied as required

6.3 Outriggers/stabilisers are stowed and secured in accordance with procedures

6.4 Crane is shut down in accordance with procedures

6.5 Plates or packing are stowed and secured

6.6 Routine post-operational crane checks are carried out in accordance with procedures

6.7 All damage and defects are reported and recorded in accordance with procedures, and appropriate action is taken
## Foundation Skills

The language, literacy, numeracy and employment skills that are essential to performance that are not explicit in the unit are listed below.

Companion Volume implementation guides are found in VETNet - https://vetnet.education.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851
Assessment Requirements for TLILIC4011 Licence to operate a slewing mobile crane (over 100 tonnes)

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

A person who demonstrates competency in this unit must provide evidence of safely operating a slewing mobile crane over 100 tonnes and satisfy all of the elements, performance criteria and foundation skills requirements of the unit on at least one occasion including:

- applying appropriate mathematical procedures to estimate loads
- applying best mobile practice including:
  - boom/jib as low as possible
  - boom/jib in line with crane
  - carrying load near to ground surface
  - gently accelerating and braking (to minimise load swing)
  - facing load uphill
  - minimum boom/jib length
  - minimum speed
  - using handheld taglines
- applying hazard prevention/control measures including:
  - adequate illumination
  - disconnected power
  - insulated electric lines
  - moving obstructions
  - pedestrian barricades
  - personal protective equipment
  - using safety observer inside exclusion zone
  - safety tags on electrical switches/isolators
  - traffic barricades and control
  - trench covers
- applying risk assessment and hazard control strategies, including hierarchy of control as applied to positioning and safely operating a crane
- applying risk assessment and management procedures
- communicating with other workplace personnel through:
  - appropriate worksite protocols
• bells
• buzzers
• hand signals
• listening
• making and interpreting hand signals
• questioning to confirm understanding
• signage
• two-way radios
• verbal and non-verbal language
• written instructions
• whistles
• completing the pre-operational check, positioning, stabilising, set up, operation, post-operational checks of a mobile crane including all functions to their maximum extension in lifting and moving loads to the safe working rated capacity of a slewing mobile crane over 100 tonnes capacity in conjunction with other associated personnel
• complying with WHS/OHS licensing legislation
• loading data into crane computer as required and checking operation to accurately reflect the crane configuration
• operating a slewing mobile crane over 100 tonnes capacity to lift and move loads to the safe working rated capacity while applying relevant crane movements including:
  • boom/jib up and down
  • operation of outriggers/stabilisers
  • raise and lower hoist
  • slew boom/jib
  • telescope in and out
  • travel
• receiving and interpreting workplace instructions, safety information, emergency procedures
• recording and maintaining accurate information relating to crane operations
• shutting down a slewing mobile crane over 100 tonnes capacity in accordance with manufacturer specifications and workplace procedures including:
  • idling engine to stabilise temperature
  • locking and securing cabin as required
  • positioning/securing boom/jib
  • removing key from ignition as required
  • retracting boom/jib
  • retracting hoist rope and hook block
  • retracting outriggers/stabilisers
  • securing crane for travel
  • turning off engine as required
• stabilising a slewing mobile crane by:
• correctly positioning plates or packing
• deploying outriggers
• establishing correct size plates or packing
• test \--- lifting load just clear of lifting plane to ensure:
  • adjustments to slinging can be made in a safe manner
  • all crane equipment is functioning properly
  • load measuring equipment can be used to verify calculated weight of load
  • loads of unusual shape or weight distribution are correctly slung
  • near capacity loads do not overload crane
• using and interpreting crane manufacturer specifications and data, including load charts, to enable crane to be configured for load including:
  • boom/jib
  • counterweights
  • fly-jib
• using communications signals including:
  • stop – hand
  • stop – whistle
  • hoist up – hand
  • hoist up – whistle
  • hoist down – hand
  • hoist down – whistle
  • luff boom down – hand
  • luff boom down whistle
  • luff boom up – hand
  • luff boom up whistle
  • telescope out – hand
  • telescope out - whistle
  • telescope in – hand
  • telescope in whistle
  • slew left – hand
  • slew left – whistle
  • slew right – hand
  • slew right – whistle
  • travel – hand
• verifying problems and equipment faults, and applying appropriate response procedures to unplanned and/or unsafe situations including:
  • environmental conditions (e.g. wind, lightning, storms, etc.)
  • failure of equipment (e.g. hydraulic system)
  • failure/loss of control (e.g. brakes and steering)
  • obstacles and obstructions
Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate mathematical procedures for estimating and measuring loads
- Australian and industry standards relevant to operating a slewing mobile crane (over 100 tonnes)
- Commonwealth, state or territory WHS/OHS legislation, standards and codes of practice relevant to the full range of processes for the crane class
- crane rated capacity and lifting gear working load limits (including use of crane load charts)
- ground suitability including:
  - backfilled ground
  - bitumen
  - concrete
  - hard compacted soil
  - rock
  - rough uneven ground
  - soft soils
- hazards including:
  - environmental conditions (e.g. wind, lightning, storms, etc.)
  - ground stability (e.g. ground condition, recently filled trenches, slopes)
  - insufficient lighting
  - obstacles or obstruction
  - other specific hazards (e.g. dangerous materials)
  - overhead hazards (e.g. electric lines, service pipes)
  - traffic (e.g. pedestrians, vehicles, other plant)
  - unusual or difficult terrains
- hierarchy of hazard identification and control:
  - elimination
  - substitution
- isolation
- engineering controls
- administrative controls
- personal protective equipment (PPE)
- mobile slewing crane characteristics and *capabilities* to allow crane configuration to suit the range of loads
- organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- procedures for recording, reporting and maintaining workplace records and information
- risks associated with overhead electric lines/electrical cables, wind, erection, pack up and crane stability, ground conditions, crane tipping and demolition sites
- systematic process of eliminating or reducing risk to personnel and property through the application of controls
- typical routine problems encountered in the process and with equipment, and adjustments required for correction.
Assessment Conditions

Assessments must be conducted by an assessor accredited for this high risk work (HRW) licence class in the Commonwealth/state/territory where the licence will be obtained (i.e. an assessor authorised by a Commonwealth/state/territory WHS/OHS regulator).

As a minimum, assessors must satisfy applicable regulatory requirements, which may include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and all assessment must be conducted in the English language.

Assessment of performance must be undertaken in the workplace and/or under realistic workplace conditions which typically reflect:

- performing tasks/activities within timelines that would be expected in a workplace
- standard and authorised work practices, safety requirements and environmental constraints
- using full-scale equipment.

Slewing mobile crane (over 100 tonnes) operation assessment must be conducted in a working zone in accordance with state/territory arrangements.

If the working zone is located at a ‘live’ site, assessment should continue in all weather conditions unless the safety of the candidate or others could be compromised.

Simulators must not be used in the assessment of this unit of competency.

Accredited assessors are responsible for ensuring candidates have access to:

- appropriate slewing mobile crane over 100 tonnes in capacity and associated equipment in safe condition
- appropriate personnel to sling and direct loads including:
  - doggers
  - riggers
- communications equipment including:
  - bells
  - buzzers
  - two-way radios
  - whistles
- controls including:
  - boom extension levers (where fitted)
  - hoisting and lowering levers
  - luffing levers
  - slewing levers including brake
- required personal protective equipment (PPE) for the purpose of the Performance Assessment
- safety devices including:
• audible and visual reversing devices
  • horns/sirens
  • lights
  • operator restraint devices
• signage and labels including:
  • crane data plates/labels
  • load charts
  • crane decals
  • control labels
• where appropriate relevant workplace procedures and standards for operating a slewing mobile crane over 100 tonnes including:
  • approved codes of practice and guidance
  • Australian Standards
  • checklists
  • history record system where service and maintenance history is kept
  • industry operating procedures
  • manufacturer guidelines (instructions, specifications or checklists) for the purposes of the Performance Assessment
  • relevant industry standards (where applicable
  • service book
  • safe work method statement (SWMS), as required.

TLILIC2001A Licence to operate a forklift truck

Modification History
Not Applicable

Unit Descriptor

| Unit Descriptor | This unit specifies the outcomes required for the operation of a powered industrial truck equipped with a mast and an elevating load carriage to which is attached a pair of fork arms or other attachment, for licensing purposes. This definition also includes a truck on which the operator is raised with the attachment for order-picking. |

Application of the Unit

| Application of the Unit | THIS UNIT REQUIRES THE OPERATOR TO BE ABLE PLAN THE WORK, CONDUCT ROUTINE CHECKS ON THE FORKLIFT, SHIFT LOADS IN A SAFE MANNER, AND SHUT DOWN AND SECURE THE EQUIPMENT AFTER THE COMPLETION OF OPERATIONS. This unit is based on the National Standard for Licensing Persons Performing High Risk Work. This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing. |

Licensing/Regulatory Information

Employability Skills Information

| Employability Skills | This unit contains employability skills. |

Elements and Performance Criteria Pre-Content

Not Applicable
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Elements describe the essential outcomes of a unit of competency.</strong></td>
<td><strong>Performance criteria describe the required performance needed to demonstrate achievement of the element.</strong> Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.</td>
</tr>
</tbody>
</table>

## 1. Plan work

1.1 Potential workplace hazards are identified

1.2 *Hazard control measures* are identified consistent with *appropriate standards* to ensure the safety of personnel and equipment

1.3 Appropriate *forklift* truck is selected according to the load and workplace conditions

1.4 Working area is inspected to determine appropriate path of movement for loads and forklift truck

1.5 *Communication methods* are identified according to *procedures*

## 2. Conduct routine checks

2.1 Forklift is visually checked for any damage or defects

2.2 All *signage and labels* are visible and legible according to the *appropriate standard*

2.3 All controls are located and identified

2.4 *Pre-start operational checks* are carried out according to *procedures*

2.5 *Forklift* is started according to *procedures* and checked for any abnormal noise

2.6 *Post-start operational checks* are carried out according to *procedures*

2.7 All forklift functions and safety devices are tested to their maximum according to *procedures*

2.8 Defects and damage are reported and recorded according to *procedures*, and appropriate action is taken

## 3. Shift load

3.1 The weight of load is assessed to ensure compliance with *forklift* truck data plate specifications

3.2 Appropriate *hazard prevention/control measures* are implemented and communicated with personnel in the work area

3.3 *Forklift* is operated at a safe speed and according to *procedures*

3.4 Loads are moved and placed to ensure stability of material and avoidance of hazards
3.5 Load movement is monitored constantly ensuring safety to personnel and load, and structural stability
3.6 Unplanned and/or unsafe situations are responded to in line with procedures

4. Shut down and secure forklift truck

4.1 Forklift truck is parked to avoid hazards
4.2 Forklift is shut down according to procedures
4.3 Routine post-operational forklift checks are carried out according to procedures
4.4 Forklift is secured to prevent unauthorised access/use
4.5 All defects and damage are reported and recorded according to procedures, and appropriate action is taken

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills:

- Accurately interpret information relating to conducting forklift truck operations (e.g. procedures)
- Safely conduct forklift truck operations including all functions to the maximum height and load capacity
- Identify hazards associated with the operation of the forklift truck, assess risks and put into place effective hazard prevention/control measures for those hazards identified
- Use communication skills at a level sufficient to communicate with other site personnel (e.g. receive and interpret work instructions, safety information, emergency procedures)
- Drive forklift with load in forward and reverse, maintaining visibility
- Verify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge:

- Methodology of determining the weight of a load
- Commonwealth, state or territory OH&S legislation, standards relevant to the safe operation for the forklift trucks
- Understanding of forklift characteristics and capabilities (including use of load data plates)
- Understanding of the hierarchy of hazard identification and control
- Organisational and workplace standards, requirements, policies and procedures for
REQUIRED SKILLS AND KNOWLEDGE

- conducting operations for the crane class
- Procedures for the recording, reporting and maintenance of workplace records and information
- Forklift truck operations and safe operating techniques
- Typical routine problems encountered in the operation of the crane and equipment and adjustments required for correction

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.

Overview of assessment
- Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.
- State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- Compliance with OH&S licensing legislation.
- Communicate and work safely with others in the work area.
- Identify hazards associated with the operation of the forklift truck and put in place effective hazard controls for those hazards identified.
- Conduct pre-start-up, operational, moving loads and shut down and secure checks of the forklift truck according to procedures.
- Operate the forklift truck and move loads safely, including driving and manoeuvring, picking up and placing of loads at various stack heights.
- Drive forklift truck with load in forward and reverse, maintaining visibility.

Context of and specific resources for assessment
- Assessment of the safe application of knowledge and skills to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.
### Evidence Guide

- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.
- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.
- Applicants must have access to:
  - Personal Protective Equipment (PPE) for the purpose of the Performance Assessment
  - Associated equipment appropriate to forklift truck operations
  - Suitable loads as described by the endorsed Assessment Instrument
  - Manufacturers specifications
  - Appropriate forklift truck in a safe condition.

### Method of Assessment

- Assessment must be conducted using the endorsed Assessment Instrument. These Instruments provide instruction on their application.
- The use of 'simulators' in the assessment of this unit of competency is not acceptable.
- Assessment may be in conjunction with the assessment of other units of competency.
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
- Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

### Guidance Information for Assessment

- Further information about endorsed Assessment Instruments may be obtained from state/territory OH&S regulators.

### Range Statement

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below.
## RANGE STATEMENT

<table>
<thead>
<tr>
<th><strong>Hazards</strong></th>

<tr>
<td>• safety devices fitted where appropriate</td>
</tr>
<tr>
<td>• forklift data plate fitted and interpreted</td>
</tr>
<tr>
<td>• logbook, handbook or operating manuals available</td>
</tr>
<tr>
<td>• external visual check including, evidence of damage, leaks, visual evidence of structural weaknesses (including paint separation or stressed welds) is carried out</td>
</tr>
<tr>
<td>• forklift attachment is checked for security</td>
</tr>
<tr>
<td>• approved modifications and/or attachments fitted to manufacturer's specifications (e.g. as per forklift or attachment data plate) are identified</td>
</tr>
<tr>
<td>• checks for adaptations or modifications outside manufacturer's specifications (e.g. not listed on the forklift or attachment data plate) are carried out</td>
</tr>
<tr>
<td>• maintenance logbook/records checked</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Post-start operational checks</th>
</tr>
</thead>
<tbody>
<tr>
<td>May include checks of the forklift truck and equipment after start-up to ensure:</td>
</tr>
<tr>
<td>• hazard warning systems (for example lights and horns), are functional</td>
</tr>
<tr>
<td>• attachment movements and control functions are smooth and comply with operating requirements</td>
</tr>
<tr>
<td>• steering, transmission and brake functions comply with operating requirements</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Hazard prevention/control measures</th>
</tr>
</thead>
<tbody>
<tr>
<td>May include but not limited to:</td>
</tr>
<tr>
<td>• barricades and traffic control</td>
</tr>
<tr>
<td>• safety tags on electrical switches/isolators</td>
</tr>
</tbody>
</table>
## RANGE STATEMENT

- insulated powerlines
- safety observer used inside exclusion zone
- disconnected power
- pedestrian control (barricades, signs, etc.)
- excavation safeguards
- movement of obstructions
- personal protective equipment
- adequate illumination

### Unplanned and/or unsafe situations

May include but not limited:
- failure/loss of control (e.g. brakes and steering)
- failure of equipment (e.g. hydraulic system)
- environmental condition

### Shut down

May include, but is not limited to:
- parking in a suitable location away from dangerous areas
- fork arms are correctly positioned (tips down, tilted forward, lowered to ground)
- appropriate transmission/gear is selected for parking (relevant to transmission type)
- hand/parking brake is applied
- engine power is turned off
- ignition key is removed (if applicable)
- LPG gas cylinder valve is shut off (where fitted)
- securing equipment against unauthorised operation
- securing the site
- ensuring access ways are clear
- identifying and segregating defective equipment and reporting to authorised personnel
- batteries are connected to the charger (if applicable)

## Unit Sector(s)

Not Applicable
CPPCMN2002A Participate in workplace safety arrangements

Modification History
Revised unit
Unit updated and equivalent to PRMCMN201A Participate in workplace safety arrangements.

Unit Descriptor
This unit of competency specifies the outcomes required to ensure own safety and that of others in the workplace. It also covers recognising hazards and following workplace emergency procedures.

Application of the Unit
This unit of competency supports employees without managerial or supervisory responsibilities. Performance would usually be carried out under routine supervision, within company guidelines.

Licensing/Regulatory Information
No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Follow workplace procedures for hazard identification and risk control.
   1.1 *Hazards* in work area are identified and reported to appropriate personnel according to workplace procedures and company requirements.
   1.2 Workplace procedures and work instructions for controlling risks are followed according to company requirements.

2. Participate in arrangements for managing occupational health and safety (OHS).
   2.1 OHS issues are raised with appropriate personnel according to relevant *OHS legislation*, workplace procedures and company requirements.
   2.2 Opportunities to participate in OHS management in workplace are identified and used within scope of own role and responsibilities, according to workplace procedures and company requirements.

3. Follow emergency procedures in workplace.
   3.1 *Emergency procedures* are followed within scope of own role and responsibilities according to company requirements.
   3.2 Details of *hazardous events* are reported to appropriate personnel according to company requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- interpersonal skills to relate to people from diverse backgrounds
- language and literacy skills to:
  - communicate clearly and concisely verbally and in writing
  - communicate OHS information to personnel
  - participate in OHS training
  - read and interpret directions and information, including:
    - emergency responses
    - product instructions
    - safety signs
    - work instructions
  - report potential and existing risks or hazards
- skills to work safely when:
  - identifying hazards and controlling risks
  - using tools, equipment and products

Required knowledge

- common workplace hazards and risk control measures, including:
  - equipment and material use, storage, cleaning and disposal procedures
  - range and meaning of workplace safety signs and symbols
  - site safety plan
  - types and purpose of personal protective equipment (PPE)
  - ways to maintain OHS in emergency situations
  - communication channels and procedures to report OHS concerns
  - rights and responsibilities of parties in workplace under relevant OHS Acts, regulations and codes of practice
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>This unit of competency could be assessed by observing the recognition of hazards in the workplace, ensuring own safety and that of others, and following emergency procedures.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Critical aspects for assessment and evidence required to demonstrate competency in this unit</td>
<td>A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified in this unit. In particular the person should demonstrate the ability to: • follow emergency procedures in emergency situations (note that evidence in this area may be gathered through simulations) • identify hazards and risks in the workplace and report them to appropriate personnel • follow workplace procedures for controlling risks in the workplace.</td>
</tr>
<tr>
<td>Context of and specific resources for assessment</td>
<td>Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards’ requirements. Resource implications for assessment include access to: • assessment documentation forms and record books • manuals and relevant documentation, including OHS policies and procedures • PPE commonly used to reduce workplace risk • relevant products, tools, specialist equipment and associated instructions • suitable work area, or simulated workplace environment, that allows for identification of hazards.</td>
</tr>
<tr>
<td>Method of assessment</td>
<td>Assessment methods must: • satisfy the endorsed Assessment Guidelines of the Property Services Training Package • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application • reinforce the integration of employability skills with workplace tasks and job roles • confirm that competency is verified and able to be transferred to other circumstances and environments.</td>
</tr>
</tbody>
</table>
This unit could be assessed on its own or in combination with other units relevant to the job function.

| Guidance information for assessment | Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support. Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed. |

---

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **Hazards** may include: | • blocked access to emergency entry and exit points  
| | • electrical and mechanical faults  
| | • unsafe manual handling methods  
| | • improper use of hazardous materials and chemicals. |

| **Identifying hazards** may include: | • checking equipment or work area before and during work  
| | • housekeeping  
| | • inspecting workplace equipment and work areas. |

| **Appropriate personnel** may include: | • health and safety representatives  
| | • managers  
| | • OHS personnel  
| | • other persons, including emergency service personnel authorised or nominated by organisation or industry to:  
| | • approve specified work  
| | • direct specified work and functions  
| | • inspect specified work  
| | • perform specified work and functions  
| | • supervisors and team leaders. |

| **Workplace procedures** may include specific OHS procedures and organisational policies or procedures relating to: | • assessment and control of risks  
| | • consultation and participation arrangements for employees  
| | • emergency response  
| | • OHS issue resolution  
| | • safe operating procedures or instructions that cover but are not

**Unit Sector(s)**

Common

**Custom Content Section**

Not applicable.
UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

Modification History
Not Applicable

Unit Descriptor

Unit Descriptor 1)

1.1) Descriptor
This unit specifies the mandatory requirements of occupational health and safety and how they apply to the various electrotechnology work functions. It encompasses responsibilities for health and safety, risk management processes at all operative levels and adherence to safety practices as part of the normal way of doing work.

Application of the Unit
Not Applicable
Licensing/Regulatory Information

1.2) License to practice

During Training: Competency development activities are subject to regulations directly related to licencing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace: The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Other conditions may apply under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

There are no prerequisite competencies for this unit.

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Application of the Unit 4)

This unit addresses information, processes and techniques for the application of general occupational health and safety requirements in workplaces and is essential for employees without managerial or supervisory responsibilities.
**Elements and Performance Criteria Pre-Content**

6) Elements describe the essential outcomes of a unit of competency

<td>2.1 Safe work methods for controlling risk are followed accurately.</td>
</tr>
<tr>
<td></td>
<td>2.2 Workplace procedures for dealing with accidents, fires and emergencies are followed according to work procedures and scope of responsibility and competencies.</td>
</tr>
</tbody>
</table>
ELEMENT PERFORMANCE CRITERIA

3. Follow workplace procedures for hazard identification and risk control
   3.1 Hazards are identified and control measures implemented and monitored through active participation in the consultation process with employer and other employees.
   3.2 Hazards in the work area are recognised and reported to appropriate personnel according to established procedures.
   3.3 OHS records of incidents are completed in accordance with regulatory requirements and established procedures.
   3.4 Workplace instructions and training are followed accurately within established procedures.
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and applying OHS practices in the workplace.

The knowledge and skills shall be contextualised to current industry standards, technologies and practices.

KS01-EE101A Occupational Health and Safety principles

Evidence shall show an understanding of Occupational Health and Safety to an extent indicated by the following aspects:

T1 The basic legal requirements covering occupational health and safety in the workplace encompassing:

- underlying principles of OH&S
- general aims and objectives of the relevant state or territory legislation relating to OH&S.
- employer and employee responsibilities, rights and obligations.
- major functions of safety committees and representatives.
- powers given to Occupational Health and Safety Inspectors
- housekeeping and potential hazards in relation to improper housekeeping
- selecting appropriate personal protective equipment (PPE) given hazardous situations

T2 The work environment encompassing:

- typical hazards associated with a range of work environments
- procedures used to control the risks associated with these hazards
- principles of risk assessment / management and state the purpose of each.
- hierarchy of OH&S hazard control measures.
- required documentation for risk assessment.
- commonly used workplace safety signs.
- workplace emergencies that pose a threat to health and safety and suitable procedure for an emergency workplace evacuation.
- appropriate fire extinguisher for a given type of fire.
- requirements for the location, mounting and maintenance of portable fire extinguishers.
- basic process of fighting a fire.
- Importance of safe premises, buildings and security in an industrial setting and the consequences of non-compliance.
REQUIRED SKILLS AND KNOWLEDGE

- standard work procedure.

T3 Manual Handling encompassing:
- typical manual handling injuries and the effect they can have on lifestyle
- situations that may cause manual handling injuries
- correct procedures for lifting and carrying to prevent manual handling injuries

T4 Chemicals in the workplace encompassing:
- hazardous substances and dangerous goods.
- classification of chemicals as hazardous substances and/or dangerous goods
- requirements for labelling of chemicals in the workplace
- safe storage procedures for chemicals
- purpose and interpretation of material safety data sheet (MSDS)

T5 Working at heights encompassing:
- dangers associated with working on ladders and scaffolds
- identification of work area as a height risk and use appropriate safety equipment to prevent a fall
- selecting an appropriate ladder for a given situation and perform a safety check before use
- precautions that should be taken when ascending and working off a ladder
- precautions that should be taken when working on and around a scaffold and elevated platforms.

T6 Confined spaces encompassing:
- hazards associated with working in a confined space
- identifying workplace situations that could be classified as a confined space
- control measures for working in a designated confined space

T7 Physical and psychological hazards encompassing:
- short and long term effects of excessive noise and techniques to avoid damage to hearing due to excessive noise
- effects of vibration on the human body and work practices to protect against vibration
- effects of thermal stress on the human body and work practices to protect against thermal stress
- effects of ultraviolet (UV) radiation on the human body and work practices to protect against UV radiation.
- dangers associated with laser operated equipment and tools and suitable protective measures to overcome the danger.
- occupational overuse syndrome; how it occurs and means to overcome it
- factors that cause stress in the workplace, symptoms of a person suffering from stress and personal stress management techniques
- detrimental effects and dangers of drug and alcohol use in the workplace
REQUIRED SKILLS AND KNOWLEDGE

T8 Working safely with electricity encompassing:
- effects of electric shock on the human body
- common causes of electrical accidents
- precautions that can minimise the chance of electric shock (earthing, extra low voltage, fuses, circuit breakers and residual current devices – RCDs)
- protection offered by a residual current device (RCD)
- need for ensuring the (safe) isolation of an electrical supply
- appropriate method of removing an electric shock victim from a live electrical situation

T9 Life support - CPR in the workplace encompassing:
- First Aid.
- responsibilities of the First Aider.
- priorities of first aid management for any accident or injury.
- procedures required at an accident scene.
- legal and ethical issues, which may impact on the management of care.
- 'Duty of Care'.
- examination of a casualty for injuries.
- effect of cardio pulmonary arrest on the body.
- Managing simulated conditions of: airway obstruction; respiratory arrest and cardio pulmonary arrest,
- single and two-person cardio pulmonary resuscitation (CPR).
- signs and symptoms of an altered level of consciousness
- management of simulation of a casualty with an altered level of consciousness.
- signs and symptoms of shock.
- management of simulation of a casualty in shock

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1) Longitudinal competency development approaches to
EVIDENCE GUIDE

assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2) Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline,
EVIDENCE GUIDE

work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement encompassing:

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement

- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.

- Demonstrate an appropriate level of skills enabling employment

- Conduct work observing the relevant Anti-Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:

  - Applying OHS practices in the workplace as described in 8) and including:

    A Preparing to enter the workplace including, the use of work permits and clearances and isolation permissions.

    B Understanding and following risk control safe work methods.

    C Applying work procedures and instructions as they apply to risk control measures.

    D Dealing with accidents and emergencies within the scope of responsibility.

    E Participation in consultation processes, identifying hazards and implementing and monitoring control measures.

    F Dealing with unplanned events
EVIDENCE GUIDE

Note:
Ability to implement these Occupation Health and Safety measures shall be demonstrated on all occasions safety issues arise.

Context of and specific resources for assessment

9.3) This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:
- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:
Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to applying OHS practices in the workplace.

Method of assessment

9.4) This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:
Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5) This unit shall be assessed concurrently, as it relates to other units undertaken in a possible skill clusters or qualification.

Components of this unit are included in the critical aspects of
EVIDENCE GUIDE

evidence of all units to help ensure the appropriate level of responsibility for safety has been acquired

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to each of the following

- Relevant Occupational Health and Safety legislation, regulations and codes of practice related to hazards present in the industry and particular workplace
- Accepted industry work procedures and the specific safety procedures and work instructions for particular workplace.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable
Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3  Writing 3  Numeracy 3

Custom Content Section

Competency Field 5)

Electrotechnology
UEENEEJ102A Prepare and connect refrigerant tubing and fittings

Modification History

Unit Descriptor

1.1) Descriptor

This unit covers the basic connection of refrigeration and air conditioning piping/tubing and fittings. It encompasses the safe use of hand, fixed and portable power tools for cutting, flaring, bending, swaging, silver brazing copper tube to copper tube, bundy tube and brass and steel fittings, measurement and reading drawings and diagrams.

Application of the Unit

4) This competency standard is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher. The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or addressed through recognition processes.

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice (1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for concurrent assessment and relationship with other units (9.5 below).
Application of the Unit

4) Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.
Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may, in some jurisdictions, require a license to practice in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:
1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

- UEEENEE10 1A Apply Occupational Health and Safety regulations, codes and practices in the workplace
Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets ofEmployability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and preparing refrigerant tubing and fittings.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ102A Refrigerant tubing and fittings techniques

Evidence shall show an understanding of cutting, bending and joining refrigeration piping and tubing tools, equipment and techniques, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Piping
- Refrigeration & water grade copper tube
- Maintaining cleanliness (always capped, do not blow out with mouth etc)
- Soft and hard drawn tube
- Tubing applications (soft, hard, pair coil, water grade etc)
- Tube qualities - diameter, wall thickness (gauge) and pressure ratings (R410A etc)
- Pipe insulation (types - tube, slit tube, sheet etc and joining methods - glue, tape etc)
- Other tube materials (Bundy, steel, aluminum, brass)

T2 Cutting
- Cutting tools (Imps, normal & large pipe cutters, tube cutting rings etc)
- Precautions while cutting (sharp burrs, sharp blades etc)
- Deburring tools (reamers, deburrers etc)

T3 Bending
- Bending tools (springs, levers, presses etc)
- Precautions while bending (work hardening, collapsing etc)
- Bending hard drawn tube - the process of annealing

T4 Joining
- Flare nuts (plain, short barrel, frost proof, reducing)
- Flaring tools (flare block, eccentric with clutch for high pressure tube)
- Precautions while flaring (deburred, length past block face, cleanliness)
- Swaging tools (punch, flare block, expander etc)
REQUIRED SKILLS AND KNOWLEDGE

- Precautions while swaging (length past block face, tube shortening effect, cleanliness etc)
- Other tube fittings (BSP to flare elbows, tees, unions, plugs, flare washers, Lokrings etc)
- Thread sealants (tapes, pastes etc)
- Access valves (Schrader, piercing, cut-away of service valve/s)
- Precautions using access valves (refrigerant leakage, core removal, limitations on piercing valves etc)

T5 Soldering and brazing equipment

- Gas types (oxy acetylene, air acetylene, propane, Mapp gas)
- Hazards associated with their use (cylinder transport, remove regulator, oil & oxy = bang)
- Personal safety (MSDS - oxy, acetylene, propane, MAPP gas)
- Flash back arrestors
- Setting up equipment (fitting regulator, adjusting pressures, tip selection)
- Igniting and flame types (flint guns, oxidising, neutral, carburising)
- Care and maintenance of equipment (hoses, regulator, tips, cylinders, flash back arrestors)

T6 Silver solder

- Types (yellow, brown, blue and their metal components)
- Personal safety (MSDS - silver brazing alloys)
- Flux and its use (dissimilar metals)
- Personal safety (MSDS - flux)
- Preparing surfaces (removing oxides, oils, applying flux)

T7 Soldering techniques

- Dry nitrogen
- Personal safety (MSDS - nitrogen)
- Applying dry nitrogen to a piping circuit
- Silver soldering copper to copper
- Silver soldering copper to dissimilar metals
- Annealing copper tube

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement
EVIDENCE GUIDE

and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1) Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2) Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria
EVIDENCE GUIDE

shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit.

- It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
  - Prepare refrigerant tubing and fittings as described in 8) and including:
    A Applying tubing and fitting appropriately to equipment layout
    B Using established methods to cut, flare, bend, swage and silver brazing copper tube
    C Attaching fittings correctly
    D Conducting component routine quality checks
    E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items
EVIDENCE GUIDE

Note:
Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment

9.3)
This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:
Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in preparing refrigerant tubing and fittings.

Method of assessment

9.4)
This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:
Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)
There are no concurrent assessment recommendations for this unit.
Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to preparing refrigerant tubing and fittings for at least two basic different refrigeration/air conditioning equipment layouts, which require cutting, flaring, bending, swaging, silver brazing copper tube to copper tube, bundy tube, brass and steel fittings.

Note:
This includes piping/tubing and fittings for high pressure refrigerants.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

1) Descriptor

This unit covers the assembly, installation and starting up and de-commissioning of single head split air conditioning systems and split water heating heat pump systems up to a maximum of 18kWr refrigeration capacity. It encompasses working safely and to standards, following routine procedures to install equipment, connecting pipe work, pressure testing, evacuating, perform functional checks and complete installation / regulatory documentation.

Note: The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill 2003 may apply to this unit. Prior to planning the delivery of any training and/or assessment activities all legislative and regulatory requirements shall be identified and included.

Application of the Unit

4) This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may also be used to augment previously acquired competencies.
Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may, in some jurisdictions, require a license to practice in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:
1. The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill 2003 may apply to this unit. Prior to planning the delivery of any training and/or assessment activities all legislative and regulatory requirements shall be identified and included.

2. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

3. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Note.
1. a. Electrical connection shall be carried out by an appropriately licensed electrician.
   b. Mains water connection shall be carried out by an appropriately licensed plumber.
2. Unit performance is completed after associated electrical work is carried out by an appropriate electrically licensed person.
3. Making safe includes leak testing and fitting of caps to all refrigerant access ports, which could allow refrigerant to escape into the environment. It includes de-commissioning.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and positioning, assembling and starting up split air conditioning and water heating heat pump systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

**KS01-EJ105A  Split air conditioning and water heating heat pump system installation**

Evidence shall show an understanding of split air conditioning and water heating heat pump system installation, start-up and decommissioning, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

**T1  Sustainable energy**
- The earth's atmosphere
- The greenhouse effect
- Energy usage in Australia (gases, coal, fuel oil etc)
- Projected population increase and its effects
- International and national greenhouse imperatives: the role of regulators and similar bodies (Kyoto Protocol)

**T2  Sustainable energy work practices**
- Definitions
- Renewable energy technologies (solar, wind, biomass, geothermal, tidal, hydro, nuclear)
- The concept of co-generation
- Economic benefits of sustainable energy initiatives

**T3  Heritage awareness**
- Heritage listings (concept and types (world, national, commonwealth etc))
- Purpose of regulations related to maintenance of listed sites
- Responsibilities while working in and around listed sites
REQUIRED SKILLS AND KNOWLEDGE

- Environmental protection
- Government agencies (AGO, EPHC, DEC etc)
- Environmental protection (land, water, atmosphere, human settlement, biodiversity etc)
- Purpose of regulations related to environmental protection
- Responsibilities while working in and around environmentally protected sites
- Protocols for working in and around protected sites (legislated acts - ozone protection etc)

T4 Relevant installation codes
- Applicable standards and codes (building, electrical, health, environmental – OH&S act, ozone protection act, Refrigerant Handling Code of Good Practice
- Introduction to MEPS (minimum energy performance standards) and the star rating

T5 Split air conditioning systems

T6 Types and applications
- categories (high wall, floor mounted, ceiling mounted, cassette, ducted)
- sub categories (single head, multi head)
- types (cooling only, reverse cycle, inverter, dc)
- typical applications for each category / type
- system ratings (hp vs kw, standard ambient conditions for capacity ratings ,actual star rating examples)
- Components, construction and operation
- evaporators (finned induced and forced draught)
- metering devices (capillary, restrictor)
- service ports (ball valves, post valves, schrader valves)
- reverse cycle (reversing valves)
- air distribution – non-ducted (fans, filters, swing louvers etc)
- air distribution - ducted (ducting types, bto's, dampers, outlets, grilles, plenums, filters etc)
- typical ducting layouts (maps)
- typical mechanical system layouts (cooling only, reverse cycle)
- evaporating and condensing temperatures / pressures - design and typical operating values
- controls - operating and safety (encapsulated lp & hp sensors, compressor overload, de-ice stat etc)

T7 Split water heating heat pump systems
- Types and typical applications. including hot water heating and swimming pool heating
- Components, construction and operation
- Cooling coil
- Heating coil
- Metering devices (capillary, restrictor)
REQUIRED SKILLS AND KNOWLEDGE

- Service ports (ball valves, post valves, Schrader valves)
- Typical mechanical system layouts
- Evaporating and condensing temperatures /pressures - design and typical operating values
- Controls - operating and safety (encapsulated LP & HP sensors, compressor overload, etc)

T8  Installation of unit and pipework
- Respect for customers premises (on-time, respectful language, private commodities, toilets, clean-up etc)
- Noise and vibration (problems for neighbours, typical council requirements)
- Location & mounting - outdoor unit (suitable locations, slabs, brackets (wall/roof), machine pads (e.g. waffle) etc)
- Location & mounting - indoor unit/water heater (suitable locations, penetrations, hanging, mounting methods)
- Refrigerant piping (layout, installation, insulation, pair coil, protection (steel trunking, plastic pipe duct))
- Condensate drains and pumps (correct drainage, safety drain on FCU, condensate pumps)
- Personal safety (safe lifting, correct use of ladder and platforms)
- Manufacturers installation instructions (examples of typical manufacturers installation guides)
- Electrical connections by electrician
- Mains water connections by plumber

T9  System start up
- Manufacturers start-up instructions (examples of typical manufacturers guides)
- Pressure testing refrigerant pipework and system (nitrogen)
- Evacuation
- Opening outdoor unit valves
- Checking refrigerant charge (pressures, temperatures, sweat line, evaporator superheat etc)
- Adding refrigerant (manufacturers recommended top-up values for longer pipework runs)
- Leak detection
- Customer familiarisation (completing warranty card, operating instructions, general maintenance instructions)

T10  De-commission split air conditioning systems
- Closing isolations valves on outdoor unit.
- Indoor unit pump down and recovery
- Sealing refrigerant components
- Electrical isolation and disconnection by electrician
REQUIRED SKILLS AND KNOWLEDGE

- Mains water isolation and disconnection by plumber
- Unit, piping, drain and electrical cable removal

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1) Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment
Critical aspects of evidence required to demonstrate competency in this unit

9.2) Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
  - Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
    - Position, assemble and start up split air conditioning and water heating heat pump systems as described in 8) and including:
      A Determining job requirements correctly
      B Positioning and assembling system components to specifications
      C Assembling piping and tubing to specifications
      D Pressure testing an evacuating the system in accordance
EVIDENCE GUIDE

with manufacturer's instructions and industry standards, codes and regulations.

Note:
Refrigerant purging is not permitted in Australia

E Giving notification to appropriate person for electrical connections to be completed

F De-commissioning single head split air conditioning and water heating heat pump units

G Testing system performance correctly to manufacturer design specifications

H Documenting work activities

I Demonstrating a basic understanding of system performance outside manufacturers design specifications

J Demonstrating a basic understanding of the compressor, condenser, evaporator and flow control types and their function relevant to single head split system installation

K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:
Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.
EVIDENCE GUIDE

Context of and specific resources for assessment

9.3) This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note: Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in positioning, assembling and starting up split air conditioning and water heating heat pump systems.

Method of assessment

9.4) This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5) There are no concurrent assessment recommendations for this unit.
Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to the assembly, installation and starting up and de-commissioning of single head split air conditioning and water heating heat pump systems (hot water or swimming pool) up to a maximum of 18kWr ‘refrigeration’ capacity with the following attributes:

- safe working
- Australian/New Zealand standards applied
- routine procedures followed
- equipment installation
- pipe work connection
- pressure test
- evacuation
- functional performance checks
- installation/regulatory documentation completion

Note:
1. The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill and the Ozone Protection and Synthetic Gas Management Regulations apply to this qualification. Prior to planning the delivery of any training and/or assessment activities all legislative and regulatory requirements shall be identified and included.

2. This includes the installation, commissioning and de-commissioning of single head wall hung split air conditioning and water heating heat pump systems. The maximum plant capacity for each system is 18 kWr.

3. This unit DOES NOT COVER COMPETENCIES FOR service, repair, maintenance, diagnostic/fault finding and electrical work and the safe and proper installation of commercial refrigeration and air conditioning and water heating heat pump plant and equipment.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.
Unit Sector(s)
Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading  3    Writing  3    Numeracy  3

2.2) Literacy and numeracy skills

Competency Field  5)

Refrigeration and Air Conditioning
UEENEEJ172A Recover, pressure test, evacuate, charge and leak test refrigerants - split systems

Modification History
Not Applicable

Unit Descriptor

1) 1.1) Descriptor

This competency standard unit covers the recovery of refrigerant, pressure and leak testing, evacuation and refrigerant charging in split air conditioning and heat pump systems. It encompasses working safely and to standards, following regulations and industry practices for handling refrigerants and completing the necessary documentation.

Note:
The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill 2003 may apply to this competency standard unit. Prior to planning the delivery of any training and/or assessment activities all legislative and regulatory requirements shall be identified and included.

Application of the Unit

4) Application of the Unit

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training and may be used to augment other electrotechnology qualifications at AQF 2 level or higher.
Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may, in some States/Territories, require a license to practice in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:
1. The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill 2003 may apply to this unit. Prior to planning the delivery of any training and/or assessment activities all legislative and regulatory requirements shall be identified and included.
2. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
3. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

- UEEENEEJ102A Prepare and connect refrigerant tubing and fittings
- UEEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace
Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and recovering, pressure and leak testing, evacuating and charging refrigerants split systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ172A Split system basic operating principles, refrigerants and lubricants

Evidence shall show an understanding of refrigerants and lubricants used in split air conditioning and heat pump systems, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated.

T1 The Residential Air Conditioning and Heat Pump Industry and Licensing Requirements

- Brief overview and history of the Australian residential air conditioning/heat pump industry
- Typical applications and equipment
- Overview of the State and federal agencies (environment and heritage, greenhouse office, ARC, OFT etc)
- State and federal licensing requirements
- The ozone protection act
- The ozone layer (function, ozone depleting substances)
- Overview of the Australia and New Zealand refrigerant handling code of practice 2007, Part 2, Systems other than Self-contained low charge systems

T2 Heat

- Matter (atoms, molecules, energy and its different forms)
- Heat energy (definition, unit of measurement)
- Enthalpy (definition, unit of measurement)
- Heat flow (hot to cold)
- Heat transfer
  - methods (conduction, convection, radiation)
  - requirements
  - effects

T3 Temperature and Relative Humidity
REQUIRED SKILLS AND KNOWLEDGE

- Temperature
- Scale types (imperial, metric, absolute) and their units of measurement
- Conversion to/from absolute values
- Temperature difference/change (td, Δt, unit of measurement)
- Relative humidity

T4 Sensible and Latent Heat
- Definition of specific heat capacity, latent heat and sensible heat (including units of measurement)
- Types of latent heat
- Heat calculations

T5 Pressure
- Define
- Scale types (imperial, metric, absolute) and their units of measurement
- Vacuum scales (Pascals, microns)
- Conversion to/from absolute values
- The basic Gas Laws – Boyles, Charles and Daltons (excl combined or general gas law)
- Pressure gauge types and applications (pressure, compound, vacuum, manometer, magnehelic, barometer)
- Hazards and related safe working practices (dangerous system pressures)
- Care and maintenance (ingress of oil and contaminants (dirt), avoiding needle bounce (especially HP) etc)
- Calibration (atmospheric pressure, send to a specialist etc)
- Appropriate and safe methods of use
- Typical locations

T6 Refrigerant conditions
- Saturation temperature
- Saturated liquid / saturated vapour
- Superheated vapour
- Sub-cooled liquid
- Pressure temperature relationships
- P/T charts
- Enthalpy

T7 The Vapour Compression Cycle
- Major system components
- High and low pressure sides
- Basic system operation

T8 Thermometers and relative humidity devices
REQUIRED SKILLS AND KNOWLEDGE

- Thermometer types and applications (digital, stem, dial, max/min, non-contact, data loggers)
- Relative Humidity measurement devices and applications (dry bulb/wet bulb, sling, digital)
- Hazards and related safe working practices (working near rotating machinery - fans, pulleys, belts etc)
- Care and maintenance (bending stems, overheating, removing batteries after use, uncoiling capillary)
- Calibration (boiling water, iced water, send to a specialist etc)
- Appropriate and safe methods of use
- Typical locations on a system
- Fitting temperature and relative humidity instruments

T9 Leak Detectors

- Detector types and applications (electronic, halide, bubble, ultra violet)
- Hazards and related safe working practices (working around rotating machinery, open flame, ultra violet light etc)
- Care and maintenance (delicate electronic equipment, changing sensor tip filters, changing gas cartridges etc)
- Calibration (auto calibrating, send to a specialist etc)
- Leak detection procedures

T10 Service Gauges

Manifold Gauges

- Types (dial gauges or electronic, manifolds with additional vacuum and charging ports & sight glasses)
- Typical uses for service gauges (high & low side pressure readings, charging, evacuating)
- Care and maintenance (oil and contaminants (dirt) in hoses, avoiding needle bounce, changing hose seals)
- Calibration (hoses open to atmosphere, adjusting screw etc)
- Hose shut-off valves and adaptors (access control valves, kwik couplers, etc)

System Access Fittings

- Types (Schrader, service valve, post valve, quick couplers etc)
- Typical applications for each
- Hazards and related safe working practices (oil or liquid spray, keeping clean, leaks etc)
- Care and maintenance (gland nuts loosened/tightened, seal caps fitted, regulations on piercing valves)

Using Service Gauges

- Service gauge manifold hose fitting
REQUIRED SKILLS AND KNOWLEDGE

- Purging
- Pressure readings
- Service gauge manifold hose removal
- Pressure to temperature conversion

**T11 Properties of Split Heat Pump Refrigerants**

- Types (R22, R407C, R410a, R12 (old units) Hydrocarbons)
- Terms (blend, azet trope, zeotrope, glide, CFC, HCFC, HFC, HC, bubble point, dew point, critical point, ODP, GWP etc)
- Typical properties of the current refrigerants used in split systems (boiling point, glide, composition (components), comparative latent heat performance etc)

**T12 Properties of Split Heat Pump Refrigerant Oils**

- Types (mineral, POE, AB) and their applications
- Basic properties (miscibility, dielectric strength and viscosity)
- Typical issues regarding compatibility (neoprene and POE, POE and mineral etc)
- Safe handling (MSDS - POEs, Mineral, AB’s - Residual acid’s in used oil)

**T13 Procedures for Working with Refrigerants**

- Contaminants (Non-condensables, moisture, carbon, copper etc), effects of contamination (acid, motor burnout, oil contamination, seizing, RMD blockage etc) and methods of contamination prevention
- Reclaiming/recovering refrigerants (using recovery pumps)
- Recovery cylinders (suitable types, markings and precautions – Code of Practice)
- Disposing of recovered refrigerants (Code of Practice)
- Pressure testing systems (suitable gases (nitrogen), test pressure etc)
- Purging pipework (illegal in Australia)
- Evacuation of newly installed split systems (vacuum pumps, correct use, ‘drop testing’)
- Charging refrigerant into a newly installed split system (pre-charged, charging cylinders, electronic scales)
- Detecting refrigerant leaks (electronic, bubbles, halide for R22)
- De-commissioning a split system (recovering refrigerant, isolating in outdoor unit)
- The practice of retrofitting (overview)
- Working with high pressure refrigerants (R410A) and Hydrocarbons (special precautions, tools etc)

Evidence Guide

EVIDENCE GUIDE
EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1) Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate

9.2) Before the critical aspects of evidence are considered all prerequisites must be met.
Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti-Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
  - Determine the basic operating conditions, recover, pressure and leak test, evacuate and charge refrigerants split systems as described in 8) and including:
    
    A Selecting and using appropriate measuring devices, materials and equipment correctly
    
    B Recording measurements
    
    C Using calculation methods accurately
    
    D Identifying the conditions of a refrigerant at various locations in the vapour compression system
    
    E Documenting operating conditions correctly
EVIDENCE GUIDE

F Removing and storing refrigerant correctly

G Conducting pressure testing at the appropriate pressure level and without damaging components

H Locating and rectifying leaks

I Evacuating the system to the required standard and using appropriate vacuum measuring instruments

J Charging the system with the appropriate refrigerant

K Completing the necessary documentation

L Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in recovering, pressure and leak testing, evacuating and charging refrigerants split systems.
EVIDENCE GUIDE

Method of assessment

9.4) This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5) There are no concurrent assessment recommendations for this unit.
Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to testing and charging split systems encompassing the following:

- Determining operating conditions using measurement and basic calculation methods of vapour compression split systems whether used for refrigeration or air conditioning. These conditions include suction and discharge pressures, ambient, evaporator and condensing temperatures, evaporator, and condenser temperature difference.
- Recovering refrigerant from an existing split system including split single head air conditioning and hot water heat pump systems
- Pressure and leak testing a newly installed systems
- Evacuating newly installed systems in preparation for charging with refrigerant
- Charging newly installed systems with refrigerant

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable
Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3   Writing 3   Numeracy 3

Custom Content Section

Competency Field 5)

Refrigeration and Air Conditioning
